**TO
HIS ROYAL HIGHNESS
THE PRINCE REGENT.**

SIR,

The gracious permission which I have received to dedicate these volumes to your Royal Highness, affords me an opportunity of interesting your Royal Highness in favour of the amiable and ingenuous people whose country they describe. The high respect they entertain for British valour and justice, and the lively gratitude they retain for the generous system of British Legislation, will, I am sure, give them a strong claim upon your Royal Highness's good opinion.

To uphold the weak, to put down lawless force, to lighten the chain of the slave, to sustain the honour of the British arms and British good faith; to promote the arts, sciences, and literature, to establish humane institutions, are duties of government which have been most conspicuously performed during your Royal Highness's regency. For a period of nearly five years, in which I have had the honour, as a servant of the East India Company, to preside over a mild and simple people, it has been my pride and my ambition to make known to them the justice and benevolence of my Prince, whose intentions towards them I could only fulfil by acting up to the principles of the Authority which I represented, and by doing every thing in my power to make them happy.

To those who judge that the right to express their sentiments requires no more than sincerity, or that their praise is of a value to overbalance the disrespect of offering it, I shall leave the usual language of dedications. Conscious that the assurances of respect and of loyal attachment can never be offered to your Royal Highness by the humblest British subject, without meeting a gracious reception,

I have the honour to be,
With profound veneration and respect,
SIR,
YOUR ROYAL HIGHNESS'S
Most faithful and most dutiful servant,
THOMAS STAMFORD RAFFLES.

London, June 1, 1817.

PREFACE

As it is possible that, in the many severe strictures passed, in the course of this work, upon the Dutch Administration in Java, some of the observations may, for want of a careful restriction in the words employed, appear to extend to the Dutch nation and character generally, I think it proper explicitly to declare, that such observations are intended exclusively to apply to the Colonial Government and its Officers. The orders of the Dutch Government in Holland to the Authorities at Batavia, as far as my information extends, breathe a spirit of liberality and benevolence; and I have reason to believe, that the tyranny and rapacity of its colonial officers, created no less indignation in Holland than in other countries of Europe.

For such, and all other inaccuracies, as well as for the defects of style and arrangement which may appear in this work, an apology is necessary; and in the circumstances under which it has been prepared, it is hoped that an admissible one will be found. While in the active discharge of the severe and responsible duties of an extensive government, it was not in my power to devote much time to the subject: the most that I could do, was to encourage the exertions of others, and to collect in a crude state such new or interesting matter as fell under my personal observation. I quitted Java in the month of March in last year: in the twelve months that have since elapsed, illness during the voyage to Europe and subsequently, added to the demands on my time arising out of my late office, and the duties of private friendship after an absence of many years, have made great encroachments; but engaged as I am in public life, and about to proceed to a distant quarter of the globe, I have been induced, by the interest which the subject of these volumes has excited, and the precarious state of my health, rather to rely on the indulgence of the public than on the attainment of leisure, for which I must wait certainly long and, possibly, in vain.

Most sincerely and deeply do I regret, that this task did not fall into hands more able to do it justice. There was one^[1], dear to me in private friendship and esteem, who, had he lived, was of all men best calculated to have supplied those deficiencies which will be apparent in the very imperfect

work now presented to the Public. From his profound acquaintance with eastern languages and Indian history, from the unceasing activity of his great talents, his other prodigious acquirements, his extensive views, and his confident hope of illustrating national migrations from the scenes which he was approaching, much might have been expected; but just as he reached those shores on which he hoped to slake his ardent thirst for knowledge, he fell a victim to excessive exertion, deeply deplored by all, and by none more truly than myself.

My acknowledgments are due to the Right Honourable Sir JOSEPH BANKS, Bart., the venerable President of the Royal Society, for his kindness and encouragement; and particularly so to Mr. CHARLES WILKINS, Librarian to the East-India Company, as well as to Mr. WILLIAM MARSDEN, for many suggestions, of which I regret that I have not been enabled to avail myself so much as I could wish, in consequence of the haste with which the work has been got up. I am also indebted to Mr. THOMAS MURDOCH, not only for access to his valuable library, but for illustrations from Portuguese authors, which the reader will find in the Introduction and Appendix.

For all that relates to the Natural History of Java, I am indebted to the communications of Dr. THOMAS HORSFIELD. Though sufficient for my purpose, it forms but a scanty portion of the result of his long and diligent researches on this subject. Of this, however, I am happy to say, that the Public will shortly be able to judge for themselves.

In sketching the state of the Dutch East-India Company, and the measures adopted by the Dutch government respecting Java, subsequently to the year 1780, I have availed myself of much very valuable information communicated to me by Mr. H. W. MUNTINGHE, President of the Supreme Court of Justice at Batavia; and as, in the course of this work, I have often been obliged to condemn the principles and conduct of the Dutch colonists, I am anxious to acknowledge the distinguished merit of this excellent magistrate, and that of Mr. J. C. CRANSSEN, President of the Bench of Schepenen, both selected by the late EARL OF MINTO to be members of the British Council in Java.

The English came to Java as friends. Holland had ceased to be an independent nation, and for the time there could be but two parties, the one English, the other French. The emissaries of the late ruler of France had

perverted the minds of the majority: many were doubtful on which side they should rally. At this critical juncture these two gentlemen declared for England and the ancient order of things; and to the influence of their decision and conduct is to be ascribed, not only the cordiality and good understanding which soon prevailed between the English and Dutch, but in a great measure also that general tranquillity of the country, without which the re-transfer of it to the rule of its former masters might have been impracticable.

Of the wisdom and benevolence which determined the late EARL OF MINTO to place two members of the Dutch nation at the Board of the British Council in Java, it is unnecessary to speak. The measure was in the same spirit which uniformly actuated that enlightened and virtuous statesman, my revered patron and ever lamented friend. The selection of the two gentlemen whom I have mentioned, was no less advantageous. To their countrymen it was peculiarly so, and I am happy to have this opportunity of publicly expressing my acknowledgments to them for the good counsel, firm support, and unwearied exertions, by which they were distinguished while members of the Board.

ORTHOGRAPHY.

The principles of Orthography, recommended by Sir WILLIAM JONES, and adopted by the Asiatic Society at Calcutta, have been adopted in this work, with some slight modifications. The consonants preserve the same sounds generally as the same letters in the English alphabet: the vowels are used as in Italian. To avoid confusion, the emphatic syllables are alone accented, and the inherent vowel *a* has invariably been adopted.

FOOTNOTES:

[1] Dr. J. C. LEYDEN, the bard of Tiviotdale, who accompanied the expedition to Batavia in 1811, and expired in my arms a few days after the landing of the troops.

ADVERTISEMENT BY THE EDITOR.

In reprinting the History of Java in its present form, the Editor feels it necessary to say a few words. Though the first edition of this work has been honored with extraordinary success, and has long been exhausted, so that copies have become rare, yet Sir STAMFORD RAFFLES always considered it as a hasty production, requiring great alteration and improvement; and if it had pleased God to prolong his course of usefulness in this world, he would have bestowed upon it those corrections and additions which he thought it required.

The present Editor has only ventured to add a few short notes which she found prepared by Sir STAMFORD, and to omit, according to his intention, the larger part of the comparative vocabularies, retaining only a hundred words in each language.

The additional plates were prepared some years ago, for a second quarto edition: they are now published, with those belonging to the first edition, in a separate quarto volume, detached entirely from the present work.

For the drawings from which the engravings of the antiquities are made, Sir STAMFORD was indebted to Lieut.-Colonel BAKER, of the East India Company's service; and the present Editor is happy to have this opportunity of acknowledging the obligation, as well as her thanks, for many kind intentions to aid her in reprinting this history.

On the subject of the plates which originally accompanied the quarto edition, Sir STAMFORD stated in the Preface to that edition, p. ix, as follows: "The plates which accompany this work, not otherwise distinguished, are from the graver, and many of the designs from the pencil of Mr. WILLIAM DANIELL, who has devoted his undivided attention in forming a proper conception of his subject, and spared neither time nor exertion in the execution."

The Editor has only to add, that the size of the map of Java rendered it impossible to unite it with the present edition of the History, it is therefore added to the engravings; and it is also prepared for separate circulation.

SOPHIA RAFFLES.

*High Wood,
Dec. 31, 1829.*

INTRODUCTION.

The first arrival of the Portuguese in the Eastern Islands was in the year 1510, when Alphonzo de Albuquerque first visited Sumatra. In the following year, Albuquerque conquered the city of Malacca, and sent to announce that event to those countries and islands which had traded thither, inviting them to continue their intercourse, and promising them protection and encouragement^[2]. To Java and the Moluccas he sent Antonio de Abrew, having, however, previously prepared the way by a Moor or Mahomedan, of the name of *Nakoda Ismael*, who was trading in a merchant vessel. Antonio de Abrew sailed on his mission with three vessels, and took with him several Javans and Malayus who had been accustomed to trade with Malacca. The first port on Java at which he arrived was the city of *Agacai*^[3], and from thence he sailed to Amboina, one of the Moluccas, where^[4] he set up his padroes, or pillars of discovery and possession, as he had done at every port at which he had touched. One of the vessels was lost in a storm, but the people were saved and carried by Abrew to a port in Banda to which vessels then resorted for trade, and whither it was that the Javan vessels used to go for cloves, nutmegs, and mace, which were carried to that port by the natives of the Moluccas in their own vessels.

Nakoda Ismael returning from the Moluccas with a cargo of nutmegs, his vessel was wrecked on the coast of Java, near *Tuban*. The cargo of the *Nakoda's* vessel having been saved, Joam Lopez Alvrin was sent (A. D. 1513) by the governor of Malacca with four vessels to receive it. Alvrin was well received in all the ports of Java where he touched, but particularly at *Sidayu* belonging to *Páteh Unrug*, a prince who had been defeated at Malacca by Fernan Peres.

The straits of *Sínga púra*^[5] being infested by the cruisers of the former king of Malacca, who had been expelled from his dominions by the Portuguese in 1511, the straits of *Sában* were the usual route of the Portuguese vessels from Malacca to the Spice Islands, and in this voyage they generally touched at the ports of Java.

About the year 1520 or 1521, Antonio de Britto, with six vessels under his command, bound to the Moluccas, touched first at *Túban* and proceeded afterwards to *Agacai*, where he remained seventeen days, during which time he sent a boat to the island of *Madúra*, for the purpose of exploring it; but the men landing incautiously were surprised and made prisoners, and were not ransomed without much difficulty, and the friendly intervention of the governor of *Agacai*.

Antonio de Britto had scarcely accomplished the ransom of his men, when he was joined by Don Garcia Henriquez with four vessels bound to Banda for spices, and at the same time a Javan vessel arrived from Banda. This vessel had been furnished with a pass from the Spaniards, under Fernan de Megalhaen, who having passed by the straits

which bear his name, had arrived at the Spice Islands. This was the first intelligence which the Portuguese received of Megalhaen's discovery of the route round the southern extremity of the American continent, and they were the more mortified at it, as he had left his own country in disgust, and was then in the service of Spain^[6].

The first voyage made by the Dutch was in 1595, in which year their first fleet, under the command of Houtman (who had been previously employed by the Portuguese in the East India service), sailed direct to Bantam. At this period the Portuguese were at war with the king of Bantam, to whom Houtman offered assistance, in return for which he obtained permission to build a factory at Bantam, which was the first settlement formed by the Dutch in the East Indies.

Following the example of the Dutch, the English East India Company, immediately after their incorporation by Queen Elizabeth in 1601, fitted out a fleet of four ships, the command of which was entrusted to Captain Lancaster, who sailed from London in 1602, first to *Acheen* (*Aché*) on Sumatra, where he procured part of his cargo, and entered into a treaty with the king, of which a copy is yet in existence. From *Acheen* he went to *Bantam*, and settled a factory there, which was the first possession of the English in the East Indies. Captain Lancaster brought home a letter from the king of Bantam to Queen Elizabeth in 1602, which is still in the state paper office.

In 1610, the first Dutch governor general, Bolt, arrived at Bantam, and finding the situation of his countrymen in that province not favourable to the establishment of a permanent settlement, removed to *Jákatra*. On the 4th of March, 1621, the name of *Batavia* was conferred upon the new establishment of the Dutch in *Jákatra*, which from that period became the capital of their East Indian empire.

In 1683, the English, who had hitherto maintained a successful rivalry with the Dutch, withdrew their establishment from *Bantam*.

In the year 1811, Holland having become a province of France, the French flag was hoisted at Batavia; and on the 11th September, in the same year, the British government was declared supreme on Java, by a proclamation of that date signed by the Earl of Minto, Governor General of Bengal. On the 17th of the same month, a capitulation was entered into, by which all the dependencies fell into the hands of Great Britain.

On the 13th August, 1814, a convention was entered into by viscount Castlereagh, on the part of his Britannic Majesty, restoring to the Dutch the whole of their former possessions in the Eastern Islands; and on the 19th August, 1816, the flag of the Netherlands was again hoisted at Batavia.

Without adverting to the political importance to Great Britain of the conquest of Java, or to the great commercial advantages which both countries might eventually have derived from its remaining in our hands, I shall merely notice that the loss of it was no immediate or positive evil to the Dutch. For many years prior to the British expedition,

Holland had derived little or no advantage from the nominal sovereignty which she continued to exercise over its internal affairs. All trade and intercourse between Java and Europe was interrupted and nearly destroyed; it added nothing to the commercial wealth or the naval means of the mother country: the controul of the latter over the agents she employed had proportionally diminished; she continued to send out governors, counsellors, and commissioners, but she gained from their inquiries little information on the causes of her failure, and no aid from their exertions in improving her resources, or retarding the approach of ruin. The colony became a burden on the mother country instead of assisting her, and the Company which had so long governed it being ruined, threw the load of its debts and obligations on the rest of the nation.

It might have been some consolation for the loss of immediate profit, or the contraction of immediate debt, to know, that such unfavourable circumstances were merely temporary; that they arose out of a state of political relations which affected internal improvement, and that the resources of the colony were progressively increasing, and would become available when peace or political changes should allow trade to flow in its former channels. Whether the Dutch could not indulge such prospects, or whether the system on which the internal government of their eastern dominion was conducted was in itself ruinous under any circumstances, a view of the financial and commercial state of Java before the conquest, and of the causes which led to the losses and dissolution of the Dutch East India Company, will assist the reader in determining.

In tracing these causes, it is hardly necessary to go further back than the period of the Company's history immediately preceding the war of 1780. The accidental calamities of that war brought it to the brink of ruin, and its importance in the past transactions of the country being borne in mind, a general concern existed in Holland for its preservation, and for the restoration and maintenance of its credit. With the view of affording it the most effective and beneficial assistance, inquiries were set on foot, not only to discover some temporary means of relief, but to provide a more permanent remedy for threatened decline. It is impossible to ascertain what might have been the result of the measures which were then in contemplation, as the convulsed state of Europe, and especially of Holland, subsequently to this period, left no room for their operation, and did not even admit of making the experiment of their efficiency. The free intercourse of the mother country with her colonies was interrupted; the trade was thrown into the hands of neutrals; several possessions were lost for the want of due protection, and those which remained were left to support or defend themselves in the best way they could, without any assistance or reinforcement from home.

For ten years preceding the year 1780, the average annual sales of the Company amounted to upwards of twenty millions of guilders, which was considerably more than in former years, and the prices of the different articles were nearly the same as they had been from the years 1648 to 1657, when the sales only amounted on an average to about eight millions a year; it was therefore clear, that the decline of the Company was not to be attributed to the decrease of trade.

On an examination of the Indian books, it was found, that from the year 1613 to 1696, the profits in India, though moderate, had always kept equal pace with the profits in Europe.

From 1613	To 1653.	To 1663.	To 1673.	To 1683.	To 1693.
	Guilders.	Guilders.	Guilders.	Guilders.	Guilders.
The total profits were	101,704,417	142,663,776	206,072,335	259,250,969	322,735,312
Expences	76,177,755	117,616,961	161,271,745	212,282,020	274,416,306
Nett Profits	25,526,662	25,046,315	44,330,590	46,968,949	48,319,506

Thus, on an average of forty years till 1653, the annual profits were about		640,000	guilders a year;
Of fifty years	to 1663	about 500,000	do.
Of sixty do.	to 1673	750,000	do.
Of seventy do	to 1683	670,000	do.
Of eighty do	to 1693	600,000	do.

In the year 1696, the nett profit from the same year (1613) amounted to only 40,206,789 guilders, being full eight millions less than it had been in 1693, only three years preceding; and the average nett annual profit from 1613 was reduced to 484,371 guilders. But from 1697 to 1779, comprehending a like period of eighty-three years, the losses were so exorbitant as to overbalance and absorb, not only the contemporary, but all the preceding profits in Europe, and even a large amount of fictitious profit stimulated to screen the government in India.

The nett amount of profits calculated from 1613, amounted

Guilders.

In 1697	to only 38,696,527
In 1703	31,674,645
In 1713	16,805,598
In 1723	4,838,925
In 1724	1,037,777

In 1730 there was already a total loss of 7,737,610, and in the year 1779 this loss amounted to 84,985,425.

The Company used to send yearly to India, before the commencement of the war of 1780, twenty ships of about nine hundred tons each, and eight or ten of about eight hundred tons each, which, to the number of twenty-two or twenty-three, returned with cargoes: four from China, three from Ceylon, three from Bengal, one from Coromandel, and twelve or thirteen from Batavia. They annually exported to India provisions and

other articles of trade to the amount of two millions six or eight thousand florins, and in cash from four to six millions, and sold yearly to an amount generally of twenty or twenty-one millions; and it was estimated that the Indian trade maintained, directly and indirectly, all the external commerce of Holland, employing a capital of about two hundred and sixty millions of florins.

From the inquiries of a commission appointed by the government of Holland, in the year 1780, to ascertain the real state of the Company's finances, and to report how far the nation would be warranted in giving its further support to the credit of an institution which had so rapidly declined, it appeared that in 1789, the arrears of the Company amounted to seventy-four millions of florins, and that this amount had since increased to eighty-four or eighty-five millions, of which sum no less than 67,707,583 florins had been advanced by the nation.

The Commissioners, however, being of opinion, that the affairs of the Company were not irretrievable, recommended a further loan of seven millions of florins.

A meritorious servant of the Company, Mr. C. Tetsingh, had offered to the Commissioners a memorial, in which he proposed that the Company should abandon the trade to private merchants under certain restrictions; but on this proposal the Commissioners stated that they were not then prepared to offer an opinion.

This Commission, in reporting upon the manner in which the Company's affairs had been managed in India, declared that "they could not conceal the deep impression which the same had made upon their minds, and that they could not fix their thoughts upon it, without being affected with sentiments of horror and detestation...." "When," said they, "we take a view of our chief possession and establishment, and when we attend to the real situation of the internal trade of India, the still increasing and exorbitant rate of the expenses, the incessant want of cash, the mass of paper money in circulation, the unrestrained speculations and faithlessness of many of the Company's servants, the consequent clandestine trade of foreign nations, the perfidy of the native princes, the weakness and connivance of the Indian government, the excessive expenses in the military department and for the public defence; in a word, when we take a view of all this collectively, we should almost despair of being able to fulfil our task, if some persons of great talents and ability among the directors had not stepped forward to devise means by which, if not to eradicate, at least to stop the further progress of corruption, and to prevent the total ruin of the Company."

The improvements proposed by the directors extended to every branch of the administration abroad. They proposed, first, with regard to the Cape of Good Hope, the yearly arrears of which settlement had latterly amounted to a million and a half of florins, that the same should be reduced to one half of that sum. With regard to the further eastern possessions, the measures proposed for consideration were chiefly the following.

To confine the Company's future trade to opium, spices, pepper, Japan copper, tin, and sugar, as far as the European and Japan markets would require. To abandon the trade to Western India to the Company's servants and free merchants, under payment of a certain recognition. To abandon several factories in that quarter, and to reduce the rest to mere residencies. To make considerable reductions in the establishment on the coast of Malabar and in Bengal. To reduce the establishments on the coast of Coromandel to three factories. To abandon the establishments on the West coast of Sumatra, and to leave it open to a free trade. To diminish the expenses at Ceylon by a reduction of the military force, and by every other possible means to animate the cultivation and importation of rice into that settlement. To open a free trade and navigation to Bengal and Coromandel, under the superintendence of the Company, on paying a certain recognition. To encourage, by every means, the cultivation of rice in the easternmost possessions, and especially at Amboina and Banda, for the sake of preventing the inducements of a clandestine trade, which the importation of rice to those places might afford. To abandon several small factories to the eastward. To adopt a plan for the trade of Malacca proposed by Governor De Bruem. To introduce a general reduction of establishment at Batavia and elsewhere. To introduce new regulations with regard to the sale of opium at Batavia. To improve the Company's revenue, by a tax upon salaries and a duty upon collateral successions. And finally, to send out commissioners to India, with full powers to introduce a general reform in the administration.

In a memorial subsequently submitted by the Commissioners, which formed the basis of all the measures recommended and adopted at this time, for the better administration of affairs in India, after shewing that, from the year 1770 to 1780, the Company had on the whole of its trade and establishments on the coast of Coromandel, Bengal, Malabar, Surat, and the western coast of Sumatra, averaged a profit of only 119,554 florins a year, they recommended the introduction at Batavia of a public sale of the spices, Japan copper, and sugar, wanted for the consumption of Western India, and the establishment of a recognition of ten per cent. on the piece goods from Bengal, and of fifteen per cent. on the piece goods from Coromandel. Under such a plan of free trade, they calculated that, after the diminution of the Company's establishments in Western India, and the abolition of several small forts and factories to the eastward, it was highly probable that the administration in India would, in future, cover its own expenses, and thereby save the Company from utter ruin.

It was on these calculations that the Commissioners appointed by the States of Holland founded their hopes of the future relief of the Company, and with these prospects they closed their report, the care and future fate of the Company devolving from that time chiefly on the Commissioners appointed at their recommendation to proceed to India, in order to carry into effect, on the spot, the reforms proposed. Of these new Commissioners, Mr. Nederburg, then first advocate to the Company, was appointed the chief.

The Indian Commissioners sailed from Europe in the year 1791. At the Cape of Good Hope they made such changes and reforms as may be said to have fully effected the

object of their commission. The importance, however, of the Cape being comparatively small, it is not necessary to enter into any detail of the measures adopted there. The more momentous part of their trust was undoubtedly to be discharged in India, where they arrived in 1793.

If the talents of these Commissioners were to be estimated by the benefits which resulted from their labours, we may safely pronounce them to have been incompetent to the task they had undertaken; but such a criterion cannot with any justice be applied. A continuance of peace with Great Britain was of course reckoned upon in all their calculations, and war with that power broke out almost immediately afterwards.

With regard to the abandonment of several forts and factories to the eastward, to which their attention had been particularly directed, the result of their deliberation and inquiry was, that the continuance of the Company's establishment on Celebes was indispensable for the protection of the Moluccas; that at Timor reductions had been made, in consequence of which the revenues covered the expenses; that after mature investigation the Japan trade was shewn to yield a nett profit of 200,000 florins; that with regard to the West Coast of Sumatra the revenues had been made to exceed the expenses, and the pepper collected in that neighbourhood left still some profit to the Company.

With respect to the institution of public sales at Batavia for Japan copper, spices, and sugar, on the introduction of which it was supposed the establishments in Western India might be for the most part reduced, they were of opinion, after deliberating with the Council of India, and after a personal inquiry into the actual state of the private trade at Batavia, that chiefly for the want of an adequate means among the purchasers such sales were entirely impracticable, and that it would therefore be preferable, after making some partial reductions in the expense, to continue the establishment in Bengal and the coast of Coromandel, but that Cochin on the Malabar coast might, perhaps, be advantageously abandoned^[7].

To determine the mode in which the trade with India should in future be conducted, these Commissioners assumed a general calculation of the receipts and disbursements which would occur at home and abroad, on the supposition that the Company should, in future, navigate with hired vessels only, and that all marine establishments should be abolished. The result of this calculation was in abstract as follows. The estimate may be considered as affording an interesting view of the hopes and prospects which were at that time entertained of the resources of the Eastern Islands.

The whole estimate was framed on the principles of monopoly, and with a view to an increase of the trade on the one hand, and a reduction of expenses on the other. The quantity of coffee stated at eighteen million pounds, was calculated upon the produce which might be expected after two years. In the calculation of the quantity of pepper, an augmentation of 1,500,000 pounds beyond the produce of the preceding year was anticipated, from the encouragement given to the growth of that article in Bantam and other parts of Java. With regard to the sugar, calculated at 8,000,000 of pounds for the home cargoes, it is stated, that the actual deliveries

From Batavia at that time amounted to	6,000,000 lbs.
From Chéribon	500,000
From other ports in Java	1,000,000
	<u>7,500,000 lbs.</u>
Supposing therefore the home cargoes	8,000,000 lbs.
The demand for Surat	3,500,000
For Japan	900,000
For the consumption of the Company's own establishments	200,000
The quantity required would be	<u>12,600,000 lbs.</u>

Or 5,100,000 pounds more than the actual produce. The whole of that quantity, however, the Commissioners felt confident might be produced in three years, by encouraging the manufacture in the Eastern Districts of Java. Among the retrenchments was a tax upon the salaries of all civil servants, which reduced the average salary of each to the sum of fifteen Spanish dollars per month.

DISBURSEMENTS AT HOME AND IN INDIA,
*Exclusively of the direct Trade to China, upon the Plan of the Commissioners of
Inquiry, A. D. 1795.***

RECEIPTS.		DISBURSEMENTS.	
	Florins.		Florins.
Public Duties	2,350,000	For the Surplus	
		Expenses at the Cape of Good Hope	150,000
Freight on Company's vessels	50,000	For the same in Bengal	33,120
Additional public revenues	400,000	For the same at Surat	40,000
Profits on Trade in India:—		For the Military Expenses in India	2,571,314
Profit on opium	1,250,000	For Salaries to Civil Servants	1,000,000
Ditto on 12,880 pikuls tin, at 26 rix-dollars per pikul	228,000	For Ammunition, &c.,	100,000

Ditto on	5,000 lbs.	43,000		For Fortifications and Repairs	400,000
Ditto on	15,000 lbs.	90,000		For Sloops and minor Vessel	200,000
Ditto on	120,000 lbs.	420,000		For Hospital Expenses	100,000
Ditto on	730,000 lbs.	292,000		On Account of Confiscations	18,000
		Copper		For Presents to Native Princes	32,000
Total on Spices and Copper			845,000	Interest on Sums lent in India	100,000
At Surat:—				For Stores and Goods shipped in India	200,000
On Sugar		190,000		For eventual Losses	100,000
On Camphor		10,000		For the Purchase of the Produce in India	4,519,400
On Tin		18,000		For Insurance at five per cent. on the Money sent to India	212,700
			218,000	For Freight on Returns of Homeward-bound Cargoes	3,300,000
In Japan, on divers Europe and Indian articles		76,000		Insurance and Risk of the Sea in India	200,000
			2,617,000	For Freight of Tonnage in India	699,030
And for Sundries at the coast of Coromandel		33,000		For Freight for 2,320 Men, to complete the	219,240
			2,650,000		

For the produce of the Indian Returns in Europe:—		
Coffee, 18,000,000 lbs., deduct		
Wastage, &c. is 16,000,000 lbs. at 8½ stivers per lb.	6,813,281	
Pepper, 3,765,000 lbs., deducting		
Wastage, &c. is 3,263,789 lbs. at 12 stivers per lb.	1,958,273	
Tin, 530,000 lbs. deducting Wastage, &c. is 490,913 lbs. at 40 florins per cwt.	196,365	
Cotton Yarn, 60,000 lbs., or nett 57,000 lbs., at 35 stivers per lb.	99,750	
Indigo, 30,750 lbs. deducting Wastage, &c. is 27,645 lbs. at 80 stivers per lb.	110,580	
Sugar, 8,000,000 lbs. deducting		
Wastage, &c. is 7,068,000 lbs. at 10 stivers per lb.	1,767,000	
Saltpetre, 1,650,000 lbs. deducting		
Wastage, &c. is 1,285,350 lbs. at 30 florins per cwt. is	385,605	
Sappan Wood, 600,000 lbs. or nett 513,000 lbs. at 12 florins per cwt.	61,560	
Cowries, 160,000 lbs. or nett 101,460 lbs. at 8 stivers per lb.	40,584	
Camphor, 64,000 lbs. or nett 56,344 lbs. at 23 stivers per lb.	65,025	
Cardamons, Java, 22,000 lbs. or nett 18,810 lbs. at 20 stivers per lb.	18,810	
Tamarinds, 115,000 lbs.	43,700	
Arrack, 140 leagers	46,000	
Cinnamon, 400,000 lbs. at 5 florins per lb.	2,000,000	

Military and Civil Establishment in India	
For the Passage home of 450 men	28,350
Bounty Money to 2,020 military men	303,000
Premiums to 300 civil servants	60,000
Recognition to the Admiralty	360,000
Contribution to the same	500,000
Total Expenses of the Company's Establishments at home	1,000,000
Yearly Interest to be paid	4,758,000
Dividends at 12½ per cent. to the Holders of Stock	831,000
	22,035,154
Balance	1,052,379

Cloves, 250,000 lbs. at 65 stivers per lb.	812,500		
Mace, 110,000 lbs.	937,500		
Nutmegs, 320,000 lbs.	561,000		
Bengal Piece Goods	970,000		
Surat do. do.	<u>550,000</u>		
	17,437,533		
For Freight and Recognition on Private Trade	<u>200,000</u>		
TOTAL	<u>Florins 23,087,533</u>	TOTAL	<u>Florins 23,087,533</u>

These Commissioners seemed to entertain no very favourable ideas of the benefits which would arise to private trade from the license it already enjoyed. As a measure much more beneficial to the general trade of Europe and to the Company, they proposed, in lieu of it, to throw open to individuals, under certain restrictions, the trade and navigation from Europe to Bengal and Coromandel.

Thus we see these Commissioners sent out with the view of introducing something like free trade on Java, coming to a resolution to take away from it even the little private trade which it had previously been allowed to enjoy.

The Company's trade with continental India had already been so much encroached upon by foreigners, that it was judged expedient no longer to exclude the Dutch free trader from his share in the spoil; but it was hoped, by increased strictness, to preserve entire to the Company the exclusive trade in spices, Javan coffee, pepper as far as it was the produce of her own possessions, Japan copper, the opium which was consumed in Java and in the Moluccas, and Javan sugar.

The trade of the Dutch Company has thus been brought to the period, when its monopoly was proposed to be almost exclusively confined to Java and the Eastern Islands, including Japan. The causes which operated to destroy the Dutch influence on the continent of India, are too well known to require any particular description.

The Dutch had long maintained a decisive superiority, as well on the continent of Asia, as among the Indian islands, until the active exertions of their competitors in trade succeeded in undermining and overturning their monopoly; and as it was natural their weak side should suffer first, it was on the continent, where their establishments were far removed from the chief seat of government, and where they had not been able to insure to themselves those exclusive privileges from the princes of the country which they had exacted from the weaker princes of the Eastern Islands, that other nations, chiefly the French and English, first endeavoured to introduce themselves.

After reciprocal jealousies had for some time prevented both nations from making any considerable progress, a successful war at last turned the scale entirely in favour of the English, whose influence, from that period, has been paramount in continental India,

and the Dutch East India Company was no longer able to enforce its system of exclusive trade there.

Without inquiring into the practicability of realizing the flattering estimate made out by the Indian Commissioners, or the policy which dictated a still more rigorous monopoly of the produce of the Eastern Islands, it ought to be remarked, although it seems never to have been adverted to by the Commissioners, whose calculations and plans were exclusively of a commercial nature, that the original situation of the Company as a mere mercantile body, looking out for trade and not dominion, had undergone a material alteration, by the acquisition it had made from the middle of the last century of considerable territorial possessions, especially on the island of Java.

To use the words of one of the most enlightened men who now adorns his country, and is prepared to give energy to a better state of things^[8], "these territorial acquisitions became to the Company a source of new relations. In consequence of them, new rights were acquired and obligations of a novel kind were contracted, as well with regard to the territories themselves as the population upon them. The nature of these rights and duties might have been deemed worth inquiry; and as all these territorial acquisitions were made by a delegated authority derived from the government at home, it was further worthy of investigation how far the government itself was entitled to a direct share in the acquisitions made, and how far it was bound to controul and superintend the exercise of those duties which were newly contracted. A consideration of these points would have led to the important question, how far, on a renewal of the Company's charter, it would be requisite to alter and modify its conditions according to existing circumstances, and especially how far it would have been expedient, in future, to leave the Company the exclusive trade, and at the same time the uncontrolled sovereignty over the same country."

But however natural it may be, at the present moment, to consider questions of this kind, it was perhaps at that time beyond the common course of human thought to entertain doubts on the subject. From an honourable regard for ancient institutions, the mercantile system of the Company was still considered with reverence and respect; it had been at all times the boast and pride of the nation; the services which the Company had rendered to the state in its earlier days, and the immense benefits which the government had been enabled, by its means, to spread among the community at large, had rendered the East India Company and all its privileges, objects of peculiar care and tenderness. The rights of sovereignty which the Company afterwards acquired, were obtained by degrees and almost imperceptibly. Every acquisition of the kind had been considered, at the time, merely as the means of increasing its mercantile profits, and all its territorial rights were looked upon as subservient to its mercantile system.

In consequence of these ideas, after the whole of the northern and eastern coast of Java had been added to the Company's territorial dominions, by a cession in the year 1749, no step seems to have been taken for improving these acquisitions, by any direct use of the supremacy obtained. Some contracts were instituted with the native chiefs, for

delivering gratis, or at the lowest possible price, such articles as would serve the Company's investments at home; but taxation, the levy of produce, and the management of police and justice in the inferior courts, were left to the care and conscience of the natives themselves.

Arguments in favour of this system may perhaps be drawn from the respect due to the native usages and institutions, and from a supposed want of power, on the part of the Company, to assume any direct controul over the native population. But whatever influence these ideas may have had on the conduct of the Company, it may be affirmed that an European government, aiming only to see right and justice administered to every class of the population, might and ought to have maintained all the native usages and institutions, not inconsistent with those principles; and that the power, for want of which it withheld its interference, would have been supplied and confirmed by the act of exercising the power which it possessed, and by the resources it might have been the means of drawing from the country.

Considering, therefore, the propensity inherent in every native authority to abuse its influence, and to render it oppressive to the population at large; the ascendancy of Europeans in general, even over the class of native chieftains; the scantiness of many of the establishments proposed in the plan of the Indian Commissioners; the manifest inadequacy of the remuneration of the civil servants which it recommended, and the narrow scale on which all expenses were calculated; no very durable benefits could have been reasonably expected from it. The discretionary power being left in the hands of the native chieftains, the whole of the lower class of the population would have remained at their disposal; the ascendancy of the European servants would have subjected both to peculations, which the insufficiency of their salaries would constantly have tempted them to practice; the administration of justice not meeting with a proper remuneration would have been ineffectual, perhaps corrupt; the reduction of the military establishment would have left the possessions an easy prey to the first invader; and the original sources of the Company's revenues in India remaining the same, it seems probable, that in a short time, the same scenes which had hitherto met with so much reprobation, would have been acted over again, and to a still more disgraceful extent.

But of whatever merit might have been the plans suggested by the Commissioners in India on the 4th July, 1795, the calamities which had already befallen the mother country were followed by an event, which it seems the Commissioners had hardly dared to suspect, and which, in every case, would have frustrated all their designs. This was the dissolution of the Company, in consequence of a resolution taken to that effect on the 24th December, by the body then representing the government of the United States of Holland.

New views of policy were of course suggested by this important change. In the year 1800 there appeared a small volume, entitled "A Description of Java and of its principal Productions, shewing the Advantages to be derived therefrom under a better Administration, by Mr. Dirk Van Hogendorp," in which the writer, after observing that

the true state of Java and its importance to the mother country had hitherto been little known, or at least that no correct ideas had yet been formed in Holland with regard to its value, fertility, population, and advantageous situation for trade, establishes,

"1. That the system on which the trade in India had hitherto been conducted and the possessions administered, was no longer good under present circumstances, but contained in itself the seeds of decline and ruin.

"2. That the exclusive trade was in its nature injurious, and naturally caused the ruin of the colonies.

"3. That under a different system, those colonies would flourish, and yield much greater advantages than ever.

"4. That a revenue, founded on the principles of freedom of trade, property in the soil, and equality of imposts, could be easily introduced.

"5. And finally, that all the benefits which would thereby accrue to the mother country, from the territorial revenue, the duties on trade, the industry and wealth for which that trade would furnish employment, and the treasures which the distribution of produce throughout Europe must bring into the mother country, would greatly exceed the highest advantages that could be calculated upon, even under the most favourable prospects, by the means of the fallen Company or a continuation of its former system."

Many parts of this pamphlet abound in violence and invective, and others are too highly coloured; but with these exceptions, it may be safely asserted that it contains a more correct view of the state of society, and of the resources of the country, than any paper which had preceded it, and the author is most justly entitled to all the credit of having chalked out to his countrymen the road to honour and prosperity, in the future administration of the Dutch East-Indian colonies.

Having, in the course of the foregoing sketch of the decline and fall of the Dutch East-India Company, exhibited a statement of these resources, under the mercantile system of the Company, it may be interesting also to state what, in the opinion of Mr. Hogendorp, the island of Java alone was capable of affording eventually, under a system founded on the principles of property in the soil, freedom of cultivation and trade, and the impartial administration of justice according to equal rights. "When the exclusive and oppressive trade of the Company, the forced deliveries, the feudal services, in short, the whole system of feudal government, is done away with, and when the effects of this important revolution are felt in the certain increase of cultivation and trade, then," observes Mr. Hogendorp, "the limits of probability will by no means be exceeded, in estimating the aggregate of the revenues of Java, in progress of time, at twelve millions of rix-dollars, or twenty-four millions of guilders, annually."

This statement, calculated with reference to the comparative produce of the West India Islands, has been generally considered by the colonists as exhibiting a very exaggerated view, of what the island could, under any circumstances, afford, and by many as too wild a speculation to deserve attention; but to this it should be added, that the plan on

which it was founded, viz. an entire change in the internal management of the country, was considered as equally wild and romantic by those who declaimed the loudest against the possibility of these advantages accruing, and that notwithstanding the doubts then entertained of its practicability, that measure has been actually carried into effect, without producing any one of the consequences depicted by the advocates of the old system, and as far as a judgment can yet be formed, with all the advantages anticipated by Mr. Hogendorp.

It is not surprising to find, that the enlightened views of this writer were never acted upon, when we find it asserted by a commission, who sat at the Hague in 1803, composed of the highest, and perhaps best qualified persons in the state of Holland, and of which he was himself a member (of course a dissenting one), that "it appeared to them to have been admitted generally, and without contradiction, that according to ancient regulations, of which the first institution was lost even among the Javans themselves, the manner in which that people are used to live rests on principles, with which a free and unlimited disposition of the ground and its productions is absolutely inconsistent; that they were, for their parts, convinced that such a change could not be effected, without causing a general fermentation among all classes of people; that though, in this case, violent measures might suppress an insurrection, they would rather advise to bid an eternal farewell to Java, than to resort to such means; that if they adverted to the question in a commercial point of view, the same uncertainty, the same dangers presented themselves. These arose from the natural disinclination of the Javan to work, which has been observed by many eminent persons; the danger of new monopolies, which would fall heavier upon the common people than the present forced deliveries; the exorbitant charges to support a great number of native chiefs and priests, who are at present provided for and ought to be supported; an undoubted deficiency in the revenues, and a considerable expenditure during the first years, without the probability of a remedy. All this," say they, "seems to forebode a neglect of the cultivation; and after long and laborious researches, we are compelled to lay it down as a general principle, that property, of the soil among the common Javans, and the abolition of public services, cannot be adopted as the basis of an improvement, of which the internal management of Java would be susceptible. The contingents and forced deliveries ought therefore to be continued and received on account of the state, which has succeeded to the prerogatives of the former Company^[9]."

Marshal Daendels, who was recalled from the government of Java only a few months before the British conquest, and who was by far the most active and energetic governor who had for a long time been at the head of the colony, has written an account of his own administration, of the state in which he found the island, of the measures he proposed and executed, of the improvements which he projected or carried into effect, of the revenues that might be expected, and of the expenditure that the public service required. Although he enters into some free and bold strictures on the conduct of the Commissioners, the estimates they formed, and the policy they recommended, he does not seem himself to have avoided many of the faults which rendered their policy

objectionable, or to have entertained any hope of establishing a more liberal system. Forced services and contingents, and all the tyranny which they render necessary, still constituted the greatest part of the ways and means of the colonial treasury, and the grand source of profits for the Company.

The difficulties he had to struggle with, and the peculiar habits and character formed by his profession, seem to have determined his proceedings, more than any matured scheme of general administration, or any deliberate principles of government. He thus describes the situation of the colony on his arrival: "A powerful enemy threatened us by sea, and the Javan princes, acquiring audacity in proportion as they saw proofs of our weakness, thought the moment had arrived for prescribing the law to their former superiors. The very existence of our dominions on Java was thus in the greatest danger. Our internal resources of finance were exhausted, while a stagnation of trade, caused by the blockade of our shores, cut off all hopes of procuring assistance from without. In the midst of such disastrous circumstances, and the failure of so many attempts to introduce reform, and to maintain the dignity of government, *I found it necessary to place myself above the usual formalities, and to disregard every law, but that which enjoined the preservation of the colony entrusted to my management.* The verbal order which I received, at my departure from Holland, had this for its object, and the approbation bestowed upon my attempts to carry it into execution, encouraged me in the course of proceeding which I had begun."

The situation in which the Marshal found the colony is justly drawn; but the result of his operations, and the condition in which he left the government to his successor, are described in colours by far too flattering. His partiality for his own work, and the consciousness of having made great exertions to accomplish it, seems to have influenced his mind too easily, in convincing him of the advantage and success of the measures he had adopted. "In spite," says he, "of all the obstacles I encountered, I obtained the following results. I made the general government the centre of authority, from which every inferior authority descended in a determined proportion, with a definite responsibility and a salutary controul. Into all the local and subordinate administrations, clearness and simplicity were introduced; agriculture was encouraged, protected, and extended; general industry was promoted; the administration of justice and of the police was put on a sure footing; the means of defence were increased as much as possible; many works were undertaken, both for the service of government and other useful ends; new roads were made and old ones improved; the condition of all the inhabitants, as well native as European, was ameliorated, and every cause of misunderstanding removed; the relations of the colonial government with the courts of the native princes were regulated on principles, conformable to the dignity, and conducive to the interests of the former; and, in fine, the revenues of the colony were so augmented, that after every deduction for internal expenditure, they will furnish a surplus of five millions, free of all charge, as a nett return to Holland."

Marshal Daendels, in his memoir, sufficiently showed the fallacy contained in the report of the Commissioners, concerning the estimated revenue and profits of the Company.

Instead of the receipt of 1,250,000 florins, accruing from the profit of the sale of opium (as marked in the table which I have transcribed), he assures us that not one farthing was actually obtained. Many of the conclusions of the Commissioners, concerning the temper of the inhabitants, the nature of the soil of particular districts, and the general resources of the island, he satisfactorily proved to be founded on erroneous information or mistake; and it is only to be regretted, that he did not carry the same spirit of impartiality into the formation of his own reports, which he requires in those of his predecessors, or anticipates from his successors, an examination equally rigorous, and a measure of justice equally strict as that to which they were subjected. Had this been the case, we should not have been offered such financial results as make the revenue of the island amount to 10,789,000 rix-dollars, and its expenditure only 5,790,000, leaving a balance of five millions of profit. It may be interesting to compare his estimate with the table already exhibited.

ESTIMATED RECEIPTS.		ESTIMATED EXPENDITURE.	
	Rix-dollars.		Rix-dollars.
Rent of land	2,000,000	Civil appointments	1,000,000
Produce of land unfarmed	500,000	Land forces	1,227,000
Sale of opium ^[10]	1,120,000	Manufactory of powder, foundery of balls, and arsenals	180,000
Money	360,000	Hospitals	80,000
Coffee, 300,000 pikuls, at 20 rix-dollars	4,500,000	Marine	250,000
Pepper, 30,000 pikuls	160,000	Fortifications, &c.	200,000
Tin, 35,000 pikuls	400,000	New works	400,000
Japan Copper, 25,000 pikuls	250,000	Justice and police	150,000
Spices	1,000,000	Transports and freights	300,000
Forests	250,000	Transport of Company's servants, recruits, &c. from Europe	300,000
Sale of rice	250,000	Purchase of native articles	300,000
		Package	100,000
		Interest	400,000
		Unforeseen charges	903,000
			<u>5,790,000</u>
	<u>10,790,000</u>	Which being subtracted from	<u>10,790,000</u>
		Leaves a nett profit, Rix-dollars	<u>5,000,000</u>

FOOTNOTES:

[2] Barros, Decada 3, chap. 6, book 3.

[3] Probably *Grésik*.

[4] Barros, Decada 3, book 5, chapter 6.

[5] Barros, Decada 3, book 5, chap. 7.

[6] The following is the description of Java from Jono de Barros, Decada 4, book 1, chap. 12.

"Before we treat of the expedition of Francisco de Sa, it is proper to state the occasion of the expedition, and how that was connected with the treaty of peace and friendship which, by order of Jorge de Albuquerque, governor of Malacca, Henriquez Lerne concluded with the King of Sunda, on account of the pepper produce in that kingdom.

"We must, therefore, first give an account of the voyage of Henriquez Lerne. The kingdom of Sunda being one of those of the island of Java, it will be best to begin with a general description of that island, that what follows may be understood.

"The land of Java we consider as two islands, whose position is from east to west, and nearly in the same parallel, in seven or eight degrees of south latitude. The total length of the two islands, according to the best authorities, is about one hundred and eighty leagues, although perhaps this is rather exaggerated.

"The Javans themselves do not divide the land into two islands, but consider the whole length as constituting only one; and on the west, where it approaches Sumatra, there is a channel of ten or twelve leagues wide, through which all the navigation of eastern and western India used to pass, previous to the founding of Malacca.

"A chain of very high mountains runs along the whole length of Java. Their distance from the northern coast is about twenty-five leagues. How far they are from the southern shore is not certainly known, though the natives say about as far as from the northern.

"Sunda, of which we are now to treat, is situated at about one-third of the total length of Java from the west end. The natives of Sunda consider themselves as separated from Java by a river, called *Chiamo* or *Chenan*, little known to our navigators; so that the natives, in dissecting Java, speak of it as separated by this river *Chiamo* from the island of Sunda on the west, and on the east by a strait from the island of *Báli*; as having Madura on the north, and on the south an undiscovered sea; and they think that whoever shall proceed beyond those straits, will be hurried away by strong currents, so as never to be able to return, and for this reason they never attempt to navigate it, in the same manner as the Moors on the eastern coast of Africa do not venture to pass the Cape of Currents."

The following is the substance of a note inserted in Jono de Barros, Decadas, p. 76-77, vol. 4, part 1st, 8vo. Lisbon 1777.

"The island of Java is divided into many kingdoms along the northern coast; and beginning to the eastward, those of which we have any account are—*Paneruca*, *Ovalle*, *Agasai*, *Paniao* (whose king resides in the interior, and has a supremacy over those just mentioned), *Beredam*, *Sodaio*, *Tubam*, *Cajoam*, *Japara* (the capital of this kingdom is called *Cheronhama*, three leagues from the sea coast, near to which *Japara* is situated), *Damo*, *Margam*, and *Matarem*.

"In the mountainous interior live a numerous class of chiefs, called Gunos: they are a savage race, and eat human flesh. The first inhabitants were Siamese, who about the year 800 of the Christian era, on their passage from Siam to Macassar were driven by a great storm on the island of *Báli*. Their junk being wrecked they escaped in their boat, and arrived at Java, until that period undiscovered; but which, on account of its size and fertility was immediately peopled by *Passara*, son of the king of Siam: and the city of *Passaraan*, called after his own name, was founded at a very good seaport, and this was the first settlement on the island.

"The Javans are proud, brave, and treacherous, and so vindictive, that for any slight offence (and they consider as the most unpardonable the touching their forehead with your hand) they declare *amok* to revenge it. They navigate much to every part of the Eastern Archipelago, and say that formerly they used to navigate the ocean as far as the island of Madagascar (St. Laurence).

"The city of *Bintam*, or *Banta*, which is in the middle of the opening of the straits of Sunda, stands in the centre of a large bay, which from point to point may be about three leagues wide, the bottom good, and the depth of water from two to six fathoms. A river of sufficient depth for junks and galleys, falls into this bay, and divides the town into two

parts. On one side of the town there is a fort, built of sun-dried bricks: the walls are about seven palms thick, the bulwarks of wood, well furnished with artillery.

"The island of Sunda is more mountainous than Java. It has six good sea-ports: *Chiamo*, at the extremity of the island; *Chacatara*, or *Caravam*; *Tangaram*, *Cheginde*, *Pandang*, and *Bintam*, which have a great traffic, on account of the trade carried on, not only with Java, but with Malacca and Sumatra.

"The principal city of this kingdom is called *Daro*, situated a little towards the interior, and we are assured that when Henriquez Lerne first visited it, this town had upwards of fifty thousand inhabitants, and that the kingdom had upwards of one hundred thousand fighting men.

"The soil is very rich. An inferior gold, of six carats, is found. There is abundance of butcher's meat, game and provisions, and tamarinds which serve the natives for vinegar. The inhabitants are not very warlike, much addicted to their idolatries, and hate the Mahomedans, and particularly since they were conquered by the *Sangue Páti Dama*.

"Here four or five thousand slaves may be purchased, on account of the numerous population, and its being lawful for the father to sell the children. The women are handsome, and those of the nobles chaste, which is not the case with those of the lower classes. There are monasteries or convents for the women, into which the nobles put their daughters, when they cannot match them in marriage according to their wishes. The married women, when their husbands die, must, as a point of honour, die with them, and if they should be afraid of death they are put into the convents.

"The kingdom descends from father to son, and not from uncle to nephew, (son of the sister), as among the Malabars and other infidels in India.

"They are fond of rich arms, ornamented with gold and inlaid work. Their *krises* are gilt, and also the point of their lances. Many other particulars might be added (but we reserve them for our geography^[11]), concerning the productions of this island, in which upwards of thirty thousand quintals of pepper are collected annually."

Decad. iv. Chapter 13.

"In the year 1522, Jorge Albuquerque, governor of Malacca, equipped a vessel to carry Henriquez Lerne, with a competent suite and certain presents, to the king Samiam above mentioned, for the purpose of establishing a commercial intercourse. Lerne was well received by the king, who was fully sensible of the importance of such a connection, in the war in which he was then engaged with the Moors (Mahomedans); and, therefore, he requested that, for the protection of the trade, the king of Portugal should erect a fortress, and that he would load as many ships as he chose with pepper, in return for such merchandise as the country required. And further, he (the king) obliged himself, as a pledge of his friendship, to give him annually a thousand bags of pepper, from the day on which the building of the fortress should commence.

"These things being concluded and presents exchanged, Lerne returned to Malacca, where he was well received by Albuquerque, who immediately communicated the result to the king of Portugal, who approved of all that had been done.

"Francisco de Sá was in consequence dispatched with six vessels (the names of which and of their commanders are enumerated), with which he called at Malacca, and accompanied the expedition against Bintam (then in the possession of the expelled king of Malacca), on leaving which he was overtaken by a dreadful storm, and one of his vessels, commanded by Dironte Coelho, reached the port of Calapa (where the fort was to be built), where she was driven on shore, and all the crew perished by the hands of the Moors (Mahomedans), who were then masters of the country, having a few days before taken the town from the native king, who had concluded the treaty with the King of Portugal, and given him the site on which to erect the fortress.

"But although the intended establishment on Java was thus frustrated, the Portuguese continued to have intercourse with that island, at which they frequently touched on their voyage to and from the Moluccas."

Decad. iv. Book i. Chapter 14.

"In August, 1626, Antonio de Britto, on his return from Ternati to Malacca, touched at the port of Paneruca, where he found his countryman, Jono de Moreno, who had twenty Malay junks under his command. From thence he proceeded to the town of *Tagasam*, whose inhabitants were at war with the Portuguese, and had captured a junk laden with cloves, which he had dispatched to Malacca, and they even attempted to take the vessel in which he himself was, which occasioned his quitting that place, having however first captured a junk laden with provisions."

Decad. iv. Book i. Chapter 17.

"In July, 1528, Don Garcia Henriquez appears to have touched at the port of Paneruca, (Panarukan) for the purpose of taking in provisions on his way to Malacca; and it also appears, that the king or chief of Paneruca sent ambassadors to the Portuguese governor of Malacca in the same year 1528."

The following is the substance of a description of Java from the Decada of Diego de Couto.—Decad. iv. Book iii. Chapter i.

Couto describes the wreck of a Portuguese vessel, and the destruction of her crew by the Moors, who had just become masters of the kingdom of Sunda, in nearly the same words as Barros. He then proceeds to state, that Francis de Sá ran before the storm along the coast of Java, and collected his scattered vessels in the port of *Paneruca*, and gives a general description of Java in nearly the following words.

"But it will be proper to give a concise description of this country, and to shew which were the Greater and the Lesser Java of Marco Polo, and clear up the confusion which has prevailed among modern geographers on this subject.

"The figure of the island of Java resembles a hog couched on its fore legs, with its snout to the channel of *Balaberao*, and its hind legs towards the mouth of the Straits of Sunda, which is much frequented by our ships. This island lies directly east and west; its length about one hundred and sixty, and its breadth about seventy leagues.

"The southern coast (hog's back) is not frequented by us, and its bays and ports are not known; but the northern coast (hog's belly) is much frequented, and has many good ports: and although there are many shoals, yet the channels and the anchorages are so well known, that but few disasters happen.

"There are many kingdoms along the maritime parts, some of them subordinate to the others; and beginning at the east (head of the hog), we will set down the names of such as are known: *Ovalle*, *Paneruca*, *Agasai*, *Sodayo*, *Paniaoa* (whose sovereign resides thirty leagues inland, and is a kind of emperor over these and others hereafter mentioned), *Tabao*, *Berdoao*, *Cajoao*, *Japara* (whose principal city or town is called Cerinhama, three leagues inland, while Japara is situated on the sea shore), *Damo*, *Margao*, *Banta*, *Sunda*, *Andrequir* (where there is much pepper, which is exported by a river called Jande). In the mountainous interior there are many kings, called *Gunos*; they live among rugged mountains, are savage and brutal, and many of them eat human flesh."

"These mountains are exceedingly high, and some of them emit flames like the island of Ternati. Every one of these kingdoms which we have named has a language of its own; yet they mutually understand each other, as we do the Spaniards and Galicians.

"The kingdom of Sunda is thriving and abundant; it lies between Java and Sumatra, having between it and the latter the Straits of *Sunda*. Many islands lie along the coast of this kingdom within the Straits, for nearly the space of forty leagues, which in the widest are about twenty-five, and in others only twelve leagues broad. *Banta* is about the middle distance. All the islands are well timbered, but have little water. A small one, called *Macar*, at the entrance of the Straits, is said to have much gold.

"The principal ports of the kingdom of *Sunda* are *Banta*, *Aché*, *Chacatará* (or, by another name, *Caravao*), to which every year resort about twenty *Sommas*, which are a kind of vessel belonging to *Chienhec* (Cochin China), out of the maritime provinces of China, to load pepper. For this kingdom produces eight thousand *bahars*, which are equal to thirty thousand quintals of pepper annually.

"Bantam is situated in six degrees of south latitude, in the middle of a fine bay, which is three leagues from point to point. The town in length, stretching landward, is eight hundred and fifty fathoms, and the seaport extends about four hundred. A river capable of admitting junks and galleys, flows through the middle of the town: a small branch of this river admits boats and small craft.

"There is a brick fort, the walls of which are seven palms thick, with wooden bulwarks, armed with two tiers of artillery. The anchorage is good; in some places a muddy, in others a sandy bottom, the depth from two to six fathoms.

"The King, Don John, conceiving that if he had a fortress in this situation he should be master of the Straits, and of all the pepper of those kingdoms, recommended it strongly to the lord admiral to have a fort built by Francisco de Sa;

and even now it would be perhaps still more important as well for the purpose of defending the entrance against the English and the Turks, as for the general security of the trade and commerce of those parts, which is the principal value of India. And it was the opinion of our forefathers, that if the king possessed three fortresses, one in this situation, one on *Acheen head*, and one on the coast of *Pegu*, the navigation of the east would in a manner be locked by these keys, and the king would be lord of all its riches; and they gave many reasons in support of their opinions, which we forbear to repeat, and return to Java.

"The island of Java is abundantly furnished with every thing necessary to human life; so much so, that from it *Malacca*, *Acheen*, and other neighbouring countries, derive their supplies.

"The natives, who are called *Jaos* (Javans), are so proud that they think all mankind their inferiors; so that, if a Javan were passing along the street, and saw a native of any other country standing on any hillock or place raised higher than the ground on which he was walking, if such person did not immediately come down until he should have passed, the Javan would kill him, for he will permit no person to stand above him; nor would a Javan carry any weight or burthen on his head, even if they should threaten him with death.

"They are a brave and determined race of men, and for any slight offence will run *amok* to be revenged; and even if they are run through and through with a lance, they will advance until they close with their adversary.

"The men are expert navigators, in which they claim priority of all others; although many give the honour to the Chinese, insisting that they preceded the Javans. But it is certain that the Javans have sailed to the Cape of Good Hope, and have had intercourse with the island of Madagascar on the off side, where there are many people of a brown colour, and a mixed Javan race, who descend from them."

Then follows the refutation of a ridiculous story told by Nicolas Couti, the Venetian, about a tree that produced a rod of gold in its pith, at which some well informed Javans, of whom Couti inquired, laughed very heartily.

"Marco Polo mentions the greater and the lesser Java. We are of opinion, that the Java of which we are treating is the lesser, and that the island of Sumatra is the greater Java; for he says that the greater Java is two thousand miles in circumference, and that the north star is not visible, and that it has eight kingdoms, *Taleh*, *Basma*, *Camara*, *Dragojao*, *Lambri Farafur*, from which it is very clear that he means Sumatra, for it has nearly the dimensions which he assigns it. The north pole is not visible, as this island lies under the equinoctial line, which is not the case with any of the islands situated to the northward, on all of which the north star is seen: and it is still more evident from the names of the kingdoms, for there cannot be a doubt that *Camara* is the same as *Camatra* (the *ç* being soft like *s*). *Dragojao* (which is pronounced *Dragojang*) or *Andreguir*, and *Lambri*, still retain their names on that island."

[7] This is the factory which by the recent convention has been exchanged with England for the Island of Banka.

[8] Mr. Muntinghe.

[9] Report of a Committee appointed to investigate East India affairs made to the Government of the Batavian Republic, dated 31st of August 1803, consisting of Messrs. Murman, Sic, Ponloe, Verbuell, D. Van Hogendorp, Nederburgh, and Voute.

[10] In a note on this source of revenue, Marshal Daendels says that he is sensible of the evils arising from the use of this drug, but that the Javans are so addicted to it, that no prospect of success could be entertained from any project for reducing its consumption. Yet even while he is making this observation, he tells us that the Commissioners fixed the sale at 1,200 chests, and that he in his estimate has only taken it at 800. It was afterwards reduced to less than 300 chests, without any fear of disturbance or any danger of illicit trade.

[11] Barros often alludes to his Treatise on Geography, in which he had described particularly all the countries mentioned in his *Decadas*; but it never was published, having been left in an imperfect state at his death.

CONTENTS OF VOLUME I.

	PAGE
DEDICATION	iii
PREFACE	vii
INTRODUCTION	xiii
CHAPTER I.	
Geographical Situation of Java—Name—Extent and Form— Divisions—Harbours—Mountains and Volcanos—Rivers and Lakes—General appearance of the Country—Mineralogical Constitution—Seasons and Climate—Metals—Minerals—Soil— Vegetable and Animal Kingdoms	1
CHAPTER II.	
Origin of the Natives—Javans compared with the Maláyus and Búgis—Comparative Progress of the three Races—Foreign Influence—Persons of the Natives—Manners—Population— Inequality of it accounted for—Population Tables—Increase of Population—Foreign Settlers—Chinese—Búgis—Maláyus— Moors—Arabs—Slaves—Gradations of rank among the Javans— Their Habitations, Dress, and Food	62
CHAPTER III.	
Importance of Agriculture to Java—Soil—State of the Peasantry— Price of Rice—Subsistence of the Peasantry—Dwellings— Agricultural Stock—Implements of Farming—Seasons—Different kinds of Land—Rice Cultivation—Maize, &c.—Sugar—Coffee— Pepper—Indigo—Cotton—Tobacco—Tenure of landed Property	117
CHAPTER IV.	
Manufactures—Handicrafts—Bricks—Thatch—Mats—Cotton Cloths—Dyes—Tanning—Ropes—Metals—Boat and Ship-	182

building—Paper—Salt—Saltpetre Works—Gunpowder, &c.—
Felling and transporting of Teak Timber—Fisheries

CHAPTER V.

Commerce—Advantageous Situation of Java for Commercial
Intercourse—Importance of Batavia in particular—Native Trade—
Roads and Inland Carriage—Markets—Influence of the Chinese—
Coasting Trade—Exports and Imports—Trade with the Archipelago [210](#)
—China—Kamtschatka—Western India—Europe, &c.—Dutch
Commercial Regulations—State of the Eastern Islands—
Advantages which they possess—Causes of the Depression of the
Nations and Tribes which inhabit them—Japan Trade

CHAPTER VI.

Character of the Inhabitants of Java—Difference between the
Súndas and the Javans—The Lower Orders—The Chiefs—Nature
of the Native Government—Different Officers of State—Judicial [272](#)
Establishments and Institutions—Laws, and how administered—
Police Institutions and Regulations—Military Establishments—
Revenue

CHAPTER VII.

Ceremonies of the Court—Deference paid to superior Rank—
Regalia—Processions—Pomp—Rank and Titles—Ambassadors—
Ceremonies attending Births, Marriages, and Funerals—Account of
the People called Kálang, and of the Inhabitants of the Téng'ger [343](#)
Mountains—The Bedui—Festivals—Amusements—The Drama—
Wáyangs—The Dance—Tournaments—The Chase—Tiger Fights
—Combat of Criminals with Tigers—Bull Fights, &c.—Games of
Skill and Chance—Other Customs and Usages

CHAPTER VIII.

Language—Little known to Europeans—Different Languages or
Dialects—Those of Súnda, Madúra, and Báli, compared with that
of Java Proper—The polite Language, or Language of Honour—
The Kawi, or Sacred and Classic Language—Numerals—Chandra [396](#)
Sangkala—Literature—Compositions in the Kawi Language, and
in the modern Javan—Influence of Hindu Literature—Introduction
of Arabic Literature—Poetry—The Brata Yudha, a Poem—Music
—Painting—Sculpture—Architecture—Arithmetic—Astronomy

**AN ACCOUNT
OF THE
ISLAND OF JAVA.**

CHAPTER I.

*Geographical Situation of Java—Name—Extent and Form—
Divisions—Harbours—Mountains and Volcanos—Rivers
and Lakes—General Appearance of the Country—
Mineralogical Constitution—Seasons and Climate—Metals
—Minerals—Soil—Vegetable and Animal Kingdoms.*

The country known to Europeans under the name of JAVA, or JAVA MAJOR, and to the natives under those of *Tána* (the land) *Jáva*, or *Núsa* (the island) *Jáva*, is one of the largest of what modern geographers call the Sunda Islands. It is sometimes considered one of the Malayan Islands, and forms a part of that division of the Oriental Archipelago which it has been lately proposed to designate as the Asiatic Isles. It extends eastward, with a slight deviation to the south, from 105° 11' to 114° 33' of longitude east of Greenwich, and lies between the latitudes 5° 52' and 8° 46' south. On the south and west it is washed by the Indian Ocean; on the north-west by a channel called the Straits of *Súnda*, which separates it from Sumatra, at a distance in one point of only fourteen miles; and on the south-east by the Straits of *Báli*, only two miles wide, which divide it from the island of that name. These islands, and others stretching eastward, form with Java a gentle curve of more than two thousand geographical miles, which with less regularity is continued from Acheen to Pegu on one side, and from *Tímor* to *Papúa*, or New Guinea, on the other: they constitute on the west and south, as do *Bánka*, *Bíliton*, the great islands of Borneo and Celebes, and the Moluccas on the north, the barriers of the Javan Seas and the Malayan Archipelago. From the eastern peninsula of India, Java is distant about one hundred and forty leagues, from Borneo about fifty-six, and from New Holland two hundred.

To what cause the island is indebted for its present name of Java^[12] (or *Jáva* as it is pronounced by the natives) is uncertain. Among the traditions of the country (which are more particularly mentioned in another place) there is one, which relates, that it was so termed by the first colonists from the continent of India, in consequence of the discovery of a certain grain,

called *jáwa-wut*,^[13] on which the inhabitants are supposed to have subsisted at that early period, and that it had been known previously only under the term of *Núsa hára-hára* or *Núsa kêndang*, meaning the island of wild uncultivated waste, or in which the hills run in ridges.

In the tenth chapter of Genesis we are told, that "the isles of the Gentiles were divided in their lands; every one after his tongue, after their families, in the nations:" and in the twenty-seventh chapter of Ezekiel we find among the rich merchants, those of *Javan* "who traded the persons of men, and vessels of brass, to the market of Tyre, and who going to and fro, occupied in her fairs, brought bright iron, cassia, and calamus." But we shall leave it to others to trace the connection between the *Javan* of Holy Writ and the Java of modern times. It appears, that the Arabs, who had widely extended their commercial intercourse, and established their religious faith over the greatest portion of the Indian Archipelago, long before the Europeans had navigated round the Cape of Good Hope, designate the whole of the nations and tribes which inhabit those regions by the general term of the people of *Jawi*, as in the following passage taken from one of their religious tracts:—"The people of *Jawi* do not observe with strictness the rule laid down for keeping the fast, inasmuch as they eat before the sun sets, while the Arabs continue the fast until that luminary has sunk below the horizon." *Jawa* or *Jawi* is also the name by which Borneo, Java, Sumatra, the Malayan Peninsula, and the islands lying amongst them, are known among the nations of Celebes, who apply the *Búgis* diminutive *Jawa-Jawáka*, or Java minor, to the Moluccas, *Ámbon*, *Bánda*, *Tímor*, and *Éndé*. *Jabadios Insulæ*, from *Jaba*, and *dib*, *div* or *dio*, has been employed in the largest sense by Europeans, and it is probable this was once generally the case among the Asiatics, with the terms *Java*, *Jawa*, *Jawi*, and *Jaba*,^[14] which, as the appellations of people inhabiting the countries beyond the continent or distant, some have derived from the word *jaù*, of very general acceptance in eastern languages, and meaning *beyond*, *distant*.^[15]

It is, perhaps, in consequence of these names having embraced the whole, or at least several of the islands collectively, that the accounts given by Marco Polo, and other early European voyagers, of particular islands, as Java Major and Java Minor, are so inconsistent with one another. The country described by Marco Polo as Java Minor, seems, beyond doubt, to have been the eastern coast of Sumatra; but that expression, "or Little Java,"

is now applied exclusively to *Báli*, as "Great Java" is to the island we are now describing. It is on the latter only, if we except what has been observed of the names given to the Archipelago generally by the natives of Celebes, that the islanders themselves apply the name of *Jawa*, in any of its forms, to their own country. It has there even a still more confined application, being generally limited to the eastern districts of the island, which may be considered as Java proper, in contra-distinction to the western districts, which are for the most part inhabited by a people called *Súnda*, from whom the Straits and Isles of Sunda have been named by Europeans.

Whether Sumatra, Java, or any other island of the Archipelago, or the whole or several of them collectively, may not have formed the *Taprobane* of the ancients, is perhaps still an undecided question, notwithstanding the claims to this distinction which have of late years been rather admitted than proved in favour of Ceylon. The most striking fact detailed in the accounts which have reached us of this ancient country, and one which, from its nature, is least likely to have been disfigured or perverted by the misrepresentations or prejudices of travellers, is, that it was bisected in nearly equal portions by the equinoctial line, and that to the southward of it the polar star was not visible. How can this statement be evaded, or in any way applied to Ceylon? Major Wilford seems inclined to consider *Taprobane* as derived from the Sanscrit words *tapa* (penance) and *vana* (forest or grove), a derivation equally favorable to the claims of the Javans, *tapa* and *wana*, or *wono*, having the like signification in their language; and if, as there is reason to believe, an extensive intercourse subsisted in very remote times between Western India and these islands, where was there a country that could more invite the retreat of holy men, than the evergreen islands which rise in endless clusters on the smooth seas of the Malayan Archipelago, where the elevation and tranquillity of devotion are fostered by all that is majestic and lovely in nature?

Although in Sumatra no traces of their residence have yet been discovered, except in the language and customs of the people; on Java, which is almost contiguous to it, it is abundantly attested by monuments still existing in stone and brass. In few countries, with which we are yet acquainted, are more extensive ruins to be found of temples dedicated to an ancient worship. If tradition may be trusted, every mountain had its *tapa*, or recluse, and the whole energies and resources of the country would appear to have

been applied to the construction of those noble edifices, the ruins of which still strike the spectator with astonishment and veneration.

That these splendid and magnificent piles were erected under the superintendence of a foreign people, more skilled in the arts than the rude and simple natives of the islands, can scarcely be doubted; and that they were sacred to the rites of the Hindu religion, according to some persuasion or other, is equally clear, from the numerous images of deities and attributes by which they are adorned, many of which are still preserved in their original state. Further investigation may perhaps establish Java and Sumatra, or rather the Malayan ports (in which general term we may include all the islands containing the Malayan Ports) as not only the *Taprobane* or *Tapavana* of the ancients, but also the Sacred Isles of the Hindus.

The map of Java which accompanies this work has been drawn principally from actual surveys, many of which were made by order of the British Government on the island. The first map of Java which was presented to the public, and from which nearly all those, which have subsequently been engraved, are copies, was published by Valentyn,^[16] and consists of seven sheets. As, at that period, little more was known of the island by the Dutch than some parts of the coast, the country in the immediate vicinity of their capital, with perhaps the province of Bantam, the author had no materials for making a map of the whole island, which could pretend to much authority or value. Most of the land in the immediate vicinity of Batavia having been sold to Europeans, was of necessity surveyed, in order to ascertain the different boundaries; but it was only a short time before the arrival of Marshal Daendels, in 1808, that any steps appear to have been taken by the local authorities, to procure correct statistical and topographical information of the other more important districts of the island. Something to this effect was done during the administration of Mr. Engelhard, late Governor of the North-east Coast, but it was only during the government of the Marshal that these objects were pursued with much energy or success.

At the period of the arrival of the English, topographical surveys of *Semarang* and several of the eastern districts had been completed; and although somewhat deficient in accuracy of measurement and neatness of execution, yet as they appeared sufficiently correct for many valuable

purposes, and as the Government was anxious to obtain, without loss of time, a better acquaintance with the geography of the country, it was determined to make some sacrifice of accuracy to the considerations of economy and expedition, and to survey the other districts upon the same plan. While these surveys were in progress, the territorial interest which the European government obtained in the central provinces, induced them to turn their attention to the improvements of which the Solo River might be susceptible. This river, the most considerable in the island, passes through *Súra-kérta*, the capital of the *Susuhúnan*, or (as he is termed by Europeans) Emperor of Java, and discharges itself into the sea near *Grésik*. An actual survey was accordingly made by a British officer of experience, particularly instructed to ascertain how far it might be practicable to improve its navigation by the aid of artificial cuts and dams.

A greater object soon called for more extensive measures. When it was determined to introduce an entirely new system of internal management, by the abolition of feudal service, and the establishment of a more permanent property in the soil, it was deemed essential that a detailed survey should be made of the different districts successively, in which the new system was to be introduced. This was intended to form the basis of a general agricultural survey of the country, then about to be made. In several of these districts this detailed survey has been completed; and, with the exception of the provinces still under native jurisdiction, and called Native Provinces, nearly the whole of the land on Java, not in a state of absolute forest, has been measured with more or less accuracy. Of the native provinces but a very small part has been actually surveyed; with regard to the rest, the materials from which the present map is taken, were principally obtained from observation made during occasional routes through them. The southern division of Bantam being principally forest, has not been actually surveyed; neither has the island of Madura been yet surveyed by Europeans: the eastern part of it was measured by the natives, and it was principally upon their authority that the map now presented of that island was drawn. The best charts of both the north and south coast have been consulted. The three harbours of Wyn Coops Bay, *Cheláchap*, and *Pachítan*, on the latter, are laid down from actual survey, as well as the entrance to the harbour of *Surabáya*. On the whole, therefore, although the map now engraved is far from perfect, and of course suffers from the reduction necessary to adapt it to the rest of the work, it is presumed that it will aid the reader in most of

the geographical objects to which this volume will refer, and that its superiority over those that have previously appeared is such as to justify its publication.

The length of Java, in a straight line drawn between its extreme points, (Java Head, and the south-east point of the island) is five hundred and seventy-five geographical, equal to six hundred and sixty-six statute miles: its breadth varies from one hundred and seventeen geographical, or one hundred and thirty-five and a half statute miles (between the south-west point of *Pachítan* bay and the north point of *Japára*) to forty-eight geographical or fifty-six statute miles, (between the mouth of the *Seráyu* river and the *Marabáya*, five degrees east of *Tegál*);^[17] and it is estimated to contain an area of about fifty thousand statute miles.

Numerous small islands are scattered in its immediate vicinity, particularly along the northern coast, and contribute, with the projecting points and headlands inclosing the different bays, to form harbours of various capacities. The most important of these islands is that of *Madúra*, which is separated from the main land of Java by a strait in one part not more than a mile broad, and serves to form the important harbour of *Surabáya*. This island has the appearance of being a continuation of the main land of Java, and having been long subjected to the same political authority, has generally formed one of the provinces of the Javan empire. In length *Madúra* is about seventy-nine geographical, or ninety-one and a half statute miles; and its narrowest part is about twenty-seven geographical, or thirty-one and a quarter statute miles. The small islands lying to the east of it are considered as its dependencies.

The form of Java is chiefly remarkable for the rectangularity of its outline, which is such that the island might be divided into five or six parts, each a rectangular parallelogram drawn by an unsteady hand. Its western and northern coasts abound with bays and inlets. The outline of *Madúra* is more regular, especially on the northern coast.

The coast from Bantam to the river *Chi-mánok*, about two degrees in length on the north, is nearly parallel to that which extends from Wyn Coops Bay to a point about twenty miles west of *Núsa kambúng'an*, the breadth throughout being about seventy-eight geographical miles; and from the same point to the river *Manchíngan*, a distance of about one degree and

three-quarters, the coast is nearly parallel to that which lies between *Chéríbon* and *Semárang*, the breadth throughout being about fifty-seven geographical miles. From the west point of *Japára* to point *Pángka* on the north, distant from it about two degrees, and along the corresponding coast on the south, the average breadth is seventy-three geographical miles; and from *Surabáya* to the north-east point of the island, distant about one degree and a half, and along the south coast opposite to it, the average breadth is forty-five geographical miles.

At the time when Europeans first visited Java, the whole of the island acknowledged the supremacy of one sovereign: but there was a period in its history when it was nearly equally divided under the independent administration of two powers, one established in the eastern, and the other in the western districts; and as there is a marked distinction between the descendants of these two nations, the most general division of the country is still into the western and eastern districts, to the latter of which alone the term Java is applied by the natives. They are separated by the river *Losári*, which forms the boundary between *Chéríbon* and *Brébes*: and all the western, the northern, with a few of the inland districts and the Island of *Madúra*, are under the immediate authority and administration of the European government. The rest of the island remains subject to the native princes, and on that account is designated on the map and elsewhere, with more regard to convenience than correctness of language, as the Native Provinces.

The provinces under European authority have latterly been divided into fifteen residencies, or separate administrations, exclusive of the seat of government, which, as they will be frequently referred to in the course of this work, it may be convenient to notice in this place.

Commencing from the west, the province, or as it is usually termed, the kingdom of Bantam (properly *Bántan*) occupies the first place. This extensive province forms a large portion of the island. It is washed on three sides by the sea. At the east it joins with the environs and highlands of Batavia and the district of *Chi-ánjur*, and on the west it is bounded by the Straits of Sunda; and in this quarter comprises dependant islands scattered along its shore, and the two harbours of *Mew* and *Merák*, which, with other bays, deeply indent the coast. Bantam, the native capital of this province, has been latterly deserted by the European establishment for *Sírang*

(commonly called Ceram), an elevated and healthy station about seven miles further inland.

Next in succession towards the east is the division of Batavia, which comprises what formerly constituted the native province of *Jákatra* or *Jokárta*. The northern part of this division, towards the coast, includes the city of Batavia, populous and important on account of its excellent roads for shipping, its advantageous position for European commerce, and as being the long established seat of the Dutch government, but less fertile and healthy than the more eastern provinces of the island.

South and east of the division of Batavia and its environs lie what are termed by Europeans the Preanger (*Priáng'en*) Regencies,^[18] the central and southern districts of which, stretching from Bantam to Chéríbon, are extremely mountainous. This extensive portion of the island, which now includes a large part of Chéríbon, consists of the districts of *Kráwang*, *Chiásem*, *Pamanúkan*, *Kándang-aúr*, and *Dramáyu* or *Indramáyu*, along the northern coast, and of the inland and southern districts of *Chi-ánjur*, *Bándung*, *Súmedang*, *Lim-báng'an*, and *Súka-púra*; the southern coast, from the boundary of Bantam to that of Chéríbon, being included within the subdivisions of *Chi-ánjur*, and *Súka-púra*.

To the eastward of these districts, and crossing the island from north to south, is the province of *Chéríbon*, divided into ten principal districts. To the south is the island of *Núsa-kambáng'an* which forms the harbour of *Cheláchap*.

East of Chéríbon, as before noticed, it is only the northern and some of the inland districts, that are immediately subject to the European authority. These, during the British government of the island, were comprised under the administrations of *Tegúl*, *Pakalúng'an*, *Semárang*, *Japára*, and *Rembáng*, which under the Dutch East-India Company constituted what was termed the government of the *North-east Coast*, the seat of which was at *Semárang*; and of *Grésik*, *Surabáya*, *Pasúrúan*, *Bisúki*, and *Banyuwáangi*, which, with *Bankálang* and *Súmenap* on *Madúra*, constituted, under the same authority, the division of the *Oost Hook*, or East Point of the island, of which *Surabáya* was the principal station. Inland of *Semárang* and *Pakalúngan*, and bounded by those divisions, and by the provinces of the native princes, is situated the rich and fertile district of *Kedú*, which, with

the more eastern districts of *Grobogan*, *Wirosári*, *Blóra*, *Jípang*, *Jápan*, and *Wírasaba*, stretching inland from *Semárang* to *Surabáya*, were ceded to the British government in the year 1812.

The capitals of all the northern districts bear the same name with the districts themselves, and are generally situated on small rivers at no great distance from the sea.

The NATIVE PROVINCES are divided between two native sovereigns: the *Susuhúnan*, or Emperor of Java, who resides at *Súra-kérta*,^[19] on the *Solo* River; and the Sultan, who resides at *Yúg'ya-kérta*,^[20] near the south coast, in the province of *Matárem*. These provinces comprise several of the richest districts of the island, among which are *Bányumas*, *Rómo*, *Bágalen*, and *Matárem*, to the west; and *Mádion*, *Jagarága*, *Sukawáti*, *Pranarága*, *Kértasána*, *Blítar*, and *Kedíri*, to the east; and with the exception of the small district of *Pachítan*, which has been recently ceded to the European government, occupy the whole of the southern coast from *Chéribon* to *Málang*, a distance of not less than two hundred and fifty miles, and form about a fourth part of the whole island.

The districts near the coasts are generally separated from each other by rivers; those in the interior often by ranges of hills and mountains. The districts are again divided, each subdivision including numerous villages.

The principal harbour of the island is that of *Surabáya* in the eastern districts, formed by the approaching extremities of Java and *Madúra*. It is broad and spacious, secure against the violence of the sea and wind, and may be rendered impregnable to any hostile attack.

The next in importance is that of Batavia, more properly, perhaps, called the roads of Batavia, which are sheltered by several islands lying in the outer part of the bay. These roads, however, not admitting of any means of permanent defence from the attack of a superior naval force, the Dutch government, during the late war, were induced to fortify the small harbour of *Merák* Bay, on the north-west coast of Bantam.

Along the northern coast, there are perhaps other positions which admit of being improved into convenient harbours; but where the whole coast affords excellent anchorage at nearly all seasons of the year, and where vessels of any burthen can approach all the principal stations, at a convenient distance

for the barter of their merchandize, the purposes of commerce are in that respect already sufficiently provided for. The sea being usually smooth, and the weather moderate, the native vessels and small craft always find sufficient shelter at the change of the monsoon, by running under some of the numerous islands scattered along this coast, or passing up the rivers, which, though in general difficult of entrance on account of their bars, are for the most part navigable to such vessels, as far up as the maritime capitals, through which they run.

The south coast, on account of its exposure to the open ocean, the consequent high swell or surf which breaks on it, and its general want of good anchorage, is seldom visited by shipping. But even here harbours may be found; and those of *Cheláchap* and *Pachítan* might, no doubt, be frequented with safety, were it considered desirable to attract commercial adventurers to this side of the island.

Passing from the coast to the interior of the country, the stranger cannot fail to be struck with the bold outline and prominent features of its scenery. An uninterrupted series or range of large mountains, varying in their elevation above the sea from five to eleven, and even twelve thousand feet,^[21] and exhibiting, by their round base or pointed tops, their volcanic origin, extend through the whole length of the island.

The first of this series, commencing from the westward, is in Bantam. This mountain (*Gûnung-kárang*), though of moderate elevation compared with others on the island,^[22] is seen at a considerable distance from sea, and is a well known landmark to mariners. It lies due south of the town of Bantam, at a considerable distance from the sea.

The next mountain of the series is the *Salák*, the eastern foot of which is connected with the *Gedé* or *Panarang'o*, situated about fifty miles south of Batavia. These two mountains are seen from the roads of Batavia, and, from the appearance they exhibit, are usually termed by mariners the Blue Mountains.

From the eastern part of the *Gedé*, the volcanic series separates into two independent branches, one of which inclines to the south; the other proceeds almost due east, slightly verging to the north. The former breaks into an irregular transverse range, which extends across the island, till it approaches the northern branch, from whence the general series is

continued in an easterly direction as far as the mountain *Sindóro*, the western of the two mountains known by mariners as the Two Brothers. The mountain *Súmbing*, or *Sindári* (the second of The Brothers), is somewhat further to the south.

At a short distance from the eastern foot of the mountain *Súmbing* are three large volcanos, in a direction almost north and south, dividing the large series transversely; these are the mountains *Ung'arang*, *Merbábu*, and *Merápi*. The next volcano, in an eastern direction, is that of *Japára*, which deviates more than any other from the regular series, and forms a peculiar peninsular appendage to the island. The series is then continued in an easterly course from the *Merápi* as far as the mountain *Telágawúrung*, which is in contact with the ocean at the eastern end of the island.

The several large mountains comprised in this series, and which are in number thirty-eight, though different from each other in external figure, agree in the general attribute of volcanos, having a broad base gradually verging towards the summit in the form of a cone.

They all rise from a plain but little elevated above the level of the sea, and each must, with very few exceptions, be considered as a separate mountain, raised by a cause independent of that which produced the others. Most of them have been formed at a very remote period, and are covered by the vegetation of many ages; but the indications and remains of their former irruptions are numerous and unequivocal. The craters of several are completely extinct; those of others contain small apertures, which continually discharge sulphureous vapours or smoke. Many of them have had irruptions during late years. ^[23]

Besides the mountains of the larger series above described, there are extensive ranges of mountains of an inferior elevation, sometimes connected with the larger series, and sometimes independent of them, which are also for the most part volcanic. Numerous ridges of hills traverse the country in various directions, and the surface of the island in general, independently of these more striking features, is in most parts undulating and uneven, except on the sea coast.

A country which abounds in mountains is seldom deficient in rivers; accordingly, no region is perhaps better watered. Java is singularly favoured in the number of its streams. The size of the island does not admit of the

formation of large rivers, but there are probably fifty, that in the wet season, bear down rafts charged with timber and other rough produce of the country, and not less than five or six at all times navigable to the distance of some miles from the coast. It would be vain to attempt numbering those which are precious to the agriculturist; they are many hundreds, if not thousands.

The largest, and most important river on the island, is that of *Sólo*, or as it is termed by the natives, *Beng'áwan* (the great) *Sólo*, which takes its rise in the district of *Kadáwang*, and after collecting the waters of the surrounding hills, becomes a stream of considerable depth and breadth at *Súra-kérta*, where it is further increased by the waters collected from the adjacent districts. Its general course from the capital is in an east-north-easterly direction, till it discharges itself by two principal outlets into the sea, near *Grésik* and *Sidáyu*. After leaving *Matárem*, it traverses the provinces of *Sukawáti*, *Jagarága*, *Mádion*, *Jí pang*, *Blóra*, *Túban*, *Sidáyu*, and *Grésik*.

At *Awí*, near the boundary of *Mádion* and *Jagarága*, on the eastern side of the river, a large branch from the south-eastern provinces, commonly called the river of *Mádion*, unites itself with that of *Sólo*, and from hence its course, which in various places has been rapid, and in a few places impeded with rocks, is calm, regular, and steady to its discharge. It has been estimated, that the extent of the windings of this river is not less than three hundred and fifty-six English miles, from *Súra-kérta* to *Grésik*, which in the chart only gives a straight line of one hundred and forty English miles, and during its whole course no serious impediment appears to its navigation.

This river is of great importance to the inland trade of many of the eastern provinces. During the rainy season, boats of considerable size convey the produce of an extensive tract of country to the sea; and, except during the months of August, September, and October, and in seasons uncommonly dry, it bears down boats of middling or small size during the whole year, from a considerable distance above *Súra-kérta*. The boats employed in the navigation of the river are of very different sizes, and of a peculiar construction: they are very long in proportion to their breadth, have flat bottoms, and draw very little water. Those generally used in conveying the produce from one village to another in the vicinity of *Súra-kérta*, carry only a few tons, and have a temporary covering of straw mats, or *kájang*; others, more carefully constructed, have a regular roof of planks and a chamber or

cabin which can be closed, and convey from fifty to one hundred tons. These are generally used by individuals in their adventures to *Grésik* and *Surabáya*. The largest, which are the property of the prince, load nearly two hundred tons. They are employed in transporting the produce of several of the interior provinces, consisting chiefly of pepper and coffee, to *Grésik*, and return laden with salt and foreign merchandize for the consumption of the interior. They require a considerable depth of water, and can only pass when the river is swollen by continued rains. They mostly depart from *Súra-kérta* in the month of January. Their course down the river is rapid: they generally arrive at *Grésik* in eight days; but they can perform but one voyage in a season, as they require nearly four months to work up the stream.

The river of *Surabáya*, the second in magnitude of the whole island, rises near *Bátu*, in the vicinity of the southern hills of the mountain *Arjúna*. It is near its source called *Káli-brántas*. Near the capital of *Málang* it receives two streams from the eastward. There it first takes its course through the most southern provinces of the island, when winding round the mountain *Káwi* it returns again to the north, receiving near its curvature numerous augmentations from the southern ridge of mountains. The chief of these is the *Lésti*, a considerable river coming from the east, which joins it near the boundary of *Málang* and *Seríng'at*. Continuing its course in a northern direction, it traverses the provinces of *Rówo* and *Kedíri*, being joined on the way by the river *Rówo*: here it attains its utmost magnitude, and is distinguished by the name of *Beng'áwan Kedíri*. From the capital of this district to its mouths, it is navigable for boats of very considerable size, and its course is steady and uninterrupted. Having crossed the district of *Wirasába* and *Jápan*, it enters that of *Surabáya*. It discharges itself into the ocean by five outlets, which form as many separate rivers. The first of them, taking an easterly course, is called the river *Púnong*: then follow those of *Tang'goláng'ing*, *Sído-kéri*, *Kedóng*, and lastly of *Wóno-króno*, which again subdividing sends off the branch which passes *Surabáya*.

Several smaller rivers, which fall into the sea between *Semárang* and *Lásem*, are highly important for the conveyance of teak timber from the central forests to the coast; and the waters from some of them being directed into canals, particularly through the low district of *Demák*, tend considerably to increase the inland navigation of the country.

In the western districts, the principal rivers which discharge themselves into the sea on the northern coast are the *Chikándi*, which forms the present boundary between Bantam and the environs of Batavia; the *Chi-dáni*, which discharges itself below *Táng'ran*; the *Chi-tárom*, which falls into the sea below *Kráwang*; and the *Chi-mánok*, which forms the present boundary between *Dramáyu* and *Chéribon*. The principal rivers which discharge themselves by the south coast are the *Chi-mandíri*, which falls into the sea at *Palábuan-rátu*, or Wyn Coops Bay; the *Chi-tándui*, which disembogues near *Núsa-kambáng'an*; and the *Seráyu*, which taking its rise in the mountain *Díeng* or *Práhu*, traverses the rich districts of *Bányumas*, and falls into the sea a short distance to the east of *Cheláchap*; but these rivers, though of considerable depth, are choked up at their mouths by heavy banks or bars, and in consequence of the heavy surf which constantly breaks on the southern coast, are dangerous at their entrance.

Along the northern coast, almost every district has its principal river, and most of them are navigable up to the maritime capitals for native vessels of considerable burthen; but they all have the disadvantage of being partially blocked up at their discharge by extensive bars and mud banks, an evil which is extending with the increase of agriculture, by reason of the quantify of soil necessarily washed down in the process of irrigating the land for the rice cultivation. Most of them require the application of jetties or piers to deepen the passages at their entrance.

There are no lakes of any considerable size on Java, for that name cannot be given to the *ráwas*, or swamps, which though swelled to a considerable size in the wet season, are for the rest of the year either dried up or choked by vegetation. Of this description are two extensive tracts; one inland of *Japára*, usually termed by the Dutch the *Binnen Zee*, or inland sea; and another in the district of *Semárang*. In *Báglen* also (one of the native provinces on the southern side of the island) there is a lake which supplies the neighbouring country with fish, and along the coast of which a traffic is carried on in boats.

Extensive swamps are also found in some parts of the native provinces, and in the mountainous districts of the *Súnda* country. Several very beautiful lakes, of small dimensions, are discovered among the hills, and some of them can evidently be shown to have been formed of the craters of extinct volcanos.

The general aspect of Java on the northern coast is low, in many places swampy and overgrown with mangrove trees and bushes, particularly towards the west. The southern coast, on the contrary, consists almost entirely of a series of rocks and cliffs, which rise perpendicularly to a considerable height. In the interior, stupendous mountains stretch longitudinally throughout the island, while others of an inferior elevation, and innumerable ranges of hills running in various directions, serve to form and confine plains and valleys of various elevations and extent. On the northern side, the ascent is in general very gradual, from the sea-coast to the immediate base of the mountains; particularly in the western parts of the island, where it has the greatest breadth, and where the mountains are situated far inland. In approaching the mountains, which lie at the back of Batavia, there is a gradual but almost imperceptible acclivity for about forty miles. In other parts, where the mountains and hills approach nearer to the coast, the ascent is of course more abrupt, as may be observed in the vicinity of *Semárang*.

Although the northern coast is in many parts flat and uninteresting, the interior and southern provinces, from the mountainous character of the country, may be reckoned amongst the most romantic and highly diversified in the world; uniting all the rich and magnificent scenery, which waving forests, never-failing streams, and constant verdure can present, heightened by a pure atmosphere and the glowing tints of a tropical sun.

The largest of the elevated plains are; in the west, that of *Bándung*, formed between the two ranges of volcanos which branch off from the foot of the mountain *Gedé*; and in the east, those usually termed the plains of *Sólo* and *Kedíri*, which extend along the central districts from the *Merápi* to *Kedíri* and the site of the ancient capital of *Mejapáhit*. These are of considerable magnitude, and with the exception of the valley of *Kedú* and the province of *Bányumas*, through which the beautiful river of *Seráyu* bends its winding and romantic course, are perhaps the richest parts of the island. The lowlands, however, are not without their claims to that distinction; especially the flats of *Demák*, once an extensive swamp, and the Delta of *Surabáya*. Large tracts, particularly in the mountainous ranges of the western districts, still remain in a state of nature, or where the ground has been once cleared of forest, are now overrun with long and rank grass. In the central and eastern districts, the country is comparatively well clothed with cultivation.

Quitting the low coast of the north, in many parts unhealthy, the traveller can hardly advance five miles inland without feeling a sensible improvement in the atmosphere and climate. As he proceeds, at every step he breathes a purer air and surveys a brighter scene. At length he reaches the highlands. Here the boldest forms of nature are tempered by the rural arts of man: stupendous mountains clothed with abundant harvest, impetuous cataracts tamed to the peasant's will. Here is perpetual verdure; here are tints of the brightest hue. In the hottest season, the air retains its freshness; in the driest, the innumerable rills and rivulets preserve much of their water. This the mountain farmer directs in endless conduits and canals to irrigate the land, which he has laid out in terraces for its reception; it then descends to the plains, and spreads fertility wherever it flows, till at last, by numerous outlets, it discharges itself into the sea.

Almost all the mountains or volcanos, in the large series before noticed, are found on examination to have the same general constitution: they are striped vertically by sharp ridges, which, as they approach the foot of the mountain, take a more winding course. These ridges alternate with valleys, whose sides are of a very various declivity. Large rocks of basaltes occasionally project, and in several instances the valleys form the beds of rivers towards the tops of the volcanos; in the rainy season they all convey large volumes of water.

Next in importance to this extensive series of primary mountains, there are various ridges of smaller mountains, or hills, extending in different directions, with nearly an equal degree of elevation; sometimes originating from or connected with the primary volcanos, sometimes forming independent ranges, and arising separately and at a distance from the great series. These, which have been termed secondary mountains, though evidently of a volcanic nature, differ in many particulars of their constitution from those of the larger series. They generally extend in long narrow ridges, with but a moderate elevation, and their sides are less regularly composed of the vertical ridges above mentioned. In most cases, a stratified structure and submarine origin may be discovered. They are generally covered with large rocks of basaltes; and in some instances they consist of wacken and hornblende, which is found along their base in immense piles.

Hills of calcareous constitution, with only a moderate degree of elevation, occur in smaller ridges, often with a flat or tabular top; or in steep rocks and eminences. These are sometimes found in the centre of the island, covering the volcanic districts, but much more frequently near the northern and southern shores.

Hills of a mixed nature, partly calcareous and partly volcanic, are also found. The southern coast of the island consists almost entirely of them, rising in many places to the perpendicular height of eighty or one hundred feet, and sometimes much higher. These, as they branch inward and approach the central or higher districts, gradually disappear, and give place to the volcanic series, or alternate with huge masses of basaltic hornblende, that appears to assume a regular stratification. At the base of these, or in the beds of the rivers which proceed from them, are frequently found various silicious stones, as common flints, prase, hornstone, jasper, porphyry, agate, cornelian, &c.

Alluvial districts, evidently of recent origin, are noticed in several parts of the island. These are formed from the sediment and near the discharge of large rivers, and at the borders of the calcareous ridges, which are in many instances partially covered by them: their boundary can easily be traced, and most of them are still in a state of constant progression. Among other phenomena are mineral wells of various temperature and impregnation; wells of naphtha, or petroleum; and rivers arising, in a few instances, from the craters of volcanos, impregnated with sulphureous acid^[24].

From these, and all other investigations yet made, the constitution of Java appears to be exclusively volcanic. From the vast Asiatic chain of mountains, one branch of which terminates in Ceylon, proceeds another, which traversing Arakan, Pegu, and the Malayan peninsula, extends to Sumatra, *Bánka*, and *Bíliton*, where it may be said to disappear. On Java no granite has been discovered. In its constitution, as in its direction, it may be considered as the first of a series of volcanic islands, which extend nearly eastward from the Straits of Sunda for about twenty-five degrees.

At what period the island assumed its present shape, or whether it was once joined to Sumatra and *Báli*, is matter for conjecture. The violent convulsions which these islands have so often suffered, justify a conclusion that the face of the country has been frequently changed, and tradition

mentions the periods when Java was separated from those islands;^[25] but the essential difference which has been found in the mineralogical constitution of Java and Sumatra, would seem to indicate a different origin, and to support the opinion that those two islands were never united. Whether, at a period more remote, the whole Archipelago formed part of the continent of Asia, and was divided from it and shattered into islands; whether they were originally distinct from the main land, or whether they were formed at the same time, or subsequently, are questions we cannot resolve. Yet, when we reflect on the violence of those dreadful phenomena^[26] which have occurred in our own times in the smaller islands of the volcanic series, and view this range, as it is now presented to us on the map of the world, a conjecture might perhaps be hazarded, that the whole may have once formed but the southern side of one large island or continent, within which much of the main land has fallen in, and subsequently disappeared on the influx of the sea.

The constitution of the island is unfavourable to metals. All the examinations hitherto made confirm this assertion, and it may be laid down as a general position, that no metals occur, in such a quantity, or with such richness of ore, as to reward the operations of the miner. The only notice we have of the existence of gold or silver is contained in the first volume of the Transactions of the Batavian Society; and the attempts on the mountain of *Párang*, in 1723, and on the *Mégeméndung*, in 1744, were soon abandoned. Iron pyrites is found in small quantity in several districts, as well as red-ochre; which, however, often contains so little iron, as scarcely to serve for the common purpose of paint. The existence of mercury in the low lands of *Démak*, where it is distributed in minute particles through the clay of the rice-grounds bounding one of the principal rivers of that district, has not been considered as an indication of a mine, or of the ores of that metal.

No diamonds are found, nor other precious stones, but many minerals of the schorl, quartz, potstone, feldspar, and trap kind. They mostly exist in mountains of secondary elevation, towards the southern shores of the island, sometimes in extensive veins; but separate fragments are carried down by the rivers, and found far from their original deposition. Prase is found in very extensive veins; hornstone is also abundant in particular situations, as well as flint, chalcedony, hyalite, common jasper, jasper-agate, obsidian, and porphyry.

The soil in Java is for the most part rich, and remarkable for its depth; probably owing to the exclusively volcanic constitution of the country, and the constant accession of new mould, which is washed down the side of its numerous mountains. It has the character of being in a high degree richer than the ordinary soil of the Malayan countries in general, particularly of Sumatra and the Malayan peninsula. The best soil resembles the richest garden-mould of Europe; and whenever it can be exposed to the inundation necessary for the rice crop, requires no manure, and will bear without impoverishment, one heavy and one light crop in the year: the poorest, with this advantage, will yield a liberal return to the husbandman. In an island of such extent and variety of surface, the soil is necessarily various, but its general character is that of extraordinary fertility. The red and very light soil of the western districts is generally considered inferior to the dark brown and stiffer soil which prevails in the eastern. The best soil is usually found near the beds of rivers, in the valleys, and on the slopes of the largest mountains: the worst on the ranges of low calcareous hills, which run through different parts of the island.

The seasons, in all the countries situated within about ten degrees of the equator, agree in this: that as one eternal summer prevails, they are not distinguished as hot and cold, but as wet and dry. On Java the seasons depend upon the periodical winds. The period of the setting in of these winds is not determined within a few weeks; but generally the westerly winds, which are always attended with rain, are felt in October, become more steady in November and December, and gradually subside, till in March or April they are succeeded by the easterly winds and fair weather, which continue for the remaining half year. The heaviest rains are in the months of December and January, and the driest weather is in July and August; at which latter period, also, the nights are coldest and the days hottest. The weather is most unsettled when the season is changing, particularly at the first setting in of the westerly winds: but those violent storms and hurricanes, which are so often felt in the West Indies and in higher latitudes, are here unknown. With the exception of a few days at these periods, or when the westerly winds are at their height, vessels of any description may ride in safety in most of the bays along the northern coast of the island; and on shore, the wind is never so violent as to do damage. Thunder-storms are, however, frequent, and the lightning is extremely vivid. In the vicinity of the hills, and elsewhere during the dry season,

seldom a day passes without thunder and lightning; and although these grand exhibitions of nature cause less consternation in general within the tropics than beyond them, it cannot be denied that they are destructive of many lives. Earthquakes are to be expected in a volcanic country, and are frequent in the vicinity of the volcanos; but the European towns have never sustained any serious injury from them.

During the rainy season there are many days free from showers. The mornings are generally clear, and although the rains sometimes continue without intermission for several days, and frequently fall in torrents, they are not marked on Java by that decided character, either of permanence or violence, which distinguishes the periodical rains of the continent of India; neither is the dry season distinguished by that excessive aridity which attends the hot seasons of that country. Even in July and August, the atmosphere is refreshed by occasional showers, and the landscape is at all times of the year covered with the brightest verdure. The thermometer of Fahrenheit has been known to rise along the northern coast as high as 90° about three in the afternoon, and even higher, particularly in the large and low capitals of Batavia, *Semárang*, and *Surabáya*; but from observations made during a course of some years at Batavia, and published under the authority of the Dutch government, it has been found usually to range between 70 and 74° in the evenings and mornings, and to stand about 83° at noon. By similar observations at *Semárang*, the same thermometer, placed in a spacious and open apartment, has averaged $87\frac{1}{2}^{\circ}$ at noon.

At a distance inland of not more than thirty or forty miles, where the ascent is gradual, and of fifteen or twenty or less where it is rapid, the thermometer falls from five to ten degrees lower. At *Chi-serúa*, situated about 40 miles inland of Batavia, and *Chi-pánas*, about twelve miles further, on the opposite slope of the mountain *Gedé*, the thermometer ranges generally between 60 and 70° . In the morning, at six o'clock, it is sometimes as low as 57° ; and in the afternoon, at three, its usual height is from 67 to 70° , but seldom rising to 72° . On some of the hills inland of *Semárang*, on which Europeans frequently reside during the dry season, at an elevation of about four thousand feet, the thermometer is frequently seen as low as 45° , and generally, in the clear season, ranges from 50 to 62° , and on the summit of one of the mountains (*Sindóro*) it has been observed as low as 27° ^[27]. Ice, as thick as a Spanish dollar, has been found; and hoar-frost, denominated

bóhon úpas, or the poisonous dew, has been observed on the trees and vegetation of some of the higher regions.

By its insular situation, the climate of Java enjoys the benefit of land and sea breezes, which in its least favoured parts subdue the fierceness of the tropical rays, while the great elevation of its interior affords the rare advantage, that from the sea-shore up to the tops of the mountains, there is, almost from one end of the island to the other, a regular diminution of the temperature, at the rate of two or three degrees of Fahrenheit for every ten miles.

The general inference which has been drawn by professional men, from the experience which the occupation of Java by the British has afforded, is, that with the exception of the town of Batavia, and some parts of the northern coast, the island of Java stands on a level, in point of salubrity, with the healthiest parts of British India, or of any tropical country in the world.

The principal stations of the British army, composed of Europeans and Sepoys, were at Weltevreden, within three miles of the town of Batavia, and at *Semárang* and *Surabáya*, spots certainly less favourable to health than the rest of the island taken generally; but detachments from it have occasionally done duty in every district of the island.

The tables included in the Appendix^[28], will shew, that notwithstanding the troops laboured under many disadvantages and privations, in point of accommodation, &c. to which they would not have been subjected in a more permanent settlement, and that they were otherwise exposed to diseases unconnected with those of the climate, the average casualties were not excessive. From the 1st November, 1813, to the same month in 1814, the average number of troops is stated to have been 7,470, the deaths 504, making a proportion of 1 to 14-8: the average number of sick in the same period was 862, making a proportion of sick to well as 1 to 8. From the beginning of November 1814 to the same month in 1815, out of an average number of troops stationed in different parts of the island, in corps and detachments, amounting to 7,487, there were 252 deaths, 63 of which were caused by fever, 123 by dysentery, and 65 by other diseases, making an average number of deaths of 21 per month, or in the proportion of one death to thirty men in the year, a proportion not exceeding that of some of the healthiest possessions in temperate climates.

To this general result may be added the comparative casualties in his Majesty's 78th regiment, during the period of its being stationed in India and Java. This regiment has occasionally been cantoned at each of the principal stations, and has remained on the island from the first conquest of Java. By the table will be seen the number of rank and file of which this regiment consisted at different periods, since 1797 to 1815, and the number of casualties in the same periods. It might not be proper to select the years in which it landed on the continent of India or on Java; but those in which it was stationed in either country may be brought together, as fit subjects for comparison. By calculation, upon the data of the table, it will appear, that from December 1800 to December 1801, the deaths were to the number of troops as 1 to about $20\frac{1}{2}$; in 1801-2, as 1 to 12; in 1803-4, as 1 to $5\frac{1}{4}$; in 1804-5, as 1 to $8\frac{1}{2}$; in 1805, as 1 to about 20; in 1806-7, as 1 to 28 nearly; in 1807-8, as 1 to $24\frac{1}{2}$; in 1809-10, as 1 to about 23; in 1811-12, as 1 to $3\frac{3}{4}$; in 1813-14, as 1 to 6; and in 1814-15, as 1 to about 20 nearly. The places at which the regiment was stationed at these different periods will be seen by the table; and the cause of the unusual mortality that prevailed in 1811-12, and which exceeds any of the years on the continent, will be found in an extract from the letter of Dr. Currie, the surgeon, inclosing the return. The mortality in the last year was as 1 to 20 in the regiment, and among the whole troops, according to the data above, as 1 to about 30; a low estimate for climates, whose characters stand higher for salubrity than that of Java.

That the climate of Java, in general, is congenial to the human frame, at least to that of an Asiatic, is corroborated by the great extent of its native population, compared with that of the surrounding islands, notwithstanding the checks which it experienced both from the native princes and the European government; and the convincing proof which the records of the British army now afford, are perhaps sufficient to remove the unfavourable impression which existed against the climate of the island, as affecting Europeans.

At the same time, however, that Java has to boast this general character of high salubrity, comparatively with other tropical climates, it is not to be denied that there are some spots upon it which are decidedly unhealthy. These are to be found along the low swampy marshes of the northern coast, which are mostly recent encroachments upon the sea: the principal of these is Batavia, the long established capital of the Dutch eastern empire.

The climate of this city has ever been considered as one of the most baneful in the world. It has even been designated the storehouse of disease; with how much justice, is too woefully demonstrated by the writings of those visitors who have survived its perils, and the records of the Dutch East-India Company itself. If we may credit Raynal,^[29] there perished between the years 1714 and 1776, in the hospitals of Batavia, above eighty-seven thousand sailors and soldiers. From the table, No. 1, imperfect as it is, on account of the loss of many of the registers at the period of the British conquest, it will be seen what a large proportion the deaths bore to the whole population; and from the table, No. 2, of the same Appendix, discovered among the Dutch records, it appears further, that the total amount of deaths in this city, from the year 1730 to the year 1752, was in twenty-two years more than a million of souls.

To those who are acquainted with the manner in which the affairs of the Dutch East-India Company were managed abroad, there will perhaps be no difficulty in laying rather at the door of the colonists, than of the nation, the crime of maintaining a commercial monopoly, at such a dreadful expence of lives as resulted from confining the European population within the narrow walls of this unhealthy city. That the sacrifice was made for that object, or to speak more correctly, under that pretext, for the private interests of the colonists who were entrusted with its details, can scarcely be doubted. From the moment the walls of the city were demolished, the draw-bridges let down, and free egress and ingress to and from the country was permitted, the population began to migrate to a more healthy spot, and they had not to go above one or two miles beyond the precincts before they found themselves in a different climate. But this indulgence, as it gave the inhabitants a purer air, so it gave them a clearer insight into the resources of the country, and notions of a freer commerce, which, of all things, it was the object of the local government and its officers to limit or suppress.

Necessity might have first determined the choice of the spot for the European capital; but a perseverance in the policy of confining the European population within its walls, after so many direful warnings of its insalubrity, cannot but lead to the inference, that either the monopoly of the trade was considered a greater object to the nation than the lives of the inhabitants, or that the more liberal views of the government were defeated by the weakness or corruption of its agents.

Of the vegetable and animal kingdoms, as of the mineral, we shall content ourselves with such an account as may be necessary to convey to the reader a general notion of the nature of the country and its resources, referring the man of science to the intended publication of Dr. Thomas Horsfield, a gentleman whose sole attention has, for the last seven years, been directed to the natural history of Java.

Java is distinguished not only by the abundance of its vegetation, but by its extraordinary variety. Upwards of a thousand plants are already contained in the herb-area of Dr. Horsfield, of which a large proportion are new to the naturalist. Between the tops of the mountains and the sea-shore, Java may be considered as possessing at least six distinct climates, each furnishing a copious indigenous botany, while the productions of every region in the world may find a congenial spot somewhere in the island.

Vegetable productions, which contribute to the food and sustenance of man, are found in great variety. Of these the most important is rice, which forms the staple grain of the country, and of which there are upwards of a hundred varieties. Maize, or Indian corn, ranks next, and is principally cultivated in the higher regions, or in those tracts where the soil is unfavourable to the rice cultivation. The bean, or *káchang*, of which there are many varieties, is an important article of food. Of the sugar-cane, which is used by the natives only in its raw state, they distinguish eight varieties, an account of which, as well as of the cultivation of coffee, pepper, indigo, tobacco, &c. will be found in the chapter on agriculture. Aniseed, *múngsi*, cummin-seed, *máricha* (black pepper), *chábi jáwa* (long pepper), *kumúkus* (cubebs), socha dolichos, and *mendéking*, plants of considerable importance, may be considered as indigenous to the island, and are collected for various uses in diet and medicine.

Besides the cocoa-nut and other productions more generally known, there are many trees growing spontaneously, of which the seeds and kernels are used as food; the principal of these are the *peté*, *jéngkol*, and *kómlandíngan*, several species of the mimosa, and the *púchang* and *kamíri*. The bread-fruit tree grows on Java, and is of the same species (although inferior in quality) with that of the South Sea Islands: but the fruit is comparatively very little esteemed or employed as an article of food.

Of tuberous roots, besides those furnished from the principal genera, convolvulus, dioscorea, and arum, are those from the *bangkwang* (*dolichos bulbosus*), the roots of which are much esteemed by the natives, and the *kéntang jáwa* (*ocymum tuberosum*) or Java potatoe. Most of the numerous varieties of the convolvulus and dioscorea, which furnish food for the natives, have been enumerated in one of the first volumes of the Batavian Transactions. The *jatropha manihot*, called *úwi blanda*, or *wúdo*, has been propagated through all parts of Java, and is found growing in the hedges.

The true sago of Amboina and the Eastern Islands, is found only solitary in a few low and marshy situations, and the preparation of it from the pith of the tree is not known to the inhabitants of Java: the leaves only are employed for covering houses; but from the *áren*, or *sagurus rumphii*, which grows abundantly in every part of the island, and on account of its variously extensive uses, ranks next in importance to the cocoa-nut, a substance is prepared, similar in all respects to the true sago of the Eastern Islands. The tops of various trees of the palm kind, which are sought after in other parts of the East as food, are, on account of the abundance of rice and other esculent vegetables, but little regarded in Java; but the young shoots of many varieties of the *bambu* are used in the diet of the natives. Wheat and potatoes, with almost every species of European vegetables, are cultivated with success. Of the oil-giving plants a particular account will be given when describing the agriculture of the country.

Java, in common with the Malayan islands in general, abounds in indigenous fruits. "No region of the earth," observes Mr. Marsden, "can boast an equal abundance and variety of indigenous fruits." The *mangústín*, which on account of its acknowledged pre-eminence amongst Indian fruits, has been termed the pride of these countries; the *durian*, or *dúren*, to which the natives of these islands are so passionately attached; the *rámbutan*, the *lánseh* or *lánseb*, with an extensive variety of the jack, the mango, the plantain, the guava, the pine-apple, the papaw, the custard-apple, the pomegranate, and almost every species of fruit which grows within the tropics, are here found in the greatest variety. The tamarind tree is general. The island also produces many kinds of oranges, citrons, lemons, and in particular the pumplemous (known in Bengal under the name of the Batavian lembu, or lime, and in the West Indies as the shaddock), besides the *sáwu*, *klédung*, *pachítan*, and a variety of others, not generally known to

Europeans, but well calculated for the table. Of the mango, at least forty varieties are enumerated; the wild raspberry, which is found in the higher regions, is not destitute of flavour; one kind, in particular, with dark violet-coloured fruit, approaches in taste to the European species. In some of the mountainous tracts are to be found peaches, Chinese pears, and some other fruits imported from Japan, the Cape of Good Hope, and China.

Among innumerable flowers which bloom in perpetual succession throughout the year, and impregnate the air of these countries with their fragrance, those of the *champáka*, *tán-jong*, *meláti*, *kanáng'a* and *nágasári*, hold the first rank; they are used by the natives in the ornament of their persons, and are remarkable for their fragrance. The myrtle and rose are found in the gardens of Europeans. A great variety of ornamental trees and shrubs, many of them overlooked in the catalogues of Rumphius and Van Rheede, have been noticed, as deserving cultivation for their utility as well as beauty.

The medicinal plants of Java have been described in an account published in the Batavian Transactions: among these are many which are employed in the daily practice of the natives, of which a large proportion have not been subjects of investigation or experiment by Europeans, and others which had not previously been botanically described or classed. In a country hitherto imperfectly explored, and abounding in profuse vegetation, it was natural to calculate on the discovery of many useful medicinal plants; and among upwards of sixty, described, for the first time, by Dr. Horsfield, he particularly notices several, as likely to become most valuable articles in general medicinal practice.

Besides abundance of coir, termed *sepét* by the natives, prepared from the fibres which surround the cocoa-nut, and gamuti (called *duk*), prepared from those of the *áren* tree, both of which are well known, another species of palm, the *gebáng*, also yields valuable ropes, the fibre of which is obtained from the large petioles or stalks of the leaves by pounding and beating. Intelligent natives assert, that ropes prepared from these are particularly valuable, exceeding in strength all other kinds of equal size. The fibres and ropes are called *bas*. The cotton shrub (*Gossypium herbaceum*) is universal; and hemp, though its uses are unknown to the Javans, is found in the gardens of foreign settlers. Besides these, the island affords various kinds of vegetables, the fibrous bark of which is made into

thread, rope, cloth, &c.; but they are never cultivated, and when required for use are collected in their wild state. The general denomination, in the Javan language, of the internal bark of all vegetables which can be manufactured into cords, thread, &c. is *lúlub*. This being freed, by beating or maceration, from the adhering particles of the exterior bark, yields the fibrous substance, which is twisted by the most simple process, commonly by the hands alone. The trees which afford the *lúlub* are the *wáru*, which is very abundant, and is manufactured into ropes for all common domestic purposes; the *melínju*, the bark of which is called *bágu*; and the *béndo*, which affords ropes of superior strength and durability.

Of the bambusa, the *pring-ápus*, the stem of which may be considered arborescent, furnishes the cheapest ropes. These are made with great expedition, being split into thin strips, which are twisted on the spot into cords fit for all common purposes, although they are serviceable only for a few days. They are uniformly used, in travelling, for securing baggage, &c. Among shrubs principally employed for these purposes are the *werúng*, *urís-urísan*, *dalúmpang*, *che-plákan* and *glúgo*; among plants, the *widúri* and *rámi*; the fibres of the latter afford very strong and durable cords, which are chiefly employed for nets or lines, and used in fishing: they greatly resemble the sunn of western India, and would probably be found to answer the same purpose, as well in furnishing the bags called in India gunny-bags, for the transportation of goods, as for the manufacture of paper in Europe. This remark applies also to the *lúlub* of several of the other shrubs mentioned. Several species of *písang* or plantain yield the materials for ropes and cords of various fineness, according to the methods employed in preparing them. In the Manilla Islands, cables are made from these fibres; and in the first volume of the Batavian Transactions a mode is described of preparing from them a substance resembling cotton. The leaves of the '*nanas*, or pine-apple, contain also abundance of useful fibres, which are easily separated in a bundle, after scraping off the coriaceous substance. It is very fine, and the separate fibres are employed by the natives in sewing without any preparation; but it may also be spun, and is made into a kind of stuff resembling silk, gauze, &c.

Mats are made from several species of pandanus, from a kind of grass called *méndong*, and from the leaves of various palms, particularly the

gebáng. The latter affords the most common kinds, coarser and less durable than the others, as well as bags (straw sacks) resembling very coarse mats.

The paper in common use with the Javans is manufactured from the *glúgo*, (*morus papyrifera*.)

A variety of vegetable substances are used in dyeing: the principal of which, however, are the *tom*, or indigo, which is extensively cultivated throughout the island; and the *wong-kúdu*, which affords a lasting scarlet. A black dye is obtained from the bark of several exotic trees, united with the rind of the *mangústin* fruit. A yellow dye is also obtained from an exotic wood, heightened by the addition of the bark of the *nángka* tree, and a variety of the mango.

Extensive forests of the *játi*, or teak of India^[30], are found in almost all the eastern provinces; but the most valuable and important are in the central districts, situated inland, between *Semárang* and *Sidáyu*, and particularly in the districts of *Blóra*, *Jípang*, and *Padáng'an*.

Of the teak tree there is but one species known, the *tectona grandis* of Linnæus, the *tekka* of Van Rheede, and the *jatus* of Rhumphius. Its natural history has been already fully detailed, and all the kinds generally enumerated are merely varieties. These are usually distinguished among the natives of Java by names derived from the quality and colour of the wood. The principal are the *játi kápur*, the chalky teak, and a kind varying in colour, and on account of its excellence termed *játi súng'gu*, or the true teak. The former is the most common: its wood is of a whitish hue, and it sometimes contains calcareous concretions in nodules or streaks. This sort is chiefly employed for common domestic purposes, and though inferior in quality to many others, from its abundance and comparative cheapness, is perhaps the most generally useful. The *játi súng'gu* is harder, closer, and more ponderous, and particularly selected for ship-building. The colour of the wood is of different shades, from light to intense brown, with a cast of violet verging sometimes to red or black. If the stem is covered with spines, or rather pointed scales, it is called *játi dúri*, but in its texture and quality it agrees with the *játi súng'gu*. Besides these the natives distinguish, as *játi gémbol*, those excrescences or protuberances which are produced from a variety of the *játi*, furnishing materials for handsome cabinet-work.

The teak tree on Java grows at a moderate elevation above the level of the ocean. It is generally conceived, that the timber afforded by forests growing on a soil of which the basis is limestone, and the surface uneven, gravelly, or rocky, is the hardest, the freest from chalky concretions, and in all respects the best; but in laying out a teak plantation, a soil consisting in a great proportion of black vegetable mould, is always selected for the purpose of obtaining a rapid growth. The teak tree is slender and erect. It shoots up with considerable vigour and rapidity, but its expansion is slow. Like all other trees affording useful timber of a close grain, it is many years in arriving at maturity. Under favourable circumstances, a growth of from twenty to twenty-five years affords a tree having about twelve inches diameter at the base. It requires at least a century to attain its perfection, but for common purposes, it is usually felled when between thirty and fifty years old^[31].

Notwithstanding the extent to which cultivation has been carried in many districts of the island, large portions of its surface are still covered with primeval forests, affording excellent timber of various descriptions. Besides the teak, there are several kinds of wood or timber employed for various domestic purposes, as the *súren* (the tuna of Bengal), of which the wood is very light, stronger and more durable than all other kinds of similar weight produced on the island: as the grain is not fine, it is not employed in making furniture, but it is useful for chests, trunks, carriages, &c.; its colour is red, and its odour somewhat resembling that of the cedar. Its weight is probably inferior to that of the larch.—The *wúngú* or *ketángi* is often used instead of teak: the grain is somewhat finer: when in full blossom it is perhaps the most beautiful tree existing.—The *wádang* or *báyur*, a light and tolerably durable wood, is employed for masts and spars of small vessels; but the surface must be well covered with resinous substances to prevent its splitting.—The *gintúngan* is employed in the same manner, but grows to a larger size; the colour of the wood and bark is red.—The *lampéan* or *lában* is light but durable, and affords materials for the handles of the spears or pikes borne by the natives.—The *nángka* abounds in several districts where teak is not found, and is almost exclusively used in the construction of houses, and other domestic purposes: the wood is more close and ponderous than the *súren*, which it otherwise resembles; it takes a tolerable polish, and is sometimes employed for furniture. The colour is yellow; but it is made to receive a brownish hue, by the application of the young teak-leaves in

polishing: its bark is used as a yellow dye.—The *lúren* resembles the *nángka*, but is generally of rare occurrence, though in some tracts it furnishes the only timber: its use in the neighbouring islands, particularly on Sumatra, is well known.—The *kusámbi* is uncommonly heavy, hard, and close: it supplies anchors for small vessels, blocks, pestles, and numerous similar utensils.—The *sáwur* is a very beautiful and useful wood; the colour resembles that of mahogany, but the grain is closer, and it is more ponderous: its chief use is for handles of tools for carpenters and other artificers, for machinery, especially for the teeth of the wheels of mills, and other purposes where a hard and durable wood is required. On account of its scarcity, it is uniformly cut down on Java before it arrives at the necessary size for cabinet-work. Forests of it grow on the hills of *Báli*, opposite the Javan shore, whence it is brought over by boat-loads for sale.

The *pílang* is a very hard wood, and employed in the eastern districts, instead of *lignum-vitæ*, for the construction of ships'-blocks, &c.—The *pung* is equally hard, and uniformly employed by the natives for pegs in constructing their *prahus*.—The *wáli kúkun* is equal to the *kusámbi* in weight, and exceeds it in hardness: it is employed for anchors, naves of wheels, machinery, &c.—The *tang'gulun* is a hard wood of a close grain, and employed by turners for various small works.—The *kelúmpit* is a very large tree: sections are employed by the natives for cart wheels.—The *járan* is a white wood taking the tool easily: the natives prefer it to all others for the construction of their saddles, which consist principally of wood.—The *demólo* affords a light wood, which is made into planks, and employed where durability is not much required.—The wood of the *kedáwung* is whitish and moderately hard.—The *lában* is a yellowish and hard wood: it is employed for the handles of axes and various utensils.—The *jánglot* is considered by the natives as the toughest wood produced in the island, and is always employed for bows when procurable: the tree is of a moderate size.—The *béndo* is a light wood, useful for canoes.—The *séntul* is a light close-grained wood, and easily worked: it resembles the *súren*.

For household furniture, cabinet-ware, &c. are employed—the *sóno kling* of the *Maláyus*, the colour of which is a deep brown, inclining to black:—the *sóno kómbang*, which has some resemblance to the *lingua* wood of the Moluccas:—the *war'm-lot*, dark brown; and *próno-sodo*, resembling the walnut, both scarce:—the *wer'n*, of a brown colour, of a close substance and

light, abundant in some districts:—the *mentáus* and *jumberit*, the wood of which is white and fine-grained, uniformly used for inlaying:—the *randu kúning*, yellowish and close-grained:—and the *íng'as*, of a brownish red colour, and very brittle.

For the hilts and sheaths of krîses, the natives make use of the *timóko*, of which the black and white variegated fragments are called *pélet*. These are of various kinds.—The *arúman*, variegated white and black, is also employed for canes, handles, and spears, &c. and is very heavy.—The *tiké*, yellowish, closed and marble,—the *mángu*,—the *áti áti*,—the *kráminan*,—the *púrwo-kúning* and several others, are employed for the same purposes.—The *kamúning* is of a brownish colour and very fine grain:—the *tayúman* resembles the last and is very much esteemed:—the *wúni stelágo* affords a reddish wood.

Among the most extensively useful productions ought not to be forgotten the *bámbu*, or *príng*, which abounds on Java, and seems, from the greater luxuriance and variety by which it is here distinguished, to find the soil and climate more congenial to its growth than those of any other country. It blossoms in different parts of the island. The rattans (*rótan*) of Java are on the whole inferior to those of Sumatra and Borneo: the improved state of cultivation is unfavourable to their growth and propagation.

Many woods afford excellent fuel. The charcoal prepared from the *kusámbi* is equal perhaps to that of any other wood with which we are acquainted, and is universally preferred in cooking, and in the other branches of domestic economy. Charcoal, for gunpowder, is uniformly prepared from the *celtis orientalis*, called *áng'grung*.

Among the useful trees must be noticed: the soap-tree, of which the fruit is used to a very great extent in washing linen:—the *kasémak*, from the bark of which is made a varnish for umbrellas:—the *sámpang*, from the resin of which the natives prepare a shining varnish for the wooden sheaths of krîses:—the cotton-tree, from which a silky wool is obtained for stuffing pillows and beds:—the wax-tree, which, though scarce on Java, grows abundantly on some parts of Madúra: (the kernel, by expression, produces an oil, which some time after becomes hard and bears a resemblance to wax; it may be burnt in lamps or converted into candles, and affords an agreeable odour): the *bendúd*, a shrub producing the substance of which the

elastic gum, commonly called Indian-rubber, is prepared. The art of preparing it in this form is however unknown in Java. Torches are made of it, for the use of those who search for birds' nests in the rocks, and it serves for winding round the stick employed to strike musical instruments, as the *gong*, &c. to soften the sound. The *mínyak káwon* or *niátu* is a very useful tree, which grows solitary in all, and abundantly in some parts of the island, and produces a kind of tallow.

Dámar, or resin, is distinguished by the inhabitants of these countries into two kinds: *dámar-bátu* or *séla*, and *dámar-puti*, comprising numerous varieties obtained from different trees. None of these are, however, produced on Java. Besides the *rásamála*, which is very limited as to its place of growth, the *Canáram*, and a peculiar resin employed by the natives for varnishing the wooden sheaths of their *krîses*, called *sámpang*, few odoriferous resins are found. The camphor-tree, which abounds on Sumatra and Borneo, is unknown on Java. The wood oil, distinguished among the Malays by the name of *krúwing* (which in Java is applied to all resinous or oily substances employed in the construction of vessels), is not a native of Java, but it grows abundantly on Banka and Sumatra.

None of what are called the finer kinds of spices, namely, the nutmeg, clove, and cinnamon, are indigenous to Java; but the few trees which have been planted in the gardens of Europeans have thriven well: and, from the nature of the soil and climate, there seems little doubt that the nutmeg and clove, in particular, might be extensively cultivated throughout the island, did it suit the policy of the European government to admit of their general introduction.

The vine was once extensively cultivated in some of the eastern provinces of the island, in which the soil and climate appear well calculated for its growth; but an apprehension, on the part of the Dutch East-India Company, that its cultivation on Java might interfere with the wine trade of the Cape of Good Hope, induced them to discourage it, and the preparation of wine from the grape was strictly prohibited. Lieutenant-Colonel Mackenzie, when noticing the vast quantities of ashes thrown up from the different volcanos, makes the following observation on the eastern part of Java. "The soil of the country is evidently enriched by the ashes and earth emitted by these eruptions, and there is reason to conclude, what persons well acquainted with the south of Europe assert, that the vines of Italy and the

Cape would thrive in perfection, in a soil and climate so well adapted to them."

Among the vegetable productions of Java, none has excited more interest than the celebrated *úpas*, or poison-tree. Mr. Marsden, in his history of Sumatra^[32], has referred to various concurring authorities, in refutation of the very extraordinary tales told of this tree; and, in this general account of the productions of Java, it may perhaps be sufficient to refer the reader to the particulars contained in the subjoined note^[33].

Of the useful or domestic quadrupeds it may be observed, that neither the elephant nor the camel is a native of Java: the former is rarely imported, the latter unknown. Neither the ass nor mule is found; but the island has a fine breed of small horses (*járan*), strong, fleet, and well made. A still finer breed is imported from *Bíma*, on the neighbouring island of *Sumbáwa*, which by competent judges has been said to resemble the Arab in every respect except size. They seldom exceed thirteen hands, and in general are below this standard.

The bull and cow (*sápi* or *lémbu*) are general, but much more so in the central and eastern districts than in the western. The breed has been greatly improved by the species introduced from continental India. But the animal of most essential and general use in the agriculture of the country is the buffalo (*kábu*, *maísa*, or *múnding*), a particular account of which will appear in the chapter on Agriculture. Goats (*wedús*) are numerous and of a small size: sheep (called here European goats) are scarce and small. As in other sultry climates, the latter have a coarse woollen coat, which is employed for stuffing saddles, pillows, &c. but it is in so little request that the inhabitants are rarely at the trouble of shearing for it. The hog (*chéleng*) is reared principally among the Chinese.

Of beasts of prey may be enumerated several species of the tiger, as the *máchan lóreng* (*felis tigris*), *máchan gogor* (a variety), *máchan tútul* (probably the small leopard of Pennant), *máchan kombang* and *kúwuk*, the smallest kind, called tiger-cats. The jackal, and several varieties of the wild-dog; as the *ásu wáwar*, *ásu ájag*, or *ásu kíkí*; and among other wild quadrupeds, the rhinoceros, and *bánteng*, or wild Javan ox, the wild-hog and the stag: the last, as well as the rib-faced and axis deer, is tamed and fattened for food. The aggregate number of mammalia on Java have been

estimated at about fifty. The habits and manners of the larger animals, the tiger, leopard, black tiger, rhinoceros and stag, and two species of deer, the varieties of the wild-hog, &c. are sufficiently known; but the *bánteng*, or Javan ox, the Javan buffalo, the varieties of the wild-dog, those of the weasel and squirrel, and most of the other smaller quadrupeds, still present curious subjects for the study of the naturalist. Next to the rhinoceros, which sometimes (though rarely at present) injures plantations, the wild-hogs are the most destructive animals. They are often poisoned (or intoxicated, according to the quantity they consume) by the *kálák kámbing*, or by the remains from the preparation of *brom*. The practice of suspending rags impregnated with urine, at small distances around the plantations, is universal over the whole island. These animals are said to have so violent an aversion to this odour, that even this "feeble barrier" is useful in preserving the plantations.

Musk, called *dedes*, is procured from the *rasé*.

Although the same qualities are ascribed to them here as in other countries, bezoars are comparatively scarce in Java; and those occasionally found in the maritime capitals are uniformly brought from other countries. The hog-deer and Nicobar pigeon are not natives; and although wild-hogs, in which bezoars are said to be found, are very abundant, they are never examined or approached by the natives. Every extraordinary concretion, calculus, ossification, &c. found in any part of an animal, is called *mustíka*, which corresponds to the bezoar of the Arabs, Persians, &c. A concretion of feathers found in the stomach of a fowl is called *mustíka áyam*, and is carefully preserved. A stony concretion, discovered accidentally by the rattling of a human skull exposed for many years to the action of the sun, has been denominated *mustíka órang*, and the most salutary virtues ascribed to it. Analogous to the bezoars, must be considered the horns of the rhinoceros, whose virtues are highly prized.

Among the domestic fowls, or poultry, are the turkey, which is comparatively scarce, and chiefly raised for the tables of Europeans; the goose, which is very common near all the establishments of Europeans; the *bébek*, or duck, abundant in every part of the island; the common fowl and pigeons. Among the birds of prey, the eagle is not found; but there are several varieties of the falcon, of which the *jóko wuru* is the largest; also the carrion crow and the owl. Of the parrot kind, two only, the *bétet* and

selíndit, are found on Java. The peacock (*merák*), is very common in large forests. The number of distinct species of birds has been estimated not greatly to exceed two hundred, of which upwards of one hundred and seventy have been described, and are already contained in the collections made on account of the English East India Company.

The dorsal feathers of the white heron, and the vent feathers of the *sándang lówé*, are employed, as substitutes for ostrich feathers, by the natives, for plumes, &c. It is very rarely that the feathers of geese, &c. are employed for beds or pillows, the silky cotton of the *kápok* being preferred on account of its coolness. For ornamenting the arrows of the natives, the feathers of some of the falcon tribe are chiefly employed.

Among the interesting subjects which still remain open for search, are the habits and constitution of the *hirundo esculenta*, the small swallow which forms the edible nests, annually exported in large quantities from Java and the Eastern Islands for the Chinese market. These birds not only abound among the cliffs and caverns of the south coast of the island, but inhabit the fissures and caverns of several of the mountains and hills in the interior of the country. From every observation which has been made on Java, it has been inferred, that the mucilaginous substance, of which the nests are formed, is not, as has been generally supposed, obtained from the ocean. The birds, it is true, generally inhabit the caverns in the vicinity of the sea, as agreeing best with their habits, and affording them the most convenient retreats for attaching their nests to; but several caverns are found inland, at a distance of forty or fifty miles from the sea, containing nests similar to those on the shore. From many of their retreats along the southern coast, they have been observed to take their flight in an inland direction, towards the pools, lakes, and extensive marshes covered with stagnant water, as affording them abundance of their food, which consists of flies, mosquitoes, gnats, and small insects of every description. The sea that washes the foot of the cliffs, where they most abound, is almost always in a state of the most violent agitation, and affords none of those substances which have been supposed to constitute the food of the esculent swallow. Another species of swallow on this island forms a nest, in which grass or moss, &c. are merely agglutinated by a substance, exactly similar to that of which exclusively the edible nests consist. This substance, from whatever part of these regions the nests be derived, is essentially uniform, differing only in

the colour, according to the relative age of the nests. It exhibits none of those diversities which might be expected, if it were collected casually (like the mud employed by the martin, and the materials commonly employed in nest-making), and applied to the rocks. If it consisted of the substances usually supposed, it would be putrescent and diversified.

Dr. Horsfield thinks that it is an animal elaboration, perhaps a kind of secretion; but to determine its nature accurately, it should be carefully analyzed, the anatomy of the bird should be investigated, and its character and habits watched.

The kayman of the Dutch, the *boáya* of the Malays, and the *bóyo* or *bájul* of the Javans, which abounds along the shores and in the principal rivers of the island, resembles more the crocodile of Egypt than that of the Ganges, or the American alligator. The character of the lacerta crocodiles, as given in the *Systema Naturæ*, applies to the Javan crocodile, with this difference, that in the latter the two crests of the tail coalesce towards the extremity, in which respect it agrees with that of the Ganges; but its head and jaws are broad, and rounded. In its manners, habits, and destructive qualities, it resembles the largest animals of this genus. Next to the crocodile in size is the *béwak* of the Malays, or *menyáwak* or *selíra* of the Javans. It sometimes attains the length of six or seven feet, and lives near the banks of rivers and marshes. Its character agrees with those of the lacerta monitor. It is erroneously denominated the guana by Europeans. The eggs of this animal, as well as of the crocodile, are eaten by the natives, and the fat is collected for medical purposes. A small lizard, the *búnglon* of the Javans, is erroneously called the chameleon, in consequence of the property of changing its colour. It has the specific characters of the guana, but is much smaller, seldom exceeding eighteen or twenty inches in length. There are various other lizards.

Two varieties of the turtle, *pényu* and *pényu kombang*, are found in the seas surrounding Java. Both yield the substance called tortoise-shell, but they are seldom taken of sufficient size to render it valuable: the flesh is excellent. Another kind, of which the species is unknown, renders a thicker shell. *Kúro* is the name of the common land-tortoise, which is found very abundantly in particular districts.

Besides the *rana esculenta*, green frog (*kódok íjù* of the Javans) which is frequently eaten, and the *kódok benju*, there is the common toad, *kódok*, and the *bánkong* and *kíntel*. The frog-fish (*rana paradosa*), or a variety of it, is also found on the island, and has been exhibited in the same supposed metamorphosis as in other countries. No noxious quality of any of these animals is here known.

It is uncertain whether the boa constrictor be found on Java. The serpent usually called the *úlar sáwa* is a species of coluber, and has been described in one of the volumes of the Batavian Transactions; but several other species are found which arrive at a very large size. One of them, the *úlar lánang*, is very much dreaded by the natives, and said to be poisonous. Of the *úlar sáwa* there are several varieties, one of which, *úlar sáwa máchan*, is most beautifully variegated. Upwards of twenty serpents are enumerated as poisonous. The *úlar lámpe* is found at or near the discharge of large rivers into the ocean, and is more abundant in some districts than in others. This is greatly dreaded by the natives; its bite however is rarely mortal, and the effects are comparatively slow, death seldom occurring within twenty-four hours from the time of its infliction. No remedies which deserve notice are known by the natives: charms and superstitious applications are generally resorted to. The most remarkable serpent is the *úlar kádut*, or *kárang*. The *úlar lánang*, and some of the varieties *úlar sáwa* are slender, and possess considerable agility. According to the account of the natives, they frequently ascend trees, and suspending themselves by the extremity of their tail, seize upon small animals passing below; but the true *úlar sáwa* of the Eastern Javans is slow, thick, and unwieldy. Nothing which could illustrate its supposed power of fascination has been noticed.

Of the fish most commonly used for food by the natives, many of which are excellent and abundant, thirty-four species of river fish, seven found chiefly in pools or stagnant waters, and sixteen sea fish, are already enumerated by Dr. Horsfield. The classes of amphibia and pisces, doubtless, afford many new subjects for investigation. Valentyn enumerates five hundred and twenty-eight uncommon kinds of fish found in the waters of the Eastern Islands.

Honey and wax are produced by three species of bees, inhabiting the largest forests, but they are both collected in very inconsiderable quantities. Bees are occasionally domesticated by the Arabs and Indians near the large

settlements, but never by the natives. Silk-worms were once introduced by the Dutch near Batavia, but attention to them did not extend among the natives. The chrysalis of the large atlas affords a coarse silk, which is however not collected for use. To the fruit, several insects, and to the corn while in the ear, a peculiar species, generally known by the name of *wálang-sángít*, are most destructive. The latter has in some years destroyed the growth of whole districts, and occasioned partial scarcity. The natives attempt, in some instances, to extirpate it by burning chaff and brimstone in the fields. There are scorpions and centipedes, but their bite is considered of little consequence: the natives generally apply a cataplasm of onions to the wound. The class of insects affords many new objects; specimens of most of the genus *papilio*, and many of other genera have already been collected.

Java does not afford the same opportunities for beautiful collections of shells as the Moluccas, Papua, and other Islands. Along the northern coast, few shells are found of beauty or variety, and the corallines have mostly lost their integrity by attrition; but the extensive bays in the southern shore contain many of these objects in a state of beauty and perfection.

FOOTNOTES:

[12] The primitive Athenians were called Iones or Iaones (Herodotus, lib. i. &c.) This name is thought to have been given to them from Javan, which bears a great resemblance to *Ἰάων*. This Javan was the fourth son of Japheth, and is said to have come into Greece after the confusion of Babel, and seated himself in Attica; and this report receives no small confirmation from the divine writings, where the name of Javan is in several places put for Greece. See Daniel x. 20. xi. 2. where the vulgar translations render it not Javan, as in the original, but Græcia. The Athenians afterwards named Asia the less *Ionia*.—Potter's *Archæologia Græca*.

[13] *Panicum Italicum*.

[14] The term *Zapagé* or *Zabaja* seems also to have been a corruption from *Jawa*, and to have been used with the same latitude, according to the following notices by Major Wilford. "There was a constant intercourse, both by sea and land, between the kingdom of *Magad'hi* and China, on the authority of Chinese history; and they traded to an island and kingdom, called Founan, to the eastward of Siam, during the third and fourth centuries. This was probably a Malay kingdom; but we cannot ascertain its situation. It seems that the Malay emperors and kings, as those of *Zapagi* and *Founan*, did what they could to introduce trade and learning into their dominions, but their exertions proved ineffectual; at least they were not attended with much success; and their subjects soon relapsed into their former mode of life." ... "There are two countries called Maharaja, which are often confounded together; the first, at the bottom of the Green Sea, including Bengal and all the countries on the banks of the Ganges; the second comprehended the peninsula of Malacca, and some of the adjacent islands in the seas of China. In these countries the emperor, or king, always assumed the title of Maharaja, even until this day. Their country, in general, was called *Zapagé* or *Zabaja*, which

is a corruption from *Java* or *Jaba*, as it was called in the west, and was also the name of Sumatra, according to Ptolemy, who calls it *Jaba-diu*, and to Marco Polo. In the peninsula of Malacca was the famous emporium of *Zaba*: Zubaja, in Sanscrit, would signify then *Zaba*. The empire of *Zabajé* was thus called, probably, from its metropolis, *Zaba*, as well as the principal islands near it. *Zaba* was a principal emporium even as early as the time of Ptolemy. It remained so till the time of the two Mussulman travellers of Renaudot, and probably much longer. It is now called *Batu Sabor*, upon the river Jehor, which is as large as the Euphrates, according to these travellers; who add, that the town of Calabar, on the coast of Coromandel, and ten days to the south of Madras, belonged to the Maharaja of Zabaje. The wars of this Maharaja with the king of *Alkonér* or countries near Cape Comorin, are mentioned by the two Mussulman travellers in the ninth century, and it seems that, at that time, the Malayan empire was in its greatest splendor."—*Asiatic Researches*, vol. ix.

[15] Others again have derived the term *Jawa* from *Yava*, which in Sanscrit means barley, whence Java has occasionally been termed the land of barley.

[16] Beschryving van *Groot Djawa* of te *Java Major* door F. Valentyn.—Amsterdam, 1726.

[17] The breadth is a few miles less between Cheribon and the south coast, occasioned by the deep bay of *Cheláchap*, and also in the eastern termination of the island beyond Surabáya, where it only averages forty-five geographical miles.

[18] The term *regencies* is adopted from the title of Regent, given by the Dutch to the chief native authority in each district.

[19] *Súra-kérta* or *Sura-kérta di ning'rat*, is the name given to the seat of empire; but as the capital was only removed to its present site about the middle of the last century, it is still frequently called *Solo*, the name of the village in or near which this capital was established.

[20] This capital is indifferently turned *Yokya*, *Jokya*, *Juju*, *'Ng'yug'ya*, or *Yug'ya-kerta*, and is the *Djojo-Carta*, according to the Dutch orthography. The turn *Yug'ya* has been selected, on account of its nearer approximation to the supposed derivation of the word from the *Na-yud-ya* of the Ramayan.

[21] The height of the mountain *Arjúna*, in the eastern part of the island, has been determined at 10,614 feet above the level of the sea; and this mountain is by no means so lofty as those of *Semíru* and *Tegál*, the exact height of which has not yet been ascertained.

[22] The height of this mountain has been ascertained to be 5,263 English feet above the level of the sea.

[23] To the above general observations, which are made on the authority of Dr. Horsfield, it may not be uninteresting to subjoin a more particular account of two or three of the volcanos which have been examined by that gentleman; those of *Tánkuban-Prahu*, *Papandáyang*, and *Gúntur* are, therefore, extracted from a paper published by Dr. Horsfield in the *Batavian Transactions*.

"TANKUBAN-PRAHU.—This mountain (which has derived its name from its appearance at a distance, resembling a *prahu*, or boat, turned upside down) forms a vast truncated cone. Its base extends to a very great distance, and it belongs to the largest mountains of the island, forming one of its most interesting volcanos. Although it has had no violent eruption for many ages, as is evident from the progress of vegetation, and from the depth of black mould which covers its sides, its interior has continued in a state of uninterrupted activity.

"The crater is one of the largest, perhaps the largest, of the island. It has, in general, the shape of a funnel; but its sides are very irregular. The brim, or margin, which bounds it at the top, has also different degrees of elevation, rising and descending along the whole course of its circumference. The perpendicular depth at the side, where I descended (in the south), is at least two hundred and fifty feet: in the west the margin rises considerably higher. The regular circumference of the crater I

estimate one English mile and nearly an half. The south side of the interior crater, near the top, is very steep. I found it impossible to descend, without the assistance of ropes tied to the shrubs at the margin. It consists here of small fragments of lava. About one-third of its depth it becomes more oblique or inclining, and the lower part consists of large piles of rocks, through which the descending streams of water have excavated a winding channel. The east side descends gradually about one-half of the depth, where it is terminated abruptly by a perpendicular pile of large rocks, which continues to the bottom. The north side is more gradually shelving than the others, and is partly covered with vegetation. The west side is one perpendicular pile of rocks. The nucleus of the mountain consists of large masses of basaltes, in which the volcanic opening is situated; and the sides exhibit piles and strata of this stone in every possible variety of configuration. In some places the rocks have the appearance of a regular wall, which is suddenly diversified by large fragments suspended apparently by a small base, and threatening to fall down every instant. Sometimes they rise in an oblique manner, and appear to have been disposed by art. But I shall not attempt a minute description of the disposition of the rocks and the strata which form the internal walls of the crater, which, without an accurate drawing, would be tedious and scarcely intelligible. The surface of the rocks which line the interior of the crater is completely calcined, generally of a white colour, sometimes inclining to grey or yellow. In many places small fragments of lava adhere to and cover the rocks of basalt: these are of different sizes, and of great variety of form and colour; but the most are calcined or burnt, or the surface like the rocks themselves. The different sides of the internal crater are excavated in many places, by furrows made by the descending water, which penetrate to a considerable depth, and expose more completely the interior basaltic composition. The bottom of the crater has a diameter of three hundred yards, but is not completely regular; its form depends on the gradual meeting of the sides below. Its surface is much diversified: it is strewed, like the sides, with immense blocks of basalt, the interstices between which are excavated, in a similar manner, by the streams of the descending water.

"Near the centre, somewhat inclining to the west side, it contains an irregular oval lake, or collection of water, whose greatest diameter is nearly one hundred yards: it dilates into several branches. The water is white, and exhibits truly the appearance of a lake of milk, boiling with a perpetual discharge of large bubbles, which rise with greatest force from the eastern side. The heat is 112° of Fahrenheit's scale: the apparent boiling arises from a constant development of fixed air. The water has a sulphureous odour; its taste is astringent, somewhat saline. Shaken in a bottle it explodes its fixed air with great violence. The sides of the lake, to some distance, are lined by a white aluminous earth, most impalpably fine, and very loose, on which account it is very difficult to approach the water. In attempting to examine its temperature, and to collect for analysis, I sunk into the earth to a considerable distance, and found it necessary to dispose large fragments of basaltes before I was able to pass over it. This earth consists of the clay (alumine) of the lavas dissolved by the sulphureous steams on the bottom of the crater; it is of the purest kind, and divided to a degree minute almost beyond conception. Large quantities have been several times thrown out of the ancient craters of the island. One eruption of this substance occurred in the year 1761 from the mountain Gedé: it was considered as an eruption of ashes.

"I was witness to a similar eruption, which occurred from the mountain of *Klut*, in the month of June last year. The earth very much resembled ashes, and was so impalpably fine and light, that the common breeze of the monsoon carried it from this mountain, situated in the longitude of Surabáya, to Batavia and farther westward. It possessed the properties of the purest clay, and being mixed with water became viscid and ductile. It can easily be formed into vessels, and if procurable in large quantities, might usefully be employed in the arts. All its properties indicated sufficiently that it was the alumine of the lavas, divided in an extreme degree by the causes above-mentioned. The Javanese are not wholly unacquainted with the properties of this earth. It is a custom amongst silversmiths to

collect the ashes thrown out by similar eruptions, for the purpose of making *moulds* for the finest works.

"Towards the eastern extremity of the lake are the remaining outlets of the subterraneous fires: they consist of several apertures, from which an uninterrupted discharge of sulphureous vapours takes place. Two of these are larger than the rest; they are several feet distant from each other. The apertures are of an irregular oblong form, and covered with crystals of impure sulphur, which form from the discharged vapours, and adhere to those incrustations of the aluminous earth which have formed themselves in a great variety of configurations (hollows, tubes, &c.) near the apertures. The vapours rush out with incredible force, with violent subterraneous noises, resembling the boiling of an immense cauldron in the bowels of the mountain: their colour is white, like the concentrated vapours of boiling water. The apertures cannot be approached without the greatest danger, as their true extent cannot be discovered: they are surrounded by incrustations of sulphur adhering to delicate laminæ of the aluminous earth, which are extremely brittle. The greatest diameter of the large opening is nearly twelve inches.

"To give an adequate description of the interior of this crater would furnish matter for an able pen: the force of the impression is increased, perhaps, by the recollection of the danger which has been overcome in descending to the bottom. Every thing here contributes to fill the mind with the most awful satisfaction. It doubtless is one of the most grand and terrific scenes which nature affords; and, in the present instance, the extent of the crater, as well as the remains of the former explosions, afforded a view and enjoyment which is not in my power to describe.

"PAPANDAYANG.—The Papandáyang, situated on the western part of the district of Cheribon, in the province of *Suka-pura*, was formerly one of the largest volcanos of the island; but the greatest part of it was swallowed up in the earth, after a short but very severe combustion, in the year 1772. The account which has remained of this event asserts, that near midnight, between the 11th and 12th of August, there was observed about the mountain an uncommonly luminous cloud, by which it appeared to be completely enveloped. The inhabitants, as well about the foot as on the declivities of the mountain, alarmed by this appearance, betook themselves to flight; but before they could all save themselves, the mountain began to give way, and the greatest part of it actually *fell* in and disappeared in the earth. At the same time, a tremendous noise was heard, resembling the discharge of the heaviest cannon. Immense quantities of volcanic substances, which were thrown out at the same time and spread in every direction, propagated the effects of the explosion through the space of many miles.

"It is estimated, that an extent of ground, of the mountain itself and its immediate environs, fifteen miles long and full six broad, was by this commotion swallowed up in the bowels of the earth. Several persons, sent to examine the condition of the neighbourhood, made report, that they found it impossible to approach the mountain, on account of the heat of the substances which covered its circumference, and which were piled on each other to the height of three feet; although this was the 24th of September, and thus full six weeks after the catastrophe. It is also mentioned, that forty villages, partly swallowed up by the ground and partly covered by the substances thrown out, were destroyed on this occasion, and that 2,957 of the inhabitants perished. A proportionate number of cattle was also destroyed, and most of the plantations of cotton, indigo, and coffee, in the adjacent districts, were buried under the volcanic matter. The effects of this explosion are still very apparent on the remains of this volcano; but I defer an account of it, till I have had an opportunity of making a more minute examination.

"GUNTUR.—The whole of the eastern part of this mountain is completely naked, and exposes to view, in a striking manner, the course of the lavas of the latter eruptions: the top is a regular cone, and covered with loose fragments of lava. I shall give a very concise abstract of the observations on the mountain, and on the different streams of lava which have lately flowed from its crater. I could

distinctly trace, from the base of the conical top to the roots of the mountain, five different eruptions. The latest stream of lava which I examined (the mountain has since had a later eruption) was thrown out in 1800. Its course along the top cannot be distinctly observed, being completely covered with sand and small fragments of lava, which generally rise towards the end of an eruption. At the place where the stream first appeared distinctly, it was about five yards broad and completely even on the surface: having proceeded about twenty yards further it gradually widened, and was formed into a connected stream, higher in the middle, the sides tapering or inclining towards the top, forming a ridge with a pointed or sharp back. As the stream arrived at the foot of the mountain, it spread more and more, and pursued its course to the eastward, about six hundred yards over the adjacent country. Its greatest breadth, from north to south, is about one hundred and sixty yards, and it terminates abruptly by a rounded margin, consisting of large blocks of lava piled upon each other, nearly perpendicularly, to the height of fifteen to twenty feet.

"This stream of lava, like all the others of later date which I have examined on the island, does not consist of a connected mass of fluid lava, united like a stream of melted metal; at least on the surface where it is exposed to view. It is made up of separate masses, which have an irregular (generally oblong or cubical) shape, and lie upon each other as 'loose disjointed clods,' in an immense variety of disposition. In some of these fragments I think I could observe a tendency to assume the regular basaltic figure. During its course down the steep of the mountain, the stream, as has been observed, forms the long connected ridge (which has been described above, in the account of the volcanos, as generally covering the sides); but having arrived at the foot and spread more at large, these lumps of lava dispose themselves, in some instances, in plains, bounded by deep vallies: now they rise to a considerable height, and form a steep perpendicular eminence; then again they are piled upon each other more gradually, and appear rising by steps and divisions. But to give an accurate description of the arrangement of these fragments of lava would be unnecessarily prolix, and would require, to be clearly understood, a good drawing. In different places, the sulphureous vapours have forced their way through the interstices of the blocks of lava. The sides of their outlets (whose form is very irregular) is covered with a white calcareous crust; and the heat is so great, that small pieces of paper thrown into them are immediately singed.

"This stream of lava is bounded on the north by another, of the same nature and disposition, thrown out of the mountain (according to an estimate made from the commencement and progress of vegetation upon it) about thirty years ago. In its course along the sides of the mountain it forms the same pointed ridges above described. It affords a plain demonstration of the manner in which the surface of lava is decomposed and rendered fit for vegetation. A third district of lava bounds the new stream first described in the south: it is more extensive than the others, and consists of several distinct regions, probably thrown out during one eruption (which appears to have been more violent than the others), but in successive periods shortly following each other. It extends farther to the eastward than the others, and covers a great portion of the foot of the mountain. Vegetation has already made considerable progress upon it: in the vallies between the separate streams of lava are found not only plants but also small shrubs. At one place, near the termination of this stream, the lava is piled up in two irregular ridges to the height of twenty feet; and at a small distance from its eastern extremity, in a spot which has escaped the effects of the later eruptions, and is covered by pleasant wood, are three different hot wells, within the circumference of a quarter of a mile. In the south, this district of lava is bounded by a recent stream, which appears to have been thrown out in 1800, by the same eruption which produced the first mentioned stream. It differs from the others only in the colour of its lava, which has a reddish hue: it is less considerable in extent than any of the others, and cannot be traced far from the foot of the mountain. The fifth stream of lava which I examined is still farther towards the south, and is one of the oldest which have been discharged from the eastern part of the crater. Near the foot of the mountain, vegetation has made greater progress than in any of the other districts of lava.

"The colour of the recent lava of this mountain is jet-black or grey: one of the streams only has a reddish colour. Its texture is very loose, and its fracture very porous. The smaller fragments have much the appearance of the scoriæ of a blacksmith's forge: on being thrown against each other, they emit a sound like two bricks coming into contact. The interior crater of this mountain, as it has remained after the eruption of 1800, is less interesting than the others which I have examined. Its shape is somewhat oval, the greatest diameter being about one hundred yards: its depth is not very considerable. Its structure, in general, is similar to that of *Tankuban-prahu*. It has one remaining aperture, which discharges with great force hot sulphureous vapours."

Batavian Transactions, vol. ix.

[24] Mineral wells, of various qualities, are found in almost every part of the island. As an instance of the hot wells, the following account of those found in Cheribon is selected. "At the village of *Bongas* (situated about ten miles to the north-east of *Karang-Sambong*) I directed my route to the large mountain, in order to examine part of the hills along its foot, called the hills of *Pana-wangan*, and several hot wells which are found near their borders. On approaching these hills, after a very gentle acclivity covered entirely by calcareous stones, I very soon came to the spot of the hot wells. They are found on a gently inclining plain, about one hundred yards in circumference. This plain is perfectly white; and on approaching it, it is perceived at some distance by a sulphureous vapour, arising from the whole neighbourhood. The water springs from several apertures, but their temperatures are not equal; the hottest indicates the degree of one hundred and thirty of Fahrenheit's scale. They all contain a very large quantity of calcareous earth in solution and suspension, which coming into contact with the air, immediately separates, and adheres to the surrounding objects, or is precipitated to the ground. The branches of the shrubs in the vicinity are all enveloped by a stalactical incrustation. The water from the different wells gently descending the white calcareous plain, is collected in a rivulet below. A large number of calcareous rocks are found in the vicinity of the plains; some are covered with elegant crystals of calcareous spar, others have a coralline appearance, and some have the fracture of alabaster. On proceeding up the hills, immense irregular blocks of calcareous rocks are found strewed about in the valleys. About one hundred yards above this district are several wells of naphtha, or petroleum. It rises in small plashes of water, about twelve or eighteen inches in diameter, upon which it drives its black specks, emitting the peculiar odour of the petroleum. The earth in the circumference of these plashes is strongly impregnated with this oil: it is very tough, and from that immediately bounding apertures, the naphtha flows out on its being pressed; some portions exactly resemble asphaltum. A considerable space of ground is occupied by these wells. The stones are all calcareous. A few hundred yards above this spot, the borders of the hills become very steep. I examined them to some extent. They are composed exclusively of calcareous stones. Several extensive stalactitic caves are found at no great distance above the wells; they exhibit the usual appearances of calcareous caves and vaults. The process of incrustation is continually going on. In some places, deep perforations extend into the heart of the hills."—*Essay on the Mineralogy of Java*, by Dr. Horsfield. *Bat. Trans.* vol. ix.

Among other objects of curiosity, which can only be illustrated by particular description, are the explosions of mud, situated between the district of Grobogan on the west, and of Blora and Jipang on the east. By the natives they are termed Blédeg, and are described by Dr. Horsfield as salt wells.

"These salt wells," he observes, "are dispersed through a district of country several miles in circumference, the base of which, like that of other parts of the island which furnish mineral and other saline waters, is limestone. They are of considerable number, and force themselves upwards, through apertures in the rocks, with some violence and ebullition. The waters are strongly impregnated with sea-salt, and yield upon evaporation very good salt for culinary purposes. (In quantity not less than two hundred tons in the year.)

"About the centre of this limestone district, is found an extraordinary volcanic phenomenon. On approaching it from a distance, it is first discovered by a large volume of smoke rising and disappearing at intervals of a few seconds, resembling the vapours arising from a violent surf: a dull noise is heard, like that of distant thunder. Having advanced so near, that the vision was no longer impeded by the smoke, a large hemispherical mass was observed, consisting of black earth, mixed with water, about sixteen feet in diameter, rising to the height of twenty or thirty feet in a perfectly regular manner, and as it were pushed up, by a force beneath; which suddenly exploded with a dull noise, and scattered about a volume of black mud in every direction. After an interval of two or three, or sometimes four or five seconds, the hemispherical body of mud or earth rose and exploded again. In the same manner this volcanic ebullition goes on without interruption, throwing up a globular body of mud, and dispersing it with violence through the neighbouring plain. The spot where the ebullition occurs is nearly circular and perfectly level, it is covered only with the earthy particles impregnated with salt water, which are thrown up from below; the circumference may be estimated at about half an English mile. In order to conduct the salt water to the circumference, small passages, or gutters, are made in the loose muddy earth, which lead it to the borders, where it is collected in holes dug in the ground for the purpose of evaporation.

"A strong, pungent, sulphureous smell, somewhat resembling that of earth-oil, is perceived on standing near the explosion; and the mud recently thrown up possesses a degree of heat greater than that of the surrounding atmosphere. During the rainy season these explosions are more violent, the mud is thrown up much higher, and the noise is heard at a greater distance.

"This volcanic phenomenon is situated near the centre of the large plain which interrupts the large series of volcanos; and owes its origin to the general cause of the numerous volcanic eruptions which occur on the island." *Batavian Trans.* vol. ix.

"These salt wells, as Dr. Horsfield terms them, and other phenomena connected with them, appear to be precisely of the same description as the mud volcano at Macalouba, in Sicily, and the eruptions described by Pallas, at Tainan and Kercha (the boundary of Europe to the south-east of Little Tartary) and no doubt owe their origin to similar causes—the extrication of gas, as well described by Dallas, in his Translation of the History of Volcanos, by the Abbé Ordinaire," page 249. All the phenomenon described in this work, as well in Sicily as at Tainan and Kercha, are to be found in Java, where, on the hypothesis of the Abbé, "the vitriolic acid liberating a great quantity of fixed air from the salts with which this argillaceous and limy mass is impregnated, is observed escaping copiously, by a general bubbling on the surface of the plain, when the substances are sufficiently diluted by rain," &c.

On the hypothesis of the Abbé it may, therefore, be doubted whether the assertion "that the Blédeggs owe their origin to the general cause of the numerous volcanos on the island, is correct." Pallas conceives that the phenomenon at Kercha and Tainan may be explained by supposing a deep coal mine to have been for ages on fire, that the sea broke in upon it, that the water was turned into steam, and that the expansion occasioned thereby, and the struggle of the different gases to get free, force the upper surface, &c. but there seems no necessity for admitting the action of fire; the mud he describes is only *luke-warm*, this is precisely the case in Java.

It is remarkable that in Java, as in Sicily, in the vicinity of these phenomena, "the country around is of calcareous earth; briny springs and salt mines are found in the neighbourhood; some beds of oil of petroleum are also observed floating on adjacent stagnant waters."

[25] The tradition is as follows:—"It is related, that in former times the islands of Sumatra, Java, Bali, and Sumbawa were united, and afterwards separated into nine different parts; and it is also said, that when three thousand rainy seasons have passed away, they will be reunited."

The separation of the lands of Palembang (Sumatra) and Java took place in the Javan year 1114	
The separation of the lands of Bali and Balembangan on Java in	1204
The separation of the lands of Giling Trawangán and Bali in	1260
The separation of the island of Selo-Parang and Sumbawa in	1280

See Chronological Table, under the head "History of Java."

[26] In order to give the reader some idea of the tremendous violence with which nature sometimes distinguishes the operations of the volcano in these regions, and enable him to form some conjecture, from the occurrences of recent experience, of the effects they may have produced in past ages, a short account of the extraordinary and wide-spread phenomena that accompanied the eruption of the Tomboro mountain, in the island of Sumbawa, in April 1815, may not be uninteresting. Almost every one is acquainted with the intermitting convulsions of Etna and Vesuvius, as they appear in the descriptions of the poet and the authentic accounts of the naturalist, but the most extraordinary of them can bear no comparison, in point of duration and force, with that of Tomboro. This eruption extended perceptible evidences of its existence over the whole of the Molucca islands, over Java, a considerable portion of Celebes, Sumatra, and Borneo, to a circumference of a thousand statute miles from its centre, by tremulous motions, and the report of explosions; while within the range of its more immediate activity, embracing a space of three hundred miles around it, it produced the most astonishing effects, and excited the most alarming apprehensions. On Java, at the distance of three hundred miles, it seemed to be awfully present. The sky was overcast at noon-day with clouds of ashes, the sun was enveloped in an atmosphere, whose "palpable" density he was unable to penetrate; showers of ashes covered the houses, the streets, and the fields to the depth of several inches; and amid this darkness explosions were heard at intervals, like the report of artillery or the noise of distant thunder. So fully did the resemblance of the noises to the report of cannon impress the minds of some officers, that from an apprehension of pirates on the coast vessels were dispatched to afford relief. Superstition, on the other hand, on the minds of the natives, was busily at work, and attributed the reports to an artillery of a different description to that of pirates. All conceived that the effects experienced might be caused by eruptions of some of the numerous volcanos on the island; but no one could have conjectured that the showers of ashes which darkened the air, and covered the ground of the eastern districts of Java, could have proceeded from a mountain in Sumbawa, at the distance of several hundred miles. Conceiving that it might be interesting and curious to preserve an authentic and detailed account of the information that could be gained of this wonderful phenomenon, while the event was still recent and fully remembered, I directed a circular to the different Residents, requiring them to transmit to the Government a statement of the facts and circumstances connected with it, which occurred within their own knowledge. From their replies, the narrative drawn up by Mr. Assey, and printed in the ninth volume of the Batavian Transactions, was collected; the following is an extract from that paper:—

"The first explosions were heard on this island (Java) in the evening of the 5th of April: they were noticed in every quarter, and continued at intervals until the following day. The noise was, in the first instance, universally attributed to distant cannon: so much so, that a detachment of troops was marched from Djocjocarta, under the apprehension that a neighbouring post had been attacked; and along the coast boats were in two instances dispatched in quest of supposed ships in distress. On the following morning, however, a slight fall of ashes removed all doubt as to the cause of the sound; and it is worthy of remark, that as the eruption continued, the sound appeared to be so close, that in each district it seemed near at hand, and was generally attributed to an eruption either from the mountains Merapi, Klut, or Bromo. From the 6th the sun became obscured; it had every where the appearance of being enveloped in a fog. The weather was sultry and the atmosphere close, and still the sun seemed shorn of its rays, and the general stillness and pressure of the atmosphere seemed to forebode an earthquake. This lasted several days. The explosions continued occasionally, but less

violently, and less frequently than at first. Volcanic ashes also began to fall, but in small quantities, and so slightly as to be hardly perceptible in the western district. This appearance of the atmosphere continued, with little variation, until the 10th of April; and till then it does not appear that the volcano attracted much observation, or was considered of greater importance than those which have occasionally burst forth in Java. But on the evening of the 10th, the eruptions were heard more loud and more frequent; from Cheribon eastward the air became darkened by the quantity of falling ashes; the sun was nearly darkened; and in some situations, particularly at Solo and Rembang, many said that they felt a tremulous motion of the earth. It was universally remarked in the more eastern districts, that the explosions were tremendous, continuing frequently during the 11th, and of such violence as to shake the houses perceptibly. An unusual thick darkness was remarked all the following night, and the greater part of the next day. At Solo candles were lighted at 4 p. m. of the 12th; at Mágelan in Kédu, objects could not be seen at three hundred yards distance. At Grésik, and other districts more eastward, it was dark as night in the greater part of the 12th April, and this saturated state of the atmosphere lessened as the cloud of ashes passed along and discharged itself on its way. Thus the ashes that were eight inches deep at Bányuwáŋgi were but two in depth at Súmenap, and less in Grésik, and the sun does not seem to have been actually obscured in any district west of Semárang.

"All reports concur in stating, that so violent and extensive an eruption has not happened within the memory of the oldest inhabitant, nor within tradition. They speak of similar effects, in a lesser degree, when an eruption took place from the volcano of Karang Asam in Bali, about seven years ago, and it was at first supposed that this mountain was the seat of the eruption. The Balinese on Java attributed the event to a recent dispute between the two Rajahs of Bali Baliling, which terminated in the death of the younger Rajah by order of his brother.

"The haziness and heat of the atmosphere, and occasional fall of volcanic ashes, continued until the 14th, and in some parts of the island until the 17th of April. They were cleared away universally by a heavy fall of rain, after which the atmosphere became clear and more cool; and it would seem that this seasonable relief prevented much injury to the crops, and removed an appearance of epidemic disease which was beginning to prevail. This was especially the case at Batavia, where, for two or three days preceding the rain, many persons were attacked with fever. As it was, however, no material injury was felt beyond the districts of Banyuwáŋgi. The cultivators every where took precaution to shake off the ashes from the growing paddy as they fell, and the timely rain removed an apprehension very generally entertained, that insects would have been generated by the long continuance of the ashes at the root of the plant. In Rembang, where the rain did not fall till the 17th, and the ashes had been considerable, the crops were somewhat injured; but in Banyuwáŋgi, the part of the island on which the cloud of ashes spent its force, the injury was more extensive. A large quantity of paddy was totally destroyed, and all the plantations more or less injured. One hundred and twenty-six horses and eighty-six head of cattle also perished, chiefly for want of forage, during a month from the time of the eruption.

"From Sumbawa to the part of Sumatra where the sound was noticed, is about nine hundred and seventy geographical miles in a direct line. From Sumbawa to Ternate is a distance of about seven hundred and twenty miles. The distance also to which the cloud of ashes was carried, so quickly as to produce utter darkness, was clearly pointed out to have been the island of Celebes and the districts of Grésik on Java: the former is two hundred and seventeen nautical miles distant from the seat of the volcano; the latter, in a direct line, more than three hundred geographical miles."

The following is an extract from the reports of Lieutenant Owen Phillips, dated at Bima on the island of Sumbawa. "On my trip towards the western part of the island, I passed through nearly the whole of Dompo and a considerable part of Bima. The extreme misery to which the inhabitants have been reduced is shocking to behold. There were still on the road-side the remains of several corpses, and the marks of where many others had been interred: the villages almost entirely deserted and the

houses fallen down, the surviving inhabitants having dispersed in search of food. The Rajah of Sang'ir came to wait on me at Dompò, on the 3d instant. The suffering of the people there appears, from his account, to be still greater than in Dompò. The famine has been so severe that even one of his own daughters died from hunger. I presented him with three coyangs of rice in your name, for which he appeared most truly thankful.

"As the Rajah was himself a spectator of the late eruption, the following account which he gave me is perhaps more to be depended upon than any other I can possibly obtain. About 7 p. m. on the 10th of April, three distinct columns of flame burst forth near the top of the Tomboro mountain (all of them apparently within the verge of the crater), and after ascending separately to a very great height, their tops united in the air in a troubled confused manner. In a short time, the whole mountain next Sang'ir appeared like a body of liquid fire, extending itself in every direction. The fire and columns of flame continued to rage with unabated fury, until the darkness caused by the quantity of falling matter obscured it at about 8 p. m. Stones, at this time, fell very thick at Sang'ir; some of them as large as two fists, but generally not larger than walnuts. Between 9 and 10 p. m. ashes began to fall, and soon after a violent whirlwind ensued, which blew down nearly every house in the village of Sang'ir, carrying the ataps, or roofs, and light parts away with it. In the part of Sang'ir adjoining Tomboro its effects were much more violent, tearing up by the roots the largest trees and carrying them into the air, together with men, horses, cattle, and whatever else came within its influence. (This will account for the immense number of floating trees seen at sea). The sea rose nearly twelve feet higher than it had ever been known to do before, and completely spoiled the only small spots of rice land in Sang'ir, sweeping away houses and every thing within its reach. The whirlwind lasted about an hour. No explosions were heard till the whirlwind had ceased, at about 11 a. m. From midnight till the evening of the 11th, they continued without intermission; after that time their violence moderated, and they were only heard at intervals, but the explosions did not cease entirely until the 15th of July. Of the whole villages of Tomboro, Tempo containing about forty inhabitants is the only one remaining. In Pekáté no vestige of a house is left: twenty-six of the people, who were at Sumbawa at the time, are the whole of the population who have escaped. From the most particular inquiries I have been able to make, there were certainly not fewer than twelve thousand individuals in Tomboro and Pekáté at the time of the eruption, of whom only five or six survive. The trees and herbage of every description, along the whole of the north and west sides of the peninsula, have been completely destroyed, with the exception of a high point of land near the spot where the village of Tomboro stood."

[27] Batavian Transactions, vol. viii. Introductory Discourse.

[28] See Appendix A.

[29] Raynal, vol i. page 293.

[30] It is remarkable that the teak tree, which, as far as our information yet extends, is not to be found on the peninsula of Malacca, or on Sumatra or the adjacent islands, should grow in abundance on Java and several of the islands which lie east of it: as on Madúra and its dependent islands, Báli, Sumbáwa, and others. Sumbáwa produces a considerable quantity. The whole of the hills on the north-east part of that island under Bíma are covered with it; but from the constant demand for the timber, the trees are seldom allowed to grow to more than a foot in diameter, except in the forests exclusively appropriated to the use of the sovereign. In Dómpò, which occupies the central division of the same island, the teak cannot be used by any but the sovereign, and the trees are in consequence allowed to attain their full size. The timber is here uncommonly fine, and by the natives considered superior to that of Java; but the forests being surrounded by steep hills, and the population but scanty, it cannot be transported to the sea-coast without great labour and expense. On Celebes the teak tree is only known in a few spots. The principal forest is in the district of Mario; and this does not appear to

be indigenous, as the natives assert that the seed from which the forest has grown, was brought from Java about eighty years ago by one of the sovereigns of Tanété.

[31] The Dutch, apprehensive of a failure in the usual supply of teak timber, have long been in the habit of forming extensive plantations of this tree; but whether from a sufficient period not having yet elapsed for the trial, or that the plantations are generally made in soils and situations ill calculated for the purpose, experience, as far as it has yet gone, has shown, that the trees which are left to the operations of nature, attain to greater perfection, even in a comparatively barren soil, unfit for any other cultivation, than those which are with great care and trouble reared in a fertile land. Their wood is more firm, more durable, and of a less chalky substance than that of the latter.

[32] Page 176, third edit.

[33] Although a serious refutation of the gross imposition practised on the people of Europe, by the romance of Foersch on the subject of the upas, or celebrated poison-tree of Java, may at this day be in a great measure superfluous, as the world has long ceased to be the dupe of his story, and as regular series of experiments have been instituted, both in France and in England, to ascertain the nature and potency of the poison; yet it may not be altogether displeasing to the reader to see in this place an authentic account of the poison, as drawn out by Dr. Horsfield at my request, and published in the seventh volume of the Batavian Transactions. Almost every one has heard of its fabulous history, which, from its extravagant nature, its susceptibility of poetical ornament, its alliance with the cruelties of a despotic government, and the sparkling genius of Darwin, whose purpose it answered to adopt and personify it as a malignant spirit (in his *Lives of the Plants*), has obtained almost equal currency with the wonders of the Lerna Hydra, the Chimera, or any other of the classic fictions of antiquity.

"Although the account published by Foersch, in so far as relates to the situation of the poison-tree, to its effects on the surrounding country, and to the application said to have been made of the upas on criminals in different parts of the island, as well as the description of the poisonous substance itself, and its mode of collection, has been demonstrated to be an extravagant forgery,—the existence of a tree on Java, from the sap of which a poison is prepared, equal in fatality, when thrown into the circulation, to the strongest animal poisons hitherto known, is a fact which is at present my object to establish and illustrate. The tree which produces this poison is the anchor, and grows in the eastern extremity of the island. The work of Rhumphius contains a long account of the upas, under the denomination of *arbor toxicaria*. The tree does not grow on Amboyna, and his description was made from the information he obtained from Makasar. His figure was drawn from a branch of what is called the male-tree, sent to him from the same place, and establishes the identity of the poison-tree of Makasar, and the other Eastern Islands, with the anchor of Java. The simple sap of the *arbor toxicaria* (according to Rhumphius) is harmless, and requires the addition of several substances, of the affinity of ginger, to render it active and mortal. In so far it agrees with the anchor, which, in its simple state, is *supposed* to be inert, and before being employed as a poison, is subjected to a preparation which will be described after the history of the tree. Besides the true poison-tree, the upas of the Eastern Islands, and the anchor of the Javans, this island produces a shrub, which, as far as observations have hitherto been made, is peculiar to the same, and, by a different mode of preparation, furnishes a poison far exceeding the upas in violence. Its name is chetik, and its specific description will succeed to that of the anchor: the genus has not yet been discovered or described.

"DESCRIPTION OF THE ANCHAR.—The anchor belongs to the twenty-first class of Linnæus, the monoecia. The male and female flowers are produced in catkins (*amenta*) on the same branch, at no great distance from each other: the female flowers are in general above the male. The characters of the genus are:—MALE flower; calix, consisting of several scales, which are imbricate. Corol; none. Stamens; filaments many, very short, covered with scales at the receptacle. The receptacle, on which the filaments are placed, has a conical form, abrupt, somewhat rounded above.—FEMALE flower;

catkins, ovate. Calix; consisting of a number of scales (generally more than in the male), containing one flower. Corol; none. Pistil; germ single, ovate. Styles; two, long, slender, and spreading. Stigmas; single and acute. Seed-vessel; an oblong drupe, covered with the calix. Seed; an ovate nut, with one cell.

"SPECIFIC DESCRIPTION.—The anchor is one of the largest trees in the forests of Java. The stem is cylindrical, perpendicular, and rises completely naked to the height of sixty, seventy, or eighty feet. Near the surface of the ground it spreads obliquely, dividing into numerous broad appendages or wings, much like the canarium commune (the canary-tree), and several other of our large forest trees. It is covered with a whitish bark, slightly bursting in longitudinal furrows. Near the ground this bark is, in old trees, more than half an inch thick, and upon being wounded yields plentifully the milky juice from which the celebrated poison is prepared. A puncture or incision being made into the tree, the juice or sap appears oozing out of a yellowish colour (somewhat frothy) from old, paler or nearly white from young trees; exposed to the air, its surface becomes brown. The consistence very much resembles milk: it is more thick and viscid. This sap is contained in the true bark (or cortex), which, when punctured, yields a considerable quantity, so that in a short time a cup-full may be collected from a large tree. The inner bark (or liber) is of a close fibrous texture, like that of the morus papyrifera, and when separated from the other bark, and cleansed from the adhering particles, resembles a coarse piece of linen. It has been worked into ropes, which are very strong; and the poorer class of people employ the inner bark of the younger trees, which is more easily prepared, for the purpose of making a coarse stuff which they wear in working in the fields. But it requires much bruising, washing, and a long immersion, before it can be used, and when it appears completely purified, persons wearing this dress being exposed to rain, are affected with an intolerable itching, which renders their flimsy covering insupportable. It will appear from the account of the manner in which the poison is prepared, that the deleterious quality exists in the gum; a small portion of which still adhering, produces, when exposed to wet, this irritating effect: and it is singular, that this property of the prepared bark is known to the Javans in all places where the tree grows, while the preparation of a poison from its juice, which produces a mortal effect when introduced into the body by pointed weapons, is an exclusive art of the inhabitants of the eastern extremity of the island. The stem of the anchor having arrived at the above-mentioned height, sends off a few stout branches, which spreading nearly horizontally with several irregular curves, divide into smaller branches, and form a hemispherical, not very regular, crown. Previous to the season of flowering, about the beginning of June, the tree sheds its leaves, which reappear when the male flowers have completed the office of fecundation. It delights in a fertile, not very elevated, soil, and is only found in the largest forests. One of the experiments to be related below was made with the upas prepared by myself. In the collection of the juice I had some difficulty in inducing the inhabitants to assist me; they feared a cutaneous eruption and inflammation, resembling (according to the account they gave of it) that produced by the ingas of this island, the rhus vernix of Japan, and the rhus radicans of North America. The anchor, like the trees in its neighbourhood, is on all sides surrounded by shrubs and plants: in no instance have I observed the ground naked or barren in its immediate circumference. The largest tree I met with in Balambangan, was so closely environed by the common trees and shrubs of the forest in which it grew, that it was with difficulty I could approach it. Several vines and climbing shrubs, in complete health and vigour, adhered to it, and ascended to nearly half its height; and, at the time I visited the tree and collected the juice, I was forcibly struck with the egregious misrepresentation of Foersch. Several young trees spontaneously sprung from seeds that had fallen from the parent, put me in mind of a line in Darwin's Botanic Garden:—

'Chain'd at his root two scion-demons dwell;'

while in recalling his beautiful description of the upas, my vicinity to the tree gave me reason to rejoice that it was founded in fiction.

"DESCRIPTION OF THE CHETIK.—The fructification of the chetik is still unknown: after all possible research in the district where it grows, I have not been able to find it in a flowering state. It is a large winding shrub. The root extends creeping a considerable distance parallel to the surface, sending off small fibres at different curves, while the main root strikes perpendicularly into the ground. The stem, which in general is shrubby, sometimes acquires the size of a small tree. The poison is prepared from the bark of the root. The chetik grows only in close, shady, almost inaccessible forests, in a deep, black, fertile vegetable mould. It is very rarely met with even in the wildernesses of Balambangan.

"PREPARATION OF THE POISON FROM THE ANCHAR.—This process was performed for me by an old Javan, who was celebrated for his superior skill in preparing the poison: about eight ounces of the juice of the anchar, which had been collected the preceding evening in the usual manner, and been preserved in the joint of a bambu, was carefully strained into a bowl. The sap of the following substances, which had been finely grated and bruised, was carefully expressed and poured into it, viz. arum (nampu), kempferia galanga (kenchur), anomum (bengli) a variety of zerumbed, common onion and garlic, of each about half a drachm. The same quantity of finely powdered black pepper was then added, and the mixture stirred. The preparer now took an entire fruit of capsicum fruticosum or Guinea pepper, and having opened it, he carefully separated a single seed, and placed it on the fluid in the middle of the bowl. It immediately began to reel round rapidly, now forming a regular circle, then darting towards the margin of the vessel, with a perceptible commotion on the surface of the liquor, which continued about one minute. Being completely at rest, the same quantity of pepper was again added, and another seed of the capsicum laid on as before. A similar commotion took place in the fluid, but in a less degree, and the seed was carried round with diminished rapidity. The addition of the same quantity of pepper was repeated a third time, when a seed of the capsicum being carefully placed in the centre of the fluid, remained quiet, forming a regular circle about itself in the fluid, resembling the halo of the moon. This is considered as a sign that the preparation of the poison is complete.

"PREPARATION OF THE POISON FROM THE CHETIK.—The bark of the root is carefully separated and cleared of all the adherent earth, a proportionate quantity of water is poured on, and it is boiled about an hour, when the fluid is carefully filtered through a white cloth; it is then exposed to the fire again, and boiled down to nearly the consistence of an extract; in this state it much resembles a thick syrup. The following spices, having been prepared as above described, are added in the same proportion as to the anchar, viz. kempferia galanga (kenchur), (súnti), anomum zingéber (shai), common onion, garlic, and black pepper. The expressed juice of these is poured into the vessel, which is once more exposed to the fire for a few minutes, when the preparation is complete. The upas of both kinds must be preserved in very close vessels."

Dr. H. then details the particulars of twenty experiments made on different animals with these poisons, as well in their simple state as procured from the bark, powerfully prepared in the manner as above stated, in which the violence of the poison was manifested; and concludes with some general observations, from which the following are extracted:

"The operation of the two different poisons on the animal system is essentially different. The first seventeen experiments were made with the anchar. The rapidity of its effect depends in a great degree upon the size of the vessel wounded, and on the quantity of poison carried into the circulation. In the first experiment, it induced death in twenty-six minutes: in the second, which was made with the sap collected at Púgar, in thirteen minutes. The poison from different parts of the island has been found nearly equal in activity. The common train of symptoms is; a trembling and shivering of the extremities, restlessness, erection of the hair, discharges from the bowels, drooping and faintness, slight spasms and convulsions, hasty breathing, an increased flow of saliva, spasmodic contractions of the pectoral and abdominal muscles, retching, vomiting, excrementitious vomiting, frothy vomiting, great agony, laborious breathing, repeated convulsions, and death. The effects are

nearly the same on quadrupeds, in whatever part of the body the wound is made. It sometimes acts with so much force, that not all the symptoms enumerated are observed. In these cases, after the premonitory symptoms (tremors, twitchings, faintness, an increased flow of saliva), the convulsions come on suddenly, and are quickly followed by death. The upas appears to affect quadrupeds with nearly equal force, proportionate in some degree to their size and disposition. To dogs it proved mortal in most experiments within an hour; a mouse died in ten minutes; a monkey in seven; a cat in fifteen; a buffalo, one of the largest quadrupeds of the island, died in two hours and ten minutes.

"If the simple or unprepared sap is mixed with the extract of tobacco, instead of the spices mentioned, it is rendered equally, perhaps more, active. Even the pure juice, unmixed and unprepared, appears to act with a force equal to that which has undergone the preparative process. Birds are very differently affected by this poison. Fowls have a peculiar capacity to resist its effects: a fowl died in twenty-four hours after the wound; others have recovered after being partially affected.

"The eighteenth and succeeding experiments were made with the poison prepared from the chetik. Its operation is far more violent and rapid than that of the anchar, and it affects the animal system in a different manner. While the anchar operates chiefly on the stomach, alimentary canal, the respiration and circulation, the chetik is determined to the brain and nervous system: a relative comparison of the appearances on dissection, demonstrates in a striking manner the peculiar operation of each. A general view of the effects of the chetik on quadrupeds is given in these experiments. After the previous symptoms of faintness, drowsiness, and slight convulsions, it acts by a sudden impulse, which like a violent apoplexy prostrates at once the whole nervous system. In two of these experiments this sudden effect took place in the sixth minute after the wound, in another in the seventh minute: the animals suddenly started, fell down head foremost, and continued in convulsions until death ensued. This poison affects fowls in a much more violent manner than that of the anchar. They are first affected by a heat and itching of the breast and wings, which they shew by violently pecking those parts; this is followed by a loose discharge from the bowels, when they are seized with tremors and fluttering of the wings, which having continued a short time, they fall down head foremost, and continue convulsed till death. In some instances, particularly young fowls, the poison acts with great rapidity; death has frequently occurred within the space of a minute after a puncture with a poisoned dart.

"Taken into the stomach of quadrupeds, the chetik acts as a most violent poison; but it requires about thrice the period to produce the same effect which a wound produces. But the stomach of fowls can resist its operation. Having mixed about double the quantity generally adhering to a dart with the food of a fowl, it consumed it without shewing any marks of indisposition. The poison of the anchar does by no means act as violently on quadrupeds as that of the chetik. I have given it to a dog: it produced at first nearly the same symptoms as a puncture; oppression of the head, twitchings, faintness, laborious respiration, violent contraction of the pectoral and abdominal muscles, &c. which continued nearly two hours; but after the complete evacuation of the stomach by vomiting, the animal gradually recovered.

"I have but little to add concerning the operation of the anchar on the human system. The only credible information on this subject is contained in the work of Rhumphius, who had an opportunity of personally observing the effect of the poisoned darts and arrows as they were used by the natives of Makasar, in their attack on Amboyna about the year 1650. They were also employed by the inhabitants of Celebes in their former wars with the Dutch. Speaking of their operation he says, 'the poison touching the warm blood, it is instantly carried through the whole body, so that it may be felt in all the veins, and causes an excessive burning, particularly in the head, which is followed by fainting and death.' This poison (according to the same author) possesses different degrees of virulence, according to its age and state of preservation. The most powerful is called upas raja, and its effects are considered as incurable; the other kinds are distributed among the soldiers on going to

war. After having proved mortal to many of the Dutch soldiers in Amboyna and Makasar, they finally discovered an almost infallible remedy in the root of the radix toxicaria of Rhumphius, which, if timely applied, counteracted, by its violent emetic effect, the force of the upas. An intelligent Javan of Banyuwangi informed me, that a number of years ago an inhabitant of that district was wounded in a clandestine manner, by an arrow thrown from a blow-pipe, in the fore-arm, near the articulation of the elbow. In about fifteen minutes he became drowsy; after which he was seized with vomiting, became delirious, and in less than half an hour he died. From the experiments above related, we may form an analogous estimate of its probable effects on man." *Batavian Transactions*, vol. vii.

CHAPTER II.

Origin of the Natives—Javans compared with Maláyus and Búgis—Comparative Progress of the three Races—Foreign Influence—Persons of the Natives—Manners—Population—Inequality of it accounted for—Population Tables—Increase of Population—Foreign Settlers—Chinese—Búgis—Maláyus—Moors—Arabs—Slaves—Gradations of Rank among the Javans—Their Habitations, Dress, and Food.

The inhabitants of Java seem to owe their origin to the same stock, from which most of the islands lying to the south of the eastern Peninsula of Asia appear to have been first peopled. This stock is evidently Tartar, and has, by its numerous and wide-spreading branches, not only extended itself over the Indian Archipelago, but over the neighbouring Continent. "To judge from external appearance, that is to say, from shape, size, and feature," observes Dr. Francis Buchanan, in his Notices on the Birman Empire^[34], "there is one very extensive nation that inhabits the east of Asia. It includes the eastern and western Tartars of the Chinese authors, the Calmucs, the Chinese, the Japanese, and other tribes inhabiting what is called the Peninsula of India beyond the Ganges, and the islands to the south and east of this, as far at least as New Guinea."—"This nation," adds the same author, "may be distinguished by a short, squat, robust, fleshy stature, and by features highly different from those of an European. The face is somewhat in shape of a lozenge, the forehead and chin being sharpened, whilst at the cheek bones it is very broad. The eyebrows, or superciliary ridges, in this nation, project very little, and the eyes are very narrow, and placed rather obliquely in the head, the external angles being the highest. The nose is very small, but has not, like that of the negro, the appearance of being flattened, and the apertures of the nostrils, which in the European are linear and parallel, in them are nearly circular and divergent, for the *septum narium* being much thickest towards the face, places them entirely out of the parallel line. The mouths of this nation are in general well shaped; their hair is harsh, lank, and black. Those of them that live even in the highest climates do not obtain the deep hue of the negro or Hindu; nor do such of them as live in the coldest climates acquire the clear bloom of the European."

But although the Javans are to be included under this general description, it does not follow that they bear an exact, or very striking resemblance, in person and feature, to the Chinese or Japanese, nor even that they are liable to be confounded with the Birmans or Siamese. From the former, indeed, they are far removed by many obvious characteristics; and though more nearly resembling the latter, they possess many peculiarities, which mark them out to the most careless observer as a race distinct and separate for ages, though still retaining general traces of a common origin. As we approach the limits of savage life, and recur to that inartificial, unimproved state of society, in which the primitive divergence may be supposed to have taken place, we shall find the points of resemblance increased, and the proofs of a common descent multiplied. The less civilized of the tribes inhabiting the islands, approach so nearly, in physical appearance, to that portion of the inhabitants of the Peninsula, which has felt least of the Chinese influence on the one side, and of the Birman and Siamese on the other, and exhibit so striking an affinity in their usages and customs, as to warrant the hypothesis that the tide of population originally flowed towards the islands, from that quarter of the Continent lying between Siam and China. But at what era this migration commenced; whether, in the first instance, it was purely accidental and subsequently gradual; or whether, originally, it was undertaken from design, and accelerated, at any particular periods, by political convulsions on the Continent, we cannot at present determine with any certainty, as we have no data on which to rely with confidence. It is probable, however, that the islands were peopled at a very remote period, and long before the Birman and Siamese nations rose into notice.

Whatever opinion may be formed on the identity of the tribes inhabiting these Islands and the neighbouring Peninsula, the striking resemblance in person, feature, language, and customs, which prevails throughout the whole Archipelago, justifies the conclusion, that its original population issued from the same source, and that the peculiarities which distinguish the different nations and communities into which it is at present distributed, are the result of a long separation, local circumstances, and the intercourse of foreign traders, emigrants, or settlers.

Excluding the Philippines, as distant from the scene of our present observations, it may be noticed, that of the three chief nations in these islands, occupying respectively Java, Sumatra, and Celebes, the first has, especially by its moral habits, by its superior civilization and improvements, obtained a broader and more marked characteristic than the others. Both the Malayan and *Búgis* nations are maritime and commercial, devoted to speculations of gain,

animated by a spirit of adventure, and accustomed to distant and hazardous enterprises; while the Javans, on the contrary, are an agricultural race, attached to the soil, of quiet habits and contented dispositions, almost entirely unacquainted with navigation and foreign trade, and little inclined to engage in either. This difference of character may perhaps be accounted for, by the great superiority of the soil of Java to that of the other two islands.

It is to be regretted, that our information on the state and progress of society in these islands is scanty, as Europeans only became acquainted with them when they were on their decline. The Malayan empire, which once extended over all Sumatra^[35], and the capital of which is still nominally at *Menáng-kábaù* on that island, had long been dismembered; but its colonies were found established on the coasts of the Peninsula and throughout the Islands, as far east as the Moluccas. The Mahometan institutions had considerably obliterated their ancient character, and had not only obstructed their improvement, but had accelerated their decline. Traditional history concurs with existing monuments, in proving them to have formerly made considerable advances in those arts, to which their industry and ingenuity were particularly directed, and they still bear marks of that higher state of civilization which they once enjoyed.

What the Malayan empire was on Sumatra, in the western part of the Archipelago, that of *Guah* or *Mengkásar*, was on Celebes in the east; but the people of this latter nation, whom we may generally designate by the name of *Búgis*, had not been equally influenced by foreign settlers nor exposed to the inroads of the Arab missionaries, and they consequently maintained their ancient worship and their native institutions for a longer period. Like the *Maláyus*, they sent forth numerous colonies, and at one period extended the success of their arms as far west as Acheen on Sumatra, and *Kéddah* on the Malayan peninsula, and in almost every part of the Archipelago, Malayan and *Búgis* settlers and establishments are to be found.

The Javans, on the contrary, being an agricultural people, are seldom met with out of their native island. At one period of their history, indeed, their power seems to have been exerted in acquiring or perpetuating foreign dominion, and they seem to have sent out colonies to Borneo, the Peninsula, Sumatra, and probably Celebes: but when Europeans became acquainted with them, their external influence appears to have been contracted, and their sovereignty nearly confined within the limits of Java itself. Their foreign establishments thus receiving from them no protection, and deriving no advantage from nominal obedience, declared their independence: and, having but little communication with the mother-country, soon became assimilated to the character, and merged into the body of the Malayan nation.

The comparative advancement of these three nations in the arts of civilized life, seems to be directly as the fertility of the soil they occupied, or the inducements they held out to foreign intercourse; and inversely, as the indulgence of their own roving, adventurous spirit, and piratical habits. The arts never fix their roots but in a crowded population, and a crowded population is generally created only on a fertile territory. Egypt, from the fertility of soil and the consequent density of its population, led the way in science and refinement among ancient nations; while the sterile tracts contiguous to that favoured land have been inhabited, from primeval times, by dispersed tribes of unimproved barbarians. In like manner, Java having become populous from its natural fertility, and having, by its wealth and the salubrity of its climate, invited the visits of more enlightened strangers, soon made great progress in arts and knowledge; while the *Búgis*, being more deficient in these advantages, have been left considerably behind in the race of improvement. They may lay claim, however, to the most originality of character.

It will be the object of another part of this work, to trace the source of that foreign influence, to which these three nations are principally indebted for their civilization: here, therefore, it may not be necessary to advert to the circumstance further, than by generally observing, that from western Asia they received the rudiments and impulse of improvement; an inference abundantly justified by the extensive remains of the arts, institutions, and languages of that country, which are still to be found throughout the Archipelago.

The inhabitants of Java and Madúra are in stature rather below the middle size, though not so short as the *Búgis* and many of the other islanders. They are, upon the whole, well shaped, though less remarkably so than the *Maláyus*, and erect in their figures. Their limbs are slender, and the wrists and ankles particularly small. In general, they allow the body to retain its natural shape. The only exceptions to this observation are, an attempt to prevent the growth, or to reduce the size of the waist, by compressing it into the narrowest limits; and the practice still more injurious to female elegance, of drawing too tightly that part of the dress which covers the bosom. Deformity is very rare among them. The forehead is high, the eyebrows well marked and distant from the eyes, which are somewhat Chinese, or rather Tartar, in the formation of the inner angle. The colour of the eye is dark; the nose small and somewhat flat, but less so than that of the islanders in general. The mouth is well formed, but the lips are large, and their beauty generally injured by the practice of filing and dyeing the teeth black, and by the use of

tobacco, *sári*, &c. The cheek-bones are usually prominent; the beard very scanty; the hair of the head generally lank and black, but sometimes waving in curls, and partially tinged with a deep reddish brown colour. The countenance is mild, placid and thoughtful, and easily expresses respect, gaiety, earnestness, indifference, bashfulness, or anxiety.

In complexion, the Javans, as well as the other eastern islanders, may be considered rather as a yellow than a copper-coloured or black race. Their standard of beauty, in this respect, is "a virgin-gold colour:" except perhaps in some few districts in the mountainous parts of the country, where a ruddy tinge is occasioned by the climate, they want the degree of red requisite to give them a copperish hue. It may be observed, however, that they are generally darker than the tribes of the neighbouring islands; especially the inhabitants of the eastern districts, who may indeed be considered as having more delicate features, and bearing a more distinct impression of Indian colonization, than those of the Western or *Súnda* districts. The *Súndas* exhibit many features of a mountainous race. They are shorter, stouter, hardier, and more active men, than the inhabitants of the coast and eastern districts. In some respects they resemble the Madurese, who display a more martial and independent air, and move with a bolder carriage than the natives of Java. A considerable difference exists in person and features between the higher and lower classes; more indeed than seems attributable to difference of employment and treatment. The features and limbs of the chiefs are more delicate, and approach more nearly to those of the inhabitants of Western India, while those of the common people retain more marked traces of the stock from which the islands were originally peopled. In colour there are many different shades in different families and different districts, some being much darker than others. Among many of the chiefs a strong mixture of the Chinese is clearly discernible: the Arab features are seldom found, except among the priests, and some few families of the highest rank.

The women, in general, are not so good-looking as the men: and to Europeans many of them, particularly when advanced in years, appear hideously ugly. But among the lower orders, much of this deficiency of personal comeliness is doubtless to be attributed to the severe duties which they have to perform in the field, to the hardships they have to undergo in carrying oppressive burdens, and to exposure in a sultry climate. On the neighbouring island of *Báli*, where the condition of the women among the peasantry does not appear by any means so oppressed and degraded, they exhibit considerable personal beauty; and even on Java, the higher orders of them being kept within-doors, have a very decided superiority in this respect.

In manners the Javans are easy and courteous, and respectful even to timidity; they have a great sense of propriety, and are never rude or abrupt. In their deportment they are pliant and graceful, the people of condition carrying with them a considerable air of fashion, and receiving the gaze of the curious without being at all disconcerted. In their delivery they are in general very circumspect and even slow, though not deficient in animation when necessary.

Here, as on Sumatra, there are certain mountainous districts, in which the people are subject to those large wens in the throat, termed in Europe *goitres*. The cause is generally ascribed by the natives to the quality of the water; but there seems good ground for concluding, that it is rather to be traced to the atmosphere. In proof of this it may be mentioned, that there is a village near the foot of the *Teng'gar* mountains, in the eastern part of the island, where every family is afflicted by this malady, while in another village, situated at a greater elevation, and through which the stream descends which serves for the use of both, there exists no such deformity. These wens are considered hereditary in some families, and seem thus independent of situation. A branch of the family of the present *Adipáti* of *Bándung* is subject to them, and it is remarkable that they prevail chiefly among the women in that family. They neither produce positive suffering nor occasion early death, and may be considered rather as deformities than diseases. It is never attempted to remove them.

The population of Java is very unequally distributed, whether we consider the fertility or the extent of the districts over which it is spread. The great mass of it lies in the eastern and native districts, as will be perceived from the annexed tables.

The table No. I., is compiled from materials collected by a committee appointed on the first establishment of the British government, to enquire and report on the state of the country. It will be found to illustrate, in some degree, the proportionate numbers of the different ranks and classes of society in the island. Beyond this, however, it cannot be depended upon, as the returns of which it is an abstract were made at a period when the Dutch system of administration provisionally remained in force; and every new enquiry into the state of the country being at that time considered by the people as a prelude to some new tax or oppression, it became an object with them to conceal the full extent of the population: accordingly it was found to differ essentially in amount from the results of information subsequently obtained on the introduction of the detailed land-revenue settlement, when an agreement with each individual cultivator becoming necessary to the security of his possession, he seldom failed to

satisfy the necessary enquiries. The table No. II., here exhibited, at least as far as regards the European provinces, may therefore be considered as faithful a view of the population of the country as could be expected, and as such, notwithstanding the inaccuracies to which all such accounts are liable, it is presented with some confidence to the public.

It was formed in the following manner. A detailed account of the peasantry of each village was first taken, containing the name of each male inhabitant, with other particulars, and from the aggregate of these village lists a general statement was constructed of the inhabitants of each subdivision and district. An abstract was again drawn up from these provincial accounts, exhibiting the state of each residency in which the districts were respectively included, and the totals of these last, collected into one tabular view, constitute the present abstract. The labour of this detailed survey was considerable, for as each individual cultivator was to receive a lease corresponding with the register taken, it was necessary that the land he rented should be carefully measured and assessed^[36].

No. II.

TABLE exhibiting the POPULATION of JAVA and MADURA, according to a Census taken by the BRITISH GOVERNMENT, in the Year 1815.

MEM.—The
Population of
the principal
European
capitals
included in
the above, is
estimated as
follows:—

Batavia and its immediate Suburbs	60,000
Semárang	20,000
Surabáya	25,000

The
population of
Súra-kérta,
the principal
Native
capital, is
estimated at
105,000.
That of
Yúgya-kérta
at somewhat
less.

By the last table, it appears that in some districts the population is in the ratio of two hundred and eighty-one to a square mile, while in others it is not more than twenty-four and three quarters: in the districts of *Banyuwángi* it is even as low as seven. The soil in the eastern districts is generally considered superior to that in the western, and this circumstance, added to the superior facilities which they afford to commerce, may serve to account for their original selection as the chief seat of the native government, and consequently for their denser population at an early period.

This disproportion was also promoted by the policy of the Dutch Company. The Dutch first established themselves in the western division, and having no confidence in the natives, endeavoured to drive them from the vicinity of Batavia, with the view of establishing round their metropolis an extensive and desert barrier. The forced services and forced deliveries, which extended wherever Dutch influence could be felt, and of which more will be said hereafter, contributed to impoverish, and thereby to depopulate the country. The drain also of the surrounding districts, to supply the place of the multitudes who perished by the unhealthy climate of Batavia, must have been enormous; and if to these we add the checks to population, which were created over Bantam, the *Priáng'en* Regencies, and Chéribon, in the pepper and coffee cultivation, of the nature of which an account will be given when treating of the agriculture of the country, we need go no further to account for the existing disproportion. It was only about sixty years ago that the Dutch government first obtained a decided influence in the eastern districts, and from that moment, the provinces subjected to its authority ceased to improve, and extensive emigrations took place into the dominions of the native princes. Such were the effects of this desolating system, that the population of the province of *Banyuwángi*, which in 1750 is said to have amounted to upwards of eighty thousand souls, was in 1811 reduced to eight thousand.

The *Priáng'en* Regencies, from their inland situation and mountainous character, may probably have at all times been less closely peopled than other parts of the island, and their insufficient population would furnish no proofs of the oppressions of government, did we not observe extensive tracts, nay whole districts, exhibiting the traces of former cultivation, now lying waste and overgrown with long rank grass. Chéribon and Bantam have shared the same fate. These provinces, according to authentic accounts, were at the period of the first establishment of the European government, among the richest and most populous of the island. In 1811 they were found in a state of extreme poverty, affording little or no revenue, and distracted by all the aggravated miseries of continued insurrections.

If we look at Calcutta, Madras, and Bombay, the capitals of the British government in India: if we look at the great cities of every nation in Europe; nay, if we even confine ourselves to the capitals of the native princes on Java, we shall find that population has always accumulated in their vicinity. And why was not this the case with the Dutch capital? The climate alone will not explain it. Bad government was the principal cause; a system of policy which secured neither person nor property—selfish, jealous, vexatious, and tyrannical. It is no less true than remarkable, that wherever the Dutch influence has prevailed in the Eastern Seas, depopulation has followed. The Moluccas particularly have suffered at least as much as any part of Java, and the population of those Islands, reduced as it is, has been equally oppressed and degraded.

It was fortunate for the interests of humanity, and for the importance of Java, that the native governments were less oppressive than the sway of their European conquerors, and that their states afforded a retreat from a more desolating tyranny. It has been ascertained, that, on the first establishment of the Dutch in the eastern part of the Island, the inhabitants of whole districts at once migrated into the native provinces. Every new act of rigour, every unexpected exaction, occasioned a further migration, and cultivation was transferred to tracts which had previously scarcely a family on them. This state of things continued down to the latest date of the Dutch government. During the administration of Marshal Daendels, in the years 1808, 1809, and 1810, nearly all the inhabitants of the province of *Demák*, one of the richest in the eastern districts, fled into the native provinces; and when an order was given for the rigid enforcement of the coffee monopoly, every district suffered in its population, in proportion to the extent of service levied upon it. Of the sacrifice of lives by thousands and tens of thousands, to fill the ranks of the Dutch native army, and to construct roads and public works, we shall speak more at large hereafter.

The total population of Java and Madúra appears from the Table No. II., to amount to 4,615,270, of which about four millions and a half may be considered as the indigenous population of the country, and the rest as foreign settlers. Itinerants, who are principally found along the coast in the different maritime and commercial capitals, are not included; neither is the nautical population, which cannot be estimated at less than 30,000 souls; so that the whole population of these two islands may, perhaps, be taken in round numbers at not much less than five millions. Of these not less than three millions are in the provinces immediately subject to European authority, and upwards of a million and a half in the provinces of the native princes.

While the British were in possession of Java, there is reason to believe that the population of the Island was rapidly increasing; that of the provinces immediately under the European authority was certainly augmented by the return of numerous families from emigration: but previously to that period, no such authentic registers were kept as might enable us to ascertain with precision the variations in the number of the inhabitants during the Dutch government.

Nothing can more completely shew the vague and defective information formerly attainable on this subject, than the loose and contradictory statements published by those who took most pains to be well informed, and who felt it their duty to collect all the light that could be attained. In some accounts which have met the public eye, the population of Java is placed on a level with that of the most powerful European states, and assumed as high as thirty millions, while in others, where one would expect more accuracy^[39], it is rated at only a million. The most respectable authorities^[40] state the population about a century ago at three millions; but the slightest reflection will convince us, that such an estimate must have proceeded upon data merely conjectural, for from our knowledge of the Dutch maxims of administration we may safely say, that until very lately, they never thought it an object to prosecute statistic enquiries, and that if ever they had done so, under the old system, they could have obtained no results deserving of confidence or credit.

About the year 1750, a certain number of families were assigned by the stipulations of a treaty to one of the native princes^[41]; and on his death, about thirty years afterwards, when an account was taken of this population, it appeared that the number of families had nearly doubled. But this increase cannot be taken as the average increase of the Island, for at this period the native provinces received a considerable accession to their numbers, in consequence of the emigrations from the Dutch territories.

If any inference can be drawn from this and other corresponding circumstances, it would seem, that notwithstanding the drains on the existing race, and the preventive checks to an increase, which were experienced during the latter years of the Dutch administration, the island was actually more populous in 1811, when it was surrendered to the British, than in 1750, when at the termination of a destructive war, the Dutch acquired the greatest portion of it from the natives.

To support the opinion of an increase within the last half century (which is every where asserted) we have the assurance, that during that period the greatest internal tranquillity prevailed in the provinces subject to native administration; that no years of scarcity and famine were experienced, and that the island was blessed with genial seasons and abundance of subsistence. But to place in the opposite scale, we have the government oppressions to which we formerly alluded, and which one would suppose sufficient to counteract the natural tendency of these advantages. As demonstrative of the strength of that principle of population, which could even maintain its stationary amount in conflict with political drains and discouragements, it may be proper to mention cursorily a few of them. Great demands were, at all times, made on the peasantry of the island, to recruit the ranks of the Dutch army, and to supply the many other wants of the public service; the severities and consequent mortality to which the troops were liable, may be calculated, from the reluctance of the unfortunate wretches, selected as victims of military conscription, to engage in the duties of a military life. Confined in unhealthy garrisons, exposed to unnecessary hardships and privations, extraordinary casualties took place among them, and frequent new levies became necessary, while the anticipation of danger and suffering produced an aversion to the service, which was only aggravated by the subsequent measures of cruelty and oppression. The conscripts raised in the provinces were usually sent to the metropolis by water; and though the distance be but short between any two points of the island, a mortality, similar to that of a slave-ship in the middle passage, took place on board these receptacles of reluctant recruits. They were generally confined in the stocks till their arrival at Batavia, and it is calculated that for every man that entered the army and performed the duties of a soldier, several lives were lost. Besides the supply of the army, one half of the male population of the country was constantly held in readiness for other public services; and thus a great portion of the effective hands were taken from their families, and detained at a distance from home, in labours which broke their spirit and exhausted their strength. During the administration of Marshal Daendels, it has been calculated that the construction of public roads alone, destroyed the lives of at least ten thousand workmen. The transport of government stores, and the capricious requisitions of government agents of all classes, perpetually harassed, and frequently carried off numbers of the people. If to these drains we add the waste of life occasioned by insurrections, which tyranny and impolicy excited and fomented in Chérifon, the blighting effects of the coffee monopoly, and forced services in the *Priáng'en* Regencies, and the still more desolating operation of the policy pursued and consequent anarchy produced in the province of Bantam, we shall have some idea of the depopulating causes that existed under the Dutch administration, and the force of that tendency to increase, which could overcome obstacles so powerful.

Most of these drains and checks were removed during the short period of British administration; but it is to be regretted (so far as accurate data on this subject would be desirable) that there was not time to learn satisfactorily the result of a different system, or to institute the proper registers, by which alone questions of population can be determined. The only document of that kind, to which I can venture to refer as authentic, is a statement of the births and deaths that occurred in the given general population of the *Priáng'en* Regencies for one year. From this account it would appear, that even in these Regencies, where, if we except Batavia, the checks to population are allowed to be greater than elsewhere, the births were to the total existing population as 1 to 39, and the deaths as 1 to 40 very nearly; that the births exceed the deaths by 618, or about 1 in 40, in a population of 232,000, and that, at that rate, the population would double itself in three hundred and seventy-five years. A slow increase, certainly, compared with England, where the births, in the three years ending 1800, were to the persons alive as 1 in 36, and the deaths as 1 to 49, and where, consequently, the nation would double itself in one hundred and sixty years (or taking the enumeration of 1811 as more correct, where the population would be doubled in eighty years): but not much slower than that of France, where, according to the statements of numbers in 1700 and 1790, about three hundred years would be required to double the inhabitants. It has been estimated that the population in some more favourable districts would double itself in fifty years. One inference cannot fail to be drawn from the register to which I have referred; that the births and deaths, though they nearly approach each other, are low, compared with the existing numbers; and that, consequently, the climate is healthy, and the marriages not very prolific, as far as this district is concerned.

In the absence of authentic documents, which would have enabled us to resolve many interesting questions regarding the population, such as the number of children to a marriage, the ordinary length of life, the proportion of children that die in infancy and at the other stages of life, the ratio between the births and deaths, and the

consequent rate of increase, the effect of polygamy and multiplied divorces, the comparative healthiness of the towns and the villages, and several others,—I shall state a few observations on some of these heads, and a few facts tending to shew, that under a better system of government, or by the removal of a few of the checks that previously existed, Java might, in a short time, be expected to be better peopled.

The soil is in general extremely fertile, and can be brought to yield its produce with little labour. Many of the best spots still remain uncultivated, and several districts are almost desert and neglected, which might be the seats of a crowded and happy peasantry. In many places, the land does not require to be cleared, as in America, from the overgrown vegetation of primeval forests, but offers its services to the husbandman, almost free from every obstruction to his immediate labours. The agricultural life in which the mass of the people are engaged, is on Java, as in every other country, the most favourable to health. It not only favours the longevity of the existing race, but conduces to its more rapid renewal, by leading to early marriages and a numerous progeny. The term of life is not much shorter than in the best climates of Europe. A very considerable number of persons of both sexes attain the advanced age of seventy or eighty, and some even live to one hundred and upwards; nearly the same proportion survive forty and fifty, as in other genial climates.

While life is thus healthy and prolonged, there are no restraints upon the formation of family connexions, by the scarcity of subsistence or the labour of supporting children. Both sexes arrive at maturity very early, and the customs of the country, as well as the nature of the climate, impel them to marry young; the males at sixteen, and the females at thirteen or fourteen years of age: though frequently the women form connexions at nine or ten, and, as Montesquieu expresses it, "infancy and marriage go together." The conveniences which the married couple require are few and easily procured. The impulse of nature is seldom checked by the experience of present deficiencies, or the fear of future poverty. Subsistence is procured without difficulty, and comforts are not wanting. Children, who are for a very short period a burden to their parents, become early the means of assistance and the source of wealth. To the peasant who labours his field with his own hand, and who has more land than he can bring into cultivation, they grow up into a species of valuable property, a real treasure; while, during their infancy and the season of helplessness, they take little from the fruits of his industry but bare subsistence.

Their education costs him little or nothing; scarcely any clothing is required, his hut needs very little enlargement, and no beds are used. Many of them die in infancy from the small-pox and other distempers, but never from scanty food or criminal neglect of parents. The women of all classes suckle their children, till we ascend to the wives of the regents and of the sovereign, who employ nurses.

Though women soon arrive at maturity, and enter early into the married state, they continue to bear children to an advanced age, and it is no uncommon thing to see a grandmother still making addition to her family. Great families are however rare. Though there are some women who have borne thirteen or fourteen children, the average is rather low than otherwise. A *chácha*, or family, is generally less numerous than in Europe, both from the circumstance that the young men and women more early leave the houses of their parents to form establishments for themselves, and from an injudicious mode of labouring among women of the lower ranks. Miscarriages among the latter are frequently caused by over-straining themselves in carrying excessive burdens, and performing oppressive field-work, during pregnancy. The average number of persons in a family does not exceed four, or four and a half. As the labour of the women is almost equally productive with that of the men, female children become as much objects of solicitude with their parents as male: they are nursed with the same care, and viewed with the same pride and tenderness. In no class of society are children of either sex considered as an incumbrance, or the addition to a family as a misfortune; marriage is therefore almost universal. An unmarried man past twenty is seldom to be met with, and an old maid is considered a curiosity. Neither custom, law, or religion, enjoins celibacy on the priesthood, or any other order of the community, and by none of them is it practised. Although no strictness of principle, nor strong sense of moral restraint, prevails in the intercourse of the sexes, prostitution is not common, except in the capitals.

As the Javans are a quiet domestic people, little given to adventure, disinclined to foreign enterprise, not easily roused to violence or bloodshed, and little disposed to irregularities of any kind, there are but few families left destitute in consequence of hazards incurred or crimes committed by their natural protectors. The character of blood-thirsty revenge, which has been attributed to all the inhabitants of the Indian Archipelago, by no means applies to the people of Java; and though, in all cases where justice is badly administered or absolutely perverted, people may be expected to enforce their rights or redress their grievances, rather by their own passions than by an appeal to the magistrate, comparatively few lives are lost on the island by personal affrays or private feuds.

Such are a few of the circumstances that would appear to have encouraged an increase of population on Java. They furnish no precise data on which to estimate its rapidity, or to calculate the period within which it would be doubled, but they allow us, if tranquillity and good government were enjoyed, to anticipate a gradual progress in the augmentation of inhabitants, and the improvements of the soil for a long course of time. Suppose the quantity of land in cultivation to be to the land still in a state of nature as one to seven, which is probably near the truth, and that, in the ordinary circumstances of the country, the population would double itself in a century, it might go on increasing for three hundred years to come. Afterwards the immense tracts of unoccupied or thinly peopled territories on Sumatra, Borneo, and the numerous islands scattered over the Archipelago, may be ready to receive colonies, arts, and civilization from the metropolis of the Indian seas. Commercial intercourse, friendly relations, or political institutions, may bind these dispersed communities in one great insular commonwealth. Its trade and navigation might connect the centre of this great empire with Japan, China, and the south-western countries of Asia. New Holland, which the adventurous *Búgis* already frequent, and which is not so far distant from Java as Russia is from England, might be included in the circle, and colonies of Javans settled on the north, might meet with the British spreading from the south, over that immense and now uncultivated region. If we could indulge ourselves in such reveries with propriety, we might contemplate the present semi-barbarous condition, ignorance, and poverty of these innumerable islands, exchanged for a state of refinement, prosperity, and happiness.

I formerly alluded to the oppressions of government, as the principal checks to the increase of population on Java. There are many others, such as the small-pox, and other diseases, which are common to that country with the rest of the world. From the scattered state of the population, any contagious distemper, such as the small-pox, was formerly less destructive on Java, than in countries where the inhabitants are more crowded into large towns, and it is hoped that, from the establishment for vaccine inoculation which the British government erected, and endeavoured to render permanent, its ravages may, in time, be entirely arrested. The diseases most peculiar to the country, and most dangerous at all ages, are fevers and dysenteries: epidemics are rare. There are two moral causes which, on their first mention, will strike every one as powerfully calculated to counteract the principle of population: I mean the facility of obtaining divorces, and the practice of polygamy. A greater weight should not, however, be given them than they deserve after a consideration of all the circumstances. It is true, that separations often take place on the slightest grounds, and new connexions are formed with equal frivolity and caprice; but in whatever light morality would view this practice, and however detrimental it would be to population in a different state of society, by leaving the children of the marriage so dissolved to neglect and want, it has no such consequences on Java. Considering the age at which marriages are usually contracted, the choice of the parties cannot be always expected to be considerate or judicious. It may be observed also that the women, although they do not appear old at twenty, as Montesquieu remarks, certainly sooner lose that influence over their husbands, which depends upon their beauty and personal attractions, than they do in colder climates. In addition to this, there is little moral restraint among many classes of the community, and the religious maxims and indulgences acted upon by the priesthood, in regulating matrimonial sanctions, have no tendency to produce constancy, or to repress inclination. Dissolutions of marriage are, therefore, very frequent, and obtained upon the slightest pretences; but, as children are always valuable, and as there is very little trouble in rearing or providing for them, no change of mate, in either party, leads to their abandonment or neglect. Indeed, the ease of supporting children, which renders the practice less detrimental to the increase of population, may be one of the principal causes why it is generally followed and so little checked. No professed prostitution or promiscuous intercourse is the consequence of this weakness of the nuptial tie. It is rather brittle than loose; it is easily dissolved, but while it remains it generally insures fidelity.

Polygamy, though in all cases it must be injurious to population and happiness, so far as it goes, is permitted on Java, as in other Mahomedan countries, by religion and law, but not practiced to any great extent. Perhaps the ease of obtaining matrimonial separations, by admitting of successive changes of wives, diminishes the desire of possessing more than one at a time.

It is plain, likewise, that whatever be the law, the great body of the people must have only one wife; and that, where there is nearly an equality of number between the sexes, inequality of wealth or power alone can create an unequal distribution of women. On Java, accordingly, only the chiefs and the sovereign marry more than one wife. All the chiefs, from the regents downwards, can only, by the custom of the country, have two; the sovereign alone has four. The regents, however, have generally three or four concubines, and the sovereign eight or ten. Some of the chiefs have an extraordinary number of children; the late Regent of *Túban* is reputed to have been the father of no fewer than sixty-eight. Such appropriations of numerous women as wives or concubines, were owing to the political power of native authorities over the inferior classes; and as, by the new system, that power is destroyed, the evil may to a certain extent be checked. If we were to depend upon the statement of a writer whom

Montesquieu refers to, that in Bantam there were ten women to one man, we should be led to conclude with him, that here was a case particularly favourable to polygamy, and that such an institution was here an appointment of nature, intended for the multiplication of the species, rather than an abuse contributing to check it. There is not the least foundation, however, for the report. The proportion of males and females born in Bantam, and over the whole of Java, is nearly the same as in Europe, and as we find generally to exist, wherever accurate statements can be obtained. From the information collected in a very careful survey of one part of the very province in question, the preponderance seemed to be on the side of male children to an extraordinary degree; the male children being about forty-two thousand, and the females only thirty-five thousand five hundred. There were formerly, it is true, great drains on the male population, to which I have before alluded, and which, in the advanced stages of life, might turn the balance on the other side; but as they were never so destructive as to render polygamy a political institution, so that institution was not carried to such an extent, as to render it a peculiar obstacle to the progress of population. Upon the whole, we may conclude that in Java, under a mild government, there is a great tendency to an increase in the number of inhabitants, and to the consequent improvement and importance of the island.

Besides the natives, whose numbers, circumstances, and character I have slightly mentioned, there is on Java a rapidly increasing race of foreigners, who have emigrated from the different surrounding countries. The most numerous and important class of these is the Chinese, who already do not fall far short of a hundred thousand; and who, with a system of free trade and free cultivation, would soon accumulate tenfold, by natural increase within the island, and gradual accessions of new settlers from home. They reside principally in the three capitals of Batavia, *Samárang*, and *Surabáya*, but they are to be found in all the smaller capitals, and scattered over most parts of the country. A great proportion of them are descended from families who have been many generations on the island. Additions are gradually making to their numbers. They arrive at Batavia from China, to the amount of a thousand and more annually, in Chinese junks, carrying three, four, and five hundred each, without money or resources; but, by dint of their industry, soon acquire comparative opulence. There are no women on Java who come directly from China; but as the Chinese often marry the daughters of their countrymen by Javan women, there results a numerous mixed race, which is often scarcely distinguishable from the native Chinese. The Chinese on their arrival generally marry a Javan woman, or purchase a slave from the other islands. The progeny from this connexion, or what may be termed the cross breed between the Chinese and Javans, are called in the Dutch accounts *pernákans*. Many return to China annually in the junks, but by no means in the same numbers as they arrive.

The Chinese, in all matters of inheritance and minor affairs, are governed by their own laws, administered by their own chiefs, a captain and several lieutenants being appointed by government for each society of them. They are distinct from the natives, and are in a high degree more intelligent, more laborious, and more luxurious. They are the life and soul of the commerce of the country. In the native provinces they are still farmers of the revenue, having formerly been so throughout the island.

Although still numerous, they are considered to have much decreased since the civil war in 1742, during which not only a large proportion of the Chinese population was massacred by the Dutch in the town of Batavia, but a decree of extermination was proclaimed against them throughout the island.

The natives of the Coromandel and Malabar coast, who reside on Java, are usually termed Moors. They appear to be the remnant of a once extensive class of settlers; but their numbers have considerably decreased, since the establishment of the Dutch monopoly, and the absolute extinction of the native trade with India, which we have reason to believe was once very extensive. Trading vessels, in considerable numbers, still continue to proceed from the Coromandel coast to Sumatra, Penang, and Malacca, but they no longer frequent Java.

Búgis and *Maláyus* are established in all the maritime capitals of Java. They have their own quarter of the town allotted to them, in the same manner as the Chinese, and are subject to the immediate authority of their respective captains.

Among the Arabs are many merchants, but the majority are priests. Their principal resort is *Grésik*, the spot where Mahomedanism was first extensively planted on Java. They are seldom of genuine Arab birth, but mostly a mixed race, between the Arabs and the natives of the islands.

There is another class of inhabitants, either foreigners themselves, or the immediate descendants of foreigners, whose peculiar situation and considerable numbers entitle them to some notice in the general sketch of the population: I mean the class of slaves. The native Javans are never reduced to this condition; or if they should happen to be seized and sold by pirates, a satisfactory proof of their origin would be sufficient to procure their enfranchisement. The slave merchants have therefore been under the necessity of resorting to the neighbouring

islands for a supply, and the greatest number have been procured from *Báli* and Celebes. The total amount may be estimated at about thirty thousand. According to the returns obtained in 1814, it appeared that the following were the numbers in the principal divisions of the island.

At Batavia and its environs	18,972
In the Semáráng division	4,488
In the Surabáya division	<u>3,682</u>
Total	<u>27,142</u>

These slaves are the property of the Europeans and Chinese alone: the native chiefs never require the services of slaves, or engage in the traffic of slavery. The Mahomedan laws, which regulate their civil condition, and permit this abomination in all its extent, are modified by the milder prejudices and more humane temper of the country. The Dutch, who, like us, valued themselves on their political liberty, are here the great promoters of civil servitude, and carried with them into their eastern empire, the Roman law regarding slavery in all its extent and rigour. But although they adopted principles that admitted of the most cruel and wanton treatment of slaves, I would not be understood to say, that they carried these principles into common practice. The contrary was almost universally the case, and the condition of slaves on Java, where they were employed principally in domestic offices, formed a complete contrast to the state of those employed in the West India plantations. It is remarked by Montesquieu, that "in despotic countries, the condition of a slave is hardly more burdensome than that of a subject," and such has been the case in Java. The grounds on which the Dutch justified the practice of making slaves, was not that they could not command the services of the natives with a sway sufficiently absolute, and that they were compelled to seek, beyond the limits of the island, for unfortunate agents to perform what the natives shewed a reluctance to undertake, but that they found the class of foreigners more adroit and docile than the Javans in the conduct of household affairs, and that having reduced them to the state of property, they remained in the family for life, and saved the trouble of a new training.

Upon the conquest of the island by the British in 1811, the condition of this class of its subjects excited the attention of government; and though we could not, consistently with those rights of property which were admitted by the laws that we professed to administer, emancipate them at once from servitude, we enacted regulations, as far as we were authorized, to ameliorate their present lot, and lead to their ultimate freedom. Steps were immediately taken to check further importation, and as soon as it was known that the horrid traffic in slaves was declared a felony by the British parliament, it was not permitted for an instant to disgrace a region to which the British authority extended. The folly and perfect uselessness of slavery on Java has been often pointed out by Dutch commissioners and Dutch authors^[42].

Having thus attempted a brief description of the different classes of the Asiatic population of the island, I shall proceed to a short detail of the habitations, dress, food, and domestic economy of the natives; but, in order to enable the reader to understand some of the terms in the tables, and likewise in the subsequent observations, it may not be improper simply to state the names and titles expressive of the different gradations of rank, leaving a more particular account of the power and authority with which they are connected to another opportunity. The sovereign, who is either called *Susuhúnan*, *Susúnan*, or *Sultan*, is the fountain of honour and the source of all distinction. His family are called *Pang'érans*, his queen *Rátu*, the heir apparent *Pangéran adipáti*, and the prime minister *Ráden adipáti*. Governors of provinces, called by the Dutch *Regents*, are styled by the natives *Bopátis*, *Tumúngungs*, or *Ang'abéis*; and are ranked among the chief nobility of the country. All the inferior chiefs, including those termed *Rádens*, *Mántris*, *Demángs*, *Lúras*, and others, except the heads of villages, termed *Kúwus*, *Búkuls*, *Pátíng'gis*, &c., who are elected by the common people out of their own number for the performance of specific duties, may be considered as *petite noblesse*.

The cottage or hut of the peasant, called *úmah limásan*, may be estimated to cost, in its first construction, from two to four rupees, or from five to ten shillings English money. It is invariably built on the ground, as on continental India, and in this respect differs from similar structures in the surrounding islands. The sleeping places, however, are generally a little elevated above the level of the floor, and accord in simplicity with the other parts of the dwelling. The sides or walls are generally formed of *bámbus*, flattened and plaited together: partitions, if any, are constructed of the same materials, and the roof is either thatched with long grass, with the leaves of the *nipa*, or with a kind of *bámbu sirap*. The form and size of these cottages, as well as the materials employed in their construction, vary in the different districts of the island, and with the different circumstances of the individuals. In the eastern districts, where the population is most dense and the land most highly cultivated, a greater scarcity is

felt of the requisite materials than in the western, and the dwellings of the peasantry are consequently smaller and slighter. In the latter, the frame-work of the cottages is generally made of timber, instead of *bámbus*, and the interior of them, as well as the front veranda, is raised about two feet from the ground. The accommodations consist of a room partitioned off for the heads of the family, and an open apartment on the opposite side for the children: there is no window either made or requisite. The light is admitted through the door alone; nor is this deficiency productive of any inconvenience in a climate, where all domestic operations can be carried on in the open air, and where shade from the sun, rather than shelter from the weather, is required. The women perform their usual occupations of spinning or weaving on an elevated veranda in front, where they are protected from the rays of a vertical sun by an extended projection of the pitch of the roof. In some of the mountainous districts, where the rains descend with most violence, the inhabitants provide against their effects, by constructing their roofs of *bámbus* split into halves, and applied to each other by their alternate concave and convex surfaces, all along the pitch of the roof, from the top down to the walls. On the whole, it may be affirmed that the habitations of the peasantry of Java, even those constructed in the most unfavourable situations and inhabited by the lowest of the people, admit of a considerable degree of comfort and convenience, and far exceed, in those respects, what falls to the lot of the peasant in most parts of continental India.

The class of dwellings inhabited by the petty chiefs are termed *úmah chébluk* or *úmah jóglo*. These are distinguished by having eight slopes or roofs, four superior and four secondary. Their value is from seven to eight dollars, or from thirty-five to forty shillings.

The largest class of houses, or those in which the chiefs and nobles reside, are termed *úmah túmpang*, and are of the same form as the preceding; they are generally distinguished from them by their greater size, which varies with the means and rank of the possessor, and usually contain five or six rooms. The supports and beams are of wood. The value of such a habitation, calculated to answer the circumstances of an ordinary chief of the rank of a *Páteh*, or assistant to the governor of a province, may be about fifty or sixty dollars, or from ten to fifteen pounds sterling.

In the European provinces, the size and comfort of these dwellings have of late been very essentially contracted, by the rigid enforcement of the monopoly of the teak forests, which were formerly open to the natives of all classes.

Brick dwellings, which are sometimes, though rarely, occupied by the natives, are termed *úmah gedóng*. This kind of building is for the most part occupied by the Chinese, who invariably construct a building of brick and mortar whenever they possess the means. The Chinese *kámpongs* may always be thus distinguished from those of the natives.

The cottages, which I have already described, are never found detached or solitary: they always unite to form villages of greater or less extent, according to the fertility of the neighbouring plain, abundance of a stream, or other accidental circumstances. In some provinces, the usual number of inhabitants in a village is about two hundred, in others less than fifty. In the first establishment or formation of a village on new ground, the intended settlers take care to provide themselves with sufficient garden ground round their huts for their stock, and to supply the ordinary wants of their families. The produce of this plantation is the exclusive property of the peasant, and exempted from contribution or burden; and such is their number and extent in some regencies (as in *Kedú* for instance), that they constitute perhaps a tenth part of the area of the whole district. The spot surrounding his simple habitation, the cottager considers his peculiar patrimony, and cultivates with peculiar care. He labours to plant and to rear in it those vegetables that may be most useful to his family, and those shrubs and trees which may at once yield him their fruit and their shade: nor does he waste his efforts on a thankless soil. The cottages, or the assemblage of huts, that compose the village, become thus completely screened from the rays of a scorching sun, and are so buried amid the foliage of a luxuriant vegetation, that at a small distance no appearance of a human dwelling can be discovered, and the residence of a numerous society appears only a verdant grove or a clump of ever-greens. Nothing can exceed the beauty or the interest, which such detached masses of verdure, scattered over the face of the country, and indicating each the abode of a collection of happy peasantry, add to scenery otherwise rich, whether viewed on the sides of the mountains, in the narrow vales, or on the extensive plains. In the last case, before the grain is planted, and during the season of irrigation, when the rice fields are inundated, they appear like so many small Islands, rising out of the water. As the young plant advances, their deep rich foliage contrasts pleasingly with its lighter tints; and when the full-eared grain, with a luxuriance that exceeds an European harvest, invests the earth with its richest yellow, they give a variety to the prospect, and afford a most refreshing relief to the eye. The clumps of trees, with which art attempts to diversify and adorn the most skilfully arranged park, can bear no comparison with them in rural beauty or picturesque effect.

As the population increases, the extent of individual appropriations is sometimes contracted; but when there is sufficient untenanted ground in the neighbourhood, a new village is thrown out at some distance, which during its infancy remains under the charge, and on the responsibility of the parent village. In time, however, it obtains a constitution of its own, and in its turn becomes the parent of others. These dependent villages are in the eastern districts termed *dúku*, and in the western or *Súnda* districts *chántilan*.

Every village forms a community within itself, having each its village officers and priest, whose habitations are as superior to those of others as their functions are more exalted. To complete the establishment in most large villages, a temple is appropriated for religious worship. Here is found that simple form of patriarchal administration, which so forcibly strikes the imagination of the civilized inhabitants of this quarter of the world, and which has so long been the theme of interest and curiosity of those who have visited the Indian continent.

In the larger villages, or chief towns of the subdivisions, in which the *Kápala chútag*, or division-officer, resides, a square place, corresponding with the *álun álun* of the capital, is reserved; and, in like manner, the mosque is found to occupy one side, and the dwelling of the chief another. The villages, whether large or small, are fenced in by strong hedges of *bámbu*, and other quick growing plants. All the large towns and capitals are formed on the same principle, each hut and dwelling being surrounded by a garden exclusively attached to it. In this respect, they are but large villages, although usually divided into separate jurisdictions. A newly-formed village contains but a few families, while in the capitals the population often amounts to several thousand souls. *Súra-kérta*, the capital of the chief native government, though its population is estimated to exceed one hundred thousand, may be termed an assemblage or group of numerous villages, rather than what in European countries would be called a town or city.

In the larger towns, however, and in the capitals, considerable attention is paid to the due preservation of broad streets or roads crossing in different directions. The inland capitals in the *Súnda* districts are distinguished by an extreme neatness and regularity in this respect; and although both these, and the greater native capitals at *Sólo* and *Yúgy'a-kérta*, may have been laid out principally at the suggestion of Europeans, it may be observed, that the same conveniences are also to be found in the extensive capital of *Banyúmas*, the planning of which must be ascribed entirely to the natives.

The dwelling or palace of the prince is distinguished by the terms *kadáton* or *kráton*, being contractions, the former probably from *ka-datu-nan*, and the latter from *ka-ratu-nan*, the place of the *Dátu* or *Rátu* (prince). Those of the Regents or *Bopátis* (nobles entrusted with the government of provinces), are styled *dálam*; a term which is applied to the inmost hall or chamber of both buildings; and by which also, particularly in the *Súnda* districts, the chiefs themselves are often distinguished.

The *kráton*, or palace of the prince, is an extensive square, surrounded by a high wall, without which there is generally a moat or ditch. In the front, and also sometimes in the rear, an extensive open square is reserved, surrounded by a railing, which is termed the *álun álun*. On the wall of the *kráton*, which may be considered as the rampart of a citadel, are usually planted cannon; and within it, the space is divided by various smaller walls, which intersect each other, and form squares and compartments, each having a particular designation, and answering a specific purpose; separate quarters being assigned within the walls to all the families who may be considered as attached to the person of the sovereign, or that of the princes. The circumference of the wall of the *kráton* of *Yúgy'a-kérta* is not less than three miles; and it was estimated that, at the period of the assault in 1812, it did not contain fewer than from ten to fifteen thousand people. That of *Súra-kérta* is neither so extensive, nor so well built. After crossing the *álun álun*, or square in front of the *kráton*, the principal entrance is by a flight of steps, at the top of which it is usual for the new sovereign to be invested with his authority, and on which he is seated on those occasions in which he shews himself in public. This is termed the *setingel*, from *seti-ingel*, the high ground. On these occasions, the *Pang'érans* and nobles are ranged below. Proceeding into the interior of the building, and after descending a flight of steps, we find the next principal gateway or entrance is called the *brójo nólo*. After passing another court, the next gateway is termed *kámandungan*; and beyond this again is the last passage, distinguished by the term *s'rimenánti*. Still farther on, in the centre of a square, is the hall, *mendópo* or *bángsal*, of the prince. On one side of the square are two small *mendópos*, or open sheds, called *bángsal peng'ápit*, where the *Pang'érans* assemble to wait the appearance of the sovereign in the principal *mendópo*; and on the opposite side is the dwelling, or *úmah tumpang*, of the prince, termed *próbo yókso*. The *bángsal*, or *mendópo*, is a large open hall, supported by a double row of pillars, and covered with shingles, the interior being richly decorated with paint and gilding. The ceiling of the *mendópo* of *Yúgy'a-kérta* is remarkable for its splendour and richness, being composed according to that peculiar style of architecture frequently observed throughout Java, in which several squares, of gradually decreasing sizes, are arranged one above and within the other; a style which is general among the Hindus, and strongly marks the architecture of the Burmans and Siamese.

In the centre of the *álun álun*, and in front of the *setingel*, are two *wáringen* trees (the Indian fig or *banyan*), called *wáring'en kúrun*, which have been considered as the sign or mark of the royal residence from the earliest date of Javan history.

In the dwellings of the nobles and governors of provinces, the same form and order, with some slight modifications, are observed. These have likewise the *álun álun* front. The outer entrance corresponding with the *setingel* of the *kráton* is however with them denominated the *láwang sekéting*, the second *pasádong*, and the third *régol*, within which is the *mendópo*, or *dálam*. The mosque forms one side of the *álun álun*.

The furniture of the houses or huts of the lower orders is very simple, and consists of but few articles. Their bed, as with the Sumatrans, is a fine mat with a number of pillows, having some party-coloured cloths generally extended over the head, in the form of a canopy or valance. They neither use tables nor chairs, but their meals are brought on large brass or wooden waiters, with smaller vessels of brass or china-ware for the different articles served up. They sit cross-legged, and, in common with other Mahomedans, only use the right hand at their meals. They usually take up their food between the finger and thumb, and throw it into their month. Spoons are used only for liquids, and knives and forks very rarely, if at all.

In the dwellings of the higher classes, the articles of furniture are more numerous and expensive. Raised beds, with many pillows piled one above the other, and mats and carpets, are common in all; but, in the European provinces, many of the rooms of the chiefs are furnished with looking-glasses, chairs, tables, &c. Most of these were at first introduced for the accommodation of European visitors, but are now gradually becoming luxuries, in which the chiefs take delight.

They are partial to illuminations, and, on days of festivity, ornament the grounds adjacent to their dwellings with much taste and design, by working the young shoots of the cocoa-nut, the *bámbu*, and various flowers, in festoons and other contrivances. The canopy or valance over the table, bed, or other place selected for any particular purpose, is universal. This canopy is generally of chintz, from Western India.

In all the provinces under the European government, the chiefs have several rooms fitted up in the European style, for the accommodation of the officers of government, and none of them hesitate to sit down at table with their visitors, and join in the entertainment.

The natives of Java are in general better clothed than those of Western India. In many provinces of the interior, and in the elevated parts of the island, warm clothing is indispensable. They are for the most part clothed from the produce of their own soil and labour; but there are parts of their dress which they willingly derive from foreign countries. Blue cloths and chintzes, in particular, have always formed an extensive article of importation from Western India; and the chiefs consume considerable quantities of broadcloths, velvet, and other fabrics, in the jackets, pantaloons, and other articles of dress, in imitation of Europeans. Persons of condition are particular in being what they conceive well-dressed. A sloven is an object of ridicule; and, in point of expensive attire, they may be considered as restricted only by their means. Although the general character of the native costume is preserved, they seemed inclined to adopt many of the more convenient parts of the European dress; and, in proof of their having but few prejudices on this score, it may be observed, that, on occasions when the population of the country has been called out in the Native Provinces, the assemblage of the provincials presented themselves habited, many of them in cocked hats and stockings of Europeans, forming a most grotesque appearance. By the institutions of the country, a particular kind of dress is assigned to each different rank; and there are some patterns of cloth, the use of which is prohibited, except to the royal family: but these sumptuary laws are for the most part obsolete in the European provinces, and gradually becoming so in those of the native princes, particularly since those princes have engaged by treaty to discontinue their enforcement. There are also distinctions of rank expressed by the different modes of wearing the *krís*, which will be treated of hereafter.

It is part of the domestic economy, that the women of the family should provide the men with the cloths necessary for their apparel, and from the first consort of the sovereign to the wife of the lowest peasant, the same rule is observed. In every cottage there is a spinning-wheel and loom, and in all ranks a man is accustomed to pride himself on the beauty of a cloth woven either by his wife, mistress, or daughter.

The principal article of dress, common to all classes in the Archipelago, is the cloth or *sárong*, which has been described by Mr. Marsden to be "not unlike a Scots highlander's plaid in appearance, being a piece of party-coloured cloth, about six or eight feet long and three or four feet wide, sewed together at the ends, forming, as some writers have described it, a wide sack without a bottom." With the *Maláyus*, the *sárong* is either worn slung over the shoulders as a sash, or tucked round the waist and descending to the ankles, so as to enclose the legs like a

petticoat. The patterns in use among the *Maláyus* or *Búgis* are universally Tartan; but besides these, the Javans pride themselves in a great variety of others, the common people only wearing the Tartan pattern, while others prefer the Javan *bátek* or painted cloths. On occasions of state they wear, in lieu of the *sárong* or *járit*^[43] (the ordinary cloth of the country, which differs from the *sárong* in not being united at the ends), a cloth termed *dódot*, which is made either of cotton or silk and much larger. This is worn in the same way; but from its size, and the manner of its being tucked up, it falls in a kind of drapery, which is peculiar to Java.

The men of the lowest class generally wear a pair of coarse short drawers, reaching towards the knee, with the *járit* or cloth folded round the waist, and descending below the knees like a short petticoat. This cloth is always tucked up close round the waist, while the labourer is at work or moving abroad, but loosened, and allowed to descend to its full length, when in the presence of a superior. It is fastened round the waist by a narrow waistband or belt (*sábuk*). In general, the Javans are also provided with a jacket (*kalámbi*), having short sleeves reaching to the elbows. This is either white, or more frequently of light and dark blue stripes. A handkerchief or the (*ikat*) is always folded round the head. With the *Maláyus* this handkerchief is generally of the Tartan pattern, but among the Javans it is of the *bátek* cloth, and put on more in the manner of a turban than the handkerchief of a *Maláyu* is: the crown of the head is covered with it, and the ends are tucked in. While abroad, they generally wear over it a large hat of leaves or of the split and plaited bambu, which shelters them like an umbrella from the sun and rain. A coarse handkerchief is usually tucked into the waistband, or a small bag is suspended from it, containing tobacco, *síri*, &c. The *kris* or dagger, which is universally worn by all classes, completes the dress. To that of the labourer, according to the work he may be employed upon, is superadded a large knife or hatchet for cutting wood, brushwood, or grass.

The women, in like manner, wear the cloth tucked round their loins, and descending in the form of a petticoat as low as the ankles. It is folded somewhat differently from the cloth worn by the men, and never tucked up as with them. The waistband or girdle by which they fasten it, is termed *údat*. Round the body, passed above the bosom and close under the arms, descending to the waistband, is rolled a body cloth called *kémban*. They also commonly wear a loose gown reaching to the knees, with long sleeves buttoning at the wrists. This gown is almost invariably blue, never being of any variegated pattern, and as well as the jacket of the men is usually termed *kalámbi*. The women do not wear any handkerchief on their head, which is ornamented by their hair fastened up in a *glung* or knot, and by an appendage of large studs, either of buffalo horn or brass, which they use for ear-rings. Both men and women, even of the lowest class, wear rings on their fingers. Those worn by the men are either of iron, brass, or copper; those of the women of brass or copper only. The value of a man's dress, as above described, may be estimated at about five rupees, twelve and sixpence; and that of the women at about six rupees, or fifteen shillings.

The children of the lower orders go naked, from the age of fifteen or eighteen months to six or seven years; but the children of persons of condition always wear the *járit* round their loins, together with a jacket.

The higher orders wear a *járit*, of about seven or eight cubits long and about three cubits wide, which with the men is folded once round the loins, and allowed to descend to the ankles in the form of a petticoat, but so as to admit of the leg being occasionally exposed when set forward in the act of walking. The part which is folded in front commonly hangs somewhat lower than the rest of the garment. The *sábuk* or waistband is generally of silk of the *chíndi* or *patólé* pattern. When at leisure within-doors, the men usually wear a loose cotton gown descending as low as the knees; but when abroad, or in attendance on public service, they for the most part wear a jacket of broad cloth, silk, or velvet if procurable, frequently edged with lace and ornamented with filagree buttons. This jacket is called *sikapan* (from *sikap* ready) as it intimates, when worn, that the party is ready for duty. The jacket used by the Regents or chiefs of provinces, and other officers of distinction, closely resembles the old Friesland jacket, as worn about two centuries ago, and is probably modified, if not entirely taken from it. Under the jacket the men always wear a vest, usually of fine white cloth, with a single row of filagree buttons, buttoning close to the body and at the neck like a shirt. If the party is upon a journey or without doors in the sun, the *tú dang* or shade, which is usually of broad cloth or velvet, is fixed over the face, having much the appearance of a large jockey cap. The petty chiefs, particularly in the western districts, instead of this shade wear a large hat, in the form of a wash-hand bason reversed, made of split bambu of various colours, and highly varnished to throw off the rain. This is fastened by a string under the chin, in the same manner as the hat of the common people.

The dress of the women of the higher classes does not in fashion differ essentially from that of the lower orders, but the articles are of finer texture and better quality, and gold studs and rings, ornamented with coloured and precious stones, are substituted for those of copper and brass. Both men and women of condition wear sandals, shoes, or slippers in the house; and in the European districts, the Regent and other chiefs, when in attendance on

the public officers, on journeys or otherwise, usually superadd to the native dress tight cloth or nankeen pantaloons, with boots and spurs, according to the European fashion.

It is difficult to estimate with precision the value of the dress of the higher orders. That of an ordinary petty chief and his wife costs about fifty Spanish dollars, or between twelve and thirteen pounds sterling, including the *siri* box, which is a necessary appendage. The *siri* box of the man is termed *epok*, that of the woman *chepúri*.

Neither men nor women cut their hair, but allow it to grow to its natural length: in this they differ from the *Maláys* and *Búgis*, who always wear it short. The men, except on particular occasions, gather it up on the crown of the head, twist it round, and fasten it by means of a semicircular tortoise-shell comb fixed in front; but among the higher classes, it is considered a mark of the greatest respect to let it flow in curls in the presence of a superior. The princes and chiefs at the native courts usually confine it on the neck, and allow it to descend down the back in large curls; but in *Chéribon* and the *Súnda* districts, the chiefs, on occasions of ceremony, let their locks flow in curls and ringlets loose over their shoulders. The women confine their hair by gathering and twisting it into one large *glúng* or knot at the back of the head, in the manner of performing which there are several modes, distinguished by as many names. The short down encircling the forehead is sometimes cut or shaved, to give the brow a better defined appearance, when the hair is combed back, and on particular occasions the fine hair in the same place, which is too short to be combed back and gathered in the knot, is turned in small curls like a fringe. All classes, both of men and women, apply oils to their hair. The women frequently use scents in dressing it, and on state days ornament it with a great variety of flowers, diamond-headed pins, and other jewellery. Both sexes perfume their persons with different species of fragrant oils, as the *láng'a chandána* (sandal-wood oil), *láng'a kanáng'a*, *láng'a gáru*, *láng'a gandapúra*, and *láng'a jerú*, and adorn the skin with a variety of powders called *bóré*; as the *bóré kúning* (yellow powder), *bóré érang* (black), *boré sári*, and *boré k'lambak*. To these may be added the general use of musk, termed by them *dédes*. In the houses of the higher orders, *dúpa* or incense of benjamin, and other odoriferous gums, is generally burnt.

The priests generally dress in white, and imitate the turbans of the Arabs.

Such is the ordinary costume of the bulk of the population, as it is usually seen in all that part of the island peculiarly called Java. In the western or *Súnda* districts, the common people are by no means so well supplied with articles of dress as in the eastern. They are often seen with little or no covering, beyond a piece of very coarse cloth tied round the waist. The Regents or chiefs of provinces in these districts generally wear, when on public duty with the officers of the European government, a velvet cap ornamented with gold lace, differing in fashion in each province, but usually calculated to shade the face from the direct rays of the sun. In the eastern districts the chiefs, on similar occasions, wear the cap called *kúluk*, which will be more particularly mentioned as part of the court dress.

Besides what may be thus termed the ordinary dress, two grand distinctions are noticed in the costume of the Javans: these are the war dress and the court dress. The former consists of *chelána* or pantaloons, buttoned from the hip down to the ankles; the *kátok*, short kilt or petticoat of coloured silk or fine cotton, descending just below the knee; and the *ámben* or girth, rolled tightly round the body seven or eight times, like a military sash, and securing the whole body from below the arms to the hips: this is made either of silk or very fine cotton. Over this is drawn a tight vest without buttons, termed *sángsang*, and over this again the ordinary vest or *kótan* with buttons, buttoning close round the body and neck, the *sikapan* or jacket being worn over the whole. The *túdung*, or shade for the face, is usually worn on this occasion, as well as shoes or sandals. The *ang'ger* or sword belt, which goes round the waist, also forms an essential part of the war dress, in which the *pedáng* or sword is suspended on the left side. Three *kríses* are usually worn in the waist on these occasions, one on each side and the other behind. These consist of the *krís* which the wearer particularly calls his own, the *krís* which has descended to him from his ancestors, and the *krís* which he may have received on his marriage from his wife's father. The latter is often placed on the left side for immediate use. This dress is worn in going into the field of battle, on which occasion it is the custom to appear in the richest attire their means admit, and to wear the rings and the other valuable jewels or trinkets which they possess.

In the court or full dress, the shoulders, arms, and body, down to the waist, are entirely bare; the drapery descending from the loins downwards, *chelána*, and what may be worn on the head, being the only covering. When a subject, whatever be his rank or family, approaches his prince, he must wear *chelána* or pantaloons of coloured silk or of fine cotton, without buttons; and instead of the *járit* or ordinary cloth, he must wear the *dódot*, a cloth which is of nearly double the dimensions. This is put on, however, nearly in the same manner as the *járit*, but so as not to descend on the right side further than just below the knee, while on the left it falls in a rich drapery,

until it touches the ground in a point. The *sábuk* or waistband must be of gold lace, the fringed ends of which usually hang down a few inches, and the party must only wear one *krís*, which is tucked in the waistband on the right side behind, while on the left he wears a weapon, or rather implement, called a *wédung*, in the shape of a chopper, together with a small knife, indicative of his readiness to cut down trees and grass at the order of his sovereign. On his head he must wear a peculiar kind of cap (*kuluk*), said to have been introduced by the Sultan *Pájang* in imitation of the scull-cap of the Arabs; it is made of cloth, and either white or light blue, stiffened with rich starch: on more ordinary occasions, and generally, except in full dress, the chiefs prefer a cap of the same form made of black velvet, ornamented with gold, and sometimes a diamond on the crown. The part of the body which is left uncovered is generally rubbed over with white or yellow powder. The sovereign himself is usually habited in the same manner on state occasions, his body and arms being covered with a bright yellow powder. When women approach the sovereign, besides having their hair ornamented with diamonds and flowers, they must wear a *sémbong* or sash round the waist, which generally is of yellow silk with red at the two ends. It is brought once round the body from behind, and the long ends are allowed to descend towards the ground, one over each hip.

Since the loss of the *makóta*, or golden crown of *Majapáhit*, which disappeared on the banishment of *Susúnan Mangkúrat*, both the *Susúnan* and *Sultan*, on public occasions, when they have to meet the European authorities, wear a velvet hat or cap of a particular fashion, somewhat different at each court; that of the *Susúnan* resembling what is distinguished by the term of the *Madúra* hat in consequence of its being still worn by the *Madúra* family, and that of the *Sultan* having a golden *garúda* affixed at the back, and two wings of gold extending from behind the ears. They both wear breeches, stockings, and buckles, after the European fashion.

The *jámang* or golden plate, which was worn over the forehead, as well as a variety of golden ornaments round the neck and arms, and which formerly formed the most splendid part of the costume, are now disused; except at marriages, or in dramatic or other entertainments, when the ancient costume of the country is exhibited in all its rich and gorgeous variety.

The following picture of a Javan beauty, taken from one of the most popular poems of the country, will serve better than any description of mine, to place before the reader the standard of female elegance and perfection in the island, and to convey an accurate idea of the personal decorations on nuptial occasions, in dances and dramatic exhibitions; it will at the same time afford a representation of what may be considered to have formed the full dress of a female of distinction, before the innovations of Mahometanism and the partial introduction of the European fashions. The extravagant genius of eastern poetry may perhaps be best employed in portraying such fantastic images, or celebrating such extraordinary tastes.

"Her face was fair and bright as the moon, and it expressed all that was lovely. The beauty of *Ráden Pútri* far excelled even that of the *widadári Déwi Ráti*: she shone bright even in the dark, and she was without defect or blemish.

"So clear and striking was her brightness, that it flashed to the sky as she was gazed at: the lustre of the sun was even dimmed in her presence, for she seemed to have stolen from him his refulgence. So much did she excel in beauty, that it is impossible to describe it.

"Her shape and form were nothing wanting, and her hair when loosened hung down to her feet, waving in dark curls: the short front hairs were turned with regularity as a fringe, her forehead resembling the *chendána* stone. Her eyebrows were like two leaves of the *ímbo* tree; the outer angle of the eye acute and slightly extended; the ball of the eye full, and the upper eyelash slightly curling upwards.

"Tears seemed floating in her eye, but started not. Her nose was sharp and pointed; her teeth black as the *kómbang*; her lips the colour of the newly cut *mangústin* shell. Her teeth regular and brilliant; her cheeks in shape like the fruit of the *dúren*; the lower part of the cheek slightly protruding. Her ears in beauty like the *giánti* flowers, and her neck like unto the young and graceful *gádung* leaf.

"Her shoulders even, like the balance of golden scales; her chest open and full; her breasts like ivory, perfectly round and inclining to each other. Her arms ductile as a bow; her fingers long and pliant, and tapering like thorns of the forest. Her nails like pearls; her skin bright yellow; her waist formed like the *pátram* when drawn from its sheath; her hips as the reversed *límas* leaf.

"Like unto the *púdak* flower when hanging down its head, was the shape of her leg; her foot flat with the ground; her gait gentle and majestic like that of the elephant. Thus beautiful in person, she was clothed with a *chíndi patóla* of a green colour, fastened round the waist with a golden *lúlut* or cestus: her outer garment being of the *méga*

mendúng (dark clouded) pattern. Her *kémban* (upper garment) was of the pattern *jing'gomosi*, edged with lace of gold; on her finger she wore a ring, the production of the sea, and her ear-rings were of the pattern *nóto bróngto*.

"On the front of the ear-studs were displayed the beauties of the *segára múnchar* pattern (emeralds encircled by rubies and diamonds), and she bound up her hair in the first fashion, fastening it with the *glúng* (knot) *bobokóran*, and decorating it with the green *chámpaca* flower, and also with the *gámbir*, *meláti*, and *mínor* flowers; and in the centre of it she fixed a golden pin, with a red jewel on the top, and a golden flower ornamented with emeralds. Her necklace was composed of seven kinds of precious stones, and most brilliant to behold; and she was highly perfumed, without it being possible to discover from whence the scent was produced.

"Her *jámang* (tiara or head ornament) was of the fashion *sódo sáler* and richly chased; her bracelets were of the pattern *glang-kána*, and suited the *jámang*. Thus was the beauty of her person heightened and adorned by the splendour of her dress."

To this we may add, from one of the popular versions of the work called *Jáya Langkára* the notions which the Javans have of the virtues, beauties, and dress, that should adorn a young man of family.

"In a youth of noble birth there are seven points which should strike the observer, and these are indispensable. In the first place, he should be of good descent; in the second, he should possess understanding; in the third, he should know how to conduct himself. In the fourth place, he recollects what he learns in the *sástras*; in the fifth, his views must be enlarged; in the sixth, he must be religious; in the seventh, he must exert the qualifications he possesses unhesitatingly. These are the seven points which must strike the immediate attention of the observer.

"In his heart and mind he must be quiet and tranquil. He should be able to repress his inclinations, and to be silent when necessary: never should he on any account tell a falsehood. He should not think long concerning property, neither should he fear death: in his devotions he should be free from pride, and he should relieve the distressed.

"It should be observed by all, that whatever he undertakes is quickly executed. He should quietly penetrate other men's thoughts and intentions; his inquiries should be discreet, intelligent, and active. Whenever he meets with an able man, he should attach himself to him as a friend, and never leave him till he has drawn all his knowledge from him; and in whatever he does, his actions should be rather what is generally approved, than the result of his mere will.

"As long as he lives he must continue to thirst after more knowledge; and he must constantly guard his own conduct, that men may not say it is bad. His recollection should be clear and distinct, his speech mild and gentle; so that people's hearts may be softened, and possessing these qualifications his dependants may praise him.

"His appearance and stature should not be deficient. The light of his countenance should be sweet, like that of *Batára Asmára* (the god of love) when he descends to the earth. When men look upon him, they should be struck with the idea, 'how great would he not be in war!' In the form of his body no part should be ill shaped. His skin should be like unto virgin gold before it has undergone the process of fire; his head rather large; his hair straight and long. His eyes watery and ready to overflow; his brows like the *ímbo* leaf; his eyelash like the *tánjung* flower; his nose sharp and prominent, with but little hair above the upper lip; his lips like the newly cut *mangústín* shell; his teeth as if painted, shining and black like the *kómbang*; his breast and shoulders wide.

"A bright circle should irradiate his face and breast, and he should stand unrivalled. Whatever he says should make an impression on all who hear him, and his speech should be playful and agreeable.

"He should wear the *chelána chíndi*, with a dark green *dódot* of the pattern *gádong-eng'úkup*; his sash of golden lace. His *krís* should have the sheath of the *sátrían* fashion, and the handle should be that of *túng'gáksmí*. The *súmping* (an imitation of flowers or leaves which hang over the ear) should be of gold, and of the fashion *súreng páti* (brave to death); and on his right thumb (*palgúna*) he should at the same time wear a golden ring."

In common with the Sumatrans, and other inhabitants of the Archipelago and southern part of the peninsula, both sexes of all ranks have the custom of filing and blackening the teeth, it being considered as disgraceful to allow them to remain "white like a dog's." The operation is performed when the children are about eight or nine years of

age, and is a very painful one. The object is to make the front teeth concave, and by filing away the enamel, to render them better adapted for receiving the black dye. This extraordinary and barbarous custom tends to destroy the teeth at an early age, and with the use of tobacco, *síri*, and lime, which are continually chewed, generally greatly disfigures the mouth. The Javans, however, do not file away the teeth so much as is usual with some of the other islanders; nor do they set them in gold, as is the case with the Sumatrans. Neither do they distend the lobe of the ear, to that enormous extent practised on *Báli* and elsewhere, and which is observed in the representations of *Búdh*. This has been discontinued since the introduction of Mahomedanism.

Compared with the western Asiatics, the Javans have but few prejudices regarding food. They are Mahomedans, and consequently abstain rigidly from swine's flesh, and commonly from inebriating liquors; and some few families, from the remains of a superstition which has descended to them from their Hindu ancestors, will not eat of the flesh of the bull or cow; but with these exceptions, there are few articles which come amiss to them. They live principally upon vegetable food, and rice is on Java, what it is throughout Asia, the chief article of subsistence; but fish, flesh, and fowl are likewise daily served up at their meals, according to the circumstances of the parties. With fish they are abundantly supplied; and what cannot be consumed while fresh, is salted, or dried, and conveyed into the inland provinces. They do not eat of the turtle or other amphibious animals, but none of the fish known to Europeans are objected to by them. The flesh of the buffalo, the ox, the deer, the goat, and various kinds of poultry, are daily exposed for sale in their markets, and are of very general consumption. The flesh of the horse is also highly esteemed by the common people; but the killing of horses for food is generally prohibited, except when maimed or diseased. The hide of the buffalo is cut into slices, soaked, and fried as a favourite dish. The flesh of the deer, dried and smoked, is well known throughout the Malayan Archipelago, under the term *dinding*, and is an article in high request on Java.

The dairy forms no part of domestic economy of Java, neither milk itself, nor any preparation from it, being prized or used by the natives: a circumstance very remarkable, considering that they were undoubtedly Hindus at one period of their history; and that, if so essential an article of food had once been introduced, it is probable it would always have been cherished. No good reason seems to be assigned for their indifference to milk; except perhaps the essential one, that the cows of Java afford but a very scanty supply of that secretion. The udder of a Javan cow is sometimes not larger than that of a sheep, and seems to afford but a bare subsistence for the calf; yet the buffalo gives a larger quantity, and butter or *ghee* might equally be prepared from it. The cows of the Indian breed are distinguished by a hump between the shoulders and a larger udder; and it has been found that the secretion of milk can be increased, as it is observed that where particular care has been taken by Europeans even of the Javan cows, they have in a short time afforded double the usual quantity. It has been conjectured, that on the introduction of the Indian breed by the Hindu colonists, the use of milk was forbidden, in order that the number of cattle might more rapidly increase; but the Javans have no tradition to this effect. It is however remarkable, that an absolute aversion to this aliment exists on that part of the continent of Asia, in which many popular usages are found similar to those of the east insular nations. In a recent publication it is stated of the people between Siam and China, who are not, by the bye, very nice in what they eat, "qu'ils ne se permettent pas le lait des animaux, et qu'ils ont pour cette boisson la répugnance que peut inspirer la boisson du sang. Cette répugnance va même jusqu'à exclure du nombre de ses alimens le beurre et le fromage^[44]."

Salt is obtained in abundance throughout every part of the island, but being manufactured on the coast, is proportionally higher in price in the inland districts. The sugar used by the natives is not prepared from the sugar-cane, but from the áren and other palms. It is manufactured by the simple process of boiling down the *tári*, or liquor which exudes from these trees, which are tapped for the purpose.

None of the palms of Java furnish the worms which are employed for food in other eastern countries, but similar worms are found in various kinds of *rótan*, *sólak*, &c. which are considered as dainties, not only by the natives, but by the Chinese and by some Europeans: they are called *géndon*. Worms of various species, but all equally esteemed as articles of food, are found in the teak and other trees. White ants, in their different states, are one of the most common articles of food in particular districts: they are collected in different ways, and sold generally in the public markets. Their extensive nests are opened to take out the chrysalis; or they are watched, and swarms of the perfect insect are conducted into basins or trays containing a little water, where they soon perish: they are called *láron*.

The cooking utensils are, as might be supposed, of the most simple kind, and either of coarse pottery or copper. Rice, after several poundings in a trough or mortar, is generally dressed by steam, though not unfrequently boiled in a small quantity of water. In the former case, it is remarkable for its whiteness and consistency when dressed; and in this state it is publicly exposed for sale in the markets and along the high roads. Indian corn is usually

roasted in the ear, and offered for sale in the same manner. Other aliments are for the most part prepared in the manner of curry, termed by the *Maláyus gulai*: of these they have almost an endless variety, distinguished according to the principal ingredients. Besides what may be considered as the principal dishes, they excel in a variety of preparations of pastry and sweetmeats (particularly of the *kétan*), of which many are by no means unpleasant to an European palate. They are fond of colouring their pastry, as well as other articles of their food. They occasionally make their rice yellow and brown, and even turn their boiled eggs red for variety.

Black pepper, as among the *Maláyus*, is scarcely ever used, on account of its supposed heating quality. The most common seasoning employed to give a relish to their insipid food, is the *lombok*; triturated with salt, it is called *sámbel*, both by the *Maláyus* and Javans, and this condiment is indispensable and universal. It is of different kinds, according to the substances added to increase or diversify its strength or pungency; the most common addition is *trási*, denominated by the *Maláyus*, *bláchang*. The name *láláb* is given to various leaves and kernels, mostly eaten raw with rice and *sámbel*: many of these substances possess a pungency and odour intolerable to Europeans. If several vegetables are mixed together, and prepared by boiling, they constitute what is called *jang'an*, or greens for the table, of which there are several distinctions. The various legumes are of great importance in the diet of the natives. *Padomóro*, *pin'dang*, and *semúr*, are dishes to which the flesh of the buffalo or fowls is added, and which resemble the Indian curry. *Rújak* is prepared from unripe mangos and other fruits, which, being grated, receive the addition of capsicum and other spices, and thus constitutes a favourite dish with the natives, though very disagreeable to Europeans.

The Chinese prepare from the *gédélé* a species of soy, somewhat inferior to that brought from Japan. The *káchang-iju* is highly useful as a general article of diet, and is a good substitute for various legumes, which form the common nourishment of the continental Indians: it contains much farinaceous matter. *Trási* or *bláchang* is prepared in many situations along the northern coast, but is mostly required for the consumption of the interior. It is prepared from prawns or shrimps, and extensive fisheries for the purpose are established in many parts of the coast. The shrimps being taken, are strewed with salt, and exposed to the sun till dry; they are then pounded in wooden mortars, dressed, and formed into masses resembling large cheeses: in this state they constitute an article of trade, and are distributed through the country. The putrescent fluid remaining after the expression strongly impregnated with the odour of the shrimps, is evaporated to the consistence of a jelly, and affords a favourite sauce called *pétis*. An inferior kind of *trási* is prepared from small fish, and, when made into the form of small balls, is called *blények*. *Trási blúro* is of a reddish colour, and much esteemed at the native capitals. Another kind of *pétis* is prepared from the flesh of the buffalo, chiefly in the interior districts.

Salted eggs are also an important article in the diet of the Javans. The eggs of ducks being most abundant, are chiefly preserved in this way. The eggs are enveloped in a thick covering made of a mixture of salt and ashes in equal parts, or salt and pounded bricks, and being wrapped each in a large leaf, they are placed on one another in a tub, or large earthen vessel. In ten days they are fit for use; but they are generally kept longer in the mixture, and, being thoroughly impregnated with salt, can be kept many months. In some districts, the eggs of the Muscovy duck are particularly employed for the purpose.

In preparing their food, the Javans may be considered to observe the same degree of cleanliness which is usual with Asiatics in general; and in point of indulgence of appetite, they may be, perhaps, placed about midway between the abstemious Hindu and the unscrupulous Chinese. In a country where vegetation is luxuriant, and cultivation is already considerably advanced, it follows that there must be an abundant supply for a people who subsist principally on vegetable productions; and it may be asserted, that, except where the manifest oppressions of government, or the effects of civil discord, for the moment deprive the labourer of his just reward, there are few countries where the mass of the population are so well fed as on Java. There are few of the natives who cannot obtain their *káti*, or pound and a quarter of rice a day, with fish, greens, and salt, if not other articles, to season their meal. Where rice is less abundant, its place is supplied by maize or Indian corn, or the variety of beans which are cultivated; and even should a family be driven into the woods, they would still be able to obtain a bare subsistence from the numerous nutritious roots, shoots, and leaves, with which the forests abound. Famine is unknown; and although partial failures of the crop may occur, they are seldom so extensive as to be generally felt by the whole community. Thus abundantly supplied, the Javans seem by no means inclined to reject the bounties of Providence: they are always willing to partake of a hearty meal, and seldom have occasion to make a scanty one. Yet among them a glutton is a term of reproach, and to be notoriously fond of good living is sufficient to attach this epithet to any one.

The Javans, except where respect to Europeans dictates a different practice, eat their meals off the ground. A mat kept for the purpose is laid on the floor, which, when the meal is over, is again carefully rolled up, with the same

regularity as the table-cloth in Europe; and a plate of rice being served up to each person present, the whole family or party sit down to partake of the meal in a social manner. A principal dish, containing the *sámbel*, *jángan*, or other more highly seasoned preparation, is then handed round, or placed in the centre of the company, from which each person adds what he thinks proper to the allowance of rice before him.

Water is the principal and almost exclusive beverage, and, among people of condition, it is invariably boiled first, and generally drunk warm. Some are in the habit of flavouring the water with cinnamon and other spices; but tea, when it can be procured, is drunk by all classes at intervals during the day.

On occasions of festivals and parties, when many of the chiefs are assembled, the dishes are extremely numerous and crowded; and hospitality being a virtue which the Javans carry almost to an excess, due care is taken that the dependants and retainers are also duly provided for. These, particularly in the highlands of the *Súnda* districts, where the people are furthest removed from foreign intercourse, and the native manners are consequently better preserved, are arranged in rows at intervals, according to their respective ranks; the first in order sitting at the bottom of the hall, and the lowest at some distance without, where each is carefully supplied with a bountiful proportion of the feast: thus exhibiting, in the mountainous districts of Java, an example of rude hospitality, and union of the different gradations of society in the same company, similar to that which prevailed in the Highlands of Scotland some centuries ago, where, it is said, "those of inferior description were, nevertheless, considered as guests, and had their share, both of the entertainment and of the good cheer of the day."

It is at these parties that the chiefs sometimes indulge in intoxicating liquors, but the practice is not general; and the use of wine, which has been introduced among them by the Dutch, is in most instances rather resorted to from respect to Europeans, than from any attachment to the bottle.

The Javans have universally two meals in the day; one just before noon, and one between seven and eight o'clock in the evening: the former, which is the principal meal, corresponding with the European dinner, and distinguished by the term *mángán-áwan*, or the day meal; the latter, termed *mángán wéngé*, or evening meal. They have no regular meal corresponding with the European breakfast; but those who go abroad early in the morning, usually partake of a basin of coffee and some rice cakes before they quit their homes, or purchase something of the kind at one of the numerous *wárongs*, or stalls, which line the public roads, and are to the common people as so many coffee or eating-houses would be to the European; rice, coffee, cakes, boiled rice, soups, ready dressed meats and vegetables, being at all times exposed in them. What is thus taken by the Javans in the morning to break the fast, is considered as a whet, and termed *sarap*.

By the custom of the country, good food and lodging are ordered to be provided for all strangers and travellers arriving at a village; and in no country are the rights of hospitality more strictly enjoined by institutions, or more conscientiously and religiously observed by custom and practice. "It is not sufficient," say the Javan institutions, "that a man should place good food before his guest; he is bound to do more: he should render the meal palatable by kind words and treatment, to soothe him after his journey, and to make his heart glad while he partakes of the refreshment." This is called *bójo krómo*, or real hospitality.

The chewing of betel-leaf (*síri*), and the areka-nut (*pínang*), as well as of tobacco (*tambáko*), and *gámbir*, is common to all classes. The *síri* and *pínang* are used much in the same manner as by the natives of India in general. These stimulants are considered nearly as essential to their comfort, as salt is among Europeans. The commonest labourer contrives to procure at least tobacco, and generally *síri*; and if he cannot afford a *síri* box, a small supply will be usually found in the corner of his handkerchief. Cardamums and cloves compose part of the articles in the *síri* box of a person of condition.

The inhabitants of Java, as a nation, must be accounted sober; although Europeans, in order to serve their own purposes, by inducing some of the chiefs to drink wine to excess, have succeeded, to a certain extent, in corrupting the habits of some individuals in this respect. Two kinds of fermented liquor are however prepared by the Javans, called *bádek* and *bróm*: the former from rice; the latter almost exclusively from *kétan* or glutinous rice. In making *bádek*, the rice previously boiled is stewed with a ferment called *rági*, consisting of onions, black pepper, and capsicum, and mixed up into small cakes, which are daily sold in the markets. After frequent stirring, the mixture is rolled into balls, which are piled upon each other in a high earthen vessel, and when fermentation has commenced the *bádek* exudes and is collected at the bottom. The remaining rice, strongly impregnated with the odour of fermentation, has a sweetish taste, and is daily offered for sale in the markets as a dainty, under the name of *tapé*. *Bádek* is, in comparison with *bróm*, a simple liquor, producing only slight intoxication: it is often administered to children to dislodge worms from the intestines. In making *bróm*, the *kétan* is boiled in large quantities, and being stewed with *rági*, remains exposed in open tubs till fermentation takes place, when the liquor

is poured off into close earthen vessels. It is generally buried in the earth for several months, by which the process of fermentation is checked and the strength of the liquor increased: sometimes it is concentrated by boiling. The colour is brown, red, or yellow, according to the kind of *kétan* employed. *Bróm*, which has been preserved for several years, is highly esteemed among the natives, constituting a powerful spirit, which causes violent intoxication followed by severe head-ache in persons not accustomed to its use. The substance that remains after separation is a deadly poison to fowls, dogs, and various other animals. Arrack is prepared by distillation: an inferior kind, made in a more simple and economical manner, is called *chiu*. Both are prepared by the Chinese, and a particular account of the method employed will be found under another head^[45]. A kind of small beer is made at *Súra-kérta* in a mode similar to the European process of brewing, by exciting fermentation in a solution of Javan sugar, with several spices and the leaves of the *pári* instead of hops. When fresh, the liquor is sprightly, and not unpleasant to the taste; but it cannot be preserved longer than four or five days.

The use of opium, it must be confessed and lamented, has struck deep into the habits, and extended its malignant influence to the morals of the people, and is likely to perpetuate its power in degrading their character and enervating their energies, as long as the European government, overlooking every consideration of policy and humanity, shall allow a paltry addition to their finances to outweigh all regard to the ultimate happiness and prosperity of the country. It is either eaten in its crude state as *mánta*, or smoked as *mádat* or *chándu*. In the preparation of *mádat*, the crude opium is boiled down with the leaves of tobacco, *síri*, or the like, and used in a sticky or somewhat liquid state. In *chándu*, the opium is merely boiled down without any admixture, to a still thicker consistency, and rolled into small balls or pills, in which state, when dry, they are inserted into *bámbus*, and thus smoked. The crude opium is eaten principally by the people in the interior of the country, in the provinces of the native princes: the opium prepared for smoking is used along the coast, and generally in the other islands of the Archipelago; it is prepared by the Chinese. The use of opium, however, though carried to a considerable extent, is still reckoned disgraceful, and persons addicted to it are looked upon as abandoned characters, and despised accordingly. The effects of this poison on the human frame are so well described by the Dutch commissioners who sat at the Hague in 1803, and who much to their honour declared, "that no consideration of pecuniary advantage ought to weigh with the European government in allowing its use," that together with the opinion of Mr. Hogendorp, who concurred with them, I shall insert their statement here. The wish to do justice to authorities, whose views were so creditable to their country and their own character, and the importance of their opinion to an extensive population, will plead an apology for the length of the extract which I now present.

"The opium trade," observe the Commissioners, "requires likewise attention. The English in Bengal have assumed an exclusive right to collect the same, and they dispose of a considerable number of chests containing that article annually at Calcutta by public auction. It is much in demand on the Malay coast, at Sumatra, Java, and all the islands towards the east and north, and particularly in China, although the use thereof is confined to the lower classes. The effect which it produces on the constitution is different, and depends on the quantity that is taken, or on other circumstances. If used with moderation, it causes a pleasant, yet always somewhat intoxicating sensation, which absorbs all care and anxiety. If a large quantity is taken, it produces a kind of madness, of which the effects are dreadful, especially when the mind is troubled by jealousy, or inflamed with a desire of vengeance or other violent passions. At all times it leaves a slow poison, which undermines the faculty of the soul and the constitution of the body, and renders a person unfit for all kind of labour and an image of the brute creation. The use of opium is so much more dangerous, because a person who is once addicted to it can never leave it off. To satisfy that inclination, he will sacrifice every thing, his own welfare, the subsistence of his wife and children, and neglect his work. Poverty is the natural consequence, and then it becomes indifferent to him by what means he may content his insatiable desire after opium; so that, at last, he no longer respects either the property or life of his fellow-creature.

"If here we were to follow the dictates of our own heart only, and what moral doctrine and humanity prescribe, no law, however severe, could be contrived, which we would not propose, to prevent at least that in future, no subjects of this Republic, or of the Asiatic possessions of the state, should be disgraced by trading in that abominable poison. Yet we consider this as absolutely impracticable at present with respect to those places not subject to the state. Opium is one of the most profitable articles of eastern commerce: as such it is considered by our merchants; and if the navigation to those parts is opened to them (which the interest of the state forcibly urges), it is impossible to oppose trading in the same. In this situation of affairs, therefore, we are rather to advise, that general leave be given to import opium at Malacca, and to allow the exportation from thence to Borneo and all the eastern parts *not* in the possession of the state."

"Opium," says Mr. Hogendorp, "is a slow though certain poison, which the Company, in order to gain money, sells to the poor Javans. Any one who is once enslaved to it, cannot, it is true, give it up without great difficulty; and if its use were entirely prohibited, some few persons would probably die for want of it, who would otherwise languish on a little longer: but how many would by that means be saved for the future. Most of the crimes, particularly murders, that are now committed, may be imputed to opium as the original cause.

"Large sums of money are every year carried out of the country in exchange for it, and enrich our competitors, the English. Much of it is smuggled into the interior, which adds to the evil. In short, the trade in opium is one of the most injurious and most shameful things which disgrace the present government of India. It is therefore necessary at once, and entirely, to abolish the trade and importation of opium, and to prohibit the same, under the severest penalties that the law permits, since it is a poison. The smuggling of it will then become almost impracticable, and the health, and even the lives of thousands, will be preserved. The money alone which will remain in the country in lieu of it, is more valuable as being in circulation, than the profit which the Company now derives from the sale of it.

"This measure will excite no discontent among the Javans, for the princes and regents, with very few exceptions, do not consume any opium, but, as well as the most respectable of their subjects, look upon it as disgraceful. The use of opium is even adduced as an accusation of bad conduct, and considered as sufficient cause for the removal or banishment of a petty chief."

[36] The Javan mode of taking account of population is by the number of *chácha*, or "families," as it is usually rendered, though the word strictly means "enumeration." When the sovereign assigns lands, it is not usual for him to express the extent of land, but the number of *chácha* attached to it. But as the population of the land so granted varies, the original expression becomes inaccurate. In the native provinces, the number of *cháchas* reckoned is almost invariably less than the number actually existing, a clear proof, if the original census was correct, that in those provinces population has increased. An account of the number of *cháchas* was taken some few years back by the Sultan of *Yúgya-kérta*, with a view to a new distribution of the lands; but the measure was very unpopular, and no accurate results were obtained. The Dutch relied entirely upon this loose system of enumeration.

[37] This includes the Population of *Pachítan*, under the European government, amounting to about 22,000.

[38] This does not include the dependent islands, on which a considerable portion of the population is scattered.

[42] It is remarked in the text, that the condition of the slaves on Java is very different from that of the same class in the West Indies. The former are employed rather as administering to the luxuries than the necessities of their proprietors; and, with few exceptions, exclusively for domestic purposes. There are some who having taught their slaves when young to embroider, or exercise some useful handicraft or trade, obtain a livelihood by means of their services, and some few employ their slaves on their estates, or let them out to hire; but the general condition of the slaves is that of domestic servants.

The regulations and colonial statutes respecting slavery seem to have been framed on the principles of humanity, and with attention to the genius of the Christian religion; yet, in consequence of the supplementary force of the Roman law in the Dutch system of legislature, there appeared to be one capital defect in the code, viz. that a slave was considered as a real property, incapable of personal rights, from which consideration the ill-treatment of a master towards his slave was not so much estimated on the principle of personal injury, as that of a proprietor abusing his own property; and although a slave, under such a system, might obtain a portion of property for himself with the consent of his master, his possession was always precarious, and depended on the discretion of his proprietor (in the same manner as a *peculium adventitium* with the Romans), becoming only the unlimited property of the slave, if the master allowed him to keep it after his emancipation.

It was conceived, that considering the civil law only as a supplement to the positive law, continued in force on Java under the proclamation of the Earl of Minto of 11th September 1811, the code respecting slavery might, together with the other parts of legislation, be amended and established, on principles more consistent with humanity and good sense, by a declaration, that slaves in future should not be considered as objects of real property, but as objects possessing personal rights, and bound only to unlimited service; and that, in consequence thereof, slaves should never be transferred from one master to another, without their own consent given before witnesses or a notary. That a master should possess no other power over his slave, than to exact service in an equitable manner; that he should inflict no corporal chastisement on him after he had attained a certain age, nor beyond such a degree as would be given to his children or common apprentices; that all personal wrongs done to a slave, either by his master or by others, should be estimated by the common rules of personal injuries, and not by the principle of a proprietor abusing his own property; that the punishment for murder committed by a master on his slave, should be the same as that of murder committed on a free person; that every slave should have a right to acquire property of his own, by his private industry or labour, or by the bounty of others; that this property should never be removeable at the discretion of the master; that by this property the slave should always have a right to redeem his liberty, after having continued with his master for the term of seven years, and on paying the sum which, on estimation, subject to the approval of the magistrate, should at the time be thought an adequate equivalent for his personal services.

These fundamental alterations in the code were submitted by the local government to a higher authority, at a period when the principal proprietors evinced a concurrence in the measure; but the provisional tenure of the government, and the expectation of the early transfer of the island to the crown, induced a delay, until the re-establishment of Holland as a kingdom precluded the adoption of so essential a change.

The excuse offered by the colonists for the origin and continuance of slavery on Java is, that on the first establishment of the Dutch in the Eastern Islands, there did not exist, as in Western India, a class of people calculated for domestic service; that they had, in consequence, to create a class of domestic servants, in doing which they adopted the plan of rearing children in their families from other countries, in preference to those in their immediate neighbourhood, who, from their connexions and the habits of their relatives, could never be depended upon. Whether necessity dictated this system in the earlier periods of the Dutch establishment, or not, is at least doubtful; but it is certain that this necessity no longer exists, nor is there the shadow of an excuse for continuing on Java this odious traffic and condition. The Javans, during the residence of the British on Java, have been found perfectly trustworthy, faithful, and industrious; and the demand was alone wanting in this, as in most cases, to create a sufficient supply of competent domestics. The continuance of the traffic for one day longer serves but to lower the European in the eyes of the native, who, gratified with the measures adopted by the British government in its suppression, stands himself pure of the foul sin. To the credit of the Javan character, and the honour of the individual, it should be known, that when the proclamation of the British government was published, requiring the registration of all slaves, and declaring that such as were not registered by a certain day should be entitled to their emancipation, the Panámbahan of Súmenap, who had inherited in his family domestic slaves to the number of not less than fifty, proudly said, "Then I will not register my slaves—they shall be free: hitherto they have been kept such, because it was the custom, and the Dutch liked to be attended by slaves when they visited the palace; but as that is not the case with the British, they shall cease to be slaves: for long have I felt shame, and my blood has run cold, when I have reflected on what I once saw at Batavia and Semáráng, where human beings were exposed for public sale, placed on a table, and examined like sheep and oxen."

The short administration of the British government on Java has fortunately given rise to another class of domestic servants. The numerous officers of the army, and others whose funds did not admit, or whose temporary residence did not require a permanent establishment of servants, for the most part usually took Javans into their service; and though these might in the first instance, not be so well acquainted with European habits, as slaves who had been brought up from their infancy in Dutch families, yet they gradually improved, and were, in the end, for the most part very generally preferred. Let not, therefore, necessity be again urged as a plea for continuing the traffic.

The measures actually adopted by the British government may be summed up in a few words. The importation was, in the first instance, restricted within a limited age, and the duty on importation doubled. An annual registry of all slaves above a certain age was taken, and slaves not registered within a certain time declared free. A fee of one Spanish dollar was demanded for the registry of each slave, the amount of which constituted a fund for the relief of widows and orphans. On the promulgation of the act of the British legislature, declaring the further traffic in slaves to be felony, that act, with all its provisions, was at once made a colonial law. Masters were precluded from sending their slaves to be confined in jail at their pleasure, as had hitherto been the case, and all committals were required to be made through the magistrates, in the same manner as in the case of other offenders.

These general regulations, with the more rigid enforcement of the prohibition of further importations, and of such parts of the code of regulations for ameliorating the condition of the slaves as had become obsolete, were all to which the local government felt itself competent; but it gave its sanction to an institution set on foot by the English, and joined in by many of the Dutch inhabitants, which took for its basis the principles of the African Institution, and directed its immediate care to a provision for the numerous slaves restored to liberty.

[45] Chapter IV. Manufactures.

CHAPTER III.

Importance of Agriculture to Java—Soil—State of the Peasantry—Price of Rice—Subsistence of the Peasantry—Dwelling—Agricultural Stock—Implements of Farming—Seasons—Different Kinds of Land—Rice Cultivation—Maize, &c.—Sugar—Coffee—Pepper—Indigo—Cotton—Tobacco—Tenure of Landed Property.

The island of Java is a great agricultural country; its soil is the grand source of its wealth. In its cultivation the inhabitants exert their chief industry, and upon its produce they rely, not only for their subsistence, but the few articles of foreign luxury or convenience which they purchase. The Javans are a nation of husbandmen, and exhibit that simple structure of society incident to such a stage of its progress. To the crop the mechanic looks immediately for his wages, the soldier for his pay, the magistrate for his salary, the priest for his stipend (or *jákat*), and the government for its tribute. The wealth of a province or village is measured by the extent and fertility of its land, its facilities for rice irrigation, and the number of its buffaloes.

When government wishes to raise supplies from particular districts, it does not enquire how many rupees or dollars it can yield in taxes, but what contribution of rice or maize it can furnish, and the impost is assessed accordingly: the officer of revenue becomes a surveyor of land or a measurer of produce, and the fruits of the harvest are brought immediately into the ways and means of the treasury. When a chief gives his assistance in the police or the magistracy, he is paid by so much village land, or the rent of so much land realized in produce; and a native prince has no other means of pensioning a favourite or rewarding a useful servant. "Be it known to the high officers of my palace, to my *Bopátis* (regents), and to my *Mántris* (*petite noblesse*)," says a Javan patent of nobility granted by Sultan *Hamángku Búana*, "that I have given this letter to my servant to raise him from the earth, bestowing upon him, for his subsistence, lands to the amount of eleven hundred *cháchas*, the labour of eleven hundred men." By

the population returns, and by the number of leases granted under the late settlement, it appears, that sometimes there is not more than a tenth part of the inhabitants employed in any other branch of industry. Out of a population of 243,268 in the *Priáng'en* regencies, 209,125 are stated as employed in agriculture. In *Surabáya*, the proportion of householders who are cultivators, is to the rest of the inhabitants as 32,618 to 634; in *Semárang*, as 58,206 to 21,404; in *Rembang* it is as 103,230 to 55,300; and in other districts there are considerable variations: but it rarely happens, that the people employed in trade, in manufactures, in handicrafts, or other avocations, amount to a half of those engaged in agriculture, or a third of the whole population. The proportion, on an average, may be stated as three and a half or four to one. In England, it is well known, the ratio is reversed, its agricultural population being to its general population as one to three or two and a half. By the surveys lately made under the orders of the British government, we are enabled to describe the processes of Javan agriculture, and to state its results with more accuracy and in greater detail, than can be attained on many subjects of superior public interest. If we avail ourselves of these means pretty largely, it is not so much in the hope of increasing the stock of agricultural knowledge, as of assisting the reader to form an estimate of the character, habits, wants, and resources of the Javan.

The soil of Java, though in many parts much neglected, is remarkable for the abundance and variety of its productions. With very little care or exertion on the part of the cultivator, it yields all that the wants of the island demand, and is capable of supplying resources far above any thing that the indolence or ignorance of the people, either oppressed under the despotism of their own sovereigns, or harassed by the rapacity of strangers, have yet permitted them to enjoy. Lying under a tropical sun, it produces, as before observed, all the fruits of a tropical climate; while, in many districts, its mountains and eminences make up for the difference of latitude, and give it, though only a few degrees from the line, all the advantages of temperate regions. The *bámbu*, the cocoa-nut tree, the sugar-cane, the cotton tree, and the coffee plant, here flourish in the greatest luxuriance, and yield products of the best quality. Rice, the great staple of subsistence, covers the slopes of mountains and the low fields, and gives a return of thirty, forty, or fifty fold; while maize, or even wheat and rye, and the other plants of Europe, may be cultivated to advantage on high and inland situations. Such is the fertility of the soil, that in some places after yielding two, and sometimes three crops

in the year, it is not necessary even to change the culture. Water, which is so much wanted, and which is seldom found in requisite abundance in tropical regions, here flows in the greatest plenty. The cultivator who has prepared his *sáwah*, or rice field, within its reach, diverts part of it from its channel, spreads it out into numerous canals of irrigation, and thus procures from it, under a scorching sun, the verdure of the rainy season, and in due time a plentiful harvest. Nothing can be conceived more beautiful to the eye, or more gratifying to the imagination, than the prospect of the rich variety of hill and dale, of rich plantations and fruit trees or forests, of natural streams and artificial currents, which presents itself to the eye in several of the eastern and middle provinces, at some distance from the coast. In some parts of *Kedú*, *Banyumás*, *Semárang*, *Pasúruan*, and *Málang*, it is difficult to say whether the admirer of landscape, or the cultivator of the ground, will be most gratified by the view. The whole country, as seen from mountains of considerable elevation, appears a rich, diversified, and well watered garden, animated with villages, interspersed with the most luxuriant fields, and covered with the freshest verdure.

Over far the greater part, seven-eighths of the island, the soil is either entirely neglected or badly cultivated, and the population scanty. It is by the produce of the remaining eighth that the whole of the nation is supported; and it is probable that, if it were all under cultivation, no area of land of the same extent, in any other quarter of the globe, could exceed it, either in quantity, variety, or value of its vegetable productions. The kind of husbandry in different districts (as shall be mentioned afterwards more particularly) depends upon the nature and elevation of the ground, and the facilities for natural or artificial irrigation. The best lands are those situated in the vallies of the higher districts, or on the slopes of mountains, and on the plains stretching from them, as such lands are continually enriched with accessions of new earth washed down from the hills by the periodical rains. The poorest soil is that found on the ranges of low hills, termed *kéndang*, extending along many districts, and particularly in the southern division of the island; but in no part is it so sterile or ungrateful, as not to afford a liberal return for the labour bestowed upon its cultivation, especially if a supply of water can be by any means directed upon it.

But when nature does much for a country, its inhabitants are sometimes contented to do little, and, satisfied with its common gifts, neglect to

improve them into the means of dignity or comfort. The peasantry of Java, easily procuring the necessaries of life, seldom aim at improvement of their condition. Rice is the principal food of all classes of the people, and the great staple of their agriculture. Of this necessary article, it is calculated that a labourer can, in ordinary circumstances, earn from four to five *kátis* a day; and a *káti* being equivalent to one pound and a quarter avoirdupois, is reckoned a sufficient allowance for the daily subsistence of an adult in these regions. The labour of the women on Java is estimated almost as highly as that of the men, and thus a married couple can maintain eight or ten persons; and as a family seldom exceeds half that number, they have commonly half of their earnings applicable for the purchase of little comforts, for implements of agriculture, for clothing and lodging. The two last articles cannot be expensive in a country where the children generally go naked, and where the simplest structure possible is sufficient to afford the requisite protection against the elements.

The price of rice, which thus becomes of importance to the labourer, varies in different parts of the island, according to the fertility of the district where it is produced, its situation with regard to a market, or its distance from one of the numerous provincial capitals. As the means of transport, by which the abundance of one district might be conveyed to supply the deficiencies of another, and to equalize the distribution of the general stock, are few and laborious, this variation of price is sometimes very considerable: even in the same district there are great variations, according to the nature of the crop. In the Native Provinces, a *píkul* (weighing 133½ lbs. English) sometimes sells below the fourth part of a Spanish dollar, and at other times for more than two Spanish dollars; but in common years, and at an average over the whole island, including the capital, the estimate may be taken at thirty Spanish dollars the *kóyan* of thirty *píkuls*, or three thousand *kútis*. A *kúti* of rice, according to this estimate, may be sold to the consumer, after allowing a sufficient profit to the retail merchant, for much less than a penny.

But though the price of this common article of subsistence may be of some consequence to the Javan labourer, when he wants to make any purchase with his surplus portion, he is rendered independent of the fluctuations of the market for his necessary food, by the mode in which he procures it. He is generally the cultivator of the soil; and while he admits that law of custom, which assigns to the superior a certain share of the produce, he

claims an equal right himself to the remainder, which is generally sufficient to support himself and his family: and he sometimes finds in this law of custom, sanctioned by the interest of both parties, a security in the possession of his lands, and a barrier against the arbitrary exactions of his chief, which could scarcely be expected under the capricious despotism of a Mahomedan government. In addition to this reserved share, he raises on his own account, if he is industrious, within what may be termed the cottage farm, all the vegetables, fruit, and poultry requisite for his own consumption. His wife invariably manufactures the slight articles of clothing, which, in such a climate, the common people are in the habit of wearing. What can be spared of the fruits of their joint industry from the supply of their immediate wants, is carried to market, and exchanged for a little salt fish, dried meat, or for other trifling comforts, hoarded as a store for the purchase of an ox or a buffalo, or expended in procuring materials for repairing the hut and mending the implements of husbandry.

The farming stock of the cultivator is as limited as his wants are few and his cottage inartificial: it usually consists of a pair of buffaloes or oxen, and a few rude implements of husbandry. There is a small proportion of sheep and goats on the island; but, with the exception of poultry, no kind of live stock is reared exclusively either for the butcher or the dairy. By the returns made in 1813 of the stock and cattle of the provinces under the British government, containing a population of nearly two millions and a half, it was found that there were only about five thousand sheep and twenty-four thousand goats. The number of buffaloes, by the same return, and in the same space, was stated at 402,054, and of oxen at 122,691. Horses abound in the island, but are principally employed about the capitals, and not in husbandry, further than in the transport of produce from one district to another.

The buffalo and ox are used for ploughing. The former is of a smaller size than the buffalo of Sumatra and the Peninsula, though larger than that of Bengal and of the islands lying eastward of Java. It is a strong tractable animal, capable of long and continued exertion, but it cannot bear the heat of the mid-day sun. It is shy of Europeans, but submits to be managed by the smallest child of the family in which it is domesticated. The buffalo is either black or white: the former is larger and generally considered superior. In the *Súnda*, or western and mountainous districts, nine out of ten are

white, which is not at all the case in the low countries; no essential difference in the breed has been discovered to be connected with this remarkable distinction of colour. The usual price of a buffalo in the western districts is about twenty-four rupees for the black, and twenty rupees for the white; in the eastern districts the price varies from twelve to sixteen rupees. The *Súnda* term for a buffalo is *múnding*; the Javan, *máisa* and *kébo*: and in compliment to *Laléan*, the prince who is supposed to have introduced cultivation into the *Súnda* districts, that prince and his successors on the *Súnda* throne are distinguished by the appellation *Múnding* or *Máisa*. The name of the individual sovereigns enters into a compound with these general terms for the dynasty, and they are called *Máisa-laléan*, *Múnding-sári*, and so of others.

The ox of Java derives its origin from the Indian breed. Two varieties are common: that which is called the Javan ox has considerably degenerated; the other, which is termed the Bengal or Surat ox, is distinguished by a lump on the shoulder, and retains in his superior strength other traces of his origin. The bull after castration is used as a beast of burden, for the draught, and sometimes for the stall. Cows are chiefly employed in husbandry, and are particularly useful to the poorer class; but in the *sáwah* and the extensive inundated plantations of the low districts of the island, the superior bulk and strength of the buffalo is indispensable. Eastward of *Pasúruan*, however, the lands are ploughed by oxen and cows exclusively. The wild breed, termed *bánténg*, is found principally in the forests of that quarter and in *Báli*, although it occurs also in other parts; a remarkable change takes place in the appearance of this animal after castration, the colour in a few months invariably becoming red.

The cows on Java, as well as throughout the Archipelago, remarkably degenerate from those properties, for which, in a state of domestication, they are chiefly prized in other quarters of the world, and afford little or no milk beyond what is barely sufficient for the nourishment of the calf: but the draught ox does not partake of a similar change, and in the central and eastern districts, particularly where the pasture is good, becomes a strong active animal. The degenerate domestic cows are sometimes driven into the forests, to couple with the wild *bánténg*, for the sake of improving the breed. A single pair of oxen, or buffaloes, is found sufficient for the yoke both of the plough and harrow; and these form by far the most expensive

part of the cultivator's stock. The price of a draught ox, in the central and eastern districts, in which they are more generally used in agriculture, varies from eight to sixteen rupees, or from twenty to forty shillings English, and a cow may be purchased for about the same price. Either from the luxuriance of the pasture, the greater care of the husbandmen, or a more equal climate, both the buffalo and the ox are usually in better condition on Java than in many parts of India: indeed, those miserable half-starved looking animals, with which some of the provinces of Bengal abound, are never seen in this island, except, perhaps, occasionally, in some of the few herds belonging to Europeans, in the vicinity of Batavia.

Buffaloes, however, more than other domestic animals, are subject to an epidemic disease, the symptoms and nature of which have not been hitherto carefully noted, or satisfactorily explained. It prevails throughout the whole island, and generally re-appears after an interval of three, four, or five years: it makes great ravages in the stock of the peasantry, and is checked in its progress by no remedies which have hitherto been discovered or applied: it is of an infectious nature, and excites great alarm when it appears: it bears different names in different parts of the island. As the bull and cow are not liable to this disease; and as, in addition to this advantage, they are less expensive in their original purchase, they are preferred by many of the natives.

For draught, the buffalo and cow are employed; and for burden, the horse (particularly mares) and the ox. In level districts, and in good roads, the use of the latter is preferred. The usual burden of a horse is rather less than three hundred weight, and that of an ox rather more than four; but in mountainous districts, and where the roads are neglected, one half of this weight is considered as a sufficient, if not an excessive load.

The comparatively higher price of cattle on Java than in Bengal has been accounted for from the demand for them as food, and the absence of extensive commons on which to feed them.

When implements of husbandry are mentioned in British agriculture, many expensive instruments, and complicated machinery suggest themselves to those acquainted with its practical details. From the preparation of the ground for receiving the seed, till the grain comes into the hands of the miller, labour is economized and produce increased, by many ingenious

processes and artful contrivances, of which a Javan could form no conception. He could form no idea of the fabrication or advantages of our different kinds of ploughs; of our swing ploughs, our wheel ploughs, and our two-furrow ploughs; of our grubbers, cultivators, and other instruments for pulverizing the soil; of our threshing and winnowing machines, and other inventions. A plough of the simplest construction, a harrow, or rather rake, and sometimes a roller, with a *páchul*, or hoe, which answers the purpose of a spade; an *árit*, which serves as a knife or small hatchet; and the *áni áni*, a peculiar instrument used by the reapers, are all the implements employed by him in husbandry; and the total cost of the whole does not exceed three or four rupees, or from seven to ten shillings.

The plough (*walúku*), in general use for the irrigated land, consists of three parts, the body, beam, and handle. It is generally made of teak wood, where that material can be provided, or otherwise of the most durable that can be found: the yoke only is of *bámbu*. Simple as it is, it appears, both in its construction and durability, superior to the plough of Bengal, as described by Mr. Colebrooke, from which it differs, in having a board cut out of the piece which forms the body, for throwing the earth aside. The point of the body, or sock, is tipped with iron, which in some districts is cast for the purpose. There is another kind, of more simple construction, in use for dry and mountain cultivation: this is termed *brújul*, and consists of but two parts. Both kinds are so light, that when the ploughman has performed his morning's work, he throws the plough over his shoulder, and without feeling any inconvenience or fatigue, returns with it to his cottage. For gardens, and for small fields adjoining the villages, the small *lúku china*, or Chinese plough, is used with one buffalo: the cost for a good plough seldom exceeds a rupee and a half. The harrow (*gáru*), which is rather a large rake having only a single rough row of teeth, costs about the same sum, and is in like manner made of teak where procurable; except the handle, beam, and yoke, which are of *bámbu*. When used, the person who guides it generally sits upon it, to give it the necessary pressure for levelling or pulverizing the soil.

The *páchul* is a large hoe, which in Java serves every purpose of the spade in Europe, and is consequently, next to the plough, the most important implement in Javan husbandry. The head is of wood tipped with iron; and the handle, which is about two feet and a half long, frequently has a slight

curve, which renders it more convenient for use: its price is about half a rupee. The *árit*, or weeding knife, costs about eight pence; and the *áni áni*, with which the grain is reaped, about three pence. The latter is a small instrument of peculiar shape. The reaper holds it in a particular manner, and crops off with it each separate ear, along with a few inches of the straw. This mode of reaping has been immemorially practised and is universally followed. Some of the most intelligent people being questioned respecting the origin of this operose process, answered, that it was reported to have been established in ancient times as a *s'lámat*, or grateful acknowledgment for an abundant harvest; that when his field was covered with the bounty of Ceres, no reaper could refuse her this acknowledgment; and that the religious discharge of this obligation was guarded by the belief, that if he ceased to offer this tribute of his labour at the season of harvest, the field would not continue to yield him the same abundant return.

The lands are ploughed, harrowed, and weeded by the men, who also conduct the whole process of irrigation; but the labour of transplanting, reaping, and (where cattle are not used for the purpose) of transporting the different crops from the field to the village, or from the village to the market, devolves upon the women.

Besides the two general divisions of the year, marked out by nature in the great changes of the earth and the atmosphere, there are other periodical distinctions, depending on less obvious or more irregular phenomena. These variations have been ascertained by a reference to the course of the heavenly bodies, or the calculations of the *wúku*, which are described in another part of this work. It is the office of the village priest to keep this reckoning, and to apprise the cultivators when the term approaches for the commencement of the different operations of husbandry. Of these minor seasons of the year, the first, commencing after the rice harvest which falls in August or September, lasts forty-one days. During this season the leaves fall from the trees, vegetation is interrupted, and the only field labour performed is the burning of grass and vegetables, as a preparation of the *tégál* or *gágas*. In the second season, which lasts twenty-five days, vegetation again resumes its vigour. The third, which lasts twenty-four days, is considered the most proper for planting sweet potatoes, yams, and such other vegetables as usually form the second crop; the wild flowers of the forest are now in blossom; and the period of what is termed dry

cultivation commences. The fourth, which lasts also twenty-four days, is the natural season for the pairing of wild animals: high winds now prevail, the rains descend, and the rivers begin to rise. During the fifth, which lasts twenty-six days, the implements of husbandry are prepared, and the water-courses examined and renewed: this is the commencement of the wet cultivation. In the sixth season the ploughing of the *sáwahs* and sowing of the *bíbít* for the great rice crop takes place: this season lasts forty-one days. In the seventh, which also lasts forty-one days, *pári* is transplanted into fields, and the courses of the water properly directed. In the eighth, which lasts twenty-six days, the plants shoot above the water and begin to blossom. In the ninth season, which consists of twenty-five days, the ears of the grain form. In the tenth, also consisting of twenty-five days, they ripen and turn yellow. The eleventh, which lasts twenty-six days, is the period for reaping; and in the twelfth, which consists of forty-one days, the harvest is completed, the produce gathered in, and that dry clear weather prevails, in which the days are the hottest and the nights the coldest of the whole year. The accurate assignment of the number of days by the natives themselves to the different operations of husbandry, affords such complete information on this interesting subject, that any further account would be superfluous. It may, however, be proper to observe, that the periods above described chiefly refer to the progress of the principal rice crop, as influenced by the annual rains; but there are many lands rendered quite independent of these rains, by the vicinity of streams which afford a plentiful supply of water at all times of the year. In many favoured situations, it is even common to observe at one view the rice fields in almost every stage of their cultivation; in one, women engaged in planting the newly prepared soil, and in another, the reapers employed in collecting the fruits of the harvest.

Lands in Java are classed under two general divisions; lands which are capable of being inundated directly from streams or rivers, and lands which are not so. The former are termed *sáwah*, the latter *tégal* or *gága*. It is on the *sáwahs* that the great rice cultivation is carried on; and these admit of a subdivision, according to the manner in which the land is irrigated. Those which can be irrigated at pleasure from adjacent springs or rivers, are considered as the proper *sáwah*; those which depend on the periodical rains for the whole or principal part of the water by which they are fertilized, are termed *sáwah tádahan*. The former are by far the most valuable, and lands of this description admit of two heavy crops annually, without regard to any

particular time of the year: the fields seldom exceed forty or sixty feet in breadth, and the water is retained in them by means of a small embankment of about a foot in height. On the slopes of the mountains, where this mode of cultivation is chiefly found, these fields are carried gradually above each other in so many terraces, for the purpose of irrigation, the water admitted in the upper terrace inundating each of them in its descent. The *tégal* lands are appropriated to the culture of less important crops, such as the mountain rice, Indian corn, &c.

The vast superiority of the *sáwah*, or wet cultivation, over that of *tégal*, or dry, is shewn in their relative produce, and may be still further illustrated by a comparison of the rents which the two descriptions of land are calculated to afford. The quantity of *tégal* land, or land fit for maize, as compared with that of *sáwah* land, varies in different districts. In *Chéribon*, the *tégal* land, by the late survey, amounted only to 2,511, while the *sáwan* exceeded 16,000. In *Tégal* the proportions were even more widely varied, the number of *jungs* of the former to the latter being as 891 to 11,445. In *Surabáya* they were as 1,356 to 17,397; in *Kedú* and *Besúki* they were nearly equal, being respectively as 8,295 to 10,757, and as 6,369 to 7,862.

The succession of crops, next to the facility of irrigation, depends upon the quality of the soil, which in the native provinces is divided by the cultivators into three principal kinds, *tána ládu*, *tána línchad*, and *tána pásir*. The first is the best, consisting of rich vegetable mould, and a certain proportion of sand, and exists chiefly near the banks of large rivers; the second is almost pure clay, and is found in the central plains; and the third is alluvial, and covers the maritime districts. The term *pádas péréng* is applied to the oblique tracts enriched with a fertile mould, which form the acclivities of hills, and from which the water readily disappears. *Tána ládu* will bear a constant succession of crops. *Tána línchad* yields only a single annual crop of rice: during the rainy season the soil constitutes a stiff mud, in which the plants find the requisite moisture and display all their luxuriance; when it is afterwards exposed to the rays of the sun, it bursts into extensive fissures, which admitting the scorching heat by which they were produced, become detrimental to every species of vegetation.

Besides the annual crop of rice which is raised on the *sáwah* lands, a variety of plants are raised upon them as a second or light crop within the same year. Among these are several species of *káchang* or bean, the cotton plant,

the indigo, and a variety of cucumbers, &c. But the more generally useful and profitable vegetables require nearly the same period as the rice, and only yield their increase once in a season: they mostly grow in situations, on which the supply of water can be regulated, and a continued inundation prevented. Among the most important are the *gúdé*, *káchang pénden*, or *káchang china*, *káchang íju*, *kédéle*, *jágung* or Indian corn, *jágung chántel*, *jáwa-wút*, *jáli*, *wíjen*, *jáarak* or palma christi, *térong*, and *kéntang jáwa*.

In *tégal* lands of high situations a particular method of planting is sometimes practiced, which produces a result similar to a succession of crops. Together with the rice are deposited the seeds of other vegetables, which arrive at maturity at different periods, chiefly after the rice harvest. The most common and useful among these is cotton; and, in some tracts, great quantities of this valuable product is thus obtained, without any exclusive allotment of the soil. Next to this are various leguminous and other plants, which do not interfere with the rice. No less than six or eight kinds of vegetables are sometimes in this manner seen to shoot up promiscuously in a single field.

Rice, however, as has been repeatedly observed, is the grand staple of Javan, as well as Indian cultivation, and to this every other species of husbandry is subordinate. The adjacent islands and states of Sumatra, Malacca, Borneo, Celebes, and the Moluccas, have always in a great measure depended on the Javan cultivator for their supply, and the Dutch were in the habit of transporting an annual quantity of between six and eight thousand tons to Ceylon, to Coromandel, to the Cape, and their other settlements. Even at the low rate at which it generally sells, a revenue of near four million of rupees, or about half a million sterling, has been estimated as the government portion of its annual produce.

According to the modes of cultivation by which it has been reared, this grain is called *pári sáwah*, or *pári gága*; corresponding, with some exceptions, to the *pádi sáwah*, and *pádi ládang* of Sumatra. In the western, and particularly the *Súnda* districts, the term *gága* is changed for *típar*, the term *gága*, in these districts, being only occasionally applied to the grain which is cultivated on newly cleared mountainous spots.

The lowland and the mountain rice, or more correctly speaking, the rice raised in dry lands and the rice raised in lands subjected to inundation, are

varieties of the same species (the *oriza sativa* of Linnæus) although both of them are permanent: but the rice planted on the mountainous or dry ground does not thrive on irrigated lands; nor, on the contrary, does the *sáwah* rice succeed on lands beyond the reach of irrigation. The mountain rice is supposed to contain in the same bulk more nourishment than the other, and is more palatable; but its use is limited to the less populous districts of the island, the greater proportion of the inhabitants depending exclusively on the produce of the *sáwabs*, or wet cultivation, for their support.

Stavorinus asserts, that the mountain rice is not so good as that of the low lands. Mr. Marsden informs us, on the contrary, that the former brings the higher price, and is considered of superior quality, being whiter, heartier, and better flavoured grain, keeping better, and increasing more in boiling. "The rice of the low lands," he says, "is more prolific from the seed, and subject to less risk in the culture; and on these accounts, rather than from its superior quality, is in more common use than the former." In general, the weightiest and whitest grain is preferred; a preference mentioned by Bontius, who includes in the character of the best rice its whiteness, its clearness of colour, and its preponderating weight, bulk for bulk. Dr. Horsfield conceives that Stavorinus formed his opinion in the low northern maritime districts of Java, and Mr. Marsden from a more extensive observation. Many intelligent natives state, that they prefer the mountain rice when they can procure it, on account of its whiteness, strength, and flavour; and that they are only limited in its use, by the impossibility of raising as much of it as can satisfy the general demand, all the mountain or dry rice not being sufficient to feed one-tenth of the population. In less populous countries, as in many parts of Sumatra, the inhabitants can easily subsist the whole of their numbers exclusively on mountain rice, or that produced on *ládangs*, which are fields reclaimed from ancient forests for the first time, and from which only one crop is demanded. The grain here, as in the mountain rice of Java, is highly flavoured and nutritious; but in countries where the population is crowded, where a scanty crop will not suffice, and where a continued supply of new land cannot be obtained, the peasantry must apply their labour to such grounds as admit of uninterrupted cultivation, and renew their annual fertility by periodical inundations, even although the produce is not so highly prized.

In the *sáwahs* of Java the fields are previously ploughed, inundated, and laboured by animals and hoeing, until the mould is converted into a semifluid mire: they then are considered fit to receive the young plants. No manure is ever used. Oil-cakes (*búngkil*), which are by some writers supposed to be used for this purpose generally, are only employed in the gardens about Batavia. One of the chief characteristics of the soil on Java, is an exemption from the necessity of requiring manure: on the *sáwah* lands, the annual inundation of the land is sufficient to renovate its vigour, and to permit constant cropping for a succession of years, without any observable impoverishment.

In the cultivation of the *sáwahs*, the plants are uniformly transplanted or removed from their first situation. In those of *tégal* or *gága*, they grow to maturity on the same spot where the seed was originally deposited, whether this be on high mountainous districts, or on low lands, the distinction of *sáwah* and *gága* depending exclusively not upon the situation of the field, but in the mode of culture, whether wet or dry.

In raising rice in the *sáwahs*, inundation is indispensable till it is nearly ripe. The seed is first sown on a bed prepared for the purpose, about one month before the season for transplanting it, and the plant is during that time termed *bíbit*. Two methods are in use. According to the first, called *úrit*, the ears of *pári* are carefully disposed on the soft mud of the seed bed; in the second, called *ng'éber*, the separated seeds are thrown after the manner of broadcast in Europe. In by far the greatest portions of the island, the ground is prepared, the seed sown, and the plant removed, during the course of the rainy season, or between the months of November and March. In situations where a constant supply of water can be obtained from springs, rivulets, or rivers, two crops are produced in the course of twelve or fourteen months; but the advantage of double cropping, which exhausts the soil without allowing it time to recover, has been considered as very questionable. If in some situations commanding a supply of water, the earth is allowed to rest after the preceding harvest, during the latter end of the rainy season, and the transplantation made in the months of June and July, it generally yields more profitable crops than the common method of working the *sáwah*. This, which is termed *gádu* by the natives, has been recommended by the experience of European planters.

Irrigation is exclusively effected by conducting the water of rivers and rivulets from the more or less elevated spots in the vicinity, and in this respect, differs materially in its process from that of Bengal, for although considerable labour and ingenuity are exercised in detaining, regulating, and distributing the supply, by means of dams, called *bandáng'ans*, no machinery whatever is employed in raising water for agricultural purposes in any part of the island.

The rice grown on *sáwahs*, is of two kinds, *pári génja* and *pári dálam*. In the former, the harvest takes place four months after the transplantation; in the latter, six months. *Pári génja* having the advantage of a quicker growth, is therefore often planted when the rainy season is far advanced. *Pári dálam* is more prolific, and yields a grain of superior quality, comprising those varieties in which the ears are longer and more compound. The varieties of each kind are distinct and permanent.

The subvarieties are very numerous, amounting, with those of *kétan*, to more than a hundred. *Kétan* is a distinct variety, with very glutinous seeds, seldom employed as an article of food, except in confections, cakes, and the like. Of the varieties of the *pári génsha*, *mentik* and *anchar bántap* are preferred. Of the *pári dálam*, those of *krentúlan* and *súka nándi* are most esteemed, being remarkably well flavoured and fit for keeping. *S'lámat jáwa* yields also rice of good quality. The bearded kinds of *pári* are always preferred for keeping, as the grains do not readily fall off. Near *Súra-kérta*, the principal native capital, close to the site of the former capital *Kérta-súra*, there is a peculiar tract inundated by water from a fountain at *Píng'gíng*, which is said to produce a grain of very superior flavour, from which the table of the *Susuhúnan* is supplied. *Súka nándi* is the kind uniformly preferred for these plantations.

For *pári gága*, whether in high or low situations, the ground is prepared by ploughing and harrowing, and the seed is planted after the manner called setting in some parts of England. The holes are made by pointed sticks, called *pónchos*, and into each hole two seeds are thrown. Only careless husbandmen, or those who cannot procure the requisite assistance in their labour, sow by broadcast. In high situations the earth is prepared before the rains commence: the seed is sown in the months of September or October, and the harvest takes place in January and February following. *Gágas* of low situations are planted about a month after the harvest of the *sáwah* is

got in, and frequently receive temporary supplies of water from a neighbouring rivulet. In high situations, to which water cannot be carried, they are sufficiently moistened by the first rains of the season. During their growth, they receive several hoeings from the careful husbandman.

As the grain ripens, an elevated shed is frequently erected in the centre of a plantation, within which a child on the watch touches, from time to time, a series of cords extending from the shed to the extremities of the field, like the radii of a circle, and by this cheap contrivance, and an occasional shout, prevents the ravages of birds, which would otherwise prove highly injurious to the crops. These little elevated sheds in the interior, and particularly in the district of *Bányumás*, are very neatly constructed of matting.

The reapers are uniformly paid, by receiving a portion of the crop which they have reaped: this varies in different parts of the island, from the sixth to the eighth part, depending on the abundance or scarcity of hands; when the harvest is general through a district, one-fifth or one-fourth is demanded by the reaper. In opposition to so exorbitant a claim, the influence of the great is sometimes exerted, and the labourer is obliged to be content with a tenth or a twelfth.

The grain is separated from the husk by pounding several times repeated. The first operation is generally performed in wooden troughs, in the villages near which it grows, and before it is brought to market. The *pári* being thus converted into *bras* or rice, afterwards receives repeated poundings, according to the condition or taste of the consumer.

With the exception of the rice raised in *sáwahs*, all other produce is cultivated on dry grounds, either on the *sáwah* fields during the dry season, or on *tégal* land, at all times exclusively appropriated to dry cultivation. The principal article next to rice, as affording food to man, is maize or Indian corn, termed *jágung*. It is general in every district of Java, but is more particularly an object of attention on *Madúra*, where, for want of mountain streams, the lands do not in general admit of irrigation. In the more populous parts of Java, likewise, where the *sáwahs* do not afford a sufficient supply of rice, the inhabitants have lately had recourse to the cultivation of maize. It is now rapidly increasing in those low ranges of hills, which, on account of the poverty of the soil, had hitherto been neglected, and is becoming more and more a favourite article of food. In the

more eastern districts, it is procured from the inhabitants of *Madúra* in exchange for rice. It is generally roasted in the ear, and in that state is exposed while hot for public sale; but it is never reduced to flour, or stored for any considerable time.

The *zea maize*, or common *jágung*, is a hardy plant, and grows on any soil. In common with every other production of Java it thrives there most luxuriantly; nor is there any reason to believe, that the Javan soil is less adapted to it than that of Spanish America, where Humboldt estimates its produce at a hundred and fifty fold. It is planted in fertile low lands in rotation with rice, and in high situations without intermission, often forming in the latter the chief, if not the only, support of the inhabitants. There are three different kinds, distinguished from each other by their respective periods of ripening. The first kind requires seven months, and is a large rich grain; the second takes only three, and is of inferior quality; and the third, which seems valuable only on account of its rapid growth, ripens in forty days, but has a poor small grain. They may be planted at all seasons of the year; and of the two inferior kinds, several crops are often raised from the same ground within the year.

Of other cerealia, the *jágung chántel* is raised very partially in particular districts, at no great distance from the capitals of the interior, and mostly for the purpose of preparing from it, by fermentation, a liquor sometimes drunk by the natives; as a general article of food it cannot be enumerated. The *jáva-wút* and *jáli* are still more confined in their use; although the natives have a tradition, that on the first arrival of the Indian colonists on Java, the former was the only grain found on the island: it yields a pleasant pulp, and is made into several articles of confectionary. As a principal article of food, or a substitute for rice, Indian corn can alone be considered.

In times of scarcity, the natives make use of various kinds of the plantain (*musa*), also the yam (*ubi* of the Malays, and *uwi* of the Javans), the sweet potatoe, *katélo* (*convolvulus batatas*), the varieties of which are described in one of the early volumes of the Batavian Transactions, and a number of leguminous vegetables, the various kinds of beans (*káchang*), together with a species of grass with minute yellow seeds, called *túton*, which in ancient times is said to have formed a principal article of food, and the dried leaves of some other plants; but, happily, these times seldom occur, and the use of the *jágung chántel* and *jáva-wút*, as well as of the various roots and

leguminous vegetables to which I have alluded, is too limited to produce any sensible effects on the inhabitants. Those natives who make use of the Indian corn exclusively, inhabit the highest districts, where the purity of the atmosphere counteracts any injury which their health might otherwise sustain from the want of rice.

From the *áren* (*sagurus rumphii*), which grows abundantly in many parts of Java, a substance is prepared, similar in all respects to the true sago of the Eastern Islands. It is particularly useful in times of scarcity, when large numbers of these valuable trees are felled, for the purpose of collecting the pith. The sap yields an excellent sugar of a dark colour, in common use with the natives. The wine or *túwak* (toddy) prepared from it is superior to that obtained from most other palms.

A very agreeable pulp is prepared from the pith of this tree, pounded with water, and exposed one night to spontaneous evaporation: it is eaten with palm sugar, and found by no means unpleasant by Europeans. The tuberous roots of a species of curcuma, *tému láwak*, grated and infused in water, yields a similar pulp. Both are denominated *pátí*, and daily offered for sale along the roads and in the interior.

All the varieties of the cocoa-tree, noticed on Sumatra, are to be found on Java, where its quicker and more luxuriant growth is accounted for by the superiority of soil. The principal varieties of the cocoa-nut are enumerated in one of the early volumes of the Batavian Transactions.

Of the oil-giving plants there are many. The *káchang góring* of the Malay countries, or, as it is indifferently termed by the Javans, *káchang china*, *pénden*, or *tána*, is cultivated almost exclusively for the purpose of obtaining its oil, near the capitals of the principal districts, both central and maritime. It requires a very strong soil for its support, and as the cultivation is profitable, the lands which produce it yield high rents. It is never employed as an article of food by itself; but what remains of it after the oil is expressed, forms an ingredient for the seasoning of rice, in one of the common dishes of the natives. The oil is obtained by grinding the seeds between two grooved cylinders, and then separating it either by expression or boiling. The former is chiefly used by the Chinese, and yields as a refuse the oil-cakes, which I formerly observed were employed as manure in some of the gardens near Batavia. Where these cylinders are not in use, the

following mode is adopted: the nut having been taken from the ground, is dried by exposure to the sun for a few days; after which the kernel is extracted, and reduced, by successive beatings in the Javan *lésung* or mortar, to a grain sufficiently small to pass through a sieve; it is then boiled by steam, and having been allowed to cool for twenty-four hours, is put into a basket, and in that state placed between two oblong planks, which, being joined together at one extremity, are forced to meet at the other, on the principle of a lemon-squeezer. The oil exuding from the interstices of the basket is caught on an ox's hide, placed below to convey it to an earthen receiver.

The *járah*, or palma christi, is cultivated in nearly the same manner as maize, and thrives on similar soils: from this plant is obtained most of the oil for burning in lamps. In extracting the oil from this as well as from the cocoa-nut, various processes are employed, most of which tend to accelerate the rancidity of the oil. A pure cold drawn oil is not known. In the cocoa-nut, if the oil is obtained by expression, the broken nuts from which it is made are exposed till putrefaction commences. In other cases they are grated, and water being poured upon them, the parts mixed with it form *sánten*, a white milky fluid, which is evaporated till the oil alone remains. As this process requires much time and fuel, a more economical method is often resorted to: the milky fluid is left exposed for a night, when the oily parts rise to the top, and being separated from the water are purified by a very short boiling.

Of the sugar-cane, or according to the native term, *tébu* (the name by which it is designated, not only on Java, but throughout the Archipelago), there are several varieties. The dark purple cane, which displays the greatest luxuriance, and shoots to the length of ten feet, is the most highly prized. By the Javans the sugar-cane is only cultivated to be eaten in an unprepared state, as a nourishing sweetmeat. They are unacquainted with any artificial method of expressing from it the saccharine juice, and, consequently, with the first material part of the process by which it is manufactured into sugar. Satisfied with the nourishment or gratification which they procure from the plant as nature presents it, they leave the complicated process to be conducted exclusively by the Chinese.

The cane, as in the West Indies, is propagated by cuttings of about a foot and a half long, which are inserted in the ground in an upright direction,

previously to the setting in of the rains. The Chinese occasionally use oil-cake for enriching the lands; but where the plant is only raised for consumption in its fresh state, no manure whatever is thought requisite; and a good soil, without such preparation, will yield three or four crops in succession.

The cane is extensively cultivated for the juice in the vicinity of Batavia, where there are numerous manufactories, principally owned by the Chinese. It is also cultivated for this purpose in considerable tracts at *Júpara* and *Pasúruan*, and partially in other districts of the eastern provinces, where mills are established for expressing it. Previous to the disturbances in *Chéribon*, sugar likewise was manufactured in that district in considerable quantities, and furnished an important article of export.

The coffee-plant, which is only known on Java by its European appellation, and its intimate connexion with European despotism, was first introduced by the Dutch early in the eighteenth century, and has since formed one of the articles of their exclusive monopoly. The labour by which it is planted, and its produce collected, is included among the oppressions or forced services of the natives, and the delivery of it into the government stores, among the forced deliveries at inadequate rates. Previously to the year 1808, the cultivation of coffee was principally confined to the *Súnda* districts. There were but comparatively few plantations in the eastern districts, and the produce which they were capable of yielding did not amount to one-tenth part of the whole; but, under the administration of Marshal Daendels, this shrub usurped the soil destined for yielding the subsistence of the people; every other kind of cultivation was made subservient to it, and the withering effects of a government monopoly extended their influence indiscriminately throughout every province of the Island.

In the *Súnda* districts, each family was obliged to take care of one thousand coffee plants; and in the eastern districts, where new and extensive plantations were now to be formed, on soils and in situations in many instances by no means favourable to the cultivation, five hundred plants was the prescribed allotment. No negligence could be practised in the execution of this duty: the whole operations of planting, cleaning, and collecting, continued to be conducted under the immediate superintendence of European officers, who selected the spot on which new gardens were to

be laid out, took care that they were preserved from weeds and rank grass, and received the produce into store when gathered.

A black mould intermixed with sand, is considered the best soil for the coffee plant. In selecting a situation for the gardens, the steep declivities of mountains, where the plant would be endangered either by the too powerful heat of the sun or an entire want of it, or where torrents in the rainy season might wash away the rich earth necessary for its growth, are avoided. The best situation for them is usually considered to be in the vales along the foot of the high mountains, or on the gentle declivities of the low range of hills, with which the principal mountains are usually skirted; and it is found that, *cæteris paribus*, the greater is the elevation of the garden, the longer is the period of its productiveness, and the finer is the berry.

Having selected a proper spot for the garden, the first operation is to clear the ground of trees, shrubs, and the rank grass or reeds, the latter of which, termed *galúga*, are often found in these situations, and generally indicate a rich soil. In clearing the ground, it is the practise to collect together into heaps, and burn the trees, roots, and other rubbish found on it, the ashes of which serve to enrich the soil: when the trees are very large, the heavy labour of rooting them up is avoided, and the trunks being cut about five feet from the ground, are left in that state to rot, and in their gradual decay still further to enrich the land. As soon as the ground is thus cleared, it is levelled by three or four ploughings at short intervals, and laid out to receive the plants. A fence is planted round them, about twelve feet from their outer row, generally of the *júrak*, or palma christi, intermixed with either the *dádap*, or the silk cotton tree; and, in low situations, outside of this a ditch is dug to carry off the water. These operations commence in August or September, and by the time the ground is in perfect readiness for planting, the heavy rains are nearly over. It then only remains to select the young plants, and prepare the *dádap* which is intended to shade them.

Of the *dádap* tree there are three kinds; the *seráp*, *dóri*, and *wáru*: but the first is preferred on account of the greater shade it affords. It is propagated by cuttings, and in selecting them for the coffee plantations, care is had that they are taken from trees at least two or three years old, and that they be three or four feet long, of which one foot at least must be buried in the ground. After the *dádaps* are planted, holes are dug, from a foot and a half

to two feet deep, for the reception of the coffee plant, which is then removed from the seed place or nursery, and transplanted into the gardens.

In coffee gardens of four or five years old, are found quantities of young plants, that have sprung up spontaneously from the ripe berries dropping off the trees, and when these can be obtained about fourteen inches long, of a strong healthy stem, large leaves, and without branches, they are preferred to others: but as the plants thus procured are seldom found in sufficient quantities, nurseries for rearing them are formed as follows: When the berries are allowed to remain on the shrub after maturity, they become black and dry: in this state they are plucked, and sown in seed beds lightly covered with earth: as soon as two small leaves appear, the plants are taken from the bed, and transplanted, about a foot asunder, under the cover of sheds prepared for that purpose; in about eighteen months, these plants are fit for removing into the garden or plantation where they are destined to yield their fruit. In taking the young plant up, the greatest care is necessary not to injure the roots, especially the tap root, and with this view it is generally removed with as much earth attached to it as possible. This precaution has the additional advantage of not too suddenly bringing the plant in contact with a new soil.

The plantations are generally laid out in squares. The distance between each plant varies according to the fertility of the soil: in a soil not considered fertile, a distance of six feet is preserved, and in each interval is a *dádap* tree for the purpose of affording shade; but in a rich soil, where the plant grows more luxuriantly, fewer *dádaps* are necessary, and the plants are placed at a greater distance from each other.

On Java a certain degree of shade seems necessary to the health of the coffee-plant, especially in low situations and during its early age; and the *dádap* is found better calculated for affording this protection than any other shrub in the country. It is a common saying, that where the *dádap* flourishes, there also will flourish the coffee: but they are not always constant or necessary companions; for in high lands many of the most flourishing gardens are to be observed with very few *dádaps*. The coffee tree yields fruit for a period of twenty years, yet in the low lands it seldom attains a greater age than nine or ten years (during six or seven of which only it may be said to bear), and the fruit is comparatively large and tasteless.

About the end of the rainy season, such coffee plants and *dádaps* as have not thriven are replaced by others, and the plantations cleaned: this latter operation, in gardens well kept, is generally performed three or four times in the year: but the tree is never cut or pruned, and is universally allowed to grow in all its native luxuriance. In this state, it often in favoured situations attains the height of sixteen feet, and plants of not less than eight inches broad have frequently been procured from the trunk. The general average produce of a coffee-tree is not estimated at much more than a *káti*, or a pound and a quarter English, notwithstanding some yield from twenty to thirty *kátis*.

There does not appear to be any fixed or certain season for the coffee to arrive at maturity. In the *Súnda* districts the gathering usually commences in June or July, and it is not till April that the whole crop is delivered into store. The season, however, generally gives what is termed three crops; of which the first is but small, the second the most abundant, and the third, being what is left to ripen, may be considered rather as a gleaning. When the berries become of a dark crimson colour, they are plucked one by one, with the assistance of a light *bámbu* ladder or stage, great care being taken not to shake off the blossoms which are still on the tree, or to pluck the unripe fruit. The women and children usually collect the crop, while the husband is elsewhere engaged in harder labour. Attached to every principal village, near which there are coffee plantations of any extent, there is a drying-house, to which the newly gathered coffee is brought: it is there placed on hurdles, about four feet from the floor, under which a slow wood fire is kept up during the night. The roof of the drying-house is opened in the mornings and evenings, to admit the air, and the berries are frequently stirred to prevent fermentation. As the heat of the sun is considered prejudicial, the roof of the house is closed during the day. This operation is repeated till the husk is quite dry. The berries dried in this way are small, and of a sea green or greyish colour, and are supposed to acquire a peculiar flavour from the smoke, although it does not appear that any particular kind of wood is used for fuel. When dried in the sun, the bean becomes of a pale bleached colour, is larger, specifically lighter, and more insipid to the taste than the former. The most common mode of freeing the bean from the husk is, to pound the berries when dry in a bag of buffalo's hide, great care being taken not to bruise the bean. A mill of simple construction is sometimes used, but is not found to answer so well. The coffee being then separated

from the husk, is put into bags or baskets, and kept on raised platforms till the season of delivery, when it is carried down to the storehouse, sometimes by men, but generally on the backs of buffaloes and mares, in strings of fifteen hundred or two thousand at a time.

In the *Súnda* districts there have been, for many years past, three principal depôts for receiving the coffee from the cultivators; viz. at *Buitenzorg*, *Chikàn*, and *Karang-sámbang*. From *Buitenzorg* it is either sent direct to Batavia by land in carts, or by the way of *Linkong*, whence it is forwarded in boats by the river *Chi-dáni*. From *Chikàn* the coffee is sent in boats down the river *Chi-táram*, and thence along the sea-coast to Batavia. From *Karang-sámbang* it is sent down the river *Chi-mánok* to *Indra-máyu*, where it is received into extensive warehouses, and whence it is now generally exported for the European market.

Under this system, the *Súnda* districts were estimated to afford an annual produce of one hundred thousand *píkuls* of one hundred and thirty-three pounds and a quarter each, and it was calculated that the young plantations in the eastern districts, when they should come into bearing, would produce an equal quantity; but in this latter quarter, many of the gardens had been fixed on ill-judged spots, and the inhabitants were averse to the new and additional burden which this cultivation imposed upon their labour. Had the system, therefore, even been persevered in, and enforced by a despotic authority, it is questionable, whether the quantity anticipated in the above estimate, or even one half of it, would have been obtained from the eastern districts. The *Súndas* living in an inland and mountainous country, and having been long accustomed to the hardship of the coffee culture, are less sensible of its pressure than the rest of their countrymen: time and habit have reconciled them to what was at first revolting, and what must always be considered as unjust; their modes of life, their arts, their domestic economy, and other social habits, have all adapted themselves to a species of labour, which was at first forced upon them; and a state of servitude, which the philosopher would lament as a degradation, is scarcely felt to be a grievance by them. Instances, however, are not wanting, in which the usual measure of exaction having been surpassed, they have been awakened to a sense of their wretchedness. A government of colonial monopolists, eager only for profit, and heedless of the sources from which it was derived, sometimes subjected its native subjects to distresses and privations, the

recital of which would shock the ear of humanity. Suffice it to say, that the coffee culture in the *Súnda* districts has sometimes been so severely exacted, that together with the other constant and heavy demands made by the European authority on the labour of the country, they deprived the unfortunate peasants of the time necessary to rear food for their support. Many have thus perished by famine, while others have fled to the crags of the mountains, where raising a scanty subsistence in patches of *gánga*, or oftener dependent for it upon the roots of the forest, they congratulated themselves on their escape from the reach of their oppressors. Many of these people, with their descendants, remain in these haunts to the present time: in their annual migrations from hill to hill, they frequently pass over the richest lands, which still remain uncultivated and invite their return; but they prefer their wild independence and precarious subsistence, to the horrors of being again subjected to forced services and forced deliveries at inadequate rates.

It is difficult to say what was the recompense received by the cultivator previous to the year 1808. The complicated system of accounts which then prevailed, seemed only calculated to blind the government, and to allow the European commissary to derive an income of from eighty to one hundred thousand dollars (25,000*l.* per annum), at the expence of the authorities by whom he was employed, and the natives whom he oppressed. This, in common with most of the establishments on the island, underwent a revision in the time of Marshal Daendels; and it was then directed, that the cultivators should receive on delivery at the storehouses, three rix-dollars copper for each mountain *píkul* of two hundred and twenty-five pounds Dutch, being little more than one dollar per hundred weight, or one half-penny per pound. This same coffee was sometimes sold at Batavia, within fifty miles of the spot where it was raised, at twenty Spanish dollars the hundred weight, and has seldom been known to bring in the European market less than eleven pence the pound. This, however, was deemed a liberal payment by the Dutch, though in some cases it had been transported over sixty miles of an almost impassable country, where two men are required to carry a hundred-weight of coffee, on their shoulders, at an expence of labour which one would suppose at least equal to this remuneration.

Under the administration of the British government, the free cultivation of coffee, in common with that of all other articles, was permitted to the inhabitants of Bantam, *Chéribon*, and all the eastern districts; and at the time when the island was again ceded to the Dutch, arrangements were in progress for extending the same provision throughout the *Súnda* districts, under a conviction, that the quantity produced would not be less under a system of free cultivation and free trade, than under a system in which it was found necessary, as one of the first acts of European authority, to compel the native princes to direct "the total annihilation of the coffee culture within their dominions," and to secure by treaty with them the destruction and confiscation of all coffee found in the hands of the natives^[46]. A considerable portion of the peasantry, as already observed, have long been accustomed to the cultivation, and it is owing to their skill and experience, as much as to any direct superintendence or interference of the European officers (who generally derive their information from the native chiefs, and have little more to do, than occasionally to ride through the garden with a pompous suite, keep the accounts, and examine the coffee as it is received), that the coffee has so long been furnished for the European market; the experience obtained in the eastern districts, during the last three years, proves at least that coercive measures are unnecessary. There are many parts of Java, particularly the *Príang'en* regencies, where the soil is peculiarly and eminently adapted to the cultivation; and although it is difficult yet awhile to fix the exact rate at which the coffee might be produced under a free system, it may be calculated to be raised for exportation at about forty shillings per hundred weight.

Of the quality of the Javan coffee, in comparison with that of other countries, it may be observed, that during the last years, it has invariably maintained its price in the European market in competition with that of Bourbon, and rather exceeded it, both of them being higher than the produce of the West Indies. During the last years of the British administration on Java, and after the opening of the European market again afforded a demand, about eleven millions of young coffee shrubs were planted out in new gardens.

Pepper, which at one time formed the principal export from Java, has for some time ceased to be cultivated to any considerable extent. It was principally raised in Bantam, and the dependencies of that province in the

southern part of Sumatra; and in the flourishing state of the monopoly, these districts furnished the Dutch with the chief supply for the European market.

But the system by which it was procured was too oppressive and unprincipled in its nature, and too impolitic in its provisions, to admit of long duration. It was calculated to destroy the energies of the country, and with them, the source from whence the fruits of this monopoly proceeded. In the year 1811, accordingly, neither Bantam nor its dependencies furnished the European government with one pound of this article.

That pepper may be produced on Java, and supplied at a rate equally moderate with that at which other productions requiring similar care are furnished, cannot admit of a doubt, and this reasonable price may be estimated at about six or seven Spanish dollars (thirty to thirty-five shillings) the píkul. The plant grows luxuriantly in most soils, and when once reared requires infinitely less care and labour than coffee. The cultivation of it on Sumatra and Prince of Wales' Island having been so accurately and minutely described by Mr. Marsden and Dr. Hunter, it would be unnecessary here to detail the system followed on Java, as it is in most points the same. The only peculiarity regarding it which may deserve notice is, that on this island the plant is allowed to grow to a much greater size, entwining itself round the cotton trees, frequently to the height of fifty and sixty feet.

Indigo, called *tom* by the Javans, and by the *Súndas tárum*, is general, and raised in most parts of the island. The indigo prepared by the natives is of an indifferent quality, and in a semifluid state, and contains much quicklime; but that prepared by Europeans is of very superior quality.

An inferior variety, denominated *tom-ménir*, having smaller seeds, and being of quicker growth, is usually planted as a second crop in *sáwahs*, on which one rice crop has been raised. In these situations, the plant rises to the height of about three feet and a half. It is then cut, and the cuttings are repeated three, or even four times, till the ground is again required for the annual rice crop. But the superior plant, when cultivated on *tégál* lands, and on a naturally rich soil, not impoverished by a previous heavy crop, rises in height above five feet, and grows with the greatest luxuriance. The plants intended for seeds are raised in favoured spots on the ridges of the rice fields in the neighbourhood of the villages, and the seed of one district is

frequently exchanged for that of another. That of the rich mountainous districts being esteemed of best quality, is occasionally introduced into the low lands, and is thought necessary to prevent that degeneration, which would be the consequence of cultivating for a long time the same plant upon the same soil. In the province of *Matárem*, where indigo is most extensively cultivated, it is sold in the market in bundles, as low as eight-pence the *píkul* weight; but in the vicinity of *Semárang*, and in districts where it is not produced in great abundance, it bears an advance upon this price of fifty per cent.

The climate, soil, and state of society on Java, seem to offer peculiar advantages to the extensive cultivation of this plant; and under the direction of skilful manufacturers, the dye stuff might form a most valuable and important export for the European market. The periodical draughts and inundations, which confine the cultivation and manufacture in the Bengal provinces to a few months in the year, are unknown in Java, where the plant might, in favoured situations, be cultivated nearly throughout the whole year, and where at least it would be secure of a prolonged period of that kind of weather, necessary for the cutting. The soil is superior, and a command of water affords facilities seldom to be met with elsewhere; while, from the tenure on which the cultivators hold their land, and the state of society among them, advances on account of the ensuing crop, which in Bengal form so ruinous a part of an indigo concern, are here unnecessary, and would be uncalled for.

The dye (*níla* blue) is prepared by the natives in a liquid state, by infusing the leaves with a quantity of lime: in this state it forms by far the principal dye of the country. Besides the quantity of it consumed within the island, it is sometimes exported to neighbouring countries by native traders, and sold at the rate of from a dollar and a half to three dollars the *píkul*, according as the plant may be in abundance or otherwise.

It is impossible to form any idea of the rate at which this species of dye can reasonably be manufactured for the European market, from the prices paid by the Dutch, both because the article was one of those classed by them under the head of forced deliveries, and because the regents, who were entrusted with its exclusive management, not fully understanding the process of making it, conducted it always in a very expensive way, and were frequently exposed to entire failures.

The cotton of the country, distinguished by the name of *kápas jáwa*, is a variety of the *gossypium herbaceum*; but it is inferior to that generally cultivated on the Indian continent, which is also found on Java, and called by the Javans *kápas múri*. The plant of the former differs from the latter, in having a smaller stem, and in yielding a material, both of coarser fibre and in less quantity. There is a third variety, with a subarborescent stem, called *kápas táhon*, which is very scarce. Trials remain to be made, to determine how far the culture of the Indian cotton might be extended, so as to supersede the Javan cotton. The inferior kind, which forms the principal, and indeed with the mass of the people the only material for clothing, is cultivated in almost every part of the island. The soil, however, is not considered as universally favourable to its growth: many of the low lands, consisting of a clay, which bursts in the dry season, are unfit for it; and on several of the more fertile districts, where the plant itself flourishes, little cotton is obtained from it: the declivities of the hills, in which the mountain rice is raised, yield in general the best and most abundant supply. At present, scarcely a sufficient quantity is produced on the island to employ the female part of the inhabitants; and one district often depends upon another for the principal part of what it uses. The cotton of *Bányumás* is exported to *Bágalen*, to *Tégál*, and the western parts of *Matárem*, where it is manufactured; the environs of *Wong'go*, *Adi-langú*, and other places towards the southern hills, supply both the capitals in the interior; *Kediri*, *Pranárága*, and the vicinity, likewise furnish considerable quantities for other parts of the island. In the *Súnda* districts, the principal supply is received from the east and west *Jámpang*. The culture of cotton, and the manufacture of yarn, are in some degree promoted by an ancient custom, which imposes on every householder or village a certain contingent of cotton yarn for the sovereign, or for the person who holds the land on his account: this custom is called *panyúmpleng*. The chiefs on Java, and particularly on *Báli*, frequently wear a skein of cotton yarn entwined round the handle of the kris; a custom which sufficiently indicates the respect paid to this species of cultivation.

The Javan cotton is a hardy plant, which grows to about the height of a foot and a half. It is generally planted on the *sáwahs* after the reaping of the rice crop, and yields the cotton in less than three months. The Indian cotton grows to a larger size, and produces a material of an infinitely superior quality; but it is more delicate in its nature, must be watched with greater

care, and requires a month longer to attain to maturity. Cotton cultivated on *tégál*, or dry land, is considered as generally better than that raised as a second crop on *sáwah*; and this mode of cultivation has been adduced as the cause of the superiority ascribed to the cotton of *Bâli*, and other more eastern islands.

Tobacco,^[47] termed by the natives *tombáku*, or *sáta*, is an article of very general cultivation, but is only extensively raised for exportation in the central districts of *Kedú* and *Bányumás*: as it requires a soil of the richest mould, but at the same time not subject to inundations, these districts hold out peculiar advantages to the tobacco-planter, not to be found on the low lands. For internal consumption, small quantities are raised in convenient spots every where; but the most eastern districts and *Madúra* are principally supplied from *Púgar*. Bantam receives its supply from *Bányumás*, by means of native traders from *Pakalúngan* visiting that port in small craft. The produce of *Kedú* is conveyed by men to *Semárang*, the great port of exportation.

In *Kedu* it forms, after rice, by far the most important article of cultivation; and, in consequence of the fitness of the soil, the plant grows to the height of from eight to ten feet, on lands not previously dressed or manured, with a luxuriance seldom witnessed in India. Cultivated here alternately with rice, only one crop of either is obtained within the year; but after the harvest of the rice, or the gathering of the tobacco-leaves, the land is allowed to remain fallow, till the season again arrives for preparing it to receive the other. The young plant is not raised within the district, but procured from the high lands in the vicinity; principally from the district of *Káli-béber*, on the slope of the mountain *Díeng* or *Práhu*, where it is raised and sold by the hundred to the cultivators of the adjoining districts. The transplantation takes place in the month of June, and the plant is at its full growth in October.

Wheat has been introduced by the Europeans, and cultivated with success to the extent required by the European population. It thrives in many parts of the interior of the country: it is sown in May, and reaped in October; and, where the cultivation has been left to the Javans, the grain has been sold at the rate of about seven rupees the *píkul*.

Potatoes have been cultivated during the last forty years, in elevated situations, near all the principal European establishments, and are reckoned of a quality superior to those ordinarily procured in Bengal or China. Few of the natives, however, have as yet adopted them as a common article of food. Besides potatoes, most of the common culinary vegetables of Europe are raised in the gardens of the Europeans and Chinese. It must be confessed, however, that they degenerate, if perpetuated on the soil without change; and that their abundance and quality depends, in a great measure, on the supplies of fresh seed imported from Europe, the Cape, or other quarters.

Having now given an account of the different kinds of produce raised within the island, and the arts of husbandry practised by the natives, I shall conclude this short sketch of Javan agriculture by an account of the tenure of landed property, the rights of the proprietor and tenant, the proportion of the produce paid for rent, the division of farms among the inhabitants of villages, and the causes that have obstructed or promoted agricultural improvements.

The relative situation, rank, and privileges of the village farmer and the native chief in Java, correspond in most instances, with those of the Ryot and Zemindar of Bengal; but the more frequent and more immediate interference of the sovereign, in the former case, with any tendency to established usage or prescriptive claim, has left no room for that difference of opinion, concerning proprietary right, which exercised the ingenuity of the highest authorities in the latter. In Bengal, before the introduction of the permanent revenue settlement, there were usages, institutions, and established modes of proceeding with regard to landed estates, that rendered it doubtful in which of the three parties more immediately interested, the proprietary right should finally and lawfully be settled. The claim of the Ryot to retain the land which he cultivated, so long as he paid the stipulated contribution, seemed to raise his character above that of an ordinary tenant removeable at pleasure, or at the conclusion of a stipulated term. The situation of the Zemindar, as the actual receiver of the rents, standing between the sovereign and the cultivator, although merely for the purpose of paying them over with certain deductions to the sovereign, and his frequently transmitting the office with its emoluments to his children, although held only during pleasure, gave his character some affinity to that

of an European landholder. And lastly, the sovereign himself, who ultimately received the rents, and regulated them at his pleasure, and removed both Zemindar and Ryot, in case of negligence or disobedience, was arrayed with the most essential attributes of proprietary right, or at least exercised a power that could render any opposite claims nugatory. Thus the Ryot, the Zemindar, and the Sovereign, had each his pretensions to the character of landholder. After much cautious inquiry and deliberate discussion on the part of our Indian government, the claims of the Zemindars, rather perhaps from considerations of policy than a clear conviction of their superior right, were preferred. In Java, however, except in the cases of a few alienated lands and in the *Súnda* districts, of which more will be said hereafter, no such pretensions are heard of, as those which were advocated on the part of the Zemindars of western India; although inquiries to ascertain the equitable and legitimate rights of all classes of the people, were known to be in progress, and a plan was declared to be in contemplation for their permanent adjustment. From every inquiry that was instituted under the British government, and every fact that was presented to the view of its officers, it appeared that, in the greatest part of the island, in the eastern and middle districts, and in short in those provinces where rent to any considerable amount was attainable, there existed no proprietary right between that of the sovereign and that of the cultivator, that the government was the only landholder.

There are lands, indeed, which contribute nothing to the state, some on which the cultivator pays no rent whatever, and others of which the rent remains in the hands of his immediate superior; but the manner in which individuals acquire, and the tenure by which they hold such lands, form illustrations and proofs of the proprietary right of the sovereign. As his resources arise almost entirely from the share of produce which he exacts, and as he considers himself invested with an absolute dominion over that share, he burthens certain villages or estates with the salaries of particular officers, allots others for the support of his relatives or favourites, or grants them for the benefit of particular charitable or religious institutions; in the same manner as, before the Consolidation Act in this country, the interest of particular loans were fixed upon the produce of specific imposts. Here the alienation shews the original right: the sovereign renounces the demand to which he was entitled; he makes no claim upon the farmer for a share of the crop himself, but orders it to be paid over to those whom he thus appoints in

his place, so far as the gift extends. With the exception of the *Súnda* districts, as already stated, and a comparatively inconsiderable portion of land thus alienated on different conditions, the proprietary right to the soil in Java vests universally in the government, whether exercised by native princes or by colonial authority, and that permanent and hereditary interest in it so necessary to its improvement, those individual rights of property which are created by the laws and protected by the government, are unknown. With these exceptions, neither law nor usage authorizes the oldest occupant of land in Java to consider the ground which he has reclaimed from waste, or the farm on which he has exerted all his industry, as his own, by such a tenure as will enable him, and his successors for ever, to reap the fruits of his labour. He can have gained no title, even to a definite term of occupancy, but from the capricious servant of a capricious despot, who himself is not legally bound by his engagement, and whose successor is not even morally bound by it.

As a matter of convenience, the same cultivator may continue to occupy the same portion of land for life, and his children, after his decease, may inherit the ground which he cultivated, paying the dues to which he was liable. The head of a village, whether called *Búkul*, *Peting'gi*, or *Lúrah*, may be continued in the collection of the village rents for life, and may be succeeded in office by his heirs; the superior officer, or *Demáng*, with whom he accounts, may likewise hold his situation for a long period, and transmit it to his family; but none of them can stand in the possession against the will of their immediate superior, or of the sovereign, by any claim of law or custom.

Little of the revenue collected from the occupants is transmitted to the government treasury; the greatest part of that which is raised, and which, in other countries, would come into the hands of government, for subsequent distribution among its servants and the support of its various establishments, is intercepted in its progress by those to whom the sovereign immediately assigns it. The officers of police, of justice, of the prince's household, and, in short, public servants of all classes, from the prime minister down to the lowest menial, are paid with appropriations of the rent of land.

To this general principle of Javan law and usage, that the government is the only landholder, there are exceptions, as I mentioned before, in some

districts of the island. These are chiefly in the districts inhabited by the *Súndas*, who occupy the mountainous and woody country in the western division of the island. Among them, private property in the soil is generally established; the cultivator can transmit his possession to his children: among them, it can be subdivided, without any interference on the part of a superior; the possessor can sell his interest in it to others, and transfer it by gift or covenant. He pays to his chief a certain proportion of the produce, in the same manner as the other inhabitants of Java; because, in a country without trade or manufactures, labour or produce is the only shape in which he can contribute to support the necessary establishments of the community. So long as he advances this tribute, which is one-tenth or one-fifth of the gross produce, he has an independent right to the occupancy of his land, and the enjoyment of the remainder. The reason why the landed tenure of these districts differs, in so important a particular, from that of the most extensive and valuable part of the island, may perhaps be explained from their nature, without resorting to any original difference in the laws of property, or the maxims of government. Where the population is small in proportion to the extent of soil, and much land remains unoccupied, the best only will become the subject of demand and appropriation. The latter alone is valuable, because it yields great returns for little labour, and therefore offers inducements to engage in its cultivation, in spite of many artificial disadvantages: it alone can afford a desirable surplus, after maintaining the hands that call for its fertility, and consequently tempts power to reserve unalienated the right to this surplus. On the other hand, when waste ground is to be reclaimed, when forests or jungle are to be cleared, or when a sterile and ungrateful spot is to be cultivated, the government have less interest in reserving the surplus, and must offer superior inducements of immunity, permanency, or exemption, to lead to cultivation. On this principle, the tenure of land in the *Súnda* districts, and on some parts of the coast, may be accounted for. It may be concluded, that many of these lands were reclaimed from waste by the present occupiers or their immediate predecessors, and their rights to possess them, which is similar to that which the discoverer of an unappropriated field, forest, or mine would have, by nature, to as many of their products as he could realize by his labours, has not been crushed or interfered with by the sovereign; a forbearance, probably, more to be attributed to motives of prudence than to the restraint of law. Nearly coincident with this conclusion is the supposition which

assumes, that before the introduction of the Mahomedan system, and the encroachments of despotic sovereigns, all the lands on the island were considered as the property of those who cultivated them; but that, as the value of the most fertile spots became more apparent, while the labour which had been originally expended in clearing them, and constituted the title to their original occupancy, was gradually forgotten, the government found inducements and facilities to increase its demands, and thus became possessed of the rights of some by violence, while it rendered those of all unworthy of being preserved. The land tenures of the *Súnda* districts, according to this hypothesis, are only wrecks of the general system, which have been protected against encroachment, because they did not so powerfully invite rapacity. Whatever truth there may be in this opinion, the fact is undoubted, that in the mountainous and less fertile districts of Java, and in the island of *Báli*, where the Mahomedan sway has not yet extended, individual proprietary right in the soil is fully established, while in that portion of Java where the Mahomedan rule has been most felt, and where proprietary right amounts to the greatest value, it vests almost exclusively in the sovereign.

The situation, however, of the cultivator in the Sunda districts, who is a proprietor, is not much more eligible than that of the tenant of the government: he may, it is true, alienate or transfer his lands, but while he retains them, he is liable to imposts almost as great as they can bear; and when he transfers them, he can therefore expect little for surrendering to another the privilege of reaping from his own soil, what is only the average recompense of labour expended on the estate of another. The Revenue Instructions, therefore, bearing date the 11th February 1814, and transmitted from the local government to the officers intrusted with the charge of the several provinces subject to its authority, lay down the following general position: "The nature of the landed tenure throughout the island is now thoroughly understood. Generally speaking, no proprietary right in the soil is vested in any between the actual cultivator and the sovereign; the intermediate classes, who may have at any time enjoyed the revenues of villages or districts, being deemed merely the executive officers of government, who received these revenues from the gift of their lord, and who depended on his will alone for their tenure. Of this actual proprietary right there can be no doubt that the investiture rested solely in the sovereign; but it is equally certain, that the first clearers of the land entitled

themselves, as a just reward, to such a real property in the ground they thus in a manner created, that while a due tribute of a certain share of its produce was granted to the sovereign power for the protection it extended, the government, in return, was equally bound not to disturb them or their heirs in its possession. This disposal of the government share was thus, therefore, all that could justly depend on the will of the ruling authority; and consequently, the numerous gifts of land made in various periods by the several sovereigns, have in no way affected the rights of the actual cultivators. All that government could alienate was merely its own revenue or share of the produce. This subject has come fully under discussion, and the above result, as regarding this island, has been quite satisfactorily established." It is remarked, in a subsequent paragraph of the same instructions, "that there have been, it is known, in many parts of the country, grants from the sovereign of lands in perpetuity, which are regularly inheritable, and relative to which the original documents still exist. Of these, some have been made for religious purposes, others as rewards or provision for relatives or the higher nobility. These alienations, as far as it was justly in the power of the sovereign to make, must certainly be held sacred; but their extent should be clearly defined, that the rights of others be not compromised by them. The government share, when granted, will not be reclaimed; but the rights of the cultivator must not be affected by these grants. Such proprietors of revenue, as they may be termed, shall in short be allowed to act, with regard to the cultivators on their estates, as government acts towards those on its own lands, that is, they shall receive a fixed share of the produce, but whilst that is duly delivered, they shall neither exact more nor remove any individual from his land." It is remarked by Major Yule, the British resident, in his Report on Bantam, that there, "all property in the soil is vested exclusively in the hands of the sovereign power; but in consequence of its having been long customary to confer grants of land upon the different branches of the royal family, and other chiefs and favourites about court, a very small portion was left without some claimant or other. The *púsákas* granted to the relations of the Sultan were considered as real property, and sometimes descended to the heirs of the family, and at others were alienated from it by private sale. To effect a transfer of this nature, the previous sanction of the Sultan was necessary, after which the party waited on the high priest, or *Mangku-bumi*, who made the necessary inquiries, and delivered the title deeds to the purchaser, in which were

specified the situation, extent, boundaries, and price of the land sold. A register of sales was kept by the priests, the purchaser paying the fees; and it rarely occurred that lands sold in this manner were ever resumed by the crown, without some adequate compensation being made to the purchaser. *Púsákas* given to chiefs for services performed, were recoverable again at pleasure, and always reverted to the crown on the demise of the chief to whom they had been granted: in all other respects, the same privileges were annexed to them as to the former. The holders of *púsáka* lands were very seldom the occupants; they generally remained about the court, and on the approach of the rice harvest deputed agents to collect their share of the crop. They do not let their lands for specific periods. The cultivators are liable to be turned out at pleasure, and when ejected, have no claims to compensation for improvements made while in possession, such as water-courses, or plantations of fruit trees made by themselves or their parents."

"We must make a distinction," say the Dutch Commissioners appointed to investigate this subject in 1811, "between the *Príangén* regencies, the province of *Chéribon*, and the eastern districts. Throughout the whole extent of the *Príangen* regencies exists a pretended property on uncultivated lands, on which no person can settle without the consent of the inhabitants of that *désa*, or village. In the *sáwah* fields, or cultivated lands, every inhabitant, from the Regent down to the lowest rank, has a share, and may act with it in what manner he pleases, either sell, let, or otherwise dispose of it, and loses that right only by leaving the village in a clandestine manner.

"In the province of *Chéribon*, according to the ancient constitution, each district and *désa*, like the *Príangen* regencies, has its own lands; with the difference, however, that whilst those regencies are considered as belonging to villages and individuals, here the villages and lands are altogether the pretended property of the chiefs, or of the relations or favourites of the Sultans, who even might dispose of the same, with one exception, however, of that part allotted to the common people. Sometimes the Sultans themselves were owners of *désas* and chiefs of the same; in which case the inhabitants were better treated than in the former instances. If an individual thought himself wronged by the chief, who either sold, hired out, or otherwise disposed of his lands, he took his revenge, not on that chief, but on the person who held possession of the property. To corroborate this statement it may be mentioned, that the lands in the district of *Chéribon*

were for the most part farmed out to Chinese, who increased their extortions in proportion as the chief raised his farm or rent, and thus almost deprived the common people of all their means.

"On the north-east coast of the eastern districts, no person can be called a proprietor of rice fields or other lands: the whole country belongs to government, and in this light do all the Regents consider it. The rice fields of a regency are divided among the whole of the population: in the division the chiefs have a share, according to their rank, occupations, or taxes they are paying.

"The chief enjoys his lands as long as he holds his station; the common people for a year only, when it falls to the share of another inhabitant of the *désa*, or village, that all may reap a benefit from it in turn. The ideas of the Javans concerning tenures, thus appear to be of three kinds: in the *Súnda* division they consist in allotting to the villages of uncultivated, and to individual persons of certain portions in the cultivated or *sáwah* fields: in *Chéribon*, the sultans and chiefs, as well as the common people, assert pretensions to similar allotments: in the eastern districts, on the contrary, nobody pretends to the possession of land; every one is satisfied with the regulation laid down, but if a man's share is withheld, he is apt to emigrate. No person considers himself bound to servitude. The Javans, however, in the *Príang'en* regencies, in *Chéribon*, and in the eastern districts, pretend to have an unquestionable right to all the fruit trees and *síri* plants, at or near their *kámpung* or *désa*."

"There is not," says Mr. Knops, another of the Dutch Commissioners, "a single Javan, who supposes that the soil is the property of the Regent, but they all seem to be sensible that it belongs to government, usually called the sovereign among them; considering the Regent as a subject like themselves, who holds his district and authority from the sovereign. His idea of property is modified by the three kinds of subjects to which it is applied: rice fields, *gâgas*, and fruit trees. A Javan has no rice fields he can call his own; those of which he had the use last year will be exchanged next year for others. They circulate (as in the regency of *Semárang*) from one person to another, and if any one were excluded, he would infallibly emigrate. It is different with the *gâgas*, or lands where dry rice is cultivated: the cultivator who clears such lands from trees or brushwood, and reclaims them from a wilderness, considers himself as proprietor of the same, and expects to reap

its fruits without diminution or deduction. With regard to fruit trees, the Javan cultivator claims those he has planted as his legal property, without any imposts: if a chief were to trespass against this right, the village would soon be deserted. The Javan, however, has not, in my opinion, any real idea of property even in his fruit trees, but usage passes with him for a law. All dispositions made by the chief, not contrary to custom or the *ádat*, are considered as legal, and likewise all that would contribute to ease the people, by lessening or reducing the capitation tax, the contingent, the feudal services, in short all the charges imposed upon them. A different system would be contrary to custom. Whatever favours the people is legal, whatever oppresses them is an infraction of the custom."

The tenure of land in the native provinces is the same generally as in the eastern districts. Thus stands the question with regard to the proprietary right to the soil in Java; but it is of more consequence in an agricultural point of view, and consequently more to my present purpose, to inquire how that right is generally exercised, than in whom it resides. Though the cultivator had no legal title to his lands, there might still be such a prevalent usage in favour of his perpetual occupancy, as would secure him in the enjoyment of his possession, and enable him to reap the fruits of his industry equally with the protection of his positive law.

But unfortunately for the prosperity of the people, this was far from being generally the case. The cultivator had little security for continued occupancy, but the power, on his part, of enduring unlimited oppression without removing from under it, or the interest of his immediate superior in retaining a useful slave; and as he could not expect to reap in safety the fruits of his industry, beyond the bare supply of his necessities, he carried that industry no farther than his necessities demanded. The sovereign knew little about the state of his tenantry or the conduct of his agents, and viewed the former only as instruments to create the resources, which the latter were employed to collect or administer. All his care was to procure as much from the produce of the soil and industry of his subjects as possible, and the complaints of the people, who suffered under the exactions of these chiefs, were intercepted on their way to the throne, and perhaps would have been disregarded had they reached it. The sovereign delegates his authority over a province of greater or less extent, to a high officer called *Adipáti*, *Tumúng'gung*, or *Ang'ebái*, who is himself paid by the rent of certain

portions of land, and is responsible for the revenues of the districts over which he is appointed. He, in his turn, elects an officer, called *Demáng* or *Mántridésa*, to administer the subdivisions or districts of the province, to appoint the chiefs, and to collect the rents of several villages. The village chief, *Búkul*, *Lúrah*, or whatever designation he bears in the different parts of the island, thus appointed by his immediate superior, is placed in the administration of the village, required to collect the government share of the crop from the cultivator, and to account for it to the *Demáng*. In some provinces, the village elects its own chief, called *Petíng'gi*, who exercises similar functions with the *Búkul* appointed by government, as will be afterwards more particularly observed in the account of the native administration. As all the officers of government, of whatever rank, are paid their salaries in the produce of the land, the *Búkuls* and the *Demángs* become responsible for the share of the appropriations of villages to this account, as much as if it went into the government treasury. They are themselves paid by the reservation of a certain share of what they collect, and of course are always ready to please their employers, and to increase their own emoluments, by enforcing every practicable exaction. Every officer has unlimited power over those below him, and is himself subject to the capricious will of the sovereign or his minister. When the Regent makes any new or exorbitant demand upon those whom he immediately superintends, they must exact it with an increased degree of rigor over the chiefs of villages, who are thus, in their turn, forced to press upon the cultivator, with the accumulated weight of various gradations of despotism.

The *Búkul*, or the *Petíng'gi* is the immediate head of the village, and however much his authority is modified in particular districts, has always extensive powers. To the cultivators, he appears in the character of the real landholder, as they have no occasion to look beyond him to the superior, by whom he is controlled. He distributes the lands to the different cultivators on such shares, and in such conditions, as he pleases, or as custom warrants, assesses the rents they have to pay, allots them their village duties, measures the produce of their fields, and receives the government proportion. He sometimes himself cultivates a small portion of land, and in so far is regarded only as a tenant, like the rest of the villagers. He is accountable for all the collections he realizes, with the reservation of a fifth part for his trouble, which share must be viewed merely as the emoluments of office, and not as the rent of the landlord, or the profits of a farmer. He

sometimes holds his situation immediately of the sovereign, or by the election of the cultivators; but more generally from the intermediate agent of government, whom I have mentioned above, to whom he is accountable for his receipts. By his superior he may be removed at pleasure; although the local knowledge and accumulated means, which are the consequence of the possession of office, generally insure its duration to his person for a considerable period, or as long as his superior himself retains his power.

The lands which he superintends and apportions range from six or seven to double that number of *jungs*, or from forty or fifty to an hundred acres English, and these are divided among the inhabitants of his village, generally varying from about two acres to half an acre each. That this minute division of land takes place, may be shewn from the surveys made under the British government in the eastern provinces, which nearly resemble those under the dominion of the native princes, and consequently may be taken as indicating the general state of the island. The inhabitants in the agricultural districts of the residency of *Surabáya* amount in all to 129,938: these compose 33,141 families, of which 32,618 belong to the class of cultivators, and 523 belonging to other professions pay only a ground rent for their houses. The area of the province contains about twelve hundred square miles, or 34,955 *jungs*, about 20,000 only of which are cultivated, so as to become of any consequence in the division of lands among the villages, the number of which amount to 2,770. By a calculation founded on these data, it would appear, that each village averages about twelve families, that a family falls considerably short of the average of four, and that a little more than seven *jungs* are allotted to a village. In *Kedú* the population amounts to 197,310, the number of villages to 3879, and the quantity of cultivated land to 19,052 *jungs*; so that in this province there are about five *jungs* attached to a village; and a village is inhabited by fifty-one souls, or about twelve or thirteen families. In *Grésik*, the number of villages amount to 1396, the quantity of cultivated land to 17,018 *jungs*, and the population to 115,442 souls. In *Probalíng'o* and *Besúki*, the numbers are—of inhabitants, 104,359; of villages, 827; of cultivated land, 13,432 *jungs*. In these two last the proportions vary, the number of *jungs* to a village in the former being more than twelve, and of inhabitants more than eighty, or about twenty families; and in the latter, the proportion is more than one hundred and twenty souls to a village possessed of more than sixteen *jungs* of land. It would be superfluous to state any more examples. In different

parts of the island, there are variations within certain limits; but the quantity of land occupied by one cultivator seldom exceeds a *báhu*, (or the quarter of a *jung*), although the quantity occupied by a village, as will be seen by the above instances, varies from five to sixteen, according to the extent of the population.

The land allotted to each separate cultivator is managed by himself exclusively; and the practice of labouring in common, which is usual among the inhabitants of the same village on continental India, is here unknown. Every one, generally speaking, has his own field, his own plough, his own buffaloes or oxen; prepares his farm with his own hand, or the assistance of his family at seed-time, and reaps it by the same means at harvest. By the recent surveys, when every thing concerning the wealth and the resources of the country became the subject of inquiry, and means were employed to obtain the most accurate information, it was ascertained, that the number of buffaloes on that part of the island to which these surveys extended, was nearly in the proportion of one to a family, or a pair to two families; and that, including the yokes of oxen, which are to those of buffaloes as one to three, this proportion would be very much exceeded. In some provinces, more exclusively devoted to grain cultivation, the number of ploughs, and of course oxen or buffaloes, nearly amounts to one to a family. In other cases, where they fall much short of this proportion, a considerable part of the inhabitants must be engaged in labours unconnected with agriculture, or the cultivators must be engaged in rearing produce, where the assistance of those animals is not required. Thus in *Japára* and *Jawána*, where the number of inhabitants is 103,290, or about twenty-six thousand families, the number of ploughs amount to 20,730, and of buffaloes to 43,511; while in the Batavian Regencies, where the coffee culture employs a considerable part of the inhabitants, the number of families is about sixty thousand, and of ploughs only 17,366. The lands on Java are so minutely divided among the inhabitants of the villages, that each receives just as much as can maintain his family and employ his individual industry.

"A time there was, ere England's griefs began,
When ev'ry rood of ground maintain'd its man;
For him light labour spread her wholesome store,
Just gave what life requir'd, and gave no more:

His best companions, innocence and health;
And his best riches, ignorance of wealth."

But situated as the Javan peasantry are, there is but little inducement to invest capital in agriculture, and much labour must be unprofitably wasted: as property is insecure, there can be no desire of accumulation; as food is easily procured, there can be no necessity for vigorous labour. There exists, as a consequence of this state of nature and of the laws, few examples of great affluence or abject distress among the peasantry; no rich men, and no common beggars. Under the native governments and the Regents of the Dutch Company, there were no written leases or engagements binding for a term of years; nor could such contracts well be expected to be formed with an officer, who held his own place by so unstable a tenure as the will of a despot. The cultivator bargained with the *Búkul* or *Petíng'gi* for a season or for two crops, had his land measured off by the latter, and paid a stipulated portion of the produce either in money or in kind. When the crop had arrived at maturity, the cultivator, if his engagement was for so much of the produce in kind, cut down his own share, and left that of the landlord on the ground.

The proportion of the crop paid as rent varied with the kind of land, or produce, and the labour employed by the cultivator. In the *sáwah* lands, the share demanded by the landlord rarely exceeded one-half, and might fall as low as one-fourth, according as the quality of the soil was good or bad, or the labour employed in irrigating or otherwise preparing it was greater or less. In *tégal* lands, the rent paid varied from one-third to one-fifth of the produce; a diminution to be attributed to the uncertainty of the crop, and the necessity of employing more labour to realize an equal produce than on the other species of cultivation. In cases where there was a second crop of less value than the principal rice or maize crop, no additional demand was made upon the additional grain reaped by the farmer.

If such rates had been equitably fixed, after a deliberate estimate of the proportion between the labour of the cultivator and his produce, and if from the best kind of *sáwah* no more than the half had been required, with a scale of rents diminishing as labour increased or the soil deteriorated, the peasant could have had no reason to complain of the exactions of government. A *jung* of the best *sáwah* lands will produce between forty and fifty *ámats* of *pári*, each *ámat* weighing about one thousand pounds. Suppose a cultivator

occupied a quarter of a *jung* of such land, he would reap ten *ámats*, or ten thousand pounds of *pári*, and allowing a half for the government deduction, would still retain five thousand pounds, which is equal to about eight quarters of wheat. The best *sáwah* lands return about forty-fold; *sáwah* lands of the second quality yield from thirty to forty *ámats* the *jung*; and they are considered of inferior quality when they yield less than thirty. From these last, two-fifths or one-third was required as the landlord's share. *Tégal* lands were assessed at one-third, one fourth, or one-fifth of their produce, according to their quality, and their produce in value is about a fourth of *sáwah* lands of the same relative degree in the scale. In Bengal, according to Mr. Colebrooke's excellent account of its husbandry, "the landlord's proportion of the crop was one-half, two-fifths, and a third, according to the difference of circumstances." The value in money of a crop of rice grown on a *jung* of the best land under the wet cultivation, may amount to one hundred and sixty Spanish dollars; and on a *báhu* (the space occupied by an individual cultivator), forty dollars. I formerly stated the price of the implements of husbandry, the price of buffaloes or oxen, the expence of building a house, and providing it with the necessary furniture. The whole farming stock of a villager may be purchased for about fifteen or sixteen dollars, or for little more than a third part of the produce of his land in one year. The price of labour, the price of cattle and of grain, as well as the fertility of the soil, varies in different parts of the island; but, in general, it may be laid down as an indisputable proposition, that from the natural bounty of the soil, the peasantry might derive all the means of subsistence and comfort, without any great exertion of ingenuity, or any severity of toil, if their government made no greater demand than the shares stated above.

But besides the rent which the cultivator paid for his land, he was liable to many more grievous burdens. The great objection to a tax levied on land, and consisting in a certain share of its produce, arises from the effect that it has in obstructing improvements; but there were other imposts and contributions exacted from the peasantry, which were positively and immediately oppressive. A ground-rent for houses, called *pachúmplang*, was prevalent over many parts of the island, amounting in the provinces subject to the native princes, to one-sixth or seventh of a dollar for each dwelling or cottage. The cultivator, in some parts of the country, instead of paying this tax, was obliged to pay for his fruit trees. In some districts there was a capitation tax; arbitrary fines were levied in others, and contributions

on the birth or marriage of the children of the superior, regent, or the prince. There were several charges made on the villages, that had a more immediate reference to their own advantage, but which nevertheless were felt as burdens; such as contributions for the repair of roads, of bridges, for the making or repair of water-courses, dams, and other works necessary for irrigation. Demands on the inhabitants for charitable and religious objects or institutions are universal, though not very oppressive. Every village has its priest, who depends upon the contributions of the peasantry for his support, receiving so much rice or *pári* as his salary. The taxes on the internal trade of the country extended to every article of manufacture, produce, or consumption, and being invariably farmed out to Chinese, who employed every mode of extortion that their ingenuity could invent, or the passive disposition of the people would allow them to practice, constituted an inexhaustible source of oppression: to these we may add the feudal services and forced deliveries required under the Dutch government.

The following observations extracted from two reports, the one on *Bantam*, at the western side of the island, and the other on *Pasúruan*, almost at its other extremity, were unhappily by no means inapplicable to the greatest part of the intermediate space, and contain by no means an exaggerated representation. "The holders of *púsaka* lands in *Bantam* were very seldom the occupants; they generally remained about court, and on the approach of the *pári* harvest deputed agents to collect their share of the crop. But what proportion their share would bear to the whole produce does not appear to be well defined: it is by one stated at a fifth, and by some (which I suspect to be nearest the truth) at as much as the cultivator could afford to pay, the agents of the proprietors being the judges of the quantity. The proprietors of the *púsakas* have also a claim to the services of the cultivators: a certain number of them are always in attendance at the houses of their chiefs, and on journies are employed in carrying their persons and baggage. The lands not *púsaka* used to pay the same proportion of produce to the Sultan as the others did to the proprietors; but the cultivators of the royal dominions laboured under greater disadvantages than the others. Every chief or favourite about court had authority to employ them in the most menial offices; and chiefs possessing *púsakas*, often spared their own people and employed the others. The Sultan always had a right to enforce the culture of any article which he thought proper to direct; and, in such cases, a price was

paid upon the produce, which was generally very inadequate to the expences."

"It may be very desirable," says Mr. Jourdan, in his report on the completion of the settlement of *Pasúruan*, "that I should mention a few of the oppressions from which it is the object of the present system to relieve the people. I cannot but consider the greatest of these, the extent of the personal service demanded, not only by the *Tumúng'gung* and his family, but the *Mántris* and all the petty chiefs, who had trains of followers that received no stipendiary recompence. These added to the individuals employed in the coffee plantations (to which they appear peculiarly averse), in beating out the rice for the contingent, in cutting grass for and attending the *jáyang sekárs*, post carriage and letter-carriers, may be calculated to have employed one-fifth of the male population of the working men. Another great source of exaction was the large unwieldy establishment of *jáyang sekárs*, and police officers: the former were liberally paid, the latter had no regular emoluments. Both these classes, however, quartered themselves freely in whatever part of the country their functions demanded their attendance. This was equally the case with any of the Regent's family or petty chiefs who travelled for pleasure or on duty. Whatever was required for themselves and their followers, was taken from the poor inhabitants, who have now been so long accustomed to such practices, that they never dare to complain or to remonstrate. The European authority did not escape the taint of corruption. Monopolies, unpaid services, licences, forced or at least expected presents, were but too common even in the best times, and must have contributed to estrange the affections and respect of the natives from that power which should have afforded them protection. From this faint sketch it will be deduced, that while the men of rank were living in pampered luxury, the poor provincials were suffering penury and distress."

The Dutch Company, actuated solely by the spirit of gain, and viewing their Javan subjects with less regard or consideration than a West-India planter formerly viewed the gang upon his estate, because the latter had paid the purchase money of human property which the other had not, employed all the pre-existing machinery of despotism, to squeeze from the people their utmost mite of contribution, the last dregs of their labour, and thus aggravated the evils of a capricious and semi-barbarous government, by

working it with all the practised ingenuity of politicians, and all the monopolizing selfishness of traders.

Can it therefore be a subject of surprize, that the arts of agriculture and the improvement of society, have made no greater advances in Java? Need it excite wonder, that the implements of husbandry are simple; that the cultivation is unskilful and inartificial; that the state of the roads, where European convenience is not consulted, is bad; that the natural advantages of the country are neglected; that so little enterprize is displayed or capital employed; that the peasant's cottage is mean, and that so little wealth and knowledge are among the agricultural population; when it is considered, that the occupant of land enjoys no security for reaping the fruits of his industry; when his possession is liable to be taken away from him every season, or to suffer such an enhancement of rent as will drive him from it; when such a small quantity of land only is allowed him as will yield him bare subsistence, and every ear of grain that can be spared from the supply of his immediate wants, is extorted from him in the shape of tribute; when his personal services are required unpaid for, in the train of luxury or in the culture of articles of monopoly; and when, in addition to all these discouragements, he is subject to other heavy imposts and impolitic restraints? No man will exert himself, when acting for another, with so much zeal as when stimulated by his own immediate interest; and under a system of government, where every thing but the bare means of subsistence is liable to be seized, nothing but the means of subsistence will be sought to be attained. The Dutch accuse the Javans of indolent habits and fraudulent dispositions; but surely the oppressor has no right to be surprized, that the oppressed appear reluctant in his service, that they meet his exactions with evasion, and answer his call to labour with sluggish indifference.

The mode of dividing land into minute portions is decidedly favourable to population, and nothing but those checks to the progress of agriculture, to which I have referred, could have limited the population of Java to numbers so disproportioned to its fertility, or confined the labours of the peasantry to so small a space of what would reward their industry with abundance. The cultivated ground on the Island has already been estimated at an eighth part of the whole area. In *Probolíng'o* and *Besúki*, the total number of *jungs* of land amount to 775,483, the total of land capable of superior cultivation 174,675 *jungs*, while the space actually cultivated amounts only to 13,432

jungs. In *Rembáng*, the land belonging to villages is about 40,000 *jungs*, and not the half of that quantity is under cultivation. In *Pasúruan*, the same appearances are exhibited. From this last district the Resident's report on the settlement states, as a reason for his assessing the same rent on all the land, "that the cultivated part bearing so small a proportion to the uncultivated, the inhabitants have been enabled to select the most fruitful spots exclusively: hence arises the little variety I have discovered in the produce." *Chéribon*, Bantam, the *Priang'en* regencies, the eastern corner of the Island, the provinces under the native governments, and in short the greatest and most fertile districts, furnish striking illustrations of this disproportion between the bounty of nature and the inefficient exertions of man to render her gifts available, to extend population, and to promote human happiness; or rather they supply an example of unwise institutions and despotic government, counteracting the natural progress of both.

When the British arms prevailed in 1811, the attention of government was immediately turned to the state and interests of its new subjects. It saw at once the natural advantages of the Island and the causes which obstructed its prosperity, and it determined to effect those changes which, having succeeded in Western India, and being sanctioned by justice and expediency, were likely to improve those advantages and to remove those obstructions. In consequence of the instructions of Lord Minto, the Governor-General, who was present at the conquest, and took a great interest in the settlement of the Island, no time was lost to institute inquiries and to collect information on the state of the peasantry, and the other points, the knowledge of which was necessary, before any attempt to legislate could be wisely or rationally made. The following principles, laid down by his Lordship, were those on which the local government acted.

"Contingents of rice, and indeed of other productions, have been hitherto required of the cultivators by government at an arbitrary rate: this also is a vicious system, to be abandoned as soon as possible. The system of contingents did not arise from the mere solicitude for the supply of the people, but was a measure alone of finance and control, to enable government to derive a revenue from a high price imposed on the consumer, and to keep the whole body of the people dependent on its pleasure for subsistence. I recommend a radical reform in this branch to the serious and early attention of government. The principle of encouraging industry in the

cultivation and improvements of lands, by creating an interest in the effort and fruits of that industry, can be expected in Java only by a fundamental change of the whole system of landed property and tenure. A wide field, but a somewhat distant one, is open to this great and interesting improvement; the discussion of the subject, however, must necessarily be delayed till the investigation it requires is more complete. I shall transmit such thoughts as I have entertained, and such hopes as I have indulged in this grand object of amelioration; but I am to request the aid of all the information, and all the lights, that this Island can afford. On this branch, nothing must be done that is not mature, because the exchange is too extensive to be suddenly or ignorantly attempted. But fixed and immutable principles of the human character and of human association, assure me of ultimate, and I hope not remote success, in views that are consonant with every motive of action that operate on man, and are justified by the practice and experience of every flourishing country of the world."

In compliance with these instructions, the object of which was embraced with zeal by the local government, to whom his lordship entrusted the administration of the Island, a commission was appointed, under the able direction of Colonel Mackenzie, to prosecute statistic inquiries; the results of which, as corrected and extended by subsequent surveys, will frequently appear in the tables and statistic accounts of this work. The nature of the landed tenure, and the demand made upon agriculture, in all the shapes of rent and taxes, were ascertained; the extortions practised by the Dutch officers, the native princes, the regents, and the Chinese, were disclosed; the rights of all classes, by law or usage, investigated; the state of the population, the quantity and value of cultivated land, of forests, of plantations of cotton and coffee, the quantity of live stock, and other resources of the country subject to colonial administration, inquired into and made known. The result of these inquiries, with regard to landed tenure, I have given above; and, as it will be seen, it was such as opposed the rights of no intermediate class between the local government and the beneficial changes it contemplated in behalf of the great body of the people. After attaining the requisite information, the course which expediency, justice, and political wisdom pointed out was not doubtful, and coincided (as in most cases it will be found to do) with the track which enlightened benevolence, and a zealous desire to promote the happiness of the people would dictate.

The peasant was subject to gross oppression and undefined exaction: our object was to remove his oppressor, and to limit demand to a fixed and reasonable rate of contribution. He was liable to restraints on the freedom of inland trade, to personal services and forced contingents: our object was to commute them all for a fixed and well-known contribution. The exertions of his industry were reluctant and languid, because he had little or no interest in its fruits: our object was to encourage that industry, by connecting its exertions with the promotion of his own individual welfare and prosperity. Capital could not be immediately created, nor agricultural skill acquired; but by giving the cultivator a security, that whatever he accumulated would be for his own benefit, and whatever improvement he made, he or his family might enjoy it, a motive was held out to him to exert himself in the road to attain both. Leases, or contracts for fixed rents for terms of years, in the commencement, and eventually in perpetuity, seemed to be the only mode of satisfying the cultivator, that he would not be liable, as formerly, to yearly undefined demands; while freedom from all taxes but an assessment on his crop, or rather a fixed sum in commutation thereof, would leave him at full liberty to devote the whole of his attention and labour to render his land as productive as possible.

In conformity with these views, an entire revolution was effected in the mode of levying the revenue, and assessing the taxes upon agriculture. The foundation of the amended system was, 1st. The entire abolition of forced deliveries at inadequate rates, and of all feudal services, with the establishment of a perfect freedom in cultivation and trade: 2d. The assumption, on the part of government, of the immediate superintendence of the lands, with the collection of the resources and rents thereof: 3d. The renting out of the lands so assumed to the actual occupants, in large or small estates, according to local circumstances, on leases for a moderate term. In the course of the following years (1814 and 1815) these measures were carried into execution in most of the districts under our government, with a view to the eventual establishment of a perpetual settlement, on the principle of the *ryotwar*, or as it has been termed on Java, the *tiáng-álit* system.

The principles of land rental and detailed settlement were few and simple^[48]. After mature inquiry, no obstacle appeared to exist, either in law or usage, to the interference of government, in regulating the condition of

the peasantry; and it was resolved, therefore, that it should take into its own hands the management of that share of the land produce which was allowed to be its due, and protect the cultivator in the enjoyment and free disposal of the remainder. The undue power of the chiefs was to be removed, and so far as they had a claim for support, founded either on former services or deprivation of expected employment, they were to be remunerated in another way. The lands, after being surveyed and estimated, were to be parcelled out among the inhabitants of the villages, in the proportions established by custom or recommended by expediency. Contracts were to be entered into with each individual cultivator, who was to become the tenant of government, and leases specifying the extent and situation of their land, with the conditions of their tenure, were to be granted for one or more years, with a view to permanency, if at the end of the stipulated term, the arrangement should be found to combine the interest of the public revenue with the welfare and increasing prosperity of the occupant. If that was not the case, room was thus left for a new adjustment, for a reduction of rate, or for any change in the system which might adapt it more to the interests and wishes of the people, without prejudice to the rights of government.

This experiment hazarded nothing, and held out every prospect of success; it committed no injustice, and compromised no claim. The peasantry could not suffer, because an assessment less in amount, and levied in a less oppressive manner than formerly (all rents, taxes, and services included), was required of them: the chiefs could not complain, because they were allowed the fair emoluments of office, and only restrained from oppressions which did not so much benefit themselves as injure their inferiors. Most of the latter were not only allowed an equivalent for their former income, but employed in services allied to their former duties,—the collection of the revenue, and the superintendence of the police. As the cultivator had acquired rights which the chief could not violate, as the former held in his possession a lease with the conditions on which he cultivated his farm, no infringement of which could be attempted on the part of the latter with impunity, no evil could result from employing the chiefs in collecting the revenue of districts, while, from their practical knowledge of the habits and individual concerns of the peasantry, of the nature of the seasons and the crops, they were the fittest persons for the office. For these services it seemed most expedient to pay them, either by allowing them a certain percentage on their collections, or by allotting them portions of land rent

free. The village constitution (which will be more particularly noticed in treating of the institutions of the country) was preserved inviolate; and the chiefs or head men of the villages, in many instances elected by the free will of the villagers, were invariably continued in office as the immediate collectors of the rents, and with sufficient authority to preserve the police, and adjust the petty disputes that might arise within them; the government scrupulously avoiding all unnecessary interference in the customs, usages, and details of these societies.

In looking at the condition of the peasantry, and in estimating the fertility of the soil, the wants of the people, and the proportion of produce and industry that they formerly were accustomed to pay for supporting the establishments of government, it was thought reasonable to commute all former burdens into a land rent on a fixed principle; all *sáwah* lands being estimated by the *pári*, or unhusked rice, they could produce, and all *tégal* lands by their produce in maize. The following (as stated in the eighty-third article of the Revenue Instructions) was considered as the fairest scale for fixing the government share, and directed to be referred to, as much as possible, as the general standard:

For *Sáwah* Lands.

1st sort	One-half	of the estimated produce.
2d do.	Two-fifths	ditto.
3d do.	One-third	ditto.

For *Tégal* Lands.

1st sort	Two-fifths	of the estimated produce.
2d do.	One-third	ditto.
3d do.	One-fourth	ditto.

"Government," it is said in the eighty-fifth section, "think it necessary to declare explicitly, that they will be satisfied when the land revenue shall be productive to them in these proportions, determining at no future period to raise the scale; so that the inhabitants, being thus exactly acquainted with what will form the utmost demand on them, and resting in full confidence that government will not exact any thing further, may in that security enjoy their possessions in undisturbed happiness, and apply their utmost industry to the improvement of their lands; assured that, while they conduct

themselves well, that land will never be taken from them, and that the more productive they can render it, the more beneficial it will be for themselves."

The government share might either be received in money or in kind from the *sawah* lands; but the *tégál* produce, though estimated in maize, was always, if possible, to be commuted into money at the lowest price in the market; and as cultivators generally held portions of both, this rule, it was conceived, could not be considered generally as a hardship.

In the first settlement, leases were only granted for a year, or at the utmost three years, and were given to intermediate renters; but in the more detailed settlement of 1814, after sufficient information had been collected on the state of the country, government determined to act directly with the individual cultivator, and to lay the foundation of a permanent system. By this latter period, the experiments have been tried to a certain extent, and had succeeded beyond the most sanguine expectation. Difficulties met us in the way, but they were by no means insurmountable; there were at first imperfections in the system, but they did not affect its principle, and were easily removed. By the zeal, the ability, and industry of the various officers entrusted with the execution of the duty, whatever was practicable in furtherance of the object in which they felt deeply interested, was accomplished. In the course of the years 1814 and 1815, the new system was introduced into *Bantam*, *Chéríbon*, and the eastern districts, over a population of a million and a half of cultivators, not only without disturbance and opposition, but to the satisfaction of all classes of the natives, and to the manifest increase of the public revenue derivable from land. In several journies which I undertook into the different provinces, for the purposes of examining in person the effect of the progressive system of reform which I had the happiness to introduce, and of lending the sanction of official authority to such modifications of it as local circumstances might render advisable, I was a pleased spectator of its beneficial tendency, and of the security and satisfaction it universally diffused. The cultivator, protected against all vexatious exactions, and no longer at the beck of a tyrannical chief who made unlimited demands upon his personal services, was beginning to feel additional stimulants to his industry, to acquire a superior relish for property, and to acknowledge that government and power were not always the enemies of the lower ranks of society, or as they modestly call themselves, *the little people* (*tiang-halit*). The British administration of

Java, with all its agents, having watched the progress of the amended system at first with vigilant anxiety, at last saw it nearly completed with success, and rejoiced in its beneficial operation on the prosperity, improvement, and happiness of the people. During the two years that we retained possession of the island, after the greatest part of its arrangements were carried into effect, we had daily proofs of the amelioration they were producing. The cultivation was extending, the influence of the chiefs appeared to be progressively weakening, and the number of crimes, both from the superior industry of the people now become interested in the result of their labours, and from the contented tranquillity produced by an increase of the means of subsistence, as well as from the amended system of police (mentioned in another part of this work), was gradually diminishing. Without troubling the reader with further details, I may mention that, in the beginning of December 1815, a few months before I left the island, not satisfied with my own observation or the vague report of others, I circulated specific queries to the different residents, on the comparative state of cultivation in the different provinces, before the introduction of the detailed settlement, and at the latest date to which an answer could be returned, and on the comparative number of crimes at the same two periods, and the return was as gratifying to humanity and benevolence as it was corroborative of the opinions previously formed. I shall quote a few extracts from these reports. The Resident at *Chéribon* "cannot, from certain data, tell what progress has been made in extending the cultivation of that province, but thinks it has been considerable;" and adds, "I have no doubt but that a few years of the amended system of government would render the district of *Chéribon*, so notorious for crimes, one of the most flourishing and valuable in any part of the island." The Resident of *Tégal* is nearly in similar circumstances with regard to authentic documents, but gives a very favourable opinion, both with regard to the increase of industry and the reduction of crimes. The return from *Kedú* is more definite: it states a positive increase of *tégal* land to the amount of thirty-six *jungs*, but a much greater increase of produce from improved culture. The revenue afforded a sufficient proof of the latter fact. The same favourable account is given of the state of police and the diminution of crime. No data are given in the report from *Pakaláng'an* to ascertain the additional quantity of rice lands brought into cultivation; but an opinion is expressed, that it has increased; and an assurance is afforded, that the culture of indigo and tobacco has

sensibly extended. As an evidence that the means of subsistence are raised in greater abundance than formerly, their price has very considerably diminished.

A commission which was appointed to inquire into the state of the revenue, report from *Japára* the great facility there was in collecting the revenue under the amended system, and certify its beneficial effects in extending cultivation, securing tranquillity, promoting industry, and diminishing crimes. The same commission conclude their report of *Grésik* with similar assurances of the happy results of the revenue, and judicial arrangements for the prosperity of that province. The Resident of *Rembáng* gives an increase of cultivation of fifty-two *jungs* of *sáwah* and about thirteen of *tégál* land, and accounts for the smallness of this increase from the comparative sterility of the soil, and the precarious supply of water. Indigo had not increased, but tobacco had to a great degree. The vigilance of the police, and the ameliorating effects of the revenue settlement, are seen, it is said, in the improved state of morals. In *Surabáya* it is stated, that during the time the amended system had been in action, there had been an increase of three hundred and twenty government *jungs*, making upwards of two thousand English acres. In the residency of *Pasúruan* there is an increase of cultivation to the amount of three hundred and six *jungs*: this, however, does not comprehend the whole advantage that the new system produced in that province, for industry had been so much promoted by it, as to obtain two crops within the year, on many of the lands where the cultivator was formerly content with one. It is needless to enter into any further particulars, to shew the advantages of the regulations adopted with regard to the settlement of the landed revenue.

By a steady adherence to a system which, even in its origin, was productive of such fruits, by continuing to the peasant the protection of laws made for his benefit, by allowing full scope to his industry, and encouraging his natural propensity to accumulate, agriculture on Java would soon acquire a different character: it would soon become active and enterprising; there would soon be created a difference in farms and in the circumstances of individuals; capital would be fixed and augmented in the hands of the skilful and the industrious among the cultivators; the idle and the indifferent would relinquish their possessions in their favour; roads, intercourse, and markets would be increased, the organization of society would be changed,

and an improved race would shew themselves, in some measure, worthy of the most fertile region of the globe. What Egypt and Sicily were in different ages to the south of Europe, Java might become to the south of Asia and the Indian Archipelago. From the exertion with which the British government endeavoured to lay the foundation of such improvements, at first amid the embarrassments of a recent conquest, and latterly with the prospect of only an intermediate possession; from the attachment it cherished for a people whose gratitude it deserved and acquired, and from the interest that every friend of humanity must feel in the anticipation of seeing this highly favoured island, the metropolis, the granary, and the centre of civilization to the vast regions between the coast of China and the Bay of Bengal, it might have been expected, that those who were instrumental in introducing the late arrangements, should watch with peculiar anxiety the first movements of the power to which the colony was transferred, and should look into the regulations for its Indian empire for the support, or the death-blow, of the most animating hopes. It must therefore be with peculiar satisfaction that we see, with regard to the freedom of cultivation, the Dutch government sanctions what we had done, and gives our regulations permanency by embodying them in its colonial policy. In articles seventy-eight and seventy-nine of the fundamental laws for the civil, judicial, and mercantile administration of India^[49], we find the following enactments. "The free cultivation of all articles of produce which may be raised in the possessions of the state in India, is granted to the inhabitants of these possessions; with the exception of cloves, nutmegs, and opium, and without prejudice to the regulations which might be adopted concerning the contingents and forced deliveries, which on a resumption of these possessions out of the hands of the English, will be found to be continued in force. All the fruits of cultivation raised within the possessions of the states beyond the forced deliveries, and every kind of produce not comprehended under the exceptions mentioned above, are to be the lawful property of the cultivator. The free unrestrained disposal thereof belongs to him of right, as soon as the land rent assessed thereon, either in kind or money, shall be paid. It is the duty of the Indian administration to maintain him in these rights." Let him be maintained in those rights, and the Dutch government will realize a revenue far beyond the amount of their former assessments, without, as formerly, disgracing the Europeans in the eyes of the Asiatic, by their weakness, corruption, and injustice.

FOOTNOTES:

[46] See Treaties of the Dutch with the Native Princes.

[47] This article has never been a contingent or forced delivery with the Dutch; and its extensive cultivation in the district of Kedu gives a proof of what the natives will do if not interfered with by European monopoly. The *Kedú* is, in consequence of this cultivation, by far the richest province in the island, giving an annual revenue to the government, in money, of half a million of rupees. This important district was never subjected to the Dutch government: it was transferred to the British in 1812, and immediately fell under the Revenue System.

[48] These principles were contemplated as just and practicable by a Dutch authority (Van Hogendorp) who resided on Java, and criticized freely the measures of administration, as will appear from the following extracts from a work, which only came into my possession subsequently to the introduction of the new system by the British government. "Property of the soil must be introduced by granting all the cultivated lands to those who have hitherto cultivated them, or, in other words, to the common Javans. All the rice fields belonging to each *désa* should be distributed among its inhabitants, and the gardens or spots of ground in which their cottages stand, should also, in future, be their personal property. Correct registers hereof should be kept, and certificates given to the different owners. Who can produce a better and nearer right to the personal possession of the land, than he who has cultivated and made it productive? And is there a country in the world where the natives are happy, free, and well settled, without having a property in the soil? Our own country, and all the kingdoms of Europe, afford the most direct proofs of this: they flourish in proportion as property is more or less secure and equally divided among the inhabitants of each. All Europe groaned under the feudal system of government: all Europe has freed itself from it; but by various means and in different degrees. Why, therefore, can similar changes not be brought about on Java? Every thing urges us to make them, and the results must be important and most advantageous to us. Java is alone able to relieve our commonwealth from all its difficulties.

"In order to collect a land-tax properly, a general and correct survey should, in the first instance, be effected in all the districts belonging to us, according to an established land measure, to be introduced generally throughout Java; for this is, at present, very irregular. All the lands should then be divided into three classes, first, second, and third class, according to the proportionate fertility of the soil, and according to the same proportion the land-tax should be established. I am very ready to admit, that this will naturally be difficult and troublesome; but what system of government is exempt from these inconveniences? and particularly in this country, where it is necessary to effect a radical change and reform, in order to produce any beneficial results? But with diligence, zeal, and deliberation, all difficulties may be overcome; and even should the survey not be exactly correct in the first instance, it might be improved from year to year. The word *jung* is now used by the Javans for a certain measure of land; but this differs so much in different districts, that it is impossible to ascertain how many square roods of land a *jung* ought to contain. The name might be retained, however, after having found by experience how many square roods, in general or on an average, are contained in a *jung*, the proportion might be once for all established, introduced throughout the island, and fixed as the regular land measure of the country. It would be difficult, and as yet unnecessary, to calculate how many *jungs* of land our territories on Java contain, and how much might be collected as a land-tax from each *jung*, in order to ascertain what this tax would amount to. I think it should be taken as a principle, that the land-tax can and ought to produce as much as the head-money, (namely, a rix-dollar per head): the land-tax would then yield an annual and certain income of at least two millions and a half of rix-dollars. Every spot of cultivated ground being measured and settled to which class it belongs, every owner will correctly know, how much he must

pay for land-tax annually, and be completely at liberty to plant his land with whatever he may prefer, and may conceive most conducive to his advantage. I am of opinion, that during the first years it would be difficult, on account of the scarcity of specie, or rather its absence from circulation, to collect the land-tax; but, in the same way as with the head-money, it would be expedient, in the first years, to be somewhat indulgent in the collection, or else to receive produce in lieu of money, which might be done in this tax better than the capitation. But after five years of good administration, I am certain that the land-tax would be fully and without difficulty collected."

[49] Dated 1815.

CHAPTER IV.

*Manufactures—Handicrafts—Bricks—Thatch—Mats—Cotton—
Cloths—Dyes—Tanning—Ropes—Metals—Road and Ship-
building—Paper—Salt—Saltpetre Works—Gunpowder, &c.
—Felling and Transporting of Teak Timber—Fisheries.*

It is here proposed to state the progress made by the Javans in a few of the common arts and handicrafts, and in one or two of the more extensive manufactures; their docility in working under European direction, and some other observations, which could not be so appropriately placed in any other part of this work. I have already had occasion to notice the limited skill and simple contrivances with which they carry on the labours of agriculture, and prepare the produce of the soil for consumption, in the various ways that their taste or their habits require. In a country like Java, where the structure of society is simple, and the wants of the people are few, where there is no accumulation of capital and little division of professions, it cannot be expected that manufacturing skill should be acquired, or manufacturing enterprize encouraged, to any great extent. The family of a Javan peasant is almost independent of any labour but that of its own members. The furniture, the clothing, and almost every article required for a family, being prepared within its own precincts, no extensive market of manufactured commodities is necessary for the supply of the island itself; and for foreign trade, the produce of their soil is more in demand than the fruits of their skill or industry. In a country where nature is bountiful, and where so much of her bounty can be collected with so little labour to pay for manufactures from abroad, there is but little encouragement to withdraw the natives from the rice field, the forest, or the coffee-garden, to the loom, the forge, or the workshop; and it is not in this respect, certainly, that a change of their habits would be beneficial. This short notice of Javan manufactures, therefore, must be very limited, both in the number of the articles that it embraces, and in the importance that Europeans may attach to them: for Java can neither send us porcelain, like China; nor silks, shawls, and cottons, like Western India. To a nation, however, so much accustomed as we are to the exertions of manufacturing skill and perfection of manufacturing

machinery, it may not be uninteresting to see the simple means, by which a half-civilized people accomplish the objects which we attain by such expeditious and ingenious processes. The most experienced naval architect may be interested by the manner in which a savage scoops his canoe.

The Javans have names in their language for most of the handicrafts. The following enumeration of terms applied to trades and professions will shew the extent to which the division of labour is sometimes carried, while the foreign extraction of some of them may, perhaps, serve to point out the source whence they were derived.

1. <i>Pándi</i> or <i>émpu</i>	Iron-smith and cutler.
2. <i>Túkang-káyu</i> , or <i>mergóngso</i>	Carpenter.
3. <i>Meráng'gi</i> or <i>túkang-weróngko</i>	Kris-sheath maker.
4. <i>Túkang úkir</i>	Carver.
5. — <i>déder</i>	Spear-shaft maker.
6. — <i>lámpet</i>	Mat maker.
7. — <i>bábot</i>	Turner.
8. — <i>bóto</i>	Brush maker.
9. — <i>wátú</i> or <i>jelog'ro</i>	Stone-cutter.
10. — <i>lábúr</i>	Lime maker.
11. — <i>nátah wáyang</i>	Wayang maker.
12. — <i>génding</i>	Musical instrument maker.
13. — <i>kemíng'an</i>	Brazier.
14. <i>Sayáng</i> , or <i>túkung-tambógo</i>	Coppersmith.
15. <i>Kemásan</i> , or <i>tukáng-mas</i>	Goldsmith.
16. <i>Kúndi</i>	Potter.
17. <i>Túkang árá</i>	Distiller.
18. — <i>jílíd</i>	Bookbinder.
19. — <i>ténun</i>	Weaver.
20. — <i>bátik</i>	Cotton printer.
21. — <i>médal</i>	Dyer.
22. <i>Túkang léng'o</i>	Oil maker.
23. — <i>nióro-wédi</i>	Diamond cutter.
24. — <i>delúwang</i>	Paper manufacturer.

25.— <i>pándom or gírji</i>	Tailor.
26.— <i>súlam</i>	Embroiderer.
27.— <i>jáit</i>	Sempstress.
28.— <i>súng'ging</i>	Draftsman.
29.— <i>chát</i>	Painter.
30.— <i>pásah</i>	Tooth filer.

I shall proceed to describe a few of the manufactures of the island, without attending much to the order in which it might be proper to arrange them. The construction of a habitation is among the first and most necessary arts of uncivilized man, as the perfection of architecture is one of the most convincing proofs and striking illustrations of a high state of refinement. I have already described the hut of the peasant, and have mentioned that it is generally constructed of wood. Such structures suit the climate of the country, and save the labour of the people; but they are not rendered necessary by an ignorance of more durable materials.

Bricks are manufactured in almost every part of the island, being generally employed in the better sort of buildings, not only by Europeans and Chinese, but by the natives of rank. The quality of the clay varies greatly in different districts. It is all obtained from the decomposition of the basaltic stones, and possesses different degrees of purity, according to the proportion and nature of the other earths which are adventitiously mixed with it. In some parts of the island it is very pure, and might be advantageously employed in the manufacture of porcelain; but the natives are unacquainted with the principles of this art: some instruction in the glazing of their pottery would be of very general benefit. They are unacquainted with the process of making glass.

Cut stones are, at present, but rarely used by the Javans, and stone-cutting is almost exclusively performed by the Chinese. But although the Javans do not, at present, possess or practice any considerable skill in this art, the extensive remains of edifices constructed in stone, and of idols carved from the same materials, afford abundant testimony that the arts of architecture, sculpture, and statuary in stone, at one period reached to a very high pitch on Java. As, however, these arts have long been lost to the Javans, the consideration of them rather falls within the department of antiquities than that which we are now upon.

In the vicinity of *Grésik* there are several hills composed of a soft white stone, which hardens on exposure to the air. Stones are here cut in the quarry into regular squares of various sizes, from that of a brick to the largest tomb-stone. They are principally required for the latter purpose, and in the cemeteries of *Grésik* and *Madúra* the inscriptions upon them are very neatly executed. Beyond this, the skill of the natives in stone-cutting does not at present pretend.

The covering of the native houses is generally of thatch. In the maritime districts, *átap*, or thatch, is made almost exclusively from the leaves of the *nípa* or *búyu*. In the preparation, the leaflets separated from the common petiol are employed. Being doubled, they are attached close to each other on a stick of three feet in length, and when thus arranged are placed on the roof, like shingles or tiles. The leaves of the *gébang*, on account of their fan-like form, are differently arranged: they constitute large mats, which are chiefly employed for sides of houses or for composing temporary sheds, but they are too large and brittle to form durable *átap*. In the interior districts, where *nípa* does not grow, the houses are almost uniformly thatched with a species of long grass called *alang-alang* (the *lálang* of the Malay countries). Near large forests, where *bámbu* abounds, the natives cover their houses with this reed. The leaflets of the cocoa-nut cannot be made into thatch, but wherever the sago and *nípa* grow, it is made from their leaflets.

An article of household furniture in use among all classes, and displaying in some cases considerable beauty and delicacy of execution, is matting. Mats are made from several species of pandanus, from a kind of grass called *mándong*, and from the leaves of various palms. A species of the latter affords the most common kinds, coarser and less durable than others, as well as bags (straw sacks) resembling coarse mats: the leaves being divided into laminae, about one line in breadth, are woven in the same manner and on the same frames as coarse linen. These fibres, called *ágel*, are sometimes manufactured into twine, which possesses but little strength. The mats or bags, called *károng*, are much inferior to the gunny-bags of India.

The coarsest kinds of mats, employed chiefly by the lower class, are called in the central districts *klóso bóngko*; those prepared from grass, *klóso mándong*; and the others, *klóso psántrem* (from the place where they are made). The materials of all these are plaited by hand. The *klóso psántrem* are of superior quality, and in use through the central and eastern parts of

the island; especially among the natives of the first class, with whom they constitute the principal furniture of the dwelling-house. A person of the highest rank aspires to no luxury, more delicate or expensive in this way, than the possession of a bed composed of mats from *psántrem*.

A kind of umbrella hat worn by the common people, and universal in the Súnda districts denominated *chápeng*, is also manufactured in this manner, principally from *bámbu*, dyed of various colours, which being shaped in the form and of the size of a large wash-hand basin worn reversed, is rendered impervious to the wet by one or more coverings of varnish.

A great part of the manufacturing ingenuity of every people must be displayed in collecting the materials, or arranging the fabrics of those articles of clothing, required for protection, decency, or ornament. Whether these materials are derived from the fleece, the fur, or the feathers of the larger animals, from the covering of an insect, the bark of a tree, or the down of a shrub, they have to undergo several laborious and expensive processes before they are fit for use; and in conducting these processes, or forming machinery for rendering them more expeditious, complete, and easy, the superior manufacturing skill of one nation over another is chiefly evinced. The sheep on Java, as in all tropical climates, loses its fleece before it can be used with advantage. The silk-worm has never succeeded, although no reason can be given why it should not, and therefore the chief material of Javan clothing is cotton.

Cotton, in its rough state, is called *kápas*, and when cleaned *kápok*. The process of separating the seeds is performed by means of a *gilíng'an*, which is a roller, consisting of two wooden cylinders revolving in opposite directions, between which the fibre is made to pass. This operation is very tedious, two days being necessary for one person to clean a *káti*, equivalent to a pound and a quarter English. After the separation of the seed, it is *géblek*, or beaten with a rattan, and *píndi* or picked. The finer sort is then bowed after the Indian manner; this operation is called *wusóni*. The cotton thus prepared is afterwards pulled out and drawn round a stick, when it is called *púsuh*. To perform the process upon a single *káti* will employ one person about two days. The cotton is now ready for spinning (*'ngánti*), and requires ten additional days' labour of one person, to convert the small quantity above mentioned into yarn, when the result is found to be three *tukal*, or hanks, of the ordinary kind.

Previous to the operation of weaving, the yarn is boiled, and afterwards dressed and combed with rice-water. When dry, it is wound round a sort of reel, termed *'íngan*, and prepared for weaving. These are the last operations it undergoes till it is put into the hands of the weaver, and requires, in ordinary circumstances, three days for its completion. Four days are required even by an expert weaver, and five or six by an ordinary one, to manufacture a *sárong*, or piece of cloth, a fathom and a half long and five spans broad (equal to three square handkerchiefs of the ordinary size worn on the head). The cloths thus prepared, while uncoloured, are distinguished by the term *láwon*.

The spinning-wheel is termed *jántra*, and the spindle *kísi*. The loom, with all its apparatus, is called *ábah ábah tenún*, the shuttle *trópong*, the woof *máni*, and the warp *pákan*. Both machines resemble those described on the continent of India, but are neater and much better made: the loom especially is more perfect: the weaver, instead of sitting in holes dug in the ground, invariably sits on a raised flooring, generally in front of the house, her legs being stretched out horizontally under the loom. The price of the spinning-wheel varies from less than half a rupee to a rupee, and that of the loom from a rupee to a Spanish dollar. The operations of spinning and weaving are confined exclusively to the women, who from the highest to the lowest rank, prepare the cloths of their husbands and their families.

Coloured cottons (*járit*) are distinguished into *lúri* or *lúri gíng'gang*, those in which the yarn is dyed previously to weaving; and *bátik*, those which are dyed subsequently. The process of weaving the former is similar to that of the gingham, which it resembles, and need not therefore be detailed; but the latter, being peculiar to Java, may deserve a more particular description.

The cloths termed *bátik* are distinguished into *bátik látur púti*, *bátik látur írang*, or *bátik látur bang*, as the ground may be either white, black, or red. The white cloth is first steeped in rice water, in order to prevent the colour with which the patterns are intended to be drawn, from running, and when they are dried and smoothed (calendered), commences the process of the *bátik*, which gives its name. This is performed with hot wax in a liquid state, contained in a small and light vessel, either of copper or silver, called *chánt-ing*,^[50] holding about an ounce, and having a small tube of about two inches long, through which the liquid wax runs out in a small stream. This tube, with the vessel to which it is attached, being fixed on a stick about

five inches long, is held in the hand, and answers the purpose of a pencil, the different patterns being traced out on both sides of the cloth with the running wax. When the outline of the pattern is thus finished, such parts of the cloth as are intended to be preserved white, or to receive any other colour than the general field or ground, are carefully covered in like manner with the liquid wax, and then the piece is immersed in whatever coloured dye may be intended for the ground of the pattern. To render the colour deeper, cloths are occasionally twice dipped. The parts covered with wax resist the operation of the dye, and when the wax is removed, by being steeped in hot water till it melts, are found to remain in their original condition. If the pattern is only intended to consist of one colour besides white, the operation is here completed; if another colour is to be added, the whole of the first ground, which is not intended to receive an additional shade, is covered with wax, and a similar process is repeated.

In order to render the dye fixed and permanent for the scarlet or blood-red colour, the cloth is previously steeped in oil, and after five days washed in hot water, and prepared in the usual way for the *bátik*. In the ordinary course, the process of the *bátik* occupies about ten days for common patterns, and from fifteen to seventeen for the finer and more variegated.

A very coarse kind of cloth, which serves for curtains or hangings, is variously clouded, and covered sometimes with rude figures, by the art of colouring the yarn, so as to produce this effect when woven. For this purpose, the strands of the yarn being distributed in lengths equal to the intended size of the cloth, are folded into a bundle, and the parts intended to remain white are so tightly twisted round and round, that the dye cannot penetrate or affect them. From this party-coloured yarn the designed pattern appears on weaving. The cloths so dyed are called *gebér*.

The sashes of silk, called *chíndi*, are dyed in this manner, as well as an imitation of them in cotton, called *jóng'grong*.

Of the several kinds of coloured cottons and silks there is a very great diversity of patterns, particularly of the *bátik*, of which not less than a hundred are distinguished by their appropriate names. Among these are the patterns exclusively worn by the sovereign, termed *bátik párang rúsa*, and *bátik sáwat*, and others which designate the wearer, and are more or less

esteemed, as well on this account as their comparative beauty of design and execution.

With the exception of blue and scarlet or blood-red, all the dyes of the inhabitants are liable to fade, and the processes offer nothing worthy of investigation or remark.

In dying blue, indigo, the palm wine of the *áren*, and various vegetable acids are employed.

Black is obtained from an exotic bark called *tíng'i*, and the rind of the *mangustin* fruit. In making the inferior infusion for this and for various other dyes, the chaff of rice, called *meráng*, is employed.

In dying green, a light blue is first induced, which is afterwards converted into the requisite hue, by infusion in a decoction of *tegráng* (an exotic wood), to which blue vitriol is added.

Tegráng alone affords a yellow colour, and generally is qualified by receiving the addition of some bark of the *nángka* and *plem-dodól*.

A beautiful and lasting scarlet and blood-red is obtained from the roots of the *wóng-kudu*. The yarn or cloth is first boiled in the oil of *wijen* or *kamíri*: being washed in a decoction of *meráng* or burnt *pári* chaff, it is dried, and subsequently immersed in an infusion of the roots of *wóng-kudu*, the strength of which is increased by the addition of the bark *jírak*, a variety of the fruit *kepúndung*. In the preparation of this dye, the roots of the *wóng-kudu* are bruised and well mixed with water, which is then boiled until it is reduced to one third, when it is fit for use. No light red or rose colour of durability is produced by the Javans: they employ for this purpose the *kasomba kling*.

In several of the maritime districts, the *Maláyus* impart a beautiful crimson colour to silk, by means of the *gúmlak tembálu* or *embálu*, but with this Javans are unacquainted.

The *kápas jáwa*, or Java cotton, in its raw and uncleaned state costs from about three halfpence to three pence the *káti*, according to its quality, and the *kápas múri* from six to eight pence. The price of each advances sometimes fifty per cent. beyond this, when the production is scarce or out of season.

A *káti* of uncleaned Java cotton is calculated to produce two and a half *túkul* or hanks of coarse, and three and a half hanks of fine yarn; and a *káti* of *kápas múri*, five hanks of the latter. The value of the former is from three to four pence, and of the latter from seven to ten.

Three hanks and a half of coarse yarn, and from five to nine of fine, make one *sárong*, or three head handkerchiefs, the price of which, undyed, is from half a rupee to four Spanish dollars; if dyed, the *ging'ams* bring from one rupee to four Spanish dollars, and the *bátik* from a rupee and a half to six Spanish dollars for the same quantity.

Another kind of coloured cottons, in imitation of the Indian chintz, is also prepared; but it is not held in much estimation, on account of the superiority of the foreign chintzes imported, and the uncertainty of the colours, which the natives allege will not stand in the same manner as those which have undergone the process of the *batik*, frequently fading in the second washing. In these cloths, the patterns being carved on small wooden blocks are stamped as in India. They serve as coverlids, and are employed as a substitute for the Indian palempore, when the latter is not procurable. The price is about four rupees.

The natives of Java, like those of every other country, must have been, from the earliest times, in the habit of manufacturing various articles of leather; but the art of rendering it more compact, more tough, and more durable, by the application of the tanning principle, has been acquired only by their connexion with Europeans. They now practice it with considerable success, and prepare tolerable leather in several districts. There are two trees of which the bark is particularly preferred for tanning; one in the maritime districts, the other in the interior. These, with some others which are occasionally added, contain very large quantities of the tanning principle, which makes excellent leather in a short space of time. Of this native article, boots, shoes, saddles, harness, &c. are made in several parts of the island; but in the greatest perfection at *Súra-kérta*, where the prices are moderate, and the manufacture extensive and improving. Neither the leather nor the workmanship of these articles is considered much inferior to what is procured at Madras and Bengal. The prices are moderate: for a pair of shoes half a crown, for boots ten shillings, for a saddle from thirty to forty shillings, and for a set of harness for four horses from ten to twelve pounds.

Neither flax nor hemp is cultivated for the purposes of manufacture. The latter is sometimes found in the gardens of the natives of continental India, particularly at Batavia, who employ it only to excite intoxication; but the island affords various productions, the fibrous bark of which is made into thread, ropes, and other similar articles. These are, with one or two exceptions, never cultivated, and when required for use, may be collected in sufficient quantity on spots where they are of spontaneous growth. A particular account of these has already been given in the first chapter, when describing the vegetable productions of the island.

To enable rope or cord which is often exposed to water or moisture, as fishing-nets, cables, and the like, to resist its influence, the sap exuding from various trees is employed.

No manufactures are calculated to show more clearly the extent to which the arts of life are carried in a country, than those in which the metals are used. Without the knowledge of iron, our dominion over nature would be very limited; as may be seen in the case of the Americans at the discovery of the western hemisphere. The manufacture and use of iron and steel has been known over the Eastern Islands, as well as in the western world, from time immemorial. The various iron implements of husbandry, the common implements and tools, the instruments and military weapons now in use among the natives of these regions, are fabricated by themselves. The importance and difficulty of the art may be gathered from the distinction which the knowledge and practice of it conferred.

The profession of a smith is still considered honourable among the Javans, and in the early parts of their history, such artizans held a high rank, and were largely endowed with lands. The first mention made of them is during the reign of the chiefs of *Pajajáran*, in the eleventh century. On the decline of that empire they went over, to the number of eight hundred families, to *Majapáhit*, where they were kindly received, and a record is preserved of the names of the head master-smiths. On the destruction of that empire in the fifteenth century, they were dispersed, and settled in different districts of the island, where their descendants are still discoverable. They are distinguished by the term *Pándi*.

Iron is cast in small quantities of a few ounces, and used occasionally for the point of the ploughshare. The metal is rendered fluid in about half an

hour: charcoal is invariably used, and the operation is termed *sing'i* or *chitak*.

The bellows, which is peculiar, and believed to have been in use at the time of *Pajajáran* and *Majapáhit*, and of which a representation sculptured in stone was found in the recently discovered ruins at *Suku* (which bear date in the fourteenth century of the Javan æra), appears to be the same as that described by Dampier^[51], in his account of *Majindánao* and the neighbouring islands. "Their bellows," says this faithful and intelligent traveller, "are much different from ours. They are made of a wooden cylinder, the trunk of a tree, about three feet long, bored hollow like a pump, and set upright on the ground, on which the fire itself is made. Near the lower end there is a small hole in the side of the trunk next the fire, made to receive a pipe, through which the wind is driven by a great bunch of fine feathers fastened to one end of the stick, which closing up the inside of the cylinder, drives the air out of the cylinder through the pipe. Two of these trunks or cylinders are placed so nigh together, that a man standing between them may work them both at once, alternately, one with each hand." This account so exactly corresponds with the Javan bellows, that no further description is necessary. The Chinese bellows are partially used. The wages of a man skilled in iron-work are sometimes as high as a rupee a day.

Cutlery of every description is made by the smith. The most important manufacture of this kind is the *krís*, or dagger, of the peculiar form well known to be worn by all the more civilized inhabitants of the Eastern Islands.

The price of a *krís* blade, newly manufactured, varies from half a rupee to fifty dollars; but the same *krís*, if it is of good character, and if its descent can be traced for three or four generations, is frequently prized at ten times that sum. A *pándi* employed to manufacture a good *krís* blade, if the materials are furnished, is paid three dollars for the job.

The manufacture of sheaths or scabbards (*sárong*) for the *krís* constitute an exclusive profession; and the manufacturers are called *túkang meráng'gi*, or *mergóngso*. These men attend at the public market, where they occupy a particular quarter, in which may be seen people employed in the finishing or repair of every part of the mounting necessary for this instrument; some upon the handle, others upon the sheath; some in applying the paint and

lacquer, others attending with a preparation of acids and arsenic for cleaning the blade, and bringing out the appearance of the *pámur*, a white metal obtained from *Biliton* and Celebes, which is worked up with the iron, in order to produce the damasked appearance of the blade.

Copper is manufactured into the kettles and pots employed by the natives for cooking; most of the other domestic vessels are of brass, which is manufactured into various other articles, from the smallest, such as buttons, ear-studs, and other ornaments, in imitation of the gold patterns, to brass guns of considerable calibre, employed for the defence of small vessels. A very extensive foundry of this kind is established at *Grésik*. From the specimen of the casts in brass, copper, &c. which are occasionally dug up near many of the ruinous temples sacred to the ancient worship of the country, we may assert, that great proficiency was once attained in this art: like that, however, of stone-cutting, it has very much declined.

Gold and silver, as is well known, are wrought by the natives of the Eastern Islands into exquisite ornaments; and the Javans are by no means behind their neighbours, the Sumatrans, in the knowledge of this manufacture. They do not, however, usually work the gold into those beautiful filigree patterns, described as common among the *Maláyus* on Sumatra, nor is their work generally so fine.

Diamond-cutters, and persons skilled in the knowledge of cutting precious stones, are also to be found in the principal capitals.

Carving in wood is followed as a particular profession, and the Javans may be considered as expert in all kinds of carpenter's work, but more particularly in cabinet-work. They imitate any pattern, and the furniture used by the Europeans in the eastern part of the Island is almost exclusively of their workmanship. Carriages and other vehicles are also manufactured by the natives after the European fashion.

Boat and ship-building is an art in which the Javans are tolerably well versed, particularly the former. The latter is confined principally to those districts in which the Europeans have built ships, for the Javans have seldom attempted the construction of square-rigged vessels on their own account. The best carpenters for ship-building are found in the districts of *Rembáng* and *Grésik*, but small native vessels and boats are continually constructed by the natives in almost every district along the north coast.

When the quantity of teak timber, and the advantages of Java in respect of ports and harbours, are considered, the most flattering prospects are held out, that this Island may, in time, be able to supply shipping to an increasing commerce of its own, and perhaps aid the dock-yards of other states.

Among the articles, the making of which may be interesting to Europeans, from the difference of the materials used or the process employed, is that of paper. The paper in common use with the Javans is prepared from the *glúga* (*morus papyrifera*) which is cultivated for this purpose, and generally called the *delúwang*, or paper tree. Having arrived at the age of two or three years, the young trees are cut while the bark easily peels off, and the fragments are portioned about twelve or eighteen inches in length, according to the intended size of the paper. These fragments are first immersed in water about twenty-four hours, in order that the epidermis may be separated; this being effected, the fibrous tissue of the inner bark is rendered soft and tractable by soaking in water, and by long and repeated beating with a piece of wood. During the intervals of this process, the fragments of the bark are piled in heaps in wooden troughs, and the affusion of fresh water is repeated till all impurities are carried off. The separate portions, which are about two or three inches broad, are then attached to each other on a plane surface, generally formed by the trunk of a plantain tree, and the union of the fibres is finally effected by continued beating. The quality of the paper depends upon the care employed in the preparation, and on the frequent affusion of fresh water. By applying successive layers to the spots which are bare from the defect of the fibres, and beating them till they unite, an uniform thickness is attained. The paper which is intended for writing is momentarily immersed in a decoction of rice, and rendered smooth and equal, by being rubbed to a polish on a plane surface. Such paper as is intended for common domestic purposes, for packing goods, &c. does not require this operation: in this the fibrous contexture of the bark is quite obvious; it much resembles a species of paper brought from Japan, and manufactured from the same tree, and was formerly employed instead of cloth by the poorer inhabitants. The process of manufacturing is strikingly like that in use among the inhabitants of the South Sea Islands, for the preparation of their cloth. The culture of this plant, as well as the manufacture of paper, is chiefly confined to particular districts, where it forms the principal occupation of the priests, who gain a livelihood by it.

Large quantities of a coarse and homely sugar, distinguished by the name of Javan sugar, are prepared from the cocoa-nut, *áren*, and other palms. The average quantity of liquor extracted from one of these trees during a day and night, is about two quarts, and this is estimated to give from three to four ounces of sugar. The trees begin to yield it at about six or seven years of age, and continue to do so for ten or twelve years. The process of preparing the sugar is extremely simple: it consists merely in boiling the liquor in an earthen pot for a few hours, and afterwards pouring it into small cases made of leaves and prepared for the purpose, in which, when cool, it attains a due consistence.

Sugar from the cane is manufactured by the Chinese alone; the process followed resembles that of the West Indies. The juice is expressed between two rollers, sometimes turned by a water-wheel; but in all cases the machinery is rude and imperfect. The quality of the sugar made on Java is considered to be equal to that of Manilla and the West Indies: it contains as much of the saccharine principle as the latter, and is brought to a drier state. It differs from the sugar of Bengal, as much in its quality as in the mode of preparing it, but can be brought to market at about the same price. Considerable quantities are sent to the Malabar coast, but the principal exportation is to Japan and Europe.

The manufactory of Batavian arrack, the superior quality of which is well known, is also conducted by the Chinese: the process is as follows: About seventy pounds of *kétan* (glutinous rice) is heaped up in a small vat; round this heap or pile one hundred cans of water are poured, and on the top twenty cans of molasses. After remaining two days in this vat, the ingredients are shifted to a larger vat adjoining, when they receive the addition of four hundred cans of water and one hundred cans of molasses.

Thus far the process is carried on in the open air. In a separate vat within doors, forty cans of palm wine or toddy from the cocoa-nut tree, are immediately mixed with nine hundred cans of water and one hundred and fifty cans of molasses. Both preparations being allowed to remain in this state for two days, the former of these preparations is carried to a still larger vat within doors, and the latter being in a vat placed above, is poured upon it, through a hole bored for the purpose near the bottom. In this state the preparation is allowed to ferment for two days, when it is poured into small

earthen jars, containing about twenty cans each, in which it remains for the further period of two days: it is then distilled.

The liquor drops into a tin vessel under ground, from whence it is ladled into receiving vessels. This is the third or common sort of arrack, which by a second distillation in a smaller still, with the addition of a small quantity of water, becomes the second sort, and by a third distillation, what is called the first sort. The third or common sort is called by the Chinese *síchew*, the second *tánpo*, and the first *kíji*, the two latter being distinguished as arrack *ápi*. When cooled, it is poured into large vats in the storehouses, where it remains till it is convenient to put it into casks.

The whole process, therefore, to the completion of the first sort, does not require more than ten days, six hours being sufficient for the original preparation to pass through the first still. The receivers of the stills are of copper, and the worm consists of about nine turns of Banka tin.

The proof of sufficient fermentation is obtained by placing a lighted taper about six inches above the surface of the liquor in the fermenting vat; if the process is sufficiently advanced, the fixed air rises and extinguishes the light.

To ascertain the strength of the spirit, a small quantity of it is burnt in a saucer, and the residuum measured. The difference between the original quantity and the residuum gives the measure of the alcohol lost.

Among the most important manufactures of Java, both viewed in its relation to the comforts of the inhabitants and the interests of the revenue, is that of salt. In almost every country it is an indispensable commodity, but particularly where the people subsist on a vegetable diet, as in India and the Eastern Islands; and wherever government has seen it necessary, it has been converted into a source of taxation.

Nearly the whole of the north-east coast of Java and *Má-dúra* abounds with places well calculated for its manufacture, and unfit for any other useful purpose. The quantity already manufactured has for many years exceeded the demand, both for home consumption and exportation, and might be increased almost *ad libitum*.

On Java the principal salt-pans are situated at *Pákis*, in the vicinity of Batavia; at *Bantam*, *Chéribon*, *Tégál*; at *Wédong* and *Bráhang*, in the

Semárang districts; at *Paradési*, in *Rembáng*; at *Sedáyu*, *Grésik*, and *Simámi*; on *Madúra*, at *Sámpang*, *Pamákan*, and *Súmenap*. Salt is also manufactured at several places along the south-coast, but of inferior quality, and by a different process. About two hundred tons are annually procured in the interior, from the *Blédeg*s, as already described. The principal supply, however, is from the north-coast, where the quality of the salt, and the facility with which it can be manufactured, give it a decided advantage in demand and cheapness.

The process of manufacturing the salt on the north-coast is very simple, and depending on evaporation by the heat of the sun alone, may be favourably contrasted with the comparatively expensive process adopted in the Bengal provinces. Reservoirs are filled from the sea at high tide, and in them the water is allowed to remain for several days; this being found necessary to prevent the salt from being bitter. It is then conveyed by means of canals and sluices to the pans, which are distributed in compartments and banked in, so as to contain the sea-water, much in the same manner as the rice fields. If the weather be dry and the sun clear, five days are found sufficient for the process of evaporation in the pans; after which the salt is collected together in heaps, where it usually remains five days longer before it is brought into store.

Under the Dutch government, the manufacture of salt was fanned out to Chinese as an exclusive privilege; and to these farms, under the plea of enabling the farmer to command a sufficient number of hands for conducting his undertaking, and enabling him to make his advances to government, extensive tracts of rice land were attached, over the population of which the farmer was allowed unlimited authority. By a continued extension of these tracts, a population far more numerous than the work at the salt-pans required was wrested from the administration of the regents and transferred to the Chinese: as they found their advantage in renting out the rice-fields, and employing the people in the transport of goods and other laborious offices of the country, the farms of course sold for more money. Under this system, it is difficult to say what was the actual cost of the salt to the farmer: the manufacturers were partly remunerated in land and partly in money, and the mode varied in every district; but this remuneration seldom amounted to more than a bare subsistence.

It was the practice of these farmers-general to underlet to other Chinese the privilege of selling salt, supplying them with the article at a certain rate, and these under-farmers sold the salt again to the petty retailers in the public markets at an advanced price. The price of the salt, after passing through the hands of the farmers, varied not only according to the distance from the place of manufacture, but according to the capital and speculation of the under-farmer; if he adopted the liberal system of obtaining small profits upon a large sale, the market was abundantly supplied at a low rate; but if, on the contrary, he traded on a small capital, and enhanced the price by insufficiently answering the demand, the price became proportionally exorbitant. In some places, as at *Salátiga* and *Ung'arang*, through which the salt was transported by inland carriage to the populous districts of the interior, the price was sometimes as high as one hundred and twenty, and even one hundred and forty Spanish dollars per *kóyan*, while along the coast, as at *Chéríbon* and *Surabáya*, it was as low as thirty, and at *Grésik* twenty-five. The average in the year 1813, when the farming system was abolished, may be taken, one district with another, at about fifty-seven Spanish dollars the *kógan*, or rather less than thirty dollars per ton.

The quantity usually calculated for the annual consumption of Java and *Madúra*, including about one thousand *kóyans* estimated to be manufactured in the native provinces, is sixteen thousand *kóyans*, or thirty-two thousand tons. Under the arrangements now adopted for the manufacture and sale of this article, the average rate at which the manufacturers are paid is about six rupees the *kóyan*, including the charges of transport to the dépôts, and the sale price varies from twenty-five to thirty-five Spanish dollars, according to the distance from the principal dépôts; an adequate supply by means of smaller dépôts is insured in every part of the country.

The salt of Java exported to the other islands of the Archipelago, competes with that of Siam and the Coromandel coast, and generally supersedes it, both on account of its quality and cheapness. The exportation is free to all places except Bengal, where, on account of its interference with the monopoly there established, it has, since the conquest of Java, been found necessary to prohibit its importation under penalty of confiscation.

The salt of the south coast being manufactured by a process which is much more expensive than that employed on the north, and at the same time being

inferior in quality, it is only consumed in places which the latter is prevented from reaching by the difficulty of conveyance or inland tolls and prohibitions; and it has consequently been calculated, that the north coast salt, if allowed to pass toll free through the country, would in a short time supersede that from the south altogether. The inferior quality of the latter is caused by the quantity of the sulphate of magnesia it contains, which renders it by its bitterness unpleasant for culinary purposes.

Of late years, the value of the manufacturing industry of the country may be in some degree be appreciated from the assistance it has afforded to the European government, when, in consequence of the war, the importation of European articles had become insufficient for the public service. Broad cloth not being procurable for the army, a kind of coarse cotton cloth was manufactured by the Javans, with which the whole army was clothed. At *Semarang* were established five of these manufactories, having seventy or eighty looms each. One or two of them made cotton lace, and supplied the army agents with epaulets, shoulder-knots, tassels, &c. There were likewise manufactures of cotton stockings, tape, fringes, cartridge-boxes, sword-belts, saddles, bridles, &c. and in short every thing that could be required for the dress and accoutrements of both cavalry and infantry.

Under European superintendents were established saltpetre works, powder-mills, foundries for shells, shot, anvils, &c. and manufactories of swords and small arms; and when it is added, that the French government found means, within the the resources of Java alone, to equip an army of not less than fifteen thousand effective men, besides a numerous militia in every district, and that, with the exception of a few European superintendants in the more scientific works, all the articles were manufactured and supplied by the natives, it is not necessary to adduce any further proof of the manufacturing ability of the country.

Saltpetre is obtained in many parts of the island, and gunpowder has long been manufactured by the native inhabitants. A saltpetre manufactory was established near *Grésik*, under the superintendance of European officers, which it was calculated would furnish annually two thousand *píkuls* of that article to government, at the rate of eight rix-dollars per *píkul*, or one hundred and thirty-three pounds English. The importance of this establishment is manifest in the following observations of Colonel Mackenzie.

"I considered that one day would be usefully employed in viewing the saltpetre works, which a very few years back had been established here, at the risk, and by the zeal and ingenuity of private individuals, with the view of supplying this colony with that necessary ingredient for gunpowder. The best sulphur is supplied from a mountain near the straits of *Báli*. For further details of these mines; of the manner in which the nitre is obtained, by an ingenious application of the latest European improvements in chemistry; of the sulphureous crater of the mountain, whence the sulphur, in its utmost purity, is supplied; of the reports of the French engineers, last year, on the improvement of the gunpowder of Java; of the wood selected for the best charcoal, and of the present state of the manufactory and powder-mills at *Semarang*, I must refer, at present, to several papers collected by me on this subject, which may be usefully applicable to our manufactures of gunpowder in India. Passing over these and other considerations, I shall only observe, that of these mines, one of them is cut in caverns into the soft white calcareous rock; and another, more regularly designed, supported by pillars or masses of the native rock, covers regularly formed beds of the native earth, which being impregnated with the native nitre, saturated with the evacuation of the numerous bats that haunt these caverns, and mixed with a compound of wood ashes, supplies the liquid that is boiled in large kettles, and afterwards left to cool and crystallize. The whole process is carried on, in a regular manner, under the direction of the first executor of this really grand work, who now resides at *Surabáya*^[52]."

The labour of felling the teak trees and transporting the timber from the forests, gives employment to a very considerable population, who are distinguished from those employed in other avocations, by the term of *blándong* people, or foresters. The teak timber was formerly delivered to the government as a contingent, by the regents of those districts in which the principal forests were situated, the quantity being regulated according to the supposed extent of the different forests, and the means of cutting and transporting the wood. Previously to the year 1808, the amount of this annual contingent was eight thousand eight hundred beams of different sizes, according to the wants of the public service, of which more than three thousand were delivered from the central forests of *Rembáng*.

The cutting and dragging of the timber delivered in contingent was performed by the inhabitants of the villages adjacent to the forests, and the

buffaloes required were left to be provided by the regents. For this service, in the *Rembáng* districts, four hundred cutters and labourers, and four hundred and twelve pair of buffaloes, were appropriated for the supply of three thousand one hundred beams annually, a proportion which varied in the other districts, only according to the distance of the forest from the timber yard on the coast, where payment was made for timber on delivery, at the rate of sixteen pence for cutting and conveying a beam of from eighteen to twenty feet long and from nine to ten inches broad, forty-eight stivers for a beam of from thirty-one to thirty-six feet long and from thirteen to fifteen inches broad, and for others in proportion. This was the regular and only payment made for the contingent timber; but when the demands of government exceeded the fixed contingent, which was generally the case, the excess was paid for at an advance of fifty per cent. on these prices. Crooked and other timber for ship-building was paid for at about the same rate, but calculated according to a fixed table by the weight.

Under this system, the regents rented out many of the villages adjoining the forests to individuals, and sold, on their own account, such timber as was not of proper quality to be delivered to government. As the demands of government increased, as well as those of the European residents, who were many of them concerned in ship-building and in the sale of timber, the forests near the coast were soon exhausted of their best timber, and as it became necessary for the cutters to go further into the interior, the labour and expense increased, but without any corresponding recompense to them, for the government never raised the price. Individuals, however, did so; and the consequence was, that government finding no regulations they could make for the internal management of the forests sufficient to ensure them an adequate supply, were contented to believe that a greater quantity than was actually furnished could not be cut without injury to the forests; although, at that very time, the deliveries to individuals in the eastern districts were estimated at not less than fifty or sixty thousand beams per annum, the coast was lined with Java-built trading vessels of every description, and these, as well as the rough timber, were frequently sent for sale to a distant market.

In the year 1808, however, in common with all the other departments on the island, this important one was newly organized by Marshal Daendels, who placing the highest value on the forests, and determining to prevent the abuses which had previously existed, removed all the population which had

formerly been engaged in the forests in the different parts of the island from the controul of the native regent, as well as the local European authority, and placed them, with the villages and lands to which they were attached, under a separate board or administration for the forest department. This change effectually secured government in the monopoly, and succeeded in the prevention of the abuses which had formerly existed: but in the degree that it had this effect, it also operated to the serious injury of general commerce and the domestic comfort of the inhabitants; for every one was now obliged to buy the timber from government, at a high monopoly rate fixed by general regulation, and the timber could only be obtained in comparatively small quantities, seldom of the dimensions required, and only at the fixed staples. Ship-building, and even boat-building, which had before been carried to the greatest extent along the whole coast, was discontinued, and the cottage of the native, which had formerly cost a few rupees, now cost ten times the amount if built of desirable materials.

Under the administration of the Board of Forest, whose residence was fixed at *Semarang*, and who were altogether independent of the local authorities, was now placed a population of nearly one hundred thousand souls, exclusively devoted to the labours of the forests; and as no revenue had been given up by the arrangement, and a small annual delivery of iron, salt, and gunpowder, to the foresters, was the only payment made, considerable profit was expected to result from it to the government. It was found, however, after the establishment of the British government, that the timber which had been cut, and of which there was an immense quantity on hand, was not of a description required for the building of coasting vessels, and could not compete in Bengal with that of Pegu, without such a reduction in the monopoly price, as added to the loss occasioned by so large a proportion of the population, who were set apart for this duty and contributed nothing else to the revenue, the extent of the establishment necessary to enable the government to be the sole timber merchant, and the abuses connected with it, would amount to more than all the profits that had been calculated on. The coasting trade was perishing for want of vessels, and the forest department was a losing concern. Under these circumstances, it was judged expedient to include the population of the *Blándongs* in the general arrangements for the release of the peasantry from feudal bondage, and the establishment of a fixed rent from the land, in lieu of all services and payment formerly rendered.

The people who lived near the forests, and had long been in the habit of cutting and dragging the timber, still however continued in this employment, an annual contract being made with them for their services in the forests, in remuneration for which a remission of rent was granted. The largest and most valuable forests are, under this system, reserved for the exclusive use of government; others of less value, and the limits of which can be easily defined, have, in consideration of a recognition of ten per cent. *ad valorem* on the timber when worked up, been thrown open to individuals engaged in ship-building, who generally contract with the people of the adjoining villages, to cut and deliver the timber at fixed prices: a mode which has also been occasionally resorted to by government, especially for the inferior and small kinds of timber, shingles, pipe staves, &c. which are allowed to be cut in particular forests.

The industry which has been excited by opening these facilities in procuring timber, and the impetus which it has afforded to trade, may be estimated by this fact, that within the last few years have been launched no less than ten to twelve square-rigged vessels, of from one hundred and fifty to four hundred tons, and that many more of larger dimensions were about to be built, when the restoration of the colony was announced.

It need hardly be observed, that due precautions have been taken for the preservation and renovation of the valuable forests, which so far from being exhausted, are capable of supplying besides crooked and compass timber for ship-building, forty or fifty thousand beams in the year without injury. European overseers are appointed, and one general superintendent is placed over the whole.

As illustrative of the importance attached to these forests by the Dutch, and of the capabilities of the island for ship-building, it may not be uninteresting to annex an extract from Mr. Hogendorp's appeal to the authorities in Holland on this subject. [\[53\]](#)

The *Blandong* people or foresters are generally employed in cutting or in dragging timber during eight months out of the twelve, but they are obliged to watch the forests the whole year through: they are regularly relieved, and half the working men are at all times left disposable for the rice fields. The *Blandong* people have always been accustomed to the work, and generally have their villages near the principal forests. It is one of the advantages of

the system of contracting with the people for land payments, that in emergencies they are willing to lend their own buffaloes to assist those of government in dragging heavy timber, which could not be removed otherwise without great expence, while their children at other times watch and attend the cattle belonging to government. In short, the resources of the village are at the disposal of government, for a land payment considerably less than one-third of the expence of hired labourers, whom it would be difficult to procure, and still more difficult, from the character of the people, to retain in constant and unremitting employment.

Under the system of granting remissions of rent, it has been calculated that in the districts of *Semarang*, where the assessment is comparatively high, on account of the vicinity to a large capital, a remission of eight rupees and a half, or about twenty shillings, being the average amount paid annually by each cultivator, government obtains a man's hard labour for six months of the year. But as the inhabitants of the same village are generally accustomed to labour in the fields alternately, and thus to assist each other, it has been found advisable to make the remissions of rent for the *Blandongs* to the village *as a community*, in order to avoid the delay and endless vexation which would ensue, in adjusting the petty claims of each individual.

In the maritime districts on the north-east side of the island, a very large proportion of the population is employed in the fisheries, and so moderate are the seasons, that except perhaps for a few days at the change of the monsoon, they are seldom interrupted by the weather.

The sea fish is taken either by the net, in stakes (*wídi*), or with the hook and line: the most considerable quantity is of course procured by means of the two former, generally distinguished by the term *máyang*, whence *práhu máyang*, fishing boat. The whole apparatus of the hook and line is called *pánching*, the usual term for angling among the *Maláyus*. The fishing-boats quit the shore at about three or four o'clock in the morning, and are driven out by the land breeze beyond sight before daylight. At about noon they are seen returning with the sea-breeze, and generally reach the shore by two in the afternoon. The stakes along the whole of the northern coast, wherever the banks and projecting land admit, are very extensive: they are often fixed in several fathom water, and constitute a very important property. They are usually closed in the night.

Nets are principally made of *rámi*, though sometimes of *gadáng'an*, and even of cotton. They are steeped in an infusion, which not only darkens their colour, but is considered essentially to contribute to their strength. Fish that is not eaten or disposed of while fresh, is salted and dried in the sun, or smoke-dried at a short distance from a fire, and in that state forms an extensive article of internal commerce. Besides the abundance of fish thus obtained from the sea, extensive tracts of country, salt marshes, and inlets of the sea, have in several parts of the island been converted into fish-ponds (*támba*). These ponds are to be found in most of the low maritime districts: those at *Grésik*, which are the most extensive, appear to have been first established during the visit of one of the early Mahomedan princes of the island in the fifteenth century. The *bándeng* is generally considered as the richest and highest-flavoured fish known in these seas: the young fry are taken in the sea, and transferred to these ponds, where they grow and fatten for seven months, when they are fit for the table. An annual supply of young fish from the sea is found necessary to keep up the stock in the tanks; and, whether from a desire to raise the value of the fish so obtained in them, or otherwise, the natives generally affirm, that the fish rarely attains its full size in the sea. The extent and value of these nurseries for the fish may be estimated from the rent paid for those at *Grésik*, which are the property of government.

The river fish are taken by a variety of methods: one is to throw a number of branches of trees into a deep part of the river; here the fish collect: they are then surrounded by stakes, or the branches are taken out, and the fish easily caught; this method is termed *rúmpon*. *Bámbu* fences are sometimes thrown across the rivers at night, and so constructed that the fish are easily entrapped as they pass down the stream: this method is called *pásang wádong*. The rivers and ponds are frequently dragged by nets of different sizes. The *coculus indicus*, and other intoxicating drugs, are sometimes thrown into the river, after which the fish are found floating on the surface and easily taken; this method, termed *túba*, is prohibited on large rivers: when the fish are afterwards driven down the river by a number of men into a snare laid below, the usual term is *jámprong*. In the western districts, a fishing party of this description affords a very favourite amusement on great occasions. A time is selected when the river is moderately low; temporary stands made of the trunks of small trees or stout *bámbus* are then thrown across, each consisting of three piles, fastened together at the top and

expanding below, the bottoms being pointed so as to fix in the ground. On a small stage on each, just above the surface of the water, are piled a few stones, by which they are steadied while the current is allowed a free course below. The piers or stages thus formed, answer well for the construction of a temporary bridge over the rocky or stony bed of the most irregular river. A coarse matting, made of *bámbu* or some other material, is then carried from one to the other, so as to shut the current in within a narrow space, across which a temporary platform and shed is thrown, with a sloping floor rising above the surface of the water, to where the party is assembled. The drug having been thrown into the river, a considerable distance higher up several hundred people now enter the river, and driving the half-intoxicated fish before them, they come floundering one after the other on the *bámbu* stage, to the no small amusement of the party collected, fish of a considerable size literally jumping into their laps. On these occasions, when the entertainment is given to Europeans, a great concourse of people attend, a feast is prepared, and the wild and antic music and dance of the mountaineers, performing on the *ánklang* and rude drum, give great peculiarity and zest to the amusement. Fish are sometimes struck at night by torch light, both at sea and in the rivers; but this method is not very general.

Pearls are obtained in the vicinity of *Bányuwáng'i*, where the privilege of fishing for them is farmed out by the year, as well as in the vicinity of *Núsakambáng'an*, on the south side of the island; but they are generally of the description called seed pearls, and of little value.

FOOTNOTES:

[50] These vessels for large patterns are sometimes made of the cocoa-nut shell, and then hold a proportionally larger quantity.

[51] Dampier's Voyage, vol. ii.

[52] Journal of Colonel Mackenzie, 1812.

[53] "Batavians! be amazed! hear with wonder what I have to communicate. Our fleets are destroyed, our trade languishes, our navigation is going to ruin—we purchase with immense treasures, timber and other materials for ship-building from the northern powers, and on Java we leave warlike and mercantile squadrons standing with their roots in the ground. Yes, the forests of Java have timber enough to build a respectable navy in a short time, besides as many merchant ships as we require. Hemp would grow as well as in Bengal, and as labour is as cheap in Java, we may consequently presume that it would require little trouble to establish manufactures of canvas and cordage there in a short time. But, at any rate, Java already produces at a very low price cayar and

gamuti cordage, which answers very well for cables, hawsers, and rigging. To build ships at Java for the mother country, it is only necessary to send out skilful and complete master-builders with a few ship carpenters; for common workmen are to be had on Java in numbers, and at a very low rate, as a good Java carpenter may be hired at five stivers a day. The principal objection that could be made is, that the shores of Java being very flat and level, are not well adapted for building, and still less for launching ships of heavy burthens, but this difficulty may be easily overcome: on the islands before Batavia, and particularly Brunt and Cooke's Island, wharfs, or even docks, may be constructed at little expence. The same may be observed of one of the islands off Japára and at Grésik, besides many other places in the eastern division, in the harbour which is formed by the island of Madúra, and which is sheltered from every wind.

"The resident of Rembáng, and sometimes of Jawána, are almost the only Europeans who build ships, for it is too difficult and dangerous for others to undertake it, under the arbitrary government at present existing in Java, under which nothing can flourish or succeed. But the Chinese, who are favoured in every thing, are well aware how to turn this also to their own advantage, and to build a great number of vessels all along the coast, from fifteen to two hundred tons burthen, for which they get the timber almost for nothing, by means of renting the forest villages. It is easy to imagine, how these avaricious bloodsuckers use the forests, and manage to get all they can out of them. In spite of all this, however, the forests of Java grow as fast as they are cut, and would be inexhaustible under good care and management.

"At Bombay, Surat, and Demaun, and other places along the coast of Malabar, at Bengal, and at Pegu, the English build many large and fine ships, which last a length of time, especially those of Bombay and Malabar built, although I believe the wood produced there, however good, is not equal to the teak of Java."

CHAPTER V.

Commerce—Advantageous Situation of Java for Commercial Intercourse—Importance of Batavia in particular—Native Trade—Roads and Inland Carriage—Markets—Influence of the Chinese—Coasting Trade—Exports and Imports—Trade with the Archipelago—China—Kamtschatka—Western India—Europe, &c.—Dutch Commercial Regulations—State of the Eastern Islands—Advantages which they possess—Causes of the Depression of the Nations and Tribes which inhabit them—Japan Trade.

From the importance which the Dutch, in the days of their greatness, attached to their East-India commerce, of which Batavia was the emporium, and the importance which this commerce conferred upon them, from the desire excited in the other nations to obtain a share in its advantages, and the crimes committed to maintain its undivided monopoly, some idea may be formed of its magnitude and value. When the French troops, in the summer of 1672, under Louis XIV. had overrun the territory of Holland, with the rapidity and irresistible force of the sea after bursting the dykes, the Republic formed the magnanimous resolution of transporting its wealth, its enterprise, and its subjects to another hemisphere, rather than submit to the terms of the conqueror, and fixed upon Batavia, already the seat of its eastern commerce, as the capital of its new empire. They could have found shipping in their own ports for the transport of fifty thousand families; their country was inundated with the ocean, or in possession of the invader; their power and political importance consisted in their fleets and colonies; and having been accustomed to maintain their naval superiority by the fruits of their eastern trade, and to buy the corn of Europe with the spices of the Moluccas, they would have felt less from a removal of their seat of empire from the north of Europe to the south of Asia, than any people who ever contemplated a similar change; while, at the same time, the very project of such an extraordinary emigration, and the means they had of carrying it into effect, give us the highest ideas of the independent spirit inspired by their

free government, and of their commercial prosperity, derived, in a great degree, from their eastern establishments and connexions.

The same advantages which the Europeans derived from the navigation of the Mediterranean, the inhabitants of the Malayan Archipelago enjoyed in a higher degree; and it cannot be doubted, that among islands lying in smooth and unruffled seas, inviting the sail or oar of the most timid and inexperienced mariner, an intercourse subsisted at a very early period. To this intercourse, and to the fertility of the soil of Java, which soon rendered it an agricultural country, must be attributed the high degree of civilization and of advancement in the arts, which, from the monuments of its progress which still exist, there is every reason to believe it once attained. In short, to adopt the expressions of Dr. Adam Smith, when speaking of a very different country^[54], Java, "on account of the natural fertility of its soil, of the great extent of its sea-coast in proportion to the whole of the country, and of the number of its navigable rivers, affording the conveniency of water carriage to some of its most inland parts, is conveniently fitted by nature to be the seat of foreign commerce, of manufactures for sale to the neighbouring countries, and of all the improvements which these can occasion."

But though there can be little doubt that Java very early emerged from barbarism, and rose to great commercial prosperity, to determine the precise time at which these events took place is perhaps impossible; and to approach the solution of the question would involve an inquiry that will be better reserved till we come to treat of its languages, institutions, and antiquities. If, in the consideration of these topics, it should be made to appear, that, in very remote ages, these regions were civilized from Western India, and that an extensive Hindu empire once existed on Java, it will be reasonable to infer a commercial intercourse still earlier than the communication of laws and improvement.

In the remarkable account of the rich commodities conveyed to ancient Tyre, it would appear that there were many articles the peculiar produce of the Malayan States; and in that given by Strabo of the importations into Egypt, cloves, which we know to be the exclusive produce of the Moluccas, are expressly mentioned. The same taste for the fine kinds of spices, and the same desire to obtain them, which prompted European nations successively to make themselves masters of these islands, must in all probability have operated, in a very remote period, on the merchants of Hindustan, and even

of countries lying farther to the westward, who had already found their way into the gold regions; and if the hypothesis, which places Mount *Ophir* on Sumatra or the peninsula of Malacca, cannot be maintained, it will at any rate be admitted, that previously to the discovery of America, no country was known more rich in gold than the Malayan Islands, and that, on that account, they were peculiarly attractive to foreigners, who could not be supplied from any other quarter.

The Arabs, it is known, had in the ninth century, if not long previously, made themselves acquainted with these countries; and the Chinese, if we may trust the Javan annals, had visited Java at the same period. According to Kempfer, the *Maláyus* in former times had by far the greatest trade in the Indies, and frequented, with their vessels, not only all the coasts of Asia, but even ventured to the shores of Africa, and particularly to the great island of Madagascar; "for," adds this author, "John de Barros in his *Decades*, and Flaccourt in his *History of Madagascar*, assures us, that the language spoken by the inhabitants of that large African island is full of Javan and Malayan words: subsisting proofs of the commerce with these two nations, about two thousand years ago the richest and most powerful of Asia, had carried on with Madagascar, where they had settled in great numbers."

Whatever credit we may attach to these statements and inferences, respecting the commerce of these islands before they were visited by Europeans in the fifteenth century, it is certain that, at this period, an extensive trade was established at Malacca, Acheen, and Bantam, then the great emporiums of the Eastern Archipelago. Hither the rich produce of Sumatra, Borneo, and the Moluccas, was conveyed in the small trading craft of the country, and exchanged for the produce of India and China. These ports were then filled with vessels from every maritime state of Asia, from the Red Sea to Japan. The Portuguese, who preceded the Dutch in India, and who had fixed upon *Goa*, on the coast of Malabar, as the capital of their eastern settlements, selected Malacca as the most convenient station for conducting and protecting their trade with the islands, and erected it into a secondary capital. The Dutch finding this desirable station pre-occupied, and being foiled in their attempts to dislodge their rivals, first established a commercial settlement at Bantam, and subsequently subdued by force of arms the neighbouring province of *Jákatra*, (or *Jokárta*), on which, as will

be afterwards mentioned, they built the fortress, the city, and the port of Batavia.

Nor was it without reason that they selected this spot for the capital of their new empire. "What the Cape of Good Hope is," says Adam Smith, "between Europe and every part of the East Indies, Batavia is between the principal countries in the East Indies. It lies upon the most frequented road from Hindustan to China and Japan, and is nearly about midway on that road. Almost all the ships, too, that sail between Europe and China, touch at Batavia; and it is, over and above all this, the centre and principal mart of what is called the country trade of the East Indies, not only of that part of it which is carried on by Europeans, but of that which is carried on by the native Indians, and vessels navigated by the inhabitants of China and Japan, of Tonquin, of Malacca, of Cochin China, and the Island of Celebes, are frequently to be seen in its port. Such advantageous situations have enabled these two colonies to surmount all the obstacles which the oppressive genius of an exclusive company may have occasionally opposed to their growth: they have enabled Batavia to surmount the additional disadvantage, of perhaps the most unwholesome climate in the world."

It would be as difficult to describe in detail the extent of the commerce enjoyed by Java^[55], at the period of the establishment of the Dutch in the eastern seas, as it would be painful to point out how far, or to show in what manner, that commerce was interfered with, checked, changed in its character, and reduced in its importance, by the influence of a withering monopoly, the rapacity of avarice armed with power, and the short-sighted tyranny of a mercantile administration. To convey an idea of the maritime strength of the native princes anterior to this date, as giving a criterion by which to judge of the trade of their subjects, it may be sufficient to state that warlike expeditions, consisting of many hundred vessels, are often reported to have been fitted out against Borneo, Sumatra, and the peninsula. In the art of ship-building, however, they do not appear to have advanced beyond the construction of that sort of vessel adapted to the navigation of their own smooth seas, and now to be met with in all their ports and harbours; nor do they seem to have had any knowledge of maritime geography beyond the shores of their own Archipelago, and the information which they gained from the reports of the Arabs, or the traditions of their own more adventurous ancestors. This circumstance would lead us to infer that the

trade of Java was carried on chiefly in foreign vessels, and through the enterprize of foreign adventurers. The habits of the people had become agricultural; they had nearly deserted an element which they had no powerful temptation to traverse, and on which they could reap little, compared with what they could draw from the fertility of their own territory. Leaving therefore their ports to be filled, and their commodities to be carried away by the *Maláyus*, the *Búgis*, the Indians, the Chinese, and the Arabs, they for the most part contented themselves with enjoying the advantages of a trade, in which they incurred no chance of loss; and thus, though their own country yielded neither gold nor jewels, they are said to have been plentifully supplied with these and other valuable articles on their own shores, in exchange for the produce of their tranquil industry and their fertile soil. This kind of traffic was almost entirely annihilated, or at least very much diverted from its ancient course, by the restrictive system of Dutch colonial policy. Some branches of it were, it must be allowed, partially encouraged by the influx of European capital and the demand for particular articles which bear a high price in the European market; but this was an inadequate compensation for the loss of that commerce, which may be said to be as much the growth of the country as any of its indigenous plants. In order to show to what insignificance it was reduced under Dutch oppression, and what tendency it has to improve under a better system, it is only necessary to compare its state during the latter years of the Dutch government, before the blockade, and afterwards during the short interval of British administration. For the first of these purposes, I have drawn, in the introduction to this work, a short sketch of the condition of the Dutch East India Company, for a considerable period previous to our arrival; and I now proceed to give some account of the external and internal trade of Java, as it existed at the time when we restored it to its former masters.

The extent of this commerce, since the establishment of the British government, and since a greater freedom of trade has been allowed, may, for a want of a better criterion, be estimated from the amount of tonnage employed since the beginning of the year 1812, at which period the operations of the military expedition had ceased, and the transports were discharged.

In the year 1812, the number of square-rigged vessels which entered the port of Batavia amounted to 239, and their aggregate tonnage to 48,290

tons, and in the same year the native craft amounted to 455 vessels, or 7,472 tons, or together 55,762 tons. The quantity cleared out during the same year was 44,613 tons of shipping, and 7,762 of native craft, making together 52,375.

In the year 1813, the number of square-rigged vessels was 288, and the tonnage 51,092, the native craft amounting to 796 vessels, or 13,214 tons, or together 64,306 tons.

In 1814, three hundred and twenty-one ships, or 63,564 tons, cleared out with 568 native vessels, or 9,154 tons, shewing the total tonnage of Batavia during this year to have amounted to 72,718 tons.

The returns for the following year have not been received, but they are estimated to exceed either of the two former years, and not to have fallen much short of one hundred thousand tons; and it may be noticed, that during one year after the first accounts were received of the successes of the allied armies against France, no less than thirty-two ships, measuring fifteen thousand tons, cleared out, and carried cargoes, the produce of Java, to the London market.

The average annual tonnage which cleared out from the port of *Surabáya*, for the three last years, amounted to about thirty thousand tons, and the native tonnage trading to the neighbouring port of *Grésik* is estimated to have even exceeded that quantity.

At the small port of *Súmenap*, situated at the east end of *Madúra*, which is a principal resort for the native trade, the tonnage which cleared out was

Small prahus and vessels. Tonnage.

For 1812	3,765	15,230
1813	4,752	33,769

And the estimated value of the same,

	<i>Imports.</i>	<i>Exports.</i>
For 1812	Rupees 625,628	Rupees 396,820
1813	740,080	492,020 ^[56] .

The value of the imports and exports of *Semárang*, on which duties were actually collected at that port, were

	<i>Imports.</i>	<i>Exports.</i>
For 1812	Rupees 555,044	Rupees 167,101
1813	1,530,716	985,709
1814	686,330	549,038

The native tonnage which cleared from *Rembáng* was as follows:

In 1812	862 vessels or	8,058 tons.
1813	1,095 ditto.	8,657
1814	1,455 ditto.	12,935

The trade from the other minor ports was inconsiderable, the effect of the regulations passed in 1813 being yet hardly felt. From *Pakalúngan* the tonnage which cleared was for 1812, 5,962 tons, and for 1813, 4,679 tons, the imports being about 150,000 rupees, and the exports 300,000 rupees in each year; from *Tégál* for 1812, 2,445 tons, and for 1813, 1,926 tons, the imports being about 50,000, and the exports about 60,000 rupees in each year.

The amount of tonnage which touched at *Anyer*, on the way through the Straits of *Súnda*, to and from Europe, Africa, and America, was

In 1812	73 ships	29,450
1813	73	37,546
1814	125	56,942

By an official return made in March 1816, it appears that the total quantity of tonnage in vessels boarded on their passage through the Straits of *Súnda*, amounted in 1812 to 45,000 tons; in 1813, to 56,000 tons; in 1814, to 64,000 tons; and in 1815, to 130,000 tons; to which, adding a third for vessels which passed without being boarded, the whole amount of tonnage for these four years, would be 390,000, the quantity in the fourth of these years being nearly triple that of the first.

The commerce of Java may be considered under the two general divisions of the native and the European, the former including the internal and coasting trade, with that of the Malayan Archipelago in general; the latter comprehending that carried on by Europeans and Americans with India, China and Japan, Africa, America, and Europe.

Java has already been described as a great agricultural country. It has long been considered as the granary of the Eastern Islands.

The southern coast is for the most part inaccessible, and seldom visited by traders; but along the north coast there are no less than thirteen principal ports, besides numerous other intermediate and less considerable ones, frequented by native vessels at all seasons of the year. Many of these are sheltered, and form safe harbours in all weather, as *Bantam*, *Batavia*, *Rembáng*, *Grésik*, and *Surabáya*. Even where the vessels lie in an open roadstead, the wind is seldom sufficiently strong to render the anchorage unsafe. Several of the rivers are navigable for many miles into the interior, and most of them are capable of receiving native vessels into the heart of the town, through which they generally run; but the rivers of Java, as well as those of the eastern coast of Sumatra and the western coast of Borneo, are for the most part obstructed at their entrance by extensive bars, which preclude the admission of vessels of any very considerable burthen. Piers have been run out in many places, to remedy this inconvenience; but in consequence of the quantity of soil annually carried down, the bars or banks are continually increasing, and in some places, as at *Tégál*, have nearly blocked up the communication between the rivers and the sea.

The produce and manufactures of the country are conveyed from one district to another and to these maritime capitals, either by water or land carriage. The principal navigable rivers to the westward, are those which disembogue themselves below *Táng'ran*, *Kráwang*, and *Indramáyu*, and the produce brought down by them is usually conveyed to Batavia. To the eastward, the great *Sólo* river, which is navigable from *Súra-kérta*, affords, with the *Kedíri*, the principal and only outlets from the native provinces by water towards the northern coast. Down the former, which empties itself by several mouths, near *Grésik*, into the great harbour of *Surabáya*, during the rains, large quantities of the produce of the richest provinces of the interior are conveyed. The boats employed, which are of considerable burthen, return with cargoes of salt. This river runs through many valuable teak

forests, and consequently affords the means of easy transport for the timber; an advantage which is also derived from several smaller rivers on the northern coast, particularly in the neighbourhood of the principal building yards. Facilities of the same kind are also found at most of the sea ports, which are generally seated on rivers passing through forests in the interior, down which timber required for house-building and the construction of small craft is floated with ease. An inland navigation is carried on to a considerable extent, by means of small canals, in *Demák* and some of the neighbouring districts, where it is common, even during the harvest, at the driest season of the year, to observe innumerable boats with their light sails crossing an extensive, flat, and highly cultivated country and traversing the corn-fields in various directions. In the rich and fertile delta of *Surabáya*, the whole produce of the adjacent country is conveyed by water carriage, generally on light rafts constructed of a few stems of the plantain tree.

Goods not conveyed by water carriage, are usually carried on the backs of oxen or horses, or on the shoulders of men and women, carts not being generally used, except in the western districts, where the population is thin, or in some of the more eastern districts, particularly those recently under Chinese direction. The cart of the western districts, termed *pedáti*, is of clumsy construction, running on two large solid wheels, from five to six feet in diameter, and from one to two inches broad, on a revolving axle, and drawn by two buffaloes. It is the ordinary conveyance of goods to the capital, within a range of about sixty miles from Batavia.

Few countries can boast of roads, either of a better description, or of a greater extent, than some of those in Java. A high post road, passable for carriages at all seasons of the year, runs from *Anyer*, on the western side of Bantam, to within twenty miles of *Bányuwáangi*, the eastern extremity of the Island, being a distance of not less than eight hundred English miles. Along this road, at intervals of less than five miles, are regular post stations and relays of carriage horses. A portion of it towards the west, which proceeded into the interior, and passed over some high and mountainous tracts, was found to occasion great delay and inconvenience to passengers, and to impose an oppressive duty upon those inhabitants, who, residing in the neighbourhood, were obliged to lend the use of their cattle, or the assistance of their personal labour, to aid carriages in ascending the steep; this part of the line has therefore been abandoned, and a new road has recently been

constructed along the low lands, from *Batavia* to *Chéribon*, by which not only the former inequalities are avoided, but a distance of fifty miles is saved. This route is now so level, that a canal might easily be cut along its side, and carried on nearly through all the maritime districts of the eastward, by which the convenience of inland navigation might be afforded them, for conveying the commodities continually required for the consumption and exportation of the capital. Besides this main road from one extreme to the other, there is also a high military road, equally well constructed, which crosses the Island from north to south, leading to the two native capitals of *Súra-kérta* and *Yúg'ya-kérta*, and consequently to within a few miles of the South Sea. Cross roads have also been formed wherever the convenience or advantage of Europeans required them; and there is no part of the Island to which the access is less difficult. But it is not to be concluded, that these communications contribute that assistance to agriculture or trade on Java, which such roads would afford in Europe: their construction has, on the contrary, in many instances, been destructive to whole districts, and when completed by his own labour, or the sacrifice of the lives of his neighbours, the peasant was debarred from their use, and not permitted to drive his cattle along them, while he saw the advantages they were capable of yielding reserved for his European masters, that they might be enabled to hold a more secure possession of his country. They were principally formed during the blockade of the Island, and were intended to facilitate the conveyance of stores, or the passage of troops necessary for its military defence. The inhabitants, however, felt the exclusion the less, as good inferior roads were often made by the side of these military roads, and bye-roads branched off through all parts of the country, so that the internal commerce met with no impediment for the want of direct or convenient lines of communication.

Nor is it discouraged by the want of understood or established places of exchange. Bazars or public markets (here called *pékan*) are established in every part of the country, and usually held twice a-week, if not oftener. The market days are in general regulated by what are called *pásar* days, being a week of five days, similar to that by which the markets in South America appear to be regulated. At these markets are assembled frequently some thousands of people, chiefly women, on whom the duty devolves of carrying the various productions of the country to these places of traffic. In some districts, extensive sheds are erected for the accommodation of the

people; but, in general, a temporary covering of thatch, to shelter them from the rays of the sun, is made for the occasion, and thought sufficient. Where the market is not held within a town of considerable size, the assemblage usually takes place under a large tree, in a spot occupied from immemorial usage for that purpose. In these markets there are regular quarters appropriated for the grain merchant, the cloth merchant, venders of iron, brass, and copper ware, and dealers in the various small manufactures of the country, as well as those of India, China, and Europe. Prepared eatables of every kind, as well as all the fruits and vegetables in request, occupy a considerable space in the fair, and find a rapid sale. In the more extensive bazars, as at *Sólo*, the *kris* handle makers have their particular quarter, and in an adjoining square, horses and oxen are exposed for sale.

Small duties are generally levied in these bazars, the collection of which was formerly farmed out to Chinese; but it being found that they exacted more than the settled or authorized rate, and that they contrived, by means of the influence which their office conferred, to create a monopoly in their own favour, not only of the articles of trade but of many of the necessities of life, that system has latterly been relinquished wherever practicable, and government has taken the management of that portion of the public revenue into its own hands. In the bazars, accordingly, regulated under the immediate superintendence of its officers, extensive sheds are built, and a small compensation only is required for the use of them by those who there intend to expose their goods for sale. This duty is collected at the entrance into the market-place, and is taken in lieu of all other taxes or customs whatever, formerly levied on the transit or sale of native commodities. It is to be regretted, that this improvement had not been extended to the native provinces, where every article of produce and manufacture is still impeded in its progress through the country to the place of consumption or export, by toll duties and other impolitic exactions, and charged on its arrival there with heavy bazar duties, to the discouragement of industry and enterprize, and the depression of agriculture and trade, in a degree not compensated by a proportionate benefit to the revenue^[57].

Almost all the inland commerce, beyond what is thus carried on through the medium of bazars, is under the direction of the Chinese, who, possessing considerable capital, and frequently speculating on a very extensive scale, engross the greater part of the wholesale trade, buy up the principal articles

of export from the native grower, convey them to the maritime capitals, and in return supply the interior with salt, and with the principal articles imported from the neighbouring islands, or from foreign countries. The industry of the Javans being directed almost exclusively to the cultivation of the soil, they are satisfied if they can find an immediate market for their surplus produce; and the Chinese, from their superior wealth and enterprize, offering them this advantage without interfering with their habits, have obtained almost a monopoly of their produce, and an uncontrolled command of their market for foreign commodities.

The trade carried on by native vessels along the coast, with the neighbouring islands, and with the peninsula of Malacca, has been even more shackled than that placed under the impolitic restraints of interior regulation; and if it exists now to any considerable extent, it is owing only to the great natural advantages that attend it. Independently of the dangers to which the peaceable unprotected trader has so long been exposed, from the numerous pirates who infest the Eastern Seas, and who for many years have been in the habit of annually sweeping the coast of Java, the various restrictions, penalties, and prohibitions established by the Dutch government, in order to insure their own monopoly, closed all the minor ports against him.

Among these restrictions, none operated more forcibly to prejudice the native trade than the rigid and enforced monopoly of the teak timber; an article of produce with which Java abounds, and of which the shipping of the Archipelago had, from time immemorial, been principally constructed. The facilities for building and repairing vessels along the coast, while the sale of timber was unrestricted, not only allowed a more abundant supply of shipping at a cheap rate for the convenience of the native trader, but attracted the beneficial visits and the intercourse of foreigners, and encouraged a species of trade, which under the recent system has been lost. The *Búgis* and Arabs of the different eastern ports, navigating in large vessels, were induced to give them an annual repair on Java; and rather than depart in ballast, frequently carried out cargoes, the profits of which alone, independently of their refit, would not have been sufficient to tempt them to the speculation. These adventurers not only imported considerable quantities of gold-dust to defray the expence of their repairs, but many other articles the produce of the Malayan islands; for which they in return

exported large quantities of salt and other bulky commodities, which would otherwise hardly repay their freight. In consequence of the stop put to this kind of intercourse, the Malayan States were principally supplied with salt from Siam and the Coromandel coast, or manufactured the article for themselves, while an accumulating undemanded surplus for many years remained on Java unsaleable. Of the nature of the restrictions under which the internal commerce and the native trade in general were placed until lately, some idea may be formed from the amount of the duties which were exacted at *Chéríbon* prior to the introduction of the land revenue settlement^[58].

These, with still heavier and more vexatious duties and exactions, were levied on trade in other districts of the island. Constant requisitions were made by the Dutch government for the services of native vessels, at rates far below a just compensation to the owner, and the native traders were forbidden to traffic in any of the articles of Dutch monopoly; considerations which incline us rather to express our surprize, that there should have been any native trade at all, than that there should be so little as now exists.

The coasting trade is carried on in vessels belonging chiefly to Chinese, Arabs, and *Búgis* (natives of Celebes), and in smaller Malayan *práhus*^[59]. The enterprize of the Arabs, Chinese, and *Búgis* is very conspicuous. They are in general fair traders; and Europeans acquainted with their several characters can rely on their engagements, and command their confidence. Many of them, particularly the *Búgis*, are possessed of very large capital.

By means of the coasting trade, the produce of the maritime and inland districts is conveyed to *Batavia*, *Semárang*, and *Surabáya*, the principal ports of consumption and exportation; and in return those districts receive iron, steel, and other articles of foreign produce and manufacture from abroad. The western districts being but thinly inhabited, do not yield a sufficient supply for the consumption of *Batavia*; and on this account, as well as its being the principal mart of foreign commerce, the trade of the eastern districts is attracted to it, in a higher degree than to any of the other great towns in their own immediate neighbourhood: but owing to the unhealthiness of the climate, the loss occasioned by the paper money, which the native traders of other islands could never understand, and the various vexations and impositions to which they were subjected, these latter invariably prefer the more eastern ports of *Semárang* and *Surabáya*, or

rather *Grésik*, in the immediate vicinity of the latter, which has always been the principal establishment and residence of the Arabs.

The *Búgis* import into Java from the other islands, Malayan camphor, tortoise-shell, edible birds'-nests, bees'-wax, cloth called *sárongs*, of a very strong texture, their own manufacture, and gold dust, which they lay out in the purchase of opium, iron, steel, Europe chintzes and broad cloth, and Indian piece goods, besides tobacco, rice, salt, and other productions and manufactures of Java, with which they return eastward during the favourable monsoon.

The Arabs navigate square-rigged vessels, from fifty to five hundred tons burden. The Chinese also have many brigs, besides their peculiar description of vessels called junks, as well as native-built *práhus*. They extend their voyages to Sumatra, the Straits of Malacca, and eastward as far as the Moluccas and Timor, collecting birds'-nests, camphor, *bich de mar*, and other articles, making Java a grand depôt for the produce of all the countries to which they resort. Throughout the whole of Java, trade is usually conducted by the Chinese: many of them are very rich, and their means are increased by their knowledge of business, their spirit of enterprize, and their mutual confidence.

If a cargo arrives too extensive for the finances of one individual, several Chinese club together, and purchase the goods, each dividing according to his capital. In this manner a ready market is always open at Java, without the assistance of European merchants, and strangers are enabled to transact their business with little trouble or risk.

The objections which have been made to the political influence of the Chinese and Arabs in the Eastern Islands, do not equally apply to them as traders. In this last capacity, and subject to regulations which prevent them from uniting the power of a chief with the temper of a merchant, and despotism with avarice, their value cannot be too highly rated. The persevering industry and speculative turn of the Chinese is too well known to need description; and the Arab traders are here what they are all over the world, keen, intelligent, and adventurous. The *Búgis* have long been distinguished among the Eastern Islands for the extent of their speculations and the fairness of their dealing.

Java exports, for the consumption and use of the other islands of the Archipelago, including the Malayan ports on the peninsula, rice, a variety of vetches, salt, oil, tobacco, timber, Java cloths, brass ware, and a variety of minor articles, the produce of her agriculture and manufactures, besides occasionally, as the market admits, a considerable quantity of European, Indian, and Chinese goods. Almost the only articles for which Java is at present dependent on its neighbours are *gúmbir*, imported from Lingén (*Ling'ga*) and Rhio, where it is produced to the annual amount of from twenty to thirty thousand *píkuls*,—and *pámur*, the metal used for damasking the Javan *krís*, of which a small quantity is imported from *Biliton* and *Célebes*, where alone it is found. The following articles, the exclusive produce of the Eastern Islands, are collected at its principal ports, for re-exportation to India, China, and Europe: tin, from *Bánka*; gold-dust, diamonds, camphor, benjamin and other drugs, edible birds'-nests, *bich de mar*, rattans, bees'-wax, tortoise-shell, and dyeing woods, from Borneo and Sumatra; sandal and other fine woods, nutmegs, cloves and mace, coarse, wild and damaged spices, *káyu-púti* and other pungent oils, from the Moluccas; horses and sapan wood, from *Sumbáwa*; *Búgis* cloths, and many collections for the Chinese market, from *Célebes*. Cloths are also sometimes imported from *Báli*, and pepper is collected at *Bánjermásin*, on Borneo, and from several of the Malayan states.

The tin brought to Java is almost exclusively from the mines of *Bánka*. This metal is also exported from several of the other islands, and from the peninsula of Malacca, whence these countries have been considered the *Temala* of Ptolemy, *timáh* being the Malayan word for tin; but the quantity obtained from all other sources falls far short of what is procured on *Bánka*, which exports to the annual amount of thirty thousand *píkuls*, or nearly forty thousand cwt. of this metal. The mines on *Bánka* are worked by Chinese, who deliver the metal into the government stores in slabs, at the rate of about eight Spanish dollars the *píkul*, of one hundred and thirty-three pounds and a quarter.

A very extensive branch of trade is carried on by a direct communication between Java and China, entirely upon Chinese capital, in a description of vessels called junks. From eight to ten of these vessels arrive annually from Canton and Amoi, with cargoes of teas, raw silk, silk piece goods, varnished umbrellas, iron pots, coarse china-ware, sweetmeats, nankeen, paper, and

innumerable minor articles, particularly calculated for the Chinese settlers. They are from three to eight hundred tons burthen, and sail at stated periods, generally reaching Batavia with the north-east monsoon, about the month of January. Of all the imports from China, that which produces the most extensive effects on the commercial and political interests of the country is the native himself: besides their cargoes, these junks bring a valuable import of from two to five hundred industrious natives in each vessel. These emigrants are usually employed as coolies or labourers on their first arrival; but, by frugal habits and persevering industry, they soon become possessed of a little property, which they employ in trade, and increase by their prudence and enterprize. Many of them, in course of time, attain sufficient wealth to render themselves independent, and to enable them to remit considerable accumulations yearly to their relations in China. As these remittances are generally made in the valuable articles, such as birds'-nests, Malayan camphor, *bich de mar*, tin, opium, pepper, timber, leather hides, indigo, gold and silver, the return cargoes of these vessels amount to an almost incredible value.

The quantity of edible birds'-nests alone, annually exported from Java to China on vessels of this description, is estimated at not less than two hundred *píkuls*, of which by far the largest proportion is the produce of the Javan rocks and hills. It is well known that these are the nests of a species of swallow (*hirundo esculenta*) common in the Malayan islands, and in great demand for the China table. Their value as a luxury, in that empire, has been estimated on importation to be weight for weight equal with silver. The price which these nests of the best quality have of late years brought in the Canton and Amoi market, has been forty Spanish dollars per *káti*, of rather more than a pound and a quarter English. They are usually classed into first, second, and third sorts, differing in price from forty to fifteen Spanish dollars, and even to ten and less for the most ordinary. The price in the Batavian market rises as the period for the departure of the junks approaches; but as the principal produce of Java is still a monopoly in the hands of government, it is difficult to fix the price at which they might be sold under other circumstances. Generally speaking, however, they sell throughout the Eastern Islands considerably lower than they are calculated to do in China, which may be accounted for by the perishable nature of the commodity, and the great care necessary to preserve them from the damp, as well as from breakage. On this account, they are seldom bought by

European traders. Birds'-nests consigned by the Javan government to the Canton factory in 1813, sold to the amount of about fifty *píkuls*, at an average rate of about twenty dollars per *kati*: but this was at a period when the China markets were unusually low.

The quantity of birds' nests obtained from the rocks called *Kárang bólang*, on the southern coast of Java, and within the provinces of the native princes, is estimated, one year with another, at a hundred *píkuls*, and is calculated to afford an annual revenue to the government of two hundred thousand Spanish dollars. The quantity gathered besides by individuals, on rocks and hills belonging to them, either in private property or held by farm from the government, in other parts of the island, may amount to fifty *píkuls*; making the extent of this export not less than one hundred and fifty *píkuls*, besides the amount of the collections from the other islands of the Archipelago.

In the Malayan islands in general, but little care is taken of the rocks and caverns which produce this dainty, and the nests procured are neither so numerous nor so good as they otherwise would be. On Java, where perhaps the birds are fewer, and the nests in general less fine than those to be met with in some of the more Eastern Islands, both the quantity and quality have been considerably improved by European management. To effect this improvement, the caverns which the birds are found to frequent are cleansed by smoking and the burning of sulphur, and the destruction of all the old nests. The cavern is then carefully secured from the approach of man, the birds are left undisturbed to form their nests, and the gathering takes place as soon as it is calculated that the young are fledged. If they are allowed to remain until eggs are again laid in them, they lose their pure colour and transparency, and are no longer of what are termed the first sort. They are sometimes collected so recently after their formation, that time has not been given for the bird to lay or hatch her eggs in them, and these nests are considered as the most superior; but as the practice, if carried to any extent, would prevent the number of the birds from increasing, it is seldom resorted to, where the caverns are in the possession of those who have a permanent interest in their produce. Much of their excellence and peculiar properties, however, depend on the situation of the place in which they are formed. It has often been ascertained, for instance, that the same bird forms a nest of somewhat different quality, according as it constructs it in the deep

recesses of an unventilated and damp cavern, or attaches it to a place where the atmosphere is dry, and the air circulates freely. The nature of the different substances also to which they are fixed, seems to have some influence on their properties. The best are procured in the deepest caverns, (the favourite retreat of the birds), where a nitrous dampness continually prevails, and where being formed against the sides of the cavern, they imbibe a nitrous taste, without which they are little esteemed by the Chinese. The principal object of the proprietor of a birds'-nest rock is to preserve sufficient numbers of the swallows, by not gathering the nests too often, or abstracting those of the finer kinds in too great numbers, lest the birds should quit their habitations and emigrate to a more secure and inaccessible retreat. It is not unusual for a European, when he takes a rock under his superintendence, after ridding it of the old nests and fumigating the caverns, to allow the birds to remain undisturbed, two, three, or even more years, in order that they may multiply for his future advantage. When a birds'-nest rock is once brought into proper order, it will bear two gatherings in the year: this is the case with the rocks under the care of the officers of government at *Karang bólang*.

In the vicinity of the rocks are usually found a few persons accustomed from their infancy to descend into these caverns, in order to gather the nests; an office of the greatest risk and danger, the best nests being sometimes many hundred feet within the damp and slippery opening of the rock. The gatherers are sometimes obliged to lower themselves by ropes (as at *Karang bólang*) over immense chasms, in which the surf of a turbulent sea dashes with the greatest violence, threatening instant destruction in the event of a false step or an insecure hold. The people employed by government for this purpose were formerly slaves, in the domestic service of the minister or resident at the native court. To them the distribution of a few dollars, and the preparation of a buffalo feast after each gathering, was thought sufficient pay, and the sum thus expended constituted all the disbursements attending the gathering and packing, which is conducted by the same persons. This last operation is however carefully superintended by the resident, as the slightest neglect would essentially deteriorate the value of the commodity^[60].

Although the Malayan camphor, which is the exclusive produce of Sumatra and Borneo, is much stronger than the camphor from China, it has not yet

been considered an article of extensive export for the European market. It is always, however, in the greatest demand in China, where it is either consumed, or as has been supposed by some, it undergoes a certain process previous to its re-exportation under a different appearance. It is not known in what manner the China camphor for the European market is prepared; and unless the Malayan camphor is used in the composition, it seems difficult to account for the constant demand for it in China, whence it is never re-exported in its original state. Whatever value may be set on the Chinese camphor, that exported from Japan is of a still superior quality, and more in demand for the European market.

Bich de mar is well known to be a dried sea slug used in the dishes of the Chinese: it is known among the Malayan Islands by the name of *trípang*, and collected on the shores of nearly all the islands of the Archipelago. It usually sells in China at from ten to fifty dollars per *píkul*, according to its quality, but being an article still more perishable than the birds'-nests, and very bulky and offensive, it seldom composes the cargoes of European vessels. It would be very difficult to ascertain the average price, as it varies according to the difficulties experienced in collecting it, and the immediate demand in the market, for its perishable nature will not admit of the excess of one season being laid by to meet the deficiency of another. It requires constant care on the voyage, and a leaky vessel frequently loses a whole cargo.

Stic-lac, used in dying, is procured in many parts of Java, and can easily be obtained in a quantity sufficient to meet the demand. The insect which yields it abounds in the Bantam districts, and the lac prepared is considered of good quality; but it is not an article which appears to have attracted much attention.

The trade between Java and China in vessels belonging to Europeans, at present consists principally in carrying out tin, pepper, spices, rattans, and betel-nut, for the China market, and receiving in return a few articles of China produce in demand for the European market, a balance of cash, and a supply of manufactures required annually at Batavia; but it is calculated that cotton, rice, and timber, which may be considered as the staple produce of Java, might be exported to China with advantage.

A small quantity of Javan cotton lately sent to China, was sold at a higher rate than the ordinary prices of the cotton from Western India^[61]. Cotton-yarn is an article sometimes exported to China, but in the existing state of society on Java, the exportation of the raw material is likely to be attended with the greatest advantages. Some writers have estimated the capability of Java to export raw cotton almost incredibly high, but it must be admitted, that although the soil is not universally favourable, yet few countries afford greater general advantages for the cotton cultivation, it being practicable to raise it to a great extent, without interfering with the general grain produce of the country. It could be grown as a second crop on the rice fields, being planted shortly after the harvest, and attaining maturity before the season again comes round for irrigating the lands. Nothing can convey a higher idea of the richness of the soil of Java, and of the advantages of its climate, than the fact, that during one half the year the lands yield a rich and abundant crop of grain, more than sufficient for the ordinary food of the population, and during the other half a valuable staple, which affords the material for clothing them, and opens in its manufacture a source of wealth and of continual domestic industry through the year.

Enterprising individuals, merchants of Batavia, have not been wanting to engage in the valuable fur trade, hitherto carried on principally by the Americans, between Kamtschatka and China. Mr. Timmerman Thyssen, an enlightened Dutch gentleman, whose name for honourable dealing and extensive business has always stood high among the merchants of Batavia, has entered into more than one speculation of this kind. Vessels fitted out from Batavia took in furs at Kamtschatka, which were intended to be exchanged in China for dollars; but the dangers of the passage in one instance, and the informality of the papers in another, rendered this bold and promising enterprize productive of but little pecuniary advantage. Nothing, however, has occurred, to prove that the adventure would not have fully answered its intention in time of peace, the principal difficulties which attended and frustrated it ceasing with the war.

Since the conquest a very extensive trade has been carried on by the English country ships importing from Calcutta, Madras, and Bombay, all kinds of piece goods, opium, and other articles, the returns for which have been usually made by bills, gold-dust, bees'-wax, tin, Japan camphor, sago, and teak timber.

The piece goods of Western India have always formed an extensive article of import into Java, and the annual value of those latterly imported cannot well be estimated at less than a million of dollars. Those generally meet a ready sale, at an advance of from thirty to forty per cent. upon the prime cost in India, and much more when the supply is scanty.

In consequence of these heavy and valuable importations, the returns to Bengal were till lately made principally by bills, obtainable either from government, or individuals desirous of purchasing colonial produce for the European market by means of funds in Western India. But there are also several articles, which experience has proved well calculated for making their returns direct to Bengal, particularly Japan copper and teak timber. Java is known to abound with valuable teak forests, and the quality of the wood has been considered as superior to that of Pegu or the Malabar coast. The restrictions under which this export was formerly placed as a government monopoly, prevented its finding its way beyond the immediate Dutch dependencies; but the extent to which it was even then sent to the Moluccas, to Malacca, and to the Cape of Good Hope, where all the public buildings are constructed of Javan teak, sufficiently attests the value and extent of the forests, as well as the good quality and durability of the wood. This valuable, but bulky article of export, is always in demand for ship-building in Bengal, and has afforded to the merchant a very liberal profit on exportation, after paying the present government prices, which are calculated at something above ten per cent. upon the actual expence of cutting and dragging the timber from the forests to the port of exportation. During the last two years, large ships have taken cargoes to Bengal, and afforded very handsome profits. From the neighbourhood of *Rémbang*, where permission has been given to individuals to cut the timber, on paying a duty of ten per cent. on the estimated value when worked up, it has not only been exported at a cheap rate to Bengal, but several ships have been constructed of it, while along the whole line of coast, from *Semarang* to *Grésik*, small vessels and country craft are launched every month.

But although the direct trade with Bengal has thus been always against Java, the demand for sugar in the Bombay market always affords the means of a circuitous return of capital. Large quantities of Javan sugar have been exported to Bombay during the last four years, principally on the returning ships in ballast touching at Batavia on their way from China, and these

cargoes have afforded considerable profit. A lucrative trade in this article is also sometimes carried on by the Arabs to the Red Sea, and particularly to Mocha; but Arab traders, of sufficient capital for these extensive speculations, have, by the effects of the former monopoly on Java, long been driven out of the market, and sufficient time has not been given for them to return.

The extensive produce of this fine island in sugar and coffee of superior quality, and the pepper and various other articles, either yielded by it or collected from the neighbouring countries, such as sago, tin, Japan copper, spices, elephants' teeth, sticklac, long pepper, cubebs, tortoise-shell, gold, diamonds, Japan wood, ebony, rattans, indigo, &c. present fine subjects for commercial speculation to all parts of Europe and America, the Cape of Good Hope, and the Mauritius; and the more so, as from the extensive native and European population, a very considerable and constant demand exists for the produce and manufactures of Europe, not only for the consumption and use of the island itself, but to supply the neighbouring Malayan states by way of barter.

The quantity of sugar seems to depend almost entirely upon the demand, and is likely at all times to equal it, few countries affording equal advantages for its manufacture. Owing to the want of a demand for this kind of produce, for several years antecedent to the conquest, many of the manufactories were discontinued; but since the trade has been opened, and the demand renewed, many of them have again commenced working, and the quantity produced in the year 1815 was not less than twenty thousand *píkuls*.

The manufacturers being no longer compelled to deliver their produce to government, can afford to sell the sugar at Batavia at from four to six Spanish dollars (or from twenty to thirty shillings) per *píkul*, the quality being distinguished into first, second, and third sorts, of which the first may be bought in the market for exportation at six Spanish dollars per *píkul*, or about twenty-five shillings the hundred-weight. The quality of this sugar is altogether different from the sugar in Bengal, and is said to be equal to that of Jamaica, being manufactured in a great measure according to the same process. While the European market is open for coffee and other light articles, the sugar of Java is always in demand for dead weight, and large

quantities have recently been sold in the London market as high as ninety and one hundred shillings per hundred-weight^[62].

The quantity of coffee delivered to government in the year 1815, exceeded seventy thousand *píkuls*; about thirty thousand *píkuls* more may have been exported by individuals, and the produce is greatly on the increase^[63].

The Batavian arrack is well known in the European market, and was at one time imported in considerable quantities into the continent of Europe. It is distilled in a great measure from molasses, in which respect, as well as in the process employed, it differs so materially from the arrack of continental India, that it cannot with propriety be considered as the same spirit: it is in fact vastly superior to it, and capable of competing in the European market with the rum of the West Indies. Its price at Batavia, where any quantity can at all times be procured, is for the first sort about sixty Spanish dollars, for the second sort fifty, and for the third thirty Spanish dollars the leaguer; the first sort, which is above proof, thus selling by the leaguer of one hundred and sixty gallons, at the rate of about twenty-pence the gallon. In consequence of the prohibitory duties against the importation of this article into Great Britain or British India, this branch of commerce has latterly declined, and many of the distilleries have been discontinued.

The Dutch possessions of Ceylon, the Cape of Good Hope, and the Moluccas, dependent on the government of Batavia, always received their principal supplies of rice from Java, and considerable quantities have of late been occasionally exported to those places, as well as the Coromandel coast, with great advantage. During a scarcity of grain in England, the Java rice has also found its way to that market^[64].

From Europe the most important imports, and those in constant demand for the native population, are iron, steel, copper, printed cottons of a peculiar pattern, and woollens. Of iron, not less than from one thousand to fifteen hundred tons are annually imported, which is worked up into the implements of husbandry, and into the various instruments, engines, and utensils, required in the towns and agricultural districts. The price has varied, during the last four years, from six to twelve Spanish dollars: the average has been about eight dollars per hundred weight for the English, and about nine per hundred weight for the Swedish iron. The small bar iron is always in demand in the market, in consequence of its convenience for

working up into the different implements required. Steel is also in demand, to the extent of two or three hundred tons annually.

English printed cottons, of peculiar patterns adapted to the taste of the natives and Chinese, and white cotton sheeting cloth, always meet a ready and extensive sale; but the great objection to the former is the want of permanency in the colours, a disadvantage which all the English printed cottons labour under. A very extensive and valuable assortment of these cottons, imitated after the Javan and Malayan patterns, was recently imported into Java by the East India Company, and on the first sale produced very good prices; but before a second trial could be made, the natives had discovered that the colours would not stand, and the remainder were no longer in any demand. Would it not tend greatly to the improvement of the British manufacture, and consequently greatly extend the export, if the enquiries of scientific men in India were directed, in a particular manner, to an observation of the different dye-stuffs used in Asia, and to the manner followed by the natives in different parts, for fixing the colours and rendering them permanent?

Broad-cloths, velvets, glass ware, wines, and in short all articles of consumption and use among Europeans, may on Java be considered also, in a great measure, in demand by the native population, who free from those prejudices which preclude an expectation of the introduction of European manufacture into Western India, generally indulge in them according to their means. The climate of many parts of the Island renders the broad-cloth, particularly at some seasons of the year, an article of great comfort, and among the higher orders it is usually, as with Europeans, worn as a jacket: sometimes this is of velvet. A constant demand, limited only by the means of the purchaser, is also daily increasing for gold-lace and the other European manufactures used in dress, furniture, saddlery, &c.; it may therefore be easily conceived, to what an extent the demand for these articles is likely to be carried, among a native population of more than four millions and a half of souls, advancing in wealth and intelligence.

It is unnecessary to notice the extent of the articles required from Europe by the European population, as they are the same in all parts of India. The demand is, of course, partially affected by the extent of the military force, and by the wants of the officers; but where there is a permanent resident

European population, of not less than a thousand souls, generally in good circumstances, it may be inferred that the demand is always great.

A continual traffic is carried on between Batavia, the Isle of France, and the Cape of Good Hope, by which the latter in particular is supplied with timber, rice, oil, and a variety of articles of consumption, the voyage being frequently effected in five weeks. While the Bourbon coffee bore a higher price in the European market, considerable quantities of coffee were sent from Java to that island, and from thence re-exported as Bourbon coffee.

The American trade was carried to the greatest extent during the existence of the anti-commercial system of the late French ruler, when American traders purchased the Java coffee at the rate of eighteen Spanish dollars the *píkul* at Batavia, and by a circuitous route imported it into France, at an advance of one hundred per cent. During this period, the purchases of the Americans in the market of Batavia amounted in some years to nearly a million sterling, for which they obtained principally sugar, coffee, and spices.

Having thus given some account of the internal and external trade of Java as it at present exists, of the advantages for an extensive commerce which it enjoys, of the articles which it can supply for the consumption of other countries, and those which it receives in return for its own consumption, and of the places with which its dealings are or might be most profitably conducted on both sides, I might now be expected to enter into the history of that trade since the subjection of the Island to the Dutch, the regulations enacted and enforced by them, for restraining or directing it, and the fluctuations it has undergone during two centuries of a rigid monopoly; but this inquiry would lead me to swell this part of the work to a disproportionate size. I shall now merely present my readers with a few extracts from the orders made in 1767, and strictly enforced throughout the Archipelago, for regulating the trade and navigation of the dominions subject to Batavia, and with a brief abstract of the amount of exports and imports during some of the subsequent years.

"All persons whatever," says the first article of those orders, "are prohibited, under *pain of death*, from trading in the four fine kinds of spices, unless such spices shall be first bought of the Company." Opium was placed under the same restrictions, and enforced by the same penalty. The exportation of

pepper, tin, and Japan copper was prohibited, unless bought for the Company; and the importation of them not permitted, except for sale to the Company, under the penalty of confiscation, and a fine of four times the value of the article. The import and export of Surat silks and of India cloths, were strictly prohibited under the same penalty. White cotton yarn and all other sorts of it, *Semárang* arrack, and unstamped gold, were prohibited from being exported under the penalty of confiscation. No port was open to any vessel coming from the northward or from the Moluccas, except Batavia. No *práhu* or vessel was to carry any greater quantity of gunpowder and shot, than might be permitted, and regularly entered in the pass given to the party, under penalty of confiscation of the vessel, *and the infliction of a corporal punishment similar to that inflicted for theft*. All persons belonging to the coast of Java were strictly prohibited from sailing from any part of the coast where there was not a Company's Resident. No navigation was allowed to be carried on by the vessels of *Bánka* and *Bíliton*, except to *Palémbang*. All navigation from Celebes and *Sumbáwa* was prohibited, under pain of confiscation of the vessel and cargo. No vessel from the latter place could pass Malacca, and the Company's pass to proceed to *Siak* was given only once in a year to three vessels from Batavia, two from the coast of Java, and one from Chéribon. The China junks were only permitted to trade at Batavia and *Bánjer-másin*. No trade or navigation whatever was permitted beyond the west point of Bantam, without a pass from Batavia. Such are the most important of thirty-one articles of restriction, serving to shackle every movement of commerce, and to extinguish every spirit of enterprize, for the narrow selfish purposes of what may be called the fanaticism of gain. After perusing them, the reader will rather be inclined to think the following amount of the trade too highly stated, than be surprised that it is so low.

The precious metals have always been a great article of import into Java, as well as into the other regions of the East. In 1770 there was imported into Java from Holland, cash and bullion to the amount of 2,862,176 Java rupees^[65], and the sums imported from other quarters in the same year, and raised by bills of exchange on Holland, amounted to 1,419,565 rupees, making in all 4,281,742, or more than half a million sterling. The amount imported in that year was almost as great as that in any subsequent year till 1803, when the importation of precious metals was estimated at 7,617,122 rupees, or nearly a million sterling. This period corresponds with that of the

greatest exportation of sugar by the Americans, who, no doubt, imported the precious metals in exchange for their cargoes, as the quantity brought from Holland in the same year amounted only to 448,370 rupees. In the following year (1804) the quantity imported was 6,499,001 rupees, of which none at all came from the mother-country. In forty years, from 1770 to 1810, the total of the imported precious metals amounted to 118,607,472 Java rupees, or nearly three millions annually upon an average. A great portion of this was re-exported to India, China, and the Dutch possessions in the Archipelago, to pay for the articles brought to Batavia for the supply of the European demand. The quantity of goods imported from all quarters of the globe, exclusive of cash and bullion, amounted in the year 1770 to the value in Spanish dollars of 2,350,316, and the exports to 3,318,161, leaving a balance in favour of the exports of 867,845 Spanish dollars. A great part of the exports was destined for Holland, and a great part of the imports came from Holland. The imports from Holland were again re-exported to China, Japan, the Spice Islands, &c. from which, and from Bengal, Ceylon, the coasts of Coromandel and of Malabar, and the Cape of Good Hope and other eastern countries, the other shipments came, and to which the other exports proceeded. The profits on the sale of that portion of the imports of 1770, disposed of in the market of Batavia for the consumption of Java, are stated at 7,895 Spanish dollars, so that, so far as the import trade was concerned, Batavia only became the *entrepôt* between the mother-country and her other possessions or stations of commercial resort in the Indian seas. The exports of Java almost every year exceeded the imports, as will appear from official returns which follow.

Years.	Exports.	Imports.	Excess of Exports.	Excess of Imports.
	Spanish Dollars.	Spanish Dollars.	Spanish Dollars.	Spanish Dollars.
1771	3,122,197	3,116,374	5,823	—
1772	2,909,371	2,170,741	738,630	—
1773	3,193,912	2,789,869	404,043	—
1774	3,184,641	2,941,011	243,630	—
1775	3,083,773	2,692,420	91,353	—

1776	3,319,070	2,305,228	1,013,842	—
1777	3,139,678	2,006,561	1,133,117	—
1778	2,440,042	1,776,674	663,368	—
1779	2,274,308	2,075,022	—	430,714

1791	3,771,263	3,098,849	672,414	—
1792	1,172,670	1,295,959	—	123,289

There was, of course, a lamentable falling off in the foreign trade of Java after the commencement of the war of the French revolution: some of the best markets were almost entirely closed to it, and the intercourse with the mother-country was nearly destroyed. The total of exports to Holland and her eastern possessions, from the year 1796 till 1806, amounted in value to only 7,097,963 Spanish dollars; the imports to 3,073,894 Spanish dollars; leaving a surplus of exports of 4,024,069 Spanish dollars. The Americans began to frequent the market of Batavia in 1798, and through them principally was the trade carried on till the conquest of the Island by the British, except during the short interval of the peace of Amiens. No specie (with which Holland chiefly paid for her eastern commodities) was imported from the mother-country from 1795 downwards, except during 1802-3 and 1803-4, during which there was only the very inconsiderable sum of about half a million of rupees imported.

It is impossible to convey a just idea of the native or foreign trade of Java, without advertng to the commercial and political state of the other islands of the Archipelago. Of these it may be stated generally, that the interior is possessed by the natives, collected under leaders who have taken advantage of the great extent of the country, in proportion to its population, to render themselves independent of the lawful sovereign; that the coast is occupied, in many places, either by pirates, by some of the ruder tribes whom it is

dangerous to invade, or by adventurous traders, chiefly *Maláys* and *Búgis*. These traders arrive in well-armed vessels, which some of them remain to protect; others travel up the country, not unfrequently to the distance of a hundred miles, and at the change of the monsoon return to their companions, charged either with plunder, or with the fruits of a commerce carried on with the natives at an exorbitant profit. The pirates, as they drive the peaceable and honest trader from the coast, recruit their numbers from among the seafaring men to whom he used to give employment. The decay of commerce is accelerated; and the natives retreat into the interior, where, for want of a market, they cease to collect the rich productions of their country, and rapidly sink into poverty and barbarism. The sea and the coast remain a scene of violence, rapine, and cruelty. The mouths of the rivers are held by lawless banditti, who interrupt the trade of those who inhabit their banks, and capture the vessels destined for the inland towns: the bays and harbours are entirely within their power; and in these smooth seas they are never driven a moment from their stations, or diverted by danger from their predatory vigilance. The sovereigns of the country have too little authority over their nominal subjects; and their resources are too confined for them to oppose any effectual resistance to these outrages. All restraints are withdrawn by the divisions and weakness of the native governments; and men, rendered desperate by the experience of lawless violence, are induced to join in the system of plunder against which they can find no protection.

This extensive, rich, and beautiful cluster of islands is thus deprived of all the advantages which it might derive from the sea with which it is surrounded; its harbours become the retreats of marauders, instead of the resort of peaceful commerce; its seafaring people are reduced to a state of nature. Where force decides right, no sovereign is possessed of paramount authority to sweep this pest from his shores; no vessel is safe, no flag is respected. The trade is thus confined to desperate adventurers only, to whom the existence of piracy is more advantageous than the unmolested security of navigation, as the danger which it creates drives away all competitors of a less daring character, and gives them a monopoly of these ports. It is too true, also, that European traders have materially contributed to the strength of the pirates, by the supply of arms and ammunition. At the port of *Sambas*, European vessels had not dared to touch openly for twenty years; but such means of resistance as the pirates were found to possess in

two recent attacks upon it, could never have been collected without large supplies from British traders.

The small colonial craft, so necessary for the prosperity of these regions, cannot without great risk venture beyond the coast; while armed Malayan and Bugis *práhus*, and a few European speculators, engross most of the trade.

The above observations apply more particularly to the coasts of Borneo and the adjacent islands; but they are, in a great measure, applicable to many parts of Sumatra. The unfortunate king of Acheen, who has long been intimately connected with the British establishments, is a young man of estimable qualities, with a title ancient and undisputed, though perhaps a weak prince. All his chiefs acknowledge his authority, though none submit to his control. Native traders from the coast of Coromandel, and Europeans from Pinang, frequent every river; and the profit derived from their dealings furnishes the inhabitants with inducements and means to throw off their allegiance. The king, too feeble to reduce the revolvers, is only able to keep up a state of continual alarm and warfare, to which the mutual jealousies among the petty usurpers themselves mainly contribute. The trade of his dominions is in a great measure carried on like smuggling, by armed boats running out at a favourable moment, hiding themselves from danger, or fighting their way through opposition, as occasion may require, and laying their account with making up for frequent losses by exorbitant profits. In some places, these almost independent bands are commanded by Malabar *chuliahs*; and, in most instances, the petty chiefs whom they elevate to authority are foreign vagrants. Those places which, from their vicinity to the residence of the king, are least able to resist his power, are supported in their opposition by the interests of the English traders; and it is not to be forgotten, that when he made a partial attempt to regain his authority over all the neighbouring country, they petitioned the European authority to prevent, by its interference, his levying a duty upon his own subjects. The petition was attended to; and the king was compelled, by the command of strangers, to forego the only means by which he could have preserved his dominions from anarchy and confusion. At the period, therefore, when the resources of his kingdom would have been unfolding themselves, by the improving industry of a well-regulated population, it is falling into decay, through the personal imbecility and political weakness of the monarch; and,

breaking into detached fragments, is about to form as many separate principalities, as formerly there were independent governments throughout all the Archipelago^[66].

That there has been, at some time, a more extensive commerce on the shores of the Archipelago is highly probable, and that there might be cannot be doubted. The great resources, vegetable and mineral, with which they abound, such as spices, camphor, gold, and diamonds, and the facilities which they enjoy for navigation, offer means and inducements of the highest nature. The general character of the people, also, as far as it can be ascertained, appears equally favourable to commercial intercourse. They are represented as mild, inoffensive, not indisposed to industry, free from any obstinate prejudices of superstition, and altogether of a different temper from that of the few who remain in a constant state of warfare on the coast.

Another favourable circumstance is the existence of sovereigns, whose rights, however infringed, are in principle acknowledged, and who have never been known to favour, what must be considered the chief misfortune of these countries, and the source of almost all the rest, the horrible system of piracy. The evil is manifest, and the remedy is not of difficult discovery. Were legitimate and acknowledged sovereigns assisted in resuming their due authority, piracy and rebellion might be destroyed, these shores would be peopled with their native inhabitants, whose industry, awakened and invited by the opening of a safe navigation to the capitals, would in fleets of small vessels, so essential to the prosperity of the Eastern settlements, bring the produce of the interior down the innumerable rivers, and communicate to countries, beyond the reach of foreign adventurers the comforts of civilised life.

A few years of repose to these islands, and of safe uninterrupted commerce, with its attendant blessings, would repay with gain incalculable, what they now claim from the benevolence and philanthropy, if not from the justice of Europeans, who have so essentially contributed to their degradation. If left neglected, without capital, without a safe navigation, almost without laws, the government disunited, the people groaning under vassalage and slavery, these races must descend still further in the scale of degradation, until scarcely a vestige will remain to vindicate the records of their history; and their political existence will only be testified by acts of piracy perpetrated

on defenceless vessels, which from accident or ignorance may visit their inhospitable shores.

In all their Eastern settlements, the favourite policy of the Dutch seems to have been to depress the native inhabitants, and give every encouragement to the Chinese, who, generally speaking, are only itinerants and not children of the soil, and who follow the almost universal practice of remitting the fruits of their industry to China, instead of spending them where they were acquired. The Chinese, in all ages equally supple, venal, and crafty, failed not, at a very early period, to recommend themselves to the speculating Hollanders. They have, almost from the first, been their agents; and in the island of Java, in particular, they acquired from them the entire monopoly of the revenue farms and government contracts. Many of the most respectable Dutch families were intimately connected with the Chinese in their contracts and speculations, and whole provinces had been sold in perpetuity to some of them, the extensive population of which were thus assigned over to their unfeeling oppression, for the purpose of raising temporary supplies of money.

On Java, the Chinese have been generally left to their own laws and the regulations of their own chiefs; and being, for the most part, merely temporary residents in the country, they devote themselves to the accumulation of wealth, without being very scrupulous about the means of obtaining it: when, therefore, they acquire grants of land, they generally contrive to reduce the peasants speedily to the condition of slaves. The improvement of the people, which was never much attended to by the Dutch, was still less so by the Chinese, and the oppression which they exercised in the vicinity of Batavia had opened the eyes of the Dutch themselves. A report of the Council of Batavia, a short time prior to the landing of the English, accordingly states, that "although the Chinese, as being the most industrious settlers, should be the most useful, they on the contrary have become a very dangerous people, and are to be considered as a pest to the country; for which evil," they add, "there appears to be no radical cure but their expulsion from the interior." Wherever the Chinese formed extensive settlements in Java, the native inhabitants had no alternative but that of abandoning the district or becoming slaves of the soil. The monopolising spirit of the Chinese was often very pernicious to the produce of the soil, as may be seen even at this day in the immediate

vicinity of Batavia, where all the public markets are farmed by them, and the degeneracy and poverty of the lower orders are proverbial.

The Chinese of Batavia are a very numerous body, and possess considerable wealth. They are active and industrious, enterprising and speculative in the highest degree in the smallest or most extensive concerns, and equally well adapted for trade or agriculture; but, at the same time, they are cunning, deceitful, covetous, and restless, and exceedingly unwarlike in their habits and dispositions. This is the character given of them by Mr. Hogendorp, who, in considering the injurious consequences of their extensive influence on Java, has drawn a very just and able representation of it^[67].

In all the Malayan states, the Chinese have made the greatest efforts to get into their hands the farming of the port duties, and this has generally proved the ruin of the trade. In addition to these circumstances it should be recollected, that the Chinese, from their peculiar language and manners, form a kind of separate society in every place where they settle, which gives them a great advantage over every competitor in arranging monopolies of trade. The ascendancy of the Chinese requires to be cautiously guarded against and restrained; and this, perhaps, cannot be better done, than by bringing forward the native population, and encouraging them in useful and industrious habits.

Some of these observations regarding the Chinese are, in a high degree, applicable to the Arabs who frequent the Malayan countries, and under the specious mask of religion prey on the simple unsuspecting natives. The Chinese must, at all events, be admitted to be industrious; but by far the greater part of the Arabs are mere useless drones, and idle consumers of the produce of the ground: affecting to be descended from the Prophet and the most eminent of his followers, when in reality they are commonly nothing better than manumitted slaves, they worm themselves into the favour of the Malayan chiefs, and often procure the highest offices under them. They hold like robbers the offices which they have obtained as sycophants, and cover all with the sanctimonious veil of religious hypocrisy.

Under the pretext of instructing the *Maláyus* in the principles of the Mahometan religion, they inculcate the most intolerant bigotry, and render them incapable of receiving any species of useful knowledge. It is seldom that the East is visited by Arabian merchants of large capital, but there are

numerous adventurers who carry on a coasting trade from port to port, and by asserting the religious claims of Sheikh, generally obtain an exemption from all port duties in the Malayan states. They are also not unfrequently concerned in piracies, and are the principal promoters of the slave-trade.

This may serve, in some degree, to illustrate the necessity of establishing an equal and uniform system of port regulations throughout the whole of the Malayan countries; for if the Chinese, on the one hand, are permitted to farm import and export duties in different ports, they have every facility allowed them to form combinations, in order to secure a monopoly to Chinese traders; and on the other hand, if the Arabs, under religious pretexts, are entirely exempted from duties, they may baffle all competition, and engross the trade of the Malayan countries to the exclusion of European traders altogether.

Let the Chinese and Arabs still trade to the eastward. Without them, the trade would be reduced to less than one-third of even what it is at present, for it is only through the stimulus which they give to the industry of the country that its resources are to be developed: but let their trade be regulated; and above all, let them not be left in the enjoyment of immunities and advantages, which are neither possessed by Europeans, nor the indigenous inhabitants of the country. Since the reduction of the Dutch influence in the East, several of the ports formerly dependant on them have almost become Arab colonies. The evil is obviously increasing every day, and can only be checked by encouraging the native population, and regulating on equal terms the duties of the Malayan and other Eastern ports.

In many other respects besides those which we have stated, the commercial policy adopted by the Dutch, with regard to the Eastern islands and the Malayan states in general, was contrary to all principles of natural justice, and unworthy of any enlightened and civilized nation^[68].

From authentic accounts it appears, that they attempted to destroy and eradicate from a vast range of countries the most advantageous produce of the land, in order to favour their own petty traffic, and burnt a large proportion of the residue, in order to keep up their monopoly price in Europe on a small proportion of this produce. Against errors of this kind, it is to be hoped the more enlightened policy of the present era will be an effectual preventive; but there are others, so interwoven with the interests of

these islands, and so local in their nature, that they may not so easily attract the attention of the governing power.

One feature of the Dutch policy in the Eastern Isles seems to have been the exclusion of all foreign trade, whether European or native; excepting at certain specified ports under their own immediate control. This policy was as much connected with the general government of the country, as with the commercial profits of the Company; for in an Archipelago of such unparalleled extent, inhabited by tribes of such various characters, formidable in a high degree from their very want of civilization, it was necessary to bring forward some of the most powerful and most favourably situated of these numerous states, and to hold them answerable for the proceedings of the several districts under their influence. Such views gave rise to the establishment of certain regular and determined trading ports, and led to the vigilant suppression of all attempts at competition and independence on the part of the inferior states.

Had this measure been combined with a liberal encouragement of the home trade, as it may be denominated, between these privileged ports established by the Dutch, and the various countries under their influence, little doubt can be entertained that it would have tended materially to promote the civilization and general improvement of all the neighbouring nations. Very different, however, was the object of the Dutch agreements with the different rajas of the Eastern Archipelago. In some cases it was to secure a monopoly of all the tin, pepper, camphor, and other saleable articles produced in their dominions; in others it was to bind the chiefs themselves to destroy the only saleable articles that their country could furnish, lest the monopoly price of the Dutch should be injured by a greater quantity of such produce being brought to market. The Dutch genius, though exclusively devoted to commerce, has never yet been able to discover the truth of the maxim, that in the long run it may be as gainful "to make small profits on large sales as large profits on smaller sales;" their policy, on the contrary, has not been inaptly compared to a man putting out one of his eyes to strengthen the sight of the other.

It must be admitted, that the line of conduct pursued by the English towards the Malayan nations, had by no means been of a conciliatory or prepossessing character. Our intercourse with them had been carried on almost exclusively through the medium of adventurers little acquainted with

either the country or people, who have been frequently more remarkable for boldness than principle^[69]. Indeed, the want of any settled basis of traffic, and the long indifference of the British government to the complaints of either party, had produced so many impositions, reprisals, piracies, and murders, that any eastern trader must have felt himself very much in the situation of a dealer in spirits, tobacco, and blankets, among the Indians of North America. It was the remark of Mr. Farquhar, than whom no man is more extensively acquainted with the interests and resources of East insular India, that the indifference of the British government must have originated solely in the want of information or incorrectness of knowledge; since it is not improbable, that the riches of Sumatra and Borneo are equal to those either of Brazil or New Spain; and it is only from the disadvantages under which we had hitherto entered into the competition, that these great sources of wealth had so long been engrossed by other nations^[70].

The doctrine, that a colony should always be considered a distant province of the mother-country, has been foreign to the political creed of the Dutch; and at any rate the radical want of strength in the government of Batavia may have prevented them from venturing to act upon it. Of course, they must always have contemplated the prosperity of the eastern tribes with the invidious regret of a rival shopkeeper, and regarded their progress in civilization with the jealousy of a timid despot. The fact sufficiently establishes the truth of this remark.

Independently of the effects of the European influence just described, the causes which have tended most to the depression of the Malayan tribes, and the deterioration of their character, are the civil commotions to which every state is liable, from the radical want of strength in the sovereign; the constant wars between the petty chieftains and heads of villages; the ill-defined succession to the throne, from the doctrine of primogeniture being imperfectly recognized; the prevalence of piracy in all the Eastern Seas; the system of domestic slavery, and all its concomitant evils, as wars for the purpose of procuring slaves, and the want of confidence between family and family, man and man; the want of a generally-established, and recognized system of laws, civil and criminal; the want of a similar system of commercial regulations respecting port duties, anchorage, and other charges, to prevent arbitrary exactions and impositions in the various Malayan ports; and, finally, the monopoly of the trade assumed by the

Malayan rajas. Had Java remained permanently annexed to the British crown, the redress of these evils would have been, in a great measure, in the power of the English nation: the undertaking would have been worthy of their general character, and there was no other nation that could have possessed the means in an equal degree, even if it had indeed possessed the inclination.

The prevalence of piracy on the Malayan coasts, and the light in which it was viewed as an honourable occupation, worthy of being followed by young princes and nobles, is an evil of ancient date, and intimately connected with the Malayan habits. The old Malayan romances, and the fragments of their traditional history, constantly refer with pride to piratical cruizes.

In addition to other causes, which I shall not stop to specify, the state of the eastern population, and the intolerant spirit of the religion of *Islam*, have eminently tended to increase the practice. The Arab Sheikhs and Sayeds, whatever doctrines they failed to inculcate, never neglected to enforce the merit of plundering and massacring the infidels; an abominable tenet, which has tended more than any other doctrine of the *Kóran* to the propagation of this religion. Numerous and various are the tribes of the Eastern Isles which have not embraced the religion of *Islam* to this day, and consequently are reckoned infidels: cruizes against such were, and are, constantly certain of receiving the approbation of all the Arab teachers settled in the Malayan countries. The practice of piracy is now an evil so extensive and formidable, that it can be put down by the strong hand alone; though precautions against its recurrence might be taken, by rendering, under the system of acknowledged ports, every chieftain answerable for his own territory.

Connected with this evil, though of much wider extent, is the system of slavery in the Malayan countries, which, to apply the energetic language of Mr. Pitt to this subject, has been none of the least efficient causes of keeping down these regions "in a state of bondage, ignorance, and blood." In the beginning of the year 1805, the Marquis Wellesley abolished slavery throughout India; and, on the 4th of June, 1811, the Earl of Minto, by an order to emancipate all the government slaves at Malacca, and to direct that hereafter no slaves should be purchased or received on account of government, gave to the Malayan nations an earnest of his sentiments on the subject. It is certainly to the credit of our countrymen in the East, that

they have ever opposed all attempts to introduce the abominable slave traffic into our settlements there. It was prohibited at Madras by an act of the Governor and Council, of so early a date as 1682.

The sources of slavery in the Malayan countries are chiefly piracy at sea, captivity in war, manstealing along the coast, and the penalties enacted in the Malayan law respecting debts and sundry misdemeanors. The surviving crews of vessels which fall into the hands of the pirates are generally disposed of by sale at the first market. The captives taken in the constant wars which the Malayan chieftains carry on against each other, are generally employed in domestic occupations, tending cattle, and cultivating the ground, where there is no opportunity of bringing them to market. This, however, is seldom the case, since such numbers are constantly required by the Arabs and Chinese traders, and heretofore by the Dutch. Many of the Arab trading vessels are almost exclusively navigated by the slaves of the owner; and in their progress from island to island, they find little difficulty in recruiting their crew, by receiving presents of slaves, or if that should fail, by kidnapping the unfortunate natives. This forms a strong argument against admitting the unrestricted range of the islands to either Chinese or Arab traders; for while this is permitted, the abolition of the system of kidnapping would be absolutely impossible. The pagan tribes in the vicinity of the Mahometans, such as those on *Báli*, and some of the tribes of Celebes, the *Harafúras*, the black *Papúas* or oriental negroes, the original inhabitants of *Hálamahíra*, *Coram*, and other easterly nations, are in a great measure the victims of the kidnapping system, and being infidels are considered as fair booty.

Nothing has tended more decidedly to the deterioration of the Malayan character, than the want of a well defined and generally acknowledged system of law and commercial regulation. The Malayan nations had, in general, made considerable progress in civilization, before the introduction of the Mahometan religion among them: they had, accordingly, regular institutions of their own, some of which were probably of considerable antiquity, derived from the continent of India, and consequently radically different from those of the Arabs.

Some difficulty appears to have occurred in adapting these institutions to the general tenor of the Mahometan law, and many anomalous ones appear accordingly to have sprung up in different states. These occur in every part

of jurisprudence, whether commercial, civil, or criminal, and are recited in the *Undang undang* and *Adat Maláyu*, which are the systems of national law among the *Maláyus*. They vary considerably from each other in different states, and still more from the generally acknowledged principle of Mahometan law, as received by the Arabs. Hence there is, in almost every state, a constant struggle between the adherents of the old Malayan usages and the *Hájis*, together with other religious persons, who are desirous of introducing the laws of the Arabs, in order to increase their own importance.

Among the numerous and important evils which result from this complex and ill-defined system, may be reckoned its affording an opening for the caprice and tyranny of the rulers, and producing a general insecurity both of person and property.

The state of the Moslem religion is very different here from what it is in the old Mahomedan states, such as Persia, Turkey, or Arabia. In many of the Eastern Islands paganism still remains: in some districts there are many Christians, and the Chinese swarm in every Malayan country, and live intermingled with the Mahomedans. This mixture of religion and tribes has tended, in some degree, to soften the intolerance of the Mahomedan system among the Malayan nations, and neither the positive authority of *Islam*, nor the persuasions of their Arab teachers, have hitherto been able to induce them to abandon entirely their own peculiar usages and customs. With some of these usages, especially those which relate to wrecks on the Malayan shores, and the commercial regulations of the different ports, it becomes incumbent on the supreme European authority to interfere. In revising these, the opportunity might perhaps be taken to procure the abandonment of some of those maxims and usages, which have the strongest tendency to prevent their improvement, and counteract the habits of civilized life.

A circumstance highly injurious to the commerce of the Malayan nations is the trading monopoly, which in most of the Malayan ports is actually assumed by the chiefs. Of this monopoly there is no trace in the *Undang undang* of the *Maláyus*, or in the fragments of their history which have yet come to light, and it is a question whether this pernicious practice has not been copied from the monopoly regulations of the Dutch. Where this system has been fully carried into effect, it has generally succeeded effectually in repressing industry and commercial enterprize; and where it

has been for some time established, its evils have been felt so deeply, that it may be presumed the Malayan chiefs might be induced to relinquish it in favour of a regulated commerce, whenever they might regain the power of collecting regular duties in lieu of it. The Malayan laws and customs are fortunately of a very different kind from those adopted among the great nations of the continent in their vicinity. These nations, especially the Siamese and Cochin Chinese, have long been accustomed to look up to the Chinese, with whom they coincide in religion and manners, and from whom they have adopted their exclusive maxims of foreign intercourse. The *Málayus*, on the other hand, though accustomed to look up to the Arabs as their religious instructors, seldom hesitate to admit the superiority of both the Europeans and Chinese, both to themselves and to the Arabs, in the arts of life and general science; and it is certainly our interest to encourage them in this mode of thinking, and to prevent the increase of the Arab influence among them.

The Dutch nation appears to have pursued, as a principle of policy, the propagation of Christianity among the Eastern Islands. The same object had been previously followed by the Portuguese with great success, and there are now several small islands in the Malayan Archipelago, inhabited almost exclusively by Christians of the Catholic persuasion. In many other islands the Protestant persuasion has made considerable progress, and teachers, in the flourishing times of the Batavian Regency, were dispersed over all the low chain of islands which extend from *Báli* and Lumbok (*Sásak*) to the great island Timor. The islands in which the Christian faith has been most extensively diffused are the great island *Endé* or *Meng' arái*, the great island of *Tímor*, and the several small islands in the vicinity, and Amboina. In many of these islands the natives having no written character of their own, have been instructed in the Roman character, and taught to read Malayan and other dialects in it. There have also been various formularies printed for their use, and translations have been executed for them in some of their languages, which have little or no affinity to the Malayan. The propagation of Christianity among these islands is obviously liable to none of those objections which have been urged against its missionaries on continental possessions. A great proportion of the natives are still pagans, under the influence of a wild and almost unintelligible superstition, the principles of which are not recorded in books, but are handed down, like stories of ghosts, fairies, and witches, with all the uncertainty of tradition.

In most instances, the people, though they stand in great awe of the priests or enchanter, or dealers with invisible spirits, are very little attached to the superstition in which they are educated. Many of them are said to be very desirous of procuring instruction, and in some places they look up with a degree of veneration to the Mahomedans, as a people who have received something which they still want.

These observations on the Malayan Islands in general, apply to no part of the Archipelago more than to the important and great island of Borneo.

BORNEO is not only one of the most fertile countries in the world, but one of the most productive in gold and diamonds^[71]. Its camphor is the finest known, and it is thought capable of producing every kind of spice. Its eastern coasts, which abound in sago, also furnish a greater quantity of birds'-nests, sea-slug, and other commodities in great demand in the Chinese market, than the other islands of the East; but the interior has never been explored by Europeans. It may be conjectured, that the ignorance of the state of the country is one of the principal causes that no European settlement on it has hitherto proved advantageous, but has generally been abandoned after a short trial. The only exception to this observation is the Dutch settlement of *Bánjer-másin*, which continued from 1747 to 1810, when it was formally abandoned by Marshal Daendels to the Sultan, by agreement, for the sum of fifty thousand Spanish dollars. The Sultan soon after sent an embassy, inviting the English to settle; and previous to the conquest of Java, the Earl of Minto received the ambassadors at Malacca, and accepted their invitation.

The only territory to which the Dutch had any claim on the island of Borneo, was the coast from *Súkadána* to *Mempáwa*; this territory they acquired by virtue of a cession from the Sultan of Bantam in 1778. They destroyed *Súkadána*, and established factories at *Pontiána* and *Mempáwa*, which however they abandoned as unproductive after a period of fourteen years.

In no other part of the island of Borneo has there been any European settlement. The English, in 1772, intended to have established a factory at *Pásir*, but they abandoned the design on some commotions taking place in that state. Its object was to make *Pásir* a depót for opium and India piece goods, and for the contraband trade in spices. In 1774, a short time after the

first settling of *Balambáangan*, Mr. Jesse was deputed as Resident to Borneo *proper*, and concluded a treaty with that state, by which he acquired for the settlement of *Balambáangan* the exclusive trade in pepper, stipulating in return to protect Borneo from the piratical incursions of the *Súlu* and *Mendanáwi* men. Neither of the parties, however, fulfilled its agreement, though the Residency at Borneo was continued for some years after the first breaking up of the settlement of *Balambáangan* in 1775.

On the north-east of Borneo *proper* lies a very considerable territory, the sovereignty of which has been long claimed by the *Súlu* government; a very considerable part of this, together with the islands off the coast, have been for upwards of forty years regularly ceded to the English by the *Súlus*, and has also at different periods been assumed by them, without any objection on the part of the government of Borneo *proper*. This ceded district, extending from the river *Ki-manis* on the north-west, which forms the boundary of Borneo *proper*, to the great bay on the north-east, is undoubtedly a rich and fertile country, though in a rude and uncultivated state, and it is admirably situated for commerce, notwithstanding the different failures of *Balambáangan* may seem to indicate the contrary. *Balambáangan* is one of the small islands off the northern extremity of the island of Borneo, and included in the *Súlu* grant to the English. It would be foreign to the present object to enter into any details concerning the history of the settlement of *Balambáangan*, but it may be proper to mention, that all the gentlemen who were engaged in the last attempt were convinced that the bottom of the great *Malúdu Bay* would have been infinitely preferable as a settlement on every account. *Balambáangan* is exactly analogous, in every respect, to Pinang; it does not admit of territorial extension, and must exist, if at all, by commerce solely. *Malúdu*, on the other hand, is a dependency on the island of Borneo, which admits of any degree of territorial extension, may always subsist any number of inhabitants by its own produce, and is said to communicate, by a land carriage of little more than forty miles, with the central lakes in the vicinity of the gold countries.

From every inquiry, however, and the result of some experience, and much reflection, it may be stated, that no settlement which is founded on a commercial, instead of a territorial basis, is likely to succeed in that quarter. We have already acquired territorial rights, and therefore the only question seems to be, whether these cannot be turned to advantage, as well by

cultivation as by commerce. The *Dáyaks*, or original inhabitants of Borneo, are said to be not only industrious, but particularly disposed to agriculture, and so manageable, that a handful of *Maláyus* have, in numerous places, reduced many thousands of them to the condition of peaceful cultivators of the ground. Indeed nothing seems wanting but a government strong enough to afford efficient protection to person and property. In the case of the *Dáyaks*, it must be considered as an advantage, that they have not hitherto adopted the religion of Islam, and would consequently be more ready from the first to regard us as their friends. It ought to be calculated among the inducements to form a settlement on Borneo, that in that quarter our territorial arrangement would interfere with the claims or the rights of no European nation. To recommend, however, the immediate establishment of a settlement at this particular spot, and on a basis so new, would obviously be premature, as notwithstanding the length of time we occupied *Balambárgan*, not only the interior of Borneo was almost unknown, but until lately, even a great part of its coasts. This supineness in the government of *Balambárgan* is perhaps not unexampled. The want of local information has, indeed, often proved fatal to the infant settlements of the English. "Colonies and settlements of every kind," says the author of the Letter on the Nagrais Expedition, "must at first be attended with many difficulties, which however a judicious perseverance will surmount, if there be not some original fault in the establishment. It must be obvious to every one, that the English never made a settlement, in which they were not impeded by some unforeseen difficulties, so as at least frequently to make abandoning the infant establishment appear the most prudent step, without even hoping any return for the prodigious expense which may have been incurred by the undertaking."—"Various reasons," adds that author, "may be ascribed for this event; but incapacity in the person entrusted with the management, and the want of previous examination of the place, seem to me the most common and the most considerable." Without stopping to inquire how far the want of success in our several attempts to settle *Balambárgan* may have been fairly attributable to either of these causes, it may be confidently asserted, that the last establishment failed chiefly from its being solely of a military nature, without either professional merchants or mercantile adventurers being attached to it.

These observations respecting *Balambárgan* apply to it chiefly as a territorial establishment; but there is no doubt that it would speedily attain

commercial importance. Many of the commercial advantages which recommended its selection still exist, to an equal or greater extent; especially those which related to Cochin China, Champa, and Cambodia. But this digression has already exceeded its reasonable limits, and it is necessary to revert to the more immediate point under consideration, the commerce of Java. Any account of this commerce would be imperfect, which after stating the extent to which it is carried, and the mode in which it is conducted with the adjacent islands in the same Archipelago, should omit to mention the advantages of an intercourse with Japan, and some notices on the Japan trade.

The history of the Dutch connexion with that country is well known, and can never be forgotten. Perhaps there is not such an instance in the annals of commerce, of the disgraceful arts to which mercantile cupidity will resort, and the degradation to which it will submit for the attainment of its object, as in the Dutch proceedings at Japan; nor is there, perhaps, a more remarkable example of the triumphant success, and complete disappointment of commercial enterprize. As it may be interesting to many readers to see an authentic history of the origin, fluctuations, and decline of the Dutch Japan trade, and as even a very succinct statement of it would swell this chapter to a disproportioned size, I have placed a short history of it in the Appendix to this work, to which I beg leave to refer those who have any curiosity for such details^[72]. From the year 1611, when the Dutch established commercial relations with Japan, till 1671 (a period of sixty years), their speculations were unrestricted and their profits were enormous. This was the golden age of their trade: they opened a mine of wealth, and they fondly thought it inexhaustible, as well as rich and easily wrought. In 1640, the Company obtained a return in gold, that yielded a profit of upwards of a million of guilders. They had been accustomed to procure, for some time previous to 1663, a return of silver to the extent of two hundred chests of one hundred pounds each, and it was suggested that it would be desirable for as many chests of gold of the same weight to be sent in future. The golden and silver ages of Japan commerce being past, the latter half of the seventeenth century began with what the Dutch called its brazen age, that is its export of copper, which has ever since continued the staple of the Japan market. The trade was on the decline during the whole of the last century, and had become of so little importance about 1740, that the Company deliberated upon the expediency of its total abandonment. From

employing, as at one time, eight or nine ships, and exporting copper alone to the amount of more than thirty thousand *píkuls*, of one hundred and twenty-five pounds each, it diminished to the use of two vessels, and the purchase of cargoes of five or six thousand *píkuls*. The Appendix contains an account of the nature of the trade, and the result of the Dutch adventures of 1804-5 and 1806, and of our own in 1813.

FOOTNOTES:

[54] Great Britain.

[55] It is said that when the Dutch first established themselves in Java, three hundred vessels of not less than two hundred tons each, were accustomed to sail to and from the port of Japára, in Java, if not belonging to that port.

[56] The greatest part, or rather nearly the whole of these exports and imports, consisted of colonial produce, of articles of subsistence, or native manufactures, mutually exchanged between the two islands of Madúra and Java. Not a tenth part of the imports came from beyond Java.

[57] "The bazars," observes Mr. Hogendorp, "now produce a large, and even an incredible amount, which however is melted away in the hands of the native regents and also some European authorities; but the Chinese, to whom they are mostly farmed out, derive the greatest profits from them, both by the money which they extort from the Javans, and by the monopolies in all kinds of produce, and particularly of rice, which by these means they are enabled to secure to themselves. The abuses on this point are horrible, and almost induce me to recommend that the markets should be made free and open."

[58] See account of Chéríbon.

[59] Although but few of the natives of Java venture their property in foreign speculations, the natives of Java form the crews of all coasting vessels belonging to Chinese, Arabs, or Europeans, and it is of them almost exclusively that the class of common sailors, known in the east under the general denomination of Malays, is composed. Here it may not be improper to notice the manner in which European vessels have hitherto been supplied with such crews, and to point out the probable causes of that atrocious conduct with which the Malayan sailor is so generally reproached.

A reference to the maritime customs of the *Maláýus* will shew the manner in which the outfit of a native vessel in the Eastern Seas is effected^[73]. Each individual on board has a share and interest in the concern, and among themselves the maritime population is distinguished for good faith and attachment. In the vessels either commanded or owned by Chinese or Arabs, the same principle is attended to; and although the common sailors in these generally receive wages, the petty officers, who are also generally Javans, have some trifling interest in the cargo, the common men are protected by them, and the policy of the commanders induces every possible attention to the usages, prejudices, and comforts of the crews. They are able to assimilate more nearly with them, and to enter more immediately into their feeling and their wants, than it is possible for Europeans to do, and as they do not possess the authority to obtain crews by force, it is only by a character for good treatment that they can insure an adequate supply of hands. These vessels navigate throughout the whole extent of the Archipelago, to Malacca and Acheen on one side, and to the Moluccas and New Guinea on the other. They are manned exclusively by Javans, usually called Malays, and no

instances occur of the crews rising either upon the Arab or Chinese commander: they are, on the contrary, found to be faithful, hardworking, and extremely docile. How is it when Malays are employed in vessels belonging to Europeans? The Javans are originally not a seafaring people; they have an aversion for distant voyages, and require the strongest inducements to quit the land, even for a coasting expedition in the smooth seas of their own Archipelago, beyond which, if they ever engage themselves on board a colonial vessel, they make an express agreement, not to be carried: European vessels in want of hands for more distant voyages to Europe, India, and China, have been compelled therefore to resort to force or fraud, as the means of obtaining crews. The Dutch government were in the habit of employing people, known among the Javans by the term *sélong*, as kidnappers, who prowled about at night, pounced upon the unwary peasant who might be passing along, and hurried him on ship-board. When the direct influence of government was not used, the native regents or chiefs were employed to obtain people for the crews of vessels: this they did sometimes in the same manner, though more frequently condemning to sea as many as were required, by an indiscriminate draft on the neighbouring population. The native chiefs were perhaps paid a certain head-money, on what may have been considered by the European commanders as nothing more than *crimpage*. The people who were seized were seldom of a seafaring class, but almost entirely landmen, in many instances perhaps opium smokers, or persons obtained from the lowest and most worthless part of the community. Once embarked, their fate was sealed for ever, and due care was taken that they never landed again on Java, as long as their services as sailors were required.

In this manner are obtained that extensive class of sailors, denominated Malays, who are found on board almost every country ship in India, and inhabit the sea-ports in considerable numbers, particularly Calcutta, where they have a distinct quarter allotted them. They are taken from their home against their will, and in violation of all their views and habits. In general, neither their language or customs are in the least understood by their new master, for though most of the commanders in the eastern trade may speak the Malayan language, and be accustomed to the Malayan character, they know nothing of the Javan language, and but little of the manners, habits, and prejudices of the Javan people.

That numerous instances have occurred, in which they have appeared the foremost in mutiny and in the massacre of their officers, will not be denied; but it is well known, that many instances of ships being cut off by the Malay crews, have been occasioned by the tyrannical and inhuman character of the commanders; and however dreadful the massacre, some excuse may be made on the score of provocation, for a people low in the scale of moral restraint and intellectual improvement. In some cases they have been made the instruments and dupes of the villany of others, and have merely followed in the track of cruelty. In general, so little care seems to be devoted to the comforts of these people, and so much violence offered to their habits, that a person accustomed to observe the course of human action, and to calculate the force of excited passions, is almost surprized to find the instances of mutiny and retaliation are so few.

[60] From a course of experiments recently undertaken, and a careful examination of the bird, by Sir Everard Home, Bart., there is every reason to believe that the nature of the substance of which the edible birds'-nests are composed will be satisfactorily explained.

[61] Mr. Hogendorp makes the following observations on the cotton of Java. "This article of produce, which now, in order to provide the Company with a few hundred *píkuls* of cotton-yarn at a low rate, is only productive of vexation and oppression to the poor natives, might be made of the greatest value, both to Java itself and to the mother country. The plant grows in abundance and of good quality, especially if the best kinds of seeds are procured from the Coromandel Coast and the Isle of France. The cultivation of cotton is not at all injurious to any other branch, for after the rice harvest is the best season for planting the cotton, and before the rains, when the fields are again ploughed for rice, the cotton is ripe and gathered.

"Little of it is comparatively planted at present; indeed only the necessary quantity, after providing the natives with coarse cloths, for the government contingent. In rough cotton there is no trade at all: but, in fact, what trade is there on Java, except the monopoly trade of the Chinese?"

"Let us but suppose the cultivator to have a property in the soil, and that he, as well as the trader, were at liberty to buy and sell, how soon should we see the Javan planting cotton directly after his rice was reaped. After being cleaned by machinery and screwed into bales, it might be exported to China and Europe.

"There is no doubt that the Javan cotton would be as good at least, if not better, than the cotton of the English, whether from Bombay, Madras, and Bengal, and it might certainly be produced cheaper; but even suppose that, when cleaned and picked, it cost ten rix-dollars a *píkul*, the Javans would still be well paid."

[62] By an official statement of the quantity of sugar manufactured at Batavia and the various residencies of the island of Java, from the year 1779 to the year 1808, it appears that

In the year 1779 it was	30,131 <i>píkuls</i> .
In the year 1800	106,513
In the year 1801	107,498
In the year 1808	94,903

that during the first fourteen of these years, the quantity made and delivered over to the Company for export to Holland, Persia, &c. amounted to 642,234 *píkuls*, or to an average of 47,874 annually, two of these years being almost entirely unproductive, on account of the non-payment to the manufacturers of money, to enable them to carry on their business. During the latter half of the period, or from 1794 to 1808, the quantity manufactured and delivered over to the Company amounted to 917,598 *píkuls*, averaging 65,542 annually. All the sugar for export, during this period, as stated in the text, was delivered over at fixed rates to the government, and was placed under laws of the strictest monopoly. To shew the great practicability of an increase to almost any extent, we may adduce the sudden start in the supply occasioned by the American demand in 1800. In no preceding year had this article of produce been delivered over to the Company to a greater amount than 67,552 *píkuls*, and in that year the quantity sold at Batavia to Americans alone, amounted to 91,554, and for the subsequent years averaged 100,000 *píkuls*, and sold for 900,000 Java rupees, or 11,000*l.* sterling. The principal part of this was manufactured at Batavia, the quantity supplied by *Jawâna*, *Japâra*, *Chéríbon*, *Surabáya*, and *Semárang*, being but proportionally small till 1803, when *Japâra* contributed to the exports of the island in this article 12,219. In 1804, the same province supplied 21,175 *píkuls*. The disadvantage under which the manufacturer laboured, by forced deliveries at inadequate rates, need not be here insisted on, though it must be taken into the account in any estimate of the attainable increase of the manufacture.

[63] Mr. Hogendorp makes the following observations on the coffee and pepper of Java:—"In comparing the produce of the West Indian islands, according to their proportionate extent, population, and expenses of cultivation, I have frequently left off in the middle of my calculations; but I am sure that Java, on a very moderate calculation, can without difficulty yield fifty millions of pounds of coffee annually.

"For a long period, the planting of coffee was confined to the Batavian high and *Priáng'en* lands, and to *Chéríbon*, on the principles of that short-sighted and self-destroying policy and spirit of monopoly, by which the company and the government of Batavia have ever been characterized. It is only of late years that it has been permitted to extend and revive the cultivation in the eastern districts. But the Commissioners, in May 1796, ordered that the cultivation should be abolished; and in the month of

September in the same year, this order was countermanded, and the planting of coffee ordered to be promoted in the most rigorous manner possible. But what is to be expected from a country, where the natives are so treated, so oppressed? To-day the Javan is ordered to plant his garden with coffee trees: he does so, and although well aware how little he will get for the fruit, he sees them grow up with pleasure, considering their produce as a tribute which he must pay to his master for enjoyment of protection; but now, when they are about to bear fruit, he is ordered to root them out: he does so, and four months afterwards he is again ordered to plant others! Can a more infamous tyranny be imagined? Can it be credited, that any government should act so madly, so inconsistently? And yet this is the plain and real truth. But how can stupid ignorance, which by the vilest means, by base meanness, mercenary marriages, and every kind of low trick, rises into power and importance, and then becomes by wealth luxurious, and by flattery intoxicated, act otherwise? And will you, Batavians, continue to trust in such hands as these, your valuable possessions and interests in India?

"Pepper grows but slowly on any soil, and is so nice with regard to it, that in some places, where to all appearance there would be an abundant produce of the plant, it will not grow at all. The vine requires four or five years to produce fruit. The improvident Javan, who under the present despotic administration, can and will scarcely provide for his daily subsistence, finds this too long a delay between his labour and its reward: having, therefore, no sufficient motive to pursue the cultivation cheerfully or actively, he can only be driven to it by force; but let him once experience the advantage of property in land; let him see the trader ready with plenty of money to purchase the fruits of his labour; let him, if he should still be idle, observe his more industrious neighbour acquire wealth, by the sale of those articles which he slothfully declines to cultivate, and with it procure the necessaries or conveniences of life, and he will soon be induced, by emulation and the desire of ameliorating his condition, to plough and plant his ground. The Island of Java will then produce a considerable quantity of pepper, for which, if the cultivator obtains twelve rix-dollars per *píkul*, he will be amply paid.

"Although every thing goes on with difficulty at first, and it cannot be denied that it will require time and trouble to stimulate the Javans, who are now confounded, as it were, with tyranny and oppression, to industry and emulation, it is notwithstanding equally certain, that an improved system of administration, founded on property of the soil, freedom of person and trade, would by degrees, though perhaps much quicker than may be imagined, bring about such a change, and that Java might and would produce as much pepper for exportation annually as coffee, or about two hundred thousand *píkuls*, which will bring three thousand six hundred rix-dollars into the country."

In the year 1801, it was estimated by one of the first commercial houses in Europe, that the following quantities of pepper might be obtained from different ports of the Archipelago.

"PORTS *and* PLACES where PEPPER is to be had:—estimated in March 1801.

"At *Bencoolen*, belonging to the English, may be had about twelve hundred tons of pepper per annum.

"At *Prince of Wales Island*, belonging to the English, may be had at present only one hundred tons per annum: in a few years it will be five hundred tons.

"At *Susú*, on the west coast of Sumatra, belonging to the King of Acheen, may be had one thousand tons per annum.

"At *Acheen* and its ports, belonging to the King of Acheen, may be had about one thousand tons per annum: the Danes often go to these two ports.

"At *Tringano* and *Kalanton*, belonging to a Malayan prince, may be had about two thousand tons per annum: the Europe Portuguese ships often call at these ports on their way to China.

"At *Palembang*: the Dutch have a small fort here, and oblige the king to send all his pepper to Batavia; it may be about seven hundred tons per annum.

"At *Lampung*, on the south point of Sumatra: the Dutch have a small fort here, and they send all their pepper to Batavia; it may be about five hundred tons.

"At *Bantam* may be had five hundred tons: this belongs to the Dutch.

"At *Bánjer-másin*, on the south-west of Borneo: the Dutch have a fort here, and the rajah sends all his pepper to Batavia: it may be about twelve to fifteen hundred tons per annum.

"At *Chintabun*, near Siam, belonging to the King of Siam, may be had one thousand tons per annum: this goes to China in the king's junks."

[64] "Ceylon, it may be observed, will consume two thousand kóyans annually (four thousand tons). There is also a ready market at the Cape of Good Hope, for one thousand kóyans a year. A scarcity of this grain frequently happens on the coast of Coromandel, when the import of it from Java will yield great profit, if the traders are permitted to export it. The general freedom of commerce and navigation, and the encouragement such freedom holds out to the merchant, will establish and extend a ready communication and friendly relation between Batavia and the trading places of India. In the article of rice, Java possesses advantages superior to Bengal; for although this grain is generally very cheap there, yet the navigation from and to Bengal is always more difficult than that from and to Java, from whence, at all seasons of the year, the passage may be made to most parts of India: and in Bengal it often happens, that the rice is very scarce and dear, and even that a famine rages there. On the island of Java, on the contrary, although the crops may sometimes partially fail in a few places, a general and total failure never happens: at least there is no instance of it on record. It may also be considered, whether the exportation of rice from Java to Europe might not become an object of speculation. The cargo of a ship of five hundred lasts, or kóyans, would only cost fifteen thousand rix-dollars, which cannot be reckoned at more than thirty thousand guilders; and the kóyan being calculated at three thousand five hundred pounds, the only question would be, what would be the value of one million seven hundred and fifty thousand pounds of rice in Europe, and if the undertaking would afford a reasonable gain? Even China is sometimes much in want of rice, and the export of it to that country would often, if not always, turn out very advantageous."—*Hogendorp*.

Rice was exported both to England and China, during the provisional administration of the British government on Java.

[65] The rupees are throughout calculated at thirty stivers each.

[66] If current report is to be credited, the fate of this unfortunate prince has been at last sealed; and the undisputed successor of "that great and puissant king," to whom Queen Elizabeth gave an assurance, "that far from ever having cause to repent an intercourse with the English, he should have a most real and just cause to rejoice at it;" and to whom, on the part of the English nation, she gave a pledge, "that her promises were faithful, because the conduct of her subjects *would be prudent and sincere*"—has been obliged to abdicate his throne in favour of the son of a Pinang merchant!

[67] "We, the Batavians," says Mr. Hogendorp, "or rather our good and heroic ancestors, conquered these countries by force of arms. The Javans, who are immediately under our jurisdiction, acknowledge the Batavian nation or the East India Company as their lord or sovereign; but by so doing, although they resigned their political rights, they still retained their civil and personal liberty, at least their right thereto. But what relation do the Chinese bear to us, and what are the rights they can require from us? As foreigners and itinerant traders, this may be easily defined, but as inhabitants and settlers a further inquiry becomes necessary. To political rights, or to a share in the government

and revenues of the country, they have not the slightest claim, and as inhabitants, they cannot even claim the enjoyment of the same civil or personal privileges as the Javans: in the first place, because they are not natives of the country; secondly, because they take no interest in the welfare or preservation of the country; thirdly, because they only endeavour to derive their gain at the expense of the Europeans as well as the Javans, in order to return to China with the profits they make, or at least to send as much of it as possible to their families there; fourthly, because they have no regard whatever to the welfare of our country, and would be quite indifferent to the English, or any other nation, driving us from Java. For these reasons, I conceive that the Chinese have not the same right as the Javans to the freedom or privilege of citizens. The basis of all civil communities is incontrovertibly the sacrifice of a part of the liberty, rights, and even property of each individual, for the enjoyment and security of the remainder; and this remainder, when fixed, forms the civil freedom and privileges of such a community. Not only are the Chinese quite exempt from this sacrifice, but they are also, by the corruption of the Batavian government, much less burdened than all the other inhabitants, even the Europeans, and are besides favoured with considerable privileges and exclusive means of gaining wealth. These are facts, which no one who is acquainted with Batavia can or will contradict.

"Were impartial justice to be adhered to, the Chinese would be looked upon and treated only as foreigners, who are suffered and admitted, as long as it is not injurious to our interest and safety, to settle in our country and under our protection, seeking in trade or agriculture their means of subsistence and emolument, and to whom, on account of their numbers, it is allowed by our indulgence, as long as they conduct themselves well and peaceably, to preserve and practise their own manners and customs, and even in particular places, to dwell together under their own chiefs.

"All the Chinese who come to Java every year in such vast numbers, in the junks from China, or in other vessels from neighbouring places, are the refuse of their nation, and principally from a province, the natives of which are considered by their own countrymen the worst of the whole empire. These people come half naked and poor in the extreme: they add, therefore, so many more to the population, which must be supported by the country, to which however they contribute nothing. It must be acknowledged, they are, particularly at first, very active, industrious, inventive, and frugal. At Batavia they exercise almost every useful art, trade, and handicraft, they cultivate and produce the best vegetables, they work the sugar-mills, and appear therefore to be uncommonly useful and perhaps indispensable.

"The trade in the interior, wholesale and retail: the trade to sea, to the opposite shores, and elsewhere in the Straits, is entirely in their hands, and is almost wholly carried on by them. In all considerable places on the coast, as well as in the interior of Java, they have distinct towns, called kampongs, where they live under their own chiefs, and follow their own customs and manners. Finally, they have exclusively all the farms of the government taxes and revenues, both in the Company's districts and in the dominions of the native princes: by which means they are complete masters of all trade, internal and foreign; and are enabled to make monopolies in every thing, which they do accordingly in the most extensive manner. The burthens they have to bear are, on the contrary, very trifling; in fact, almost nothing: especially because they are exempt from all feudal and personal services, which are so oppressive to the Javans.

"To what can this impropriety and injustice be ascribed but to the government of Batavia? The Chinese have obtained all these favours and privileges by making considerable presents, and thus sacrificing the interests of the Company and the nation to their selfishness and avarice. These arbitrary governors of the East Indies have made the Chinese possessors of Java: for I undertake to prove, that the wealth of the Chinese on that island amounts to ten times as much as the property of all the Europeans added together, and that their profits every year bear the same proportion.

"With reference to their numbers and character, I am of opinion that the following resolutions regarding them might be adopted: That the Chinese on Java should be allowed to remain, and even that further arrivals of them should be permitted; care being taken, however, to keep them in good order, that they should be prevented from injuring the Javans, either by force or fraud: that they be not more favoured than others: that they should contribute a proportionate and equitable share towards the revenues of the state for their enjoyment of the rights of citizenship, in the same manner as other inhabitants, which can best be effected by means of a capitation tax. Uncultivated and uninhabited lands might then be granted or sold to the Chinese, as well as to the natives, to establish sugar-mills or plantations. By these means, every practicable use and advantage would be derived from them, as an industrious and active people, without doing any injury to the other inhabitants, and especially the Javans as natives of the country: and because they have no interest in our national welfare, they should be made, as an equitable compensation, to pay a higher rate to the state. In other respects, they may be completely subjected to our laws, and may be treated with kindness as well as justice.

"The number of Chinese on Java is much greater than is generally imagined, and annually more of them arrive by thousands. By connexions with the native women, their families increase in inconceivable numbers. These half-Chinese retain the language, religion, manners, customs, and even the dress of their fathers; and are generally called Pernakans, although that name is also frequently applied exclusively to those Chinese who embrace the Mahometan religion; and these, as a separate class of people, have their own chiefs, or sometimes confound themselves with the Javans, and can only be distinguished by their lighter complexion."

[68] Among the exports from Java for the Europe market, no particular notice has been taken in the text of the extent of the spice trade, the produce of the Moluccas having, during the provisional administration of the British government, been conveyed direct from Amboina to the port of London, without being landed and re-assorted at Batavia, as was formerly the case under the Dutch government.

The sovereign Prince of the Netherlands has, by a solemn act, abandoned his right to the feudal services of his native subjects in the Eastern Archipelago, but has at the same time reserved to the state the exclusive monopoly of the spices. It may perhaps have been deemed expedient, in aid of the finances of Great Britain, that this odious monopoly should have been permitted to remain for upwards of five years under her uncontrolled dominion; and that, while the cloves on Amboina were raised by forced services, the nutmeg gardens on Banda should have been cultivated by slaves. There may have been reasons also which induced her to continue the system of extirpation in the neighbouring islands, and to act up to those stipulations for depressing these unhappy countries, for which the Dutch have in all ages been so justly reprobated. But now that the sovereign, to whom they are again ceded, has recommenced the Dutch administration in the Eastern seas, with an appearance of something more like justice, humanity, and sound policy than we have been in the habit of witnessing for the last two centuries, it is to be hoped that the profits of two annual cargoes of spices, whatever they may amount to, will never be considered of sufficient importance to tempt a great and magnanimous nation longer to trample on the hallowed rights of humanity, and to persevere in a system, which, while it may have afforded a temporary profit, has tended to degrade, depopulate, and destroy the fairest countries in creation. If the nutmeg and clove trees were allowed to grow where Providence would seem to have ordained that in their natural course they should, and this trade were opened to a free commerce, nutmegs might perhaps be procured as cheap as betel-nut, and cloves as cheap as pepper.

"In the Spice Islands," observes Adam Smith, "the Dutch are said to burn all the spiceries which a fertile season produces beyond what they expect to dispose of in Europe, with such a profit as they think sufficient. In the islands where they have no settlements they give a premium to those who collect the blossoms and green leaves of the clove and nutmeg trees which naturally grow there, but

which this savage policy has now, it is said, completely exterminated. Even in the islands where they have settlements, they have very much reduced, it is said, the number of those trees. If the produce even of their own islands was much greater than what suited their market, the natives, they suspect, might find means to convey some part of it to other nations; and the best way, they imagine, to secure their own monopoly, is to take care that no more shall grow than what they themselves carry to market. By different acts of oppression, they have reduced the population of the Moluccas nearly to the number which is sufficient to supply with fresh provisions and other necessities of life, their own insignificant garrisons, and such of their ships as occasionally come there for a cargo of spices. Under the government of the Portuguese, however, these islands are said to have been tolerably well peopled."

Had Dr. Smith written at the present day he might have heightened the picture by observing, that so far from even being able to supply the garrisons, these islands have long been considered incapable of raising sufficient supplies for their own subsistence; they have for many years depended almost entirely on Java for rice and the common necessities of life, and latterly supplies have been sent to them from Bengal.

[69] This general remark is not intended to apply to the traders of Pinang (Prince of Wales' Island), who are in general well-informed and most honourable in their dealings, possessing great experience in the trade, and acquaintance with the habits and character of the natives: but this establishment is comparatively of recent date, and the very general view here taken has reference to the intercourse which has subsisted during the last century.

[70] See an able report on the Eastern Islands, by R. T. Farquhar, Esq. late Lieutenant-Governor of Prince of Wales' Island.

[71] GOLD.—From a calculation recently made, it appears that the number of Chinese employed in the gold mines at Mentrada and other places on the western side of Borneo, amounts to not less than thirty-two thousand working men. When a mine affords no more than four *bengkals* (weighing about two dollars each, or something less than a *tahil*) per man in the year, it is reckoned a losing concern, and abandoned accordingly. Valuing the *bengkal* at eighteen Spanish dollars, which is a low rate of estimation, and supposing only four *bengkals* produced in the year by the labour of each man, the total produce is 128,000 *bengkals*, worth 2,224,000 Spanish dollars, equal to 556,000*l.*, at the rate of five shillings the dollar. But it is asserted, that upon the general run of the mines, seldom less than six *bengkals* per head has been obtained, and in very rainy seasons seven. Taking the medium at six and a half *bengkals*, the 32,000 Chinese will procure 208,000 *bengkals*, which at eighteen Spanish dollars the *bengkal* is 3,744,000 Spanish dollars, equal to 936,000*l.* Such is the result of a very moderate calculation of the produce of these mines. According to an estimate made in the year 1812, the annual produce of the mines on the west coast of Borneo was estimated at 4,744,000 Spanish dollars, being an excess of a million sterling. The quantity of gold procured on Sumatra, the supposed golden Chersonesus of the ancients, is according to Mr. Marsden about 30,800 ounces, which, at 4*l.* sterling the ounce, is worth 123,200*l.*, equal to 492,800 Spanish dollars.

With respect to the disposal of the gold from the mines of Borneo, it may be observed, that every native Chinese, whether employed in the mines, in agriculture, as merchant or artificer, manages every year to remit at least the value of one *tahil*, more or less, of gold to his relations in China. These remittances are generally made by the junks in gold, as it saves freight, is more easily smuggled on shore without the notice of the rapacious Mandarin, and remitted over-land to the residence of their families. Taking the Chinese male population who can thus remit at double the number employed in the mines, and supposing one half to be born in the country, most of whom may not remit to China, this remittance would amount to 34,000 *bengkals* or *tahils*, which at eighteen Spanish dollars is 612,000 dollars, or 153,000*l.*

It is calculated that, one year with another, at least five hundred Chinese return in the junks to their native country with a competency. Several have been known to take away one thousand *bengkals* of gold, many from three to five hundred, but very few return before they have cleared a competency of two thousand dollars, or from one hundred to one hundred and twenty *tahil* of gold. This goes partly in gold; though they prefer investing a part of it in tin from Banka, opium, and other articles. Say, however, that they remit one half in gold, five hundred men, at one thousand dollars each, will give five hundred thousand dollars, which added to the small family remittances, accounts for an amount exceeding one million of dollars, or 250,000*l*. This calculation, however, seems to be far within the mark, and gives less by one half than what is usually stated to be remitted to China from the Bornean mines, which has been estimated at a loose guess at two millions of dollars, or 500,000*l*.

A further amount of not less than the value of a million of dollars (250,000*l*.) is supposed to find its way annually to Western India, and principally to Bengal, *viâ* Batavia, Malacca, and Pinang, for the purchase of opium and piece goods. The surplus enriches Java and some of the other islands, in exchange for salt, tobacco, coarse cloths, &c.

As the mines are worked with so little expence of machinery, the funds necessary for commencing an undertaking of the kind are small; and as the property of the soil belongs to the first occupant, almost every Chinese would become a proprietor, but from the mode by which their services are, in the first instance, secured by the council of proprietors or kongsis. A parcel of half-starved Chinese, enchanted with the prospect of wealth on the golden shores of Borneo, readily find a passage in the annual junks that sail from the mother-country to Borneo, at ten dollars a head. On their arrival, being unable to pay the passage money, and the tax of a dollar per head, established by the native authority, while their immediate wants of food, clothing, and habitation, are urgent and imperious, the proprietors of the mines find it easy to engage their services for three or four years. In some other cases, agents are employed to obtain men from China, on stipulated agreements, to work for a number of years; the usual rate of payment to the miners so engaged is not considered to average less than five Spanish dollars a month. No sooner, however, are these engagements concluded with their masters, than a number of them club together with the funds they have been able to save, and commence a new mine upon their joint account, in a few years acquiring a competency to return to their native country.

DIAMONDS.—There appears to be no just foundation for the idea, that the diamonds of Borneo are inferior to those of Golconda. Many of an inferior quality have no doubt found their way into the market, because there was perhaps less skill and judgment in the selection; but the value of diamonds here, as well as every where else, depends upon their shape, size, and water, and in this respect the diamonds of Borneo will bear a comparison with those of any country yet known. Indeed, as far as we may judge from the present state of our information, the Lándak mines alone are as productive, and its diamonds as precious, as any other in the world.

The principal mines where diamonds are regularly dug for on Borneo, and found in any considerable quantities, are those of Lándak, Sângau, on the great river Lawi, and the districts of Bánjer-másin. Diamonds have been occasionally found within the limits of Borneo Proper, at Mátan and Sukadána. The mines of Lándak are as ancient as the Malayan dominion on the islands, those of Sângau are of more recent date, and those of Bánjer-másin are said to have been first discovered in the reign of Sultan Sepoh, from whom the present sultan is the fourth in descent.

Diamonds are not only found in the bottom of rivers when dry, but at the foot of craggy hills and mountains. The *párits*, or mines, are dug to the depth of from one to five fathoms only; but experience has invariably proved, that the deeper they are dug, not only are the diamonds more abundant, but superior in size, shape, and water. The soil which produces diamonds is known from a species of earth called by the natives *lábor* or *lábor-gig'gi*. This is sometimes black, sometimes

white, red, orange, and green: it is a species of earth which stains the clothes of the labourer, and is distinguished by many names.

At Lándak there are ten *párits* worked by Chinese, and in each from twenty to thirty labourers employed. As a general average, eight Chinese are supposed to find about eight *bengkals* of diamonds in a year. From two to three hundred of the smallest sort are supposed to go to a *bengkal*, valued at from twenty to twenty-four rupees. This is independent of the larger ones, which are casual. So far back as the year 1738, the Dutch annually exported from the produce of these mines, diamonds to the value of from two to three hundred thousand dollars.

Few courts of Europe could perhaps boast of a more brilliant display of diamonds than, in the prosperous times of the Dutch, was exhibited by the ladies of Batavia, the principal and only mart yet opened for the Bornean diamond mines, and whence those known in the European world have been procured. With the decline of the Dutch government, however, the demand has decreased, and the mines are now almost neglected, the numerous diamond-cutters not being able to obtain a livelihood. Formerly, when more Chinese were employed in the mines of Lándak, diamonds from ten to thirteen carats were common in the public markets. The Pangéran of Lándak now wears one of eighteen, and another of fourteen carats and a half. Since Java has been in the possession of the English, rough diamonds from Borneo have been sent to England, and, even in a very unfavourable state of the market, turned out an advantageous remittance.

Among the larger diamonds which these mines have produced, it may not be uninteresting to mention, that the great diamond now in the possession of the Sultan of Mátan, which has been seen and examined by Europeans, weighs three hundred and sixty-seven carats: it is of the shape of an egg indented on one side. It is, however, uncut; and, on this account, it may be difficult to say, whether it will become the largest cut diamond ever known; for the famous diamond of Aurung Zebe, called the Mogul, in its rough state weighed seven hundred and ninety-five carats, and was then valued at 600,000*l.*, but when cut was reduced to two hundred and seventy-nine carats. This celebrated diamond, known by the name of the Mátan diamond, was discovered by a *dáyak*, and claimed as a droit of royalty by the Sultan of the country, Gúru-Láya; but was handed over to the Pangéran of Lándak, whose brother having got possession of it, gave it as a bribe to the Sultan of Súkadána, in order that he might be placed on the throne of Lándak: the lawful prince, however, having fled to Bantam, by the aid of the prince of that country and the Dutch, succeeded in regaining possession of his district, and nearly destroyed Súkadána. It has remained as an heir-loom in the family of these princes for four descents, and is almost the only appendage of royalty now remaining.

CHAPTER VI.

Character of the inhabitants of Java—Difference between the Súndas and the Javans—The Lower Orders—The Chiefs—Nature of the Native Government—Different Officers of the State—Judicial Establishments and Institutions—Laws, and how administered—Police Institutions and Regulations—Military Establishments—Revenue.

Having, in the foregoing pages, attempted to introduce the inhabitants of Java to the reader, by an account of their person, their manners, and employment in the principal departments of agriculture, manufactures, and commerce, I shall now endeavour to make him, in some degree, acquainted with their intellectual and moral character, their institutions, government, and such other particulars as may contribute to enable him to form some estimate of their relative rank in the scale of civilized society.

From what has been stated of their progress in the manufacturing and agricultural arts, their general advancement in knowledge may be easily estimated. There are no establishments for teaching the sciences, and there is little spirit of scientific research among them. The common people have little leisure or inclination for improving their minds or acquiring information, but they are far from being deficient in natural sagacity or docility. Their organs are acute and delicate, their observation is ready, and their judgment of character is generally correct. Like most Eastern nations, they are enthusiastic admirers of poetry, and possess a delicate ear for music. Though deficient in energy, and excited to action with difficulty, the effect probably of an enervating climate and a still more enervating government, they are capable of great occasional exertion, and sometimes display a remarkable perseverance in surmounting obstacles or enduring labours. Though ignorant and unimproved, they are far from wanting intelligence in the general objects of their pursuit, and frequently astonish Europeans by the ingenuity of their expedients, and the facility with which they accomplish difficult operations by apparently inadequate means.

People in a rude state of society are not always prepared to admit their inferiority, or inclined to adopt manifest improvements: what is much beyond their skill or their power, may excite their wonder, but does not always tempt their imitation. This is more peculiarly the case, where national pride or religious prejudice stand in the way; and the contempt of unbelievers, with which the Mahomedan system inspires its votaries, leads them usually to undervalue the arts in which others excel, or the instruction which they communicate. The Javans, though far from deficient in national pride, and though Mahomedans, are free from this senseless and pernicious prejudice, and are ready to acknowledge the superiority of the Europeans, as well as disposed to imitate their arts and to obey their direction. No people can be more tractable; and although their external appearance indicates listlessness and sometimes stupidity, none possess a quicker apprehension of what is clearly stated, or attain a more rapid proficiency in what they have a desire to learn. The restraints under which conversation labours by the necessity of using different dialects in addressing different orders of society, as well as the respect paid to superiority of rank, prevents them from such a frequent intercourse of thought and opinion as might otherwise be expected, and often renders them, to appearance, reserved and taciturn, although in fact, they are social, cheerful, and good humoured.

An uninstructed people are often credulous, and the Javans are remarkable for their unsuspecting and almost infantine credulity. Susceptible of every impression that artifice may attempt to make upon them, and liable to every delusion propagated by the prejudiced or the designing, they not inaptly compare themselves to a piece of pure white cloth, on which any dye or shade of colour may be laid. They lend an easy credence to omens, to prognostics, to prophets, and to quacks. They easily become the dupes of any religious fanatic, and credit, without scruple or examination, his claim to supernatural powers. Their profession of Mahomedanism has not relieved them from the superstitious prejudices and observances of an anterior worship: they are thus open to the accumulated delusion of two religious systems.

They are great observers of lucky or unlucky days, or natural phenomena, and undertake no journey or enterprize without attending to them. It is unlucky to go any where on the day that you hear of the death of a friend: the sight of two crows fighting in the air is unlucky: two small birds (called

prenjak) fighting near a house, afford a prognostic of the arrival of a friend from a distance. Explosions or noises heard from the mountains not only excite terror for their immediate consequences, but are thought to forebode some great calamity, unconnected with the convulsions of nature, of which they are the symptoms, such as a sanguinary war, a general famine, or an epidemic sickness. The eclipses of the sun and moon powerfully excite this superstitious spirit, and induce many absurd notions and observations. Earthquakes furnish certain prognostics, according to the day of the month on which they happen. In none of their superstitions, however, is there any thing of that gloomy, dark, or malignant cast, which distinguishes those of less favoured climates or of more savage tribes.

Although, on many occasions, listless and unenterprising, their religious enthusiasm is no sooner excited, than they become at once adventurous and persevering, esteeming no labour arduous, no result impossible, and no privation painful. We witnessed an instance, both of their simplicity and of their energy, connected with this part of their character, which excited our astonishment. The population of some of the districts of *Bányumás* contributed their voluntary labour, in 1814, to the construction of a broad high road, from the base to the summit of one of the loftiest mountains on the island (the mountain *Súmbing*), and this extraordinary public work was almost completed, before intelligence of its commencement reached the government. It was in consequence examined, and found to be a work of immense labour and care, but without the least appearance of object or utility. Upon enquiring into the motive of such a singular undertaking, it was learnt that a general belief prevailed, that there was a very holy man at the top of the mountain, who would not come down till there should be a good road made for him. The *Madúrese* are said to believe, that the spirits of the dead revisit the earth; but this does not appear to be a Javan superstition.

Their prejudices are neither very numerous nor unyielding, and seem generally to have originated in some laudable feeling or amiable weakness. Their nationality, which is very strong, although it delights in the traditionary narratives of ancient Javan exploits, and supports a hope of future independence, which they are not backward to express, does not lead them to despise the character, or to undervalue the acts of strangers. They have a contempt for trade, and those of higher rank esteem it disgraceful to

be engaged in it; but the common people are ever ready to engage in the labours of agriculture, and the chiefs to honour and encourage agricultural industry. Those of the highest rank and greatest authority, generally attend at the opening of new *sáwah* fields, performing part of the work with their own hands, and leading their inferiors or dependents, as they express it, to pay respect to the earth, in whose honour they also observe annually the *sedéka búmi*, or feast to the earth. It is in the same spirit that the buffalo, as the chief assistant of the husbandman, is viewed with such peculiar regard, that in some of the interior districts, new-born infants are sometimes carried to be breathed upon by them, from a superstitious belief that such a ceremony will render them fortunate.

Notwithstanding the despotic nature of their government, and the feudal principles on which it rests, the Javan must be considered as a patriarchal people, still retaining many of the virtues, and all the simplicity, which distinguish that state of society. Their village settlements constitute detached societies, under their local chief and priest, and the same internal concord prevails in these little associations which characterises patriarchal tribes. Vicinity and daily intercourse afford opportunities of conferring real assistance and acts of kindness: injustice and even violence may sometimes be committed against the inhabitants of other villages, but very seldom by the inhabitants of the same village against each other. The patriarchal spirit of the Javans may be further traced, in the veneration which they pay to age, the respect and acquiescence with which they receive the maxims or the counsels of experience, the ready contented submission which they shew to the commands of their immediate superiors, the warmth of their domestic attachments, and the affectionate reverence with which they regard and protect the tombs and the ashes of their fathers. To the same description of feelings may be referred that consideration for ancestry, that attention to the line of descent, and that regard to the history and merits of distant kindred, which in the meanest people appears often to assume the character of family pride.

These observations apply principally to the inhabitants of villages, at some distance from the seats of the princes or regents, and the contagion of the larger capitals, and more particularly to the people of the *Súnda* districts. Those of higher rank, those employed about court, or in administering to the pleasures or luxuries of the great, those collected into the capitals or

engaged in the public service, are frequently profligate and corrupt, exhibiting many of the vices of civilization without its refinement, and the ignorance and deficiencies of a rude state without its simplicity. The people in the neighbourhood of Batavia are the worst in the Island, and the long intercourse with strangers has been almost equally fatal to the morals of the lower part of Bantam. The population collected at the native capitals is naturally influenced, to a certain extent, by the vices of the court; but the further they are removed from European influence and foreign intercourse, the better are their morals and the happier are the people.

In attempting to exhibit some of the more striking features of the Javan character, it becomes necessary to distinguish between the privileged classes of society and the mass of the people. Long continued oppression may have injured the character of the latter, and obliterated some of its brighter traits; but to the former, the constant exercise of absolute dominion has done a more serious injury, by removing every salutary restraint on the passions, and encouraging the growth of rank and odious vices. In the peasantry we observe all that is simple, natural, and ingenuous: in the higher orders we sometimes discover violence, deceit, and gross sensuality.

Where not corrupted by indulgence on the one hand, or stupified by oppression on the other, the Javans appear to be a generous and warm-hearted people. In their domestic relations they are kind, affectionate, gentle, and contented; in their public, they are obedient, honest, and faithful. In their intercourse with society, they display, in a high degree, the virtues of honesty, plain dealing, and candour. Their ingenuousness is such, that as the first Dutch authorities have acknowledged, prisoners brought to the bar on criminal charges, if really guilty, nine times out of ten confess, without disguise or equivocation, the full extent and exact circumstances of their offences, and communicate, when required, more information on the matter at issue than all the rest of the evidence. Although this may, in some degree, be the result of the former use of torture, it cannot be wholly so.

Though not much addicted to excess, and of rather a slow temperament, they are in general liberal and expensive, according to their means, seldom hoarding their wealth, or betraying a penurious disposition. Fond of show and pomp, they lay out all their money, as soon as it is acquired, in the purchase of articles of dress, horses, splendid trappings, &c.: but they possess a quality which is not always joined with a love of splendour, either

in nations or individuals; they are cleanly in their persons, and pay the greatest attention to neatness, as well as to glare and finery.

Hospitality is universal among them; it is enjoined by their most ancient institutions, and practised with readiness and zeal. The Javans are exceedingly sensible to praise or shame^[24], and ambitious of power and distinction; but their national oppressions or agricultural habits have rendered them somewhat indifferent to military glory, and deprived them of a great portion of their ancient warlike energy. They are more remarkable for passive fortitude than active courage, and endure privations with patience, rather than make exertions with spirit and enterprize.

Though living under a government where justice was seldom administered with purity or impartiality, and where, of course, we might expect to see the hand of private violence stretched out to punish private wrong, or a general spirit of retaliation and insidious cruelty prevailing, the Javans are, in a great degree, strangers to unrelenting hatred and blood-thirsty revenge. Almost the only passion that can urge them to deeds of vengeance or assassination, is jealousy. The wound given to a husband's honour by seducing his wife, is seldom healed, the crime seldom forgiven; and what is remarkable, the very people who break the marriage tie on the slightest caprice, or the most vague pretence, are yet uncommonly watchful over it while it remains entire. They are little liable to those fits and starts of anger, or those sudden explosions of fury, which appear among northern nations. To this remark have been brought forward as exceptions, those acts of vengeance, proceeding from an irresistible phrenzy, called *mucks*, where the unhappy sufferer aims at indiscriminate destruction, till he himself is killed like a wild beast, whom it is impossible to take alive. It is a mistake, however, to attribute these acts of desperation to the Javans.

That such have occurred on Java, even during the British administration, is true, but not among the Javans: they have happened exclusively in the large towns of Batavia, *Semarang*, and *Surabaya*, and have been confined almost entirely to the class of slaves. This phrenzy, as a crime against society, seems, if not to have originated under the Dutch, certainly at least to have been increased during their administration, by the great severity of their punishments. For the slightest fault, a slave was punished with a severity which he dreaded as much as death; and with torture in all its horrid forms before his eyes, he often preferred to rush on death and vengeance.

Atrocious crimes are extremely rare, and have been principally owing to misgovernment when they have occurred. In answer to what has been asserted concerning robberies, assassinations, and thefts, it may be stated, that during the residence of the English, an entire confidence was reposed in the people, and that confidence was never found misplaced. The English never used bars or bolts to their houses, never travelled with arms, and no instance occurred of their being ill used. The Dutch, on the contrary, placed no confidence: all their windows were barred, and all their doors locked, to keep out the treacherous natives (as they called them), and they never moved five miles abroad without pistols and swords. What could be expected by a government that derived a principal part of its revenue by the encouragement of vice, by the farms of gaming, cock-fighting, and opium shops? After the two former were abolished by the English, and the local government had done all in its power to discourage the latter, a visible amelioration took place in the morals of the lower ranks.

Hordes of banditti, formidable for their numbers and audacity, formerly infested some parts of the country, particularly the provinces of Bantam and Chéribon; but since they have been dispersed by the strong hand of government, the roads of Java may be travelled in as much security as those of England.

Much has been said of the indolence of the Javans, by those who deprived them of all motives for industry. I shall not again repeat what I have formerly on several occasions stated on this subject, but shall only enter a broad denial of the charge. They are as industrious and laborious as any people could be expected to be, in their circumstances of insecurity and oppression, or as any people would be required to be, with their advantages of soil and climate. If they do not labour during the whole day, it is because such persevering toil is unnecessary, or would bring them no additional enjoyments. The best refutation of the charge of indolence is to be found in the extent of their cultivation, the well dressed appearance of their rice fields, and the abundant supplies of their harvests. They generally rise by daylight: at half-past six they go out to the rice fields, where they employ their buffaloes till ten, when they return home, bathe, and refresh themselves with a meal. During the violent heat of the noon they remain under the shade of their houses or village trees, making baskets, mending their implements of husbandry, or engaged in other necessary avocations,

and at about four return to the *sáwahs* to labour them, without buffaloes or other cattle. At six they return to their homes, sup, and spend the remainder of their time till the hour of rest (which is generally between eight and nine) in little parties for amusement or conversation, when the whole village becomes a scene of quiet content and pleasure. The same round of toil and relaxation is observed during the season for garden culture, dry field labour, or other employments.

Under this system, the villagers seem to enjoy a greater degree of happiness than they could derive from those increased means that would result from increased exertion. I can bear testimony to their general cheerfulness, contentedness, and good humour, for having visited their villages at all seasons, and often when least expected or entirely unknown, I have always found them either pleased and satisfied with their lot when engaged at their work, or social and festive in their hours of pleasure. One observation generally made and admitted, would seem to militate against this part of the Javan character; they are remarked to be envious and jealous of one another's success: but if this trait of character be with difficulty reconciled to their general reputation for contentedness and benevolence, it is surely still more inconsistent with that indolent apathy with which they are often charged.

It will appear throughout their history, that when strongly excited by the animosities of the constant wars in which they were engaged, they were frequently guilty of acts of great barbarity: such as decapitating a vanquished enemy, and kicking his head about like a football. In war and politics, much is not to be said in their favour, stratagem and intrigue being relied upon in preference to discipline, courage, or good faith: even the Chinese, during what is called the Chinese war on Java (A.D. 1750), would appear to deserve a higher character for bravery and good faith than the Javans. But it is reasonable to attribute this, in some measure, to the degrading influence of European despotism. A great disregard for the *little people* is shewn throughout their political history, as is particularly exemplified in the instance of a mock battle that was fought between the Chinese and Javans, near *Semárang*, in order to impose upon the Dutch. The Chinese wished to know how they should act upon the occasion. "Attack the whole army of the Javans by surprize," said the Javan

negotiators," but be careful not to kill any of the chiefs or great people, and it will be a sham fight."

Of their nationality it may be observed, that ever since the first arrival of Europeans, they have neglected no opportunity of attempting to regain their independence. A reference to the chapters on history will be sufficient to illustrate this, as well as to shew the national feeling on the encroachments and assumptions of their European rulers. In the great cause of national independence all would unite, but they seem hardly to be sufficiently advanced in civilization to effect such an object, without the risk of relapsing into many barbarities, from the practice of which they have been weaned, by a long continuance of established government and general tranquillity. Quiet and peaceable as the Javans now are, were they once roused to insurrection, their blood would rapidly boil, and they would no doubt be guilty of many excesses.

I might illustrate the Javan character still further by a comparison of it with the Malayan, by shewing, from the remains of those customs that are to be referred to an anterior and milder system, how much it has been altered by the introduction of Mahomedanism, and by giving an estimate of the effects produced upon it by the government of the Dutch; but this would anticipate some observations which will be more appropriate in other parts of this work.

Of the causes which have tended to lower the character of the Asiatics in comparison with Europeans, none has had a more decided influence than polygamy. To all those noble and generous feelings, all that delicacy of sentiment, that romantic and poetical spirit, which virtuous love inspires in the breast of an European, the Javan is a stranger, and in the communication between the sexes he seeks only convenience, and little more than the gratification of an appetite. But the evil does not stop here: education is neglected and family attachments are weakened. Among the privileged orders, the first wife is generally selected by the friends of the party, from motives of interest, and to strengthen family alliances, and the second is rather to be considered as the object of the husband's choice. But if his circumstances admit of it, he has no scruple to entertain other women as concubines, who hold an honourable rank in his household. The progeny from these connections is often immense. It has already been stated, that a Javan chief has been known to have upwards of sixty acknowledged

children; and it too often happens, that in such cases sons having been neglected in their infancy, become dissipated, idle and worthless, and spring up like rank grass and overrun the country, or serve but to fill up a long and useless retinue. Fortunately for the peasantry, who are the mass of the population, they have escaped this deteriorating institution; and perhaps much of the comparative superiority of the character of the peasantry over that of the higher orders is to be attributed to this advantage. The higher orders have also been more exposed to the influence of Mahomedanism and European innovation; and if the former has removed from their usages some traits of barbarism, and tended to the developement of their intellectual qualities, it has introduced Mahomedan vices; and the European power having gradually obtained its supremacy over the island, rather by stratagem and intrigue than by open conquest, it is probable that the necessity under which the natives found themselves to resist its encroachments by similar means, has powerfully contributed to corrupt their natural ingenuousness. It is not at the court of the sovereign, penned up as he now is, and kept like a bird in a cage by the intrigues and power of the European authority, that we are to look for the genuine character of the people; neither is it among those numerous chiefs and petty chiefs attendant on the European authorities, who by continual association have, in a great degree, assimilated with them. What we have said of the Javans must therefore be considered, as more particularly applicable to the peasantry or cultivators, who compose three-fourths of the whole population, and is to be received with some reserve in its application to the higher classes.

Thus far I have given a faithful representation of the people as they appeared to me; but it may be amusing to the reader to read the Javan character, as transcribed from the impressions of the Dutch. The following is an official account^[75] of this people given by a subject of that nation, which has contributed so much to depress and degrade them.

"If the Javan is a person of rank, or in affluent circumstances, he will be found superstitious, proud, jealous, vindictive, mean, and slavish towards his superiors, haughty and despotic towards his inferiors and those unfortunate beings that are subject to his orders, lazy and slothful.

"The lower class is indolent and insensible beyond conception, and although certain persons, who presume to be perfectly acquainted with the character of the Javan, maintain the contrary, still I am convinced by daily

experience, that the Javan in general is most shockingly lazy, and that nothing but fear of his superior, and apprehension of being punished, or momentary distress or want, can compel him to labour. If left to himself, he will do no more than what is absolutely requisite to furnish the necessities of life, and as he needs but little, his labour is proportionate: yet as soon as he has a sufficiency for four days, or for the next day only, nothing will put him in motion again but force or fear.

"Cowardly, vindictive, treacherous, inclined to rob and to murder rather than work, cunning in evil practices, and unaccountably stupid (supposed intentionally,) if any good is required of him. These are the principal traits of the Javan character.

"The *Maláyu*, speaking of him as an inhabitant of this island, because I am unacquainted with the character of those living at a distance, is possessed of a little more courage and activity, fond of small trade and travelling, and but seldom a robber like the Javan, whom in other respects he very much resembles. A *Maláyu*, who is a little cunning, will, as soon as an opportunity offers, commit a fraud, especially when he has had some loss which he wishes to retrieve."

Others of the colonists, and some particularly who are likely to have greater influence with the restored government, entertained more correct, because more favourable opinions of the Javans, coinciding nearly with those which I have stated as my own.

The following extracts are intended to convey some notion of Javan ethics. The first is from a popular work, called *Raja Kapa-kapa*^[76].

"It is incumbent upon every man of condition to be well versed in the history of former times, and to have read all the *chiríta* (written compositions) of the country: first, the different *Ráma*, the *B'rata yúdha*, *Arjúna wijáya*, *Bíma súchi*; secondly, the different accounts of *Panji*; thirdly, the *Júgúl múda*, *Pralámbang*, and *Jáya langkára*; also to know their different tunes, as well as the mode of striking the *gámelan*; he must know how to count the years, months, and days, and comprehend the *Sangkála*, understand the *Káwi* language, and also must be clever in all

<i>Niúng'ging</i>	Painting;
<i>Ukir ukir</i>	Carving in wood;

<i>Pándi</i>	Iron-work;
<i>Kemásan</i>	Gold-work;
<i>Argéding</i>	Musical instrument making;
<i>M'ráng'gi</i>	Kris-sheath making;
<i>N'gapús</i>	Compositions (literary);
<i>Gárdji</i>	Sewing with the needle; working;
<i>Anyára-wedi retna</i>	Jewellery;
<i>Anyádur-rasa</i>	In gilding and the application of quicksilver.

And he must also be skilled in horsemanship, and in the management of an elephant, and have courage to destroy all bad men, and drive away all women of loose character."

The *Níti sástra* is a work of the greatest celebrity on Java: the original is in the *Káwi* language, but there are many versions. The following is translated from a modern version in the present language of Java.

"Praise be to *Batára Gúru*, who is all powerful! to *Batára Vishnu* (*wísnu*), who purifieth the minds of men! and to *Batára Súria*, who enlighteneth the world! May they render their divine assistance to the author who composeth this work, *Níti Sástra*, which contains an account of the truths to be found in the sacred writings, and which are highly necessary to be known by all public officers.

"A man who cannot regulate his conduct according to circumstances, and to the situation in which he may be placed, is like unto a man who has lost the senses of taste, and enjoyeth not the advantage of *síri*, for such a man doth not shine in the world, however fair may be his appearance.

"A man who is ignorant of the sacred writings, is as one who has lost his speech; for when these become the conversation of other men, he will be under the necessity of remaining silent.

"It is an abomination to the Divinity to worship him in an unclean place; and the man who does so may be compared to one who eats another man's bread without his consent. The food is unwholesome to him, even as if he ate of his own bread

with aversion, in which case he resembles the poor man who overeats himself and afterwards suffers from hunger.

"A woman who takes not a husband until her hair becomes grey and her teeth fall out, is despicable in her own eyes, because men will no longer feel any inclination to her.

"A man, to be accounted able, must know how to adapt his words to his actions and his actions to his words, so that he may give offence to no one, but render himself agreeable to his companions: he must also know how to command in war, and to inspire his followers with courage.

"In order to obtain this distinction, a man must conduct himself towards his equals even as a lover conducts himself towards his mistress; for as the lover cannot obtain his object without flattery and indulgence, so must we strive to obtain the good will of mankind by flattering them occasionally, and by indulging them in those things to which they are most inclined, and which consists, if we are in company with religious men, in treating of religious matters, and if in company with warriors, in treating about war. This will not only make them like us the better, but at the same time, excite them to excel in their profession.

"The subtle nature of the snake, and the venom of its poison, as well as the ferocious disposition of the tiger, may be removed by sympathetic remedies; the wild elephant may also be tamed by means of the well-known small iron hook: but the fierceness of the warrior, when once in close engagement, is not to be tamed, unless his enemy surrender; and even then not entirely, for although the vanquished surrender, it is to be inferred that he still harbours resentment for the loss of his freedom, and the conqueror must keep a lively watch over the vanquished, lest he still oppose him.

"It is well known that waters, however deep, may be fathomed; but the thoughts of men cannot be sounded. In order to know the nature of another, we must attentively observe his appearance, his manner of speaking, and his judgment; and

if a man gives himself out as a holy man, it must be proved by his observance of the service of the Deity and his knowledge of the sacred writings.

"Such a man is distinguished, who is able to expound all abstract expressions.

"A rich man, who maketh not use of his riches in procuring for himself good food and clothing, is an abomination, and ought not to be admitted into the society of the learned or men of rank; neither ought a man, who has learnt a profession or studied religion, but who still continues attached to his idle and vicious propensities.

"The man who advances in years, and he who is too lazy to labour, and does nothing but eat and sleep, is like a sheep, which is useless except on account of its flesh.

"It is said, that neither the ravens nor the *gadárbo* birds, are good for man; but much less are such men who having once embraced a holy life, return to worldly pursuits, or such as can find it in their hearts to seduce the wives and daughters of their friends to commit adultery.

"The water in a vessel which is only partly full will by the least agitation splash on the sides: experience also proves, that the cow which has the loudest voice gives the least milk. So it is with men: those who have least understanding or wealth make the greatest noise and show; but in reality they are inferior, and all they say and do vanisheth like smoke.

"Friends must be faithful and forbearing towards each other, otherwise the consequences will be fatal to both. Of this we have an example in the fable of the tiger and the forest.

"The forest and the tiger lived together in close friendship, so that no one could approach the forest, for the tiger was always in the way; nor the tiger, for the forest always afforded him shelter. Thus they remained both undisturbed, on account of the mutual security they afforded to each other; but when the tiger abandoned the forest and roamed abroad, the people

seeing that the tiger had quitted it, immediately cut down the forest and converted it into plantations: the tiger, in the meantime, taking shelter in a village, was seen by the people, who soon found means to kill him. In this manner, both parties, by abandoning their mutual duties to each other, were lost.

"A child ought, in every respect, to follow in the footsteps of its father; but this is seldom the case, either among men or animals in general. Among the latter, however, there are three sorts which follow their parents in every respect: all kinds of fish, frogs, and tortoises. The first and second spawn in water, which is carried away until the young are produced, when they again join their parents: the last lay their eggs in holes, and as soon as the young are hatched they follow the old ones into the water.

"Man, although he is borne in his mother's womb a long time, and after his birth is taken care of and nourished, still seldom follows in the footsteps of his parents. If his father is a holy man, he ought to follow the same profession; but instead of this, children do not generally attend to the advice of their parents, nor to the lessons of the sacred writings, or those given by holy or good men.

"That men of rank should do every thing in their power to attach the lower class of people to them, is not only proper but necessary, in order to keep them faithfully to their duty. To this end, therefore, men of rank ought to be indulgent and liberal towards their inferiors, like a woman who implores the assistance of man to bring forth children and support her; but not like a tigress that brings forth its cubs, nor the snake which brings forth so many young, that sometimes having no food for them or for herself, she devours them.

"Man is pleased with the *dódot* cloth (apparel), and women are proud of their bosom; but a good man prefers the sacred writings, which may lead him to the life to come.

"Property obtained by man's own labour is valuable, but more valuable is that which is obtained by a man's blood in time of war: of less value is property inherited from a man's parents. Of little value is the property taken from a man's parents or his wife, but still less valuable is that which comes to a man from his children.

"It is the duty of the chief of the nation to inquire into every thing which can affect his subjects; to know whether they are prosperous or not, if every one attends to his duty, if they are skilful in the execution of it or not, and in all cases to take measures accordingly, never losing sight of justice. He must, as far as possible, be lenient in the punishment of the guilty, and liberal in the reward of the deserving; particularly in the field of battle, when in sight of the enemy, when presents ought then to be distributed to the soldiers (*prajúrit*), in order to animate them; for if ever so justly treated, they will not, except they have been obliged by their commander, either be so faithful, or risk so much in an attack against the enemy.

"Highly prejudicial is it for the chiefs to discover fear before their enemies, for in that case the men will also be afraid; but when the chiefs conduct themselves in such a manner as to shew they do not fear the enemy, then the men are animated by their example.

"A chief should keep his plan of attack as secret as possible, because the knowledge of it may enable the enemy to be on his guard, and turn the measures taken to his own advantage. He ought not to challenge his enemy to give battle, as in that case the enemy will have an opportunity of preparing himself for the same: but he should attempt to surprize him, and rush upon him like a fire, that quickly and without much noise consumeth all with which it comes in contact.

"The most formidable enemy of a man is his own conscience, which always brings his crimes before his eyes, without leaving him the means of avoiding it.

"The most valuable and lasting friendship is that which exists between persons of the same rank.

"The severest misfortune which a man can suffer, is to be deprived by force, of the land upon which he lives and which he has cultivated, or to have his wife and children taken from him by force.

"Man loveth nothing more than his own children, and he always esteems his own feelings in preference to those of others.

"Of all birds the *chíong* (miner) is the most highly prized, because it has a beautiful appearance and can imitate the speech of man.

"A woman who loves her husband so tenderly, that at his death she wishes to die with him, or surviving never marries again, but lives as if she were dead to the world, is valued above all others of her sex.

"The lessons of our parents are like the lessons of the ten wise masters. No master can be called wise, unless he attends to what is written, as well on sacred as on worldly subjects. Such a master may be justly called a superior mortal; for it is a difficult task to learn and to attend to the same, even as difficult as to catch and tame a wild elephant on the edge of a precipice without injury.

"Melancholy is it to see a young man of condition unacquainted with the sacred writings; for, be he ever so gracefully formed or elegant in his manners, he remains defective; like the *wúrawári* flower, which, notwithstanding its fine appearance and bright red colour, emits no fragrance whatever.

"No man can be called good or bad, until his actions prove him so. Thus if a man declares that he has never taken any but delicious food, it will be shewn in his appearance. If he is stout and well looking, then may he be credited; but if, on the contrary, he is poor and lean, then it is impossible that he should have lived on good food.

"In like manner, when a man pretends to be the friend of mankind, it must be proved by his behaviour when he receives the visits of others. If he receives his guests with kindness and hospitality, then is he the friend of mankind, otherwise he is not so. And further, if a man pretends to have fasted and prayed, and to have become a holy man, it will be known whether he is really so, by the success which attends the prayers which he puts up for another: if the Deity hears them not, then is he a deceiver.

"A caterpillar has its poison in its head, a scorpion in its tail, and a snake in its teeth, but it is unknown in what part of the body the poison of man is concealed: a bad man is therefore considered poisonous in his whole frame.

"A child which is indulged by its parents in every thing, is like a young fish in a clear and pure stream, in which it grows and sports, unconscious whither it may lead.

"As the strength of a bird is in its wings, so does the power of a prince consist in his subjects; but then only through the means of persons properly informed on the following points. First, how a country ought to be properly administered; secondly, how to please a prince; thirdly, how to prepare all delicacies for him; and fourthly, how to preserve discipline and direct the conduct of an army.

"The dread of the subject should be such, that the orders of the prince should be to him like a clap of thunder, that may be heard far and wide.

"A man who does evil to his companions acts against the sacred writings and the lessons of his instructor: he can never enjoy prosperity, but will meet with misfortunes in all his proceedings. Such a man is like a piece of porcelain, which when it falls to the ground breaks into many pieces and can never be rendered perfect.

"A field without pasture is not frequented by cattle, neither does a river without water contain fish. An instructor who knoweth

not how to perform the duties of his situation can have but few disciples, and a prince who pays little regard to his country and subjects, will in time not only lose his fame and glory, but his authority also.

"It is well known that a man cannot take the goods of this world with him to the grave, and that man after this life is punished with heaven or hell, according to the merits of his actions in this life: a man's duty, therefore, requires of him to remember that he must die; and if he has been merciful and liberal in this life to the poor, he will be rewarded hereafter. Happy is the man who divides his property equally between himself and the indigent, who feeds the poor and clothes the naked, and relieves all who are in distress; he has hereafter to expect nothing but good.

"The following animals, as being injurious to the health of man, are not proper to be used by him as food: rats, dogs, frogs, snakes, worms, monkeys, lizards, and the like.

"A handsome man is an ornament to the community, and one that has good manners besides, is an ornament to his prince; but he who understands the sacred writings is the pride of the community and a delight to his prince.

"A prince who wishes to know his subjects well, ought to be attentive to their manners, actions, and courage; and as gold is known by the touchstone, or broken into pieces in order to ascertain its intrinsic value, so ought a prince to try his subjects, before he intrust them with the charge of his women or treasure, and make himself acquainted with their valour and knowledge: for a person who does not possess the qualifications required for this purpose, is unworthy to associate with people of condition, and much less to be the servant of a prince.

"If a man violates the law, he may for the first offence be punished by a pecuniary fine, for the second by punishment affecting his person, but for the third offence he may be punished with death.

"A joy generally followed by sorrow is that which we feel in borrowing money. We feel happy in having obtained what we wished, but as soon as our creditors come for their money, our joy is converted into grief; and that is the greatest when the money is spent, and we have not wherewith to satisfy our creditors: then arise quarrels and ill will, and yet no sooner are these settled than we again have recourse to the old habit of lending and borrowing.

"Laughing and joking at our companions is also a bad custom, for it generally begets quarrels, and is thus the cause of grief.

"Should medicine be mixed with poison, we would naturally separate the poisonous parts before we swallowed it, and we would also clean rusty metal in time before it becomes rusty and corroded. In the same manner we should distinguish between the good and bad actions of man, rewarding knowledge and opposing evil: and be it recollected, that a woman, however low her birth, if her manners are amiable and her person good, may without impropriety be made the wife of a great man.

"Riches only tend to torment the mind of man, and sometimes even to death; they are therefore, with justice, disregarded and despised by the wise. They are collected with pain and troubles in afterwards administering them; for if we neglect to watch them properly, thieves will come and steal them, and the loss occasions as much grief as the point of death.

"Therefore is it advisable to give part of our property to the poor and indigent, who will thence naturally become under obligations to us, and not only assist in guarding our property against all accidents, but pray that our property may increase, being themselves interested in our success, and our names will be blessed by our children and grandchildren.

"As dykes cannot long resist the force of water, unless the water is allowed a free current and a place to pass through, so riches cannot long be enjoyed, unless employed for

charitable purposes; but, on the contrary, they will turn to the injury of the possessor, both here and hereafter, who will be exposed to the wrath of all the nine deities.

"*Batára gúru* is cool, still colder is the moon; but the coolness of neither is to be compared to that which is instilled by the voice of a holy man. Fire is hot, still hotter is the sun; but neither is to be compared to the heat of a man's heart.

"Like those flies and birds, which fly in the air to procure food, and still continue to feed on filth and dirt, is the man of bad character; for although he may have the means of procuring an honest subsistence, still will he continue to take what he should not, by unlawful means, to the prejudice of others. But a good man wishes the success of another, and is happy when his brother prospers.

"As the moon and stars enlighten the night, and the sun enlighteneth the day, so do the Holy Scriptures enlighten the hearts of men; and a son who is superior in knowledge to his father, is a light to his family.

"A child accustomed to nothing but amusement, neglects the lessons of its parents. The child on this account, often abandoned to its fate, becomes a dangerous subject; it is therefore essential that a child should be kept under subjection while it is yet time to prevent its committing any bad acts. For this purpose these rules should be attended to:

"A child under five years of age may be indulged in many things; but afterwards it must be kept under strict subjection, and instructed in the knowledge of the Holy Writings until its tenth year, when a commencement may be made to instil that sort of knowledge which will form the intellects for the benefit of society. After the sixteenth year further instruction must be given in the higher and more important branches of knowledge.

"Man should always be on his guard against the commission of wicked acts, for the end of them is always pain and misery.

"A man must, on no account, listen to the advice of a woman, be she ever so good; for the end of it will be death and shame: but he must always consult his own mind in what he has to do or not to do, never losing sight of the lessons of his instructors. Thus, not only will he obtain knowledge, but his actions will be good.

"Riches, beauty, knowledge, youth, and greatness often lead a man into error; he, therefore, who is blessed with any of them ought to be, at the same time, humble and generous, for then he will excel; otherwise, his virtues will be hidden.

"As the man who advances by fair means from poverty to riches, or from insignificance to greatness, is rewarded in this world, so will he who is generous and kind-hearted be rewarded hereafter in heaven. So will the warrior killed in battle, who is like a conqueror, enjoy all the delights imaginable; while a deserter is despised by all men, and covered with shame and disgrace, because he deserted his comrades in the moment of danger.

"No man ought to be termed a hero but he who has already conquered a hundred heroes; nor should any man be termed a holy man until he can boast of surpassing in virtue a hundred holy men: for as long as a hero has not conquered a hundred heroes, or a holy man has not surpassed a hundred other holy men in virtue, he can neither be considered as a real hero or holy man.

"The signs of the approaching end of this world will be all kinds of depravity among mankind; that is to say, the wise will turn foolish, the holy men will become worldly, children will abandon their parents, princes will lose their empires, the little will become great, and commit depredations; in short, every thing will be in confusion, and an entire revolution take place.

"In the beginning every thing was at rest and quiet. During the first thousand years princes began to start up, and wars arose about a woman named *Déwi Darúki*: at this period writing

was first introduced. One thousand five hundred years after this another war began, about a woman named *Déwi Sínta*. Two thousand years after this a third war broke out, about a woman named *Déwi Drupádi*: and two thousand five hundred years afterwards another war took place, about the daughter of a holy man not named in history.

"Every man can thus see what has been the first cause of war. Even as the roots of trees and the course of rivers cannot run straight, but wind here and there, so cannot a woman be upright: for the saying is, that a raven can sooner turn white, and the *tanjang*-plant (a water lily) grow from a rock, than a woman can be upright.

"A perfect man should be, in firmness and ability, equal to eight women; and to satisfy a woman, a man must be able to please her in nine different manners.

"A bad man is like a fire, which inflames every thing which approaches it; we, therefore, ought never to go near it with an intention to extinguish it. A good man, on the contrary, is like a sweet-scented tree, which continues to produce flowers and fruit, pleasant to the taste and smell of every one, and the fragrance of which remains in the wood even after the tree is cut down and rooted out.

"When a harlot begins to feel shame, then is her improvement approaching; but when a holy man begins to meddle with worldly affairs, then is he about to become a worldly man himself.

"When a prince allows encroachments to be made on his territories, it is a sign that the loss of both his court and lands is nigh at hand.

"A man may receive instruction from his *gúru* (instructor) until his twentieth year: after which he should apply himself to study until his thirtieth year; at which time he ought to know every thing necessary, as well for this world as for that to come.

"The art of elocution may properly be reckoned superior to all others, because happiness and misery, fortune or misfortune, very often depend upon it: it is, therefore, necessary to use prudence in speech.

"A man who does not eat *síri* (*betel*) does not shine.

"Married people who have no children ought to lead a retired life, and people without fortune should not attempt to make a shining appearance: they should look pale and melancholy, like unto the dullness and quiet of a country without a prince.

"These are the qualities necessary to constitute a good housewife: —She must be well-made and well-mannered, gentle, industrious, rich, liberal, charming, of good birth, upright, and humble. A stingy, curious, dirty, foul-mouthed, vulgar, false, intriguing, lazy, or stupid woman, is not only entirely unfit for a housewife, but will never be beloved by a husband."

Intimately connected with the character, moral and intellectual, of a people, are its civil and political institutions. In a country like Java, the frame of society is so simple, the hand of power is so universally felt or seen; rank, wealth, and authority are so identified, and the different classes of the community are so referable to each other, by contrast or reciprocal influence, that it was impossible to give any account of the state of the peasantry, or of the tenure and distribution of the land, without introducing some notices concerning government and revenue. As there is little division of labour among a rude people, so there is no division of power in a despotism: the despot is proprietor, all the rest is property.

The Island of Java appears at different times to have been divided into states of greater or smaller extent. History informs us, that it was at one period under the sway of one principal chief, and at others subject to two or more. In the former case, the provinces into which it was divided were administered, as they are still, by subordinate and delegated governors; and in the latter, many of them composed independent sovereignties. In all these cases, the form of government and the privileges of the people were the same; the only difference between a state co-extensive with the Island, and

one limited to a few districts, consisting in the different extent of territory or number of subjects at command. In looking at the map, the divisions of the Island now under European dominion, and those under the native princes, can easily be traced. Bantam (the sultan of which surrendered his rights to the British government for a pension of a few thousand dollars), and Chéríbon, an extensive province to the eastward of Batavia, enjoyed till lately a nominal independence; but the only great native power on Java, till the establishment of *Yúg'ya-kerta* about sixty years ago, was that of the *Susuhúnan*, or as he is termed, the Emperor of Java; and a slight sketch of his government, of the maxims by which it is regulated, and the officers it employs, will be sufficient for my present purpose.

The sovereign is termed either *Susuhúnan* or Sultan, both denominations adopted since the establishment of Mahomedanism: the titles previously employed were *Kiaí Gedé*, *Prábu*, *Browijáya*, &c. as will be perceived on reference to the list of Hindu princes in the historical details. The line of succession to the throne is from father to son, but the rights of primogeniture are not always allowed or observed. If there is no direct descent, the claims of collateral branches of the reigning dynasty are settled by no law or uniform custom. Females have sometimes held offices of power, but have never occupied the throne since the establishment of Mahomedanism. The chiefs of districts and the heads of villages are sometimes women; in that case widows continued in the office of their deceased husbands.

The government is in principle a pure unmixed despotism; but there are customs of the country of which the people are very tenacious, and which the sovereign seldom invades. His subjects have no rights of liberty of person or property: his breath can raise the humblest individual from the dust to the highest distinction, or wither the honours of the most exalted. There is no hereditary rank, nothing to oppose his will. Not only honours, posts, and distinctions, depend upon his pleasure, but all the landed property of his dominions remains at his disposal, and may, together with its cultivators, be parcelled out by his order among the officers of his household, the members of his family, the ministers of his pleasures, or the useful servants of the state. Every officer is paid by grants of land, or by a power to receive from the peasantry a certain proportion of the produce of certain villages or districts.

When a sovereign enjoys unlimited power, he generally in eastern countries surrenders it for ease and pleasure, and his servant, under the name of Vizier or some other title, becomes the despot. The highest executive officer or prime minister in the Javan government is called *Ráden Adipáti*: he usually rules the country while his master is satisfied with flattery, with pomp, and the seraglio. He is intrusted with power so great, as even, in particular cases, to extend to the royal family. All communications to and from the sovereign are made through him: he receives all reports from different parts of the country, and issues all orders. The power and importance of this office has, however, naturally lessened of late years, since the European government has assumed the right of nominating the person who shall fill it: the sovereign naturally reposes less confidence in a prime minister so nominated than in one of his own choice; and if he does not take an active part himself in the politics of his court, he is generally under the influence of an ambitious member of his own family, by which means the *Ráden Adípati*, or prime minister, though left to conduct the details of government, is often ignorant of many of the intrigues carried on in the place.

The gradations of power and rank are as follow.

After the royal family, which includes the prince or sovereign, called *Susuhúnan* or *Sultan*, and the sons and daughters of the sovereign, called *Pangérans*, the heir apparent being called *Pángéran Adipáti*, come the nobility, and at their head the *Ráden Adipáti*.

The nobility or privileged orders may be classed under the two general divisions of *Bopátis*, and their immediate assistants or *Pátehs*, and *Mántris* or public officers. *Bopáti* is the general term given to the governors of provinces, being the plural of *Adipáti*. This, however, is rather a title of office than of mere rank, as these governors are sometimes *Tumúng'gungs*, *An'gebáis*, and of still inferior rank. *Adipáti* appears to be the highest title below royalty. The dignity of this title, as well as that of others, is again raised, by prefixing the epithet *Kiai* (venerable) or *Mas* (golden), as *Kiai-adipáti*, *Kiaí-tumúng'gung*, *Mas-adipáti*, *Mas-tumúng'gung*. *Ráden-tumúng'gung* is also occasionally used, to express a rank above an ordinary *Tumúng'gung*, in the same manner as *Ráden Adipáti*.

These officers, when appointed to the administration of provinces, are called Regents by the Dutch. Since the innovations of Europeans, the distinctions above referred to have been a good deal confounded. In the *Súnda* districts, where the absolute sway of the native sovereign has long ceased to be felt, and in the eastern provinces, which are subject to Europeans, the Regent assumes the state of a petty sovereign, and is the fountain of honour. The power and rank attached to particular titles, especially those of inferior importance, differs in some degree in almost every province.

The sons of the Regents, or of those who may be properly termed the nobles of the country, are usually called *Rádens*, and in the *Súnda* districts invariably so; but there is properly no hereditary nobility, no hereditary titles, although few people have a greater respect for family descent than the Javans; custom and consideration, in this as in other cases, generally supplying the place of law.

Nearly the same form of government is followed in the administration of each particular province as is observed in the general administration of the country, every *Adipáti*, or governor of a province, having a *Páteh*, or assistant, who acts as his minister. In general there is a *Páteh-luar*, and a *Páteh-dalam*; one for conducting affairs abroad or public business, the other for the superintendence of the household.

The same union of the judicial, revenue, and executive authority, which exists in the sovereign, descends to the governor of a province; and if there are subdivisions of the province, it descends to each head of the subdivision. This is also the case with each village; the consequence of which is, that every chief, of whatever rank, has an almost absolute power over those below him. The only exception to this, and the only part of the Javan constitution which wears the appearance of liberty, is the mode of appointing the heads of villages; these are elected by the people, as will be hereafter more particularly described.

In every considerable province or district there are several subdivisions over which an inferior chief presides: the district of *Semárang*, for instance, has several. Although this absolute authority is vested in the different chiefs, according to their ranks, it is dangerous for a public functionary, whatever be his rank, and even for the *Susuhúnan* himself, to violate what is

called the custom of the country; and the ancient Hindu institutions are revered and generally followed by all classes. The priests also exercise a considerable influence; and although the power of the *Jákṣa*, or law officer, is essentially reduced since the establishment of Mahomedanism, and a great part of his authority transferred to the *Panghúlu* or Mahomedan priest, he is still efficient, as far as concerns the police and minor transactions. The observations which follow on the administration of justice and the judicial instructions established by the British government, will explain the present nature of his duties.

In the suite of every governor of a province, of his *Páteh*, or assistant, and of every public functionary of importance, are numerous petty chiefs, generally classed as *Mantris*, but having various titles, as *Demángs*, *Lúras*, *Klíwons*, &c. varying in authority and relative rank in different districts.

Three-fourths of the island having been long subjected to the European authority, and the provinces which still remain under native administration having been divided under two distinct authorities, and their original constitution otherwise departed from, it would be impossible to lay down a scale of rank for the different titles of honour, which should be applicable to every part of the island, but the subject will be resumed in a future chapter.

The following observations of Mr. Hogendorp, who resided on Java not many years before the arrival of the English, and was employed in a commission of inquiry into the state of the island, are extracted from a report or memoir which he drew up for the use of the Dutch government, recommending a policy similar to that which we subsequently pursued. They contain a just account of the principles of the Javan government, and of the state of the Regents under the Dutch Company. After remarking, in perhaps too broad and unqualified terms, that the structure of the government is feudal, he proceeds to state:

"The first principles of the feudal system, which form the basis of the whole edifice, are: that the land is the property of the sovereign; that the inhabitants are his slaves, and can therefore possess no property, all that they have and all that they can obtain belonging to the sovereign, who allows them to keep it no longer than he chooses; and that the will of the prince is the supreme law.

"These are the real fundamental principles of the feudal system: for though the English and French kings could not always maintain their despotic sway, but were sometimes opposed, hostilely attacked, and even forced by arms to treat for terms with their subjects, this was only the natural consequence of the acknowledged rule, that *tyranny destroys itself*; and it is only necessary to revert to what James and Charles of England, in so late a period, thought their divine rights of royalty, to ascertain what were the rudiments of the feudal form of government: and even now, notwithstanding the numerous changes and revolutions which have happened in England, the most surprizing traces of that system are to be found, since in that country, so free, no individual soever possesses a foot of land in absolute property (allodium), but merely from the king (feodum), to whom only belongs the *dóminum absolutum et directum*, although subsequent laws and regulations have rendered this title more imaginary than real.

"The same system of government has been continued in the Company's districts, under the pretext of allowing the natives to retain their own laws and customs, but in reality from ignorance and self-interest. Although they were too ignorant to effect any improvement, they knew perfectly well that this plan was the best adapted to promote their own interest and advantage.

"The princes of Java, as well as those of Europe in former times, and as a natural effect of the same cause, were also almost continually at war with their chief vassals, until the Dutch power and influence re-established and maintained the general tranquillity. This, however, has never had any effect on the system of government itself, and the subject who dethroned his sovereign and then succeeded him, thought that he had thereby obtained the same *divine right* of property in the lands and persons of his subjects, as his predecessor had possessed.

"The princes allotted the lands to their chiefs and immediate dependents, as rewards for military and other services. These chiefs (termed by the Dutch regents) again subdivided the lands among others of inferior rank, on the same conditions, and so on, down to the poor labourer who cultivated the land, but to whom a very small proportion of the fruits of his labour was left for his own support.

"The exclusive administration of the country was conferred on the regents, an appellation given to the native chiefs, who had acquired their lands from the Dutch, by contract or agreement, binding them annually to deliver partly for payment and partly not, a quantity, in some cases fixed, in others uncertain, of the produce of such lands, obliging them also to the performance of feudal services, both of a military and other nature.

"The titles of these regents are either *Adipáti*, *Tumúng'gung*, or *Ang'ebái*. The Prince of *Madúra*, styled *Panambáhan*, and the Prince of *Súmenap*, who is called *Pangéran*, are however only regents as well as the rest. The Prince of *Madúra* enjoys that tide as being of the imperial family, and the Prince of *Súmenap* purchased his by a large payment to a Governor-General.

"These regents are only officers of government, and possess not the smallest right to hereditary possession or succession. Yet when one of them dies, he is in general replaced by one of his sons, considered most fit for the office, provided he can afford to pay the customary present to the governor of the north-east coast of Java; for if he is unable to do this, or if any other person offers a more considerable sum, a pretence is easily found to exclude the children in favour of the more liberal purchaser.

"These presents form a principal part of the emoluments of the governor of the north-east coast, and consequently all new appointments of regents are for his advantage. The present chief regent of *Samárang* paid 50,000 dollars for his promotion, and all the children of his predecessor were superseded. The others pay in proportion to the value of their regencies; and as this is arbitrary and uncertain, it is easily to be conceived, that they find means to recover the amount of their place-money^[77].

"These Regents although very proud, are, with very few exceptions, ignorant and idle persons, who give themselves little concern about their lands and their people; of whom, indeed, they frequently know nothing, but only endeavour to squeeze and extort from them as much as possible, both for their own subsistence and pleasure, and to satisfy the cupidity of government and of their immediate superiors. They leave the administration of affairs entirely to their *Pátehs*, who are also appointed by the Dutch, and are held accountable for every thing^[78].

"To their brothers, wives, children, and other near relations, they assign villages or *désas*, sufficient for their maintenance, for all these consider themselves born not to work, and look upon the peasantry as only made for the purpose of providing for their support.

"In order to collect the rice and other kinds of produce, which they are by contract obliged to deliver to the Company as contingents, they compel the inhabitants of the district to furnish as much of it as is at all possible, without any fixed ratio or calculation, and without any kind of payment, leaving them scarcely what is absolutely necessary for their own support and that of their families, and even sometimes not nearly so much, especially in the event of failure in the crops; on which occasions the miserable inhabitants desert by hundreds to other districts, where, at least in the first instance, they may expect a less rigorous treatment. Several regents also, when distressed for money, are compelled by want, to let out many of their best *désas* to the Chinese: these bloodsuckers then extort from such villages as much as they can possibly contrive, while the inhabitants of the other *désas* are alone obliged to deliver the contingent required from the whole aggregate. It may easily be conceived, how oppressively this demand must fall upon those unhappy individuals; and how greatly these and other acts of injustice, which are the natural consequences of the present faulty administration, must tend to the ruin of the country, it would be superfluous reasoning to prove."

The only restraint upon the will of the head of the government is the custom of the country, and the regard which he has for his character among his subjects. To shew what that character ought to be, what is expected of a good prince, and what are the reciprocal duties of a prince, prime minister, and people, I may here quote a few sentences out of the *Níti Prája*, a work in very high esteem, and constantly referred to by the Javans.

"A good prince must protect his subjects against all unjust persecutions and oppressions, and should be the light of his subjects, even as the sun is the light of the world. His goodness must flow clear and full, like the mountain stream, which in its course towards the sea enriches and fertilizes the land as it descends. He must consider that as the withered foliage of the trees awaiteth the coming of rain to flourish anew, so are his subjects waiting for his benevolence, to be provided with food, with raiment, and with beautiful women. If, on the contrary, a prince neglects to extend his benevolence and

protection towards his subjects, he exposes himself to be abandoned by them, or at any rate to lose their confidence; for it is an undeniable truth, that no one will be faithful or attached to a man upon whom no dependence can be placed.

"When a prince gives audience to the public his conduct must be dignified. He must sit upright and not in a bending posture, and say little, neither looking on one side or the other, because, in this case, the people would not have a proper sight of him. He must assume a pleasing appearance, which will enable him to observe his subjects who surround him, and then enquire if any one has any thing to say to him; and if there is, he must animate him to speak openly.

"In his discourse he must not speak loud, but low, and with dignity, and not more than is necessary for the purpose; for it does not become a prince to withdraw his words if once given, and much less to give them another turn.

"It is, above all, the duty of a prince to take notice of every thing going on in his country and among his subjects, and, if possible, to turn every thing to a good end: if he passes over unnoticed the least crime, he may create numerous enemies. It is further the duty of a prince, besides knowing the merits of his subjects and the state of his country, to explain all abstract and difficult expressions, particularly such as occur in writings.

"It is a disgrace to a prime minister for any hostile attack to be made on the country intrusted to his charge without his knowledge, or that he should be careless or inattentive to the same, rather thinking how to obtain the favour of his prince than to secure the safety of the country. So it is when he does not understand how to administer the country properly, or fails to invent what is useful; when he makes many promises, but fulfils few; when he is careless with regard to public affairs, and talks much about what is of no consequence, seeking to be admired by the people, and putting on fair appearances when his intentions do not correspond; when he cares nothing about the misfortunes of his inferiors, provided he gets money himself; when, finally, he is not faithful, but deceitful. Such a prime minister is like the hawk, which soars high in the air, but descends low on the earth to seize and steal its food.

"But a good prime minister is he who is upright in his heart, moderate in his fear of the prince, faithfully obedient to all his orders, kind-hearted, not

oppressive to the people, and always exerting himself to the utmost for the happiness of the people and the welfare of the country.

"And a prime minister is good beyond measure who can always please his prince in every thing that is good; who knows every thing that is going on in the country, and takes proper measures accordingly; who always exerts himself to avert whatever is likely to be injurious; who considers nothing too trifling to merit his attention; who accumulates not wealth, but offers to his prince whatever comes in his way that is curious; who heeds not his own life in effecting what is right; who considers neither friends, family, nor enemies, but does justice alike to all; who cares not when he is praised or reviled, but trusts to the dispensations of Providence; who possesses much experience; who can bear poverty, and cares not for the enjoyment of pleasures; who is polite to every one; who with good will gives alms to the poor and helpless; who consults much with his brother officers, with whom he ought always to advise on affairs of business. Against such a prime minister it is impossible for any one to speak, for he will be feared at the same time that the people will become attached to him: the people will then live quiet and happy, perform their labours with cheerfulness, and wish that his administration may be lasting.

"A prime minister ought, nevertheless, not to be too confident in this, but always remain on his guard against the designs of bad men.

"There are many examples of such prime ministers: among which is *Rája Jájahan*, (prime minister of *Mesir* Egypt,) to whom all the people of the country, great and small, were much attached.

"Whenever his brother officers intended to visit the prince for the purpose of paying their respects, they always assembled at the prime minister's house, where they generally partook of a meal: after this they proceeded to the court, followed by the prime minister on foot, dressed in white, with only three attendants, carrying a spear and other articles of state before him. By this conduct he supposed that he was screened from reproach, and that he was freed from enemies; but at the very time there were enemies conspiring against his life, as was afterwards discovered: therefore ought a prime minister not only to be virtuous, but cautious also, and always armed against his enemies, in the same manner as a sportsman arms himself against wild beasts.

"A subject going into the presence of his prince must be clean and well-dressed, wearing proper *chelána* (pantaloon.) He must have a good girdle and a sharp *krís*, and be anointed with aromatic oils. He must range himself with his equals, and convince them of his abilities and good breeding; because from this it is that he has to expect favour or disgrace, grief or joy, happiness or misery; for a prince can either exalt or humble him.

"A prince is like a *dálang* (*wáyang* player,) his subjects like *wáyangs*, and the law is as the wick of the lamp used in these entertainments: for a prince can do with his subjects what he pleases, in the same manner as the *dálang* acts with his *wáyangs*, according to his own fancy; the prince having the law, and the *dálang* the lamp, to prevent them from going out of the right way.

"In like manner, as it is incumbent on the *dálang* to make magnanimity and justice the principal subjects of his representation, in order that the spectators may be instructed and animated thereby, so should a prince, a prime minister, and chief officers of the court, direct the administration of the country with such propriety, that the people may attach themselves to them; they must see that the guilty are punished, that the innocent be not persecuted, and that all persons falsely accused be immediately released, and remunerated for the sufferings they may have endured."

The judicial and executive powers are generally exercised by the same individual. The written law of the island, according to which justice is administered and the courts are regulated, is that of the *Koran*, as modified by custom and usage. The Javans have now been converted to the Mahomedan religion about three centuries and a half, dating from the destruction of the Hindu kingdom of *Majapáhit*, in the year 1400 of the Javan æra. Of all the nations who have adopted that creed, they are among the most recent converts; and it may be safely added, that few others are so little acquainted with its doctrines, and partake so little of its zeal and intolerance. The consequence is, that although the Mahomedan law be in some instances followed, and it be considered a point of honour to profess an adherence to it, it has not entirely superseded the ancient superstitions and local customs of the country.

The courts of justice are of two descriptions: those of the *Panghúlu* or high priest, and those of the *Jákisa*. In the former the Mahomedan law is more

strictly followed; in the latter it is blended with the customs and usages of the country. The former take cognisance of capital offences, of suits of divorce, of contracts and inheritance; they are also, in some respects, courts of appeal from the authority of the *Jáksa*. The latter take cognisance of thefts, robberies, and all inferior offences; its officers are employed in taking down depositions, examining evidence, inspecting the general police of the country, and in some measure acting as public prosecutors: these last functions are implied in the title of the office itself, *jáksa* meaning to guard or watch^[79].

At the seat of government are supreme courts of the *Panghúlu* and *Jáksa*: to these there is an appeal from similar but inferior tribunals, established within each province. Petty tribunals, under like names, are even established under the jurisdiction of a *Demáng*, or chief of a subdivision, and sometimes of a *Bákol*, or head of a village; but in these the authority of the *Panghúlu* and *Jáksa* extend no further than to take down evidence to be transmitted to some higher authority, to settle petty disputes, and perform the ordinary ceremonies of religion, inseparable among the Javans, as well as all other Mahomedans, from the administration of justice.

Such however is the nature of the native government, that these officers are considered rather as the law assessors or council of the immediate superior officer of the executive government, than as independent ministers of justice. In such cases as come before them, they examine the evidence, and point out the law and custom to the executive officer, who is himself generally too ignorant and indolent to undertake it. When the evidence is gone through, and the point of law ascertained, the whole is brought before him, at whose discretion it rests to pass judgment. It is however admitted, that in matters of little moment, where his passions and interests are not concerned, the division is frequently left to the law officers; but in all matters of importance he will not fail to exercise his privileges of interference.

The court of justice in which the *Panghúlu* or high priest presides, is always held in the *serámbi*, or portico of the mosque; a practice, which, as it inspires the people with a considerable share of awe, appears judicious. It is also convenient for the administration of oaths, which among the Javans are always administered within the mosque, and usually with much solemnity.

The forms of the court are regular, orderly, and tedious; all evidence is taken down in writing, and apparently with much accuracy.

The court, at least at the seat of government, consists of the *Panghúlu*, the officiating priest of the mosque, and four individuals, also of the religious order, called *Páteh nagári*, meaning literally the pillars or supports of the country, to whom, after the examination of evidence in capital offences, the point of law and decision is referred. At the seat of government the sovereign or his minister passes judgment.

The court of the *Jákša* at the seat of government consists of the head *Jákša*, who may be styled the law officer of the prime minister, and the *Jáksas* of his *Klíwons* or assistants, for they too have their law councils. The functions of this court being of less importance, of a more mixed nature, and less solemn because less connected with religion, are still more subject than that of the *Panghúlu* to the rude interference of the executive authority^[80].

The Javan code of law is divided into two departments, that of the Mahomedan law and that of custom and tradition. The former is distinguished by the appellation of *húcum állah*, the *commands of God*, from the Arabic; the latter by the Javan words *yúdha nagára*, meaning consideration for the country, or in other words, allowance for the state of society.

The decisions in Mahomedan law are chiefly guided by several works in the Arabic language. In all the courts of Java these works are said to be consulted in the Arabic language, but reference is more frequently made to a collection of opinions extracted from them, and translated into the language of the country.

The law of custom is chiefly handed down by oral tradition, but has in part been committed to writing in the following performances.

The earliest work relating to jurisprudence which is now referred to, is that of *Júgul Múda Páteh*, or minister of *Sri Ma Púng'gung* (of *Méndang Kamúlan*), now *Wirosári*: it is computed to be about six hundred years old. The second bears the name of *Rája Kápa*, said to have been the son of *Júgul Múda*, and like him minister of his sovereign *Kandiáwan*, also prince of *Méndang Kamúlan*.

By the authority of the Sultan of *Demák*, the first Mahomedan prince, a compilation of the Javan laws was made, in which they were in some measure blended with the Mahomedan jurisprudence. Probably this was intended to pave the way to an entire introduction of Mahomedan law. The body of regulations, &c. compressed in these codes is curious, from the laborious refinement of their distinctions, from the mixture of moral maxims and illustrations with positive law, from the most incongruous combinations, and from their casuistical spirit. In the Appendix will be found the translation of a modern version of the *Súria Alem*, a work of this description in high repute, as well an abstract of the laws and regulations said to have been in force in the earliest periods to which Java tradition refers^[81].

The proclamations (*úndang-úndang*), and the laws and regulations (*ánger ángeran*) of the sovereign, form another source of deviation from the Mahomedan law. Collections of these have been committed to writing.

The prince, by himself or his officers, is always supposed vested with a discretionary power of adapting the Mahomedan law to the circumstances of society, a prerogative liberally exercised. This power, which sanctions every deviation from the letter of Musselman law, the Javans also express by the term of *yúdha nagára*. The krising of criminals instead of beheading them, the combat of criminals with tigers, the severe penalties for infractions of the sumptuary laws of the Javans, the constant commutation of corporeal punishment for a pecuniary fine, and in the case of persons of rank found guilty of murder, the commutation of the strict law of retaliation for a fine, without regard to the wishes of the relations of the deceased, if the latter be of no consideration, were among the deviations from the Mahomedan law sanctioned by the *Yúdha nagára*.

Such was the composition of the courts, and the code of laws that existed on Java before the arrival of the Dutch, and remained unchanged at the conquest of the island by the British. The Dutch legislated for the colonists, but took little interest in the system by which the judicial proceedings of their native subjects were guided, excepting in so far as their own advantage or security was concerned in them. The following statement contains the changes introduced by the Dutch.

Besides the colonial laws and regulations, enacted from time to time by the Governors and Council at Batavia; besides some standing orders of the Court of Directors, and some rules and provisions contained in the successive charters of the Company, and in what was called the *article brief*; the Dutch law, which was always considered the foundation of the colonial law, was of authority, as far as it remained unaffected by these institutions.

A collection of the colonial statutes and regulations, called the *Placart Book of Batavia*, and an abstract of them, entitled the *Statutes of Batavia*, were made under the authority of the colonial government; but as the latter never underwent a regular promulgation, the rules contained in it were not considered as possessing the force of law, except in so far as they might be found to be conformable to the orders, proclamations, and regulations of the Indian government, or of the Directors of the East India Company.

The power of the Directors and of the Council of Batavia to enact local laws and regulations, seems not to have been very circumspectly defined in the first charters of the Company, those charters conferring on them, in general terms only, authority to provide for the administration of justice and establishment of police.

But from the nature of the occasion it seems evident, that this power of making colonial laws, as far at least as related to the Council of Batavia, could only have been a limited one, to be exercised with considerable discretion, and only upon points requiring an immediate provision, subject always to the approbation of the authorities at home; and even the Directors could hardly be considered to have possessed a greater extent of legislative power, than was necessary for the security of their new territories, and of their rights and privileges, or to have been authorised to deviate wantonly from the established law of the country, or neglect the dictates of justice and equity.

In the great variety of matter comprehended in the colonial statutes, no subject seems to have occupied more attention than the laws respecting slavery. These, as already observed, appear to have been formed in general upon principles of humanity and consideration for the condition of the unfortunate beings to whom they related.

In consequence of a resolution of the year 1760, the Council of India ordered that the customs of the Mahomedans, in matters of inheritance and successions *ab intestat*, &c. should be sanctioned and published.

In civil matters, natives and Chinese in the districts of Batavia seem to have been governed by the same laws as the European inhabitants.

Crimes committed by natives or Chinese in the city of Batavia and its environs, had, from the first settlement of the Dutch on the island, always been tried by European judges, and according to European law.

In Bantam the criminal jurisdiction over the natives was left to the Sultan, and that over the Chinese resident there, was exercised as at Batavia according to the European law.

The *Jakatra* and *Priáng'en* Regencies seem formerly to have enjoyed a peculiar and fortunate state of tranquillity. Almost entirely removed from every communication and intercourse with Europeans, Chinese, and other foreign settlers found in the neighbourhood of Batavia, engaged in agriculture, and ruled by their own native chiefs, these districts seem to have been in a high degree free from crime; but whenever enormities did happen, the offenders were sent down to Batavia, and tried according to European law. It is to be observed, however, that on the first submission of those districts to the Company, their chiefs or regents reserved to themselves the jurisdiction over the inhabitants of their respective districts; but this stipulation appears to have been disregarded in the latter times of the Dutch Company, and under the late administration of Marshal Daendals, a court was established for these districts, the rule of which was European law.

From Chéribon the Chinese were amenable, as from Bantam and Batavia; but the natives were subject to a *landraad* (or local court), of which the Resident was president, and the Sultans members; and this court was, partly at least, directed by a *papákam*, or native code, compiled under the sanction of the government.

In the Eastern districts of the island, the Javans seem always, in criminal matters, to have enjoyed their own laws, founded on ancient custom and the precepts of the *Koran*. Of these laws the Council of Batavia caused abstracts to be printed, for the guidance of the great *landraad* or high court

at *Semárang*, to which all the Javans in the European provinces, from *Losári* to *Banyuwáangi* were amenable.

Under the native government, the prime minister (*Ráden Adipáti*) is the head of the police, as well as every other department of authority. The higher class of functionaries is most frequently to be found in those parts of the country most remote from the seat of government, where, as governors of provinces, they possess some extension of powers. The great and fertile provinces near the capital, on the other hand, are divided into small appropriations, of from two hundred to one thousand *cháchas*, or families, placed under the administration of division officers, whose authority is limited to the duties of police.

Each village is possessed of a distinct organization within itself, has its chief, its *Kabáyan* or assistant, and if of any considerable size, its priest, whose advice is frequently had recourse to, and who generally decides petty disputes, especially respecting divorces and matters of inheritance. The chief of the village is not without his share of judicial authority, and often takes upon himself to punish by fine and imprisonment. In each village the inhabitants keep regular nightly watches and patrols.

The manner in which these little societies have been recently formed in the districts to the east of *Surabáyu*, where the European authority had not interfered, and where the influence of the Mahomedan government was scarcely felt, will tend to illustrate their nature and constitution.

The frequent wars, in which the people had been engaged with the inhabitants of *Báli* and *Madúra*, as well as with the Dutch, had reduced those provinces to a state of wilderness towards the middle of the last century. The encouragement held out to the people of the neighbouring island of *Madúra* brought over several adventurers, who were allowed to occupy the land they cleared; first rent-free, and afterwards at a fixed assessment. If several persons came together, their leader was invested with the authority of *Petíng'gi* over the new village which they formed. When individuals associated to construct a village, the chief was elected by themselves, subject to the approval of the landlord; and they possessed the privilege, common in all the districts east of *Surabáya*, of annually electing their chief, or *Petíng'gi*.

The nature of the duties rendered by this person was so essential to the well-being of a village, that this privilege was most intimately connected with its existence. Whenever a new assessment was imposed on the lands, it was the business of the *Petíng'gi*, if the amount was too high, to represent the matter to the superior, and to state the inability of the people to make good the demand: the consequence was, either a reduction of assessment on the part of the principal, or desertion on that of the people. But when the amount of the assessment was considered reasonable (and any amount less than three-fifths seems to have been so considered), the *Petíng'gi* had to assemble all the people, and to distribute to each, in the common presence of all, his individual proportion of land, with a statement of the produce to be paid. He had to keep a roster of all duties required of the people, and to see that every man took his proper turn. When the harvest ripened, he had to watch the collectors, that they exacted no more from each man than his proportion; and the cultivator, that he did not embezzle any part of the due of government. In large villages he had an assistant, called a *Kabáyan*, who represented him during his absence, and with the *Kamitúah* and *Múdin* (priest), formed a court for settling petty village disputes; subject, however, to a reference, if the parties should be dissatisfied.

It was customary for the people of the village to cultivate the lands of their *Petíng'gi* without payment. This and the honour of chiefship rendered the office an object of village ambition; while an annual election, and the fear, if turned out, of being called upon to justify his conduct, rendered this officer generally a steady and careful representative of his constituents.

All strangers passing through the country were expected to apply to the *Petíng'gi* for the assistance they required; and if payment was tendered, all procurable necessities were furnished. The *Petíng'gi* also took charge of the strangers' property, examined the same in the presence of the other head-man, and was bound to return the whole undiminished the next morning, or to pay the value. If, however, the stranger preferred keeping his property under his own charge, and rested himself for the night under some of the public sheds, the loss he might sustain fell on himself alone, and all he could procure from the village was assistance to trace the offenders.

It was customary, as well to deter beasts of prey as thieves, for a part of the men of each village to keep a night watch round it, and to perform this duty in successive rotation.

Such appears to have been the internal regulation of these villages; and it seems to have been framed according to the ancient usage of the island, the similarity of which to that of Western India has been adduced as a strong instance of one common origin^[82].

It follows from the above, that each village has in itself the materials of a good police, and that a right of choosing their chiefs gives to the people a considerable share of real liberty^[83]. This right of election in the inhabitants of the village, as before observed, would appear at one time to have been general throughout the island. It is still respected in the districts of *Surabáya*, where the office of *Petíng'gi* was always elective, for although the same person might hold it for many years, a ballot for the situation was regularly held at specified periods, varying from one to three years^[84].

The right of election is also clearly acknowledged in the districts of *Japára* and *Jawána*. "That the *Petíng'gi* is elected by the inhabitants of a village," observes the officer who introduced the settlement into those districts^[85], "there cannot be a doubt; and even the right of election is foregone by the people, though I have not met with a single instance of the kind, it may be taken for granted, that it is so only, in consequence of the influence of the Regent, to serve some particular purpose. While the *Petíng'gi* continues in office, he is looked up to and obeyed by the people of the village to which he belongs as the immediate chief. He generally occupies the *paséban* usually to be found in villages of consequence, and has two or more men, inhabitants of the village, appointed to attend him wherever he goes. A *Petíng'gi* was usually elected for one year, during which time he could not, according to the ancient usage, be removed, except in consequence of some gross misconduct, but if his conduct was such as to give satisfaction to the inhabitants, they continued him for several years. As far as I could learn," continues the same officer, "the Regent, or other superior native authority, seldom interfered in the election of a *Petíng'gi*; but it was generally understood, that although he could not force a *Petíng'gi* upon them who was disliked by the people, his confirmation was required before the person elected could act with effect."

In the *Súnda* districts of *Chéribon* and *Tegál*, the appointment to this office is invariably made, if not by the election of the villagers, generally from among themselves, and always with their concurrence. It is a common

practice for the people of a village, even where the right of election is not in use, to represent in a body the conduct of their chief, if incorrect; and it has always been necessary for the chief native authority to remove him, if the complaints were justly founded.

A reference to the judicial regulations in the Appendix^[86] will show how desirous the British government on the island has been to protect the privileges of these societies, and in particular the right of electing their chief.

When the British authority was established on the island, it was immediately seen that something must be done to supply the deficiencies, and to correct the imperfections of the native code. All the other changes in contemplation for the encouragement of industry and for the abolition of oppressive and impolitic exactions, would have been nugatory, without such an improvement in the judicial and police regulations, as would secure, by a full and impartial administration of justice, the rights and privileges about to be conferred. It would have been in vain to define the limits of power, to issue directions for guiding the conduct of public servants in their transactions with the people, or to have abrogated the oppressive privileges of the chiefs, and to have assured the people of the intention of government to protect them against all invasion of their rights, either by open violence, by the exaction of services, or by oppressive contributions, without establishing effective means of obtaining redress when aggrieved. The system acted upon was at once barbarous and revolting. Practices prevailed under the sanction of native law, which were abhorrent to the criminal jurisdiction of any enlightened nation, without being at all necessary to the due administration of justice^[87]. I allude particularly to torture and mutilation. These the Earl of Minto immediately abolished, by his proclamation of the 11th September 1811, in which, besides this beneficial and humane enactment, he laid down clearly and distinctly the liberal and enlightened principles which should guide the local government in the subsequent revision of the civil and criminal code of the colony. The result was the enactment of the code of judicial and police regulations which will be found in the Appendix to this work^[88]. The outlines of these regulations, and the principles which dictated them, are contained in a Minute which I recorded on the 11th February 1814, when they were completed and

promulgated; and the following quotations from that document may be sufficient to put the reader in possession of the change which was effected.

"It was essential, in conducting the revenue arrangements, that the measures taken for the establishment of a good and efficient police, and the full and impartial administration of justice throughout the island, should preserve an equal pace.

"Rights were not to be bestowed and defined, without a suitable provision for their being effectually guarded against any invasion; and it became an object of the first moment, to form such an adequate and consistent code of regulations, as should serve, in every instance, to guide the executive officers of government in the performance of their duty, and to make known, and secure to the people, the means of obtaining redress, whenever they felt themselves in any way aggrieved.

"The system found existing on our first arrival was at once complicated and confused. In the principal towns there were established courts, but these were constituted in all the troublesome formalities of the Roman law; and in the different residencies were provincial courts, styled *land-raads*, where the native form and law was left to take its course, with all its barbarities and tortures.

"The Dutch government, proceeding entirely on the system of commercial monopoly, paid very inferior attention to their internal administration. They had little other connexion with their best subjects, the cultivators of the soil, than in calling on them, from time to time, for arbitrary and oppressive contributions and services; and for the rest, gave them up to be vassals to the various intermediate authorities, the Regents, *Demángs*, and other native officers. These either at first purchased their situations, or stipulated for a certain tribute, in service or money, in consideration of which all the inferior classes of inhabitants were made over, to be dealt with by them as most pleasing to themselves. Policy, and the common attention to their own good, suggested to these a certain equity of procedure, and it was generally the custom to leave each village to its own management, with respect to police and settling the petty quarrels that occurred within its limits; but for the continuance of what was good in such a system, there was no security whatsoever, and oppression and injustice must have constantly occurred. Where the will of the lord was the paramount law, his vassals could only

have depended on his natural goodness of disposition for being equitably treated. No remedy was afforded where the reverse was the case, and they possessed, in short, no security, no freedom whatsoever.

"On the propriety of the measures to be adopted by us to remedy such evils, no doubt could exist.

"The first proclamation of the enlightened founder of the present government adverted immediately to this subject. As a step that could not, consistently with British ideas, admit of a moment's delay, it instantly ordained, that torture and mutilation should no longer make part of any sentence to be pronounced against criminals; and it then proceeded to define clearly the relative situation of the English and Dutch inhabitants, laying down rules for the future guidance of government concerning them. This proclamation, dated 11th September, 1811, has long been before the world, and it would be superfluous, in this place, to dwell on that love of justice and benevolence of disposition, which is to be traced through every part of it. It forms the basis of the present respective European rights in this colony^[89].

"As a continuation of the measures so ably sketched out by my predecessor, I issued the proclamation, dated the 21st January, 1812.

"In this I attempted to simplify the clumsy and unwieldy structure of the former courts, by abolishing some, lessening the number of the judges in the remaining ones, and by defining, as accurately as I could, the limits of their respective jurisdictions.

"It was found that, formerly, there were separate courts for investigating the conduct of the immediate European servants of the Dutch Company, and of Europeans not included in that service. This distinction, as Lord Minto observed, never could have been grounded on any sound principle, and it being resolved, that justice, under the British government, should be administered equal and alike to all classes and denominations, the judicial power of the College of Schepenen was abolished, and transferred to the jurisdiction of the courts of justice.

"The great number of judges who, under the Dutch administration, formed a court, was reduced in each to a president and three members.

"One court was established in each of the three principal towns, Batavia, Semarang, and Surabáya, the jurisdiction of which extended over its European inhabitants; proceeding, in civil cases, in the mode before established, but in criminal ones, so as to conform as much as possible to that established in Great Britain; in all cases confronting the prisoner with the evidence, and a jury being called to judge of the fact on the evidence so adduced.

"To relieve these courts from numerous inconsiderable causes, courts, of the nature of Courts of Requests, were also established in these three towns, for the recovery of small debts.

"For matters of police within the towns, magistrates were appointed; but they were ordered to confine themselves entirely to this branch.

"An abuse which had been discovered to be usual, the compounding crimes and offences, in consideration of a sum of money paid to the Fiscal or other officer, had also met with Lord Minto's most severe reprehension, as being one of an abominable nature, and to be suppressed without delay. The practice was accordingly strictly prohibited, and consonantly with British ideas was termed scandalous.

"Thus much had been done with regard to Europeans, and it has been found fully sufficient.

"But with respect to the native inhabitants of the Island, it was to be expected that much greater changes would be necessary.

"In the first instance, it was ordered that courts should be established in the different districts, in which the chief civil authorities should preside, aided by the Regents and other native officers, for the purpose of hearing and trying all causes in which natives only were concerned; the amount of their civil decisions, when exceeding fifty dollars, being submitted for confirmation to the courts of justice; and all criminal cases, of a capital nature, being made over by them to judges of circuit, who were ordered to be sent on this duty twice a year, from among the members of the superior courts.

"Thus much was known not to militate either against the principles of universal and natural justice, or against the particular laws and usages of the country; and thus much was only, at first, done, because it was resolved to

obtain the fullest knowledge of the subject, with regard to the manners, habits, and institutions of our native subjects, before we established one general code of regulations for the internal administration of the country.

"In effecting this grand object, it was rather my wish to have it maturely and well done, than by accelerating it too much, to run the risk of taking up a crude system, which would require to be afterwards re-considered, and perhaps entirely new modelled.

"On the principle, however, which would eventually guide me, there was no doubt, nor is it necessary for me to dilate on the impolicy, the inconvenience, or the injustice, of subjecting the natives of Java to any other laws, than those of their ancient government and established faith.

"The tranquillity of the country and the duties of police have been provided for, by preserving the original constitution of the villages, and continuing the superintendence and responsibility in the hands of those, whose rank enables them to exert a due influence, and to command respect. For the administration of justice, the duties of the Resident, as judge and magistrate, have been considerably extended. In civil cases, the mode of proceeding, and the establishment of petty courts, are founded on the practice of the country; in criminal, the jurisdiction and authority of the Resident has been considerably extended. Hitherto, his duties had been strictly confined to police; but considerable delay and injury to the parties accused, as well as to the witnesses, had been occasioned by allowing all causes of a higher nature to lie over for the Court of Circuit: and as the separation of the collection of the Revenue would afford more time to the Resident, it was resolved to extend the criminal jurisdiction of the Provincial Courts to all cases, in which the punishment for the crime alleged does not amount to death. In these courts, which instead of being termed *Landraad*, as heretofore, are now styled the *Resident's Courts*, the *Panghúlu*, or chief priest, and the superior, *Jáksa*, or native fiscal, attend to expound the law. The *Bopátis*, or Regents, with their *Pátehs*, are present, to aid and assist the Resident with their opinion in the course of the investigation, but they have no vote in the decision. If the opinion of the law officers appears to the Resident to be according to substantial justice, and is in accordance with his own opinion, the sentence is immediately carried into effect, provided the punishment does not extend to transportation or imprisonment for life.

"In cases where the punishment adjudged is more considerable, or wherein the opinion of the law officers may be at variance with that of the Resident, a reference is to be made to the Lieutenant Governor; and in all cases where the punishment for the crimes charged is of a capital nature, the prisoner is committed to jail, to take his trial before the Circuit Judge.

"On the first establishment of the Courts of Circuit, it was directed that the President and one other member of the Courts of Justice, should proceed once in six months, or as much oftener as circumstances might require, to the different Residencies in their several jurisdictions, for the trial of offenders. Much inconvenience, however, was found to arise from the absence of those members of the courts from the towns in which they were established, as it necessarily followed, that all civil business was at a stand while they were away. On the other hand, to prevent delay on the trial of criminals, it was necessary that they should visit the Residencies more frequently than once in six months.

"To remedy this in future, and to provide for the prompt and due administration of justice among the native inhabitants, in a manner that is not repugnant to their notions of right and wrong, one member of each of the courts of justice has been appointed a Judge of Circuit, who will be present in each of the Residencies at least once in every three months, and as much oftener as necessary. In the mode of proceeding, they are to avoid the formalities of the Roman law. A native jury, consisting of an intelligent foreman and four others^[90], decide upon the fact: the law is then taken down, as expounded by the native law officers, and the sentence, with the opinion of the Judge of Circuit, and on the application of the Dutch and Colonial law on the cases, is forwarded for the modification or confirmation of the Lieutenant Governor.

"Hitherto the jury required by the Court of Circuit, did not exceed five in number, and these, as justly observed, 'were chosen from a class of men (Europeans) who had no common feelings, no common rights; who were, in no shape or consideration, the equals of the person tried. The law was the law of Europe. The jury, under their best prejudices, were influenced by that law; and its meanings and penalties were applied to people who reason in a different manner, and who often never knew any thing of the laws of Europe, before they found themselves its convicted victims.'

"The general jurisdiction of the Courts of Justice at Batavia, Semárang, and Surabáya, is now confined to Europeans and foreigners and to the inhabitants of those towns and their suburbs; and a line has been drawn, which distinctly separates the police of the country from that of the towns.

"Collections of the different law-books and institutions of the country are now making, and a native establishment has been formed at Buitenzorg, under my immediate superintendence, for examining and revising the judicial proceedings, and for affording to the native inhabitants that facility of appeal, which the remoteness of the Government, and the rules of Dutch administration, did not formerly admit of, but which is so consonant to the principles on which the new system of internal economy has been established."

Under the native government, the whole of the male population capable of bearing arms was liable to military service; but the number of people required to cultivate the land, and to perform other public services, did not admit of more than one-third being spared for military purposes, except in cases of extraordinary emergency. The extent of the force permanently kept up by the sovereign in time of peace varied, of course, with the probability of approaching hostilities: when this was smallest, the number seldom exceeded what was required for the state and pomp of the court, and might have amounted to four or five thousand men. Until within the last sixty years, when the Dutch first obtained a supremacy over the whole island, the provinces under the native administration had for several centuries been in a continual state of warfare; but since that period the military spirit has been gradually subsiding, and, by the existing treaties with the native princes, they are restricted in the number of troops which they may maintain. Those of the *Susuhunan* are limited to a body guard of one thousand men: such further number as may be required for the tranquillity of the country, the European government undertakes to furnish.

Before the native sovereign was under this restriction, he used to raise the requisite force by a demand upon the governor of each province for a specified number, to be furnished at a certain time, varying according to circumstances. The governor or chief of the province apportioned this demand among the subdivisions, and the village chiefs selected from among the villagers as many as were required of them; and thus, in a country where every man wears a *kris* or dagger, and the spear or pike is the principal

military weapon, an army, or rather a numerous armed mob, was easily collected in a few days. The men furnished from the villages, and of whom the mass of every large army necessarily consisted, were distinguished from the soldiers by profession (*prajúrit*), by the term *árahan*, or *prajúrit árahan*. During their absence from home, they were provisioned by the sovereign, and their wives and families were maintained by the head of the village, who required of the remaining cultivators to assist in working their fields or gardens.

The sovereign, as the head of the military and the fountain of military honour, assumes among his titles that of *Senapáti*, or lord of war. When an army is to be raised, he appoints a certain number of his chiefs to be *widánas*, or commanders of corps of three hundred and twenty men. Under each *widána* are four *lúrahs* or *tíndihs*, who command companies of eighty men, and have each two subaltern officers, called *babákals* or *sesábats*, each having the command of forty men. The *widánas* were remunerated for their services by grants of land, to the amount of a thousand *cháchas*, from which they had again to make assignments for the maintenance of the inferior officers, who were always nominated by them.

When troops march through the country, or supplies are required, a demand is made upon the neighbouring districts, which are obliged to contribute according to their means, without payment. When in an enemy's country, the troops, of course, subsist by plunder, the disbursement of money for provisions or supplies being unknown.

The native armies of Java consisted chiefly of infantry, but the officers were invariably mounted, and when cavalry was required, each province furnished its quota: the troops, whether on foot or mounted, joined the army properly equipped for action. It was thus unnecessary for the sovereign to keep up a store of arms. Each village has its provision of spears, and sometimes of fire-arms; the officer of subdivision keeps a further reserve for contingencies; and as the chief of the province is responsible for the proper equipment of the men, he generally has also a further store to supply any deficiency.

Of the different weapons used in Java, the most important and the most peculiar to the Eastern Islands is the *krís*, which is now worn by all classes, and as an article of dress has already been noticed.

The Javan *krís* differs from the Malayan, in being much more plain, as well in the blade as in the handle and sheath: it differs also in the handle and sheath from the *krís* of *Madúra* and *Báli*, as may be seen in the plate. The varieties of the blade are said to exceed an hundred; and as a knowledge of the *krís* is considered highly important by the Javans, I have, in a separate plate, offered specimens of the most common.

In the plates are also exhibited the different kind of spears, darts, and other weapons, either said to have been in use formerly, or actually used at the present day. These are the bow and arrow (*gendewa*, *pana*) which are seldom used in modern days, except on state occasions. The arrows, termed *chákra*, *paspáti*, *trisúla*, *waráyang*, *diwál*, *róda dedáli*, and others of a similar form, as well as the clubs called *indán*, *gáda*, and *dénda*, are represented as the weapons used by the gods, demigods, and heroes of antiquity, and are constantly referred to in the mythological and historical romances of the Javans, and exhibited in their scenic and dramatic entertainments. The *túlup* and *páser* represent the tube and the small arrows which are rendered poisonous by the *úpas*: these have not been used on Java for centuries, but they are common in less civilized islands of the Archipelago, and particularly on Borneo. The *gánjing* is an iron bar, formerly used by the Javans. The *bandrín*y, or sling, is still used with considerable effect, and was employed in resisting the British troops in 1812. The *pedáng*, *bandól*, *badík*, *golók*, *mentók*, *lámang* or *klewáng*, and *chundrík*, are varieties of the sword. The *kúdí-tráncang* is a weapon which was formerly general on Java, but not now much used. The *wedúng* is a peculiar weapon, in the shape of a chopper, worn on occasions of state by all chiefs when in presence of the sovereign. Of spears and darts, there are several varieties distinguished by different names. Small round shields are still in use; the long shield is not. The matchlock exhibited in the plate is a representation of a piece manufactured on *Báli*.

Besides these instruments of war, the Javans have long been acquainted with the use of cannon, muskets, and pistols. Previous to the reduction of *Yúgya-kérta*, in 1812, by the British forces, the Sultan cast brass guns of considerable calibre, and at *Grésik* they are still manufactured for exportation. Round the *kráton* of *Súra-kérta* are mounted several very large pieces of artillery, and great veneration is paid to some of them supposed to have been the first introduced on the island: two, in particular, are

considered to be part of the regalia. For muskets and pistols they are principally indebted to Europeans. Gunpowder they manufacture, but to no considerable extent, and the quality is not esteemed.

From an army raised only on emergency, and composed of people who do not make the military life a profession, much discipline cannot be expected. The veneration, however, which the common people pay to their chiefs, the well defined gradations of rank, and the devotion with which all classes are willing to sacrifice themselves in support of their ancient institutions and independence, seem to render the Javan troops, while acting under their own chiefs, orderly and tractable. In their tactics and conduct they endeavour to emulate the examples given in their ancient romances; and in the plans for their pitched battles, the march of their armies, and the individual heroism of their chiefs, they strive to imitate the romantic exhibitions contained in the poems of antiquity. In the great *Matárem* war, for instance, the result of which was the establishment of the present family on the throne, the disposition of the army is said to have been in the form of a shrimp or prawn, as represented in the plate. This form is termed *mangkára*, or the shrimp which hides its soul, alluding to the sovereign who is in the centre and not to be approached. The plan of this order of battle is said to have been taken from the poem of the *Bráta Yúdha*, and was adopted by *Bimányu*, the son of *Arjúna*. The *diráda máta* is another form, said to have been used by the army of *Astína*, and has likewise been adopted by the modern Javans^[91].

Of the bravery and heroism required of a soldier, some notion has been given in the account of the Javan ethics; and a reference to their history, for the last three centuries, will abundantly prove, that although unacquainted with those evolutions and tactics which contribute so largely to the power of an European army, the Javans, as soldiers, have not been deficient, either in personal courage, or in such military principles as might be expected from the general state of society among them, and as are well suited to the nature of the country and the weapons they are accustomed to carry^[92].

It is the national boast, that it was not so much by force of arms as by intrigue and stratagem, that the Dutch obtained the superiority in the country. The history of the Dutch administration on Java will abundantly testify this, and at the same time prove, that among Asiatics, there are few nations who have fought more obstinately in support of their independence

than the Javans. It was by corrupting and bribing the chiefs, and sowing disunion among them, that the Dutch succeeded in dismembering an empire, already shaken, at the period of their arrival, by the constant wars which attended the establishment of Mahomedanism. The comparison which has been drawn by the Javans themselves of their own character, in contrast with that of the Dutch, may serve to illustrate the nature of the military feeling still existing in the country. "The Dutch," say they, "are superior to the Javans, inasmuch as they have good heads; they can calculate, and they understand policy better, but then they have cold hearts: the Javans are poor simple beings, but they love their country and will never quit it; their heart glows and often burns."

The phrenzy generally known by the term *muck* or *ámok*, is only another form of that fit of desperation which bears the same name among the military, and under the influence of which they rush upon the enemy, or attack a battery, in the manner of a forlorn hope. The accounts of the wars of the Javans, as well as of the *Maláýus*, abound with instances of warriors running *ámok*; of combatants, giving up all idea of preserving their own lives, rushing on the enemy, committing indiscriminate slaughter, and never surrendering themselves alive^[93]. Even at present, there are to be found among the Javans men who profess to be and are considered invulnerable; and there are some who, by a dextrous manner of receiving the spear, and other such artifices, completely impose upon the too credulous people. Nothing is so easy as for an artful man to persuade the common Javans that he possesses supernatural power. At the present day this pretension, and the artifices by which it is supported, are more generally of a religious nature, but during the wars, every fortunate chief was considered as partially vested with it.

The general term for a soldier is *prajúrit*: the guards of the sovereign are distinguished by the term *tantómo*. *Sara g'ni* is the name given to those who carry fire-arms. *Gánde*k are the couriers or messengers who convey the orders of the commanders. In every army there is a certain number called *jága béla*, whose duty it is to prevent the body of the troops from deserting, and to see that every man does his duty. *Pána káwan* is the term by which the youths who accompany their fathers and relations to battle are distinguished. *Semút gátat* is the general term for attendants, retainers, and followers of an army. But besides distinctions of office, there are others

purely of merit and honour: those are called *niútra* who are selected as superior to their comrades in person and strength: the *prawireng* are those who have once distinguished themselves in battle: *magátísh*, those who sacrifice all other prospects in life in order to pursue the love of arms: *trúna-láyang*, gallant youths: *jága súra*, those whose courage is undisputed, and who keep a good look out: *júdi páti*, those who hazard their lives in battle, as they would hazard a die in any common game of chance; literally, who play with death: *nirbáya*, those who are above a sense of pain or fear: *jáyeng sekár*, flowers of victory^[94]. This latter term was chosen by Marshal Daendels for the native militia raised for the service of the Dutch government during his administration.

In the Dutch armies the Javans were considered as inferior to the other islanders as soldiers, and from the facilities offered for desertion while serving on Java, it was with great difficulty that they could be disciplined. The men were invariably raised by conscription, and instances have occurred of their deserting by companies. Under the British a corps of about twelve hundred men was raised, with little prospect of advantage for the first two years; but, by the perseverance and ability of the officer who commanded them, they afterwards became a well-disciplined corps, and on all occasions behaved themselves with fidelity and courage when called into action. As individuals, they are, for the most part, physically weaker than the *Maláyus* and other islanders; and as a nation, their agricultural habits have considerably obliterated the military character which they once possessed. Their country, however, particularly in the interior, is naturally very strong, full of ravines and fastnesses, and their mode of warfare is perhaps the best adapted for its defence. Were the whole energies of the nation united under one chief, with the experience which they now have of European tactics, it may be assumed that they would render it impregnable to any open attack, either of an European or an Asiatic force; but, unfortunately for their independence, it has been their lot, as their history will shew, to be continually disunited, either by religious or political feuds. Their greatest resistance appears to have been made against European influence. They maintain with pride, that although virtually conquered, they still, as a nation and as individuals, pertinaciously adhere to their ancient institutions, and have a national feeling, very different from that which is usually to be found among a conquered people.

The subject of revenue, for the support of the various establishments under the native government, has been so repeatedly touched upon, and came so much into view in the account given of Javan agriculture, that many further details here would appear tedious and unnecessary. All public officers, it has been often observed, from the highest chief to the lowest menial, are remunerated by grants of land revokable at pleasure, and all expences of the courts of justice, all police and military services, defrayed out of the same fund. There is no public treasury. When public works are to be executed, or supplies are to be furnished, each village is called upon to furnish its quota of men, of provisions, &c.; and on the equitable regulation of these services and contributions depends the reputation of the native chief. The land constitutes the only treasury of the prince, and this is valuable according to its fertility, and the extent and number of its cultivators. There are, to be sure, certain general taxes and imposts levied throughout the country: but these appear to have been of comparatively modern introduction, and unconnected with the genuine principles of the Javan government. The nature of several of these imposts and taxes has been explained in treating of the landed tenure and the condition of the peasantry. The following statement, extracted from the Report of a Dutch commissioner^[95], appointed to inquire into the subject of taxation in the year 1812, though it refers to the particular province of *Surabáya*, may be considered as applicable to the greater part of the island; and I here produce it in preference to any more general or more concise account of my own, because it will shew that the opinions I have so often expressed, concerning the oppressions of the Dutch authorities, the patient submission, the industry, and other good qualities of the lower classes of Java, are not peculiar to the English, but entertained by some of the subjects of a government which profited by the abuses complained of, and must have been anxious to conceal their enormity.

"The ordinary taxes annually levied in the district of *Surabáya* are as follow:

"1. The *grabág* or *peték*, or as it is sometimes called, the *chácha* or capitation tax, is generally levied at the rate of four rupees for each *chácha* a year; that is to say, for such a quantity of profitable land as may be cultivated by one family.

"2. The contingent or contribution of rice to government, being from fifteen to nineteen *píkúls* of clean rice from each *jung*, according to its situation and fertility.

"3. *Pári pánajúng* (from which, however, are excused the distant districts), consisting generally of three *ámats* of *pári*, equal to from eight to ten *káti* of rice, from each *jung*. This is destined for the maintenance of those *Mántris* and chiefs who were not at all or insufficiently provided with rice fields of their own.

"4. *Pári págondíkan*, levied only in the districts near the capital, consisting generally of two *gédings* or double heaps of *pári*. This was destined for the extraordinary expences of the districts; as the maintenance of the government, state prisoners, native ambassadors from the opposite coast, and the like.

"5. *Pári pakásak*, consisted of three *gédings* from each *jung*, destined for the maintenance of those who superintend the direction of the water-courses, &c.

"6. *Pári zákat*, consisted of one *ámat* of *pári* from each *jung*, and was destined for the maintenance of the church and chief priests.

"7. *Pítrah*, consisted in the payment of twenty *káti* of rice from each *jung*, also destined for the maintenance of the priests.

"8. *Máláman*. This consisted of a payment made to the Regent or chiefs of the districts, at each of the three festivals of *Múlut*, *Púasa*, and *Besár*, of ten *káti* of rice, and three and a quarter stivers in money from each *jung*, one large fowl, five eggs, four cocoa-nuts, one bunch of plantains: and from those who held three or four *jungs*, was further required a bottle of oil, to add to the solemnity of the ceremony, to which persons of this condition were universally invited.

"It is easy to conceive, that the common Javan was not able to make any money after paying these taxes and contributions, at least not so much as he wanted for himself and family; particularly if we take into consideration, that it is very seldom one man is the sole proprietor of a *jung* alone, but that it is often divided between three and four persons, and that, with the most successful harvest, such a *jung* does not produce more than thirty to thirty-five *ámats* of *pári*. With all this, however, the common Javan would feel

himself satisfied, if he had no other taxes to pay, having generally a good many fruit trees, and a little cottage farm, in which he cultivates *síri*, &c. and sometimes a small fish-pond in the vicinity of his dwelling, which is usually free of tax. But this is not the case; he must submit to other oppressions, which not being regulated, are for that reason the heavier, because they are called for in an arbitrary way, and because self-interest does not fail to seize every possible opportunity of extortion.

"When a chief has occasion to travel, when a marriage, birth, circumcision, recovery from illness, or any such subject of festivity, occurs in his family, it is advertized immediately to the subordinate towns and villages, the inhabitants of which feel themselves obliged, each in proportion to his means, to carry him fruits, rice, fowls, and even buffaloes and money. These are called free presents, but in fact, are as much an obligatory contribution as any of the others; to say nothing of the many demands for fowls, eggs, ducks, fruits, &c. for which payment is made, but always at a rate far below their value: or of the numerous fines which are continually exacted from the people, in compensation, or as hush money for disputes and offences of every description; the taking away of *bámbus*, and sometimes of fruit trees, when wood is required, either for government or the chief; to which must yet be added, that for the execution of the duties of government, and on the conveyance of orders, *Mántris*, and other subordinate chiefs, were continually, in the neighbourhood of the villages, just like so many voracious birds, who think themselves entitled not only to take something for their trouble, but to be provided during their stay with every thing gratis, even opium, if they require it. This custom, adopted on Java, extends to every other chief, although not in employment, and even to the Regents, their relations, &c. None of these persons will pass through a town or village, without demanding what he wants for his maintenance or journey; and very often he asks what he does not want, to the great oppression of the common Javan. Much is wasted by this practice, and no particular advantage appears to result from it.

"We must, indeed, be astonished to see all the oppressions, &c. to which the common Javan must submit. It is usually said, indeed, that the Javan is not accustomed to an easy life, and ought not to have more than barely enough to keep him alive, with many more such expressions; but this is not the manner of reasoning of any well-thinking man, who, though he sees very

well the imperfections and weak nature of the Javan, yet bears in mind that he is a man like himself; who, although he has been conquered, it is true, by the greater valour and knowledge of the European, has still an equal right to be treated like a man.

"But, alas! these are not all the vexations and oppressions which fall to the lot of the common people, who bear all without murmuring. The feudal service was as grievous as almost all the other charges united. The origin of those services must be sought for in the feudal system of the native government, long ago adopted throughout Java. It was considered that all the land was the property of the prince, who only made provisional assignments thereof to his subjects, in remuneration for military and other services rendered. This was the cause of all the lands being divided into as many allotments as could be cultivated, called *cháchas*, each of a size to be cultivated by one man. A certain number of these was assigned to the different chiefs, according to their rank; the custom of the country fixing not only the amount of contributions to be paid from the produce, but the number of men to be constantly kept in attendance upon them. The lands thus assigned to chiefs were exempt from service to them, and the inhabitants were only expected to watch the villages, to make and repair the roads, and to perform other general services of the state. This was the situation of the people with regard to service, when the coast districts were first ceded to the European government. The system of trade and fixed contributions did not admit of any change, and the services were at that time of very little consequence, and such as could be performed without oppression to the inhabitants; but the case is now quite different. Successively and particularly of late years, much heavier services have been demanded than were ever before known, and it naturally follows, that the Javan must be kept more at work than before. Besides, it is not possible to apportion those services equally, on account of the situation of the places where the services are required, and because the chiefs, who have the direction of the works, from indifference and laziness, generally make a requisition on the nearest village; and it not unfrequently happens, that many people are thus taken for the public service, who have no lands whatever allotted to them.

"Were the requisitions made for the public service alone, it would still be comparatively nothing, it being admitted that the state has a right to the

labour of its subjects; but the Regents, their relations, their *Pátehs*, and the subordinate chiefs of every description, assume the right of disposing of the services of the common people as they think proper, and themselves employ many of them in menial labour of all descriptions^[96], from which it arises, that the number of people employed away from their homes, on what is called public services, is almost incredible.

"It is therefore more than time, and highly necessary, that an end be put to this monstrous system of government. Humanity looks forward with pleasure to this step. Government, who are essentially interested, have the most perfect right to take it; but the change must be entire and radical. Where the machine is entirely bad, it would be vain to attempt the repair of a few of the parts of which it is composed: the whole would still remain worthless, and it would only result that the main defects being hidden by a specious covering, the whole labour would be worse than thrown away."

The British government did accordingly alter the whole system of revenue. The subject was forced upon its attention, not only by the desire which every humane and liberal administration must feel, to promote the happiness of its subjects, but by considerations of a prudential nature. The resources of the country had sunk under a capricious and tyrannical system of exaction; industry was paralyzed, and confidence was destroyed. The opportunity for effecting a reformation was favourable, our means ample, and we had nothing to dread from the opposition of those interested in supporting abuses: it was, therefore, resolved to abolish all oppressive taxes, and to come immediately upon the soil for support of our establishments, by appropriating a fixed portion of its produce, leaving the full enjoyment of the remainder to the cultivator, with every facility for turning his industry to account. What was done in consequence, by the land revenue arrangements, has been seen in the account given of landed tenure.

The subjects of the colony were freed from the sway of their chiefs, who were no longer permitted to demand at pleasure their services or their property. These chiefs were compensated for the loss of their former influence by salaries in money or allotments of land, which they either held on condition of performing the police duties, or collecting the revenue. When paid by the rent of land, they were permitted to exact no more than the assessment settled by government. No arbitrary power was allowed them to disturb the peasant in the enjoyment of the remainder, or to drag

him from his home and his duties to his family, for the purpose of swelling their idle pomp, or performing services about their person or household. The Chinese farmers of the revenue in *Chéribon* and other districts, having oppressed the people by every rapacious and tyrannical expedient, were, by the discontinuance of the farms, deprived of the power they had exercised over the persons and property of the natives. Forced services and all deliveries of produce at inadequate rates on government account were abolished; and for whatever colonial produce or supplies might be required for the public service, the fair market price was ordered to be paid. Duties on the transport of goods from one part of the country to another, and on the sale of commodities at markets or bazars, were, for the most part, abolished, as injurious to trade and discouraging to agricultural industry. The system of farming the import and export duties, which existed under the Dutch, was likewise annulled, and collectors were appointed to receive the duties immediately for government. Internal duties, of the nature of tolls and market dues, had been universally, though secretly, levied by the Chinese, in *Chéribon* and other places, in direct opposition to the orders of government and the terms of their engagement. This abuse, engrafted on the farming system, incalculably aggravated its evils and called loudly for redress. The farmer thrust his rapacious hand into every place where there was the least prospect of gain, and limited his demand only by the capacity of the merchant to satisfy it, or by an ill-defined custom, which might be perverted almost at pleasure, so as to accommodate itself to any exaction. The evils resulting from this mode of raising a revenue may easily be calculated, when it is stated, that, for a very trifling contribution to government by the farmer, duties were levied upon internal transport amounting to nearly fifty per cent. on the value of the commodities transported. Rice, on its transport from one part of the island to another, had been liable to duties of about forty-six per cent. Regulations were made for fixing the amount of import duties, and equalizing them over the island.

The restoration of the Dutch Indian empire to the sovereign of the Netherlands, at a period when these important changes were only in progress, may have perhaps prevented the full accomplishment by the English of the details in some districts, but the principles of the new system were not only introduced and thoroughly understood in all the more populous districts under the European government, but an experience of three years fully demonstrated the advantages resulting from it to the public

revenue. It would have been attended with great immediate loss, without any corresponding future gain, to have abolished at once all the former sources of revenue; but the thorough change of system was declared, and the principles of it were acted upon, as far as was consistent with the security of public tranquillity and the realization of the current resources of the country; and the results of these arrangements, as far as they went, proved that a land rent might, even with the existing taxes in the capitals, &c. be realized at the rate of at least six rupees annually from each cultivator, or after the abolition of the taxes bearing on agriculture, at the average rate of four Spanish dollars from each cultivator, giving in the one case a rental for the whole island of about six millions of rupees, and in the other of four millions of Spanish dollars, or at five shillings the dollar, a million sterling. Of this one-fourth would accrue to the native princes, and the remainder to the European government. The particulars of the land revenue settlement effected in each district, and the detailed resources of the different parts of the island, will be particularly noticed in the statistical accounts which will appear in a subsequent part of this volume, when the subject of revenue will be again adverted to; and, in the mean time, it may be sufficient, for the purpose of shewing the general resources, to refer to the annexed table, exhibiting the revenues and expenses of the Javan government for a period of three favourable years under the old Dutch Company, for three years under the administration of Marshal Daendels, when its real resources were first called forth and the revenue was higher than before known, and for the first three years under the British government, of which alone, the accounts are yet closed. The dependencies included in this table do not include the Moluccas or Spice Islands, the administration of which under the British government was kept distinct from that of Java.

By this statement it will appear, that the revenues actually realized in cash, on Java, in the year 1814-15, and before the land revenue arrangements had become fully effectual, amounted to upwards of six millions and a half of rupees: to this may be added one-third more for the revenue of the native provinces, making a total revenue of the island exceeding eight millions and a half of rupees, or above a million sterling.

From a colony which was able to furnish at such a moment so extensive a revenue from its own internal resources, after the drains, checks, and

restrictions to which it had been subjected during the last two centuries, what might not have been expected, had confidence been once established in the permanency of the government, and the tide of British capital been once fairly turned into it?

FOOTNOTES:

[74] The inhabitants of these Islands are strikingly alive to a sense of shame; a feeling, which is heightened by the influence of a tradition among the Maláyus, that, on the first establishment of the Malayan nation, the islanders stipulated, that neither they nor their descendants should ever be put to shame. The tradition runs as follows:

"Then *Ampu* and *Maling* made obeisance to *Sangsapurba* (a prince who had arrived in Sumatra from Western India, and who is supposed to have founded the Malayan empire) and represented to him that *Demang Lebar Daon* (chieftain broad leaf of Palembang), had a daughter. *Sangsapurba* accordingly sent to ask her in marriage; but he excused himself, alleging, that she would probably be struck with sickness, and that he would only resign her to him as a wife on certain conditions. These conditions were, that, on *Sangsapurba* marrying his daughter, all the family of *Demang Lebar Daon* should submit themselves to him; but that *Sangsapurba* should engage, both for himself and his posterity, that they should receive a liberal treatment; and, in particular, that when they committed a fault, they should never be exposed to shame nor opprobrious language, but if their fault was great, that they should be put to death according to the law. *Sangsapurba* agreed to these conditions; but he requested, in his turn, that the descendants of *Demang Lebar Daon* should never move any treasonable practices against his descendants, even though they should become tyrannical. 'Very well,' said *Demang Lebar Daon*; 'but if your descendants break your agreements, probably mine will do the same.' These conditions were mutually agreed to, and the parties swore to perform them, imprecating the divine vengeance to turn their authority upside down who should infringe these agreement. From this condition it is, that none of the Malayan rajas ever expose their Malayan subjects to disgrace or shame: they never bind them, nor hang them, nor give them opprobrious language; and whenever a raja exposes his subjects to disgrace, it is the certain token of the destruction of his country. Hence also it is, that none of the Malayan race ever engage in rebellion, or turn their faces from their own rajahs, even though their conduct be bad, and their proceedings tyrannical."—*Malàyan Annals*.

[75] See Report on the Districts of Japára, by the Resident Dornick, in the year 1812.

[76] See a further account of this work under the head Literature.

[77] This payment is regularly termed by the Dutch, *ampt-geld*, or place-money, being money paid for the purchase of an office. By the Javans it is termed *sorok*, which, in its more general acceptation, means a bribe.

[78] With whatever fidelity this character of the Javan regents may have been drawn by Mr. Hogendorp, in the year 1800, it most certainly did not apply to them in the year 1811, nor in the subsequent years of the British government on Java; for, however negligent and corrupt many of them may have been rendered, by the system of government which prevailed under the Dutch East India Company, the changes effected during the administration of Marshal Daendals soon induced a character for energy and activity. His government was military and despotic in the extreme, and the regents were considered to hold a military rank, and required to exert themselves in proportion to its importance. They did so, and works of the greatest magnitude were constructed by their exertions. The chiefs were found active and intelligent, the common people willing and obedient. With regard to their character under the British Government, it would be an act of injustice, if not ingratitude, were I to neglect this opportunity of stating, that, as public officers, the Regents of Java were almost universally distinguished by an anxiety to act in conformity with the wishes of the government, by honesty, correctness, and good faith; and as noblemen, by gentlemanly manners, good breeding, cheerfulness, and hospitality. In the observations made upon the Javan character in the text, I have

spoken of the Javans as a nation generally; but I might select instances where the character of the individual would rise very far above the general standard which I have assumed. I might, for instance, notice the intellectual endowments and moral character of the present *Panambáhan* of *Súmenup*, *Náta Kasúma*. This chief is well read, not only in the ancient history of his own country, but has a general knowledge of Arabic literature, is conversant with the Arabic treatises on astronomy, and is well acquainted with geography. He is curious in mechanics, attentive to the powers of mechanism, and possesses a fund of knowledge which has surprised and delighted all who have had an opportunity of conversing with him and of appreciating his talents. Of his moral character I have given an instance, in the manner in which he liberated his slaves. He is revered, not only for his superior qualifications and talents, but also for the consideration and attention he pays to the happiness and comfort of the people committed to his charge.

Of the capacity of the Javans to improve, of their anxiety to advance in civilization, and of the rapidity with which they receive knowledge and instruction, an instance might be given in the case of the two sons of the Regent of *Semárang*, *Kiái Adipáti Súra Adimangála*. This Regent, who, next to the *Panambáhan* of *Súmenap*, is the first in rank as well as character, shortly after the establishment of the British government on Java, sent his sons to Bengal, in order that they might there receive an education superior to what they could have had at home. They remained there for about two years under the immediate protection and patronage of the late Earl of Minto, and on their return not only conversed and wrote in the English language with facility and correctness, but evinced considerable proficiency in every branch of knowledge to which their attention has been directed. The eldest, in particular, had made such progress in mathematics before he quitted Calcutta, as to obtain a prize at a public examination, and had acquired a general knowledge of the ancient and modern history of Europe, particularly in that of Greece and Rome. He is remarked for his graceful and polite manners, for the propriety of his conduct, and for the quickness and correctness of his observation and judgment. As this is the first instance that has been afforded of the capacity of the Javan character to improve under an European education, it may enable the reader to form some estimate of what that character was formerly in more propitious times, and of what it may attain to hereafter under a more beneficent government. Among all the English on Java, who have had an opportunity of conversing with this young nobleman, there has not been one who has hesitated to admit, that his mind, his qualifications, and conduct, would be conspicuous among their own countrymen at the same age, and that, as an accomplished gentleman, he was fitted for the first societies of Europe. This young man, *Ráden Sáleh*, is now about sixteen years of age, and when the British left Java was an assistant to his father as Regent of *Semárang*.

[79] The following description of the office of a *Jákisa*, and of the qualifications requisite for fulfilling his important duties, is taken from the *Niti Prája*, a work already referred to.

"A *Jákisa* must, in all cases, be impartial, to enable him to weigh all causes which come before him with the same exactness as merchandize is weighed in a scale, and nicely balance the equilibrium, nothing adding or taking from either side.

"He must be above all bribery, either by words or money, and never allow himself to be induced to commit an act of injustice; for were a *Jákisa* to commit an act of this kind, the consequences could not but be highly injurious to the country.

"He must not accept presents of any kind from the parties whose cause comes before him, not only because he cannot expect to derive advantage therefrom, but also because the public will hold discourse concerning him highly injurious to his reputation.

"All causes in dispute must be decided upon by him with the least possible delay, according to law, and not kept long in suspense, to the injury of the parties concerned, lest he be considered like a holy man, who, for the sake of money, sacrifices his good name.

"A *Ják*sa must inquire into every circumstance relating to the causes brought before him, and duly investigate the evidence; after which he must take the cause into consideration. He must not, in the least, listen to what is false, and on all occasions must decide according to truth.

"A *Ják*sa who attends to all these points is of high repute. Of less repute is a *Ják*sa who, in the decision of causes which come before him, listens to the advice of others: such a one is like that kind of bird, which in order to procure for itself the necessary food, dives under water, without thinking of the danger to which it is exposed of losing its life from the want of air. But entirely unfit for employment is a *Ják*sa who is haughty in his demeanour, and at the same time low enough to take advantage of persons who come before him: such a one is like a bat, that in the dark steals the fruit from the trees; or like a sportsman, who though destined to chase what is useful only, indiscriminately destroys whatever comes in his way, whether useful or not. In the same manner is it with a priest who every day attends at the temple, for no other purpose but to make profit by it: or with a writer, who knows not how to make any thing but by the prostitution of his writings; or with the head man of a village, who imposes upon the villagers; or a devotee, who gains his livelihood by necromancy."

[80] The following was the usual course of proceeding in *Jápara*, and generally in the provinces subjected to European authority, previous to the interference of the British government. The plaintiff went to the *Ják*sa and made his complaint. If the case was important, the *Ják*sa took down the deposition in writing in the presence of witnesses, summoned the accused, and communicated the deposition to him. The latter then either acknowledged or denied the facts, witnesses were examined, and the proceedings of the suit laid before the Regent, who after perusal transmitted the same to the *Panghúlu* for his advice, with which the latter complied, referring at the same time for a sentence to some of the collections on Mahomedan law. The Regent having compared the sentence with the law and with equity, and finding the same correspondent with both, judgment was pronounced by the *Ják*sa.

[81] See Appendix C.

[82] With the exception, perhaps, of the right of election, which I have not seen noticed in any account of Continental India, the constitution of the Javan village has a striking resemblance to that of the Hindus, according to the following statement in the Fifth Report of the House of Commons on Indian Affairs. "A village, geographically considered, is a tract of country comprising some hundreds or thousands of acres of arable and waste lands; politically viewed, it resembles a corporation or township. Its proper establishment of officers and servants consists of the following descriptions: the *Potail* or head inhabitant, who has generally the superintendence of the affairs of the village, settles the disputes of the inhabitants, attends to the police, and performs the duty of collecting the revenues within his village, a duty which his personal influence and minute acquaintance with the situation and concerns of the people render him the best qualified to discharge. The *Kurnum*, who keeps the accounts of cultivation, and registers every thing connected with it. The *Tallier* and *Totie*, the duty of the former appearing to consist in a wider and more enlarged sphere of action, in gaining information of crimes and offences, and in escorting and protecting persons travelling from one village to another; the province of the latter appearing to be more immediately confined to the village, consisting among other duties in guarding the crops and assisting in measuring them. The boundary man, who preserves the limits of the village, or gives evidence respecting them in cases of dispute. The superintendent of *tanks* and water-courses, distributes the water therefrom for the purposes of agriculture. The *Bramin*, who performs the village worship. The schoolmaster, who is seen teaching the children in a village to read and write in the sand. The calendar *Bramin* or astrologer, &c.

"These officers and servants generally constitute the establishment of a village; but in some parts of the country it is of less extent, some of the duties and functions above described being united in the same person: in others it exceeds the number of individuals which have been described.

"Under this simple form of municipal government, the inhabitants of the country have lived from time immemorial. The boundaries of the villages have been but seldom altered; and though the villages themselves have been sometimes injured, and even desolated by war, famine, and disease, the same name, the same limits, the same interests, and even the same families, have continued for ages. The inhabitants give themselves no trouble about the breaking up and division of kingdoms; while the village remains entire, they care not to what power it is transferred, or to what sovereign it devolves; its internal economy remains unchanged. The *Potail* is still the head inhabitant, and still acts as the petty judge and magistrate, and collector or renter of the village."

In examining the interior of a village on Java, we find that, in common with the Hindu usage, it possesses a constitution within itself, independent of the supreme governing power. Here, as in Western India, it will be found that each village possesses its *Petíng'gi* or chief; its *Kabayan*, who is the deputy or assistant to the head of the village; its *Kamituah* or elders, generally men who have formerly been chiefs of the village; its *Múdin* or priest; its *Ulu-ulu* or *Kapala Bandang'an*, or superintendent of water-courses; its *Jeru-tulis* or writer, &c.

[85] Mr. Mc. Quoid. See his Report on the Districts of Japára and Jawána.

[86] Appendix D.

[87] Among many others, the following enactments, which were in force in some of the Eastern districts when the English arrived, will serve to shew the barbarities of the law then existing, in its operation on the people, and its leniency towards the great.

"Any person murdering his superior shall be beheaded, his body quartered and given to the wild beasts, and his head stuck upon a *bambu*.

"Any person disobeying his superior and attempting to murder him, may be killed by the superior, without giving any intimation thereof to the chief town.

"Any person daring to destroy any public advertisement promulgated by government shall forfeit his right hand.

"A *Demáng*, or other chief of a *désa*, being acquainted with any conspiracy tending to the injury of the state, and not giving intimation thereof, shall be punished by losing one ear, his head shall be shaved, and he shall be banished.

"Any person daring to offer violence to a priest in the mosque or among the tombs shall forfeit one hand.

"If a woman kills a man she shall be fined 500 reals *batú*.

"If a superior kills an inferior he shall be fined 1000 doits.

"If a person puts out the eyes of another he shall be fined 500 reals *batú*; if one eye only 50 reals."

There were also different fines for maiming different parts of the body. "For cutting out the tongue, 500 reals; for knocking out the teeth, 25; for breaking the thumb, 500; for breaking the finger, 100; and the like." See *Collection of Native Laws at Banyuwangi*.

[88] Appendix D.

[89] See Appendix D.

[90] The number required to compose the jury was fixed in conformity with the ancient usages of the country, in which five persons are considered necessary to assist in the deliberation upon any matter

of importance.

[91] In joining the battle it is usual for the warriors to shout, and for the trumpets (*sarenen*), gongs, and drums used in the martial music of the country to be sounded.

[92] The following verse from the *Níti Sástra Káwi* may be adduced, in further illustration of the notions entertained by the Javans regarding the bravery of a soldier:

"The brave man who has been successful in war obtains his heart's desire.

"The brave man who dies in war is received into heaven and cherished by the *Widadaris*.

"If a man is cowardly in war and die, the keepers of hell seize upon him in a rage:

"Should he not die, he is reprobated and despised by all good men, even to his face."

[93] It is on these occasions that the parties frequently increase their desperation by the use of opium.

[94] "As to their military character, it is certain," says Plutarch, "they were able commanders, both by sea and land. But as the champions, who in one day gain the garland, not only in wrestling, but in the *pancration*, are not simply called victors, but by the custom of the games, the *flowers of victory*; so Cymon, having crowned Greece with two victories gained in one day, the one at land, the other at sea, deserves some preference in the list of generals."—*Langhorne's Plutarch: Cimon and Lucullus compared*.

[95] Mr. Rothenbulla.

[96] This was the practice of the Europeans also.

CHAPTER VII.

Ceremonies of the Court—Deference paid to superior Rank—Regalia—Processions—Pomp—Rank and Titles—Ambassadors—Ceremonies attending Births, Marriages, and Funerals—Account of the People called Kálang, and of the Inhabitants of the Téng'ger Mountains—The Bedui—Festivals—Amusements—The Drama—Wáyangs—The Dance—Tournaments—The Chase—Tiger Fights—Combat of Criminals with Tigers—Bull Fights, &c.—Games of Skill and Chance—Other Customs and Usages.

Having, in the preceding Chapter, endeavoured to pourtray the natural and moral character of the people of Java, and to convey to the reader a general idea of the nature and principles of the government to which they have been subjected, I shall now proceed to detail some of the usages and customs which prevail among them.

Of these the ceremonies of the court are the most obvious, and a stranger cannot fail to be struck with the extreme deference and respect towards their superiors, by which the Javans are characterized. Respect for rank, for experience, for parents and old age, have been already noticed among the features of their character; but the excess to which deference to rank is carried by the political institutions of the country, deserves more particular remark, whether we consider it as illustrative of the nature of the government and the quiet and orderly disposition of the people, or endeavour to trace, in the early periods of their history, the causes which may have contributed to the existing constitution of society among them.

The respect shewn to superior rank on Java is such, that no individual, whatever his condition, can stand in the presence of a superior; neither can he address him in the same language in which he is spoken to. Not even the heir apparent, or the members of the royal family, can stand in the presence of the sovereign; and the same restriction applies to the family of each subordinate chief. Were this mark of respect confined to the royal family alone, it might perhaps find a parallel in other eastern countries, where it is

usual for the subject to prostrate himself before the sovereign, but in Java the nature of the government is such, that each delegated authority exacts the same marks of obeisance; so that, from the common labourer upward, no one dares to stand in the presence of a superior. Thus when a native chief moves abroad, it is usual for all the people of inferior rank among whom he passes, to lower their bodies to the ground till they actually sit on their heels, and to remain in this posture until he is gone by. The same rule is observed within doors; and instead of an assembly rising on the entrance of a great man, as in Europe, it sinks to the ground, and remains so during his presence.

This humiliating posture is called *dódok*, and may be rendered into English by the term *squatting*. The practice is submitted to with the utmost cheerfulness by the people: it is considered an ancient custom, and respected accordingly. It was, however, in a great measure discontinued in the European provinces during the administration of the British government, who endeavoured to raise the lower orders, as much as was prudent, from the state of degradation to which their chiefs, aided by the Dutch authority, had subjected them; but it continued in force in the native provinces, in *Madúra*, and to a certain extent in most of the districts at a distance from the seats of European government.

In travelling myself through some of the native provinces, and particularly in *Madúra*, where the forms of the native government are particularly observed, I have often seen some hundreds drop on my approach, the cultivator quitting his plough, and the porter his load, on the sight of the *Túan besár's* carriage. At the court of *Súra-kérta*, I recollect that once, when holding a private conference with the *Susúnan* at the residency, it became necessary for the *Ráden adipáti* to be dispatched to the palace for the royal seat: the poor old man was as usual squatting, and as the *Susúnan* happened to be seated with his face towards the door, it was full ten minutes before his minister, after repeated ineffectual attempts, could obtain an opportunity of rising sufficiently to reach the latch without being seen by his royal master. The mission on which he was dispatched was urgent, and the *Susúnan* himself inconvenienced by the delay; but these inconveniences were insignificant, compared with the indecorum of being seen out of the *dódok* posture. When it is necessary for an inferior to move, he must still

retain that position, and walk with his hands upon his heels until he is out of his superior's sight.

Besides this deference in the posture of the body, a deference, equally striking and still more defined, is shewn in the language used to a superior. The vernacular language of the country is never allowed to be used on such occasions, but only an arbitrary language, distinguished by the term *bása*, the language, or *bása kráma*, the polite language, or language of honour. The common people are thus not permitted to use the same language as the great, or in other words, are by the political institutions of the country, in a great degree, deprived of the use of their mother tongue. This subject will however be more particularly treated of in another chapter. That a set of people who have received some mental culture will necessarily discover it in their language, and that a line of distinction will be thus drawn between the well informed and the ignorant, is natural; and of the employment of a different number of persons in the verbs and pronouns, according as supremacy, respect, or familiarity is to be expressed, the modern European languages afford abundant example: but that one class of words should be exacted from the lower orders as a homage to the powerful, and another class given in exchange, serving to remind them of their inferiority, is a refinement in arbitrary power, which it would be difficult to parallel.

Having thus seen the nature and extent of the general deference paid to a superior on Java, the reader will be prepared, in some degree, for the still further humiliations which are expected from a subject on public occasions. No one approaches his sovereign or immediate chief, no child approaches his father, without *súmbah*, (to that is, obeisance) closing his hands and raising them to his forehead, in token of respect. On public or festival days, it is usual for the inferior chiefs, not as in Europe, to kiss the hand, but to kiss the knee, the instep, or the sole of the foot, according to the relative distance of rank between the parties.

The royal seat is a large stool or bench of gold or silver with a velvet cushion: it is called *dámpar*, and attends the sovereign wherever he may go.

Among the regalia (*upachára*), which are always carried in procession when the sovereign moves abroad, and are arranged behind him while seated on the *dámpar*, are the following golden figures:—the *hásti* or *gája*, that of an elephant; the *hárdá walíka* or *nanágan*, that of a serpent; the

jajáwen sánting, that of a bull; the *sángsam*, that of a deer; and the *sáwung gáling*, that of a cock fowl; each of a size to be borne in the hand. These, with the *kútuk* and *chapúri* for tobacco and *síri*, the *pakachohán* or golden spitting-pot, and a variety of golden salvers, bowls, &c. distinguished by the respective names applicable to their different purposes, have descended as *pusákas*, or heir-looms, in the royal family, and are esteemed with the highest degree of veneration.

When the sovereign moves abroad, he is attended by numerous spearmen (*wáhos*), the duty of eight of whom is to attend the figures of the sacred elephant and bull, near which are also led four horses richly caparisoned. The royal *páyung*, or state umbrella, is carried in front of the procession on these occasions, in which are also invariably carried four trunks or boxes (*brókoh*), each borne by two men, and containing the clothes of the sovereign, caparison for his horses, his personal arms, implements, provisions, and in short every thing required for an establishment: this rule is observed whenever the sovereign moves out of the palace. His mat (*lántê*) is likewise borne in procession, together with two saddle horses for his use when necessary.

The ceremonies and state of the native courts have lost much of their genuine character, from the admission of European customs, introduced by the Dutch after the last Javan war. Salutes are regulated after the European order, and the Javans have availed themselves of many of the customs of Europeans, to render the ceremonies of state more striking. Thus both the *Susúnan* and *Súltan* are furnished with large gilt carriages, after the fashion of those used by the Lord Mayor of London. When the former drinks wine with the governor, the rest of the company are offered white wine, while they alone drink red, and a flourish of trumpets sounds as the glass approaches their lips.

It may be observed, that few people are more attached to state and show than the Javans; that, in general, the decorations employed and the forms observed are chaste, and at the same time imposing, calculated to impress a stranger with a high idea of their taste, their correctness and yet love of splendour. The ornaments of state, or regalia, are well wrought in gold; the royal shield is richly inlaid with precious stones, and the royal *krís* is hung in a belt, which, with its sheath, is one blaze of diamonds. In processions, when the European authority is to be received, each side of the road, for

miles, is lined with spearmen in different dresses, and standing in various warlike attitudes; streamers flying, and the music of the *gámelán* striking up on every side. *Páyungs*, or umbrellas of three tiers, of silk richly fringed and ornamented with gold, are placed at intervals, and nothing is omitted which can add to the appearance of state and pomp. Among the ensigns displayed on these occasions are the *Monkey* flag of *Arjuna*, and a variety of other devices taken from the poems of antiquity, as well as the double-bladed sword, and a variety of inscriptions from the Arabs.

The chiefs of provinces, and the petty chiefs in their gradation below them, keep up as much of the form and ceremony of the chief court as is consistent with their relative rank and means; and, in their turn, exact from their vassals the same degree of respect which the sovereign exacts from them.

On occasions when the Regents are anxious to shew particular respect to Europeans, as on the entrance of the Governor, or other high officer travelling, it is the custom, particularly in the *Súnda* districts, to erect triumphal arches of *bámbu* at the entrance of the principal villages; and the taste and variety displayed on these occasions have been often noticed, as evincing a refinement beyond what the general results of their present state of civilization might justify.

In a former place I noticed, that the gradations of rank among the Javans were, in some instances, marked by the dress they wore, and by the manner of putting on the *krís*; but a more defined line is drawn by the *páyung*, or umbrella, which is subject to the following regulation from immemorial custom:

1. The Sovereign alone is entitled to the golden *páyung*^[97].
2. The *Rátu*, or Queen, and the members of the royal family, to the yellow *páyung*.
3. The family of the *Rátu*, and the family of the Sovereign by his concubines, to the white *páyung*.
4. The *Bopátis* and *Tumúng'gungs* to the green *páyung*, edged and mounted with gold.
5. The *Ang'ebáis*, *Ráng'gas*, *Mántris*, &c. to the red *páyung*.

6. The heads of villages, and other petty officers, to the dark *páyung*.

In order to convey an idea of the different titles and the gradations of rank among the Javans, it becomes necessary, in consequence of the confusion which has arisen among them of late years, to revert to what they were supposed to be in the days of *Májapáhit* and previously, when the Hindu faith and institutions exclusively prevailed.

The usual term for the sovereign was then *Rátu*, and in the literary compositions which have descended to us, he was either distinguished by such epithets as *Nára-náta*, *Nára-dípa*, *Nára-páti*, *Naríndra*, *Narária*, *Aji*, *Prábu*, *Kátong*, *Ajung*, or *Máharája*. The queen was called *Pramiswári*. The children of the sovereign were called, the princes *Ráden*, and the princesses *Déwi*, which titles were hereditary in their families. The brothers of the sovereign had the title of *Ráden aria*.

When a sovereign was advanced in age, and quitted his government to become a devotee, he was called *Begáwan*.

The minister who administered the country in the name of the sovereign, and issued his orders to the governors of provinces, &c. was always termed *Páteh*; and the chiefs employed in administering the government of the provinces, or otherwise in the government of the country, were entitled either *Pratíiwa*, *Pung'gáwa*, *Niáka*, or *Bopáti*. The chiefs below these, and subject to their orders, such as *Ráng'ga*, *Ange'bái*, *Demáng*, *Praméa*, *Ménak*, *Klíwon*, and others were included in the class of *Mantris*.

The heads of villages were called either *Umbul*, *Patíng'gi*, *Babákal*, *Babáhu*, *Lúra*, or *Kúwu*.

The commanders-in-chief in war had the title of *Senapáti*. The general term for soldiers was *prajúrit*; and those employed in guarding the country from the approach of an enemy were called either *Pechát tánda*, *Támping*, or *Ulu-bálang*.

In judicial affairs the *Jáksha* was the chief. His assistant or deputy was *Paliwára*, and the officers of his court *Kérta*.

Wadána gédong was the title given to the officer entrusted with the charge of the sovereign's purse and personal property, and with the collection of his revenues: the secretary or writer was called *Chárik*. *Tánda* and *Sabándar*

was the title of the officers who collected the duties in the markets and along the high roads.

When it was necessary for the sovereign to move from one part of the country to another, there was always a class of *Mántris* in attendance, to whom the title of *Pang'alatan* or *Kajíneman* was given.

On the establishment of the Mahomedan religion, in the Javan year 1400, a new gradation of rank and order of titles was introduced by the sultan of *Demák*, as follows.

The sovereign, instead of being called *Rátu*, took the name of *Susuhúnan*^[98], or *Sultan*, and the queen was called *Rátu*. The title of *Panámbahán* was conferred as the highest in rank next to the sovereign, and above the princes of the blood, who were now termed *Pang'éran* or *Pang'éran ária*; the princesses born of the queen were termed *Rátu*, and the daughters by concubines *Ráden áyu*. The sons of the princes were called *Ráden mas*, until they were married, when they were termed *Ráden* only; their daughters before marriage were called *Ráden ajéng*, and after marriage *Ráden áyu*. The *Susuhúnan's* great grandchildren by his wife were allowed to assume the title of *Ráden*, and those by his concubines bore the title of *Mas*, the latter title continuing to descend in the family to the offspring by a wife, those by a concubine taking the title of *Bágus*, which is considered as the lowest title appertaining to royalty. It would be tedious, in this place, to detail the minor titles common in the *Súnda* districts; they will be more particularly noticed in the statistical accounts of those districts.

When a *Bopáti*, or governor of a province, is appointed, he is furnished with a *piágam* or *nawála*, or letter patent, fixing his rank, and the extent of assignment of lands conferred upon him^[99]; also with a *báwat*, or stick, similar to that of the *páyung*, or umbrella, measuring about eight feet long, with which it is his duty to measure the *sáwah* or rice fields.

When a chief of the rank of *Mántri* is appointed, he is furnished with a *krís* handle and with a mat, which is carried behind him when he moves about, as well for use as to shew his rank.

The Javans include in the general term of *Priáyí* all persons above the rank of common people, a term which in its general application on Java is not very unlike that of gentlemen, or latterly of esquires, in England.

Among the forms of an eastern court, few are more particularly observed than those relating to ambassadors. The Javans have long ceased to send or receive ambassadors, but the following extracts from the *Níti Prája*, will shew what they conceive ought to be the qualifications and conduct of such an officer.

"A person entrusted with a message from his prince, must never abuse the trust placed in him, but always keep in sight that on such occasions he is the representative of the prince. And chiefly, if he is sent with a letter from the prince to a foreign country, in this case he must be less submissive than before his own prince. According to circumstances he must conduct himself with dissimulation, and before he enters any foreign country, by some secret means or other, occasion his own name, and that of the prince his master, to be spread over the country, at the same time that he obtains every possible information regarding the state of the country and people. On entering the country, he must assume a dignified appearance, and not speak or look about him more than is necessary. Such conduct will inspire the people with respect for him.

"The letter must be carried on the shoulder, and in his gait and speech he must conduct himself with propriety. In delivering the letter he must present himself with dignity, approach first, and then retire from the person to whom the letter is directed, speak with him at a distance, and not too familiarly.

"In all cases he must be careful not to go beyond his orders. His deportment must be unassuming yet dignified; and having received an answer for his prince, it is his duty to depart immediately, and to proceed with it direct to the prince, without even going to his own house first. If the letter is from some person lower in rank than his master, he must not immediately shew it, but conceal it for a time; but if it is from a prince of equal rank, then must he carry the letter before him. When a letter is from a prince to one of his subjects, it must be carried high. Coming in the presence of his prince, he must carefully watch his eye, that he may deliver the letter on the first intimation given by the prince that he is ready to receive it.

"Whoever dictates a letter must be careful that a letter to a superior is not couched in the same terms as a letter to an inferior."

The three most remarkable events in the history of the individual are his birth, his marriage, and his death; to these accordingly have the greatest number of forms and ceremonies been attached.

As soon as it is observed that a Javan woman is in the third month of pregnancy, the event is communicated to all the nearest relations, to whom, at the same time, presents are made, consisting of yellow rice, sweet-scented oils, and wax candles. People of condition add some cloths, gold, silver, or brass cups, as also needles, either of those metals or of iron.

After seven months' pregnancy, a festival is given to the relations and friends, at which yellow rice forms invariably a part of the entertainment.

The pregnant woman must afterwards wash her body with the milk of a green cocoa-nut, on the shell of which has been previously carved two handsome figures, one of each sex, by which the parents intend to represent a standard of beauty for their expected offspring, and to engrave on the imagination of the mother, impressions which may extend to the lineaments of her infant. The nut must be opened by the husband. She is next to bathe in water, into which many sweet-scented flowers have been thrown, and to dress herself with a new cloth, making a present of the old one, together with money, raw rice, *sírí*, and cocoa-nuts, to the midwife, who assists in her lustrations. On the night of these ceremonies there must be a *wáyang* or scenic shadow performed, the object of which is to represent the life and adventures of a certain prince in the line of *Déwa Batára Bráma*.

If the woman is delivered of a son, the after-birth is immediately cut off with a very sharp knife of *bámbu*, wrapped in a piece of paper on which is written the Javan alphabet, then laid in a new pot, and buried in the ground, at which place a lamp, covered with a basket of *bámbu*, and adorned with leaves of the *pandánri*, is put, and kept burning till the umbilical cord of the child falls off. When this takes place, the child is watched the whole night, by persons who read the history of the *Déwas*, or of famous princes, or amuse themselves with a *wáyang*.

As soon as the child is nine months old, the parents entertain their relatives and friends with a *wáyang* and festival.

Marriages are invariably contracted, not by the parties themselves, but by their parents or relations on their behalf. Such interference (which was

common among the Greeks, without the same apology) is rendered necessary by the early age at which the matrimonial union is formed, and the incompetence of either of the intended couple to form a discreet and prudent choice. During the period that intervenes between the application of the friends of the boy to the parents or guardians of the girl for their concurrence in the match, and the obtainment of it, her condition is distinguished by the term *tétákon* (enquired for): when the consent of her parents is obtained, it is termed *lámar* (solicited). According to ancient custom, after matters proceeded thus far, a present of different valuables, termed *paníng'sat* is sent by the intended bridegroom to the bride, and her acceptance of it, implying that she concurs in the previous steps taken towards her settlement, renders the contract binding. The general prevalence of similar customs cannot fail to strike those who are acquainted with the nature of the *sponsalia dona* of the Romans, and the marriage ceremonies detailed in various passages of Scripture (Genesis, ch. xv. 2; xxiv. 5, &c.) A present of this kind is described as being sent by *Pánji Kérta Páti* to the Princess *Chándra Kirána of Dahá*^[100], and we are told that it thence became a custom among the Javans.

By any reluctance to complete his engagement, the bridegroom forfeits to his betrothed these earnest gifts (as they may be called); while, on the other hand, if the obstacles to the completion of the marriage originate with her, she is bound to return them. This present is also called *patiba sámpir*.

This custom, however, is now not so common as formerly: it is in a great measure discontinued or confounded with the next ceremony, termed *sárahan* (delivered up.) This consists in making various presents to the bride a short time before the day fixed for the marriage, after the delivery of which, the bride and bridegroom are confined to the house, until the ceremony takes place. The period varies; but with people of distinction there generally elapses an interval of forty days between the *sárahan* and the marriage.

On the day of the marriage (for which one that is considered fortunate^[101] is previously selected) the father of the bride proceeds to the mosque, accompanied by the bridegroom, and informing the *Panghúlu* that the lad whom he presents has agreed to give the *sri káwin* (generally about two dollars), requests him to marry him to his daughter: on which the *Panghúlu* inquires of the bridegroom whether he has paid the amount, or is willing to

do so? and upon the affirmative being declared, he sanctifies the marriage by words to the following effect:

"I join you, *ráden mas* (bridegroom), in wedlock with *sátia* (the bride), with a pledge of two reals weight in gold or silver^[102]. You take (*sátia*) to be your wife for this world. You are obliged to pay the pledge of your marriage (*sri káwin*), or to remain debtor for the same. You are responsible for your wife in all and every thing. If you should happen to be absent from her for the space of seven months on shore, or one year at sea, without giving her any subsistence, and are remiss in the performance of the duties which you owe to your sovereign, your marriage shall be dissolved, if your wife requires it, without any further form or process; and you will be, besides, subject to the punishment which the Mahomedan law dictates."

Should any circumstance occur to prevent the bridegroom from attending at the mosque on the day selected for the marriage, he follows the singular custom of sending his *krís*^[103] to the ceremony, which is deemed sufficient by the *Panghúlu*; and afterwards he may appoint a proxy to represent him in the processions which follow. But this is seldom done when a man marries for the first time.

After the ceremony, the bridegroom pays the priest the marriage fees (*saláwat*), which ought, according to strict Mahomedans, not to exceed fifteen stivers. In most instances, the fees are raised to five times that sum in money, besides in many places a fowl, a hank of cotton-yarn, four *kátis* of rice, two cocoa-nuts, *síri*, and fruit.

On the wedding day, or sometimes the day following, the bridegroom dressed in his best clothes, mounted on horseback, accompanied by all his friends, and attended with music in the front and rear, proceeds at noon to the dwelling of the bride, who, on his approach, comes out to meet him at the door. In some districts, before their nearer approach, the bride and bridegroom throw simultaneously a bundle of *síri* at each other with considerable force, with the intention, it is said, of learning, from the dexterity with which the parties, respectively perform this singular feat, and the success that attends it, which of them will be able best to maintain their privileges, or gain an ascendancy during the continuance of their union. They prognosticate that, if the bundle of the bridegroom touch the head of the bride, it is an infallible sign that he must rule; otherwise, the reverse.

The bride, after this, receives the bridegroom with a low obeisance, in testimony of her regard for him, extending similar marks of respect to his parents, who attend him. The married couple are then placed in a situation elevated above the rest of the company; and in token of their afterwards living together, and sharing the same sustenance, commence eating *síri* from the same *síri*-box.

In some districts, after leaving the mosque, the bridegroom and his father proceed to the house of the bride's parents, where they obtain her company in a procession through the village or town. On these occasions, the bride is carried on a litter, which is generally fashioned in the form of a *garúda*, and the bridegroom is mounted on horseback. All the relations and friends of the parties attend, carrying flowers and refreshments, together with the presents made to the bridegroom on his marriage. The procession moves on to the sound of the national music, and the occasional firing of cannon. A feast is given in the evening at the house of the bride's parents, at which the new married couple remain for the night. The term given to the bride and bridegroom is *peng'ánten*, and the marriage ceremony is called *láki rábi*.

On the next day in some districts, and on the fifth in others, the bridegroom (or *peng'ánten lánang*), and bride (*peng'anten wádon*), together with the whole train of relations and friends, visit in like manner the house of the bridegroom's father. This ceremony is called *únduh mántu* (accepting the daughter-in-law.) There they both again sit down to eat *síri* in some place of distinction; similar entertainments are repeated, and on the following day they return with the same pomp and form to the bride's dwelling, the ceremony being now completed.

With the exception of the delivery of the *sri káwin*, and the procession to the mosque, there is very little in these ceremonies conformable to the Mahomedan precepts.

Marriages are frequently contracted between children, and then termed *gántung káwin* (hanging-on marriages); but in this case the parties are kept separate, and the principal ceremonies are reserved till they attain the age of puberty. Such contracts proceed from a laudable solicitude, on the part of parents, to provide a suitable and advantageous match for their children as early as possible; and to the same cause, as much, perhaps, as from the

influence of climate and intemperance of manners, may be attributed the early age, at which matrimonial engagements are sometimes consummated.

Whatever may be the reasons for such early marriages, one of the most serious consequences is the facility with which they are dissolved. The multiplication of divorces is mentioned by the poets, the moralists, and the historians of the Roman empire, as one of the greatest causes and symptoms of the corruption and degeneracy of the period in which they lived; and certainly it had proceeded to great lengths, when Seneca could say that a woman computed her age, not by the annual succession of consuls, but of husbands^[104]. The Javans, though a simple people, are in this respect too like the profligate and dissolute Romans.

In no part of the world are divorces more frequent than on Java; for besides the facilities afforded by the Mahomedan ordinances, a woman may at any time, when dissatisfied with her husband, demand a dissolution of the marriage contract, by paying him a sum established by custom, according to the rank of the parties: about twenty dollars for a person of the lower orders, and fifty dollars for those of the degree of *Demáng* or *Mántri*. The husband is not bound to accept it; but he is generally induced to do so, from a consideration, that the opinions and custom of the country require it; that his domestic happiness would be sacrificed in a contest with his reluctant companion; and that, by continuing his attachment, he would incur the shame of supporting one who treated him with aversion or contempt. This kind of divorce is termed *mánchal*. The husband may at any time divorce his wife, on making a settlement upon her sufficient to support her according to her condition in life.

A widow may marry again at the expiration of three months and ten days after her husband's death.

When a person of rank or property dies, all his relations, male and female, meet at the house of the deceased, to testify their grief at the death and their respect for the memory of the departed. On that occasion, what is termed *selámat* money is distributed among all according to circumstances. The priests, who are to perform the service at the place of interment, receive a Spanish dollar, a piece of cloth, and a small mat each.

When the corpse is washed^[105] and wrapped in a white cloth, it is carried out of the house on a bier covered with coloured chintz, on which garlands

of flowers are hung as drapery. On this occasion, no means of costly pomp or impressive solemnity are neglected in the use of umbrellas (*páyung*), pikes, and other insignia of honour. All the relations and friends accompany the corpse to the grave, where the priest addresses a prayer to heaven and delivers an exhortation to the soul of the deceased; of which the substance commonly is, "that it should be conscious of being the work of the Creator of the universe, and after leaving its earthly dwelling, should speed its way to the source whence it issued." After this ceremony the corpse is interred, and the other priests continue their prayers and benedictions.

For seven successive nights, the same priests meet and pray at the house of the deceased, in the presence of his relations.

On the third, seventh, fourteenth, hundredth, and thousandth day or night after the death of a person, are observed particular festivals or solemn feasts in his commemoration, on which occasions prayers are offered up for the happiness of his soul.

The body is interred after the usual manner of the Mahomedans, and a *sambója* tree is usually planted by its side. It is the universal practice of the relatives of the deceased to strew the graves several times in the year with the sweet-scented flowers of the *sulási* (the *tulsi* of Bengal), which are raised exclusively for this purpose. The burial-grounds are, in general, well chosen. In *Kedú*, where the most beautiful eminences have been selected for this purpose, and where the *cambôja* tree grows with the greatest luxuriance, they form very interesting objects in the landscape. The burial-places of the royal family and of the nobles of the country are usually called *astána*; they are surrounded by one or more high walls, and in general by stately *waríng'en* trees. The tombs are sometimes ornamented with sculptural devices and well-executed inscriptions, either in the Javan or Arabic character. They are kept clean and repaired by contributions from all parts of the country, under the superintendence of priests appointed to that particular duty, and are respected and guarded with religious veneration and zeal. The burial-place of the family now on the throne is at *Megíri*, in the province of *Matárem*, a few miles distant from the modern capital of *Yúgya-kérta*.

As the Javans are still devotedly attached to their ancient customs and ceremonies (few of which they have sacrificed to their new faith), I shall, in

order to give a better idea of those still observed on the most remarkable occasions, present a short account of their state anterior to the introduction of Mahomedanism, as far as it can be ascertained. Though, as Mahomedans, they are averse to an open avowal of Pagan practices, they still preserve them more or less, according as the parties happen to be less or more under the influence of Arab priests.

When a woman was pregnant with her first child, at the expiration of four months a feast was given, at which yellow rice was served up. This entertainment was insignificant compared with that which was observed at the expiration of seven months, when the guests were presented with cloth, gold, silver, and steel, according to the means of the parties, a piece of steel never failing to be one of the gifts, though it did not exceed the size of a needle. On this occasion a new bath was prepared in the evening, and watched during the night by the light of a lamp. At the side of the bath were laid two stalks of the dark coloured sugar cane, as an offering to *Batára Kála*, a painted cloth of the pattern *túwuh wátu*, and a young cocoa-nut (*chénkir gáding*), on which was engraved the resemblance of *Pánji Kérta Páti* and his wife *Chándra Kirána* of *Dáha*. In the morning the wife, after putting on the cloth, entered the bath, when the water from the young cocoa-nut was poured over her: during the day it was also incumbent on her to change her dress seven times. At the feast given on this occasion, fish, flesh, and fowl were invariably served up, and performances of the *wáyang* were exhibited.

Immediately on the birth of the child it was placed in a kind of basket made of *bámbu* (in form similar to the sieve or farming basket used for separating the chaff from the rice), the relations were assembled, and the remains of the umbilical cord were carefully cut off by means of a piece of sharpened *bámbu*. The part abstracted by this operation was deposited in the interior of a cocoa-nut, with a lump of turmerick placed under it. This cocoa-nut was ornamented on the outside with the twenty letters of the Javan alphabet. It was afterwards put into an earthen pot, and either buried under ground or thrown into the sea. A stone rolling-pin, dressed up like a baby, was placed in the basket in its stead. The female relations relieved each other through the day and night, in constantly supporting the child in their arms, till the navel was healed; the male relations all the while reading and reciting the history of *Ráma*, and other mythological and historical romances. As soon

as the child was recovered, a grand feast was observed, with performances of the *wáyang*. Near the *Dálang* (director of the *wáyang*) was placed a bowl of pure water, into which fresh and sweet-scented flowers were cast, two black sugar-canes, a cloth of the *túwuh wátu* pattern, and a piece of white cloth, together with a bundle of *pári* and different kinds of eatables. On this occasion was exhibited the drama of *Batára Dúrga* and *Sang Yang Jágat Náta* (one of the designations of *Gúru*), at that passage where, during the first two quarters of the moon, the former appeared in her amiable character of *Uma*^[106], and where, in the city of *Kúru Sétra Gándamáyu*, she is delivered of a son, *Batára Kála*, having the form of a *Rasáksha*, "greedy to destroy and devour mankind." At that part of the performance when *Sang Yang Jágat Náta* takes the child on his lap, the *Dálang* did the same with the infant, repeating the invocation, "*hong! ila-heng!*" several times, and afterwards returning it into the hands of the father. On this occasion the *wáyang* was performed from seven o'clock in the evening till eight o'clock in the morning.

When the child was forty days old, its head was shaved, as directed by the parent, and the ceremony took place of giving it whatever name should be determined on by the father and the elders.

The *Dúkun* (midwife) who attended at the delivery, was entitled to receive for her trouble fourteen *wang* (about a rupee) if it was an ordinary birth, but in difficult cases her allowance was proportionately increased. Her attendance continued for the mornings and evening of forty days, at the expiration of which she was further entitled to receive a present of two pieces of cloth, one small and one large, four *kátis* of rice, two cocoa-nuts, and some *síri*. If required to attend beyond that period, she was paid accordingly. A *Dúkun* once employed, could not be exchanged on any account during the forty days. Women invariably acted as midwives; in other cases the medical art was practised exclusively by the men.

On the child's attaining its seventh month, a feast was given, when it was for the first time placed with its feet on the ground. At this entertainment rice cakes and sweetmeats of different colours and kinds were served up; and if it happened that the child had come into the world either as the sun was just rising or setting, a bundle of grass or rubbish was thrown into the basket, upon the top of which it was placed for a few minutes; after which one of the elders taking the child into his arms repeated the following

words: "*Hong! 'amilam mastúna masidam! súming'gáha yéwang Kala'ing w'ru ajal amúla-níra ana-níra, Sang-yang Sába lan Batári Dúrga:*" which after an invocation to the Deity would express, "Begone, oh God *Kála*, for I am not ignorant of thy nature, nor of thy being descended from *Sang Yang Sába (Gúru)* and *Batára Dúrga*^[107]."

When the child attained the age of one year, another feast was given in commemoration of its nativity, and this universally among all classes of people; those who possessed the means kept the anniversary of their birthday until their death.

Marriages were invariably contracted by the relations of the parties, by the paternal grandfather or grandmother if living, if not by the parents, and in case of their demise, by the natural guardian. Thus the brother, on the death of his parents, was permitted to dispose of the hand of his sister; and a deviation from this course was deprecated, as laying a foundation for quarrels and dissensions.

The consent of the relations being obtained, the bridegroom was bound to serve the parents of the bride for a year^[108].

For forty days previous to the celebration of the marriage, the parties were not allowed to go to a distance from their homes, or to be employed in any severe labour.

At sunset on the wedding day, the bridegroom went in procession to visit the parents of the bride, after which she was visited by his parents, who on these occasions gave the married couple their blessing, wishing them happiness as lasting as that enjoyed by the god *Kámajáya* with his consort *Kámaráti*.

One of the elders, or an *Ajar*, then repeated the following benediction:

"Hong! Gáng'ga-trigáng'ga? pináyung hana kala chákra kinásih hána pra-dewáta hipáta'ing sapudénda tulúsa amándan waríng'en." "Hail! holy water, thrice holy water! be it as a covering to shield you from harm: may the gods be merciful unto you: henceforth be nourishing as the *pándan* and *waríng'en* trees."

In these processions the bridegroom was obliged to prepare whatever ornaments, trinkets, or gifts, the mother of the bride had fixed her fancy

upon, either at the birth of her daughter or on any other occasion, whether they consisted in the representation of a white elephant, a white tiger, or the like.

Five days after the consecration of the marriage, the parents of the bride, with whom she staid for that period, prepared a feast, at which was invariably served up among other things yellow rice. This entertainment was given to mark the period of the consummation: and after celebrating such an event, it was thought proper that the bride should be on a visit to the parents of her husband, remain under their roof, share their protection, and subsist at their expense for forty days without going abroad, at the expiration of which the new married couple were at liberty to go to their own house and pursue their own plans of life, becoming liable to contribute their share to the revenues and demands of the state.

The dresses worn on the nuptial day are thus described in the romance of *Pánji*.

"It being arranged that at the same time when *Rádin Pánji* was to receive the princess *Déwi Chándra Kirána* in marriage, *Rétna Jinóli*, his sister, should also be married to *Gúnung Sári*, son of the Prince of *Dáha*, the Prince of *Dáha* departed with a joyful heart, and gave the necessary directions to prepare the clothing and ornaments necessary for the two brides.

"*Klána Jáyang Sári*^[109], accompanied by his sister, *Rétna Jinóli*, and his numerous followers then entered the *dálam* of the prince. *Klána Jáyang Sári* wore on the occasion a *dódot* of silk stamped with flowers of gold; his *chelána* were of the green *chindi* ornamented with golden lace round the bottom, and studded with *kúnang-kúnang* (golden ornaments made to represent the fire-fly); his *sumping* (ornaments at the back of the ear) were of golden flowers studded with diamonds. On the third finger of each hand he wore two diamond rings. His waistband or belt was a painted cloth, of the pattern *gríngsing sang'u-páti*; his *krís* of the *kaprábon*; his *jámang*, or head ornament, of gold set with diamonds, and scented with all kinds of sweet-scented oils. He appeared more beautiful than a deity descended from heaven, all looking upon him with delight and astonishment.

"His sister, *Rétna Jinóli*, was dressed nearly after the same fashion as the Princess *Ang'reni*.

"The dress of *Déwi Ang'réní*, when married, was as follows: her *dódot* was of a pink colour stamped with flowers; her *kéndit* (zone, of which the ends hang in front) was *mandála gíri* (yellow with red at each end); her *jámang* of golden flowers; her golden ear-rings of the *bápang* fashion, with a diamond in the centre; her hair according to the *glung máláng* (a particular kind of knot), in which were placed beautiful and sweet-scented flowers; the fine hair round her forehead fashioned into small curls, with a sprinkling of powder; her eyebrows shaped like the *ímba* leaf. She wore golden armlets of the *kálung* pattern, ornamented with drops. Her *kálung*, or necklace, was of the *méng'gah* fashion. She wore two rings on the little and third finger of each hand, like unto a *widadári*."

There were three modes of disposing of the body of a deceased person: by fire, termed *óbóng*; by water, termed *lárung*; or by exposing it upright against a tree in a forest, where it was left to decay, termed *sétra*. When the body of a chief or person of consequence was burnt, it was usual to preserve the ashes, and to deposit them in a *chándi* or tomb.

It was the custom with all classes of people on Java to give an entertainment or feast on the decease of their friends and relations^[110]. The first feast was given on the day of the death, a second on the third day after, a third on the seventh day, a fourth on the fortieth day, a fifth on the hundredth day, and a sixth on the thousandth day after the decease of the party; after which an annual feast was observed, with more or less pomp, according to the respect in which the deceased was held, or the circumstances of the friends and relatives who celebrated his memory.

Besides these regular feasts and ceremonies, others prescribed by the *wúku*^[111] were religiously observed. When the day *ang'gâra* fell on the *páncha klíwon*, it was considered a propitious time for preferring petitions to the gods. On the seventh day of the *wúku galingán*, sacred to *Batára Kámajáya*, they relaxed from all worldly pursuits, and offered praises and prayers to the gods collectively, it being supposed that they were assembled on that day. On the *wúku gúmreg*, sacred to *Batára Sákra*, every villager joined in a feast sacred to the earth (*púja búmi*); and this *wúku* was particularly observed by the people termed *Kálang*, who, during the seven days performed no work, but employed themselves in visiting the tombs of their deceased friends and relations, or in feasting with their living relatives.

During the whole of that period they kept in their houses a lighted lamp, which they carefully preserved from extinction.

It may not be inappropriate to introduce in this place a short digression, containing an account of some of the customs peculiar to the people termed *Kálang*, and to the inhabitants of the *Teng'ger* mountains. The former are said to have been at one time numerous in various parts of Java, leading a wandering life, practising religious rites different from those of the great body of the people, and avoiding intercourse with them; but most of them are now reduced to subjection, are become stationary in their residence, and have embraced the Mahomedan faith. A few villages in which their particular customs are still preserved, occur in the provinces of *Kendál*, *Káliwúng'u*, and *Démak*, and although the tradition of the country regarding their descent from an unnatural connection between a princess of *Mendang Kamúlan* and a chief, who had been transformed into a dog, would mark them out as a strange race, they have claims to be considered as the actual descendants of the aborigines of the Island^[112]. They are represented as having a high veneration for a *red dog*, one of which is generally kept by each family, and which they will, on no account, allow to be struck or ill-used by any one. When a young man asks a girl in marriage, he must prove his descent from their peculiar stock. A present of rice and cotton-yarn, among other articles, must be offered by him, and carried to the intended bride, by an elderly man or woman of his own race, which offering must, in like manner, be received by an elderly relation of the girl: from this moment until the marriage is duly solemnized, nothing whatever is allowed to be taken out of either hut. On the marriage day, a buffalo's head, covered with white, red, or black rice-powder, is placed on the ground near the place intended for the bride to sleep upon, and the elderly people and relations being assembled, they dance by pairs, at the end of each dance presenting the bride to the bridegroom, and making such offerings as they think proper. The bridegroom is, on this occasion, accompanied to the house of the bride's father by as many friends as he can procure, and is bound to bring with him not less than a pair of buffaloes, a plough, harrow, hoe (*pachul*), and whip, with a bundle of *pári*. Those who are in good circumstances are further bound to add a cart (*pedáti*) to the above-mentioned stock. Prior to the equipment of the bride and bridegroom for the entertainment, it is essential that their bodies be rubbed over with the ashes of a *red dog's* bones. At sunset they both eat rice together off the same leaf. On the

following night they jointly partake of the buffalo's head, which is previously laid by the side of the place where they sleep. On the third day they proceed to the house of the bridegroom's father, making as much show as possible, and go round the extent of the village confines, preceded by people carrying a bed, cooking utensils, a spinning-wheel and loom. On the death of a *Kálang*, the body is carried in procession to the dwellings of the relations, who join in the ceremony, and proceed with it to the place of interment: they then pass round the corpse three times before it is lowered into the grave, the women crying aloud. A young cocoa-nut is then split in two, and the water from it poured into the grave, one-half of the shell being placed at the head, the other at the feet of the deceased. On their return home, the feasts and ceremonies are the same as those noticed in the practice of the other inhabitants of Java. Whenever the *Kálangs* move from one place to another, they are conveyed in carts, having two solid wheels with a revolving axle, and drawn by two or more pairs of buffaloes, according to the circumstances of the party. In these they place the materials of which their huts are constructed, their implements of husbandry, and other articles of necessity or value. In this manner, until of late years, since they have been subjected to the regulations of the Javan chiefs, they were continually moving from one part of the island to another. They have still their separate chiefs, and preserve many of their peculiar customs. Those who are Mahomedans employ in their religious functions priests who differ from others in being less scrupulous. They have always been treated with so much contempt by the Javans, that *Kálang* is an epithet of reproach and disgrace.

To the eastward of *Surabáya*, and on the range of hills connected with *Gúnung Dásar*, and lying partly in the district of *Pasúruan* and partly in that of *Probolingo*, known by the name of the *Teng'ger* mountains, we find the remnant of a people still following the Hindu worship, who merit attention, not only on account of their being, (if we except the *Bédui* of Bantam, who will be hereafter noticed) the sole depositaries of the rites and doctrines of that religion existing at this day on Java, but as exhibiting an interesting singularity and simplicity of character.

These people occupy about forty villages, scattered along this range of hills in the neighbourhood of what is termed the sandy sea. The site of their villages, as well as the construction of their houses, are peculiar, and differ

entirely from what is elsewhere observed on Java. They are not shaded by trees, but built on spacious open terraces, rising one above the other, each house occupying a terrace, and being in length from thirty to seventy, and even eighty feet. The door is invariably in one corner, at the end of the building, opposite to that in which the fire-place is built. The building appears to be constructed with the ordinary roof, having along the front an enclosed veranda or gallery, about eight feet broad. The fire-place is built of brick, and is so highly venerated, that it is considered a sacrilege for any stranger to touch it. Across the upper part of the building rafters are run, so as to form a kind of attic story, in which are deposited the most valuable property and implements of husbandry.

The head of the village takes the title of *Péting'gi*, as in the low-lands, and is generally assisted by a *Kabáyan*, both elected by the people from their own village. There are four priests, who are here termed *Dúkuns* (a term elsewhere only applied to doctors and midwives), having charge of the state records and the sacred books.

These *Dúkuns*, who are in general intelligent men, can give no account of the era when they were first established on these hills; they can produce no traditional history of their origin, whence they came, or who entrusted them with the sacred books, to the faith contained in which they still adhere. These, they concur in stating, were handed down to them by their fathers, to whose hereditary office of preserving them they have succeeded. The sole duty required of them is again to hand them down in safety to their children, and to perform the *púja* (praise-giving) according to the directions they contain. These records consist of three compositions, written on the *löntar*-leaf, detailing the origin of the world, disclosing the attributes of the deity, and prescribing the forms of worship to be observed on different occasions.

When a woman is delivered of her first child, the *Dúkun* takes a leaf of the *álang álang* grass, and scraping the skin of the hands of the mother and her infant, as well as the ground, pronounces a short benediction.

When a marriage is agreed upon, the bride and bridegroom being brought before the *Dúkun* within the house, in the first place bow with respect towards the south, then to the fire-place, then to the earth, and lastly, on looking up to the upper story of the house, where the implements of husbandry are placed. The parties then submissively bowing to the *Dúkun*,

he repeats a prayer, commencing with the words, "*Hong! Kendága Bráma ang'-gas síwang'ga ána ma siwáha sangyang g'ni sira kang*^[113]", &c.; while the bride washes the feet of the bridegroom. At the conclusion of this ceremony, the friends and family of the parties make presents to each of *kríses*, buffaloes, implements of husbandry, &c.; in return for which the bride and bridegroom respectfully present them with betel-leaf.

At the marriage feast which ensues, the *Dúkun* repeats two *púja*. The marriage is not, however, consummated till the fifth day after the above ceremony. This interval between the solemnities and the consummation of marriage is termed by them *úndang mántu*, and is in some cases still observed by the Javans in other parts of the island, under the name *únduh mántu*.

At the interment of an inhabitant of *Teng'ger*, the corpse is lowered into the grave with the head placed towards the south (contrary to the direction observed by the Mahomedans), and is guarded from the immediate contact of the earth by a covering of *bámbus* and planks. When the grave is closed, two posts are planted over the body; one erected perpendicularly on the breast, the other on the lower part of the belly; and between them is placed a hollowed *bámbu* in an inverted position, into which, during seven successive days, they daily pour a vessel of pure water, laying beside the *bámbu* two dishes, also daily replenished with eatables. At the expiration of the seventh day, the feast of the dead is announced, and the relations and friends of the deceased assemble to be present at the ceremony, and to partake of entertainments conducted in the following manner.

A figure of about half a cubit high, representing the human form, made of leaves and ornamented with variegated flowers, is prepared and placed in a conspicuous situation, supported round the body by the clothes of the deceased. The *Dúkun* then places in front of the garland an incense-pot with burning ashes, together with a vessel containing water, and repeats the two *púja* to fire and water; the former commencing with "*Hong! Kendága Bráma gangsi wang'ga ya nama síwáha*," &c.; the latter with "*Hong! hong gang'ga máha tirta ráta mejil sáking háti*," &c.; burning *dúpa* or incense at stated periods during the former, and occasionally sprinkling the water over the feast during the repetition of the latter.

The clothes of the deceased are then divided among the relatives and friends; the garland is burned; another *púja*, commencing with "*Hong! áwigna mastúna ma sidam, hong! aráning,*" &c. is repeated, while the remains of the sacred water are sprinkled over the feast. The parties now sit down to the enjoyment of it, invoking a blessing from the Almighty on themselves, their houses, and their lands. No more solemnities are observed till the expiration of a thousand days, when, if the memory of the deceased is beloved and cherished, the ceremony and feast are repeated; if otherwise, no further notice is taken of him: and having thus obtained what the Romans would call his *justa*, he is allowed to be forgotten.

Being questioned regarding the tenets of their religion, they replied that they believed in a *déwa*, who was all-powerful; that the name by which the *déwa* was designated was *Búmi Trúka Sáng'yáng Dewáta Bâtur*, and that the particulars of their worship were contained in a book called *Pángláu*, which they presented to me.

On being questioned regarding the *adat* against adultery, theft, and other crimes, their reply was unanimous and ready, that crimes of this kind were unknown to them, and that consequently no punishment was fixed, either by law or custom; that if a man did wrong, the head of the village chid him for it, the reproach of which was always sufficient punishment for a man of *Teng'ger*. This account of their moral character is fully confirmed by the Regents of the districts under whose authority they are placed, and also by the Residents. They, in fact, seem to be almost without crime, and are universally peaceable, orderly, honest, industrious, and happy. They are unacquainted with the vice of gambling and the use of opium.

The aggregate population is about twelve hundred souls; and they occupy, without exception, the most beautifully rich and romantic spots on Java; a region, in which the thermometer is frequently as low as forty-two. The summits and slopes of the hills are covered with Alpine firs, and plants common to an European climate flourish in luxuriance.

Their language does not differ much from the Javan of the present day, though more gutturally pronounced. Upon a comparison of about a hundred words with the vernacular Javan, two only were found to differ. They do not marry or intermix with the people of the low-lands, priding themselves on their independence and purity in this respect^[114].

The *Bédui* are in numbers inconsiderable, and found in the interior of Bantam: they are the descendants of those who escaped into the woods after the fall of the western capital of *Pajajáran*^[115] in the fifteenth century, and would not change their religion, remaining firmly attached to that of *Prábu Séda*. There is a tomb of one of them which they hold sacred, and will not allow any one but themselves to approach even to this day. When the *Bédui* subsequently submitted to the Sultan of Bantam, and shewed no disposition to oppose the Mahomedans, they were not compelled to become converts; but it was agreed, at the same time they admitted, that the number of the *Rowá-ian* (the name given to their little societies) should be limited to three or four.

The *Bédui* attend to all orders they receive through the medium of the village chief. They subsist by cultivating rice: all they raise beyond what is required for their own consumption they sell to the hill people, who are in the habit of going to them for it once a year, on account of the superior quality of the rice, or rather superior estimation in which it is held. It is an established rule among them to allot but one day for each of the different successive operations of husbandry: one day for cutting down the trees and underwood, one day for clearing what has been so cut down, one day for sowing the grain, one for weeding the field, and one for reaping, one for binding up the grain and one for carrying it home. If any part of what has been reaped cannot be carried home in one day, it is left and neglected. The *Gírang póhon* (which is the title of the chief) is the first who commences the work of the field, and many of the hill people follow him in regard to the period for sowing their *pári*.

Their dress consists of white and black cloths. They wear rings and silver scabbards to their *kris*es, but gold and *swasa* they dislike. Spanish dollars are the only coin they prize.

The festivals or feasts of the Javans are of three kinds: the *grébeg*, or religious festivals; the *bancháki* or *nealamáti*, so called from the Arabic *salámat* (a blessing), held on the celebration of marriages, births, and circumcision; and the *sedékah*, appointed in honour of the dead, and for the celebration of their memory.

The principal and most important of these are the national entertainments corresponding with the Mahomedan festivals of *múlut*, *pása*, and *bésar*; the

two first answering to the half-yearly festivals of the Arabs of *moháram* and *ramázan*, and the latter with that of *kháji*, in the month of dulkhija. On these occasions the sovereign appears in public, and the *álun álun* is crowded with an assemblage of people from all quarters, every one being dressed in his most splendid attire, and accompanied by all his armed followers. The same is observed in the more distant provinces of the country, where the petty chiefs, in like manner, assemble in the *álun álun* of the Regent. Presents of fruit, poultry, and other kinds of provisions, are brought from every part of the country: offerings are made by the chiefs to the mosques, and a public festival is given by the chief authorities. The men only partake of these public feasts; but the female part of the family of the chiefs assemble together, and enjoy corresponding entertainments within their chambers. The festival seldom lasts above one day.

Of the *bancháki* and *nealamáti* it may be only necessary to observe, that those given during the ceremonies consequent upon the birth of the first child are most important.

The *sedékah* are solemnities observed on the occasion of the funeral, or in honour of the memory of a departed relative, on the seventh, fortieth, one hundredth, or thousandth day after his decease: they are distinguished from the feasts of *grébeg* and *nealamáti* by the absence of music. Those who intend to observe them, assemble on the preceding evening in order to read some portion of the *Koran*. Before the guests partake of the meal, the principal person present generally addresses the Almighty in a prayer, which alludes to the occasion, and expresses gratitude for the repast which his bounty has provided. Thankfulness to the earthly donor of the entertainment often mingles itself with gratitude to heaven, and the praises of both are celebrated at the same time. This grace before meals is called *dúng'a*.

Reserving for a subsequent chapter a sketch of the music and poetry of the Javans, I shall in this place endeavour to give some account of their national drama and dances, as constituting, next to music and poetry, the most conspicuous and refined of their amusements.

The dramatic entertainments are of two kinds; the *tópeng*, wherein the characters are represented by men, who except when performing before the

Sovereign wear masks; and the *wáyang*, in which they are represented by shadows.

The subject of the *tópeng* is invariably taken from the adventures of *Pánji*, the favourite hero of Javan story. In the performances before the Sovereign, where masks are not used, the several characters themselves rehearse their parts; but, in general, the *Dálang*, or manager of the entertainment, recites the speeches, while the performers have only to "suit the action to the word." The music of the *gámelan* accompanies the piece, and varies in expression, according to the nature of the action or the kind of emotion to be excited. The actors are splendidly dressed after the ancient costume, and perform their parts with grace, elegance, and precision; but the whole performance has more the character of a ballet than that of a regular dramatic exhibition, either of the tragic or comic kind, in which human passions, human follies or sufferings, are represented in such appropriate language and just action, as to seem only a reflection of nature. Love and war are the constant themes, and the combats of contending chiefs generally close the scene. Those who perform before the sovereign and repeat their parts, previously study their characters from written compositions expressly prepared for the purpose; but in other cases, the *Dálang*, well versed in the principal incidents, descriptions, and speeches of the history, furnishes the dialogue between the actors extempore. A party of *tópeng* generally consists of ten persons, besides the *Dálang*, of whom four play the *gámelan* and six perform the characters. They are engaged to play by the night, for about ten rupees (twenty-five shillings) and a supper.

Buffoonery is sometimes introduced, to increase the zest of these entertainments with the multitude, but it does not interfere with the regular course of the performance, the actors being only disturbed occasionally by the actions of an extraneous character, who whether representing a dog, a monkey, or an idiot, seldom fails to excite considerable mirth, and not unfrequently in the most interesting part of the performance.

There is also a kind of pantomime, or rather an assemblage of wild beasts called *Barúng'an*; in this entertainment men dressed up to represent various animals are made to appear in procession and combats. This is generally performed for the amusement of children, and is only accompanied by the beat of the *góng* and drum.

In the *wáyangs*, or scenic shadows, the subject of the performances is taken from the earliest period of history and fable, down to the destruction of the Hindu empire of *Majapáhit*. These are distinguished according to the periods of the history which they represent, by the terms *wáyang púrwa*, *wáyang gédog*, and *wáyang klítik*.

The different characters in the history are in these *wáyangs* represented by figures, about eighteen inches or two feet high, stamped or cut out of pieces of thick leather, generally of buffalo's hide, which are painted and gilt with great care and at considerable expense, so as to form some supposed resemblance of the character to the individual intended to be personified. The whole figure is, however, strangely distorted and grotesque, the nose in particular being unnaturally prominent. There is a tradition, that the figures were first so distorted by the *Susúnan Mória*, one of the early Mahomedan teachers, in order to render the preservation of the ancient amusements of the country compatible with a due obedience to the Mahomedan precept, which forbids any exhibition or dramatic representation of the human form. "By these means," said the *Susúnan* with much ingenuity, "while the world in general will not imagine the figures to be human, the Javans, from recollecting their history, will yet be able to comprehend the characters they are intended to represent, and enjoy in secret their national amusements. Or if, in time, they should forget the originals, and confound them with the distorted resemblance, they will be impressed with the idea, that it was only after conversion to the faith of the Prophet that their ancestors assumed the present shape of man." But the comparatively recent alteration in the figures is rendered doubtful from the circumstance of similar figures being found on many of the more ancient coins, thus affording ground for an opinion, that they existed nearly in their present form before the introduction of Mahomedanism. Their antiquity is further confirmed, by the existence of similar figures in the Hindu island of *Báli*, where, though not so much distorted, they are still far from natural. These figures are fastened upon a horn spike, and have a piece of thin horn hanging from each hand, by means of which the arms, which are jointed at the elbow and shoulder, can be moved at the discretion of the manager. A white cloth or curtain is then drawn tight over an oblong frame of ten or twelve feet long and five feet high, and being placed in front of the spectators, is rendered transparent by means of a hanging lamp behind it. The several figures are made in turn to appear and act their parts. Previous to the commencement of this

performance, the *Dálang*, who is seated behind the curtain, arranges the different characters on each side of the curtain, by sticking them into a long plantain stem which is laid along the bottom. The *gámelan* then commences, and as the several characters present themselves, extracts of the history are repeated, and the dialogue is carried on, generally at the discretion and by the invention of the *Dálang*. Without this personage nothing can be done; for he not only puts the puppets in motion, but repeats their parts, interspersing them with detached verses from the romance illustrative of the story, and descriptive of the qualities of the different heroes. He is the soul which directs and animates the whole order and machinery of the piece, regulating the time of the music with a small hammer which he holds in his hand, while he recites the speeches suited to the occasion.

In the *wáyang purwa*, or *wáyang* of the most ancient times, the subject is taken from the earliest periods of fabulous history, down to the reign of *Parikésit* inclusive. This is the age of interesting story and marvellous fiction, the reign of the gods, demigods, and heroes of the Hindu and Javan mythology, who in these representations are exhibited with the attributes, and in the situations with which their names are connected in the most popular poems and romances. The fables thus turned to account, are generally taken from the poem of *Ráma*, the poem of *Mintarága* containing the penance of *Arjuna* on the mountain *Indra*, and the celebrated epic of the *Bráta Yúdha*, or the war of the *Pandáwa*. These poems are all written in what are termed the high measures, and are accompanied in their recital by the *gámelan saléndro*. In the performance of this *wáyang*, the *Dálang* first recites a few verses in the *Káwi* language, chaunting afterwards an interpretation of the passage in Javan, for the use of the unlearned. As the several characters are brought forward, he himself supplies the minor dialogue between the dramatis personæ, keeping in general close to the original story, when there is any person present who could detect his deviations: if he is performing before the ignorant, however, he frequently digresses from the main story, in any way which he thinks may most readily amuse his audience; and on this account, the practice of rendering the *Káwi* into Javan, which furnishes an opportunity for such deviations, is termed *charángan*, literally a branch from a tree. In the course of the entertainment, all the varieties of ancient weapons named in these poems are represented behind the transparent curtain. The interest excited by such spectacles,

connected with national recollections, is almost inconceivable. The eager multitude will sit listening with rapturous delight and profound attention for whole nights to these rude dramas. By means of them, the lower class have an opportunity of picking up a few *Káwi* terms, and of becoming acquainted with the ancient legends of the country.

The subject of the *wáyang gédog* is taken from the period of history subsequent to *Parikésit*, commencing with the reign of *Gandra-yána* and including the adventures and reign of the celebrated *Pánji*, and that of his successor *Laléan*, until he established himself at *Pajajáran*. These poems being composed in a different measure, the *gámelan pélog* is employed as the accompaniment; and although the history of the early part of this period is written in the *Káwi*, the *Dálang* always employs the Javan translation. The adventures of *Pánji* compose the most popular portion of it. The characters are numerous, and the figures in general more highly coloured and better finished than those of the *wáyang púrwa*. In bringing any hero on the stage, the *Dálang* recites those verses of the history which relate to him, and introduces such dialogue as may give a dramatic effect to the exhibition, together with such explanations as may make it intelligible to common capacities.

In the *wáyang klítik* the figures exhibited are more properly puppets than shadows: they are of wood, about ten inches high, and made to perform their parts without the intervention of a curtain. In these are represented that portion of the history commencing with the establishment of the western empire of *Pajajáran* and ending with the destruction of the eastern empire of *Majapáhit*. Of this, by far the most favourite scenes are found in the popular story of the adventures between the *Ménak Jíng'ga*, a chief of *Balambáng'an*, and *Dámar Wúlan* (the light of the moon), on account of the Princess of *Majapáhit*.

The compositions which thus serve as the basis of these popular and interesting entertainments, comprise the legends from which the account of the earlier periods of Javan story, detailed in another part of this work, is principally derived. The most popular and interesting events and adventures are preserved and related in various compositions, whilst more recent actions and events, which possessed less interest, have fallen into oblivion. The constant exhibition of these plays in every part of the country, but more particularly in the eastern districts, has served to keep alive the recollections

of "days long since gone by," and to disseminate a general knowledge of native legendary history among many, with whom, from the ignorance of letters, the stories might otherwise have been irretrievably lost or more grossly distorted.

The *Dálang*s, who manage and conduct these amusements, are treated with considerable respect. In many points, their office strongly resembles that of the ancient bards. The ceremony of giving his blessing to the first born infant, in the repetition of some particular passages of the ancient legends, gives this part of his office a very peculiar interest. The usual payment to the *Dálang* who owns a set of *wáyangs*, and brings his own *gámelan* players, is from two to three dollars for the night; but the nobles and chiefs generally have several sets of *wáyangs* of their own, and keep a *Dálang* in their service.

Another representation of this nature is that of the adventures of *Ménak Jing'ga* and *Dámar Wúlan*, which are exhibited, but not very commonly, by means of drawings on folded leaves of strong paper, while the *Dálang* repeats the story and furnishes dialogue to the characters. This is termed *wáyang béber*. An entertainment of a similar description, though not accompanied by the exhibition of figures, is termed *trébang*: it was invented in the time of the kingdom of *Démak*. The story is taken from the Arabic account of *Begínda Ambia*, which being rendered into Javan, is repeated by the *Dálang*, who with a small drum before him, and accompanied by the music of the *gámelun*, gives spirit to the different parts, by beating time with his hand, and varying the strength of the sound or quickness of time according to the subject. These two latter are of comparatively modern invention, and not much esteemed.

The dance with the Javans, as with Asiatics in general, consists in graceful attitudes of the body, and in the slow movement of the arms and legs, particularly of the former, even to the distinct motion of the hand and fingers.

Of the dancing girls who exhibit at public entertainments, the first in rank and the most skilful in their profession are the concubines of the sovereign and of the hereditary prince. They alone are allowed to perform the *s'rímpi*, a figure dance by four persons, distinguished by an unusual degree of grace and decorum.

The dancers are decorated according to the ancient costume of the country, and nearly in the same manner as a modern bride. The *tápih*, or petticoat, is of silk of different colours, often green stamped with golden flowers, and hanging in the most graceful manner, a part of it falling between the feet and serving as a short train, which in the course of the dance is frequently thrown aside by a quicker motion of the foot than ordinary. The *údat*, or waistband, is of the *chíndi* pattern; and on these occasions is worn the *mer*, or cestus, composed of plates of gold highly ornamented with diamonds at the clasp in front. The body is enclosed in a kind of corset (*pemákak*) passing above the bosom and under the arms, and confining the waist in the narrowest possible limits. The ends of the *sémbong*, or sash, fall gracefully on each side on the back of the hip and reach the ground. Sometimes, indeed, this graceful appendage to the dress is brought from the back to a point between the breasts, whence being fastened in a rosette, the ends flow towards the ground in front of the person, the usual bending attitude during the dance causing them to hang distinct from the rest of the apparel. The triple necklace, richly chased armlets, bracelets, and tiara, are of gold, studded with precious stones; and the hair is gracefully ornamented with buds of white and sweet-scented flowers. On their fingers they generally display brilliant rings, and the face, neck, shoulders, and arms, which remain uncovered, are tinged by a delicate shade of yellow powder. The music is slow and solemn, and the performance is on the *gámelan saléndro*; verses from the romances of *Pánji*, descriptive of the attire and beauty of the wives and concubines of that hero, being chaunted as a prelude to the entertainment and during its continuance. On occasions when the *s'rímpi* are exhibited before Europeans at the Residency house, they are brought with great care, and under a guard, from the *kráton*, in a large enclosed palanquin, or rather box, borne on men's shoulders. When they reach the door of the residency, they glide behind the prince into the chamber appropriated for his accommodation, and when they come forth for the dance, seat themselves on the ground in front of him. On his intimating that they should commence, they slowly, and to the sound of music, close their hands, and raising them to the forehead, bend in reverential awe, and gradually extending their arms and swaying in unison with each other from side to side, assume an erect posture. The dancers seldom exceed the age of fourteen or fifteen. The birth of a child generally puts an end to their performances, and removes them from the profession. They are the choicest

beauties of the country, selected for the royal bed. Throughout the whole performance their eyes are directed modestly to the ground, and their body and limbs are by slow movements thrown into every graceful attitude that the most flexible form is capable of exhibiting. In the figure of the dance they occasionally approach and recede from each other, and sometimes cross to the opposite side. It frequently happens, that the delicate corset by falling too low, exposes more of the body than is considered correct. On such occasions, one of the trusty matrons always in attendance raises it again, without interrupting the dance or embarrassing the movements of the dancer. At the conclusion of the dance they gradually place themselves on the ground, in the same manner as before its commencement, and after closing their hands, and raising them to the forehead in token of respect, remain seated with a downcast look and captivating modesty, until the signal is given to the matrons to relieve them by others, when they again glide into the same apartment.

The *bedáya*, who perform a figure dance of eight persons, are in some respect to the nobles what the *s'rímpi* are to the sovereign: but, at present, few of the nobles can afford to maintain a sufficient number of youthful concubines to compose this dance; it is frequently therefore performed by boys trained for the purpose. They are dressed nearly in the same manner as the *s'rímpi*, though not so expensively. The action moves to the same music and song.

But the common dancing girls of the country, who appear to approach more nearly to the usual dancing girls of Western India, are called *róng'geng*, and are generally of easy virtue. They make a profession of their art, and hire themselves to perform on particular occasions, for the amusement of the chiefs and of the public. Though to be found in every principal town, their performance is most highly esteemed in the western, and particularly among the rude mountaineers of the *Súnda* districts, where the superior graces of the *bedáya* are unknown. Here they are constantly engaged on every occasion of festivity, and the regents frequently keep the most accomplished in their service for years. Their conduct is generally so incorrect, as to render the title of *róng'geng* and prostitute synonymous; but it not unfrequently happens, that after amassing considerable wealth in the profession, they obtain, on account of their fortune, the hand of some petty chief. In this case, they generally, after a few years retirement and domestic

quiet, avail themselves of the facility of a divorce, and repudiating their husbands, return to their former habits. The *róng'gengs* accompany the dance with singing, the words being generally extempore to the music of the *gámelan saléndro* and *pélog*. Their dress is coarse, but in other respects resembles that of the more select dancers. They do not, however, wear any tiara on the head, nor armlets; bracelets are only worn occasionally. Their hair is dressed after a peculiar fashion, abundantly oiled, and ornamented with flowers of various kinds. They sometimes exhibit singly and sometimes in groups, following and approaching each other, or receding at pleasure. They perform at any time of the day, but chiefly in the evening, and endeavour to exhibit their best attitudes round a lamp which hangs suspended. Generally speaking, both their action and their song are rude and awkward, and on that account often disgusting to Europeans, although there are some among them whose performance does not deserve to be so considered. Their action is usually distorted, their greatest excellence seeming to consist in bending the arms and hands back in an unnatural manner, and giving one or two of the fingers a tremulous motion. The voice, though sometimes harmonious, is often loud, dissonant, and harsh to an European ear. They generally have a handkerchief thrown over the shoulder, and usually a fan in their hand, which occasionally serves to conceal one half of the face, not so much out of any affectation of bashfulness, as, in the manner of a huntsman, to assist the louder tones of the voice. At other times it is employed to strike against the back of the arm, so as to give a greater effect to different parts of the action and music. Generally speaking, the *róng'gengs* do not descend to the performance of those disgusting and disgraceful postures and motions, which are stated to be so frequent on the continent of India, but they are not free from the charge of impropriety in this respect. Their song, though little esteemed and less understood by Europeans, sometimes possesses much humour and drollery; and in adapting their motions to the language, they frequently excite loud bursts of laughter, and obtain great applause from the native audience.

The nobles of the highest rank are accustomed, on particular occasions of festivity, to join in the dance with a *róng'geng*. To dance gracefully, is an accomplishment expected in every Javan of rank; and in the western districts, particularly, all the chiefs are, on days of festivity, accustomed to join in the exercise, one after the other, commencing with the youngest. On

these occasions, the nobles of the highest class vie with each other in pointing the toe with grace, in exhibiting elegance of movement, in displaying adroitness by intricate evolutions, or beauty of person by an ingenious management of attitude. So devoted are they to this exercise, that although their wives and daughters never dance, the happiness of a festive occasion is considered incomplete, where an opportunity is not afforded to the chiefs themselves of introducing their favourite amusement. In the *Súnda* districts, there are some individuals distinguished as regular posture or dancing-masters.

It is not unusual for the performances of the *róng'gengs* to be varied by the action of a fool or buffoon. Mimicry is a favourite amusement, and beside imitating, in a ludicrous manner, the actions of the *róng'gengs*, there are not wanting performers of this description, who occasionally direct their wit against all classes of society, and evince a considerable degree of low humour.

These are the only public exhibitions of the female sex; but the posture dances by the men are numerous, and contribute to the state of the sovereigns and chiefs. Among these, the *Gámbuh*, with a shield on one arm, gracefully raises the *dódot* (or petticoat) with the other hand; the *Niutra*, having a bow and arrow in the hand, goes through the motion of its exercise, stringing and unstringing it to the sound of the *gámelan*. Both throw their limbs and body into the most graceful postures, as they slowly move in procession before the chiefs, or are arranged on the side of the passage through which he is to pass. Both the *Gámbuh* and *Niutra* are naked from the waist upwards, while the *dódot* hangs to the ground on one side in the manner of full dress, shewing the knee on the other. Their bodies are generally covered with yellow powder, and from round their ears hang suspended in front, strings of the young *meláti* flowers.

The *Gámbuh* are occasionally employed to exhibit before the prince, when with a *krís* in their right hand and a shield on their left arm, they go through all their evolutions to the sound of music.

But the chief description of male performers are the *Béksa kémbang* or *Béksa rong'geng*, who have flowers, shields, or serpents in their hands, and in dancing seem to resemble the South Sea Islanders, though more elegant in their attire, and perhaps more graceful in their motions. Neither have any

covering above the waist; but the yellow, and sometimes green powder which is upon the body, gives it an appearance very like dress. The term *Béksa láwung* is applied to the petty chiefs, who on public days dismount from their horses, and go through the exercise of the spear for the amusement of the prince. Another description of performers are termed *Unchelang*; their art consists in throwing the spear into the air, and catching it again as it falls with great dexterity. Similar exhibitions of these persons combating with sticks, called *újung*, were formerly common.

In the domestic circle, the women and elderly people are partial to a peculiar amusement termed *sintren*, which paints very forcibly the notions they possess of the power of music. A boy or girl, properly attired and skilled in the dance, is placed under a reversed basket which is carefully covered with cloth. Round it music and song are struck up by all present; those who do not play on any instrument, or who do not sing, joining in beating time by clapping their hands. When the excitement has continued sufficiently long to be supposed to have effected the charm, the basket is seen to move, and the boy or girl rising from under it, apparently unconscious of what is doing, moves and dances gracefully but wildly, in unison with the music. At length tired out, the dancer falls and seems to sink into sleep, and when awakened pretends not to recollect any thing that has passed. The perfection of this amusement consists in the performer's giving himself up so completely to the power of music as to be charmed by it, and perfectly unconscious of every other sense.

For the amusement, principally however of children, a cocoa-nut shell is carved with the features of a man, and affixed to the top of a reversed basket, covered with cloth. This basket, after being for some time exposed by the side of a river, or under a large tree, in order, as is supposed, that some supernatural spirit may enter into it, is brought again into the house, and rocked according to the swaying motion of the Javan dance by two children, to the music of the *gámelan*. An amusement of this kind is termed *bríndung*.

Tilts and tournaments (*wátang*) form a favourite and constant diversion with the Javans: they are exhibited principally in the *álun álun*, or great square in front of the *kráton*, or palace, and compose an essential part of the ceremony of the *pásar senén*, or the day in which the sovereign and regents appear in public. This, with the sovereign, is Saturday; with the chiefs,

Monday. On the afternoon of this day, all the princes, nobles, and public officers assemble, and arranging themselves in the places assigned to their respective ranks, await the coming out of the sovereign, who, as soon as he descends from the *setíngel*, mounts a horse richly caparisoned, and rides round the *waríngen* trees, the several chiefs joining in his suite as he passes the circle. Several of the chiefs, and particularly their sons and youthful relations, then join in pairs, tilting and striking their long and blunted spears as they pass the sovereign. The same thing is observed on the afternoon of every Monday, at the capitals of the different provinces throughout the island, where the native government and institutions are at all preserved. The assemblage of people on these occasions is frequently very great. The trappings and housings of the horses are extremely rich, and the riders perform their feats with some dexterity, being seldom unhorsed^[116]. At the conclusion of the exhibition on horseback, it is not unusual for the youths and petty chiefs who have contended in the saddle to dismount and practice the attack and defence of the spear on foot: they are then termed *Béksa lówung*. Tilts are likewise exhibited in the *álun álun* on the days of public festival, when the chiefs appear.

The Javans have long advanced beyond that state in which the chase was considered as connected with their subsistence.

The stag is hunted chiefly in the eastern and western extremities of the island, by the descendants of the *Báli* and *Súnda* races: the Javans inhabiting the central districts are not practised in the diversion, nor much acquainted with it. They uniformly pursue the animal on horseback. In the eastern districts he is killed with a spear: in the western he is cut down with a *kléwang* or cutlass; here the chase is conducted with more regularity and method, and many of the inhabitants, particularly the chiefs, are passionately addicted to it, employing the best and swiftest horses and dogs they can procure for the purpose.

A favourite and national spectacle is the combat between the buffalo and the tiger. A large cage of *bámbu* or wood is erected, the ends of which are fixed into the ground, in which the buffalo is first and the tiger afterwards admitted, through openings reserved for the purpose. It seldom fails that the buffalo is triumphant, and one buffalo has been known to destroy several full grown tigers in succession. In these combats the buffalo is stimulated by the constant application of boiling water, which is poured over him from

the upper part of the cage, and of nettles, which are fastened to the end of a stick, and applied by persons seated in the same quarter. The tiger sometimes springs upon the buffalo at once; he very generally, however, avoids the combat, until goaded by sticks and roused by the application of burning straw, when he moves round the cage, and being gored by the buffalo, seizes him by the neck, head, or leg. The buffalo is often dreadfully torn, and seldom survives the combat many days. In these entertainments the Javans are accustomed to compare the buffalo to the Javan and the tiger to the European, and it may be readily imagined with what eagerness they look to the success of the former. The combat generally lasts from twenty minutes to half an hour, when, if neither of them is destroyed, the animals are changed, and the tiger, if he survives, is removed to be destroyed in the manner called *rámpog*, which is as follows.

On receiving information of the retreat of a tiger the male inhabitants are sometimes called out in a body, by the order of a chief, each man being obliged to be provided with a spear, the common weapon of the country. The place where the animal is concealed is surrounded: a double or triple range being formed, according to the number of hunters, and he is roused by shouts, by the beating of *gongs*, or by fire. The place where he is expected to attempt his escape is carefully guarded, and he is generally speared on the spot.

In many districts, where the population is not deficient, the appearance of a single *tiger* rouses the neighbourhood, and he is infallibly destroyed by the method described^[117].

When the *rámpog* is resorted to by way of amusement at the capital of the sovereign, a hollow square of spearmen, four deep, is formed on the *álun álun*, in the centre of which are placed the tigers in small separate cages, or rather traps, with a sliding door, in the manner of a rat-trap. Two or three men, accustomed to the practice, at the command of the sovereign, proceed into the centre of the square, and placing plaited leaves in front of the cage, to supply the place of the wooden door, set it on fire, and drawing the wooden door up, throwing it on one side, themselves retreating from the spot at a slow pace, to the sound of music. As soon as the tiger feels the fire he starts, and in endeavouring to make his way through the spearmen is generally received upon their weapons. Instances, however, have occurred, in which the animal has made good his retreat, but he was soon afterwards

killed; sometimes the tiger, particularly if he has been opposed to the buffalo, will not move from the centre of the square; in which case the sovereign generally directs six or eight of his choice men (*gándek*) to advance towards him with spears. This they do with surprizing coolness and intrepidity, never failing to pierce the animal, by fixing their spears into him at once. The smaller species of the tiger is generally selected for this amusement.

The exposure of criminals in combat with tigers was formerly practised, and it is said to have been common on the first establishment of the *Matárem* empire; but of late years, such a method of deriving amusement from the infliction of judicial punishment had almost become obsolete, and is now, as well as mutilation and torture, altogether abolished by treaty. Several instances are said to have occurred during the reign of the sultan of *Yúgya-kérta* who was deposed by the British Government in 1812. In an exhibition of this kind, which took place about ten years ago, two criminals were exposed for having set fire to a dwelling. They were provided each with a *krís*, which was long, but broken off or blunted at the point, and the tiger was let in upon them separately in a large cage constructed for the purpose. The first was soon destroyed, but the second, after a combat of nearly two hours, succeeded in killing the tiger, by repeated cuts about the head and under the ears and eyes. On this a smaller tiger, or rather leopard, was let in upon him, and the criminal being equally successful in this combat was released. His success, as in the judicial ordeals of the dark ages, was taken for a manifestation by heaven of his innocence, and not only secured his pardon, but procured for him the rank of a *Mántri*, as a recompense for the danger to which he was exposed in its vindication. Although this barbarous practice appears so recently to have been resorted to, it is not to be inferred that, as a spectacle, it is held in any estimation by the Javans in general. It seems to have been of comparatively late introduction, and adopted only in the policy of a known and avowed tyrant. The concourse of spectators to witness the combat can no more stamp the general character of the people with barbarity, than the crowds which are always present at public executions in Europe. The bare relation of the fact excites feelings of horror in the mind of the ordinary chief.

Bull-fighting is common on *Madúra* and in the eastern parts of the island; but it is perfectly different from any species of sport derived from the

courage or ferocity of that animal in Europe. Here, neither dogs are employed as in England, nor men and horses as in Spain, but the bulls themselves are directed against each other. The population form an extensive ring round the *álun álun*, within which the animals are first led up to a cow, until they are sufficiently excited, when the cow being withdrawn they are set at liberty and contend with each other, until one of them gives way, and is driven from within the ring by the victor. The small well formed bulls of *Súmenáp* afford considerable amusement in this way, while considerable bets are laid on the result of the combat.

The combat between the ram and wild hog, which generally terminates by several dogs being let in to complete the destruction of the latter, is an exhibition which furnishes frequent amusement; a small stand is raised for the ram, to which he can retreat when in danger, and from whence he can take advantage of a favourable moment of attack upon his antagonist.

Quail-fighting (*áduh gemár*) and cock-fighting (*áduh jágu*) were formerly very prevalent, the latter particularly, among the common people, but by no means to the same extent as practised in the other islands of the Archipelago, in many parts of which, particularly among the *Maláyus*, it forms almost the whole source of diversion and interest. On the establishment of the British power, cock-fighting and gaming, which had formerly proved a productive source of revenue to the European government, were prohibited, and are now in consequence rarely resorted to. The Javans were not in the habit of fixing spurs to their cocks: this practice, they say, belongs to the *Maláyus*^[118]. The common people still amuse themselves with betting upon the issue of a fight between two crickets (*ádhu jangkrik*), which are daily exposed in the markets for that purpose. The little animals being confined in small *bámbus* partially opened, are said to afford an amusement of considerable interest.

Among the games of skill may be reckoned those of chess, drafts, and several minor games played with pieces or balls, on boards of a somewhat similar construction.

In chess (*chátur*) the pieces are named, the *rátu*, or king; the *pateh*, or minister, corresponding with the queen; two *práhu*, or vessels, corresponding with castles; two *mántri*, corresponding with bishops; two *járan*, or horses, corresponding with knights; the *bídak*, or pawns; and are

arranged as in the English game, except that the kings are placed on the left hand of the queens, and opposite to the adversary's queen. The moves are also the same; except that the king, if he has not been checked, may move two squares the first time, either as a knight or otherwise; and that the pawn may move two squares the first move, even though it should pass the check of an adversary's pawn. When a pawn reach the adversary's first line, it must retrograde three moves diagonally before it can become a queen, except it has reached the castle's square, in which case it is a queen at once. There maybe any number of queens on the board at once.

The king cannot castle after having been checked. Castling is performed by two moves; the castle must first be brought up to the king, after which the king may pass over the castle at any future move, provided he shall not have been checked, or that no piece has occupied the square he would move into. A piece or pawn must remain on the board till the last; if the king is left alone it is considered as *stale mate*, and he wins.

This game was formerly more general than at present.

Besides chess, there are a variety of games played upon checkers; and next to it in estimation may be considered the games of *chúki* and *dákon*. In *chúki*, the board has one hundred and twenty angular points, formed by cross lines on a checkered board, and the same is played with sixty white and sixty black pieces. The object here is to clear the board of the adversary's pieces, and the victor is he who does so first. The parties toss up who shall take off the first piece or break the board. The moves are in all directions, and the person who commences goes on as long as he can take one, three, or five of his adversary's pieces. When he cannot do either, he stops, and the other goes on in the same way. *Dákon* is played with fourteen or eighteen balls on an oblong board with holes, and is much practised by women.

Dandáman, or drafts, is not very unlike the Indian game, but has more pieces.

Machánan, is a game in which two chief pieces represent tigers, one conducted by each party, and twenty-three pieces representing cows: the tiger who destroys the most wins the game. *Máling'an* is played on squares with eighteen pieces, and the object is to surround your adversary's pieces.

Of games of chance there are many. That denominated *telága tári* is accounted the most ancient: it consists in guessing the number of beans enclosed within the hand. Three or four people commonly join in it. One of the party having dried beans in his lap, take a certain number in his hand, requiring each of the others to fix by guess upon a number; if there are three persons, upon a number from one to four, and the two numbers left fall to the share of the person who holds the beans. If the number in his hand exceeds four, every four beans are thrown aside, and the residue, until they are reduced to that number or below it, only counted.

Dadu, or dice, as well as cards, are borrowed from the Chinese, and not included among the national games. The most common species of gaming, and that which is practised by the numerous and dissolute class of *báturs*, or porters, in the central districts, is a kind of pitch and toss, denominated *képlek*. Four farthings, whitened or marked on one side, are tossed into the air; if the whole or three of them fall on the side that is marked, or on the reverse, the party who tossed them wins; if only two he loses the stake.

Bets are frequently laid on the hardness or otherwise of a particular nut, known among the *Maláyus* by the term *búa kras* and called *áduh gemíri*. Bets also frequently depend on the flying of kites (*layáng'an*).

I shall conclude this chapter by referring to some peculiarities, which, although partially explained elsewhere, and falling perhaps more correctly under other heads, may not be improperly noticed in an account of the national usages and customs.

The practice of filing and dyeing the teeth black, and that of lengthening the lobe of the ear to an enormous size, both of which have been already noticed, appear to have extended over the whole of the eastern peninsula of India, as far as China, and throughout the islands of the Archipelago, as far at least as Papua or New Guinea.

The practice of covering the face, body, and limbs with yellow powder on state occasions, and the use of yellow silk or satin for the envelope of letters between princes, evinces the same esteem for this colour which prevails in the other islands, as well as in Ava, Siam, and China.

The *kríses* worn by the Javans are only varieties of that which is found in the islands, and on what is termed the Malayan peninsula. The Javans have

a tradition that it was first introduced by one of their early Hindu sovereigns, *Sakú-tram* (others call him *Sa Pútram*), who is said to have come into the world with the *krís* by his side. This *krís* is supposed to have been of the kind called *pasopáti*, which is consequently considered as the most honourable at the present day. In the chapter on History will be found an account of the *krís* deposited in the tomb of the *Susúnan Gíri*, and of the virtues attributed to it by the superstitions of the country. There is a tradition, that the inhabitants of all those countries in which the *krís* is now worn, once acknowledged the authority of the Javans, and derived that custom from them. Another tradition attributes the introduction of this weapon among the islanders to the celebrated *Pánji*. The practice of poisoning the blade of the *krís* seems to have been attributed to the Javans and their neighbours without any foundation. In order to bring out the damasking, it is usual to immerse the blade in lime juice and a solution of arsenic, which, by eating away and corroding the iron, may probably render the wound more angry and inflamed, and consequently more difficult to cure, but it has never been considered that death is the consequence. After this application of the acid and arsenic, the blade is carefully smeared with some fragrant oil, to prevent it from rusting, and this is all that is ever done to it.

It has been usual to condemn these people as blood-thirsty, prone to immediate revenge, because they invariably use the *deadly krís*; but however frequent the appeals to this weapon may be in some of the more wild and uncivilized of the Malayan states, experience has proved to us, that on Java it may be universally worn without danger. I have elsewhere remarked, that the custom of wearing the *krís* among these islanders has, in its effects upon the manners of the people, proved in many respects an effectual substitute for duelling among Europeans. In these countries, where there is very little justice to be obtained from regularly established courts, and where an individual considers himself justified in taking the law into his own hands accordingly, the *Maláyu* is always prepared to avenge with his *krís* the slightest insult on the spot; but the knowledge that such an immediate appeal is always at hand, prevents the necessity of its often being resorted to, an habitual politeness ensues, and it has often been said, that if the *Maláyus* are savages, they are by far the most polite savages that we know of. If this effect is produced on the wilder and less civilized *Maláyu*, and has equal force with the more adventurous and warm-hearted *Búgis*, it

may be easily conceived the Javans have not escaped it. The *krís*, among them, has for a long period been more exclusively a personal ornament, than a rapier was in Europe fifty years ago, being among the higher classes even seldomer resorted to, as a weapon of defence or offence, than the latter.

The condition of absolute slavery, as understood by Europeans, seems to have been unknown to the ancient constitution of society in these islands, and throughout all the fragments of their history, of their laws, usages, and customs, no trace is to be found of its ever having existed among the Javans^[119].

Throughout the more ancient laws and institutions of the country, a property of the subject in the land is clearly recognized, and it is probable that it continued to subsist till the subversion of the Hindu government. From various definitions and enactments respecting property, some of which may be seen in the *Súria Alem*^[120], it is obvious, that money transactions took place formerly, to a greater extent than they do at present. The change is probably attributable to the European policy of the last two centuries. Four per cent. per month when a valuable pledge is deposited, and double that amount otherwise, is the common rate of interest in small transactions between the natives and Chinese of the present day.

In the transaction of money concerns, the women are universally considered superior to the men, and from the common labourer to the chief of a province, it is usual for the husband to entrust his pecuniary affairs entirely to his wife. The women alone attend the markets, and conduct all the business of buying and selling. It is proverbial to say the Javan men are fools in money concerns.

When speaking of their fondness for show and state, I noticed that the Javans were at the same time distinguished by neatness and cleanliness, qualities not often combined with the former. That they are in most respects remarkable for their neatness cannot be denied: to their personal cleanliness there are exceptions. This is however chiefly true of the higher classes, and especially those who mix with Europeans; but the common Javan, though more cleanly than the Chinese and even the European, would suffer by a comparison in that particular with the natives of Western India.

The common people generally bathe once a day, others once only in two or three days. None of any rank anoint the body with grease, as is the case with the natives of Western India; but they abundantly oil their hair, which among the common people, on account of its length, is too often filthy in the extreme. They are accustomed to arrange the hair with a coarse comb, but the use of the small-toothed comb is unknown, its office being invariably performed by the hands of women. Near Batavia, and some of the low capitals on the coast, it is not unusual to see on the road side women thus employed for the benefit of passengers, at a certain rate per head, who submit to it as naturally as an English labourer goes into a barber's shop to be shaved for a penny. The *Maláyus* accuse the Javans of eating what they find on these occasions: "*itu orang Jáwa,*" say they, "*mákan kútut.*" This, however, appears to be a calumny: the Javans confess to biting, but deny the swallowing. The practice of the women cleaning the men's hair is referred to by the Javans as of very ancient date. It was from this practice that the mother of *Wátu Gúnung*, in the very earliest period of Javan traditionary story, discovered her lost son^[121].

Passing from this disgusting particular, and referring the reader to the details of the native history for the leading features of the political character of the Javan, and to the other divisions of this work, which may afford him information how to estimate their former and present state of civilization, I cannot but regret, that I am compelled to reserve, until a future occasion, a more detailed account of the constitution, usages, and customs of the village societies. It is by these that the private virtues and vices of the people are perhaps best illustrated, and an account of the municipal regulations by which the little property and happiness of each individual is protected, of the internal precautions of police, and of the mode of adjusting disputes, could not fail to be interesting, on account of their simplicity, their equity, and efficacy. Independently of the degree of rational independence and importance which the existence of these societies insures to the common people, and of the protection which, under all circumstances of greater political revolutions, they have afforded to them, it is hoped that their influence in maintaining the police and tranquillity of the country, will ever prevent the European authority from interfering in their constitution or internal arrangements.

It has long been the opinion of the Dutch authorities, that a system of European police, and the employment of European officers of police are necessary; but under the British government the contrary has been satisfactorily proved. Let the higher departments of justice be scrupulously superintended and watched by Europeans of character; let the administration of justice be pure, prompt, and steady; let what is bad in the native practice of police be gradually removed, but let the system, in its application to the common people, be supported. It is one which has grown with them, one which they are accustomed to and understand. Under the native system, the rice block of the village is used as the alarm; and according to the manner in which it is beaten, the inhabitants know whether it is to announce a single thief or a banditti, a tiger or a fire, and arm themselves suitably. As it is usual for a thief to have but little covering on his body, and to oil himself all over, that he may slip from the hands of any one who may seize him, the Javans make use of a long wooden pole, with branches of brambles inverted within a fork at the end, and by means of this simple contrivance they avoid the risk of being wounded, and effectually secure the offender, who cannot escape without tearing his skin. These, and other simple expedients, adopted from immemorial custom and according to the circumstances of the country, are certainly preferable to the watchmen's rattles and constables' staves which Europeans would wish to introduce.

FOOTNOTES:

[97] The same is assumed by the European Governor, or his representative.

[98] The titles at present assumed by the *Susúnan* are *Susuhúnan Páku Buána Sena-páti heng Alága Abdul Ráhmen Sáyedín Pánatagáma*.

[99] *Form of a Piágam, or Patent of Javan Nobility.*

Let it be observed, this is the writing of me, the Sultan, &c. &c. &c.

Be it known to the *Nayáka* (high officers of the palace), *Bopátis* (the class of *Tumung'gungs* or Regents), and *Mantris* (the petty noblesse) of *Yúgya-kérta* and *Mánchanagára*, that I have invested ... with this letter, to raise him from the earth, and permit him to bear the title of ..., and wear the dress appointed for the ..., bestowing upon him for his subsistence lands to the amount of eleven hundred *cháchas*, the labour of eleven hundred men (families).

These are the names of the land bestowed. * * *

Translation of a Nawála for the Mánchanagára, or distant Districts.

Let all persons observe this, the royal letter of us, the exalted Sultan, &c., which we give in charge to....

Be it known to you, our servants, chiefs of *Yúgya-kerta Adiníngnat*, whether *Bopátis* or *Mántris*, and to you our *Bopátis* and *Mántris*, chiefs of *Mánchanagára*, that our royal letter is given in charge to ..., in order to exalt him. Moreover we prefer our servant to the rank of a *Bopáti*, to be chief of the *Bopátis* of *Mánchanagára*, bearing as heretofore the name of ... We also entitle him to wear such dress as is appointed for the *Widána* of *Mánchanagára*, and we give for his estate (seat), our own royal lands ..., amounting to two thousand *chachas*: ... thousand productive (living), of which last ... thousand are assigned for a maintenance and ... thousand are charged with rents, to the amount of ... dollars annually, payable twice a year, viz. at the festival *Mulud* ... and at the festival of *Puasa* ..., each dollar to consist of thirty *wangs*, and the whole to be subject to an office fee of one *wang* in each dollar. Moreover we direct, that each year an account be rendered to us of the increase or decrease of the *sáwah* (rice lands). The date of giving the royal order is the....

[100] "Thereupon *Klána Jáyang Sári* (another name for *Pánji Kérta Páti*), called his sister, and the Princesses of *Báli* and *Balem-báng'an*, and directed them to proceed to the Prince of *Dahá*, and to present to him a handsome present, composed of the most beautiful and rich ornaments and articles of dress for adorning a princess, placing the same in a *kendága* (or box), in order that if the prince was pleased to allow it to be delivered to his daughter *Déwi Chándra Kirána*, it might be a proof that he confirmed the contract with *Klána Jáyang Sári*, and that his daughter, *Déwi Chándra Kirána*, would be accepted by *Klána Jáyang Sári*, in which case he was ready to attack the enemies of the prince."—See the Adventures of the celebrated *Pánji*.

[101] Fortune was so much considered in the making of these matches among the Romans, that the augurs were always called along with the witnesses to a marriage contract, to pronounce upon the happy results of the settlement which the latter attested:

"Veniet cum signatoribus Auspex."—*Juvenal*.

[102] The Jews marry in nearly the same way, the husband delivering a sum of money as a pledge. The Greeks were in the habit of presenting gifts on similar occasions.

[103] A description of this instrument, on account of the importance attached to it among the Javans, the constancy with which it is worn, and the care with which it is preserved through different generations, will be found in another place.

[104] "Non consulum sed maritorum numero annos suos computant." *Seneca, de Benef.*—But this is short of *Juvenal's* account: "Fiunt octo mariti, quinque per autumnos."

[105] The Romans likewise were in the habit of washing the dead body several times before interment with water, which in their case was warm.

"Pars calidos latices et athena undantia flammis
Expediunt: corpusque lavant frigentis et unguunt."

Virgil: Æneidos, lib. vi. lin. 218.

By referring to the Old and New Testament, the same practice will be found to have prevailed among the Jews: indeed, it seems to have been very general.

[106] During the two latter quarters of the moon she is considered as appearing in the form of a *Rasáksa*, and is then more properly called *Dúrga*.

[107] A custom somewhat similar to this is said to be practiced in South America.

"They lighted a great number of torches, and the midwife taking up the child carried it through the yard of the house, and placed it upon a heap of leaves of sword-grass, close by a basin of water, which was prepared in the middle of the yard, and then undressing it said, 'my child! the gods *Ometeucti* and *Omicihautl*, Lords of Heaven, have sent thee to this dismal and calamitous world: receive this water, which is to give thee life:' and after wetting its mouth, head, and breast, with forms similar to the first bathing, she bathed its whole body, and rubbing every one of its limbs said, 'where art thou, ill fortune? in what limb art thou hid? go far from this child!'"—*History of Mexico by Clavigero, translated by Cullen*, vol. i.

[108] It is curious to observe how exactly this corresponds with the patriarchal history of Scripture, and the early accounts of the manners of ancient nations. The daughter was always considered the property of the parent, the wife as the purchase of the husband, and the marriage contract as the deed of transfer.

[109] One of the names of Pángi.

[110] The prevalence of this practice must strike every one.

[111] See Astronomy

[112] See Historical Chapters.

[113] These prayers will be found at length in the Transactions of the Batavian Society, vol. ix. The word *hong!* used by the Javans at the commencement of their invocations to the deity, is doubtless the mystical *om!* of the Hindus.

[114] The following are the only traditions respecting these people which are current in the eastern provinces. "The people of the *Teng'ger* mountains say, that they received that name from a person from *Matáram*, of an inquisitive and travelling turn (*wong malána*), who having ascended the highest of them, and being struck with astonishment at the view of all around, gave them the above-mentioned name of *Teng'ger*, from the Javan word *angeng'ger*, which signifies wonder or astonishment.

"Before *Gúnung Bràma* had received that name, or had become a volcano, there lived a man called *Kiai Géde Dádap Pútih*, who had no children. He petitioned of his deity to grant that he might have children, to the number of twenty-five, promising, in that event, that he would cast away one of them into the sea. In the course of a short time children began to be born unto him. As soon as he had the number he had prayed for, the people of *Teng'ger* were inflicted with a pestilence, so dreadful in its effects, that those who were attacked by it in the morning never failed to die before the evening. *Dádap Pútih* was so distressed and afflicted at the lamentable situation of the *Teng'ger* people, that he loathed his food and neglected his rest, till it was communicated to him in a vision, that the pestilence had been sent in consequence of his having omitted to perform his vow, of casting into the sea one of the twenty-five children whom the deity had granted him. *Dádap Pútih* then assembled all his children, and inquired which of them was willing to be sacrificed, in order to appease the angry deity. All of them signified their unwillingness to become the victim except the youngest child, who voluntarily came forward and agreed to suffer, in which ever way its father thought proper. *Dádap Pútih*, however, reflecting that the sea was at a very great distance, carried this child only to that extensive sand plain at the foot of *Gúnung Bráma*, which bears the name of *Sagára wédi* or *Lout Pásir*, and there abandoned it. No sooner had he done so, than *Gúnung Bráma* began to send forth hollow sounds, and immediately burst forth into a volcano. *Sagára wédi* is so called from the resemblance of its sandy surface, to a sea when surveyed from *Bráma's* heights: its original name is *Dassar*.

"*Bima* being asked by *Kresna* if he was able, in the course of one night, to make an inland sea below the *Teng'ger* mountains, and having answered in the affirmative, *Kresna* challenged him to do it,

telling him at the same time, that it must be done before the cocks were heard to crow, or the people of the villages began to weave or beat out rice. By three o'clock in the morning his work was so far advanced, as to convince *Kresna* that it would be completed in the prescribed time. To prevent this, therefore, *Kresna* immediately went, and rousing all the cocks and people of the villages, caused the former to crow and the latter to begin to weave and beat out rice. By this manœuvre, *Bima* was obliged to leave off the work, which otherwise would have been completed within the fixed time; and so incensed was he against the people, who had so untimely began to weave and beat out their rice (whereby he failed to perform the task which was given to him to prove his power) that he cursed them, and swore that they should never again perform either the one act or the other, and to this day the *Teng'ger* people neither weave cotton nor beat out rice."

[115] See History.

[116] It has already been noticed that the island is plentifully supplied with a fine breed of small horses. Almost every petty chief and public officer is mounted, and those who possess the means pride themselves upon a respectable establishment. They have an aversion to some colours, and there are particular marks, the possession of which renders a horse valuable to the natives; if a few hairs on the neck curl, or have the appearance of a star, the horse is highly prized. Previously to the cession of *Kedú* to the European government in 1812, the native princes maintained a very respectable stud in that province. Horses are never shod on Java, nor are they secured in the stable, as is usual in Europe and Western India. A separate enclosure is appropriated for each horse, within which the animal is allowed to move and turn at pleasure, being otherwise unconfined. These enclosures are erected at a short distance from each other, and with separate roofs. They are generally raised above the ground, and have a boarded floor.

The Javans use an extremely severe bit, and in consequence have the horse always under command. The saddle, bridle, &c. are extremely heavy, and disproportioned to the size of the animal.

[117] "The fruit of a species of *contorta*, called *kálak kámbing*, has a deadly effect on tigers. It is prepared by the admixture of other vegetables, and exposed on a piece of rag at the places frequented by them. In some districts their number has been sensibly diminished by this poison."—*Horsfield*.

[118] The cocks reared for this purpose are of the large game breed. The cock which we improperly call the Bantam, is not found on Java, except as a curiosity: it comes from Japan.

[119] A peculiar feature in the state of society in the Eastern Islands is the law between debtor and creditor. Throughout the Archipelago, where the European government has not interfered, confinement for debt is unknown. The creditor universally has a right to the effects of the debtor, to the amount of the debt, on proving it before the proper authority, and if the effects are not sufficient to satisfy the demand, he has a right to the personal services of his debtor, and of his debtor's wife and children if necessary. Hence arises that extensive class of people commonly called slave debtors, or more correctly bondsmen. In Java they are termed *bédol*. In the provinces of Java subject to the European authority, this practice has for some time been checked; and during the administration of Marshal Daendels, in 1810, when it was usual for the common Javans to lend themselves in pawn for a certain sum of money, it was declared illegal. As an ancient institution of the country, it will perhaps be better explained hereafter, in detailing the existing practice on *Báli*, which may be considered to assimilate, in a great measure, with what the practice once was on Java.

[120] See Appendix D.

[121] See Javan History.

CHAPTER VIII.

Language—Little known to Europeans—Different Languages or Dialects—Those of Súnda, Madúra and Báli compared with that of Java Proper—The polite Language, or Language of Honour—The Káwi, or Sacred and Classic Language—Numerals—Chándra Sangkála—Literature—Compositions in the Káwi Language, and in the modern Javan—Influence of Hindu Literature—Introduction of Arabic Literature—Poetry—The Bráta Yúdha, a Poem—Music—Painting—Sculpture—Architecture—Arithmetic—Astronomy.

The extensive prevalence of the Javan language, and its connexion with the languages of continental India, were not overlooked by those intelligent Europeans who visited these islands at an early period; for we find Valentyn^[122] quoting the authority of Flaccourt, who published in 1661, and the Portuguese Jan de Barros, for conclusions with regard to the extent of Javan commerce in remote ages, drawn from the resemblance then traced between the languages of Java and those of Madagascar and Amboin (Amboina.) "The Javans," observes this author, "must doubtless have visited Coromandel and Malabar, for the high or court language is, in three parts out of four, derived from the Sanscrit or Brahminical language. Many Malabar words also enter into the composition, and it is besides composed in a great measure from the *Dekan*, which is the ancient language of India, in the same manner as the Sanscrit is the sacred language."

The alphabet has been exhibited, though imperfectly, by Valentyn, Le Brun, and Reland, and an *Alphabetum Bantemense* is said to have been found amongst the posthumous papers of the learned Hyde; but the language does not appear to have been regularly cultivated by Europeans until within the last very few years. Some of the outlines of the Javan mythological stories had previously appeared in a Dutch dress, in the transactions of the Batavian Society; and these, with the translation of the Lord's Prayer in the high and low languages, published by Valentyn, some short vocabularies, and a short comparative view of the Javan and Malayan languages, which appeared in a Dutch work entitled "*Begin en vortgang den Oost Ind Compén*," or the Rise and Progress of the East-India Company, are the only contributions to our knowledge of Javan literature with which I am acquainted.

The native population of Java, *Madúra*, and *Báli*, islands most intimately connected with each other in every respect, use exactly the same written character, and it appears that one generic language prevails throughout these islands. Of this generic language, however, there are four dialects, differing so materially from each other as to be generally considered separate languages. It is, however, rather by admixture of other languages than by mere difference of dialect that they are distinguished. These dialects or languages are the *Súnda*, spoken by the inhabitants of the mountainous districts of Java west of *Tégal*; the *Jáwa* or Javan, which is the general language of Java east of Chéríbon, and throughout the districts lying on the northern coast of the island; the *Madúra* and the *Báli*, being the dialects or languages belonging to those islands respectively.

How far these dialects or languages radically assimilate with each other, and justify the opinion that one generic language prevails throughout, may be determined by an inspection of the annexed vocabulary^[123]. The *Lampung* is added on account of the vicinity of that part of Sumatra to Java, and the intimate political connection which at all times subsisted between the people; and in order to enable the reader to compare them all with the prevailing language of the Archipelago the *Maláyu* is prefixed. Under the Javan is included the *Bása kráma*, or polite language, which will be more particularly noticed hereafter.

In this vocabulary such words only have been introduced as are used in conversation, and in ordinary epistolary composition; but the inhabitants of these islands possess further a classic language, altogether distinct from the ordinary languages of the country, and which is to them what the *Sanscrit* is to the *Pracrit* language of Hindustan, and what the *Pali* is to the *Birman* and *Siamese*. This language is termed *Káwi*^[124]. The annexed vocabulary, No. 2^[125], which affords a comparison between the *Sanscrit*, the *Pali*, and the *Káwi*, will shew how nearly these languages are allied.

These two vocabularies may serve to convey a notion of the extent, peculiarities, and antiquity of the Javan language, which will be found as intimately connected with the *Maláyu*, or general language of the Archipelago, on the one hand, as it is with the *Sanscrit* and *Pali* on the other.

The *Súnda* language, though now confined to the mountainous districts, seems to have been formerly, and probably down to the period immediately preceding the revolution occasioned by the Mahomedan conversion, the

general language of the western districts, and is perhaps the most ancient vernacular language of the country. It is a simple uncultivated dialect, adapted however to all the purposes of the simple and uneducated mountaineers who speak it, and has perhaps escaped the influence of foreign innovation, from the peculiar nature of the country and the independent character of that race. It possesses a considerable portion of *Maláyu* words, and some of Sanscrit origin; the latter being, generally speaking, proper names or terms of art and science or polity, have probably been borrowed from the eastern or proper Javans, in common with whom the *Súnda* people have adopted a *B'hasa dâlam*, or *Bása krâma*, which, however, is by no means extensive. The *Súnda*, with reference to the Javan, may be viewed in much the same light as the Welch is to the English. The proportion of the people who now speak it does not exceed one-tenth of the population of the whole island; the remaining nine-tenths speak Javan.

The language of *Madúra*, which is again divided into the dialects of *Madúra* proper and *Sumenáp*, will be found to contain many words in common with that of *Súnda*, but a much more extensive portion of *Maláyu*, varied in the termination by a peculiarity of dialect.

The languages of *Báli* are intimately connected with those of Java and *Madúra*. In the historical part of this work it will be shewn that it was in *Báli* the ancient religion, and with it the literature of Java, took refuge in the fifteenth century of our æra; and although, from the difference which is at this day found to exist between the vernacular languages of the two countries, as well as in their institutions, it is evident that the language, literature, and institutions of Java were there engrafted on a more rude and savage stock, still it is chiefly to *Báli* that we must look for illustrations of the ancient state of the Javans. The relation of the political revolutions by which these islands have been convulsed at different periods of their history, will, in a great measure, account for the distinctions of language which at present exist; while, at the same time, these distinctions and peculiarities must serve to confirm many of the facts, for which we should otherwise have only the authority of tradition to rely.

At Bantam the language is much mixed with *Maláyu* and *Súnda*. The language in ordinary use at Batavia and its immediate vicinity is a jargon of Dutch, Portuguese, Chinese, Javan, and *Maláyu*, the latter forming the principal component. In *Bógor* and *Chai-ánjur*, the *Súnda* is pronounced in a more drawling manner than in *Chéribon*, where it is probably most correctly spoken, as in the word *náh*, what? which at *Chéribon* is pronounced short and sharp, *naù*. At *Tégal* the Javan words are in like manner lengthened in pronunciation, while at *Semárang* they are spoken short and full. At the courts of *Sura-kérta* and *Yugya-kérta*, the words are pronounced short, strong, and full. In the provinces east of *Surabáya*, the language partakes much of the *Madurese*, and in the extreme district of *Banyuwángí*, the *Báli* is discernible.

The alphabet of Java is peculiar: it consists of twenty consonants (*y* and *w* are of the number), termed *aksára* or letters. In common with all other characters properly Indian, these letters may be considered as syllables, composed of a consonant and an inherent vowel sound, which is invariably expressed, unless contradicted by a particular sign.

Besides the *aksára*, there are twenty auxiliary characters, termed *pasáng'an*, which in this application means corresponding or similar. They have the same power as the *aksára* against which they stand, except that they are only used in connexion with and immediately after the *aksára*, for the purpose of suppressing their inherent vowel sound. Three of them are always placed after the *aksára*, the others below them.

When the inherent vowel sound in the *aksára* is not contradicted, the *aksára* is termed *lagána*. The vowel sound in this case is that of *a* in "water," or of *o* in "homo;" the *o* being at present invariably used at the native courts and their vicinity for the inherent vowel of the consonant, instead of *a*. The latter, however, is still preserved on *Madúra*, *Báli*, and in the districts of Java, west of *Tégal*, and was doubtless the original inherent vowel. The consonant sounds correspond with the sounds usually attributed to the English consonants, with the exception of a second *d* and *t*, which correspond with similar sounds in the *Devanágari* alphabet; *ch*, which is used as *ch* in "church;" *nia*, and *ng'*, which latter is frequently used as an initial letter.

Besides these there are five vowel signs, which supplant the inherent vowel. These signs are termed *sandáng'an*, the clothing or dress. The *répa* consist of certain contractions of consonants and other signs used in composition. These, with a *pángkun*, or sign of elision, corresponding with the *báris máti* of the *Malayu*, which has no sound of its own, but being placed at the end of a word or sentence denotes its termination in a pure consonant, and some few other marks corresponding with the *Devanágari*, complete the orthographical arrangement, which though complex and intricate, is remarkable for its precision.

Some of the letters occasionally occur under a capital, or rather peculiar form, for they are of the same size; but these are seldom used, and when they are, it is not as capitals are employed in European languages. They are

principally found in proper names, and titles of office, and are placed alike in the beginning, middle, or end of a word.

The annexed table is intended to exhibit the powers and application of the different letters and orthographical signs. No. 1. exhibits the characters now in general use. No. 2. contains the square characters in which the *Káwi* is usually written, and in which the different inscriptions in that language, cut in stone and copper, are found. No. 3. contains specimens of the varieties which the alphabetical characters have at different times assumed, arranged, according to the judgment of the native writers, in the order of their relative antiquity.

(Or Contractions of certain Consonants used in composition with other Consonants).

*signian or
wignian*

is placed after the letter, and is used to supply the place of the letter *h*, when not followed by a vowel sound.

chákra

is placed round two letters, and introduces *r* between the consonant and its inherent vowel.

láyar

is placed above the letter, and is used to supply the place of the letter *r* when not followed by a vowel sound.

péngkal

is placed partly below the letter and partly after, to introduce a medial *y* in the same manner as *chákra* introduces *r*.

chechak

is placed above the letter, and is used to supply the place of the letter *ng'*, when not followed by a vowel sound.

*chákra-
gántung*

is placed below the letter, and is pronounced *re*.

pángkun

is placed after a letter, and serves as a mark of elision, destroying the final vowel sound.

VOWELS.

The Javans write from left to right. Every consonant (*aksára*) is written separately, not being joined to that which precedes it, and no space is left between the words. One or two short diagonal lines are used at the close of every poetical stanza, and sometimes a comma, and this is the only mark in the language which simply indicates a stop.

In Java the natives usually write with Indian ink upon paper manufactured by themselves, as already described, and sometimes on European and Chinese paper; but in *Báli* the natives invariably use an iron style, and cut the letters on a prepared palm leaf, in the same manner as in Western India. This practice is still partially continued in some of the more eastern parts of Java, and was no doubt, at a former period of their history, general throughout the island. The leaf is called *lontar* (from *ron* a leaf, and *tal* the palm tree, the first and last letters being transposed), and the leaves or manuscripts are strung together to form books in the same manner as on continental India. Of these I have several specimens, containing nearly all the interesting compositions of the country.

As in the *Maláyu*, by far the greater proportion of primitive Javan words are dissyllables, pronounced with a slight stress or accent on the former of the two. There are a great number of derivative words, formed after the same manner as those in the *Maláyu*, by prefixing or annexing certain inseparable and otherwise non-significant particles. Compound words, formed by the junction of two or more significant terms, are frequently met with, though they by no means form an extensive portion of the language.

Many words, in their primitive sense, are not confined to one particular part of speech, but are common to two or more. Nouns, as in the *Maláyu*, cannot be said to possess the distinctions of either gender, number, or case. The males and females of all animals are, with few exceptions, as in the instances *Pútra—Pútri*, *Déwa—Déwi*, *Bramána—Bramáni*, and some few others, denoted by adding to the general terms words applicable to the different sexes. Number is not denoted by any variety of termination or change in the form of the noun, but by separate words, expressive of plurality or singularity; a duplication of the singular sometimes occurs, though rarely, to denote plurality. Where the terms *bíji*, *ékor*, *buáh*, *képing*, &c. are used in the *Maláyu* to specify a particular number, the term *wíji* is used indiscriminately in the Javan, whatever may be the thing spoken of. The nouns have no cases.

The adjectives are indeclinable, and generally follow the noun; and these are sometimes formed from nouns by prefixing a particle. The comparative degree is sometimes formed by prefixing a word meaning higher or larger, but more frequently by placing adverbs, significant of "with," before that with which the comparison is made, as if we should say "by the side of." The superlative degree is formed by annexing adverbs signifying "very, exceedingly, entirely, alone."

The cardinal numbers are placed sometimes before and sometimes after the nouns to which they are attached. When prefixed, they undergo, for the sake of the sound, a variety in their termination, or drop the first syllable. The ordinals are formed by prefixing a distinguishing word to the cardinals. Ten characters, which are all either

alphabetical letters or signs slightly altered in form, serve to express all numbers, the notation being decimal, and the numerals being combined in the same manner as the Indian and Arabian.

The pronouns of the first and second person are always significant, and vary with the relative rank of the parties. There is no proper pronoun of the third person, but a word signifying "alone, self," with the addition of the possessive particle, is used as a personal pronoun of the third person. The personal pronouns may all be used as possessive pronouns, by being placed as such after the noun to which they belong. The relative and demonstrative pronouns correspond very nearly with those of the *Maláyu*.

With regard to the verb, it may be noticed that many of the observations in Mr. Marsden's grammar, on the nature and formation of the different parts of the *Maláyu* verb, are applicable to the Javan. It belongs rather to the detail of the grammar to point out these; but it may be remarked, that the use of these inflexions in the Javan appears to be so varied and undefined, that it is impossible, without a much more extensive knowledge of the language than Europeans at present possess, to make out a perfect conjugation, or to lay down any fixed rules for them. All that could perhaps be done, in the present state of the language and of our knowledge of it, would be to give a number and variety of correct idiomatical expressions in the Javan, by which their nature and irregularity may be shewn; and our present limits do not admit of this.

The Javan language has never been reduced within the grammatical rules adopted by Europeans, nor have the Javans themselves any notion of grammar. The construction is generally simple and regular; but owing to prosodial refinements (every writing of importance being written in verse), syllables and words necessary to express a perfect sense are often omitted; at other times, unnecessary syllables or words are added, and letters at the beginning, middle, and end of a word are transposed. Hence, and also from the usual ellipsis of the verb transitive and personal pronouns, the meaning of many passages appears obscure.

The language is remarkable for the profusion of words which it contains, for the minute distinctions and shades of meaning, and the consequent extent of synonymes, and for difference of dialect.

Of the profusion of words it may be observed, that the Javan, in this respect, may be put in competition with many of the more cultivated languages of Europe and Asia, and that a dictionary would perhaps be far from complete, if it comprehended less than twenty thousand.

Of the extent of synonymes, and the minute shades of distinction which are found in this language, some notion may be formed from the extracts from the *Dása Náma* which are annexed^[126]. In order to facilitate the acquirement of the language, it is usual to collect all the words in the different dialects, with their synonymes, and to connect them together by stringing them in classes following each other, according to the natural chain of our ideas. Thus, after commencing with the word *man*, and giving an explanation of every word in the vernacular, polite and *Káwi* languages, applicable from his birth to his death, as *infant*, *boy*, *youth*, and the like, it proceeds to *woman*, *child*; from thence to the deities, afterwards to the various avocations of mankind, &c. This collection of synonymes is called *Dása Náma*, literally the "ten names," a term probably given to it on account of few important words in the language having less than ten synonymes. Children are no sooner taught to know the letters of the alphabet (which they first describe on the sand), and to connect them in syllables and words, than they are instructed in the *Dása Náma*, without a partial knowledge of which, no youth is considered competent to enter upon any public office, or can advance to a knowledge of the written compositions of the country. These collections are varied in their contents and order of arrangement, according to the acquirements and notions of the compiler. As books of reference they may be considered to supply the place of dictionaries, and if less convenient for this purpose than works alphabetically arranged, they have certainly an advantage over them, in the comparative facility with which their contents are impressed on the memory.

But there is no feature in the language more deserving of notice than the difference of dialect, or the distinction between the common language, and what may be termed the polite language or language of honour. The latter contains many words of Sanscrit origin, and a portion of *Maláyu*; and in those instances in which it appears to have been borrowed from the vernacular language, which may perhaps be loosely estimated at a fourth of the whole, a slight alteration is commonly made in the orthography and pronunciation, to mark the distinction. To render this distinction intelligible to those who are not locally informed, it may be necessary to explain, that from whatever cause the distinction may have originated, so clearly is the line drawn on Java, between the higher and the lower classes of society, that on no account is any one, of whatever rank, allowed to address his superior in the common or vernacular language of the country. This language is exclusively applied when addressing an inferior, or among the lower orders or uneducated, where distinction of rank may not be acknowledged. Persons of high and equal rank, when discoursing among themselves, sometimes use the polite language, but in general they adopt a medium,

by introducing words belonging to both branches of the language; and this is generally adopted by them in epistolary correspondence.

It is probable, that in the earlier stages of society, the terms of respect used towards a superior were comparatively few: that this second dialect, which now forms so extensive a branch of the general language, has been gradually formed with the growth of arbitrary power; and that, at one period, the extent of these terms did not exceed what is to be at this day found in the less cultivated dialects, and among the more independent races of *Madúra* and *Súnda*. Such, however, is their present extent in the Javan, that nearly one half of the words in the vernacular language, have their corresponding term in the *Bása Kráma* or polite language, without a knowledge of which no one dare address a superior; and although the general construction of the language, and its grammatical principles are not altered, so effectually is the language of inferiority contrasted with that of superiority, that it is possible to suppose a case in which a person might be well acquainted with one dialect, without being able to understand one sentence of the other.

It is not, however, to be inferred, that the one is studied and attained exclusively of the other, for while the one is the language of address, the other must be that of reply, and the knowledge of both is indispensable to those who have to communicate with persons of a different rank with themselves. Children are accustomed from their infancy to employ the polite language in addressing their parents and relations, and this added to the mode of instruction by the *Dása Náma* above described, early impresses upon their memory the corresponding terms to be used according to the occasion. The *Bása Kráma*, as has been before noticed, consists of a more extensive class of foreign words, and where different words from the common language have not been introduced, a variation in the orthography and termination is adopted; and the more effectually to render it distinct, not only are the affirmatives and negatives, as well as the pronouns and prepositions varied, but the auxiliary verbs and particles are different.

I have already mentioned, that besides the ordinary and the polite languages of the country, the inhabitants of these Islands possess a poetic or classic language, called *Káwi*. In this are written all the historical and poetical compositions of note, as well as most of the ancient inscriptions on stone and copper, which are found in different parts of the Island. In a short vocabulary already referred to^[127], the relation of the *Káwi* to the Sánscrit and *Páli* is shewn; and in order to enable the Sánscrit scholar to extend the comparison, I have annexed a further vocabulary of *Káwi* words, with the meaning which the Javans at present attach to them^[128].

At what period this language was introduced into Java, whence it came, and whether it was ever the sacred or vernacular language of any foreign people, remains to be decided. Of the words of which it is composed, as far as we may judge from the annexed vocabulary, and the compositions which have come down to us, nine out of ten are of Sánscrit origin, and less corrupted than the present *Páli* of *Siam* and *Ava* appears to be: if, therefore, it was ever the same language with the *Páli*, it must have been before the *Páli* was corrupted, and therefore probably at a very remote period.

In *Báli* the *Káwi* is still the language of religion and law; in Java it is only that of poetry and ancient fable. In the former, the knowledge of it is almost exclusively confined to the *Bramána* (Bramins); in the latter, a slight knowledge of it is deemed essential for every man of condition. In *Báli*, the ancient, mythological, and historical poems, are however preserved in more correct *Káwi* than on Java: and it is to the copies obtained from thence, that reference will be principally made in the observations which follow on Javan literature.

In noticing "the accessory tongues from whence the *Maláyan* acquired such a degree of improvement, as removed it from the general level of the other cognate dialects, and gave it a decided predominance in that part of the east," Mr. Marsden observes, "that the earliest, as well as most important of these, appears to have been, either directly or mediately, that great parent of Indian languages, the *Sanscrit*, whose influence is found to have pervaded the whole of the eastern (and perhaps also of the western) world, modifying and regenerating even where it did not create. That the intercourse, whatever its circumstances may have been, which produced this advantageous effect, must have taken place at an early period, is to be inferred, not only from the deep obscurity in which it is involved, but also from the nature of the terms borrowed, being such as the progress of civilization must soon have rendered necessary, expressing the feelings of the mind, the most obvious moral ideas, the simplest objects of the understanding, and those ordinary modes of thought which result from the social habits of mankind; whilst, at the same time, it is not to be understood, as some have presumed to be the case, that the affinity between these languages is radical, or that the latter is indebted to any Hindu dialect for its names for the common objects of sense^[129]."

The same observations apply still more extensively to the Javan; and in the *Káwi* or classic language, we may presume to have discovered the channel by which the Javan received its principal store of Sanscrit words, for it is the practice, even at present, among the better educated of the Javans, for the party to display his reading, by the introduction, particularly into epistolary correspondence and literary compositions, of *Káwi* words, by which means the colloquial, but more particularly the written language of the country, is daily receiving fresh accessions of Sanscrit terms. From the vocabularies now presented to the public, and the account which will be given of their literary compositions, it will appear, that few languages, even on the continent of India, have been more indebted to the Sanscrit than the Javan. One original language seems, in a very remote period, to have pervaded the whole Archipelago, and to have spread (perhaps with the population) towards Madagascar on one side, and to the islands in the South Sea on the other; but in the proportion that we find any of these tribes more highly advanced in the arts of civilized life than others, in nearly the same proportion do we find the language enriched by a corresponding accession of Sanscrit terms, directing us at once to the source whence civilization flowed towards these regions. At what period, however, the light first broke in upon them, or at what period the intercourse first took place between the enlightened inhabitants of Western Asia and the islanders of this extensive Archipelago, is a question which, perhaps, may be more properly discussed, when treating of the antiquities and history of the country, and at best is involved in so much obscurity and fable, that much must be left to conjecture.

The letters of the Javan alphabet, as well as the orthographical signs, are decidedly on the principle of the *Devanágari*; but it is remarkable, that the letters of the alphabet do not follow the same order, notwithstanding that order is preserved in all the alphabets of Sumatra as well as in that of Celebes. This deviation has been considered presumptive of the alphabet having been introduced into the island anterior to the period when this order might have been established for the *Devanágari* itself, or before the refinement supposed to have been effected in that alphabet by the Bramins; but the deviation may, perhaps, be sufficiently accounted for, by the circumstance of a meaning being attached to the words formed by the order of the Javan alphabet as the letters are at present arranged, thus: *hána charáka dáta sawála páda jayánia mága batáng'a*; means, "there were two messengers disputing with each other, equally courageous, till they both died"^[130]. That this is not accidental may be inferred, not only from the common laws of chance, but from the probability of such an arrangement being preferred, both on account of its convenience, and in conformity with the spirit which in the *Chándra Sangkála* seeks to select such expressions for the particular numerals that are required, as may make a sentence.

Near the ruins of *Brambánan* and *Sínga-sári*, are still found inscriptions in the pure *Devanágari* character of a very ancient form. A specimen of these, together with one of the square *Káwi*, is exhibited in the accompanying plate, corresponding in size with the original. Annexed to each letter in the *Devanágari* character found on Java, is the modern character, and in the same manner the modern Javan letters are placed under the *Káwi*; and, in order to enable the reader to compare the forms of the consonants used in the alphabets of Ava, Siam, and Java, with the *Devanágari*, they have been placed against each other in another plate. It will be seen that many of the letters of the *Káwi* correspond so exactly with the square *Páli* of the Birmans, as to leave no doubt of their having originally been the same. It is probable, also, that were our acquaintance with the *Páli* more extensive, a similar coincidence would be found between the languages.

Upon the overthrow of the Hindu empire on Java, the natives may be considered to have lost most of their knowledge of the *Káwi* language; for although numerous compositions in it are still to be found among them, and these compositions are recited in their national entertainments, they would not be generally understood, but for the versions which have long since been rendered of them into the modern Javan. The *Panambakán* of *Sumenap* is perhaps, at present, alone entitled to be considered as a *Káwi* scholar, and he knows so little of the language as to acknowledge, while assisting in translating from it, that he was often under the necessity of guessing at the meaning.

The knowledge of the ancient characters seems, on Java, to have been for many years almost exclusively confined to the family of this chief, and it is stated, that they owe their knowledge of it, and of the *Káwi* language itself, to the circumstance of one of them having visited *Báli*, to which island it is that we must now look as the chief depositary of what remains of the literature and science which once existed on Java.

It is not unusual for the Javans, in carrying on any secret or political correspondence, to adopt a mystical language, known only to the parties themselves; and on occasions where attempts have been made to stir up the common people to commotion, scrolls have been distributed in various unintelligible characters, which, for the most part, appear to have had no other object but to impose on the credulity of those who were too willing to believe them sacred and mysterious. Were the characters intelligible, the mystery would cease, and the charm be dispelled. Of

the manner in which the letters of the alphabet are applied in forming this mystical language, an instance is given at the conclusion of the vocabulary of *Káwi* words^[131].

Unlike the Malayan, the Javan language owes little or nothing to the Arabic, except a few terms connected with government, religion, and science, which have been admitted with the religion and laws of Mahomet. The language, as well as the ancient institutions of the country, have been but little affected by the conversion. The Javan language was abundantly copious before the introduction of Arabic literature, and had few or no deficiencies to be supplied.

The general character of the language is strongly indicative of a former advanced state of civilization, and illustrates, in some degree, the present character of the people. It is rich and refined; it abounds in synonymes and nice distinctions; it is mixed and easily made to bend, and suit itself to every occasion; it is, in a high degree, expressive of power and servility^[132].

As the languages of the whole Archipelago are so intimately connected with each other, and that of Celebes in particular is so little known, I have subjoined in an Appendix some further comparative vocabularies of the languages of Java, with some observations on the *Búgis* and *Mangkásar* nations^[133].

For ordinary purposes, the Javans, as already described, use a modification of some of the letters of their alphabet as numerals, and a representation of these numerals has been given in the table of the Javan alphabet, page 404; but on occasions of importance, it is usual to employ certain signs or symbols in lieu of these ordinary numerals, and this practice appears to be of great antiquity among them. These symbols are termed *chándra sangkála*, "reflections of royal times," or "the light of royal dates," and consist in a certain number of objects, &c. either represented in design or named, each of which is significant of one of the ten numerals. Of the former class are said to be those found in most of the ancient buildings and coins, which in that case usually bear no inscription. The latter is found in most of the ancient inscriptions, and in such of the written compositions as possess any date at all, and is adopted in all proclamations and public writings by the sovereign of the present day.

The Appendix G. contains an account of these peculiar numerals, as far as they are at present understood by the Javans. In the use of them, they endeavour to select such objects from the list, as when read in succession, may afford some meaning illustrative of the fact the date of which is recorded; but this is not always attended to, or at least is not always to be traced. The date of the destruction of *Majapàhit* (1400), the most important in the history of Java, is stated as follows, the numbers being always reversed.

<i>Sírna</i>	<i>ílang</i>	<i>kertáning</i>	<i>Búmi</i>
Lost and gone	is the work	(pride) of	the land.
0	0	4	1

In like manner, the date of the long graves at *Grésik*, near the tomb of the Princess of *Chermai* (1313), is thus stated:

<i>Káya</i>	<i>wúlan</i>	<i>pútri</i>	<i>íku</i>
Like unto	the moon	was that	Princess.
3	1	3	1

Other examples will be given, in detailing some of the principal events of Javan history.

However imperfect the foregoing general account of the languages of Java may be, it will have served to convey to the reader some notion of the extent to which it has been indebted to a foreign source for its copiousness and refinement, and to prepare him for that extensive influence of Hindu literature, which is still to be found in the compositions of the country. Of these the most important, and indeed all that have any claim to literary distinction, are found either in the *Káwi* or in Javan versions from that classic language. On Java the establishment of a Mahomedan government for nearly four centuries, has tended in a great measure to obliterate that general knowledge among the better educated, which, there is reason to believe, once existed; but in *Báli*, the Hindu faith, however blended with the local customs of the island, and however perverted and distorted in its application by a semi barbarous people, is still the established religion of the country. Mahomedanism has gained but little ground there, and no part of the island has yet submitted to European authority. It was in this conveniently situated island

that the adherents to that faith took refuge, when the sword of Mahomed prevailed on Java, carrying with them such remnants of the sciences and literature as they were able to rescue from the general wreck.

An account of the present state of the island of *Báli*, of the religious and political institutions, and of some of the peculiar customs and usages which subsist there, is essential to the illustration of Javan history; and although the limits of the present volume will not admit of our enlarging so much on this interesting subject as we could wish, it is hoped that a general notion may be formed, from the particulars which will be inserted in the chapter on the religion and antiquities of Java. In the following account of the literary compositions of Java, I shall avail myself of the more correct copies, which I was fortunate enough to obtain from *Báli*, confining myself in the explanation of them to the existing notions of the best informed of the Javans, it being the present state of their literature, rather than that of *Báli*, that I am now to describe.

The literature of Java may be considered under the general heads of ancient and modern, the former and more important division consisting of compositions in the *Káwi* language, which appear connected with the mythology and fabulous history of continental India.

It is to be regretted, that the work which treats most extensively of the ancient mythology of the country, and of the earliest periods of fabulous history to which the Javans of the present day refer, is not to be found in the *Káwi*. The Javan work, termed *Kánda*, is probably a translation from the *Káwi*, and, in the absence of the original, claims our first attention. It is to this work, and the *Mánek Móyo*, of which an abstract will be given in the chapter on religion, that the modern Javans constantly refer for an explanation of their ancient mythology.

This composition is frequently called *Pepákam*. It contains the notions of mythology which appear to have been general throughout the Eastern Islands, with imperfect portions of their astronomical divisions, and of ancient history. It is to be regretted, however, that the Javan copy from which the following account is taken, though otherwise written in a very correct style, abounds in passages unfit for a chaste ear, and that it has been almost impossible entirely to purify it.

It opens with an account, first of *Sáng yáng Wénang* (the most powerful), who was sixth in descent from *Purwáning Jan* (the first of men, or Adam), and who had a son named *Sáng yáng Túng'gal* (the great and only one), the first, who (as is inferred from the meaning of his name) conceived that he was above all, and who setting aside the ways of his father, established the heavens, with all that they contain, under the name of *Suréndra Buána*, or *Suraláya*.

Plucking a leaf from the *kastúba* tree, and paying adoration to it, the leaf assumed the form of a beautiful woman, by whom he had four sons:—1, *Sáng yáng Púgu*; 2, *Sáng yáng Púng'gung*; 3, *Sáng yáng Sámbar*; 4, *Sáng yáng Pang'at*. When these children attained maturity, *Púgu* quarrelled with *Púng'gung*, on account of the splendour and riches of the dwelling of *Sáng yáng Túng'gal*, which each of them desired to possess. *Sáng yáng Túng'gal* became enraged at this: not being able to reconcile them, the heavens became disturbed; he, in consequence, seized hold of both of them, *Púgu* by the right and *Púng'gung* by the left hand, and cast them aside. To the former, who fell on *Sábrang* (the opposite coast), he gave the name of *Sécha Túng'gára*; to the latter, who fell on Java, he gave that of *Náyan-taka* (the same with *Sémar*, the attendant on *Arjuna*). He converted them into monstrous figures, ridiculous in appearance and speech, exciting laughter by their actions, and with an inclination to follow in attendance on warriors.

Sáng yáng Tung'gal, who is said to have been invisible, and who in the *Wáyangs* of the present day is designated by a sun or glory of light, transferred the government of heaven to his son, *Sáng yáng Sámbar*, directing him not to separate from his remaining brother, whose assistance he would require, and conferring upon him the title of *Níla Kánta* (blue necked), on account of his being of bright appearance, but having a tinge of blue on the front of his throat. To *Pang'at*, his brother, he gave the name of *Kanika pútra*.

Srí Níla Kánta subsequently assumed various names and titles; the most pre-eminent of which was *Pramésti Gúru*, by which name and title he is acknowledged as supreme throughout the Eastern Islands. This title was first conferred upon him when the deities in *Saraláya* were numerous, and when all looked up to him as an instructor or *Gúru*. *Kanika Pútra* took the name of *Rési Naráda*.

The thoughts of *Sáng yáng Gúru* turning one day upon women, he took a leaf of the *kastúba* tree, and paying adoration to it, it was immediately converted into a most beautiful female, who took the name of *Uma*. While she was young he looked upon her as a daughter, but when she arrived at maturity, he felt a stronger passion. *Uma* disliking this fled, and *Sáng yáng Gúru* being unable to catch her, it occurred to him that he might be more successful if he employed four hands and arms; whereupon, at his desire, two additional arms sprang from his

shoulders, and *Uma* was immediately within his embrace. But she still resisted his desires, and during the struggle *Káma Sála* and *Máha Praláya*, both *Rasáksas*, but the latter in the form of a man, were produced, by an event similar to that which gave birth to some of the children of Jupiter^[134]. *Sáng yáng Gúru* still observing the repulsive conduct of *Uma*, said to her, "your appearance is like that of a *Rasáksa*," whereupon she immediately assumed the form of one; and grieving sorely at this transformation, beseeched that she might again become what she had been, but *Sáng yáng Gúru* was deaf to her entreaties, and he conferred upon her the name of *Káli Dúrqa*.

Káma Sála and *Máha Praláya*, when they arrived at maturity, mutually sought from each other to discover their descent, but not succeeding, they agreed to proceed in company to *Suraláya*, to demand information from *Sáng yáng Gúru*, resolving that, if they were not satisfied with his reply, they would make war against him. Arrived at *Suraláya*, they overcome the opposition of *Rési Naráda*, and reach the presence of *Sáng yáng Gúru*, who informs them that they are not his children, though they sprang from his body, and that it was the fault of the woman only that they had their present form. He tells them that he cannot allow them to remain in *Suraláya*, but will provide for them a place in which with their mother they may reside. He then appoints the mother to be sovereign of *Naráka* (*Tambráka múka*), under the title of *Yáma Dipáti*. To *Káma Sála* he gives the title of *Batára Kála*; the other retained the name of *Máha Praláya*. To *Kála* he assigns the charge of the bridge between earth and heaven, called *Wot ágal ágil* (the tremulous or swinging bridge, over which a good man may pass in safety, but from which, on account of its being shaken by his sins, a bad man falls into the gulph below), and to *Máha Praláya* that of the souls of men when they die, in order that he may direct to the bridge such as, from good conduct on earth, have a chance of passing it, and cast the others into *Naráka*, to his mother *Yáma Dipáti*.

Sáng yáng Gúru was again inclined to take another leaf of the *kastúba* tree, but apprehending that it might turn out as before, he restrained his inclination. Then purifying himself, there appeared before him, at his desire, a beautiful boy, to whom he gave the name of *Sámbu*, and after five more purifications, there successively appeared, secondly, a boy of a high colour, beautiful and very powerful, to whom he gave the name of *Bráma*; thirdly, a boy, appearing extremely powerful and enraged, to whom he gave the name of *Máha déwa*; fourthly, a boy beautifully white, bright, and fierce looking, and having sharp and sparkling eyes, to whom he gave the name of *Basúki*; fifthly, a boy of a deep black colour, but extremely beautiful, to whom he gave the name of *Wísnu* (Vishnu); sixthly, a girl of a bright yellow colour, beautiful and slender, to whom he gave the name of *Warsíki*.

Rési Naráda^[135] following the example of his superior, there appeared before him after several purifications, five boys. The first was brilliant and bright as a pure flame; on him *Sáng yáng Gúru* conferred the name of *Súria*. The second was very weak and delicate, but well formed and beautiful; he received the name of *In dra*. The third was short and strong, and was named *Sákra* (or *Chákra*). The fourth was of a blue colour, and looking as if he would grow to a great height, with curled hair like a *Papúa*^[136]; on him, was conferred the name of *Báyu*. The fifth was most beautiful, but appeared sad and sorrowful; to him *Sáng yáng Gúru* gave the name of *Chándra*.

This effected, *Sáng yáng Gúru* considered that a sufficient number of deities had been created for the charge of *Suraláya*.

Sáng yáng Gúru then turned his amorous thoughts towards *Warsíki*, but all the deities opposing it, *Rési Naráda* advises him to take a woman from the earth, and offers himself to go in search of one. This being agreed to, *Naráda* descends upon the earth, and discovers a most beautiful virgin, not yet arrived at maturity, at a place called *Má dang*; *Sáng yáng Gúru* no sooner beheld her than he became enamoured of her, and giving the name of *Sri*, he places her under the charge of *Batára Sákra*, with especial injunctions to take care of her. When she arrived at maturity she became most beautiful, and it so happens that *Batára Wísnu* beholds her by accident: they immediately feel a mutual passion, and *Wísnu* obtains his desire. When *Sáng yáng Gúru* hears of it, he becomes highly enraged; *Batára Wísnu* is cast out from *Suraláya* and thrown upon the earth, at a place called *Waríngen pítu*, or seven banyan trees.

[Here the narrative breaks off, and the story of *Wátu Gúnung* commences as follows.]

There was a woman of the name of *Sínta*, who resided on the earth, and who had a younger sister named *Lándap*. *Sínta* dreamt one night that she was sleeping with a *Pandíta*, named *Rési Gána*: after a few months she felt herself pregnant, and at the expiration of nine she was delivered of a most beautiful boy. This child, however, soon became unruly; and it happened that one day, when he had enraged his mother excessively, she struck him on the head with the wooden spoon which was in the rice vessel, on which he fled into the woods, and afterwards becoming a devotee, his mother long searched for him in vain.

At length having concluded his penance, he wandered about in quest of subsistence, until he came to the country of *Giling Wési*, where he sought alms at a feast; but not being satisfied with the provision afforded to him, the parties became enraged, and hostilities ensuing, the Raja of the country was slain, and this boy succeeded him, under the title of *Rája Séla Perwáta*, which in the common language is the same as *Wátu Gúnung*, a name conferred upon him from his having rested on a mountain like a stone, and obtained his strength and power thereby, without other aid or assistance.

Becoming a great and powerful sovereign, he was still unmarried when his mother and sister arrived in the country. Ignorant who they were, and admiring their beauty, he espoused them both, and by his mother *Sínta* had twenty-seven children, when being one day restless and anxious to sleep, he requested her to comb and scratch his head, in doing which she discovered the wound and recognized her son. Her grief became excessive, and explaining the circumstance to him, she urged him to obtain another wife from among the *Widadári* of *Suraláya*, and recommended *Sri* as a proper object of his choice.

Wátu Gúnung thereupon sent an embassy to *Suraláya*, but the gods opposing his desires, because *Sri* had been delivered of a child by *Wísnu*, he assembled his forces and nearly defeated those of *Suraláya*, when *Naráda* pointing out the danger to *Sáng yáng Gúru*, urged the advantage that would arise from the recal of *Wísnu*. *Naráda* was accordingly authorized to call him back, with a promise that if he should be victorious on the present occasion, he should be pardoned, and permitted to return to his former abode in *Suraláya*. *Wísnu* was no sooner engaged in the cause, than he formed a stratagem with *Wilúwuh*, a demon *Rasáksha*, with whom he had become intimate at *Waríngen pítu*, and directed him to proceed to the sleeping place of *Wátu Gúnung*, in order to ascertain his secret. This spy had no sooner concealed himself in a place where he could overhear the conversation that was going on, than he heard the following discourse between *Wátu Gúnung* and *Sínta*.

Sínta. "What think you; shall we be successful or not in this enterprise?"

Wátu Gúnung. "If the gods are so nearly destroyed by those who are subordinate to me, what must they not suffer when I go myself? for I shall not then have occasion to use force. I need only say a few words, and if they don't understand the meaning of them, they will forthwith be destroyed, and I shall myself become sovereign of *Suraláya*. Should they, however, comprehend the meaning of what I say, then I shall know that my power is gone; but still there will be trouble in putting me to death."

Sínta. "Tell me what are the words you mean to use, and why they have not the power to put you to death?"

Wátu Gúnung. "I shall enclose in my hand the *Sástra* or description of my country, and holding it out, demand of them to tell me what it is. Then I shall repeat these words: *dáka wói díki*, and also *díki wói dáka*. The meaning of these words is easy enough, but the gods don't understand it: a great tree has small fruit; great fruit has a small tree. The great tree with small fruit means the *waríngin* tree; the great fruit and small tree means the gourd. I am invulnerable by all weapons, but if they pull my two arms asunder, then will they find it easy to put me to death; but this the gods know not."

With this intelligence the spy immediately hastened to *Wísnu*, who arrived at *Suraláya* when the gods were nearly beaten by the twenty-seven sons of *Wátu Gúnung*. After this success, *Wátu Gúnung* approaching *Sáng yáng Gúru*, put the intended questions to him. The latter referring to *Wísnu*, they were immediately recognized by him, on which *Wátu Gúnung* attempted to escape, but was soon overtaken by *Wísnu*, who laying hold of one of his arms, while his son, *Sri Gáti*, held the other, they soon succeeded in putting him to death. As he expired a voice was heard by *Wísnu*, saying, "think not that it will end here: hereafter trouble will again arise in *Suraláya*, in the time of *Rája Sumáli*, of the country of *Séla gríng'ging*, who will have a brother named *Mang'liáwan*. Forget it not."

When the twenty-seven sons of *Wátu Gúnung* heard of their father's fate, they wished to sacrifice themselves; but *Wísnu* disposed of them as follows, saying, "let there be a sign to the world of this victory. I will once in seven days put to death one of these twenty-seven, so that they may be killed in rotation." The grief of *Sínta* being excessive, she wept for seven days, and afterwards was received into *Suraláya*, and *Wísnu* added her name, as well as those of her sister and *Wátu Gúnung*, to the twenty-seven, and established the thirty *wúku*, as everlasting signs, in commemoration of this victory. From the grief of *Sínta* for seven days, it is said that rain always falls during the *wúku* which bears her name^[137].

Then seizing the *Pepáteh* and three assistants, who with *Wátu Gúnung* had constituted the council of five, he declared that they should serve to commemorate the four great revolutions or *Nága* (serpents:) *Nága Búmí* (of the earth,) *Nága Dína* (of the day,) *Nága Wúlan* (of the moon,) *Nága Táhun* (of the year.) He struck out both the eyes

of *Nága Búmi*, that the earth might never again see to attack the heavens, and afterwards the left eye of *Nága Dína*, and the right eye of *Nága Wúlan*.

[Here that part of the relation which has an astronomical reference breaks off.]

Bráma then following the example of *Naráda*, purifies himself, and at his desire, first there appears before him a boy of strong make, on whom he confers the name of *Bráma Táma*; secondly, a boy, also of strong make, whom he names *Bráma Sudárga*; and thirdly, a beautiful girl, on whom he confers the name of *Bramáni Wáti*.

The two boys, when they attained maturity, descended from *Suralága*. *Bráma Sudárga* united in marriage with a female of the earth: from them, in the third degree, were descended *Raja Sumáli* and *Mangliáwan*. In the reign of the latter of these a destructive war is stated to have taken place. *Mangliáwan* laid waste *Suraláya* and slew *Sri Gáti*, but afterwards, when he shewed a desire to possess *Sri*, *Wísnu* exerted all his strength, and put him to death. As *Mangliáwan* expired *Wísnu* heard a voice saying unto him, "The work is not yet complete; hereafter, when there shall be on earth a man named *Rahwána*, who will be descended from *Bráma Táma*, beware of him: in his time the peace of heaven will be again disturbed, and he will lay it waste." *Bráma Táma* espoused a princess of *Chámpa*, named *S'ráti Déwi*, by whom he had a son, named *Bráma Rája*, who became *Raja* of *Indrapúri*, and had a son named *Chíttra Bahár* or *Angsárwa*, to whom, when he became advanced in age, he delivered over charge of the country, proceeding himself into the forests as a devotee, and assuming the name of *Rési Táma*.

Sumáli had a daughter, named *Sukési Déwi*. This prince, alarmed at the accounts of *Mangliáwan*'s death, fled with her to *Chíttra Bahár*, and requested him to protect her as a maiden, giving him authority to sanction her marriage on any proper occasion which might offer. He himself fearing the vengeance of *Sáng yáng Gúru*, fled further into the woods for concealment, but died on the way. *Chíttra Bahár*, forgetting the nature of his charge, became enamoured of the girl. This happened when he was performing a penance; for he had two sons, named *Mísra Wárna* and *Bísa Wárna*, to the former of whom he had intrusted the charge of his government. The girl resisted on account of his age, but he at last succeeded. During the first amour he received from her nine strokes on the head with a stone. In due time she became pregnant and was delivered of a boy, having nine marks or excrescences on his head, which added to his natural face, making as it were ten fronts to his head: he was thence called *Dása múka* (ten-faced.) In the second attempt she pulled the lobes of both his ears with great strength, and when delivered she produced a child in the form of a *Rasáksha*, and having immense lobes to the ears: this child was named *Amba kárna*, or long-eared. In the third she scratched him all over, and the fruit of it was a girl, born with long nails and claws at the end of each finger: she was named *Sárpa kanáka*, or serpent-nailed; the wounds inflicted by these nails are said to have been mortal. But the fourth being unresisted, she was delivered of a most beautiful boy, who, having a countenance and mouth beautiful like those of a girl, was named *Bibisána*.

When these children were grown up *Chíttra Bahár* carried them to *Mísra Wárna*, saying, "these are your brothers and sister, assist them, and they will be of use to you in your government." *Mísra Wárna* had a great dread of thunder. He possessed a weapon called *límpung*, which descended to him from *Bráma Rája*, and *Dása Múka*, desirous of possessing it, ingratiated himself into his favour, but no sooner obtained possession of it than he formed a design against his brother's life, in the hope of succeeding him. He accordingly performed a penance and prayed for thunder, and as soon as it was heard he slew his brother, and gave out that he disappeared during the thunder. At the moment, however, that he struck *Mísra Wárna* with the weapon it vanished; still he became *Raja*.

In the mean time *Bísa Wárna* became beloved by the gods, and they presented to him a car, named *jaladára*, in which he could be conveyed through the clouds. When *Dása Múka* heard of this he became enraged, and demanded the carriage for himself; but he had no sooner made the request than he perceived his lost weapon descend upon the lap of *Bísa Wárna*. Still more enraged at this, the altercation did not cease until *Bísa Wárna*, with one blow, laid him senseless on the ground; at which moment the father, *Chíttra Bahár*, coming up, he succeeded in reconciling them, and with impressing upon *Dása Múka* the futility of his attempts against his brother. *Chíttra Bahár* on this occasion repeated several invocations to the deity, which were treasured up in the recollection of after ages: such as *Hong! Awígna; Hong! Widadánia; Hong! Widadáni, &c.*

The father, however, had no sooner withdrawn, than *Dása Múka* again took courage, and another combat ensued, which ended in his being a second time struck senseless on the ground, blood issuing from his mouth. *Bísa Wárna* then laying hold of his body was about to cut his throat with the *límpung*, when *Rési Naráda* appeared and arrested his hand, saying, "forbear, *Sáng yáng Gúru* does not permit that you slay your brother. By attending to this advice you will hereafter become a deity in heaven. Give your weapon to your brother, who is *Raja* of *Indrapúri*." *Bísa Wárna* assenting, *Rési Naráda* then brought *Dása Múka* to his senses, and delivering over to him the weapon and

car, conferred upon him the name of *Rah-wána*^[138], from his blood having flowed in such quantity as to reach the adjoining forest.

[In some copies of this work it is said that *Dása Múka* was called *Rahwána*, because in his youth he delighted in the destruction of children and to spill their blood. There is also some variation in this part of the story, and *Citrá Bahár* is termed *Chátor Bója* (four-shouldered), on account of the great strength he exhibited in the war with *Níli Kewácha*].

Rési Naráda then presented *Rahwána* to *Sáng yáng Gúru*, who taking a liking to him adopted him as his son, giving him a *saléndang*^[139] as a mark of his affection. *Rahwána*, however, was soon dazzled by the appearance of a bright flame, when forgetting the attachment of *Sáng yáng Gúru*, he pursued it, until he came into the presence of *Sri*, from whose beauty it proceeded. She, however, ran to her husband *Wísnu* for succour, and a severe combat ensued, during which the heavens were disturbed, and many of its most valuable contents were destroyed by *Rahwána*. *Rési Naráda* at length approaching, separated the combatants, saying, "this is not the proper place for your contention; better had you descend to the earth. As for you, *Wísnu*, as you are a god, and may be ashamed to shew yourself as such on earth, it is the will of *Sáng yáng Gúru* that you be permitted to appear there in the form of a man, and to do there as you like." On which *Rahwána* was cast out of *Suraláya*, and *Wísnu*, with his consort *Sri*, disappeared, without any one knowing whither they went.

Bísa Wárna was then, in fulfilment of the promise given by *Naráda*, called up to heaven, to supply the place among the *Déwas* vacated by *Wísnu*, and approaching the presence of *Sáng yáng Gúru* received from him the name of *Batára Asmára* or *Kamajáya* (the god of love), and presented him with a consort, named *Káma Ráti* or *Batári Ráti*.

[Here ends the *Kérta Yoga*, or first age of the world, and the *Tréta Yóga*, or second age, commences.]

Wísnu, after his descent upon the earth, first became incarnate in the person of an illustrious sovereign, named *Arjúna Wijáya*, of the country of *Mauspáti*, and reigned for a period of seventeen years, during which he was successful in two wars. One, in which the *Rája* of *Tánjung-púra*, having a beautiful daughter, named *Chíttra Wáti*, in whom *Sri* had become incarnate, offered her in marriage to the prince who should overcome in wrestling all the others assembled: *Arjúna Wijáya*, however, carried her off from the place in which she was secreted (*Gedóng Brahála*) which produced a war, wherein he was victorious. The other war was with *Rahwána*, who attacked him at *Mauspáti*: in this *Rahwána* was taken prisoner and confined in a cage; but on the solicitations of his father, *Chíttra Bahár*, he was forgiven, and allowed to return to his country, on condition that neither he nor his descendants would ever again make war on *Arjúna Wijáya*.

Wísnu afterwards quitting the body of *Arjúna Wijáya* became incarnate in the person of *Ráma*, son of *Dása Ráta* (who when young was called *Murdáka*), entering the body of his mother during conception, and coming into the world with the child. About the same time *Batára Basúki*, who had a son named *Baswárat*, united to *Bramáni Wáti*, becoming sorrowful, quitted *Suraláya*, with a determination to follow the fortunes of *Wísnu*, who after quitting the body of *Arjúna Wijáya* roamed for some time round the skirts of the earth until he fell in with *Basúki*. *Wísnu* then said to him, "there is a *Raja* of *Mándra-púra*, named *Bása Ráta*, who has two wives, named *Déwi Rágu* and *Mánwa-dári*. I am younger than you, but on earth I must be older. I will enter the body of *Rágu*, and become incarnate in the child she will bring forth; do you the same with the other." *Mánwa-dári* was delivered of a child named *Lakasamána*, in which *Basúki* accordingly became incarnate.

[The portion of the work, which also includes a relation of the feats of *Báli* son of *Gotáma*, the founder of *Astíno*, brings the story down to the period of the poem of *Ráma*. The history is then carried on to the period of the *Pendáwa Líma* or *Bráta Yudha*, and may be concisely stated as follows:]

Baswárat, son of *Basúki*, had by *Bramáni Wáti* two sons, *Mánu-Manára* and *Mánu-Madéwa*. The daughter of *Mánu-Madéwa*, named *Siráti*, was married to *Bramána Rája*, and from this marriage proceeded *Rahwána*. The *Pendáwa Líma* were tenth in descent from *Mánu-Manára*, as in the following pedigree:

1. *Mánu-Manása*,
2. *Tritrushta*,
3. *Parikéna*,
4. *Sutápa*,
5. *Sa-pútram*,
6. *Sákri*,
7. *Pulasára*,
8. *Abiása*,
9. *Pándu-déwa Náta*.

The *Tréta Yóga* or second age, is supposed to have ended, and the *Duapára Yóga*, or third age, to have commenced on the death of *Ráma*, which happened about the time of *Sákri*.

The *Wiwáha káwi* is a regular poem, and contains three hundred and fifty-five *páda*, or metrical stanzas. The subject is as follows:

Erang Báyu had a son, whose form was that of a *Rasáksha*, and who became sovereign of the country of *Ima-ímantáka*, under the name of *Détia Kéwácha*. The father, desirous of getting rid of him, urged him to go to *Suréndra Buána*, in search of a flower, called *Turáng'ga játi*, which was worn by all the *Widadáris*. The *Rasáksha* accordingly goes in search of it, and no sooner comes into the presence of *Batára Gúru*, than a *Widadári* sitting by his side, named *Su Prába*, the daughter of *Batára Sámba*, presents one of these flowers to him, with which he returns to his father, who alarmed at his success, immediately delivers over to him the government of his country.

After *Détia Kéwácha* had thus become sovereign, he desired to be united in marriage with the *Widadári* who had given him the flower, and dispatches a *Rasáksha* named *Kolángkía*, with a letter addressed to *Batára Gúru*, soliciting *Su Prába* in marriage, and threatening to destroy the heavens in case of refusal. When the messenger reached *Suréndra Buána* he presented the letter to *Batára Sákra*, who knowing its contents without reading it, immediately replied in a rage, "then let your sovereign carry his threat into execution, for *Bitára Gúru* will never consent that a *Widadári* be married to a *Rasáksha*."

When the messenger had disappeared, *Batára Sákra* communicated to the gods the state of affairs, on which *Batára Gúru* became enraged. As he curbed his passion, *Naráka* becomes disturbed; smoke issued from its deepest recesses and the heavens rocked to and fro. *Rési Naráda* then apprised *Batára Gúru* that there was a man on the earth, named *Bagáwan Wardiningsih*, or *Mitarága*, who had long performed his devotions on the mountain *Indra-kíla*, and suggested that it might be better to employ him against *Detia Kewácha* than for the gods, who were ignorant of the art of war, to await in heaven the coming of the *Rasáksha*. *Batára Gúru* approves of the suggestion, and *Rési Naráda* descends accordingly to *Indra-kíla*, accompanied by seven *Widadáris*, in the hope that by the influence of their charms, he might succeed in abstracting *Wardiningsih* from the severe penance which he was performing. The names of the *Widadáris* who accompanied him were *Su Prába*, *Wilotáma*, *Leng-leng-Mandana*, *Sumartáka*, *Ang'impuni*, *Su Prába-sini*, and *Dérsa-nála*. In their train followed a thousand of the young and beautiful maids of heaven.

Wardiningsih was performing a long and rigid penance, for the purpose of recovering the kingdom of *Astína*; and when *Naráda* arrived at *Indra-kíla*, the sun had climbed half way up the heavens. The *Widadáris* immediately displayed their charms, and employed every artifice to attract his attention, but they could not succeed. One of them, who resembled his wife, even threw off her upper garments, and exposing her bosom embraced him with transport; but it did not avail.

Batára Sákra then descended to *Indra-kíla*, in the disguise of a Dervise, assuming the name of *Panjíngum*, and approaching *Wardiningsih*, as if in grief, threw off his disguise, and resuming the god, addressed *Wardiningsih* as follows: "My visit to you is on three accounts; first, I request your assistance in this war; secondly, I wish to apprise you, that *Batára Gúru* will in a short time appear to you; thirdly, to advise you, that when you see *Batára Gúru*, and he asks you whether you have courage to engage in the war or not, you answer that you have; requesting, however, in return, that when the war *Bráta Yúdha* takes place, the *Pandáwa* may be successful. You may then request two arrows, called *paso páti* and *trisula*, and the crown *cháping basunánda*, the vest *ánta kasúma*, the slippers *márdu kachárma*: these slippers, when you wear them, will enable you to fly, and to enter heaven in person. Request, moreover, the chariot *mánik*, which is drawn by elephants and horses of the heavenly race (*sambráni*), and called *chípta waláha*, and that if you are successful in the war with *Détia Kewácha*, *Batára*

Gúru, as well as the other gods, may each present you with a *Widadári*." *Batára Sákra* having made an impression on the mind of *Wardiningsih* returned to heaven.

In the mean time *Mang-máng Múrka*, the *Peptáeh* of *Détia Kewácha*, who had a face like a hog, received orders to lay waste the mountain of *Indra-Kíla*. He no sooner arrived there, and began to destroy the cultivation, than *Sémar* gave information of it to *Wardiningsih*, who coming forth with his bow and arrow, immediately struck the *Rasáksha*; upon which *Batára Gúru* appeared in the form of a forester, holding in his hand a bow without an arrow. Then straggling with *Wardiningsih* to withdraw the arrow with which the *Rasáksha* had been struck, each pulled at it ineffectually until a quarrel ensued, in which *Batára Gúru* accused *Wardiningsih* of having a bad heart, and of following the dictates of his *Gúru Dúrna*, who was at *Astina*, and who had a crooked nose and mouth. *Wardiningsih* being enraged at this, a severe combat ensued, when *Batára Gúru* having laid hold of his adversary's hair, the other attempted to retaliate, on which *Batára Gúru* vanished. A fragrant odour immediately arose, and *Wardiningsih* reflected upon what *Sákra* had told him, and instantly perceived a bright arch, like the rainbow, with *Batára Gúru* appearing within it, attended by *Rési Naráda* and a suite of *Widadáris*: bowing profoundly to the ground, he felt himself permitted to approach the deity and kiss his feet; *Batára Gúru* then informed him of his object in coming to *Indra-kíla*, and requested that he would make war upon *Détia Kewácha*, who was the enemy of the gods; to which *Wardiningsih* consented, making the requests which had been suggested by *Batára Sákra*. To these *Batára Gúru* assented, adding, "If you have success in this war, I will appoint you sovereign of the heavens for one year. You shall have power over all the gods, and the *Widadáris* shall be your attendants; and as long as you live you shall have power to visit *Suraláya* at your pleasure." This said, *Batára Gúru* disappeared.

On the next day *Wardiningsih* prepared for his journey to *Ima imantáka*, the country of *Détia Kewácha*, and on his way thither fell in with the *Widadáris*, *Su Prába* and *Wilá Táma*, who had been sent by *Batára Sákra*. *Wardiningsih*, on his arrival at the *Rasáksha*'s capital, commissioned these *Widadáris* to enter the palace and feign an attachment for *Détia Kewácha*. *Détia Kewácha* no sooner beheld them, than being thrown off his guard, he declared, that the object of the war being thus attained without trouble, he would enjoy himself at his ease. Then dressing himself in his princely robes, and perfuming himself as a bridegroom, he approached *Su Prába*, and taking her on his knee chaunted a song, which so delighted her that she fell asleep. *Wardiningsih*, on this, entered into her ear-stud, and awoke her. *Détia Kewácha* then urged her to gratify his passion, but she refused, and required, as a mark of confidence, that he would trust her with the secret of his power. This he refused, until she was about to stab herself, when he whispered in her ear that he was invulnerable except within his throat; if any one injured that part in the least he must instantly die. *Wardiningsih* thus ascertaining his vulnerable point, escaped with the *Widadáris*, and ascended to *Batára Sákra* in *Suraláya*.

Détia Kewácha, then collecting his forces, proceeded to the war with a countless host, laying waste the country, until he arrived near *Tánda Wáru*, where he halted to make preparations for the attack. The heavens now shook, and *Naráka* emitted smoke. The gods trembled with fear, and the wind, charged with the gross stench of the *Rasáksha*, almost overpowered them.

Wardiningsih having arrived at the abode of *Sákra*, the great bell (*gatíta*) was struck, when the gods immediately assembled. The forces of *Suraláya* then moved on, *Wardiningsih* following in a splendid chariot. Having thrown off the *Pandíta*'s garment, he now appeared richly clothed in the character of *Arjúna*, adorned with gold and costly gems. The chariot had formerly belonged to *Ráma*, and had been preserved by *Batára Gúru*, when *Ráma* committed himself to the flames.

The battle commenced, and the forces of the *Rasáksha* being most numerous and powerful, were about to carry all before them, when *Gatot Kácha* arrived, and taking part with *Wardiningsih*, turned the tide of the battle in favour of the gods, plucking up the mountains by the roots, and casting them upon the *Rasákshas*. *Détia Kewácha* escaping the general overthrow, and attended by *Sécha Tung'gára*, shot an arrow at *Wardiningsih*, which the latter caught under his arm, and feigning death, fell to the ground. Great was the grief of *Sémar* and of all his other attendants; but *Détia Kewácha* approaching burst out into a loud laugh, when *Wardiningsih*, who had watched his opportunity, observing the *Rasáksha*'s mouth open, instantly rose, and struck the arrow into it, and so killed him.

Gátot Kácha, who, in consequence of the absence of *Arjúna* on a penance for three years, had been sent to recall him, and who had discovered him by the appearance of his attendant *Sémar*, now approached *Wardiningsih*, and kissing his feet, informed him of the sorrow of *Séna* and *Dérma Wángsa* at his absence, on which *Wardiningsih* desired him to return and report what he had seen.

He then proceeded, attended by the victorious host, to the dwelling of *Batára Gúru*, called *Papáriwárna*; on which *Batára Gúru* assembling the gods, and permitting *Wardiningsih* to approach and kiss his feet, declares to him that

he was not forgetful of his promise, and would forthwith fulfil it. He then declared him sovereign of *Suraláya*, under the title *Prábu Aníli Kíti*, and gave him free access to every part of the heavens. *Arjúná* then visited the seven quarters of *Suraláya*, in which was the abode of the *Widadáris*, and assumed the sovereignty accordingly; while *Gátot Kácha*, proceeding to *Amérta*, informed *Séna* and *Dérma Wángsa* of what had passed. There were also present at his relation *Nakóla Sa déwa*, *Batára Krésna*, *Sámbu*, and *Panchawála*, all equally anxious to know the fate of *Arjúna*. *Déwi Kúnti*, the mother of *Pandáwa*, having calculated on the death of *Arjúna*, and made preparation for burning herself in consequence, was overjoyed at this unexpected good news; and *Dérma Wángsa*, the sovereign *Amérta*, gave a grand entertainment, in which the *Bedáyas* danced to the sound of the music, while *Gátot Kácha* related the feats of *Arjúna*.

The *Ráma Káwi* is usually divided into four parts. The first, called *Ráma Gán-drung*, contains the history of *Ráma*, from his infancy until his marriage; the second, *Ráma Bádra*, from his marriage until his consort, *Síti Déwi*, is carried off by *Rahwána*; the third, *Ráma Táli*, from the first employment of *Hánuman* as a *dúta* or messenger, until he builds the bridge from the continent to the island *Ang'langka-di púra*; and the fourth, called *Ramayána* (by which is understood *Ráma* when arrived at his full power), from the beginning of the war of *Dána Lága* on *Lánka* till the end of it, when *Ráma* regains his consort *Síti Déwi*, and returns to *Nayúdía*, leaving *Rahwána's* brother, *Bibisána*, sovereign of *Lángka*. Of these the *Ramayána* is the most common on Java. The *Ráma Táli* has been recently obtained from *Báli*. This composition, as one poem, is by far the most extensive of any which the Javans possess.

The mythology contained in the *Ráma* differs, in some measure, from that of the *Kánda*. *Ráma* is here made to relate to *Bibisána*, in *Artáti* measure but *Káwi* language, that *Bráma*, in the first instance, sprang from *Wísnu*; that in the beginning of the world, *Wísnu* existed in that part of the heavens named *Antabóga*, the place of serpents; that *Bráma* first communicated the knowledge of the *Sástra*. Nine incarnations of *Wísnu* are then detailed: the first, when he appeared as *Iwak Mokúr-mo* (the tortoise); the second, as *Sing'ha* (the lion), when he was called *Barúna*; the third, as *Arjúna Wijáya*; the fourth in *Winákitáya* or *Ráma*. In the fifth he was to appear as *Krésna*; and after the sixth, seventh, and eighth, in the ninth when he would become incarnate in the person of a great sovereign, named *Prábu Purúsa*.

Anráka Súra (the courageous child of the sun) is written in *Káwi*, but translated into Javan, under the name of *Búma Kalantáka*, or *Emba táli*. The period to which it refers is that occupied posterior to that of the *Wiwáha*, and prior to that of the *Bráta Yúdhá*. It relates almost exclusively to the exploits of *Búma*, who was the son of *Déwi Pratiwi*, of the race of *Widadáris*.

Déwi Pratiwi being enamoured of *Wísnu*, her thoughts were continually turned towards him, notwithstanding he had been cast out of *Suraláya*. One night having dreamt that her passion for him was gratified, she conceived a child. She afterwards heard in her sleep a voice saying to her, "Descend to the earth in search of *Krésna*, for *Wísnu* is become incarnate in his person: his colour is deep black." She descended accordingly; and established herself at *Praju-téksna*, where she was delivered of a son, whom she named *Búma Kalantáka*. When he arrived at maturity, she informed him who was his father, and when he discovered him he was received and acknowledged by him. *Krésna* had afterwards another son, named *Sámba*, who having insulted the wife of *Búma* a quarrel arose between the two brothers, in which *Búma* put *Sámba* to death in a most disgraceful manner, mangling and exposing his body. *Krésna*, enraged at this, threw his *Chákra* at *Búma*, desiring *Gátot Kácha* to raise him from the earth the moment he is struck, lest the power of his mother should restore him. *Gátot Kácha* obeys his orders and *Búma* is destroyed. *Séna*, one of the sons of *Pándu*, is one of the personages of this poem.

The history of the succeeding period is contained in the *Bráta Yúdhá*, or holy war, the most popular and esteemed work in the language. This poem is identified in its subject with the *Mahabárat* of continental India, in the same manner as that of *Ráma* is with the *Ramayána*. An analysis of this poem will be given under the head poetry.

Next, in point of time, to this story, follows that of the poem called *Parakísit*, which abounds with the praises of that prince, who was the son of *Bimányu* and grandson of *Arjúna*, and is descriptive of the tranquillity and happiness which universally prevailed during his reign. It also contains an historical relation of the sovereigns who succeeded him, and brings down the line of princes from *Parikísit* through ten descents to *Aji Jáya Báya*, as follows.

— *Parikísit.*

1. *Súma Wichitra.*

2. *Ang'ling Dría.*

3. *Udiána.*

4. *Madiwáng'i.*

5. *Miséna.*

6.

7.

8.

9. *Súma Wichála.*

10. *Aji Jáya Báya.*

It was during the reign of the last of these princes that the first intercourse with Western India is supposed to have taken place; an account of the historical composition relating to a subsequent period is therefore reserved for the chapters on History.

The *Súria Kétu* (or lofty sun) contains in a few stanzas the history of a prince, the fifth in descent from the *Kuráwa*, who by dint of prayer to the gods obtained a son named *Kérta Súma*.

The *Níti Sástra Káwi* is a work on ethics, comprized in one hundred and twenty-three stanzas, each of which contains a moral lesson: it is considered coeval with, if not more ancient than the *Bráta Yudha*, and the *Káwi* is considered the most pure extant. The modern version of this work has already been referred to, and translations of some of the stanzas have been introduced. The following are taken indiscriminately, and translated immediately from the *Káwi*.

A man who is moderate and cool in his desires will do good to a country. A woman is like unto *Déwi Manuhára* when her desires are moderate, and men cannot look upon her without delight. A *Pandíta* must act up to his doctrines; although it may be in war and difficulty, still he must act up to what he professes.

This must be the conduct of the *Pandíta*. If attacked by a serpent, he must not be moved by it, nor even by a lion: still the same, he must be firm and unmoved, and neither the serpent nor the lion will have power to hurt him.

As the *surája* flower floats in the water, so does the heart exist in a pure body; but let it not be forgotten, that the root of the flower holds to the ground, and that the heart of man depends upon his conduct in life. The conduct of a *Pandíta* must be distinguished by mercy, charity, firmness, and prudence. His speech should be soft and gentle, and in accordance with and like unto written instruction, so as to moderate and calm the mind and desires of mankind.

It is mean and low for a rich man not to dress well: it is still more mean and low for a man of understanding to mix with bad company. So it is when a man attains a high age and knows not the *Sástra*; but when a man, through the whole course of his life, does not reflect upon his conduct, such a man is of no use in the world whatever.

A man should wear that sort of apparel which in the general opinion is considered proper, and should also eat that kind of food which is generally approved of. If he does this, he will appear like unto a virgin, who has just attained maturity. Let him not follow implicitly the advice and instruction he may receive, but let him weigh them, and select what is good by his own understanding.

In war, let there be no fear on any account, but let the whole thoughts be directed to the main object of urging the warriors to the attack of the foe. Moreover, let the thoughts be directed to what may be the enemy's plans: this done, let the heart feel fire.

When a man engages another in his service, there are four points on which he should satisfy himself respecting him. First, his appearance: secondly, his conduct; thirdly, his intelligence; and fourthly, his honesty.

The most valuable property is gold; and whoever has much of it, if he does not assist those who are poor and in want, is like unto a house without a fence, and he will soon be deprived of the property which he possesses.

As the moon and the stars shed their light by night, and the sun giveth light by day, so should the sayings of a wise man enlighten all around him.

Follow not the seeming wisdom of a woman's discourse; for as a man is more powerful and better informed than a woman, it is fitter that he should stand on his own ground.

A man who knows not the customs of the country (*yúdyá Nagára*), is like a man who would bind an elephant with cords made from the *tánjung* flower. It is not necessary for the elephant to be enraged: with the least motion he breaks the cords asunder.

Deprive not another of the credit which is due to him, nor lower him in the opinion of the world: for the sun, when he approaches near to the moon, in depriving her of her light adds nothing to his own lustre.

There is nothing better in the world than a man who keeps his word; and there is nothing worse than a man who swerves from his word, for he is a liar. There are five witnesses, which may be seen by every one: *Yang-anála* or *Bráma* (fire), *Súria* (the sun), *Chándra* (the moon), *Kála* (time), *Báyu* (life). And they are the great witnesses always present throughout the three worlds; therefore let men recollect never to lie.

There are three things which destroy a man's character, and they are as three poisons: the first, to disgrace his family or lower himself; the second, to take delight in bringing misfortunes and unhappiness upon others; the third, to be a hypocrite, and assume the character of a *Pandíta*.

Several works have been recently discovered in *Báli*, called *Agáma*, *Adigáma*, *Púrwa Digáma*, *Súrcha*, *Muscháyagáma*, *Kantára* or *Sástra Menáwa*, *Dewagáma*, *Maiswári*, *Tatwa*, *Wiya Wasáha*, *Dásta Kalabáya*, *Slákan Taragáma*, *Satmagáma*, *Gamíga Gamána*. Of many of these, copies have been procured, and the *Sástra Menáwa*, or institutions of *Menu*, have been partially translated into English. This is a book of law comprised in about one hundred and sixty sections, evidently written on the spot, and with reference to the peculiar habits and dispositions of the people for whom it was framed. As a code of civil law, it is remarkable for the proof it affords of the existence of actual property in the land; and as a criminal code, for the frequency of capital punishment, and the almost total absence of all degrading or minor corporeal punishment.

Of the more modern compositions, and which may be considered as more strictly Javan, the following are the principal:

Angréné is an historical work, which commences with the reign of *Sri Jáya Langkára* sovereign of *Médang Kamúlan*, the grandfather of the celebrated *Pánji*, and concludes with the death of *Pánji*. This is the longest work to be found in the modern literature of Java, and contains the most interesting and important part of Javan history immediately antecedent to the establishment of Mahomedanism. It is composed in several measures of the *Sékar Gángsal*, and is usually divided into several smaller works, to each of which the name of *Pánji* is prefixed, as:

Pánji Mordaningkung. The history of that part of the *Pánji*'s life, when his consort, *Sékar-táji*, is carried off by a deity. This is replete with relations of his adventures in war, and partly written in the *Sékar Sépoh* and partly in the *Sékar Gángsal*.

Pánji Magát-kung relates to that period when the object of *Pánji*'s love was not yet attained.

Pánji-áng'ron ákung, containing the particulars of marriage ceremonies observed by *Pánji*.

Pánji priambáda, containing an account of the success and completion of *Pánji*'s love, and ending with his marriage.

Pánji Jáya Kasúma. This is one of the names assumed by *Pánji* after the loss of his consort, *Sékar-táji* and contains an account of his expedition to *Báli*, where he regained her.

Pánji Chékel Wáning Páti (when young brave even to death) contains the juvenile exploits of this hero.

Pánji Norowangsa includes the period of his life, when the Princess of *Dahá* transforms herself into a man.

Neither the date of the principal work from which these minor compositions are taken, nor the name of the author is known; but it is supposed to have been written subsequently to the time of *Majapáhit*, the language being modern Javan.

Literary compositions of the higher cast are generally classed by the Javans under the head of *Pepákam* or *Bábat*, the latter of which includes all historical works and chronicles of modern date.

Srúti is a work which contains regulations for the conduct and behaviour of an inferior to a superior. It is written in the *Káwi* language, but *Artáti* measure, and has not yet been translated into Javan. It is of the same length as the *Níti Sástra Káwi*.

Níti Prája is composed in the same measure as the *Srúti*, and contains regulations for the conduct of sovereigns and chiefs, partly in the *Káwi* and partly in the Javan.

Asta Prája is a work of the same nature and similarly composed.

Siwáka contains regulations for behaviour when in the presence of a superior, in the Javan language and *Artáti* measure.

Nagára Kráma, regulations for the good administration of the country, in the same language and measure.

Yúdha Nagára, the customs of the country, containing rules for the behaviour of persons of different ranks, in Javan and in the *Artáti* and *Pamíjil* measures.

Kamandáka contains instructions for inspiring respect and fear in the exercise of authority, partly *Káwi*, partly Javan, and in *Artáti* measure.

The seven last mentioned works are supposed to have been written about the same period. The *Chándra Sangkála* of the *Srúti* is 1340 of the Javan era. From the allusion to *Islam* customs which they contain it is concluded that they were all composed on the decline of *Majapáhit*, at a period when the influence of that religion was rapidly gaining ground. These works are in pretty general circulation, and form the basis of the institutions and regulations of the country. The translation already given of a modern version of the *Níti Prája* will serve to shew their nature and tendency.

Jáya Langkára is a work supposed to have been written by a chief of that name, when sovereign of *Médang Kamúlan*, and which contains regulations for the highest judicial proceedings.

Júgul Múda, supposed to have been written by *Júgul Múda* the *Páteh* or minister of *Kandiáwan*, chief of *Médang Kamúlan*, containing rules for the guidance of *Pátehs* in the judicial department of their office.

Gája Múda, a similar work, supposed to have been written by *Gája Múda*, the *Páteh* of the great *Browijáya* of *Majapáhit*.

Kápa Kápa, regulations for the guidance of the sovereign in the administration of justice.

Súria Alem, a similar work for the guidance of all persons entrusted with authority, supposed to have been composed by *Aji Jímbon*, the first Mahomedan sovereign of Java.

None of the above works are written in verse. They form the basis of what may be called the common law of the country. The translation of the modern version of the last of these, contained in the Appendix, will serve to convey some idea of the nature and spirit of this class of compositions.

Besides the above may be noticed another work called *Jáya Langkára*, a romance, supposed to have been written in the time of *Susúnan Ampel*, in the Javan language and modern measures. This is a moral work of considerable length, written in allegory, and pointing out the duties of all classes.

The *Jówar Maníkam* is of a more recent date, and a general favourite: it may convey some notion of the modern romances of the Javans.

That is true love which makes the heart uneasy!

There was a woman who shone like a gem in the world, for she was distinguished by her conduct, and her name was *Jówar Maníkam*.

Perfect was her form, and she was descended from a devotee, from whom she derived her purity and the rules of her conduct.

Her beauty was like that of the children of heaven (*widadáris*), and men saw more to admire in her, than was to be found on the plains, on the mountains, or in the seas.

Pure was her conduct, like that of a saint, and she never forgot her devotions to the deity: all evil desires were strangers to her heart.

She rose superior above the multitude from following the dictates of religion, and in no one instance was her heart disturbed by a bad thought or desire, so that her life was without reproach.

What pity it is she hath not a lover, for when a young and handsome woman obtains a husband of high character and qualifications, it is as milk mixed with sugar!

When her virtue was assailed by the *Panghúlu*, she was astonished, and exclaimed, "why dost thou thus take the course of a thief? why dost thou act in this manner?"

"Art thou not prohibited from doing thus? forgettest thou thy *Rája*, and fearest thou not thy God?"

"And thinkest thou not either of thyself? Greatly dost thou astonish me! Is not thy conduct bad even before the world? but being forbidden by the Almighty, art thou not afraid of his anger?"

"If such be thy desire, I can never consent to its indulgence, for I fear my God, and for all such deeds the punishment from heaven is great.

"Rather let me follow the course pointed out by the prophet: let me imitate the conduct of his child Fatima.

"How comes it, that thy inclination is so evil towards me? Verily, if my father knew of this proceeding, wouldst thou not justly receive severe punishment?"

The *Panghúlu* thus frustrated in his design, writes in revenge to her father, and informs him that his daughter has made a fruitless endeavour to seduce him: upon hearing which the deceived parent orders her to be put to death. Her brother is about to put this order in execution, when placing his hand before his eyes while he inflicts the blow, he stabs a small deer in lieu of his sister, who escapes into the woods.

With rapidity she fled to the woods, and then taking shelter under a wide spreading *waríng'en* tree, the still unripe fruits of the forest attained maturity, and seemed to offer themselves as a relief to her.

All the flowers, though the season for opening their petals was not arrived, now expanded, and shedding their fragrance, it was borne by a gentle zephyr towards her, while the *bramára*, attracted by the odour, swarmed around, and the fragrance of each flower seemed to vie with the other in reaching her presence.

The wild animals of the forest, the tiger, the wild ox, the rhinoceros came towards the princess, as if to watch and guard her, crouching around her, but occasioning not the least alarm.

Being in want of water, the princess put up a prayer to heaven, when close by her feet a spring of pure water issued.

On which the *sarója* flower soon appeared, opening its petals, and offering the shade of a *páyung* to the smaller water-plants floating beneath.

Her heart now became easy; and delighted at what she beheld, she proceeded to bathe and perform her devotions.

The father, on his return, learns the treachery of the *Panghúlu*, and having recovered his daughter, she is subsequently married to a neighbouring prince, by whom she has three children. Her trials, however, are not yet at an end, for being on a journey to visit her father, accompanied by the *Pepáteh* of her husband, who is appointed to guard her on the way, the *Pepáteh* forms a design upon her virtue. He is represented as saying:—

"If you, oh princess, submit not to my desires, it is my determination to put your eldest child to death."

The princess on hearing this became so affected as to be deprived of speech.

When the *Pepáteh* again repeating his threat in a solemn manner,

She replied, "what would you have me say? Whatever may be the will of God I must submit. If my child is to die, how can I prevent it?"

The *Pepáteh*, on hearing this, forthwith drew his sword, and slew the child, again demanding of the princess whether she would submit to his desires? To which she answered, "No!"

He again urged her: but the princess hanging down her head was silent, and in the hope that God would give her resolution, her mind became more easy.

The *Pepáteh* then shaking his sword before the princess, again urged her to submit, threatening that if she refused he would slay her second child.

But the princess could only reply, "you must act as you say, if it is the will of God that you should do so."

He then slew the second child, and again urging her to submit, threatened, in case of refusal, that he would slay the third child, then at her breast.

Snatching the child from her arms, he put his threat into execution, and the blood flew on the mother's face, on which she swooned and fell to the ground.

The *Pepáteh* having succeeded in recovering her, again attempted to effect his purpose, threatening that if she still refused he would slay her: to this the princess at first made no reply.

But placing her sole reliance on the Almighty, a thought at last struck her, and she said:

"Do as you will with me; but seeing that I am disfigured with blood, allow me first to bathe in an adjacent stream."

The *Pepáteh* assenting to this, she went away and effected her escape into the woods. There she remained in safety, until discovered by her husband, who in revenge put the three children of the *Pepáteh* to death.

It has already been shewn, that notwithstanding the intercourse which has now subsisted for upwards of four centuries, and the full establishment of the Mahomedan as the national religion of the country for upwards of three centuries, the Arabic has made but little or no inroad into the language; and it may be added, that the Arabic compositions now among them are almost exclusively confined to matters of religion. Books in the Javan language are occasionally written in the Arabic character, and then termed *Pégu*, but this practice is by no means general. The *Kóran* was first translated, or rather paraphrased, about a century ago, and rendered into Javan verse by a learned man of *Pranarága*, to whom the title of *Kiai Pranarága* was in consequence given.

Arabic books, however, are daily increasing in number. The principal works in this language, with which the Javans are at present acquainted, are the *Umul brahin*, by *Sheik Usuf Sanusi*; *Mohárrar*, by *Iman Abu Hanífa*; *Ranlo Taleb*, by *Sheik Islam Zachariah*; and *Insan Kamil*, by *Sheik Abdul Karim Jili*. The doctrines of *Sheik Mulana Ishak*, the father of *Susúnan Gíri* and one of the earliest missionaries, were those of *Abu Hanífa*, which are

"Reng jánma di kámi ta chíta reséping sárwa prája ng'enaka
"Ring s'tri matdia manuára práa wawus andé mána kung
lúlut
"Yen ring Madiáni kang pinandîta mochap tetóah pa désa
prîen
"Yen ring matdía nikáng mosa mochap-akan wakchúra
sing'a k'roti.

A man who is moderate and cool in his desires will do good
to a country.

A woman is like unto *Déwi Manuhára* when her desires are
moderate, and men cannot look upon her without
admiration.

A *Pandíta* must at all times and on all occasions act up to his
doctrines:

Whether it be in war or in difficulty, still he must act up to
what he says.

Examples of several other measures of the *sekár káwi* and of the metre will
be given hereafter in the analysis of the *Bráta Yudha*.

Of the *sekáh sepoh* there are great varieties, several of which are exhibited
in the following examples.

MEGÁTRUH.

(Consisting of five unequal lines, terminating with the vowel sounds u, e, u,
i, and o.)

"Wong ahurîp | aywa tâ | ang'gung | katungkûl ||
"Ing kawibawân | kamuktên ||
"Aywa ta | ang'gung gumung'gūng ||
"Manawā | dinadung eblīs ||
"Kajarāh | temah wurung wōng ||

Men of this world! give not yourselves up
To the pleasures of power and sensual gratification:
Neither be vain nor open to flattery.
Lest caught in his toils,
You fall into the hands of the devil.

PÚCHUNG.

*(Consisting of four unequal lines, terminating with the vowel sounds u, a, i,
and a.)*

"Den prayitnā | wong agūng | aja pitambūh ||
"Barāng | rahing prajā ||
"Kawruhanā | den atitī ||
"Supayani | 'ing tindāk aywa | ng'alentār ||

Watch well, ye great, and be not unmindful
Of what takes place in the country;
But observe it narrowly,
That the administration of it may not be neglected.

BALÁBAK.

(Consisting of three long lines, each terminating in é.)

"Wong ahurīp | aja anggung mang'an minūm | jarenē ||
"Ananungkūl | íng dría kang tan sayogyā | gawénē ||
"Lamun orā | ing nalika mangsa Kalā | Kalanē ||

Men of this life! devote not yourselves to the pleasures of
eating and drinking;
For it is a passion of which the indulgence is vicious,
Except on grand and particular occasions.

KÚSWA WIRÁNGRONG WIRÁNGRONG.

(Consisting of six lines, terminating in the vowel sounds i, o, u, i, a, and a).

"Lir dawūh dawūh | ing margī ||
"Sang d'yāh parayāng | paroyōng ||
"Supe duk aniandāk | wastra ng'rangkūs ||
"Kawingkin kang wēntīs ||
"Lumarāp | kadi kilāt ||
"Murub padāng | Kang pasebān ||.

Stumbling as she went,
The Princess walked with faltering pace.
Laying hold of her under garment, she unconsciously drew it
up,
When from the exposed calf of her leg
A flash like lightning darted,
Which illumined the Hall of Audience.

SUMEKĀR.

(Consisting of eight lines, ending in the vowel sounds i, a, a, i and e).

"Gugunung'ān | lor-wetan tuhu 'angrawīt ||
"Pinārigī ing selā kakarang'ān ||
"Pandan-janmā | jinemb|ang'ān ||
"Sri jata winujīl | wujīl ||
"Pisang tatār | lir tunjūng | Sikarī |

Beautiful are the hills to the north-east,
Adorned and interspersed with walls of stone,
With the *pándan jánma* growing in pots,
And overgrown with the *s'ri játa*,
And the *písang tátar*, having a blossom like the *túnjung*.

PALUGÓN.

(Consisting of eight lines, terminating with the vowel sounds a, u, o, u, o, a, u, and o).

Yen tan hanā | adedangkān ||
Punggawa satryā agūng ||
Miang mantrī | rempeg āgolōng ||
Obah osīk | ing prajekū ||
Iku arjā | prajā katōng ||
Lawan pang'wā | saning natā ||
Tan hanā | panasten kalbū ||
Nora cheng'īl | datan leniōk ||

When none are selfish,
And the great officers of state, the nobles,
And the petty officers, are all united together,
Whatever may be the convulsions or the troubles of the
kingdom,
Still will the kingdom be great and prosperous.
When the power of the sovereign
Is envied by none,
All are then united and none are disloyal.

PAU-GÁNGSA.

(Consisting of six lines, terminating in the vowel sounds a, e, e, a, a, and i).

Pada salāmet sadayā ||
Sapung gawā | mantri lān satriyānē ||
Yata Rajā | adil malī | andikānē ||
Eh ajunan pirāng prakārā ||
Kabechikān | m'ring kawulā ||
Pateh yunān | awōt-sarī ||

All will be prosperous and peaceful,
The chiefs of provinces, the nobles, and the petty chiefs.
On which *Raja Adil* (the just king) thus spoke again:
"Oh *Yúnan*, how many rules are there
"For the prosperity of the subject?"
To which *Páteh Yúnan* returned for answer.

KÚSWARÍNI.

(Consisting of seven lines, terminating in the vowel sounds u, a, u, a, i, a, and e).

"Sampun katāh | aniyasāt wadya prabū ||
"Balik ng'egung'enā ||
"Turasing wōng | bangsa luhūr ||
"Yen turaīng | bangsa andāp ||
"Nang'ing prayugī | kīnantī ||
"Den pratelā | hing panejā ||
"Ang'inggahaken | wād'yanī ||

Treat not the subjects of your majesty with cruelty,
But respect
The descendants of honourable families;
To the descendants even of low families
Also shew kind treatment;

Yet be careful how you take a liking to any one,
And raise him in the world.

MÁHISA LÁNG'IT (THE BUFFALO OF THE SKY).

(Consisting of five lines, terminating in the vowel sounds e, u, i, u, and o).

"Yen sampūn | wontēn kagunānē ||
"Miang kraprawirānipūn ||
"Punjuling | sasami sāmī ||
"Pantes jenunjūng | kang lunggūh ||
"Nora lingsēm | ing piyāngkōh ||

If there is one who has merit
And abilities
Surpassing his equals,
It is proper to raise him,
And there is no shame in such an act.

KÉNYA KEDÍRI,

*(Consisting of nine lines, terminating in the vowel sounds, u, i, u, u, u, a, e,
u, and i.)*

"Inggih lamūn | dereng wontan labetipūn ||
"Guna Kaprawirānekī ||
"Upama yen jinunjūng'a | lungguhipūn ||
"Sayektī | kochaping jāgāt | datan arūs ||
"Makan darāh | yen dereng yog'ya jinūnjūng ||
"Lan sampūn | 'akaryā | lūrāh ||
"Wong durjanā | dursilekī ||
"Lan sampun atantūn ||
"M'ring pung'gawā | mantrī jahīl ||

But if one having neither merit,
Ability, nor capacity,
Should be promoted in his stead,
Then would the world say it was improper;
For one raised above his merits must *mákan dárah* (swallow
blood).
Make not a chief
Of one who is a knave or bears an ill character,
And ask not advice
From one who is ill-disposed.

Other measures, which may be classed under the *sekár sepoh* are *júrudemúng, lúntang, gámbuh, kulánté, lámbang, káswa rága, ránsang, pamur'ántang, ontang-'anting, 'mas-kumámqang, tárub-agúng, pa-mijil s'lang'it* or *kinánti, irun-írun lung-gadúng, lára-katrísna*.

The *sekár gungsal*, or five modern measures, are those in which the ordinary compositions of the present day are written. Of these there are again several varieties in different districts, as follow:—

ASMARANDÁNA,

which, according to the manner in which it is chaunted, is called *salóbog, jákalóla, súrup-sasi-bawaraga, séndon pradápa, paláran*.

(Consisting of seven lines terminating in the vowel sounds i, a, o e, a, a u, and a.)

"Sun 'amurwā | lang'it inggīl ||
"Dadalan ikū | pan dāwā ||
"Chok jurang'ā | pasti lēdōk ||
"Lumrahi g'ni āpānas ||
"Sanady'an lawē | petāk ||
"Yen winedēl | dadi wūlūng ||
"Yen mahidū | ayonānā ||

Lofty is the sky,
Roads too are always long;
Every valley is low,
And fire is naturally hot;
White thread will even be black
If jet you do but dye it,
And if you don't believe it, try.

ARTÁTI, DÁNDANG GÚLÁ, (sugar crow), or SADÁNA CHÍTA,

which, according as it is chaunted, is called *renchasih*, *majásih*,
lindur dálang-karahínan, *bárang míring*, *gúla kentar*, or
paláran.

(Consisting of ten unequal lines, terminating in the vowel sounds i, a, e or
o, u, i, a u, a, i and a.)

"Benjang ingsūn | mari brangta kingkīn ||
"Yen mamalā | malaning kanang rat ||
"Dūrjanā | dusta līnyokē ||
"Chelā | cholong chalimūd ||
"Wong ambīgāl | ng'etal katāhil ||
"Kichū kampāk karūmpak
"Babotoh | kābutuh ||
"Babangsāt | puda malesat ||
"Baya kōnō | mari analian—wiyādī ||
"Dadining susī | lārja ||

The painful feeling of my love will only cease
When the wicked of the world,
The knaves, the thieves, and the liars,
The scandalous and those who steal,
And the banditti, are all held in contempt;
When robbers and plunderers are all destroyed,

And cock-fighters are in despair;
When gamblers are cast out.
Then, perhaps, the sadness of my heart may cease;
Then may I be restored to peace and happiness.

SINOM, SRI NÁTA, OR PERDÁPA,

which, according to the chaunt employed, is called *béngak*,
garúndel, *gádung-maláti*, *jáyeng-asmára*, *babarláyar*,
merák ngúwuh, *hagók-surabáya* and *paláran*.

(Consisting of nine lines, terminating in the vowel sounds, a, i, a, i, i, u, a, i
and a.)

"Wusinā | ing'amban saksāna ||
"Layōné | dewi angrēni ||
"Binaktā | minggah kēng pālwa ||
"Indrajalā | dan tītihī ||
"Dening Rahadēn Pūnjī ||
"Dewi oneng'ūn tān kantūn
"Tumut dateng kāng | raka ||
"Akatāh | pawong'ān chéti ||
"Kang binakta | sagung'ingkang rajābranā ||

Having taken in his arms
The body of the departed
Princess *Ang'réni*,
It was borne
On board the vessel *Indrajála*
By *Ráden Pánji*.
The Princess *Oréng'an* was not left behind,
But accompanied her elder brother,
With many companions and female attendants,
The whole treasures being carried along with them.

PÁNGKUR,

which, according as it may be chaunted, is termed *paláran* and *kadáton*.

(Consisting of seven lines, terminating in the vowel sounds, a, i, u, a, u, a, and i.)

"Nīhan kramanīng | tumītah ||
"Dan tatīla | tumulad 'ing réh titi ||
"Wechanā | den pindā | pūnggūng ||
"Dan amēm | nayéng gitā ||
"Pagutēnā | yen wus samekta éng wūwūs ||
"Den panggah | ay'wa miyāgāh ||
"Pilih tā | kawadēng wadī ||

The manners of men should be correct;
And in adopting an accurate conduct,
Let your speech be modest and unassuming.
When thinking, let your countenance appear unruffled;
And when your words are prepared, deliver them.
Be firm, but on no account bigotted,
Lest you be held in contempt.

DURMA,

which, according as it is chaunted, is called *seráng*, *rángsang*, *bedáya*, *madúra*, and *Paláran*.

(Consisting of seven lines, terminating in the vowel sounds, a, i, a, a, i, a, and i.)

"Masjidé kā | kabatulah ika prayōgā ||
"Payū | tinirū sami ||
"Gawi kabatūlah ||
"Sigra mantuk prasamia ||

"Wōng Abesah | sireng prapti ||
"Ing nagarania ||
"Anulia | yasa sami ||

The temple of *Kabatúlah* is most excellent,
Come, let us all imitate it,
And build another *Kabatúlah*.
They then returned to their home,
And when the people of *Abésah* arrived
At their country,
They immediately commenced the work.

The *sekárs*, *kinánti*, and *míjil* are sometimes classed under the common or modern measures. The following are examples of those measures.

KINÁNTI,

(Consisting of six lines, terminating in the vowel sound, u, i, a, i, a, and i.)

"Ake wong | sanak sadūlūr ||
"Tan kadiā | Sugriwā bali ||
"Sapolāh | tingkaniā pada ||
"Moang suarā | rupa anūng'gīl ||
"Kadia n'gilu | lan wayang'gā ||
"Kewran sāng | rama ēng ati ||

Most people have brothers and relatives,
But not such as *Sugriwa* and *Báli*.
Their actions and conduct were both alike,
And their voice and form was one and the same.
They were like each other even as a substance and its
shadow,

And the mind of *Ráma* himself was confused in
distinguishing between them.

MIJIL,

(Consisting of six lines, terminating in the vowel sounds, i, o, e, i, i, and u.)

"Rima panjāng | memak tur awīlīs ||
"Urāb urāb āwōr ||
"Lir manj'āngān | katarwan solāhē ||
"Brang'os lemēt | yayah lir mināngsī ||
"Dia wirun tinūlīs ||
"Warnani abāgūs ||

His long and waving hair was of a greenish hue
Intermixed with flowers,
His action like that of a wounded deer,
And his mustachios fine and dark, as if pencilled.
He resembled the picture of *Wírun* (the brother of *Panji*).
Most beautiful was his complexion.

The following are examples of some of the measures adopted by the inhabitants of *Báli*. The three first are in the language of the country people; the others are extracted from one of their modern compositions.

"Kadi jaran
"Pang'aruk duag mapola
"Pang'ang'gong niane lueh
"Mapelag-pelagan
"Mandadi
"Paleng'gian
"Atut sayang
"Kategah-keng
"Tundung ne balan
"Lamput tina chamáti

Like unto a horse
Graceful in action,
Richly caparisoned
With various ornaments
Becoming
The royal saddle-horse;
Truly pleasant and agreeable
To ride,
His back shewing the mark
Of the stroke of the whip.

"Chahi santri
"Bajang bajang gobah m'lah
"Dapati manu hukung
"Deman hatini memadat
"Chahi
"Bajang taruna
"Nu liyu
"Demanin chahi
"Ing'atan awah
"Bikasé dali santri

Young man! you are a *sántri*^[142],
Young and handsome:
Curb your inclinations
And don't smoke opium.
Young man!
Yet unconnected with woman,
There is much
To which you must incline.

Think of yourself,
And that you have become a *sántri*.

CHECHANG KRIMAN.

(Sung by a Mother to her Child on her Arm.)

"Niahi ayu kapakan maniankil wakul
Kalang mabalanjar lakuné manolé-nolé
Sada gisu
Dayanin tuah kablag'gandang"

My handsome girl! in bringing a purchase from the market,
When you have paid the price, cast not your eyes behind,
But move quickly,
Lest men may seize upon you.

The following are examples from the written compositions of *Báli*.

"Sang'nata ika wus mati
Penadang deneng joarsa
Yata nulia kesa mangko
Medal saking pupungkuran
Prapta
Heng jawi kita
Awatara
Teng'ha dalu
Tanana wong kang ng'uning'a"[\[143\]](#)

Then that sovereign died,
Being destroyed by *Joarsa*,
Who thereupon went out,

Retreating by the back part of the dwelling;
And having arrived at the outside of the fort
At the time
It was midnight,
No one knew of it.

"Wus lepas lampa ireki
"Handung kaping parang parang
"Sumung kaking ukir halon
"Tumaruning lebah lebah
"Mantuk
"Maring Nagara
"Heng Sahalsa
"Sina dia
"Hiku kalang'an chobayang suks'ma"

When he had passed the road
He ascended the mountains,
And moved on slowly,
Ascending and descending,
Proceeding in search of his country,
Named *Sahálsa*,
Which he descried;—
But here he was opposed by the will of Providence.

In order the better to illustrate the poetry and literature of Java, and to exhibit the nature and spirit of the compositions in the *Káwi*, I request to present the reader with an analysis of the *Bráta Yudha*, the most popular and celebrated poem in the language. Versions of this poem in the modern Javan are common throughout the island, and the subject is the theme of the most popular and interesting amusements of the country.

The *Brata Yúdhá Kawi*, of which the following is the analysis, and from which the illustrations which are interspersed are taken, contains seven hundred and nineteen *páda* or metrical stanzas, of four long lines each, the measures varying with the subject, so that most of the twelve *Káwi* measures are to be found in it. Considering how little was known on Java of the *Káwi* language, and how likely that little was to be lost for ever, I felt a strong interest in analysing and translating, as far as practicable, one of the principal compositions in that language; and availing myself of the literary acquirements of the *Panambahan* of *Sumenap*, to whom I have already adverted, and of the assistance of a gentleman of my family, and *Raden Saleh*, the son of the regent of *Semaráng*, I have it now in my power to lay the following analysis of this ancient poem before the public. It is far from being as complete, or correct, as I could have wished, yet imperfect as it is, it may serve to convey some idea of the original. I have endeavoured to keep as close to the original as possible, and have, in every instance, given the interpretation of the *Káwi*, as far as it was understood by the *Panambahan*. The Sanscrit scholar will probably find imperfections, and possibly might be able to render a better translation; but it is the *Káwi* language, as it is understood by the Javans of the present day, that I am anxious to illustrate. The original stanzas are given in the *Káwi*, and I only regret that the limited knowledge of the language possessed by the *Panambahan* himself, and my own want of time to study and trace the grammatical construction of it, have not admitted of my doing more justice to the original. I can safely affirm, that independent of the interest which the subject loses by translation into a foreign language, the illustrations now given afford but a very imperfect specimen of the beauty, sublimity, and real poetry of the original.

This celebrated work would appear from the *Chándra Sangkála* included in one of the verses, to have been composed by one *Puséda*, a learned *Pandíta*, in the year 1079. Some copies, however, admit of a different interpretation regarding the date, and the general opinion is, that it was composed in 706 of the Javan era, during the reign of a prince on whom was conferred the title of *Jáya Báya*. Whether the poem was actually written on Java, or brought by the early colonists, may be questionable; but the Javans of the present day firmly believe, not only that the poem was written on Java, but that the scene of the exploits which it records was also

laid on Java and *Madúra*. The annexed sketch, with the subjoined note, will explain the situation of the different countries, according to this notion^[144].

NAMES OF THE PANDÁWA PRINCES, PRINCESSES, &c.

Names.	Genealogical and Descriptive Account.	Different other Appellations under which known.
<i>Krésna</i>	An incarnate deity, who is favourable to the <i>Pandáwa</i> , the particular friend and guardian of <i>Arjúna</i> . His father was brother to <i>Déwi Kúnta</i>	<i>Narayána</i> . <i>Janardána</i> (performers of austerities). <i>Patmanába</i> . <i>Esa</i> . <i>Wijáya mólia</i> . <i>Kesáwa</i> .
<i>Pándu</i>	The son of <i>Abiása</i> , husband of <i>Déwi Kúnti</i> and <i>Déwi Madrim</i> and father of the <i>Pandáwa</i>	<i>Pandu Déwa Nata</i> .
<i>Déwi Kúnti</i>	Daughter of <i>Basuketé</i> , King of <i>Madúra</i> , and wife of <i>Pándu</i> .	
<i>Déwi Madrim</i>	Daughter of <i>Chándra Wàti</i> , King of <i>Mandaráka</i> , and wife of <i>Pándu</i>	<i>Déwi Metrim</i> .
The Padawa, or five Sons of Pándu.		<i>Dérma</i> <i>Kasúma</i> . <i>Chantáka púra</i> . <i>Gunan tali kráma</i> . <i>Yudistíra</i> .
<i>Dérma Wángsa</i>	The chief and eldest of the <i>Pandáwa</i> by <i>Déwi Kúnti</i>	
<i>Bíma</i>	Son of <i>Pándu</i> by <i>Déwi Kúnti</i>	<i>Waikudára</i> .

		<i>Judipáti</i> (death seeking).
		<i>Bayu-pútra</i> (son of strength).
		<i>Séna</i> (chief in war).
		<i>Palgúna</i> (of powerful [145] thumb).
		<i>Jaya Ningrat</i> (victor of the world.)
		<i>Wintarája</i> .
<i>Arjúna</i>	Son of <i>Pándu</i> by <i>Déwi Kúnti</i>	<i>Parta</i> (the middle one).
		<i>Wardiníngsih</i> (devotee, enthusiast).
		<i>Janárka</i> .
		<i>Damarjáya</i> (victory-giving).
		<i>Kerséti</i> .
<i>Nakula</i>	Son of <i>Pándu</i> by <i>Déwi Madrim</i> .	
<i>Sedéwa</i>	Son of <i>Pándu</i> by <i>Déwi Madrim</i> .	
<i>Naráda</i>		
<i>Kánwa</i>	In attendance on	
<i>Jenáka</i>	<i>Krésna</i> .	
<i>Parásu</i>		
<i>Pancha</i>	Son of <i>Dérma</i>	
<i>Kumara</i>	<i>Wángsa</i> .	
<i>Gatot Kacha</i>	Son of <i>Bíma</i> .	
<i>Abimányu</i>	Sons of <i>Arjúna</i> .	

<i>Oráwan</i>	
<i>Drupáda</i>	Brother of <i>Déwi Kúnti</i> .
<i>Satiáki</i>	Servant of <i>Krésna</i> .
<i>Mangsa Páteh</i>	King of <i>Wiráta</i> .
<i>Kakarsána</i>	King of <i>Madúra</i> , and eldest brother of <i>Krésna</i> .
<i>Sumbádra</i>	Sister of <i>Krésna</i> , wife of <i>Arjúna</i> , and mother of <i>Abimányu</i> .
<i>Destadriumna</i>	Son of <i>Drupada</i> .

The regal titles of
Aria, *Narária*,
Naranáta,
Naríndra, &c. are
occasionally applied
to the different
chiefs on both sides.

NAMES OF PRINCIPAL KURÁWA PRINCES, PRINCESSES, &c.

Names.	Genealogical and Descriptive Account.	Different other Appellations under which known.
<i>Drupadi</i>	Daughter of <i>Drupada</i> and wife of <i>Dérma-Wángsa</i> .	
<i>Sirikándi</i> , or <i>Sikándi</i>	Do. ... do. and wife of <i>Arjúna</i> .	
<i>Sitisundári</i>	Do. ... do. of <i>Krésna</i> and wife of <i>Abimányu</i> .	
<i>Utári</i>	Do. ... of <i>Mángsa Páteh</i> or <i>Wiráta</i> , and wife of <i>Abimányu</i> .	
<i>Utára</i>	Son of ... do.	
<i>Séta</i> , or <i>Soita</i>	Do. ... do.	<i>Sang Wirata Suta</i> .

<i>Sangka</i>	Do. ... do.	
<i>Dresteráta</i>	Eldest brother of <i>Pándu</i> and father of the <i>Kuráwa</i> , born blind.	<i>Dresterája.</i> <i>Dreterája.</i> <i>Genderea.</i> <i>Kurupati.</i>
<i>Suyudána</i>	King of <i>Astína</i> , and eldest son of <i>Dresteráta</i> .	<i>Kuranata.</i> <i>Durya dana.</i> <i>Kurawendra.</i> <i>Korawe Swara.</i>
<i>Durusána</i>	One of the <i>Kúru</i> .	
<i>Kérna</i>	Son of <i>Batára Suria</i> (the Sun) by <i>Déwi Kúnti</i> when a virgin, King of <i>Awáng'ga</i> .	<i>Suria-putra,</i> (Child of <i>Arka-putra,</i> the Sun). <i>Radea</i> <i>Rawi Suta.</i>
<i>Jáya-dráta</i>	Brother-in-law of the <i>Kuráwa</i> .	
<i>Sália</i>	King of <i>Mandaráka</i> , and uncle to the sons of the <i>Pandáwa</i> , <i>Nakúla</i> and <i>Sedéwa</i> .	<i>Norasuma</i> (his early name).
<i>Dang yang drúnu</i>	An aged <i>Pandíta</i> , revered by all parties.	
<i>Aswatáma</i>	His Son.	<i>Duija Suta.</i>
<i>Krépa</i>	The younger brother of <i>Dang yang Deruna</i> .	
<i>Bísma</i>	An aged <i>Pandíta</i> , revered by all parties, son of a former king of <i>Astina</i> .	<i>Dewa-brata.</i> <i>Aria Bisma.</i>
<i>Sakúni</i>	Brother-in-law of <i>Dresteráta</i> .	
<i>Begedénta</i>	The friend and companion of <i>Suyudána</i> .	
<i>Satia-wáti</i>	Wife of <i>Sália</i> and daughter of <i>Gunawijaya</i> , a worthy <i>Rasaksa</i>	
<i>Bannwáti</i>	Wife of <i>Suyudana</i> .	

**NUMERICAL TERMS MADE USE OF
IN THE BRÁTA YÚDHA.**

	100 <i>Rátus</i> .
	1,000 <i>Rébu</i> .

[123] See comparative vocabulary of the *Malayu*, *Javan*, *Madurese*, *Báli*, and *Lampung* languages. Appendix E.

[124] The term *Káwi* seems to have been borrowed from the Sanscrit *Káwi*, meaning, in that language, poetry or poetical.

[125] See Appendix E. No. 2.

[126] Appendix E, No. IV.

[127] Appendix E. No. II.

[128] See Appendix E. No. III.

[129] Marsden's *Malayan Grammar*.

[130] See Historical Chapter, for an account of the introduction of the alphabet by *Aji Saka*.

[131] See Appendix E. No. III.

[132] "The style of the address in Mexican is varied according to the rank of the persons with whom, or about whom, conversation is held, by adding to the nouns, verbs, prepositions, and adverbs, certain particles expressive of respect. This variety, which gives so much refinement to the language, does not however make it difficult to be spoken, because it is subjected to rules, which are fixed and easy; nor do we know any language that is more regular and methodical."—*History of Mexico*, by *Clavigero*, vol. 1.

[133] See Appendix F.

[134] The centaurs.

[135] See Appendix.

[136] Who is represented as the *Páteh*, or minister, of *Sáng yáng Gúru*.

[137] See Astronomy.

[138] From *rah*, blood, and *wána*, wood, forest.

[139] A narrow white cloth, usually thrown over the shoulders, still worn by the Bramanas of *Báli*, and called *sámpa álang álang*.

[140] *Sekár* literally means flowers, and is the usual term for poetry, flowers (of the language.)

[141] "The *tegála* verse is only regulated by the rhythm of the syllables, and the similarity of the vowels in the close. This similarity of the terminating vowels does not amount to regular rhyme, for the consonants may be totally different though the vowels are similar, as in the Spanish rhymes termed *Asonantes*. Thus *laglag* and *taltal*, *sut* and *cahug*, *silip* and *bukkir*, however imperfect as rhymes, are all that is required in the termination of the *tegála* verse."—*Leyden on the Indo-Chinese Asiatic Researches*.

[142] Priest.

[143] This and the following stanza are from the poem of *Joarsa*, being the history of two brothers of the country of *Sahalsa*.

[144] Under this impression, the city of *Astina* (*Hastina pura*) is believed to have been situated near the modern *Pakalong'an*; *Gendara Désa*, the country of *Sanghoni*, near *Wiradesa*; *Amerta*, the country of *Derma Wangsa* and the *Pandawa*, near *Japara*; *Talkanda*, the country of *Bisma*, and *Banjar jung'ut*, the country of *Dursa Sána*, in *Lurung Teng'ha*; *Awang'ga*, either near *Kendal*, or the modern *Yug'ga-kerta*; *Pring'gadani*, the country of *Bima*, near *Pamálang*; *Purabáya*, the country of *Gatot Kacha*, near *Surabáya*; *Mandura*, the country of *Bála dewa*, or *Kákrá Sáná*, the western provinces of the island *Madúra*, and *Mandaráka*, the country of *Salía*, the eastern provinces of that island, towards *Sumenap*; *Diára Wati*, or *Indoro Wati*, *Krisna's* country, the modern *Pati*. In the same spirit, the modern capital of the sultan of *Matarem*, called by the Dutch *Djocjo carta*, but more correctly *Ayog'ya Kerta*, was so named by its founder, about sixty years ago, after *Ayudya* the celebrated capital of *Rama*.

There are three peaks in different parts of the Island, which still retain the name of *Indra Kíla*, the mountain on which *Arjúna* performed *tapa*; one on the mountain *Arjúna*, near *Surabáya*, one on *Morea* at *Japara*, and another on the *Ung'arang* mountain, near *Semárang*.

At the foot of *Semiru*, the name of one of the highest mountains on the eastern part of the island, is supposed to have been situated the country of *Newata*, better known as the residence of *Detia Kewacha*, who reigned before the war of the *Bráta Yudha*.

On *Gunung Práhu*, a range of lofty mountains inland between *Pakalungan* and *Semárang*, are the remains of nearly four hundred temples, or buildings, with the traces of an extensive city. This is supposed to have been the burying-place of the ancestors of the *Pandáwa*, as well as of *Arjúna*. The site of the temples was formerly called *Rah tawu*, the place whence blood was washed, from a tradition, that when *Pula Sara* was born, his mother immediately died, on which the *Déwa* came and received the infant on its coming into the world.

In the performance of the *wáyang*, in which the heroes of these historical romances are exhibited, the common people of *Jawana* never exhibit that part of the history which relates to the juvenile days of *Krésna*, from a superstitious apprehension, that the alligators would, in such event, overrun the country, these animals being supposed to be the transformed followers of *Kángsa*. At *Pamalang*, also, there is a similar prohibition with regard to representing *Arímba*, the brother-in-law of *Bíma*, under a dread, that if the *Dálang* should, by accident, not represent the story with exactness, he would inevitably fall sick on the first mistake.

**AN ANALYSIS
OF
THE BRÁTA YÚDHA,
OR HOLY WAR; OR RATHER THE WAR OF
WOE:
AN EPIC POEM,
IN THE KÁWI OR CLASSIC LANGUAGE OF
JAVA.**

INTRODUCTORY REMARKS.

The wife of *Santánu*, king of *Astína*, dying on giving birth to *Déwa Bráta* (*Bísma*), *Santánu* asked *Pulásara*, the *Prábu-Anom* (or younger prince), of *Wiráta*, and brother-in-law of *Mángsah Páti*, prince of that country, to allow his wife *Ambarsári*, who at that time had a child (*Abiása*) at the breast, to suckle and so save the life of his infant boy *Déwa Bráta*.

Pulasára, offended at the proposal, went to war with *Santánu*, but was afterwards persuaded by the *Déwa Sang yang Naráda* to comply, on condition of *Santánu* resigning his kingdom to him; to which *Santánu* agreed. *Pulasára*, when his son *Abiása* was grown up, gave him the kingdom of *Astína*, and turning hermit, went and passed the rest of his days on the mountains.

By his wife *Ambalíka* (the old maiden daughter of *Baliétma*, a hermit of *Gúnung Chámaragándi*, whom he was forced to marry against his inclination) *Abiása* had three sons, viz.

1. *Drestaráta*, who was blind.
2. *Pándu*, whose head was inclined to one side.
3. *Aria Widúra*, who was lame.

Pándu, the least exceptionable of the three sons, being raised to the throne, *Abiása* turned hermit, and went and passed the remainder of his days among the mountains.

On the death of *Pándu*, *Drestaráta* persuaded his father *Abiása* to allow him to rule the country during the minority of the *Pándáwa* (or five children of *Pándu*). These were *Dérma Wangsa*, *Bíma*, and *Arjúna*, born of his wife *Déwi Kúnti*, and *Nakúla* and *Sedéwa*, born of his wife *Déwi Madrim*.

Drestaráta however afterwards persuaded them to go to a wild uncultivated place called *Amérta*, and establish a kingdom there, furnishing them, for that purpose, with the requisite implements, and a thousand men to enable them to clear away and cultivate the country.

Through the assistance of *Mangsáh Pati*, the king of *Wiráta* (uncle to *Abiása*), the country of *Amérta* was completed; but not until the thousand men had all been devoured by demons, of whom *Párta* was the chief.

Drestaráta retained possession of *Astína*, and afterwards resigned it to his sons, the *Kuráwa*, in number ninety-seven.

The hundred was completed by the addition of *Kérna*, the son of *Déwi Kúnti* before marriage, by *Batára Suria*, and of *Jaya-dráta* and *Aswatáma*.

The incarnate *Déwa*, *Krésna*, having been deputed by the *Pandáwa*, whose part he takes, to propose to the king of *Kuráwa* an equal division of the kingdom of *Astína* between the *Kuráwa* and *Pandáwa*, and his proposal being rejected, the *Pandáwa* go to war for the kingdom which was left them by their father, and which in justice they ought to have had. The *Kuráwa* are ultimately beaten, and the kingdom of *Astína* recovered by the *Pandáwa*.

The scene of the poem lies chiefly in the hostile plains of *Kuruksétra*, close to *Astína*, whither it sometimes shifts. The time of it is about a month, the same being the fifth of the year.

The poem opens as follows:—

(Measure *Jagadíta*.)

1. In war 'tis the prayer of the brave to annihilate the foe,
To see the braids of fallen chiefs scattered like flowers
before the wind.

To rend their garments, and burn alike their altars and their
palaces,
Boldly to strike off their heads while seated in their chariots,
and thus to obtain renown.

2. Such was the prayer (of *Jáya Báya*) offer'd to the three
worlds for success in battle;

Such was the resolve of *Batára Náta*^[146] against those
whom he knew to be his enemies.

And the name and power of *Padúka Batára Jáya Báya*
became famous throughout the world,

Confirmed and approved by all good men and by the four
classes of *Pandíta*^[147].

3. The lord of the mountains descended with all his *Pandíta*,
And the prince approached him with respect and a pure
heart.

The deity was pleased, and said, "*Aji Jáya Báya*," be not
afraid:

I come to thee not in anger, but according to thy desire, to
endow thee with the power of conquest.

Awigno mastutina masidam.

(Tem bang Jágadíta.)

1. Săng sūră m'rī ayā|niă rīng sāmără mā|yoănī ỉlăng'ăni
kāng | părăng-mŭkă ||

Yetna s'ri pamasa mamurista mang'argia ri sira sang'a chintia
nir mala
Yekan tusta mana Batara sa wuwus Aji Jaya Baya ayua sang
saya
Ta tan kroda tekangku yen sira saka sung'a wara karananan
ka dik Jaya

4. Receive from me a blessing, oh my son *Jáya Báya*!—
Hear me! In thy country
Thou shall become the chief of the whole circle of princes,
and in war victorious over the enemy.
Be firm and fear not, for thou shalt become as a *Batára*.
This declaration pronounced with solemnity, was treasured
in the memory of all the holy *Pandíta* of heaven.

5. Thus having bestowed his blessing, the *Batára* vanished;
And the enemies of the prince being overcome with fear,
submitted to him.
Tranquil and happy was every country. The thief stood aloof
during the reign of this prince,
And the lover alone stole his pleasure, seeking his object by
the light of the moon.

6. It was at this time *Puséda*^[148] rendered memorable the
date, *risang'a kuda suda chandrama*^[149],
When the brilliancy with which the enemy was defeated was
like unto the brightness of the sun at the third season,
And the mercy which was shewn to them was like the moon
at the full.
For in war he looked upon the enemy, as the lord of the wild
beasts would eye his prey.

4. Tang'gap tosna nograha ku ri wukang ku Jaya Baya rang'e
nikang Praja
Satiastu prabu chakra wartia kita ring sabuana Jaya satru
ring mosu

Ring prang derpa pasu prabu pamanira Yuni Kadung'ola
ning parang muka

7. Then *Batára Séwa* came and said to him,
"This is the time proper to relate the war between the
Pandáwa and the princes of *Kóra*,
A relation which is not intended for the regulation of the
country or the conduct of men, but is like *síri* with
burnt lime,
Which affects not the teeth, but gives inward satisfaction and
delight."

8. In former times, *Narária Krésna* was the friend of
Naranáta Pandáwa,
And he urged them saying, "Request from *Suyudána*, the
chief of the *Kúru*.
"Nothing less than a division of the country of the *Kúru*:
"If he accede, it is well; if not, a great war shall be raised."

9. Thus having advised he hastily departed, and quitted
Wiráta, followed by *Satiáki*,
He mounted his chariot of swift-footed coursers, which sped
through the air as if with wings,
And soon discerned the city of *Gajahúya*^[150], breaking
through the clouds. Sad
Looked her *waríngen tree*^[151], like unto a sorrowful wife
separated from her husband.

7. Biakta chamana pada Pangkaja Batara seiva mara

10. The corners of the gateways seemed to bow as he
advanced,
And their turrets to beckon to *Janardáni* to hasten on.
The branches of the serpent flower^[152] waved in the wind,
as if in obeisance,
And all the beauty of the city of the *Kúrus* appeared to
enquire whether he were followed by the *Pandáwa*.

11. But *Narária Kesáwa* had left the sons of *Pándu* at
Wiráta.
The appearance of every thing on the road was sad:
sorrowful was the sound of the bird *chúchur*,

And the *jring* plant was drooping and fallen, bearing down
with it to the ground the *pándan* flower;
Mournful was the moaning of the bird *walikitádáhasi* crying
on the branch of a tree.

10. Punchak punchaki gopuran'ia aturang ng'adang'a ri sira
mong'gu ri ng'nu

12. Bright and beautiful was the city of *Gajahúya*, till it was
known that the *Pandáwa* did not follow.
The *champáka* flower was full blown and ready to fall;
The faded flowers of the *tanjung* were caught in the spider's
web,
And the dark beetle^[153], almost lifeless, in sadness sought
the flowers of *Angsána*, which floated on the waters.

13. Dry was the course in which the rivulet had flowed,

And the stone images looked in sadness at the marks which
the water had left on the rocks.

The shell-fish^[154] had deserted their covering.

And the dead shells were left on the banks by the retiring
waters.

14. Unlike this was the appearance of the *ráwas*^[155], which
resembled an assemblage at the *paseban*^[156].

On their banks grew the flower *rajása*^[157], entwined by the
suwárna^[158], as a golden ornament worn by men.

The white flowered *tánjung* having reclosed its petals, hung
like a closed *páyung*^[159],

And the small fish were frisking with delight in the waters.

12. Kapua sa leng'ang'ing Gajahuya ri tan padulur rira
Nararia Pandawa

Hunia champaka malugas Kusuma paksa Malabua jurang

15. And as he came close to the city, the approach was
cleared:

The *wúng'or* flowers hung in abundance like reclining
pillows,
The *tanjúng* flower was open, like an expanded *payúng*,
And the *pétung*^[160] was surpassed by the beauty of the
gáding^[161] sprouts, which shewed like the *gáding*
flower.

16. And the woods were as if no one could tell whether there
was good or bad in them, and the rocks were as if
deaf and dumb.

The beetle buzzed at a distance from the flowers of the
dádap and the *síri*, for it knew not the taste of them;
The bird *chat-da* played like unto the bird *kiong*^[162], when
in its glory in the woods;
And the joints of the sugar-cane attracted not the eye.

(Measure *Suandána*.)

17. Delightful and pleasant were the roads of *Astína*.
And soon on the plains^[163] of *Kúru* did the good *Krésna*
arrive:

There was he joined by the heroes *Kánwa*, *Janáka*, and
Narádá,
Who were found by him on the plain, and who entered his
service.

15. Sing'gi yan maparek puraraja mahalep alep anoluhi ri

Kapāng'gē irikāng | tegāl milu rikār ya sāng būpati ||

18. Immediately the excellent *Krésna* took the charioteer's
seat,
Giving up his own in the chariot to the three *Pándita*, and
making obeisance to them.
They returning the salute,
Inwardly prayed for the welfare of *Krésna*.

19. The *Pánditas* were much pleased by *Krésna's* taking the
charioteer's place:
And as they were borne along, they talked of their journey to
the King of *Astína*,
And also discussed many weighty matters,
While mildly flowed their words like a gentle stream.
20. When the worthy *Krésna* was yet on the plain of *Kúru*,
Drótarája soon heard of his coming,
And gave orders to clean and dust the palace;
Directing, at the same time, the finest cloths to be spread on
the ground from the royal seat, outside, as far as the
great square.
21. It was at the same time required of all to show respect.
Such were the orders of *Aria Bísma* and *Dratarástra*.
Sakúni, *Kerna*, *Duryodána*, alone refused to obey, turning
away and shewing their backs.
This they did, perceiving intuitively that the great among
men was acting in concert with the *Pandáwa*.
-

18. Wawang sira nararya kresna numaring gwaning sarate
Sirang parama sapta pandita gumanti mung'gweng rata
Turawin sira telas winorsita malas mawe nastute

Kunang sira wi'ang ming'e sakune karna duryodana
Apan warui mana janardana sapaksa ring pandawa

22. The various viands in the interior of the palace being
prepared and laid out,
Kesáwa^[164] arrived before the city.
When grateful sounds struck up from various musical
instruments,
As slowly advanced his chariot to the hall of audience.

23. The people, desirous of beholding the royal arrival, and
afraid of being too late,
Hurried in crowds to where they might have a view of him,
Adjusting their dress and tying up their hair as they ran
along;
And some, who had left the operation unfinished, came with
their teeth partly black and partly white.

24. While others, among the women, held up their breasts
with both hands,
As if they were going to present them to the exalted among
men^[165].
Children, too, bore along in their arms their ivory dolls,
And caused them, when they came to the looking place, to
acknowledge and bow to him, whom they pointed
out as their royal father.

22. Sedeng masaji boga sadrasa samong'gu ring jero puri

Tekeng pangu ngangan kinon ika mangakua rama aji

25. There were also seen among the throng, those who,
leaving off the duties of the toilet, and taking with
them their looking-glass and paint-brush,
Appeared as if they were hastening to officiate for the
prince.

Others there were, whose hands contained unfinished
garlands of flowers, which they had been making,
and

Which they seemed to be running to give to his highness.

26. Others ran so fast, that they dropt and lost their garments
by the way;

Such was their fear of being too late to see the prince go by.

The overloaded ladders broke down with the weight of
people upon them,

And the extended mouths of those who fell prostrate, gave
them the appearance of persons under the influence
of liquor.

(Measure *Basánta tiláka*).

27. It would be endless to describe the various sights which
presented themselves among the astonished

multitude,
Enough that the royal *Krésna* reached the palace.
But it was not the palace of the King of *Astína* which he
went into;
It was that of the *Aria Drastarésta*.

25. Wane tanga payas wa'u saha sipatnia mung'geng sadak

Tūtān dunāng | ri kurunā|ta sīran t'kāngka ||
T'kāni narār|yā dratarēs|tra sirān chumūnduk ||

28. There he found assembled *Drúna*, *Bísma*, *Krépa*, and
Sália;
As also *Aria Widúra*, *Dratarája*, and *Kérna*.
Then quickly before him did the *Aria* place
Viands, served up in dishes of gold set with precious stones,
befitting the dignity of a prince.

29. Delighted was the mind of *Krésna*,

When he saw the hospitable manner in which he was treated
by the *Aria* and by *Bísma*.

Then came the King of *Astína* to present him with dainties;
But his coming was fruitless, for *Krésna* would have none of
them, spurning the offer.

30. On which the King of the *Kuráwa*, addressing the
blessed among men^[166] in an angry tone thus spoke:
"O! thou pure among men, who lovest to over-rate thyself,
"Disdaining to receive the proffered food which I prepared
for thee,
"It is not fit that thou shouldst be numbered among the good
and worthy of the earth."

31. Such were the words of the King of the *Kuráwa*
addressed to *Krésna*.
To whom, in reply, the latter said: "Being deputed by others,
"To accept of the articles presented to me by thee, would be
as if I were to take poison,
"Not having yet finished the work I am come about."

28. Ka drona bisma krepa salya kapanggi arpat
Lawan sang arya widura drata-raj'ya karna
Sig'ran sumung'akni kang pasaji nararya
Bogo paboga saha mas mani raj'ya yog'ya

29. At'yanta tustané manah naranata Krésna
Yanton segeh nira pararya makadi bisma
Yekan dateng prabu ri astina sopa boga
Datan tinanggapira Kresna aturnia nir don

30. Yekan panant'wa kurunata risang narind'ra

31. Naling nirang kurupatin pang'uchap ring Kresna
Mojar janardana t'her puri ing kinongkon
Tan sambramé pang'upakara ritap'waning don
Apan mamukti wisa rak'wana sida karaya

32. So spake the pure among men, losing for a moment the
character of a *Pandíta*,
Krésna then returned home, followed by his principal
Mántri^[167]:
And on reaching his residence he immediately kissed the
feet of the wife^[168] of *Pándu*,
Who very graciously and kindly received the honour done
her.

(Measure *Bangsa patra*.)

33. As soon as *Batári Kunti*^[169] perceived *Krésna*
approaching,
Her mind suddenly expanded, like an opening flower, but
immediately after became oppressed with grief.
Then addressing the royal youth, she said, his coming to her
was as welcome as that of the *Pandáwas*.
She then quickly threw her arms round the neck of the well-
pleased *Krésna*,

34. And immediately told him of all the sad grief and
consequent shame which filled her mind,
With a choked utterance and a strenuous effort to suppress
the rising tear,
"O! my friend and protector," said she, "thou bringest
consolation and comfort to my breaking heart,
"Making me feel as happy as if I were at this moment in the
delightful company of all the sons of *Pándu*."

32. Naling janardana ri sang resi sangga suks'ma
Sang Kresna mantuki niring nira sang sumantri
Prapténg g'reha ngusapi jeng nira pandu-patni
Somia b'wata t'wang'i t'las nira yan panembah

(*Tembang Bangsa patra.*)

33. Saliyati ra Batā|ri Kūnti Krēs|na wahu datēng ||
Kadi sinekari kāng | t'yās māhār|sa puwarā sekel ||

34. T'hěr awarahi geng ning duka ngande hirisira
Saha wuwus ira mas'ret déning luh lagi pinegeng
Kita tiki bapa tambang kun mariyang regepa lara
Sawulata saguyu m'wang sang pandut'maja saweka

35. Such were the words of the great *Dewi Kunti*, causing
Krésna to shed tears.
To whom the latter, in reply, thus spake: "Grieve not, oh
princess,
"What is, has been ordained by the Almighty, whose humble
instrument I am."
Thus said, he forthwith returned, and went to the palace of
Wára-widúra.

36. Leaving *Krésna* to the hospitable entertainment of
Widúra, who administered to all his wants,
Let us proceed to speak of the King of the *Kuráwa*,
Whose gifts had been disdainfully rejected,
And who thereby was sorely vexed.

37. He consulted with *Dusasána* and *Sakúni* upon the
subject.

But the first on the list of advisers were *Krépa* and *Kérna*.
They wishing to kindle the ire of the king of *Kuráwa*,
Asked, "Why should you be afraid to refuse giving up half
of the country,
"On account of *Krésna*'s being the friend and ally of the
Pandáwa;

35. Na wuwus ira su déwi kunti Krésna saha tang'is
Sang inujaran irojar tan soba n'repa mahisi
Sakarepa Batara manggeh ng'wang w'kasanika
Ling'ira t'her umantuk ring g'wan sang warawidura

36. H'neng'akena kamant'yan sang kresnan s'deng'iniweh
T'kapira widura pah ramia tut samanahira
Da tuchapa kurunata karya sa sinala hasa
Sapasaji nira eman dé sang kresna tana árep

37. Karana nira na hemhem m'wang dusasana sakuni
Maka muka k'repa karna t'yan téng dusta mangapui
Ling'ira mapa tahé t'wan ta wéha pura sateng'ah
Apan iki n'repa k'resna b'yekta pandawa sasisih

38. "Therefore it is that the offered food was so much
slighted.
"If not accepted of (by *Krésna*) care not, but give it away
elsewhere.
"Be the enemies of our leader who they may, our bweapons
are ready."
Having thus said, *Krépa* and *Kérna* departed, and were
followed by *Dusasána* and *Sakúni*.

39. All having departed, and gone home,

The king of the *Kuráwa*, alone and sad,
Went to the apartment of his wife,
Who was said to be exquisitely beautiful, even exceeding
the females of heaven, and containing more
sweetness than a sea of honey.

40. When he reached the place where his wife was, he spoke
not, but continued silent,
Oppress'd with grief, and lost to every thing;
In this mood he remained, till the coolness of evening came,
and
The sun shone bright in the west.

41. The sun about to disappear, looked as if descending into
the bosom of the deep,
And cast a beautiful and pleasing appearance on the palace;
But it assumed all at once a pale and sombre aspect,
While the women within were happy and joyful.

38. Niha niki teka panian sampa é-ke pasaji aji
Tarimanen niki ay 'wang kewéra métukaraken
Sapa karika musuh sang nata was gati rasika
Ling ira t'her umantuk m'wang dusasana sakuni

39. Da'i moli ira kap'wa ngungsir wésma nira uwus
Kurupati kari sokang kaneng g'wan warama 'isi
Tuchapan niki sawang sang déwi ngant'yani ngahajeng
Ratih ajapana wung'wa m'wang yanging jeladi madu

40. Sadateng'ira ri déwi tan warnan aneng'akena
Lawani wing'iti chita sri dur'yudana na sumeng
Lalu déwasa kalungha tistis ng'wé kirana matis
Ririsa dulura ngen mar mam'wat ganda ningasana

41. Rawi mangayati moksa kane lot masilurupa

Dana s'mo kama tresnan ton rumneng pura ridalem
Karana nerana noli moruk pinda kamadelen
'Lala lumiating s'tri ring jero mahawuhawu

42-46. [Description of the loves of both sexes, and the graces and attractions of women.]

47-50. [Moonlight scene described, with the sports and blandishments of the maids of the palace.]

51-53. [The maids of *Astína* continue to talk and amuse themselves by the light of the moon.]

54. [Midnight follows, when all are at rest, and a solemn stillness prevails, disturbed only by the *Bramins* proclaiming the midnight hour.]

55-63. [Description of morning. Sunrise, &c.]

64-66. [*Suyudána*, king of *Kuráwa*, comes forth in state into the hall of audience to meet *Krésna*, who has been waiting for him there, along with many princes and chiefs of the place.]

67-73. [*Krésna* announces to *Suyudána* the object of his mission, viz. to ask for half the kingdom of *Astína* for the *Pandáwa*, &c. The father and mother of *Suyudána* and all the old and grave *Pandítas* recommend compliance with the proposal of the *Pandáwa*, in order that there may be an amicable adjustment of affairs. *Kérna*, *Dusasána*, *Sakúni*, and *Krépa*, shake their heads, in token of their disapprobation of the measure, and evince their readiness to attack and kill *Krésna* on the spot.]

(*Measure Sekaríni.*)

74. Then the servant *Satíáki* related to *Krésna* from his own
knowledge,
That at the time the plan of *Duriodána* was to take away his
life,
For he had collected together and assembled his people in
arms;
Whereupon *Krésna* issued orders for his forces to be in like
manner assembled.

(*Tembang Sekarini.*)

74. Samāṅkā yoda sā|tiaki majari sāṅ | Krēsna saduga ||
Ri tīṅkā sāṅ Durio|dana arap pam|ātia nāri sira ||
Tuwin sampūn naidāṅ | yadū bala kabē | sāstrani sita ||
Umi rātniā s'ri Krēs|na kārana nikīn | tān warang'en ||

(*Measure Basānta tilāka.*)

75. *Krēsna* then giving way to his anger, arose from his seat,
His passion swelling and rising within him like unto the fury
of the god *Kāla*.

His speech no longer soft, was harsh and loud, and he
represented the all-powerful *Wísnu*^[170],
His appearance uniting the force of the three powers and of
the three worlds.

76. From his shoulders were seen to extend four arms, and
above them were three heads and three eyes^[171].
The power and divinity of every deity now entered into his
person:

Brāma, the saints, the powerful deities, the chiefs of the
Rasāksas,

With the power of all the people and chiefs of the immaterial
world, and of all that possessed power.

77. Then swaying his body from side to side, and breathing
hard like the roar of a lion,
The earth shook to its base, disturbing the foundation of
every thing:

The mountain tops nodding, and the mountains themselves
rocking to and fro;

The waves of the sea rising like mountains, forming
whirlpools and casting the deep sea-fish on the
adjacent shore.

(*Tembang Basanta tilaka*. See 26.)

75. Angka kroda Kresna mang'adĕk sakaring pahman
Mong'ging natar sira wibuh Kadi Kala merchu
Mintonakan krama niran tuhu Wisnu murti
Lila tri wikrama maka waki kang tri loka

76. Takkuwan chatur buja siran tri sira tri netra

Moang detia denawa pisacha manusia sakti

77. Yekan lumangka asigap kraka singha nada
Lindu tikang siti pado lawa ng'ambek Kambek
Yang parwoto gra gumiwang manawang ginanjuh
Kombak wayi tasi kanyakra panyunya kabeang

78. In an instant fear and panic overspread the hundred
Kuráwa.

Silent and speechless they stood, and with a pale and wan
look, which extended to the prince *Kérna* himself.
Even *Súyudána* and *Yuyútsu* lost their senses from fear;
They remained as without life, and having no will of their
own.

79. It was then that *Drúna* and *Bísma*, and the good *Pandíta*
Naráda,

Offered prayers and praise, and sprinkling a shower of
sweet-scented flowers before him,

Thus entreated: "Are you not, in truth, the God of Day, why
become greater?"

"Have mercy upon the world and all that it contains.

80. "If you resolve upon the destruction of *Kurunáta*, his
destruction must ensue:

"But think once more of the agreement of *Nahária Bíma*,
"And of the pledge of *Drupádi*, who has vowed not to bind
her hair
"Until she shall have bathed in the blood of the hundred
Kuráwa."

81. At this the god relented, and his heart became softened
When he listened to the words of the holy *Bísma*;
For the wisdom of *Krésna* was pleased with the praise,
And in an instant he resumed the form of *Nahária Krésna*.

78. Tanduan kawus gatini kang sata Kurawa ras
Diem tan pasábda mawenes Narepa Karna Nata
Mangkang Suryodana Yuyutsu Wikarna morcha

81. Da kantananya lesunen poa geleng Batara
Ling sang watak resi lawan paramarsi Bisma
Karunya budi nira Kresna renan pinuja
Rap saksana noluya rupa Nararia Kresna

82. The *Pandítas* then went each his way,

And *Krésna* proceeded to the dwelling of the widow of
Pándu.

No sooner was he arrived than he said: "I offered my advice
to the princes of *Kúra*,

"But they have resolved to be destroyed in battle.

83. "Such, O *Naranáti Déwi*, is the conduct of *Kurunáta*."
To him the princess then replied, "Inform my sons, the sons
of *Pándu*, of this:

"And since they must fight, let them select warriors who
cling to life;

"And let *Swárga* receive those who may fall in the war."

84. Thus spake the princess to *Nahária Krésna*,
Who closing his hands in respect, requested to withdraw.
Then quickly mounting his resplendent chariot,
He was followed by *Widúra*, *Sanjáyá*, and *Yuyútsu*.

85. *Kérna* alone was seated in the chariot by the side of
Krésna,

And him he advised to follow the cause of *Pándu*.

But the Prince of *Wáng'ga* replied: "I hold to my resolve,

"And long to try my strength in battle against *Kiríti*."

82. 'Ngka tant tinut nira muli resi sangga suksma
Sang Kresna mantuk kumari sira Pandu Patni
Sigran teka jari wiang nira Kura wendra
Kewalia mayun nirikang rana matia ring prang

83. Yekan pasabda Karuna Naranati dewi
Bota siasi wara-akan ta ripandu Putra
Heng sura darma ngosirangnia matoha jiwa

85. Sang Karna rowang nira Kresna aning rata krem
Sinoé kinoni tumota ri Pandu Putra
Dan sang Nararia Riawang'ga kedah sudira
Mayon makola guna sakti lawan kiriti

86. Such was the speech of *Narapáti Kérna*, who would not
hear but of war;
"To the battle will I go, for I pant for war, and instant war.
"In the fifth season, and on the first day of the moon, shall
the war commence,
"And ere the tenth night of *Krésna* shall it be terminated."

87. *Rawisúta* having thus declared himself in speech bold
and fierce,
Requested to depart in company with *Widúra*, *Sanjáya*, and
Yuyútsu,
And said not a word until he reach'd his home.
Janardána gave speed to his course and went on.

88. *Narapáti Krésna* spoke not a word as he proceeded;
But *Srí Kúnti*, when she heard the intelligence,
Became sad at heart that her children should go to war,
And well she recollected what *Krésna*, had formerly said.

89. This she thought should be the course of *Naranáta*
Kérna,
He should not listen to *Kurunáta*, for he is bent upon war;
And thus she advised her son, *Arka Pútra* ^[172],
For she had borne him when yet a virgin.

86. Nahan wuwus Narapati Karnu wiyang tanamoas
Metoeng ranang gana juga heng ujar neragia
Mamui taneng kalima tué sedang tumanggal
Rapun Masampuna nipancha dasinia Kresna

87. Nahan wuwus Rawisuta piakakas rasia
Mamoet lawan Widura Sanjoya len Yuyutsu
Tan warnanan Sira wuwus tekaring swa wisma
Lampa Janardana makin kalepas kemantian.

88. Da titanen narapati Krésna sedang lumampa

Biak tan nanak'nira ri kalaniran sukanya.

90. But *Kérna* would not hearken, but averted his head.
His wish was that nothing should avert the war;
For he feared the loss of his character for courage,
And he had received great benefits from the princes of *Kóra*.

91. The widow of *Pándu* then departed in grief,
And in silence bent her way to the abode of *Sumántri*.
Janardána, meanwhile, continued his course
Attended by *Satiáki*, the good and the brave.

92. So rapidly did the chariot go that the time could not be
counted,
Till reaching *Wiráta*, he met the assembled *Pandáwa*.
To them *Krésna* related, that the people of *Astína* rejected
his advice,

And were resolved upon trying their prowess in war.

93. Transfix'd with rage, the sons of the *Pándu*,
Bíma, *Arjúna*, *Yenakúla*, spoke with fierceness and defiance,
When they heard the words of *Pándu Pátni*
That they should try their power and skill in war.

94. It was then that all the assembled princes
Consulted and declared for war.
And *Drupáda* said to his son, the prince of *Wiráta*,
"Give orders and make ready the warlike implements,
collect the chiefs and warriors."

90. Dan Kerna langana saha dara lot manamba

Ayuhé nuchap Drupada sunu Wirata putra
Sabda nomangkata ri kalanikang pranata

(*Measure Sragdára.*)

95. At the dawn of day, the *Pandáwa* arose and march'd
forth from the capital of *Wiráta*,
Resplendent as the morning sun, when rising above the
mountains, he first sheds his rays over the earth;
In numbers great, compact, and like an overwhelming sea.
And a sound, like distant thunder in the hills,
Was the sign, that the elephants, horses, and chariots, with
the rich and splendid trappings of gold were in
motion.

96. Many and numberless were the flowers scattered in
clouds upon them by the *Pandita*;
Loud was the sound of the martial strain, breathing victory
and triumph to the sons of *Pándu*.
And when the flowers ceased to fall, there arose a strong
wind, as if propitious to their march;
For the gods were assembled on high, and wished them
success in the war.

(*Tembang Sragdára.*)

97. In the front of the march *Bíma*, the bold and the brave,
took his station;
Wild with impatience for battle, and heedless of opposition,
He remained on foot, tossing his *gáda* into the air for
amusement;
For he was accustomed to conquer, as well on the sea as on
the mountains, and elephants and lions became his
spoil.

98. In his rage he was all-powerful as the elephant of the
forest:
And now that he was in motion, he panted for the hostile
chief, and gave the challenge aloud:
His voice being like the roar of the lion was heard by all,
The sound thereof resounding throughout the three worlds.

99. Behind him followed *Arjúna*, seated in a splendid chariot
of variegated gold, and shaded by a golden *páyung*,
Flaming like a burning mountain and threatening destruction
on *Astína* and its princes.
His banner, the monkey, floated high in the air, flapping the
clouds in its course;
And as his retinue shone and glittered, lightning flashed with
the thunder-clap in presage of victory.

100. Next to *Palgúna* came *Aria Nakúla*, with *Sedéwa*,
mounted in a chariot of green of exquisite
workmanship.
In beauty resembling two deities of heaven, and thirsting for
the attack on the youths of *Astína*,
They shone resplendent. Their banner floating in the air like
a dark cloud threatening rain, and scattering the
petals of sweet-scented flowers.

Ready for the combat, as thunder before the lightning flash;
and as they moved, the sound resembled the
humming of bees in search of food.

101. Then slowly followed *Aria Utára*, with *Soíta*, alike
mounted in a chariot of war;
And next *Drásta driúmna* and *Drupádi*, with *Sikándi* by her
side;
With countless chariots, elephants, and horses bringing up
the cavalcade and filling up all space:
The whole elevated in spirit, as fish when enlivened by a
sudden fall of rain.

102. And now appeared *Drupádi*, borne on a litter of gold,
and shaded with a *páyung* of peacocks' plumes:
She was like a deity when represented by a golden image;
her long hair hanging loose and floating in the wind.
She had not bound it: but while it hung like a low'ring cloud,
she awaited the coming of the rain of blood;
For she held to her vow, that until she bathed in the blood of
the enemy, she would not collect her hair or tie the
knot.

103. Then in her train followed *Dárma Súnu*, mounted on a
white elephant,
His attire complete; his *pustáka* yellow, and the case of the
purest gold;
Evincing that *Dárma Mórtia* desired to slay *Sália*, the chief
warrior of *Duriodáning*:
And that when he raised his *pustáka* as an instrument of war,
there was not his equal in power or courage.

104. Next *Krésna* advanced in his golden chariot, and
shaded by a white *páyung*;
For it was his pleasure to bring up the rear, with the elder
princes and the royal host.
Not far off were his *chákra* and conch, and the princes of his
retinue were borne on white elephants;
The cry of the elephants rose loud and high, uniting with the
mingled sounds which issued from all quarters.

105. Behind *Krésna* came *Bimányu*, the son of *Arjúna*,

With his instruments of war, borne in a splendid chariot,
studded with precious stones, and playing with his
chákra,
With him was *Satiáki*, seated on an elephant, and
accompanied by numerous followers.
Richly adorned with golden vests, the surprise and
admiration of all beholders.

103. Lila Sri Dárma sunu miring ngakaning sira nong'ganing

106. And then came on the two sons of the *Pandáwa*,
 Panchawála, and *Wítia*,
Complete in their habiliments, and mounted in a war-chariot,
 ornamented with gems and flowers of gold:
Their dress of linen and of silk. A delightful fragrance
 surrounded them.
Beautiful was their *páyung*, for it was of the wings of the
 mardukára, and dazzled the eye like the glare of the
 sun.

107. Many and various were the characters and attributes of
 the different warriors hastening to their work, were
 they all to be described.
Arrived at *Kuruksétra*, they soon raise a fort of very great
 strength;
And the palace built therein being finished, they invite the
 wife of *Pándu*,
Who quickly arrives, and enters the palace, accompanied by
 Widúra.

108. Then *Widúra* went back, and safely reached her home.
While *Déwi Náta* and all the sons of *Pándu*, met together
 with mutual delight,
And discoursed in turn of the hardship of her being
 incessantly obliged to retreat to the hills;
The more she poured out her grief, the greater was the joy
 that followed, even to shedding tears.

106. Mong'geng wuntat watak Pandawa suta mang'aran

109. Long would it take to relate all the pleasure felt by the
wife of *Pándu* while in the interior of the palace.
Then all the *Pandáwa*, together with *Krésna*, the first and
the mightiest, with many other chiefs, debated
Who was the fittest, from his knowledge of military
positions, to be elected *Séna-dípa*^[173],
As one of undoubted ability and skill in managing an army.

110. *Dérmát-mája*, addressing *Krésna* and all the assembled
chiefs, then said,
"Seven only out of all the number appear to be fit to hold the
chief command
"Of the army, which consists of seven hundred millions of
fighting men.

"And first of these *Soétan*^[174], skilled in the direction of soldiers."

(*Measure Suandána.*)

111. Whilst all the *Pandáwa* were appointing chiefs over the
army,
Narapati Kuráwa^[175] held a council of war,
For he had heard of the arrival of many enemies at *Kuruk-*
sétra^[176].
It was *Aria Widúra* who gave him the intelligence.

112. Then *Prábu Gajawáyan*^[177] marched forth with all his
chiefs.
All the *Kuráwa*, too, were in company, making a noise as
they moved along, like the roaring of the sea.

In the neighbourhood of the hostile plain they construct a
place of strength.

Soon was the work completed, for the *Narapati's* authority
extended over all the princes around.

113. Then was *Aria Bísma* first made a leader in battle.
Raised above all others, he is seen crowned with flowers.
From all quarters the crowded and restless multitude send
forth shouts

While the sound of *gongs* and *conchs* rend the skies.

(*Tembang Suándana.*)

111. Sedēng mang'abisekā | brātya pati sāng | watāk
Pāndawa ||
Ulā nerepati kō|rawē swara na hēm | pirēng ng'wā kena ||

Penuh pas'luring prawira masurak masang'garuhan
Lawan Pada ibera sangka tinolup umong ring langit

114. Next all the princes and chiefs are regaled;
The troops and followers have all they want, and are
provided with conveyances.

The length of one line was twelve millions one hundred
thousand;
While the thronged legions extended to the hills and to the
woods.

115. Then altogether they set out for the field of battle,
Moving towards the west, and leaving their strong hold and
the king of *Astína* behind.
Arrived on the hostile plain, loud resounded the *conchs*;
While the warriors, animated by the sound, testify by their
actions and gestures, their impatience to engage in
the fight.

116. At the same time they are formed in battle array on the
hostile plain.
Ráwan was the name of the order which was first founded
by the king of the *Pandáwa*:
That of king of the *Kúru* was according to the wish of the
Bramána,
Who with all their relations swore they would conquer or die
in the battle.

117. And now let us proceed to speak of the *Pandáwa*.
Having come out from their strong hold and arrived at the
field of battle,
They advance eastward, towards the formed bodies of the
Kuráwa:
Both sides shout and brandish their weapons in front of each
other.

114. Tu'e pwa niniwe watek ratu kabé pinujakrama
Tekéng bala samoa yoda pada purna ring wahana
Pinanding ngatarung wilenya sawelas gananya yuta
Ya karanane kin penuh tekaring kawukir mwang wana

T'las metu sakeng dalam kuta samipaneng panchaka
Lumampa angawétan angarepaken g'lar korawa
Pada pranga ngawuh mangunda winawanya kapwa ngadeg

118. Loud and confused were the mingled sounds of the
armies.
The stoutest and bravest seemed to have been placed in
front:
The only persons who did not engage in the fight were the
musicians and standard-bearers.
Those in front were seen prancing and nimbly moving about
with their brandished weapons.

119. Quickly the contending armies mutually and fearlessly
rush upon each other,
Amid the roar of elephants, the neighing of steeds, the
beating of drums, and the shouts of the troops,
Till the whole air and sky is filled with the jarring sounds,
And the earth is shaken with the tumultuous din of war.

120. *Prawára Bísma* then formed his troops into the
resemblance of the sea and mountains:
While the princes and chiefs of *Astína* seemed like towering
and immovable rocks;

The warriors in front dashing upon the enemy like the waves
of the sea,
And like the ocean bearing down before them stones as large
as mountains.

118. Rikan pada gamoeanane sawateknia sawang pareng
Sinangwo'a sinilan risan mokane sang prawireng rana
Ritan anane ngapranga mawa meredang'ga tung'gul kunang

120. Sireng Prawara Bisma sigra mag'lar ukir sagara
Watek ratu anéng gaja-swa karanganya durga ruhur
Pama gunong nganeng balamuka ngalun tuanut musuh
Ya bano'ani kagunturang gulunganeng sela marwata

121. *Prawára*^[178], *Pandáwa*, formed the order of *bajára*
tíksna lúngit^[179].
Dananjáya^[180] and *Werkodára*^[181] were there with
Sikándi^[182] in front;
Wiráta's^[183] son, *Satiáki*, and the son^[184] of *Drupáda*, were
in the rear,
Yudestíra with all the princes being in the centre.

122. The mind of *Arjúna*, when he viewed the enemy, was
divided between joy and sorrow, and he was moved
with love and pity towards them;
For they were chiefly composed of his own kindred.

Some of them were the sons of his father and mother: the
younger and elder brother of his father were also
there;

As also the *Gúrus*^[185], *Krepa*, *Sálea*, *Bísma*, and *Duijéng'ga*.

123. Therefore quickly addressing *Narária Krésna*,
He intreated that the battle might not take place, being
afflicted at the sight of the *Kuráwa*.

But *Janardána* compelled him to command that the fight
should begin,

It being dishonourable for men to hold back at the hour of
battle.

121. Kuneng Prawara Pandawa g'lari bajara tiksna lungit
Dananjaya lawan Werakodara tomot S'ikandi arep
Wirata suta Satiaki Drupada sunu waktré wuri
Yudistira lawan watek ratu kabé manganténg tenga

122. Mulat mara sang Arjuna s'mu kamanusan kas'repan

123. Ya karananeran pasabda ri nararya Kresna teher
Aminta wurunga laga pana welas tumon Kurawa
Kuneng sira Janardana sekang'a kon sarosa pranga
'Apan ilailang kasinatria surut yaning paprangan

124. Then was seen *Dérma-pútra* stealing away
Towards *Aria*, *Bísma*, *Krépa*, *Sálea*, and *Dúija*.
With ardour he kissed and clung to their feet;

For it was customary, with *Gúrus*, to make obeisance to them before the battle.

125. Then spoke those who were thus made a brilliant object of adoration and respect:

"Our noble child, suffer no uneasiness of mind, for you have already deprived us of life.

"Child of ourselves, may you be successful in battle and soon obtain possession of the country.

"And may *Narapáti Krésna* witness the truth of our words."

126. This done, he forthwith returned to his own side; Quickly ascending his chariot and laying hold of his weapons,

While each sounded his *conch*;

And various were the sounds of the *kéndang* and its accompaniments.

127. Instant the contending armies rush upon each other, mingling together in long, obstinate, and close fight.

Ten elephants to a chariot, and ten horses to an elephant:

These ten horses being mounted by such as fear not to die in battle,

And their duty being to watch when they can cut up and exterminate the enemy.

124. Caton pwa sira Derma-putra manges rika tan tumut

128. The number of the chiefs who were mounted on
elephants
Were a thousand millions: those that accompanied them
were ten and one thousand billions.
Those on horseback amounted to one billion, while they that
followed were ten billions.
Great therefore was the battle and many were the slain.

129. Many days did the *Kuráwa* oppose the *Pandáwa*.
Soon fell the brave sons of *Wirátes Swára*.
He named *Wira Sángka* was slain by *Duija*:
Dea Utra fell by the hand of *Narapáti Sálea*, the hero in
battle.

130. Enraged at the fall of these two heroes, *Soéta*^[186]
Rushed like a mountain on ten billions of the foe.
A shower of arrows at once destroyed the chariot of *Náta*
Sálea, and carried death to many of the brave;
Sálea himself and his charioteer narrowly escaping with
their lives.

131. The whole army of the *Koráwa* hastened to his support.

Amongst them were seen *Bíma*, *Dróna*, *Wérahat-bála*, and
 Jáya, *Séna*, armed with their clubs;
Rukmaráta, too, the son of *Narapáti-Sálea*, supporting his
 father.
Soon did *Ari Soéta*, powerful as a lion, make them feel his
 superiority.

128. Aneka tekaping wibaga yan sangséna dulur
'Anun saka sapanti len sapretana sagulmé naseh

132. *Dínang Rukmaráta* fell and lay prostrate on the seat of
his carriage.

Soéta fought furiously and killed many of the *Kuráwa*:

None would face him, but all fled in terror.

Great too was their dread of *Gátut-kácha*, *Drupáda*'s son,
and *Kirítíatmája*.

133. Then *Rési-Bísma* rapidly advancing opposed the furious
attack of all the *Pendáwa*,

Aiming at *Soéta* he unceasingly shot the best of his sharp
arrows;

But *Soéta*, the commander in battle, unhurt, grew more and
more courageous, and shot his arrows in turn.

Bíma and *Dananjáya* came to his aid: their arrows poured
like a shower of rain from the heavens.

134. The King of the *Kuráwa* advancing, no sooner came
upon *Bíma*, in the middle of the field of battle,

Than he suddenly stopped and started backwards, making a
precipitate retreat, running and falling, and stopping
not till he had got to a great distance.

But *Bísma*, intent only on *Bíma*, maintained an incessant
attack, which *Bísma*, standing up in his carriage,
watched and repelled,

While *Bísma* was greatly exasperated against *Wiráta-tináya*,
for his attempt to exterminate the *Kuráwa*.

135. Then, alarmed, *Wirá-ta-sáta*, the leader of the
Pandáwa,
Shot one of his best arrows at him, the tiger of the *Kuráwa*.
The flight of the arrow resembled that of the bird *garúda*;
And striking the shoulder of *Déwa-bráta* broke it into seven
pieces.

136. On this *Wiráta-tanáya* alighting and laying hold of a
large club of iron,
Would have struck *Súra-bráta* therewith on the side of his
head; but he leaping from his chariot avoided the
blow.

Destroyed, however, was his carriage, and slain were the
horses and charioteer:
And the death of many elephants and chiefs ensued.

137. Terrified at the sight of *Wiratamája*, *Wára-Bísma*
would have fled in dismay,
When a voice from heaven told him that the hour for *Soéta*
to die was come.
Whereat encouraged, he talked boldly; and seizing a chariot
and arrows,

He aimed at the heart of *Soéta* with the sharp pointed
weapon of fire^[187].

138. Quickly pierced through the heart, *Sang Wiráta Sáta*
fell lifeless on the ground.
Grieved and distressed were the *Pandáwa* thus to see *Soéta*
killed on the field of battle.
Not so the hundred *Kuráwa*, who shouted with joy when
their enemy perished.
While *Sang Dusásána* danced fantastically, delighted with
the sight of the fallen *Wirátamja*.

139. [Vexed and enraged at the death of his son, *Mángsah Páti* makes a furious and desperate attack upon the enemy. The *Pandáwa*, too, heedless of their lives, join and support him.]

140-144. [The followers of *Bísma* are routed and pursued with great slaughter. Night comes on, hostilities cease, and the contending armies respectively withdraw. *Mangsáh Páti* and his wife weep over the dead bodies of their three sons slain in battle, and lament their misfortune in losing them:—they shake them and endeavour to call them to life.]

145. [They then burn the dead bodies on the field of battle by the light of the moon.]

146-147. [The *Pandáwa* consult about the election of a fit person to take the lead in battle. *Drestadriúmna* is appointed. Morning arrived, the army of the *Pandáwa* is formed into the terror-inspiring order of *kágeng-páteh*, or that of the royal vulture. Situations of the different princes and chiefs detailed.]

148-151. [*Suyudána* causes the army of the *Kuráwa* to be formed into a similar order. The battle rages. The different chiefs, on either side, who engage each other.]

152-153. [The dust stirred up fills and darkens the air. The dust clearing away, the field of battle appears like a sea of blood, in which the carcasses of elephants, horses, and men, with the fragments of chariots, weapons, &c. resemble so many rocks and stones.]

154-156. [*Bísma* beheld with delight and admiration by all the chiefs and people of *Kuráwa*, distinguishes himself by his prowess. He engages *Arjúna*, and shoots ten arrows for every one discharged by him.]

157. [*Ráwan*, the son of *Arjúna*, is killed by the *Rasákxa Séreng'gi*.]

158-159. [*Krésna*, enraged at *Bísma*, descends from his chariot and is going to shoot at him, when *Bísma* evinces his ready willingness to be killed by *Krésna's chákra*, and so gain admittance to his heaven.]

160. [*Arjúna* then descends from the chariot, and dissuades *Krésna* from killing *Bísma*.]

161. [*Krésna* and *Arjúna* both re-ascend the chariot, while *Bísma* remains deprived of all his strength, in consequence of the fright he had undergone.]

162-164. [*Bísma* makes a sign to *Dérma-Wángsa*, who recollecting that the former had made a surrender of his life to *Arjúna* and *S'ri-kándi*, goes to them and tells them not to be afraid, but to shoot at *Bísma*; whereupon *S'ri-kándi* discharging an arrow, hits him in the breast. The arrow not having penetrated far, *Arjúna* shoots, and drives it home with another arrow. *Bísma* falls down in the chariot but is not killed. His blood ascending to the regions above, is converted into flowers, and in that form returns to the earth.]

165. [The *Kuráwa* fly and are pursued by the *Pandáwa*.]

166-167. [*Dérma-Wángsa*, *Arjúna*, *Nakúla*, and *Sedéwa*, all go and kiss the feet of the respected *Bísma*; but the haughty and unbending *Bíma* remaining in an angry posture, makes no obeisance to the wounded *Gúru*. The *Kuráwa* chiefs, with *Suyudána* at their head, wish to come up and bow respectfully before *Bísma*; but seeing the stern *Bíma* they are afraid to approach.]

168. [A truce takes place between the hostile chiefs, when all shew their respect for *Bísma*. The *Kuráwa* wish to place him upon a mat, but the *Pandáwa* insist upon his litter consisting of arrows joined together.]

169. [The *Pandáwa* withdraw, and the *Kuráwa* alone are left in charge of *Bísma*. *Bísma* refuses to take the water offered him in a vessel by *Suyudána*, and calls to *Arjúna*, who presents him with some in a quiver.]

170-171. [*Bísma* defers dying till the period of the sun's greatest declination, which he reckons to be about seven months off.]

172. [*Suyudána* appoints *Dangyang Drúna* commander-in-chief, whereupon it rains blood.]

173. [The *Kuráwa* are too uneasy in their minds to go to rest.]

174-177. [The following morning they go to battle. Both armies are formed into the order of battle called *gája*, or the elephant. A furious engagement ensues, in which many are slain on either side. *Arjuna* destroys the order of the *Kuráwa* army, is shot by *Bágadéta*, and afterwards brought to life again by medicines administered by *Krésna*, when he returns to the attack, and kills *Bágadéta* and the elephant he is on. Many of the *Kuráwa* are killed by *Bíma* and *Arjuna*.]

178. [Night coming on the battle ceases. It was at the eighth *pánglong* (or about the twenty-fourth) of the moon. The *Pandáwa* regale themselves, while the *Kuráwa* lament the death of *Bágadéta*.]

179-181. [*Dangyang Drúna* undertakes to kill *Dérma Wángsa*, provided *Arjuna* and *Bíma* are out of the way. Ten *Kuráwa* chiefs, with *Trigérta* at their head, draw away *Arjuna* to fight against them to the south of the hills: ten more, under *Dráta Púra*, draw off *Bíma*, in a similar manner, to the north of the hills. *Krésna*, as usual, accompanies and watches over the safety of *Arjuna*.]

182-185. [*Dangyang Drúna* forms his men into the order *chákra-búhia* (or that of the circle with a well-defended entrance). *Dérma Wángsa*, in his perplexity what to do, calls upon *Bimányu*, the son of *Arjuna*, to attack and break the order of the enemy. *Bimányu*, decoyed by *Suyudána*, pursues him into the ring purposely formed by the enemy, when it closes, and he is cut off from all assistance and support from the *Pandáwa*.]

186-194. [*Bimányu* kills *Leksána-kumára*, the son of *Suyudána*, but is overpowered by the number of the enemy. His situation is described by many similes. He is slain.]

195-196. [Night comes on and hostilities cease.]

197-199. [The effect which the death of *Abimányu* produces on his wife *Déwi Sundári*. She adorns and prepares to burn herself with the corpse of her husband.]

200. [His other wife, *Utári*, being eight months gone with child, is deprived of this honour.]

201-205. [*Bíma* and *Arjuna* return victorious from their respective engagements. The latter is angry with *Dérma Wángsa*, for having caused the death of his son, but is appeased by *Krésna*, and induced to treat the old

man with respect. *Dérma Wángsa* explains how *Abimányu*'s death was occasioned by *Jáya Dráta*'s preventing the *Pandáwa* from entering the ring of the enemy, and from his defending it so well. *Arjúna* vows vengeance against *Jaya Dráta*, and hopes that he himself may be killed and burned, if he does not on the following day send him to the other world.]

206-207. [*Jáya Dráta* advised of *Arjúna*'s intentions, begs of *Suyudána* to be allowed to withdraw from the field of battle. *Dangyang Drúna*, upon this, upbraids him, and persuades him to remain and try his hand against *Arjúna*, promising to support him.]

208-211. [*Arjúna* and *Krésna* consult together how *Jáya Dráta* may be killed, and *Krésna* himself escape.]

212-213. [For this purpose *Krésna* makes *Arjúna* purify himself and offer up prayers to the *Batára*. *Batára Sákra* descends, and informs *Arjúna* that he will succeed in killing *Jáya Dráta*, if he only makes use of the arrow called *pasopáti*, and then vanishes.]

214-228. [The two wives of *Abimányu* talk much together of the death of their husband. Their different situations and feelings. Their separation, and meeting again under various forms, &c.; after which *Sundári* burns herself with the body of *Abimányu*.]

229-231. [With the rising sun, the *Pandáwa* chiefs, &c. repair to the field of battle, where they find the *Kuráwa* forces drawn up in the order *chákra báhui*, with *Jáya Dráta*, for safety's sake, in the centre.]

232. [The diameter of the circle formed by the enemy round *Jáya Dráta*, is ten times the distance at which men can be distinguished by the eye.]

233-235. [The *Pandáwa* observe the same order of battle, and attack the *Kurawa*. Both armies mingle in close and obstinate fight.]

236-237. [The *Pandáwa* being oppressed with thirst, *Arjúna* strikes an arrow into the earth; whereupon water springing forth, men and beasts drink and are refreshed.]

238-240. [*Krésna* makes *Arjúna* shoot at *Suyudána*, whose chariot is thereby broken to pieces, and his charioteer and horses killed, himself narrowly escaping with his life. *Arjúna* and his men fight furiously, and kill many of the enemy.]

241-244. [*Satiaki* kills *Tuyasáda*, *Kambujána*, and *Sang Ambisúki*.]

245-252. [*Bíma* kills *Chitra Yúda*, *Jáya Suséna*, *Cháruchitra*, *Durjáya*, *Jáya Chitra Séna*, *Chitraka*, *Sangupu Chitra Derma*, and nine more chiefs.]

253-257. [*Buristráwa* opposes *Satiaki*. They fight, and after their weapons are broken, they close and wrestle. *Satiaki* is on the point of being killed, when *Arjuna*, at the urgent request of *Krésna*, discharges an arrow at *Buristráwa*, which, breaking his arm, causes him to drop the weapon with which he was going to kill *Satiaka*. While *Buristráwa* and *Arjuna* are expostulating with each other on their respective conduct, *Satiaki* seizes the opportunity to dispatch the former. *Bíma* and *Arjuna* slay thousands of the enemy, and endeavour to get at *Jáya Dráta*, but are prevented by the numbers of the *Kuráwa*, who rush in between and try to save him.]

258-259. [Seeing *Bíma* and *Arjuna* tired and nearly exhausted, without the latter's being likely to effect the death of *Jáya Dráta* within the promised time, *Krésna* has recourse to an artifice. He discharges his *chákra* at the declining sun, whereupon the clouds following the course of the weapon, collect round and obscure the luminary, making it appear like night. The *Kuráwa* thinking the fatal day past on which *Arjuna* was to kill *Jáya Dráta*, triumphantly and insultingly call out to *Arjuna* to fulfil his promise of meeting death and being burned.]

260-262. [Taking advantage of the darkness, and of the *Kuráwa* being off their guard, *Krésna*, accompanied by *Arjuna*, wheels his chariot past the *Kuráwa*, till he reaches the spot where *Jáya Dráta* is. *Arjuna* then shoots at *Jáya Dráta*, and kills him. *Jáya Dráta*'s head being struck off by the arrow, *Krésna* causes a wind to rise and carry it to *Jáya Dráta*'s father, who was doing penance in the mountains, in order to obtain of the gods, that if his son was killed in the battle, he might live again. In his surprise at beholding the head, he inadvertently exclaimed that his son was *dead*, which sealed his doom. *Krésna* then recalled his *chákra*, whereupon the sun again shone forth before it went down. Thus the vow of *Arjuna* was fulfilled.]

263-264. [*Suyudána* accuses *Dangyang Drúna* of being the cause of *Jáya Dráta*'s death, in not suffering him to retire from the field of battle when he wished to do so. *Dangyang Drúna* defends his conduct, and uses high words to *Suyudána*.]

265-266. [*Suyudána* invites *Kérna* to go and attack *Arjúna*. *Kérna* goes, and *Suyudána* with his men follow.]

267-271. [The sun sets and the battle continues. Enemies and friends are with difficulty distinguished in the dark, and many of the latter are killed by mistake.]

272-275. [*Sang Dwa jáya-ráta*, the adopted brother of *Kérna*, is killed by *Bíma*. *Pratipéya* is on the point of killing *Sangá sánga*, the son of *Satiáki*, but is prevented from doing so by *Bíma*, by whom he himself is slain, after having wounded *Bíma*.]

276. [The sons of the *Kuráwa* chiefs, exasperated at the death of *Pratipéya*, all fall upon *Bíma*, but are every one of them killed by that potent hero.]

277. [Three younger brothers of *Sakuni* are killed by *Bíma*.]

278-280. [*Suyudána* talks with *Kérna* of the carnage occasioned by *Bíma* and *Arjúna*. *Kérna* makes light of their power, and engages to kill them both. *Krépa* accuses *Kérna* of being a boaster, and intimates his inferiority in prowess to the two hostile heroes, whereupon they are going to fight with each other, when *Suyudána* interposes and prevents them.]

281-284. [*Kérna* attacks the *Pandáwa* army and causes great havoc. A consultation is held among the *Pandáwa* respecting the fittest person to oppose *Kérna*. *Krésna* objects to *Arjúna*'s doing so, as being unskilled in fighting by night. *Gatot Kácha*, the son of *Bíma*, is then selected to fight against *Kérna*.]

(Measure *Basánta lila*.)

285. Wherefore *Sang Gatot Kácha* was directed to seek the
child of the sun
By *Krísna* and *Parta*, who complimented him for his
superiority and power:
Quickly roused at the call, he presented himself with joy,
And said, "Happy am I and fortunate, thus to be
distinguished by his highness.

286. "And so that I continue to serve the king according to
my duty,

"Let my body be severed to pieces, and death itself ensue.
"However arduous the service required, I will nevertheless
perform it."

At these words the advanced in years were struck dumb.

287. Thus spake *Sang Gatot Kácha*. The heart of *Kesáwa*
failed,

So well did he know how to awaken tender feelings:

Therefore did the heart of his uncle melt away,

When he saw the boy daring enough to encounter the King
of *Awáng'ga*.

288. Therefore did *Krésna* and *Parta* remain speechless.

Moved with compassion, and grieved that they had thus
called upon *Gatot Kácha*.

Instantly the hero hurried to the attack;

But as he was about to engage the child of the sun, he stopt
short in terror.

(*Tembang Basánta lila.*)

285. Irika ta sang | gatot kacha kinon | mapag arka suta ||
Teka pira kresna parta maneher | muji sakti nera ||

289. Then all his potent arrows
Issuing from his hands and from his mouth,
With celerity flew to the child of the sun, who overpowered
in battle,
Gave way to the left, while the numerous torches of the
Pandáwa army shed their glare around.

289. Apitui sarwa sanjata wisesa yatas stranera
Mijili tangan dudung mijili chang Kema nuta ngohuh
Yata rumujak sang Arka suta Kéwerana pinda jemor
Muruda kiu mowa metu sulu bala pandawa bap

290-299. [*Sialambána*, a blind *Rasáksa* chief, joins the *Kuráwa* against *Gatot Kácha*, by whom he is slain; whereupon his band of blind *Rasáksas* take to flight. Three other blind *Rasáksa* chiefs, with separate bodies of blind *Rasáksas*, successively oppose *Gatot Kacha*, and share the same fate as the first.]

300-308. [*Gatot Kacha* fights with *Kérna*, flies, and is ultimately killed by him.]

309-314. [The *Pandáwa*, enraged at the death of *Gatot Kacha*, all fight with desperate fury. *Arjúna* alone is restrained and withheld by *Krésna*.]

315-321. [*Dowi Arimbi*, the mother of *Gátot Kácha*, burns herself on the funeral pile of her son.]

322-334. [The following morning *Dangyang Drúna*, a *Pandíta* on the side of the *Kuráwa*, causes great havoc among the *Pandáwa*; to save whom from

the destruction which threatened them, *Krésna* spreads a false report of *Aswatáma's* death, and makes all the *Pandáwa* proclaim it. *Dangyang Drúna* hears and believes the rumour of his son's death, and faints away; upon which *Drestadrúmna* approaches him and cuts his throat.]

335-343. [*Aswatáma* hearing that his father is killed, makes a furious attack upon the enemy, but perceiving *Bíma* is afraid and retires.]

344. [The sun is about to set and hostilities cease.]

345-349. [Description of the field of battle after the fight.]

350-351. [The King of the *Kuráwa* asks *Kérna* to engage *Arjúna*. *Kérna* agrees, but requests to have some one to attend and support him in battle. *Sália* is selected and appointed for the purpose.]

352-356. [*Kérna* and *Sália*, before they go to fight, go home to take leave of their families, &c. What passes on the occasion.]

357-365. [*Kérna's* wife relates to her husband a dream she had. The particulars of the conversation which takes place between them.]

366-393. [*Dérma Wángsa*, *Krésna*, and *Arjúna*, set out in the night for the purpose of finding and putting together the head and body of their respected *Gúru*, *Dangyang Drúna*, and in order to pay due respect and homage to his remains, and to entreat forgiveness on account of what had happened to him. Description of all they see and meet by the way.]

394-407. [Morning. The *Pandáwa* prepare for battle.]

408-413. [The *Kuráwa* army is formed into the position *báhui-makára*^[188], or that of the prawn. *Kérna* in the mouth, *Drumúka* in the right fore claw, *Sakuni* in the left, *Suyudána* in the head, all the princes and chiefs in the body.]

414-415. [The *Pandáwa* army is put into the order called *wúlan-tumáanggal*, or that of the new moon. *Arjúna* forms the right horn of the crescent, *Bíma* the left, *Dérma Wángsa* and all the princes and chiefs compose the centre.]

416-426. [*Kérna* and *Sália*, mounted in one carriage, proceed to the field of battle. The two contending armies engage. Their various success described.]

427-440. [*Bíma* attacks, upbraids, and pursues *Suyudána*. To save the latter, *Dusasána* fires an arrow at *Bíma* and hits him. *Bíma* turns about, and

finding it was *Dusasána* that shot him, he seizes him by the hair, and having called out to all the princes and chiefs to bear witness to the fulfilment of his promise, he tears him in pieces and drinks his blood.]

441-449. [The battle continues to be fought with various success, sometimes one army giving way and sometimes the other.]

450-467. [*Arjúna* and *Kérna* fight against each other. The arrows shot by each at the other are immediately converted into various elements or destructive animals. *Kérna* shoots rain; *Arjúna* shoots and dispels it. *Kérna* shoots fire; *Arjúna* shoots rain and quenches it. *Kérna* shoots dragons; *Arjúna* shoots griffins which destroy them.]

468-469. [*Kérna* aims an arrow at the throat of *Arjúna*, whom *Sália* beckons to incline his head. *Ardawilíka*, a *Rasákṣa*, in the form of a dragon, is killed by *Arjúna*, while in the act of shooting at him.]

470-476. [*Kérna* twice shoots at *Arjúna*, but his arrow only strikes and loosens his top-knot of hair.]

477-479. [*Arjúna*, invited and challenged by *Kérna* to shoot at him, in his turn tells him, if he wishes to save his life to surrender and pay obeisance. *Kérna* refusing to do this is shot in the throat by *Arjúna*: his head falls back into the chariot. On the death of *Kérna*, the child of the sun, that bright luminary grows dim with grief, and expresses his deep sorrow by groans of thunder and showers of tears, while his twinkling eyes emit incessant flashes of lightning.]

479. Disheartened at the death of *Kérna*, the army of the
 Kuráwa take to flight,
And pursued by numbers, conceal themselves, out of fear, in
 holes and cavities,
The earth shakes, and at the same time a drizzling rain
 descending from the clouds, washes the blood-
 stained corpse.
The evil-portending cloud is seen, and the grumbling noise
 of thunder is heard.

480. Thus it was with him who died in the field of battle.
 Lost was the sweet expression of his countenance,

Shining were his polished teeth, and uplifted and still the
black of his fixed eye!
No longer erect, his hair lay flat on his pale face, and
frightful yet becoming was his severe wound.
Such is the appearance of the brave who die in battle.

479. Ri lina sri Karna lara laruti Kang Korawa bala
Tinut ginreg mukséng wana Kateduning lo'ah juranga res
Pareng mwanng lindu mega sumara riris rah sumarasah
Kawanda lirning téja patrà keter wana tangisa

480. Nian lir sang mating rana pada elang mwanng manesira
Waja nerang seidenta sepi irengi Kang nitra lumayep
Alandung sang sri tang muka lalu Kuchem syu brana luwes
Datanlen sang waneng baya mapalupu'i ring rana saba

481-483. [The *Kuráwa* having taken to flight are pursued by the *Pandáwa* into *Astína*.]

484. [Night coming on, the *Pandáwa* return.]

485-489. [*Suyudána* comments on the misfortune of the *Kuráwa* in losing *Kérna*, and consults about the fittest person to succeed that hero.]

490-497. [Advised by *Sakúni*, *Suyudána* asks *Sália* to assume the chief command.]

498-500. [*Sália* endeavours to excuse himself; whereupon *Aswatáma* comes forward, and accuses him of being friendly to the *Pandáwa*, and on that account unwilling to become the leader of the *Kuráwa*.]

501-502. [*Aswatáma* and *Sália* quarrel and are going to fight, when *Suyudána* interferes and draws *Sália* away, exhorting him to take the command.]

508-511. [*Sália* at last consents, and then withdraws to his wife.]

512-516. [*Nakúla* is sent by *Krésna* to *Sália* to dissuade him from fighting. Description of *Sália*'s palace.]

517-524. [At sight of his nephew *Nakúla*, *Sália*'s resolution fails him, and he promises not to fight against the *Pandáwa*. He declares he will readily and willingly surrender his life to *Dérma Wángsa*, but to no one else, and that that worthy person has only to make use of the arrow called *pustaka akalíma asáda*.]

525-527. [*Nakúla* returns and informs *Krésna* and *Dérma Wangsa* of the success of his mission to *Sália*, and of all that passed on the occasion.]

528-553. [*Sália* relates to his wife *Sátia Wáti*, the result of his interview with *Nakúla*, and of his intention to sacrifice himself, whereupon she is grieved and sheds tears. Then follows a long and detailed description of *Sátia Wáti*, her person, manners, disposition, &c., and the particulars of a conversation which takes place between her and her husband, wherein they display great affection for each other; after which they yield to the power of love, and then fatigued with amorous dalliance, sink into each other's arms and fall asleep.]

554-556. [In consequence of *Sátia Wáti*'s declared determination to accompany him, *Sália* steals from her when she is asleep; and having got fairly away from her, he dresses himself without, and is honoured by the *Pandíta*, who cast flowers upon him.]

559. [*Sália* reaches the field of battle.]

560. [The *Pandáwa* army forthwith appears, and an engagement takes place.]

561. [The army of the *Pandáwa* are hard pressed and obliged to fall back.]

562-564. [*Bíma* comes to their support and routs the enemy with great slaughter.]

565-567. [*Sália* deserted by his army remains alone, and as he discharges his arrows they change into thousands of *Rasáksas*, dragons, and evil spirits, which lighting among the enemy occasion great consternation; whereupon *Krésna* ordering all the people to throw down their weapons and fold their arms, the whole of the *demons* disappear without doing any harm.]

568-581. [The good and quiet *Dérma Wángsa* is reluctantly persuaded by *Krésna* to save the *Pandáwa* by killing *Sália*.]

582-583. [*Dérma Wángsa* discharges the arrow *pustáka kalíma asáda*: it penetrates and sticks in the breast of *Sália*, who immediately dies.]

584-586. [On the death of *Sália* the *Kuráwa* forces are routed and pursued in all directions by the *Pandáwa*, with great slaughter.]

587. *Suyudána* was on the point of being taken, but he
bravely resisted;
And quickly bounding away in great alarm, he narrowly
escaped with his life.
But *Sakúné*, trembling with fear, fell into the hands of the
enemy;
And weeping, implored mercy, exclaiming, "this is the
reward of my kindness and hospitality."

587. Suyudana sireki meh kawananga takis lagawa
Lumompata layu luput lepasa met urip katresan
Tuwen sakuni sang sedeng ngkakatran kakesa graha
Asambata nangis dine kwenargan buja sestawa

588. "Silence! thou vile and infamous dog!
"With what restless labour hast thou sought to vex and
offend me;
"But now will I fail not to take my revenge;
"Death shall seize thee, and great shall be thy torture."

589. Thus spake *Bíma*, and trampling him beneath his feet,
He thereby and with his *gáda* reduced to atoms the body of
Sakúne.
The story goes, that he tore it in pieces, and sucking the
blood,
Scattered them among the villages of the north and of the
south.

590. The enemy being totally extinguished, filled was the
field of battle with mountains of the slain,
While downward, in its deep bed, a sea of blood rolled with
noisy rush.

Suyudána having escaped, there yet remained to seize him.
He is pursued and sought for, but cannot be found, having
plunged in the water.

591. Abandoning their fruitless search after *Suyudána*, the
five *Pandáwa* returning, homeward bend their
course.

Déwi Sátia Wáti is then informed that *Sália* had fallen in
battle.

Aged and creditable persons, bowing respectfully,
communicate to her the dire news:

Concealed amid the heaps of slain lay her lord, they alone
escaped to tell the tale.

588. Ada nara'neng tako ngasu kanistane chadama
Datan werga weh laram beka ngupaya ri banchana

samendeming sawa

592. The news quickly spreading, all the *Gúrus* of the
country weep on every side.
Trembling and distressed, *Déwi Sátia Wati* no longer retains
the power of speech.
Blind with grief and with a heart full of sorrow, she reels and
cannot stand:
Lost and insensible to all around, she seemed as if life itself
had forsaken her.

594. Coming to herself, by the pains and assistance of her
friends, she rises and adjusts her disordered dress:

Then loosening and combing her hair, she is bent on
repairing to the field of battle.

First grasping her *petrem*^[189], wherewith to deprive herself
of life when she reaches the place where the joy of
her heart is lain,

She forthwith ascends her chariot, and sets out, favoured by
a grateful breeze.

592. Sang siptan pawaranya tando'a guruwing sanagara pada

565-602. [Accompanied by *Sagandika*, she wanders over the field of battle
by night in quest of his corpse, looking for it among the number of prostrate
slain. Appearance of the different dead bodies and carcasses of horses,
elephants, &c. described. She often thinks that she has found it: her
repeated mistakes and disappointments.]

603. Wearied with fruitless search, and despairing of finding
him to whom she would make her obeisance, the
princess

Unsheathed her dagger, resolved to stab herself, her heart
being wholly devoted to her husband.
But the Almighty, in pity, sent lightning to guide her to the
spot where he whom she had long sought for lay,
And inspired her with strength and desire to renew the
search.

604. All this while the chariot^[190] lay buried among flowers
which had been showered down upon it.
As if the growling thunder wept, tears fell in small rain, in
grief for the death of the prince^[191].
Such was the mark the princess followed till she came to and
perceived the body of *Sália*,
Who seemed as if looking at her with a side glance as he lay
with grinning teeth.

603. Meh tan diria mahas narendra ma'isi ri taiyani sang

605. Then quickly seizing the feet of him, now lifeless, who
 stole from her bed,
Not knowing what she did, she patted, pressed, and kissed
 the body,
His lips she rubbed and stained red^[192]; supporting his head
 with her encircling arm, and wiping his face with the
 end of one of her garments: but long were his eyes
 without twinkling.
To cure his wounds she constantly applied her chewed *síri*.

606. "Ah! ah! my princely lord, thou whom having sought I
 have at last found, why dost thou remain silent?
"Wilt thou not speak to her who has thus sought thee out?—
 Who else is there to be kind to me, unfortunate?
"Tired and worn out am I with searching for thee, and now
 with averted glance thou refusest to look at me,
"Shall I weep, or what is it thou wouldst have me do?—
 Speak and tell me, instead of preserving this
 unmeaning smile.

607. "Am I to understand that thou hast no regard for me?
 Come, quick, speak comfort to me, and make my
 heart glad."
With words sweeter than honey, and nicely selected, did she
 thus hold converse with the dead; but it was all in
 vain.
"Was it thus to meet death," said she, "that thou didst steal
 from me when I was asleep,
"And depart alone, without my knowledge, to the regions
 above? but I will follow thee.

617. Thus weeping, the female attendant, affected with grief,
The buried dagger drew (from the body of her mistress),
And stabbing herself, instantly expired
At the feet of the princess, where her body lay.

618. Forthwith delighted their happy spirits together fled.
The astonished spirit of prince *Sália* quickly said:
"Uneasy and impatient have I waited for thee among the
clouds,
"With many *Widadáris*, *Panditás*, and *Déwas*."

619. Having taken the princess in his arms,
He returned with her by the road which leads to heaven.
There arrived, they find it extremely beautiful.
Of silk were the houses and brilliant were the precious
stones.

620. Amusing herself, the princess
Was delighted with the abundance of food which was there,
Great being the bounty of the Almighty to mankind,
And there was no difference susceptible in the ages of those
that were there^[194].

617. Nahan tangis ning pari charaka n'gres

621-624. [The *Pandáwa* hear that *Suyudána* is in the middle of the river: delighted, they repair to the spot. *Bíma* calls him a dastardly coward afraid to die, and assures him that his arm will reach him, whithersoever he may betake himself, to the lowest depth of the earth or the highest region of heaven.]

625-628. [*Suyudána* comes out of the water and assures *Bíma* that he betook himself to the river, not out of fear, but for the purpose of making adoration to the gods, challenging *Bíma*, or any other of the *Pandáwa*, to combat. *Krésna* represents that *Dérma-Wángsna* is too peaceable and benevolent to fight against *Suyudána*; that *Arjúna*'s forte consists in using the bow mounted in a chariot; that *Nakúla* and *Sedéwa* are too young and inexperienced, and that *Bíma* is therefore the fittest of all the *Pandáwa* to oppose *Suyudána*.]

629-631. [*Kakrasána* is informed by *Naráda* of the *Pandáwa* and *Kuráwa* forces being engaged, and withdraws to see the issue of the contest. *Bíma* and *Suyudána* go and make their respects to him, and each receives from him a charm.]

632-639. [*Bíma* and *Suyudána* fight. Missing each other, they strike and cut the earth, trees, and every thing about them, without being able to hurt each other. They then throw away their weapons, and closing, wrestle. So closely are they united, that they seem to be one person and to have one voice.]

640-656. [*Arjúna* repeatedly striking his hand on his left thigh, reminds *Bíma* of *Suyudána*'s being vulnerable in that particular place only. *Bíma* recollecting the circumstance, seizes his club and strikes *Suyudána* with it in his vulnerable part. *Suyudána* falls, and expiring under the blow is trampled upon by *Bíma*, who continues to insult and triumph over him, till out of all patience with his relentless and ungenerous conduct, *Kakrasána*

seizes his spear and is going to slay *Bíma*, but is withheld by *Krésna*, who says that *Bíma* is not to be blamed for such just retaliation.]

(Here end the Javan copies of this work; the following abstract is from a copy of the *Bráta Yúdha Káwi* presented to me by the *Rája* of *Báli Balíling* in *Báli*.)

657-667. [*Suyudána* dead, and night coming on, the *Pandáwa* retire from the scene of battle to the city of *Astína*, and there feast and rejoice, on account of their victory. Satiated and fatigued with their revelling, all except *Krésna* go to sleep. He alone remains awake, pitying in his own mind the fate of *Suyudána*, and recollecting with feelings of regret the indignant and unkind manner in which he was treated by *Bíma*. Withdrawing by stealth, he goes to the mountains, and wanders about oppressed with grief and much agitated.]

668. [Next morning the *Pandáwa* missing *Krésna*, go in search of him, and find him among the images on the hills. Portentous signs take place. A raven croaks till blood issues from its beak, it rains blood, and all the wild animals fight with each other.]

669. [Next morning all these omens are gone.]

670-693. [News arrives from *Astína* of *Aswatáma*'s having entered the city by night, and assassinated *Drésta-drúmna*, *Sérikándi*, and *Pánchakumára*, and of all the *mántris* having fled for fear. Half are inclined to give credit to the report, and half believe that it must have been the spirit of *Sália*. The *Pandáwa* return to *Astína*, and find the women there all in tears, and bewailing the loss of those who had been murdered during the night. *Krésna* consoles them, and reconciles them to what has happened.]

694-696. [*Krésna* makes the *Pandáwa* accompany him in search of *Aswatáma*, whom they find among the hills.]

697-699. [*Bíma* is going to strike *Aswatáma*, when the latter discharges an arrow at *Bíma*, and at the same time tells him he is not a fit opponent, inviting *Arjúna* to contend with him. *Arjúna* and *Aswatáma* fight, causing the earth and mountains to shake, &c.]

700-705. [*Sáng yáng Naráda* descends from above, and tells *Arjuna* that they will cause the destruction of the world if they continue the dreadful conflict. *Sáng yáng Naráda* at the same time goes up to *Aswatáma*, and advises him to desist from opposing the *Pandáwa*, as he will certainly be beaten, and recommends his surrender and resignation to the *Pandáwa* of his *pusáka* of *Chúda-manik*, also called *Chúpu-mánik Estígéna*, a charm which gives its possessor the power of getting eight different things.]

706-707. [*Aswatáma* refuses to give it to the *Pandáwa*, but is willing to part with it to the unborn grandson of *Arjuna*, of whom *Utári* was then pregnant, and whom he directed should be called *Parikísit*.]

708-709. [*Krésna* offers to bear witness to the promise; after which *Aswatáma* gives the *pusáka* to *Bíma*, to deliver to the grandson of *Arjuna*.]

710-714. [*Krésna* and the *Pandáwa* again return to *Astína*, and inform *Arjuna*'s wife of what has happened. *Aswatáma* remains aloof from the *Pandáwa*, wandering about in the woods and among the mountains. *Yuyútsuh*, the only surviving *Kuráwa* chief, joins and lives with the *Pandáwa*. All the sons of the *Pandáwa* having been killed in the battle, without a single descendant being left to be made a king of *Astína*, excepting the yet unborn son of *Abimányu*, whom *Utári* was about to bring forth, *Dérma Wángsa*, the eldest of the *Pandáwa* (although all of them had arrived at an age when they should withdraw from the world) is appointed sovereign, until such time as he can be relieved and succeeded by the yet unborn *Parikísit*. Description of *Dérma Wángsa*; the beauty of his person; his many good qualities and accomplishments, for which and for his character for justice, wisdom, prudence, &c. he is universally beloved, and his praises celebrated in song.]

715-719. [*Dérma Wángsa* receives the name and title of *Batára Jáya Báya*. Under his wise and excellent administration the kingdom of *Astína* flourishes, crimes are unknown, and the inhabitants are happy. The neighbouring princes of Java, who had survived the war, all acknowledge the authority of the king of *Astína*, and pay homage to him.]

The musical instruments of the Javans are peculiar. Several of them are necessary to compose a *gámelan*, set, or band: of these there are several varieties. The *gámelan salíndro*, which is the most perfect, consists of the several instruments represented in the plate. In the *gámelan pélog*, the instruments are much larger and louder; the *bónang* or *krómo*, has sometimes only ten, and sometimes as many as fourteen notes. Both of these *gámelans* are employed as accompaniments to the *wáyangs*. The *gámelan míring* partakes of the two former, and is employed to accompany the *wáyang klítik*. In the *gámelan mún'gang*, called also *kódok ng'órek*, from its resembling the croaking of frogs, the *bónang* has fifteen notes, and the *kécher* resembles the triangle: neither the *géndér*, *salentam*, *sarón*, nor *chalémpung* are included in this set; this *gámelan* is considered the most ancient, and is played at tournaments, in processions, &c. In the *chára báli*, or *chára wángsul*, the *rebáb*, or viol, is not used: in other respects the instruments are the same as in the *salíndro*, except that they are as large as in the *pélog*. The *gámelan sekáten*, which resembles the *pélog*, except that the instruments are still larger and louder, is restricted to the use of the sovereign, and seldom played, except on great occasions, as during eight days of the festival of *Múlut*. The *gámelan srúnen* is used in processions of state and in war, being properly the martial music of the country, in which, besides the ordinary instruments, a particular *gong* and trumpets are introduced.

The plate will afford a better idea of the form of these instruments than any verbal description. Most of them resemble the *staccáto* or harmonica, and the sound is produced by the stroke of a hammer. The *gámbang káyu* has wooden plates, sixteen or seventeen in number: the *gámbang gángsa*, of which there are several in each band, has metal plates.

In the *géndér* the metal plates are thin, of a different form, and suspended by strings. The *gong*, represented (No. 9) in the plate, is usually three feet in diameter. The *bónang*, *kénong*, and *ketók*, are of metal, and are suspended by tightened cords to favour the vibration. The *kécher*, shewn in the plate, corresponds with the cymbal. The hammers with which the larger instruments are struck are either wound round at the end with cloth, or the elastic gum, in order to soften the sound. The drum is struck with the open hand and fingers only. The *chalémpung* is a stringed instrument, with from

ten to fifteen wires, which are sounded with the finger, after the manner of the harp.

The person who leads the band performs upon the *rebáb* (No. 17), an instrument which, having a neck, and two strings pitched by pegs, is capable of producing perfect intonation and a variety of sounds, by shortening the strings with the pressure of the finger.

The *gámbang káyu* (No. 2) is a kind of *staccáto*, consisting of wooden bars of graduated lengths, placed across a kind of boat, which, when skilfully struck with a sort of mallet, produce pleasing tones, either grave or acute. The lowest and highest sounds of the instrument differ from each other by the interval of three octaves and a major third: the intermediate sounds of each octave from the lowest note are a second, third, fifth, and sixth. This instrument is general throughout the Archipelago, and is frequently played alone, or accompanied only by the drum and a small *gong*. *Ráden Rána Dipúra*, a native of Java, who accompanied me to England, played on this instrument several of his national melodies before an eminent composer, all of which were found to bear a strong resemblance to the oldest music of Scotland, the distinctive character of both, as well as of Indian music in general, being determined by the want of the fourth and seventh of the key, and of all the semitones^[195]. By reiteration several of the sounds are artfully prolonged much beyond their noted length, which produces an irregularity of measure that might both perplex and offend the educated ear of an accompanying timeist. The rhythm of the sections (from extention and contraction) appears very imperfect.

The *bónang* or *krómo* (No. 3) the *sáron* (No. 5) the *démong*, (No. 6) and *selántam* (No. 7) are *staccátos* of metallic bars, and a sort of bells placed on a frame. They contain a regular diatonic scale, and nearly two octaves. These, however, are never played singly, but harmonize with the instrument on which the air is played.

The *gongs* (No. 9) are perhaps the noblest instruments of the kind that have been brought to Europe: I am assured that they are very superior to that which was admitted in the terrific scenes of the serious ballet representing the death of Captain Cooke. Suspended in frames, and struck by a mallet covered with cloth or elastic gum, they sustain the harmonious triad in a very perfect manner, and are probably the most powerful and musical of all

monotonous instruments. They might be introduced with advantage in lieu of large drums. They have the advantage of being mellifluous, and capable of accompanying pathetic strains. The two *gongs* differ from each other by one note.

The above observations apply particularly to the *gámelan pélog*, which usually accompanies the recitation of the popular poems of the country. The *gámbang káyu* of the *salíndru* appears only to differ in being in another key, which is considered better suited to the occasions in which that kind of *gámelan* is used.

The airs which are exhibited in the plate are selected from several written down by a gentleman at *Semárang*, as they were played on the *rebáb* of the *gámelan pélog*, and may afford a further illustration of the nature of their music.

But it is the harmony and pleasing sound of all the instruments united, which gives the music of Java its peculiar character among Asiatics. The sounds produced on several of the instruments are peculiarly rich, and when heard at a distance have been frequently compared to those produced on the harmonic glasses. The airs, however simple and monotonous they may appear of themselves, when played on the *gámbang káyu*, or accompanied by the other instruments, never tire on the ear, and it is not unusual for the *gámelan* to play for many days and nights in succession.

The Javans do not note down or commit their music to writing; the national airs, of which I have myself counted above a hundred, are preserved by the ear alone. Those which are exhibited in the plate are among the most popular: but there are a variety which are played on occasions of rejoicing and festivity, which it would be difficult to note down; if, indeed, they can be called airs at all, the sounds produced rather resembling the chiming of bells than a melody. Thus, when a great man arrives at the native seat of government, the tune of *kébu gíru*, "buffaloes frisking," is played, and a variety of others of the same nature, which diffuse the same kind of joy and gaiety among all assembled, as the quick ringing of bells in the churches of England.

A complete set of the *gámelan pélog* costs from a thousand to six hundred dollars (£250 to £400,) but second-hand sets are frequently disposed of. The principal manufacture is at *Grésik*, and the *gongs* in particular furnish a

valuable article of export. Every native chief in authority has one or more *gámelans*, and there are more or less perfect sets in all the populous towns of the eastern provinces.

In some of the interior, and in particular in the *Súnda* districts, the inhabitants still perform on a rude instrument of *bámbu*, called the *ángklung*, of which a representation is given in one of the plates. This instrument is formed of five or more tubes of *bámbu*, cut at the end after the manner of the barrels of an organ. These, which are of graduated lengths, from about twenty to eight inches, are placed in a frame, in such a manner as to move to a certain extent from their position, and to vibrate on the frame being shaken. A troop of from ten to fifty mountaineers, each with an *ángklung*, and accompanied by one or two others with a small drum played with the open hand, always perform upon this instrument on occasions of festivity in the *Súnda* districts. The upper part of the instrument, and the parties themselves, are generally decorated with common feathers, and the performers, in their appearance and action, are frequently as grotesque and wild as can be imagined. There is something, however, so extremely simple, and at the same time gay, in the sound produced by the rattling of these *bámbu* tubes, that I confess I have never heard the *ángklung* without pleasure. The Javans say the first music of which they have an idea was produced by the accidental admission of the air into a *bámbu* tube, which was left hanging on a tree, and that the *ángklung* was the first improvement upon this Æolian music. With regard to the music of the *gámelan*, "that," they say, "was procured from heaven, and we have a long story about it."

A wind instrument, of the nature of a flute, but in length some feet, with a proportionate diameter, is sometimes introduced in the *gámelans*; but this is not usual in Java, though, in *Báli* it is general.

The *trawánga* is a stringed instrument, not very unlike a guitar^[196], which is occasionally found in the *Súnda* districts: it is by no means general. I recollect to have once heard an old blind bard at *Chiánjur* play upon this instrument, reciting at the same time traditions respecting *Pajajaran*, and the ancient history of the country, which had probably never been committed to writing.

The Javans have made no progress in drawing or painting; nor are there any traces to be found of their having, at any former period of their history,

attained any proficiency in this art. They are not, however, ignorant of proportions or perspective, nor are they insensible to the beauty and effect of the productions of other nations^[197]. Their eye is correct and their hand steady, and if required to sketch any particular object, they produce a very fair resemblance of the original. They are imitative, and though genius in this art may not have yet appeared among them, there is reason to believe that, with due encouragement, they would not be found less ingenious than other nations in a similar stage of civilization. They have a tradition, that the art of painting was once successfully cultivated among them, and a period is even assigned to the loss of it; but the tradition does not seem entitled to much credit.

The Javans do not appear to possess any peculiar method or system in their arithmetical calculations. They generally compute without putting down the figures in writing. In this process they are slow, but generally correct. The common people, from an entire ignorance of arithmetic, or to assist their memory, sometimes use grains of *pári* or small stones on these occasions.

The many vast and magnificent remains of edifices found at this day in different parts of Java, bear witness to the high degree of perfection in which architecture and sculpture were at one period practised in that island. But whether the natives themselves designed these edifices and their ornaments, or only worked under the direction of ingenious artists from other countries, is a question connected with their history, which we shall at present forbear to inquire into.

The art of sculpture is entirely lost to the natives. The only modern buildings they possess, of any architectural importance, are the *krátons*, or palaces of the chiefs, which have already been described.

The Javans of the present day have no pretensions to astronomy as a science. The seasons are determined by reference to a system no longer perfectly understood, either in its principle or application; but from the Hindu terms still in use for the days of the week, &c. and from the similarity of many of their superstitions to those of continental India, it seems probable that if they ever possessed an astronomical system, it was derived from that quarter. Thus when an eclipse takes place, the people shout and make all the noise they can, to prevent the sun or moon from being devoured by the great *nága*, or dragon, which they suppose to be

invading it. Some of the better informed have derived a few notions of astronomy from the Arabs; but their knowledge, in this respect, is at best extremely imperfect, and it is rather to the traces which are to be found in the ancient manuscripts, and to the remains of what they knew in former days, that it is interesting to refer.

The Javans, in common with other Mahomedans, have, for upwards of two centuries, if not for a longer period, adopted the lunar year of the Arabs; but they still retain their own era, and seldom adopt that of the Hejira. The Javan era is called that of *Aji Sáka*, on whose arrival in Java it is supposed to have commenced; but as *sáka* is a Sanscrit term, variously applied, as connected with the establishment of an era, it was probably adopted by the Javans at the period of the introduction of the era itself^[198], which corresponds almost exactly with the Hindu era of *Salavaharna*, being seventy-four years short of the Christian era. The present is accordingly the year 1744 of the Javan era, or era of *Aji Sáka*. On *Báli*, where the same era is likewise adopted, there is a difference of about seven years, the *Báli* year being 1737. This difference is supposed to have arisen from the people of *Báli*, who are still unconverted to the Mahomedan faith, continuing to use the solar year.

The Javans usually divide the day and night each into five portions, as follows:

Division of the Day.

The period from six o'clock in the morning till eight is called	<i>ésuk</i> ;
That from eight to noon	<i>teng'angi</i> ;
That from noon till one o'clock	<i>bedúg</i> ;
That from one till three	<i>lingsir kúlon</i> ;
That from three till six	<i>ásar</i> ;

Division of the Night.

The period from six o'clock in the evening till eight is called	<i>sóré</i> ;
That from eight till eleven o'clock	<i>sirapwóng</i> ;
That from midnight till one o'clock	<i>teng'awéng'i</i> ;

That from one o'clock till three

*língsir-
wéng'i;
báng'un.*

That from three o'clock till daylight

The twenty-four hours of the day and night are also occasionally divided into what is called the *líma wáktu*, or five periods of time, namely: from sunset until eight o'clock in the morning; from that hour till twelve; from twelve till three; from three till four; from four till sunset.

Each of these divisions is considered sacred to one of the five deities, *Sri*, *Kála*, *Wísnu*, *Maheswára*, and *Bráma*, supposed to preside over these divisions of the day and night in rotation, the order being changed every day, until at the commencement of every fifth day and night it returns to the same again. The division which thus becomes sacred to *Sri* is considered fortunate; that to *Kála* unfortunate; that to *Wísnu* neither good nor bad; that to *Maheswára* as still more fortunate than that to *Sri*; that to *Bráma* as peculiarly unfortunate.

The terms *páhing*, *pon*, *wági*, *kalíwon*, and *mánis* or *légi*, are applied to the days of the *panchawára*, or week of five days, which is common throughout the country, and by which the markets are universally regulated^[199].

Besides this week of five days, which seems to be by far the most ancient as well as the most generally adopted among them, the Javans have a week of seven days as follows.

<i>Díti</i> , Sunday,	which corresponds with the Hindu	<i>Rowi</i> .
<i>Sóma</i> , Monday		<i>Soma</i> .
<i>Ang'gára</i> , Tuesday		<i>Mangala</i> .
<i>Búdha</i> , Wednesday		<i>Budha</i> .
<i>Raspáti</i> , Thursday		<i>Vrihaspati</i> .
<i>Súkra</i> , Friday		<i>Sukra</i> .
<i>Sanischára</i> or <i>Túmpah</i> , Saturday		<i>Sani</i> .

The Arabic terms are usually employed to express the months.

The weeks of seven days, considered with reference to the seasons, are termed *wúku*. Thirty of these are said to have been established in commemoration of the victory obtained over *Wátu Gúnung*^[200]. These thirty have again six principal divisions, each consisting of thirty-five days, and commencing on the day when *díti* and *páhing* fall together.

Each *wúku*, is dedicated to its particular deity, and has its appropriate emblems in the Javan system of judicial astrology. The names of the *wúku* and of the deities to which each is considered sacred are as follow:

WÚKU.	DÉWA OR DEITY.
1. <i>Sínta</i>	<i>Batara Yáma.</i>
2. <i>Landáp</i>	<i>Súria.</i>
3. <i>Wúkir</i>	<i>Maheswára.</i>
4. <i>Kurántil</i>	<i>Puru Senkára.</i>
5. <i>Tálu</i>	<i>Báyu.</i>
6. <i>Gúmbreg</i>	<i>Sákra.</i>
7. <i>Waríga</i>	<i>Asmára.</i>
8. <i>Warigájan</i>	<i>Pancháresi.</i>
9. <i>Júlung Wáng'i</i>	<i>Sámbo.</i>
10. <i>Sung Sang</i>	<i>Gána Kumára.</i>
11. <i>Galúng'an</i>	<i>Kamajáya.</i>
12. <i>Kuníng'an</i>	<i>Indra.</i>
13. <i>Lángkir</i>	<i>Kala.</i>
14. <i>Mandásia</i>	<i>Bráma.</i>
15. <i>Julung-pújud</i>	<i>Páncha Rásmi.</i>
16. <i>Paháng</i>	<i>Tántra.</i>
17. <i>Kuru Welút</i>	<i>Wísnu.</i>
18. <i>Maraké</i>	<i>Gána.</i>
19. <i>Támbir</i>	<i>Séwa.</i>
20. <i>Mánda kung'an</i>	<i>Basúki.</i>
21. <i>Maktal</i>	<i>Chandrása.</i>
22. <i>Woyé</i>	<i>Kawéra.</i>
23. <i>Manáhil</i>	<i>Chitra Gáta.</i>
24. <i>Prang-bákat</i>	<i>Bísma.</i>

25. <i>Bála</i>	<i>Dúrğa.</i>
26. <i>Wúku</i>	<i>Lódra.</i>
27. <i>Wáyang</i>	<i>Sri.</i>
28. <i>Kuláwu</i>	<i>Sewandána.</i>
29. <i>Dukúd</i>	<i>Kanéka.</i>
30. <i>Wátu gúnung</i>	<i>Gúru.</i>

The twelve seasons, *Mángsa*, of which an account has been given, when treating of the agriculture of the Javans, are said to be determined by reference to the sun's course at the commencement of each of these divisions.

When a want of rain is experienced, it is a custom for the people of the village or town to assemble, and for a *wáyang* to be performed upon the story of *Wátu Gúnung* and *Déwi Sínta*. On these occasions two sticks of the dark coloured sugar-cane, two young and two old cocoa-nuts, two bundles of different coloured *pári*, two bundles of the flowers of the *areca*-nut, a piece of white cloth, sweet scented oils, two fowls and two ducks, are placed by the side of the *dálang* during the performance, and are afterwards considered his property.

The term *wíndu* is used to express a revolution or cycle of years. The Javans refer to *wíndu* of eight years, a *wíndu* of twelve years, a *wíndu* of twenty years, and a *wíndu* of thirty-two years. The *wíndu* of eight years, now in use, seems to have been borrowed from the Arabs; but this is more frequently considered of seven years, each year taking its name from one of the following animals, according to the day of the week on which it begins.

<i>Mangkára</i> , Prawn,	if on a Friday,
<i>Ménda</i> , Goat,	Saturday,
<i>Klábong</i> , Centiped,	Sunday,
<i>Wichitra</i> , Worm,	Monday,
<i>Mintúna</i> , A species of fish,	Tuesday,
<i>Was</i> , Scorpion,	Wednesday.
<i>Maisába</i> , Buffalo,	Thursday.

The names given to the year comprised in the *wíndu* of twelve years appear to be the same with the signs of the zodiac, which, according to the manuscript discovered at Chéribon, are as follow:

1. <i>Mésa</i> or <i>Mesáris</i> ,	the Ram,	corresponding with the Hindu	<i>Mesha</i> ,
2. <i>M'rísa</i> or <i>M'resába</i> ,	the Bull,		<i>Vrisha</i> ,
3. <i>M'ritúna</i> or <i>M'rikaga</i>	the Butterfly,		<i>Mithuna</i> (the pair),
4. <i>Kalakáta</i> or <i>Kkala</i> <i>kadi</i> ,	the Crab,		<i>Karkata</i> ,
5. <i>Sing'ha</i> or <i>Grigréson</i> ,	the Lion,		<i>Sinha</i> ,
6. <i>Kanya</i> or <i>Kangerása</i> ,	the Virgin,		<i>Kunya</i> ,
7. <i>Tula</i> or <i>Tularási</i> ,	the Balance,		<i>Tula</i> ,
8. <i>Mri-Chika</i> or <i>Priwitarási</i> ,	the Scorpion,		<i>Vrishchica</i> ,
9. <i>Dánu</i> or <i>Wánok</i> ,	the Bow,		<i>Danus</i> ,
10. <i>Makára</i> ,	the Crawfish,		<i>Makara</i> (sea monster),
11. <i>Kúba</i> ,	the Water- jug,		<i>Kumbha</i> ,
12. <i>Ména</i> ,	the Fish,		<i>Mina</i> ^[201] .

The Javans, though they occasionally apply the signs of the zodiac to the twelve years of the cycle, have at present no knowledge of these signs as connected with the sun's course. In the Chéribon manuscript, which contains an explanation of each sign, they seem to have been considered only as giving names to particular years. Thus in the explanations of the first sign it is stated:

"This year, the year of *Mesa-arsi*, there is a mark in the horn of the ram; the deity who presides is *Batára Wisnu*; the rain is for five months; it is

profitable to plant *gágas*, but birds destroy great quantities; this may be prevented by administering *obat* (medicine) composed of the oil of the *káwang*, with the flowers of the cotton plant and those of the *kasúmba*; rats also do great mischief in the *sáwahs*, which may be prevented by administering the *bud* of *síri* on a lucky day, named *ang'gara*, and *diti* on the *panchawára Mánis*; when administering it the following words should be repeated; '*Hong! Kíro-Wísnu-Sówa! tung'gal sih ning Buána!*' 'Hail Wisnu! who art beheld clearly to be the only one in the world!'"

In the same manuscript, which appears to be entirely of an astronomical or astrological nature, the year appears to be divided into four portions, each distinguished by the peculiar position of a *nága*, or serpent.

The first of the three divisions includes *Jista*, *Sáda*, *Kásar*; the form and shape of the great *nága* in these seasons is first stated, and represented by a drawing, the head being during these months towards the east and tail to the west. "In these months, if any one wishes to plant rice, it must be white and yellow *pári*; and at this time alms must be given, consisting of white rice ornamented with the flowers called *wári*, and in the name of or in honour of *Déwa Yáma*, and on the seventh day. It will not be profitable to go to war in these months.

"If a child is born in these months he will be liable to seven sicknesses through life. Great care and caution must be taken in these months against sickness."

The second is as follows:

"In the seasons of *Káru*, *Katíga*, and *Kaphat*, the head of the *nága* is to the north and tail to the west. These times are neither good nor bad; it is proper to plant yellow *pári*; alms should be given of *búbur ábang*, red rice and water, &c. in honour or in the name of *Déwa Sarasáti*. Success will attend wars undertaken in these months.

"If a child is born in the month it will be unfortunate, and great care and caution must be taken regarding it; and if the child attains an advanced age, unhappiness will befall the parent.

"In the third *nága*, which includes the fifth, sixth, and seventh seasons, the head of the *nága*" it says, "is to the west, his tail to the east, his belly to the north. The offering then to be made is yellow rice, and a small ivory-

handled knife ornamented with gold. The deity of these months is *Batára Sarastati*. In going to war in these seasons, be careful not to face the head of the *nága*^[202]."

FOOTNOTES:

[146] One of the titles of *Jaya Baya*.

[147] *Duijawara*, *Pandita* of society or village priests.

Resi, *Pandita* who do penance in the woods.

Sewa, *Pandita* who fast and constantly watch.

Sugata, *Pandita* who communicate advice and give instruction.

[148] The supposed author of the poem.

[149]

Risanga kuda suda chandrama,

9 7 0 1

making 1079 of the Javan æra. But other interpretations render it 708, which latter is the date generally attributed to the work on Java, and the period in which *Jaya Baya* is said to have reigned.—*See History*.

[150] *Astina*.

[151] The Indian fig or *banyan*.

[152] *Nagasari*.

[153] *Bramára*.

[154] *Kuráchékéchup*.

[155] Swamps.

[156] *Paseban*, assemblage of chiefs in front of the palace.

[157] The same with the *kasang'a*.

[158] The same with the *masmas*.

[159] Umbrella.

[160] A large head of *bambu*.

[161] The yellow *bambu*.

[162] *Kiong*, *Chiong*, or minor.

[163] Tegal.

[164] Another name for *Krésna*.

[165] *Krésna*.

- [166] Kresna.
- [167] *Satiaka*.
- [168] *Déwi Kúnti*.
- [169] The mother of the *Pendáwa*, the same with *Déwi Kúnti*.
- [170] Vishnu.
- [171] Three pair of eyes.
- [172] Child of the sun.
- [173] Commander-in-chief.
- [174] *Seta*.
- [175] King of the *Kuráwa*.
- [176] The plain of *Kuru*.
- [177] Or Elephant Carcass, another name for *Astína*. The Javan tradition is, that an elephant made the country, in order to obtain *Ratnádi*, who, thinking it impracticable, had imposed that task on him, as a condition of her favour. When it was effected, she got *Gatáma* to kill him, and then married him. It was called *Astina*, from *Asti*, which also signifies an elephant.
- [178] The princes on the side of the *Pandawa*.
- [179] Or that of a sharp-pointed weapon.
- [180] *Arjúna*.
- [181] *Bima*.
- [182] Wife of *Arjúna*.
- [183] *Sita*.
- [184] *Dresta Drijúmna*.
- [185] Religious instructors.
- [186] Their brother, being also a son of *Wirátes Swára*.
- [187] *B'hramástra*.
- [188] See plate of the position of the *Matàrem* army.
- [189] Dagger.
- [190] Of *Sália*.
- [191] Milton says:

"Sky lowered, and muttering thunder, some sad drops,
"Wept at completion of the mortal sin."

And a modern poet selected the passage as an example of the exercise of a truly poetical imagination.

- [192] With *Síri* juice.
- [193] Bridge.

[194] Having since my return to England put these illustrations of the *Brata Yudha* in the hands of a relative (the Rev. Thomas Raffles, of Liverpool,) he has been kind enough to give the translation a poetical dress, and I regret that the limits of the present volume do not admit of their insertion in this form, in justice to the poetry of Java and the talent which he has displayed. The following example of the last stanzas may serve as a specimen of the style and spirit in which the task has been executed.

603. Wearied with fruitless search, and in despair
To find the object of her pious care,
Her murder'd lord, who on the battle plain
Lay all neglected mid the thousands slain,
She drew the dagger from its sheath of rest,
Intent to plunge it in her heaving breast.
Just then, as if in pity to her grief,
Flash'd the red light'ning to the maid's relief,
And shew'd with horrid glare the bloody way
To where her husband's mangled body lay.

604. Another flash, indulgent from the skies,
Points to the spot where *Sália's* carriage lies,
And *Sália's* self, whom living she adored,
The bleeding body of her murder'd lord.
The richest flowers by heavenly influence shed
Their sweetest odours o'er his honoured head,
The muttering thunder mourned his early tomb,
And heaven in showers bewailed the hero's doom.

605. With eager grasp the livid corpse she press'd
In frantic wildness to her throbbing breast;
Tried every art of love that might beguile
Its sullen features to one cheerful smile;
Kiss'd those dear lips so late of coral red,
As if unconscious that the soul had fled;
Then in her folded arms his head she rais'd,
And long on those beloved features gazed.
With *síri*-juice his pallid lips she died,
And to his wounds its healing balm applied;
While with the skirt of her embroidered vest,
She wip'd the blood-drops from his mangled breast.

606. "Ah! then, my princely lord, whom I have found
"Bleeding and mangled on this cursed ground!
"Why are thy lips in sullen silence sealed
"To her who sought thee on this battle field?
"Wilt thou not speak—my love, my lord, my all,
"Or still in vain must *Sátia Wáti* call!
"Say, shall my copious tears in torrents flow
"And thus express my agony and woe?
"How shall I move thee, by what art beguile
"The ghastly air of that unmeaning smile?"

607. Thus soft and tender were the words she poured,
To move the pity of her murder'd lord;
But ah! no sound the unconscious dead return'd,
No fire of love within his bosom burn'd;
While at each pause a death-like stillness stole
O'er the deep anguish of the mourner's soul.
"And was it thus to bow thy honour'd head
"Amid the thousands of the mingled dead,
"That on that fatal morning thou didst glide
"With gentle footsteps from thy consort's side?
"And thus to reach the glorious realms above
"Without the faithful partner of thy love?
"But earth has lost its fleeting charms for me,
"And, happy spirit, I will follow thee!

608. "Oh! meet and bear me o'er that fatal stone,
"Nor let me pass it, trembling and alone.
"Though *Widadáris* shall obey thy call,
"Yet keep for me a place above them all.
"To whom but me does that first place belong,
"Who sought and found thee mid this ghastly throng;
"And who, unable to survive thy doom,
"Thus sheds her blood and shares thy honour'd tomb?"

610. Then with a steady hand the noble maid
Drew from its peaceful sheath the gleaming blade;
From her fair bosom tore th' embroidered vest,
And plunged it deep within her heaving breast.
Rich was the blood that issued from the wound,
And streamed like liquid gold upon the ground.

611. And while the ebbing tide of life remained,
And thought and reason were a while sustained,
She called her maiden with her feeble breath,
And thus address'd her from the arms of death.

612. "Oh! when my spirit soars to realms above,
"Take this my last request to those I love:
"Tell them to think of *Sátia Wati*'s fate,
"And oft the story of her love relate;
"Then o'er her woes the tender heart shall sigh,
"And the big tear-drop roll from pity's eye."

614. "Ah my lov'd mistress," cried the faithful maid,
"In every scene by thee I gladly staid.
"Whate'er the state of being thou must know,
"Thy faithful maiden will partake it too.
"What hand but mine the cooling stream shall pour,
"Or bathe the feet of her whom I adore?"

617. Strong in despair, and starting from the ground,

She drew the dagger from her mistress' wound,
With deadly aim she plunged it in her breast,
And with her mistress sunk to endless rest.

618. Then did their happy spirits wing their way
To the fair regions of eternal day.
The astonish'd shade of *Sália* linger'd there,
Borne on the pinions of the ambient air,
To bid the object of his earthly love
An eager welcome to the realms above.

619. Then in his arms his lovely bride he bore
Up that resplendent path he trod before,
Till earth and time had vanished all away
Amid the splendours of eternal day:
Where fields of light and silken mansions stand,
The glorious work of a celestial hand.

620. Th' enraptured princess, dazzled with the sight,
Gazed o'er the boundless realms of living light,
With heavenly fruit the eternal groves were crowned,
And joy and rich profusion smiled around.
All bore the bloom of an immortal youth,
All breathed alike the air of love and truth;
And all adoring one eternal mind,—
The Almighty, rich in bounty to mankind.

[195] The same observation has, I believe, been made on the character of the Grecian music.

[196] See Plate.

[197] We can hardly suppose them to have been as ignorant of the art of design as their neighbours on Borneo, at the period of their being first visited by Europeans. The following story is translated from a note in Joao de Barros, 4 Decade, Book I. Chap. 17. "Vasco Lorenzo-Drejo Cam and Gonzala Veltoza, were sent to the King of Borneo on a treaty of commerce. Among their presents was a piece of tapestry, representing the marriage of Henry VIII. of England and Catherine, Princess of Arragon. The king received them well, but on delivering the presents, the piece of tapestry was displayed, with the figures as large as life. This to the king was matter of alarm and suspicion, for he imagined that the figures must be enchanted, and that the Portuguese wished to introduce them under his roof to deprive him of his kingdom and his life. He ordered the tapestry to be immediately removed, and that the Portuguese should immediately depart, as he did not chuse to have any more kings beside himself in the country; and all attempts to pacify him were fruitless."—Vol. IV. Part I. p. 107.

[198] See Chapter on History.

[199] "Each Mexican month of twenty days was subdivided into four small periods of five days. At the beginning of these periods every commune kept its fair, *tianquiztli*."—*Humboldt's Researches*, Translation, vol. i. page 283.

"In respect to civil government, they divided the month into four periods of five days, and on a certain fixed day of each period their fair, or great market day, was held."—*Clavigero*, Translation, vol. i. page 293.

[200] See Literature, account of the *Kanda*.

[201] Each of the years represented in the Chéribon manuscript, and distinguished by the signs of the Zodiac, is considered sacred to one of the following deities: *Wísnu, Sámbu, Indra, Suria, Místri, Barúna, Sang Místri, Wandra Kurísia, Purusiah, Tabada, Aria, or Gána.*

[202] See an account of this manuscript under the head Antiquities.

AN ACCOUNT OF THE

ISLAND OF JAVA.

CHAPTER IX.

Religion—Introduction to Mahomedanism—How far its Tenets and Doctrines are observed—Priests—How provided for—How far the ancient Institutions of the Country are superseded—Antiquities—Edifices—The Temples at Brambánan—Bóro Bódo—Gúnung Práhu—Kedíri, Sing'a Sári, Súku, &c.—Sculpture—Images in Stone—Casts in Metal—Inscriptions on Stone and Copper—Coins—Ruins of the ancient Capitals at Médang Kamúlan, Majapáhit, Pajajáran, &c.—Island of Báli—Conclusion.

It has already been stated, that the established religion of the country is that of Mahomed. The earliest allusion to this faith made in the Javan annals is in the twelfth century of the Javan era (A.D. 1250), when an unsuccessful attempt appears to have been made to convert some of the *Súnda* princes^[203]. Towards the close of the fourteenth century, several missionaries established themselves in the eastern provinces; and according to the Javan annals, and the universal tradition of the country, it was in the first year of the fifteenth century of the Javan era, or about the year of our Lord 1475, that the Hindu empire of *Majapáhit*, then supreme on the island, was overthrown, and the Mahomedan religion became the established faith of the country. When the Portuguese first visited Java in 1511, they found a Hindu king in Bantam; and subsequently, they are said to have lost their footing in that province, in consequence of the arrival and establishment of a Mahomedan prince there; but with the exception of an inconsiderable number in some of the interior and mountainous tracts, the whole island appears to have been converted to Mahomedanism in the course of the sixteenth century, or at least at the period of the establishment of the Dutch at Batavia in 1620.

The natives are still devotedly attached to their ancient institutions, and though they have long ceased to respect the temples and idols of a former worship, they still retain a high respect for the laws, usages, and national observances which prevailed before the introduction of Mahomedanism.

And although some few individuals among them may aspire to a higher sanctity and closer conformity to Mahomedanism than others, it may be fairly stated, that the Javans in general, while they believe in one supreme God, and that Mahomed was his Prophet, and observe some of the outward forms of the worship and observances, are little acquainted with the doctrines of that religion, and are the least bigoted of its followers. Few of the chiefs decline the use of wine, and if the common people abstain from inebriating liquors, it is not from any religious motive. Mahomedan institutions, however, are still gaining ground, and with a free trade a great accession of Arab teachers might be expected to arrive. Property usually descends according to the Mahomedan law; but in other cases, the Mahomedan code, as adopted by the Javans, is strangely blended with the more ancient institutions of the country^[204].

Pilgrimages to Mecca are common. When the Dutch first established themselves on Java, it was not unusual for the chiefs of the highest rank to undertake the voyage, as will be seen in the course of the native history. As soon, however, as the Dutch obtained a supremacy, they did all they could to check this practice, as well as the admission of Arab missionaries, and by the operation of the system of commercial monopoly which they adopted, succeeded pretty effectually. It does not, however, appear that this arose from any desire to check the progress of Mahomedanism on Java, or that it was with any view to introduce the doctrines of Christianity, that they wished to cut off the communication with Mecca; their sole objects appear to have been the safety of their own power and the tranquillity of the country. Every Arab from Mecca, as well as every Javan who had returned from a pilgrimage thither, assumed on Java the character of a saint, and the credulity of the common people was such, that they too often attributed to such persons supernatural powers. Thus respected, it was not difficult for them to rouse the country to rebellion, and they became the most dangerous instruments in the hands of the native authorities opposed to the Dutch interests. The Mahomedan priests have almost invariably been found most active in every case of insurrection. Numbers of them, generally a mixed breed between the Arabs and the islanders, go about from state to state in the Eastern Islands, and it is generally by their intrigues and exhortations that the native chiefs are stirred up to attack or massacre the Europeans, as infidels and intruders.

The commercial monopoly of the Dutch, however injurious to the country in other respects, was in this highly advantageous to the character of the Javans, as it preserved them from the reception of many of the more intolerable and deteriorating tenets of the *Kóran*.

I have already mentioned, that every village has its priest, and that in every village of importance there is a mosque or building set apart adapted to religious worship. The usual Mahomedan service is performed; and the *Panghúlu*, or priest, consulted, and decides in all cases of marriage, divorce, and inheritance. He is bound also to remind the villagers of the proper season for the cultivation of the lands. He is remunerated by a tithe of the produce of the land, certain fees which are paid on circumcisions, marriages, divorces, and funerals, and presents which are usual at particular seasons and on particular occasions.

In every chief town there is a high priest, who with the assistance of several inferior priests, holds an ecclesiastical court, and superintends the priests who are appointed in the subordinate districts and villages. His emoluments consist of a share, which varies in different districts, of the *zakát* levied by the village priests, of fees of court, presents, &c. These chief priests are usually either Arabs, or descendants of Arabs, by women of the islands. Their number in some of the large towns is considerable; at *Pakalóngan* and *Grésik* they have amounted to some hundreds. The village priests are mostly Javans. On entering the profession, they adopt a dress different from that of the Javans in general, wearing a turban and long gown after the manner of the Arabs, and encouraging, as much as possible, the growth of a few hairs on the chin, as a beard. It is probable, that the total number of priests is not less than fifty thousand, which forms a ninetieth part of the whole population of the island.

In common with other Mahomedans, the Javans observe the ceremony of circumcision (*sónat*), which is performed at about eight years of age, and in a manner somewhat differing from that usual in other countries. The ceremony is usually attended with a feast and rejoicing. Girls, at the same age, suffer a slight operation, intended to be analogous, and called by the same name.

In their processions and rejoicings on religious festivals and other occasions, the Javans are free from that noisy clamour and uproar, which is

usual with the Mahomedans of continental India. The ceremony of *húsen hásen*, which on the continent excites such a general noise throughout the country, here passes by almost without notice, and the processions of the Sepoys on this occasion, during the period of the British government on Java, excited the utmost astonishment among them, on account of their novelty, noise, and gaudy effect; but nobody seemed inclined to join in, or to imitate them: indeed the Javans have too chaste an ear to bear with pleasure the dissonant sounds and unharmonious uproar of the Indians^[205].

The Mahomedan religion, as it at present exists on Java, seems only to have penetrated the surface, and to have taken but little root in the heart of the Javans. Some there are who are enthusiastic, and all consider it a point of honour to support and respect its doctrines: but as a nation, the Javans by no means feel hatred towards Europeans as *infidels*; and this perhaps may be given as the best proof that they are very imperfect Mahomedans. As another example of the very slight hold which Mahomedanism has of them, may be adduced the conduct of the reigning prince (the *Susúnan*) in the recent conspiracy among the Sepoys serving on Java. The intimacy between this prince and the Sepoys first commenced from his attending the ceremonies of their religious worship, which was Hindu, and assisting them with several idols of that worship which had been preserved in his family. The conspirators availing themselves of this predilection of the prince for the religion of his ancestors, flattered him by addressing him as a descendant of the great *Ráma*, and a deliberate plan was formed, the object of which was to place the European provinces once more under a Hindu power. Had this plan been attended with success, it would probably have been followed by the almost immediate and general re-conversion of the Javans themselves to the Hindu faith^[206].

Whatever of their more ancient faith may remain in the institutions, habits, and affections of the Javans, the island abounds in less perishable memorials of it. The antiquities of Java consist of ruins of edifices, and in particular of temples sacred to the former worship; images of deities found within them, and scattered throughout the country, either sculptured in stone or cast in metal; inscriptions on stone and copper in ancient characters, and ancient coins.

The antiquities of Java have not, till lately, excited much notice; nor have they yet been sufficiently explored. The narrow policy of the Dutch denied

to other nations facilities of research; and their own devotion to the pursuits of commerce was too exclusive to allow of their being much interested by the subject. The numerous and interesting remains of former art and grandeur, which exist in the ruins of temples and other edifices; the abundant treasures of sculpture and statuary with which some parts of the island are covered; and the evidences of a former state of religious belief and national improvement, which are presented in images, devices, and inscriptions, either lay entirely buried under rubbish, or were but partially examined. Nothing, therefore, of the ancient history of the people, of their institutions prior to the introduction of Mahomedanism, of their magnificence and power before the distraction of internal war and the division of the country into petty contending sovereignties, or of their relations either to adjacent or distant tribes, in their origin, language, and religion, could be accurately known or fully relied on. The grandeur of their ancestors sounds like a fable in the mouth of the degenerate Javan; and it is only when it can be traced in monuments, which cannot be falsified, that we are led to give credit to their traditions concerning it. Of these monuments, existing in great profusion in several places, and forming, if I may so express myself, the most interesting part of the annals of the people, none are so striking as those found at *Brambánan* in *Matárem*, near the middle of the island, at *Bóro Bódo* in *Kédu*, on *Gúnung Práhu* and its vicinity, in *Kedíri*, and at *Sing'a Sári* in the district of *Málang*, in the eastern part of the island.

In addition to their claims on the consideration of the antiquarian, the ruins at two of these places, *Brambánan* and *Bóro Bódo*, are admirable as majestic works of art. The great extent of the masses of building covered in some parts with the luxuriant vegetation of the climate, the beauty and delicate execution of the separate portions, the symmetry and regularity of the whole, the great number and interesting character of the statues and bas-reliefs, with which they are ornamented, excite our wonder that they were not earlier examined, sketched, and described.

With respect to the ruins at *Brámbanan*, we find, upon the authority of a Dutch engineer, who in 1797 went to construct a fort at *Klátén*, on the highway between the two native capitals, and not far from the site of the temples, that no description of its antiquities existed at that period. He found great difficulty in clearing away the rubbish and plants, so as to

obtain a view of the ruins and to be enabled to sketch them. The indifference of the natives had been as great as that of their conquerors, and had led them to neglect the works of their ancestors which they could not imitate. They had allowed a powerful vegetation, not only to cover the surface of the buildings, but to dislocate and almost to overthrow them. They still viewed with veneration, however, the most conspicuous statue in the ruins, and in spite of their Mahomedan principles, addressed it with superstitious reverence. The temples themselves they conceived to have been the work of a divinity, and to have been constructed in one night; but unfortunately this belief did not restrain the neighbouring peasants from carrying off the stones of which they were constructed, and applying them to their own purposes. Enough, however, still remains, to shew the style of architecture that was followed in their construction, the state of sculpture at the period of their erection, and the nature of the religion which then prevailed.

In the beginning of the year 1812, Colonel Colin Mackenzie^[207], so well acquainted with the antiquities of Western India, visited *Brambánan*, took an accurate survey of the ruins, and sketched the fragments of the building, the architectural ornaments, and the statues found there. His journal, accompanied with much ingenious and interesting speculation on the nature and origin of the worship indicated by them, he kindly permitted me to publish in the seventh volume of the transactions of the Batavian Society.

Considering it as a matter of importance, that a more extensive and detailed survey should be made while we had the best opportunity of doing so, I availed myself of the services of Captain George Baker of the Bengal establishment, employed in the provinces of the native princes, to survey, measure, and take draughts of all the buildings, images, and inscriptions, which this magnificent mass of ruins presented. The following is an abstract of his report on the subject.

In the province of *Matárem*, and between the native capitals of *Súra kerta* and *Yúgya kerta*, lies the village of *Brambánan*, and at a distance of a mile from the high road, there are hills which run east and west, for about a mile and a half. On one of these, within about one hundred yards to the south-east of the *Bándar's*^[208] house, stands

THE CHANDI KÓBON DÁLAM,

but so covered with trees and shrubs, that it is not visible till you are within two or three hundred yards of it. I could find no remains of the ancient enclosure, but the fields for some distance round have been enclosed in later days with the stones which have fallen from the temple. About forty yards westward of the temple, formerly stood two colossal images or *réchas*^[209], both now overthrown, and one broken in two: these evidently faced each other inwards, as if to guard the approach. Each of these, including the pedestal, is of a single block, seven feet high; the head is two feet high; the square of the pedestal about three feet, and its height thirteen inches and a half: the stone block coarse grained, and apparently the same as the outer coating of the temple. The door-way is three feet and a half wide, and now ten feet long, so that allowing two feet for dilapidation, the thickness of the walls must have been more than twelve feet. This leads directly to an apartment twenty feet square, the terrace of which, or original floor, is now covered to an unknown depth with masses of stone fallen from the walls and roof. The present height of the interior of the building is about twenty-eight feet.

The roof is a square pyramid about fourteen feet high, formed of stones which overhang each other like inverted steps. The stone composing the interior of the apartment is whitish and close grained, and breaks in flakes something like flint. The whole is uniformly cut and neatly morticed together without cement. The interior is perfectly plain, the exterior could never have possessed more than the simplest architectural embellishment.

Excepting the two *réchas*, or porters, I saw no remains of statuary; but it is probable that images of Hindu deities lie buried in the rubbish. These porters or giants seem to have been posted as if to guard the approach to the sanctuaries of the gods. The hair of each is plaited and wound round his head, after the fashion of the mendicant priests of India. He wears large cylindrical ear-rings, like those of the Javan women, bracelets and necklace of beads. His waistband, which is very bulky and reaches almost to his knees, is confined by a chain of square links, and receives on the right side a small square-hilted dagger. Between his legs and under the waistband there passes a *lungofa* or *kopina*, the ends of which hang down before and behind. In his right hand he holds an octagonal club; in his left a snake,

coiled and darting its tongue along the breast: small twisted snakes also form his armlets, and one passes over his left shoulder diagonally across the body, the head and tail forming a kind of knot. His head is broad; his forehead and chin short but wide; his eyes quite round, large, prominent, and staring; his lips thick; his mouth open, and shewing two very large dog teeth and four others of the upper jaw. Singular as the countenance is, it has generally an open good humoured expression. The Sepoy who attended me, and who had resided two years among the Bramins at Benares, and, of a corps of upwards of eight hundred Sepoys, was acknowledged to be the best acquainted with such subjects, informed me that similar figures were common guardians of the entrance to the temples of India, and seemed perfectly well acquainted with their history, purpose, and distinctive accompaniments; but he was lost in surprise at the number, magnitude, and superior execution of those at *Brambánan*, to which he said that India could in no respect furnish a parallel. Every thing here, he said, was manifestly the work of the gods, as no human power could have effected such things. The temples at *Brambánan* are entirely composed of plain hewn stone without the least mixture of brick, mortar, or rubbish of any kind, even in the most extensive solid masses, or to fill up the floors and basements of the largest structures. Large trees have made their way through many of them, and give an air of high antiquity.

Close by the road side at *Brambánan*, and in front of the *bándar's* house, there are several pieces of sculpture deserving of notice. One is a very well executed relievo on two small stones, of about eighteen inches by five, within the *bándar's kámpung*: it represents elephants completely caparisoned in the Hindu fashion. Another is a piece of sculpture representing the wide-extended mouth and erect curled proboscis of the elephant, having a figure (I believe of a *Gôpie* or inferior deity or demi-god) seated in an erect posture on the animal's tongue, surrounded with a formidable array of teeth. This is found on either side of the top or bottom of flights of steps, grand entrances, or portal of all the *Brambánan* buildings. There is also a more finished specimen of the same kind as the last, but having instead of a *Gópia* a lion, decorated with a necklace, to whose head descends from the *lotos* flowers which crown the elevated proboscis of the elephant, a very rich cluster of beads. Two stones are sculptured in relief with the figures of seven apes traversing a wood: they are each about two feet six inches high by two feet wide. These pieces are

more damaged by time and weather than any others I met with, and perhaps more ancient. They appear to be entirely historical, and probably formed together the memorial of some legendary event, which the learning of my Brahmin did not reach: he seemed however positive that *Hanumán* was not of the number. The shield occurs twice, a reptile of the lizard kind led by a string once, and all the figures appear armed with sticks.

The only other piece of sculpture found here is of a headless naked figure, sitting on a double throne, surrounded with foliage, opposite the *Bandáran* at the corner of a field. The journal of Colonel Mackenzie, which had previously appeared in the Transactions of the Batavian Society, had so fully persuaded me that all these rude figures in a sitting cross-legged posture were *Jain* or *Budhist*, that I by accident only asked my companion if he knew what this was? To my astonishment he replied, that this, with all other similar images, were *tupís wurri*, or Hindus in the act of devotion, and that this figure was evidently a Brahmin (from the sacrificial or sacred string over his left shoulder) employed in *tupísya*. I asked him whether it might be *Budh*? to which he replied, No; that *Budh* held a very low rank in the estimation of the Brahmins, who, in consequence of the schism between Brahmins and Budhists, did not choose to make *tupísya* before him, or erect his likeness in their temples; and that, as all the temples at *Brambánan* were entirely Braminical, or had their origin from the same sect of which he himself was a member, it was not likely that any images of *Budh* should be found thereabouts. When we afterwards came to examine the temples at *Lóro Jóngran* and other places, where the same figure complete appears seated in the small temples, surrounding the great central one, I pointed out to him the long-extended ears, short curled head of hair, and other marks, which I had understood served to distinguish the *Jain* or *Budh* images from all others. He said he was only more convinced that they were all simple Hindu devotees in the act of making *tupísya*, in the presence of the principal deity enthroned in the grand temple in the midst of them; that this was frequently the case in India, and wherever practicable the Brahmins placed images of devotees, of exactly similar form and attitude, around the fanes of Brahma and their inferior gods; that what I called curled hair was nothing more than a peculiar kind of cap (*topi* he called it) worn by devotees when in the most sacred acts of *tupísya*, which caps are common, he said, throughout Bengal or Hindustan, and are made for the purpose, by a particular class of people. I found the lower part of two counterpart

decorated stones, having the part of the body of *Ganésa* in the centre of each. They were extremely well executed and in good preservation.

CHÁNDI LÓRO JÓNGRANG; or TEMPLES OF LÓRO JÓNGRAN.

These lie directly in front (north) of the village of *Brambánan*, and about two hundred and fifty yards from the road, whence they are visible, in the form of large hillocks of fallen masses of stone, surmounted, and in some instances covered, with a profusion of trees and herbage of all descriptions. In the present dilapidated state of these venerable buildings, I found it very difficult to obtain a correct plan or description of their original disposition, extent, or even of their number and figure. Those that remain, with any degree of their primary form or elevation, are ten, disposed in three lines, running north and south. Of those on the western line, which are far the largest and most lofty, that in the centre towers high above the rest, and its jutting fragments lie tumbled about over a large area. Nothing can exceed the air of desolation which this spot presents; and the feelings of every visitor are attuned, by the scene of surrounding devastation, to reflect, that while these noble monuments of the ancient splendour of religion and the arts are submitting, with sullen slowness, to the destructive hand of time and nature, the art which raised them has perished before them, and the faith which they were to honour has now no other honour in the land.

After repeated visits to the place, I am perfectly clear, that the temples of *Jongrángan* originally consisted of twenty separate buildings, besides the enclosures and gateway; that of these, six large and two small temples were within the second wall, and twelve small ones, exactly similar to each other, formed a kind of square about the exterior of the inner wall. The first temple that occurs on entering, is the small central one on the right hand of the present pathway; and though its roof is gone, a most beautiful terrace appears, which supported the building, and measures twenty-three feet six inches by twenty-two feet ten inches. At present the height of it is barely three feet and a half. The lower part contains five small niches on either side, profusely decorated and resting on small pilasters, each niche occupied by a lion, seated exactly similar to those described in the elephant's mouth. The intervals between the niches are very neatly filled

with diminutive pilasters and other ornaments, displaying real taste and skill, which again support a double fillet projecting all round. One carved most beautifully, with a running festooned beading, with intermediate knots and pendants, each festoon filled with a lively representation of a parroquet with expanded wings, the other fillet with a fancy pattern more simple. On the opposite, or north side, was a building similar to this, but now a mound of stone.

The largest temple, apparently about ninety feet in height, is at present a mass of ruin, as well as the five others connected with it; but ascending to its northern face, over a vast heap of stones fallen from it and the third temple, at the height of about thirty feet, you reach the entrance: the whole is of hewn stones, fitted and morticed into each other, without rubbish or cement of any kind. Directly in front of the door-way stands the image of *Lóro Jóngran*. I had previously found a very similar, and I think a more beautiful representation of *Dévi*, as the Bramin called it, in the village of *Kuwíran*, about fifteen miles north-east from *Brambánan*. The image of *Lóro Jóngran* here has exactly the same attributes and accompaniments as that found at *Kuwíran*, but it is larger, not at all damaged, perfectly smooth, and with a polished surface: the buffalo is entirely recumbent; the character of the countenance, general figure, and attitudes, are very different, and the shape, attitude, and visage of the goddess, far less elegant and feminine. The figure at *Brambánan* is six feet three inches by three feet one inch in the widest part at the pedestal; that at *Kuwíran* is three feet nine inches high by twenty inches. The general description of this goddess, as read to me by the Bramin from a Sanscrit paper he copied at Benares, will serve to illustrate both these images, in the literal precise manner in which I took down his words.

"*Bhawáni*, *Dévi*, *Soca*, *Juggudumba*, *Mahamya*, *Lutala*, *Phulmuttis*, and *Mata*, are the designations of this powerful goddess, who resides at *Shasi* or *Basini* (Benares), at an angle of the sacred Ganges. Her adoration is called *urchit* with oblations of flowers, *chundun*, *kundun*, and *mugt*. In her hand she holds a *tulwar*, called *khug*: round her neck she has a *mala* of *sumpurun*, *toolsi*, or *chundun*. Her weight is very great, and wherever her effigy is placed the earth trembles and becomes much heavier. The name of her buffalo is *Mahisa*, and the *Dewth* who attempts to slay it is *Ussoor*. She sleeps upon a bed of flowers."

Thus much could I understand, and repeat verbatim of this goddess's power and attributes. For the rest, in her eight arms she holds, 1st. the buffalo's tail; 2d. the sword called *khurg*; 3d. the *bhulla* or *janclin*; 4th. the *chukur* or *whut*; 5th. the *lune* or conch shell; 6th. the *dhat* or shield; 7th. the *jundah* or flag; and 8th. the hair of the *Dewth Mahikusor*, or personification of vice, who, while attempting to slay her favourite, *Mahisa* is seized by the goddess in a rage. He raises a *dhat* or shield in his defence, and a sabre, or some offensive weapon, should be in his right hand.

The apartment in which this image and some other sculptured stones are placed, rises perfectly square and plain, to the height of ten feet, and there occurs a richly carved cornice of four fillets, a single stone to each. From this rises the roof in a square pyramid, perfectly plain or smooth, for ten feet more.

Proceeding over the ruins round to the west face of this building, you pass the intermediate angular projection, carved alternately in a running flower or foliage, which Colonel Mackenzie has called *Arabesque*, and with small human figures of various form and attitude in compartments, above representations of square pyramidal temples, exactly like those on so many of the entablatures of *Bóro Bódo*, and similar, I understand, to the *Budh* temples of Ava, &c. &c., the whole extremely rich and minute beyond description. The western door-way is equally plain with the former, and the entrance is still lower. The apartment is ten feet two inches square, apparently more filled up (that is, the floor raised higher than the other), but in all other respects exactly the same. In front is seated a complete *Ganésa*, of smooth or polished stone, seated on a throne: the whole a single block, five and a half feet high and three wide. In his hands he has a plantain, a circlet of beads, a flower, and a cup to which the end of his proboscis is applied: a hooded snake encircles his body diagonally over the left shoulder. His cap is high, with a death's head and horned moon in front, and as well as his necklaces, waistband, armlets, bracelets, anklets, and all his habiliments, is profusely decorated. The only damage he appears to have sustained, is in losing all but the roots of his tusks.

The Javans to this day continue to pay their devoirs to him and to *Lóro Jóngran*, as they are constantly covered with turmeric, flowers, ochre, &c. They distinguish *Ganésa* by the name of *Raja Demáng*, *Singa Jáya*, or *Gana Singa Jáya*. Going still round over heaps of fallen stone to the south

face, you with some difficulty enter by the door-way (nearly closed up by the ruin) into the third apartment, where there is scarce light enough to see a prostrate Siva with his feet broken off and lost. What remains is four feet ten inches and a half long, and two feet two inches wide.

The whole of the apartment on the east side has fallen in, or is closed up by the dilapidation of that entire front.

From the elevated situation of the entrances to all the apartments first described, it is evident that there must formerly have been flights of steps to them. The plan of this temple, and as far as I could judge of the two adjoining ones, north and south, was a perfect cross, each of the four apartments first described occupying a limb or projection of the figure, and the small intermediate protruding angles between these limbs of the cross could only be to admit of a large apartment in the centre of the building, to which, however, no opening was practicable or visible. Moreover, as all the grand entrances to the interior of Hindu temples, where it is practicable, face the rising sun, I could have wished to ascertain from this (the largest and most important at *Jongrángan*) whether or not the main apartment was in existence, as I had made up my mind, that were I possessed of the means to clear away the stone, I should have found *Brahma* himself in possession of the place: the smaller rooms being occupied by such exalted deities as *Bhawani*, *Siva*, and *Ganésa*, scarce any other, indeed, than *Brahma* could be found presiding on the seat of honour and majesty.

The three large temples on the eastern line are in a state of utter ruin. They appear to have been very large and lofty, and perfectly square. The upper terraces, just under the supposed entrances, were visible in some places, at the height of about sixty feet.

CHÁNDI SÉWU, or THE THOUSAND TEMPLES.

In the whole course of my life I have never met with such stupendous and finished specimens of human labour, and of the science and taste of "ages long since forgot," crowded together in so small a compass as in this little spot; which, to use a military phrase, I deem to have been the head quarters of Hinduism in Java. These ruins are situated exactly eight hundred and thirty-five yards north-north-east from the northern extremity of those of *Lóro Jóngran*, and one thousand three hundred and forty-five yards from

the high road opposite the *bándar's* house. Having had in view all the way one lofty pyramidal or conical ruin, covered with foliage, and surrounded by a multitude of much smaller ones, in every stage of humbled majesty and decay, you find yourself, on reaching the southern face, very suddenly between two gigantic figures in a kneeling posture, and of terrific forms, appearing to threaten you with their uplifted clubs; their bulk is so great, that the stranger does not readily comprehend their figure. These gigantic janitors are represented kneeling on the left knee, with a small cushion under the right ham, the left resting on the retired foot. The height of the pedestal is fifteen inches, of the figure, seven feet nine inches to the top of the curls; total, nine feet. The head twenty-six inches long; width across the shoulders, three feet ten inches. The pedestal just comprises the kneeling figure, and no more.

The character and expression of the face I have never met with elsewhere: it belongs neither to India nor to any of the eastern isles. The countenance is full, round, and expressive of good humour. The eyes are large, prominent, and circular; the nose is prominent and wide, and in profile seems pointed; the upper lip is covered with tremendous mustaches; the mouth is large and open, with a risible character, shewing two very large dog-teeth; the under lip thin, and the chin very strait and short; forehead the same; no neck visible; the breast broad and full, with a very prominent round belly; the lower limbs, as well as the arms, extremely short and stout. But the most extraordinary appendage of these porters, is a very large full-bottomed wig, in full curl all over, which, however, the Bramin assured me (and I really believe) is intended to represent the usual mode in which the *Moonis* are supposed to dress their natural hair; these gigantic genii, whose duty it is to guard the sanctuaries of the gods, requiring as formidable an appearance as possible. In other respects the images are in the Hindu costume. The *lungota* passes between the legs, the ends of it decorated, hanging down before and behind, over the waistband, and a curious square-linked chain, which encircles the waist. A snake entwines the body diagonally over the left shoulder, the tail and head twisted on the left breast. A small ornamented dagger is stuck in the girdle on the right loins. A pointed club of an octagonal form is held up in the right hand, and rests on the knee; the left hand, dropped down his side, grasps a circled snake, which seems to bite the fore-part of the left arm. The necklace is of fillagree-work (such as is called *star*); and the ears, which are large and long, are decorated with the

immense ornamented cylindrical ear-rings worn by the Javan women of the present day. Round the two arms are twisted snakes, and round the wrist bracelets of beads. The waistband extends nearly to the knees. From the waist upwards the figure is naked.

The same description is applicable to the eight other pair of images, which guard the other approaches of *Chándi Séwu*; at twenty feet distance from the exterior line of temples, and facing inwards to each other about twelve feet apart. Each of these statues and its pedestal is of one piece of a species of pudding-stone, which must have required great care in working.

The whole site or ground-plan of these temples forms a quadrangle of five hundred and forty feet by five hundred and ten, exactly facing the cardinal points. The greater extent is on the eastern and western sides, as there allowance has been made for wider avenues leading up to the grand central temples situated within, while on the north and south sides the spaces between the small exterior temples are all alike. There is no vestige of an exterior boundary wall of any kind. The outer quadrangle, which is the limit of the whole, and which encloses four others, consists of eighty-four small temples, twenty-two on each face: the second consists of seventy-six; the third of sixty-four; the fourth of forty-four; and the fifth, or inner parallelogram, of twenty-eight; in all two hundred and ninety-six small temples, disposed in five regular parallelograms. The whole of these are upon an uniform plan, eleven feet and a half square on the outside, with a small vestibule or porch, six feet two inches long, by four feet and a half externally. Within is an apartment exactly six feet square, with a door-way five feet nine inches high, by three feet four inches wide, directly opposite to which stands the seat or throne of the statue which occupied the temple. The walls inside rise square to the height of seven feet ten inches, and quite plain; thence the roof rises about five feet more in a plain pyramid, and above that a perpendicular square rises two feet more, where the roof is closed by a single stone. The interior dimensions of the porch or vestibule in front were three feet and a half by two and a half. The thickness of wall to each temple was about two feet nine inches, and of the vestibule one foot four inches. The exterior elevation of each must have been about eighteen feet, rising square to the cornices about eight or nine feet, according to the irregularities of ground, and the rest a fanciful superstructure of various forms, diminishing in size to the summit, which was crowned with a very

massive circular stone, surmounted with another cylindrical one rounded off at the top. The whole of each superstructure thus formed a kind of irregular pyramid, composed of five or six retiring steps or parts, of which the three lowest appeared to me of the figure of a cross, with intermediate projecting angles to the two lower, and retired ones to the upper step, which varied in position also from the lower ones. Above that the summit appeared to rise in an octangular form, diminishing gradually to the stones above described. The same kind of stone appears also to have been placed on the four projecting angles of at least the lower part of the elevation above the body of the building. I saw none that were complete; but from the detached views I had of all, I think either nine or thirteen similar ones were disposed at the various points of the roof. Besides these, the roofs had little in the way of decorations to attract notice, beyond a profusion of plain cornices, bands, fillets, or ribands, forming a kind of capital to the crest of each stage of the superstructure, and on one of them small square pilasters cut in bas-relievo at intervals.

I have already stated, that the small temples appeared to be all upon one uniform plan, differing however according to their situation. The decorations, internal and external, are alike in all, except that the interior niches are all variously filled with the endless variety of Hindu mythology.

Proceeding inwards from the southern *récha*, and reckoning from the centre, the distances are as follow: to the exterior line of the outer quadrangle twenty feet; depth of these temples, including porch, sixteen feet; space from thence to the next line of temples eleven feet; depth of the second quadrangle sixteen feet; thence to the third quadrangle thirty feet; supposed depth of this line sixteen feet; thence to the fourth quadrangle thirty feet; depth of the fourth quadrangle sixteen feet; thence to the fifth or inner quadrangle thirty feet; depth of the inner quadrangle sixteen feet; thence to the bottom of the flight of steps leading up to the grand temple fourteen feet; in all two hundred and fifteen feet from the centre of the porters to the bottom of the steps. The spaces between all the temples on the same line are about twelve feet and a quarter, but on the east and west sides the central avenue is larger. Between the inner quadrangle and the central temple, at a distance of five feet from the bottom step of it, runs a line of stone fourteen inches high, and two feet four inches wide.

We now come to the great temple. You ascend from each of the cardinal points by a flight of fourteen stone steps, all rough hewn, and now mostly disjointed or displaced. The length of each flight was about sixteen feet to the edge of the upper step, the breadth eight over all, and the height about ten feet, that being the elevation of the terrace of the temple. The walls of this elevated terrace projected on either side of the steps, so as to form with the walls that received the steps three sides of squares, which the Sepoy who was with me immediately said must have been intended for small tanks, one at each side of every flight of steps, for the devotees to purify themselves in before their appearance at the shrine of the deity. On the third step from the bottom, on each side of it, was a figure of *Hastu Singh* (or the lion seated in the elephant's mouth), looking outwards and having a very fine effect. The same figures, facing outwards, supported each side of the four entrances to the vestibules. The terrace has a breadth of three feet and a half, clear of the walls of the temple all round, and as far as I could discern in the ruin, following the angles of the edifice.

The form of the building, like that at *Lóro Jóngran*, is a cross, with the same intermediate angular projection, in order to afford room for the grand central apartment. Entering from the east you pass through a portal, five feet eight inches in width by five feet nine inches in length (which is the thickness of the walls), into an outer vestibule, twelve feet wide by ten deep. The walls of this vestibule are ornamented with three niches, a large and two smaller ones, with pointed arches, and all the profuse decoration of Hindu architectural sculpture. In most of these niches remained the throne of the inferior deities, who the Sepoy said must have originally occupied them: not one was now to be found. The throne was generally a single stone, decorated in front with a vase and profusion of flowers, filling the whole space in a natural easy manner. Leaving this room you pass on through a door-way four feet five inches in width, and four feet in depth (the thickness of the wall), but of uncertain height, to a second vestibule, fourteen feet nine inches wide, and four feet four inches deep. At either end of this vestibule is a door, twenty-six inches wide in the clear, four feet two inches deep in the passage or width of the wall, and barely five feet and a half high, which communicates with the surrounding terrace. This vestibule is perfectly plain, with the exception of a raised spiral fluting, which surrounds the large portal or gate leading into the central apartment, and terminates near the bottom steps in the representation of the elephant's

mouth and trunk, simply cut in relief on the wall, with no other addition but several strings of beads descending from the top of his proboscis. The roofs of the vestibules or limbs of the building, though entirely fallen, were originally shaped like the Syrian, that is pointed and falling down to the upper cornice of the walls, with a gentle double swell or curve. The northern limb is an entire mass of confusion and ruin; but the description just given of the double vestibule on the east side of the temple, answers with a very trifling variation of dimensions to those on the south and west, but that instead of the large and spacious portal to be seen on the east, there are five very lofty niches let into the main walls about a foot, with pointed Indian arches, standing on square pilasters of the same fashion, the capitals of each of which are supported by a small, squat, doubled-up human figure, having its arms embowed over its head, which my Cicerone informed me was very common in the like situations in India. He concluded also, that images of the gods had occupied the niches in front against the main walls of the temple, on the north, south, or west sides; but we saw not one, and only the centre niches had even the thrones remaining. The niches and pilasters are surmounted with a very deep elaborate projecting cornice, crowned again with five representations of small temples on each side, and immediately over these are seen the two swells or curves of the original Syrian roof.

So far we have gone on a level with the external terrace or platform which surrounds the whole; but on the east side you ascend by a flight of eight steps, at least six feet high, through the spacious portal before mentioned, which is twelve feet high from the top of these stairs, and six feet eight inches wide in the clear, formed entirely of massive blocks of stones, well squared. The depth of the passage or thickness of the wall is ten feet. The top of the portal, which is flat or square externally, surmounted in the centre with a very large and terrible gorgon visage, changes with the ascent of the stairs, in a very artful manner, to the pyramidal form, internally, formed by the overhanging of the stones to resemble inverted square steps closed at the top with a single stone. You thus find yourself in the *sanctum sanctorum*, the spot which has rewarded the toil and zeal of many a weary pilgrim. My expectations were raised, and I imagined I should find the great and all-powerful Brahma seated here, in glory and majesty proportionate to the surrounding splendour and magnificence of his abode. Not a single vestige, however, remains of Brahma, or of any other deity. The apartment

is a plain, unadorned square, of twenty-one by eighteen feet. Four feet from the eastern wall or door is a raised platform, three feet and a half high, extending all across the room (north and south), surmounted with a deep projecting capital or crest, to ascend which are two small flights of six steps each, situated at the extremities on either hand. The walls of this sanctuary, to the height of about forty feet, rise square and plain, and are composed of uniform blocks of greyish stone, well squared, and fitting closely without cement, grooved into each other, according to the general manner of all the buildings at *Brambánan*. Above this is a projected cornice of three or four stones, from which the roof assumes the pyramidal form of overhanging stones, or inverted steps, to the height of ten feet nearly; thence it rises perpendicular, plain and square, for about ten feet more, and hence to the top in an octangular pyramid of overhanging stones, approaching each other gradually by tiers or layers, for nearly fifteen feet more, where it closes finally with a stone, about two and a half or three feet across.

The exterior of this great temple contains a great variety of ornamental sculpture; but no human or emblematical figures, or even niches in the walls, as in all the small temples surrounding it. The capitals of the pilasters (as in the niches against the body of the temple) are indeed supported by the very diminutive figures before mentioned; but nothing further appears in that way throughout the whole structure. The style, taste, and manner of execution, are every where light, chaste, and beautiful, evincing a fertile invention, most delicate workmanship, and experience in the art. All the figures occupying the niches of the smaller temples (and there were thirteen to each of the two hundred and ninety-six) are a wonderful variety of mythological characters, which the Brahmin said figured in the Hindu legends.

Of the small temples, at least two-thirds are strewed along the ground, or are mere ruined heaps of stone, earth, and jungle. On the third quadrangle no more than six large heaps of dilapidation remain: fields of palma christi, sugar-cane, and tobacco, occupy the place, and many detached spots on the site of the temples. Not one, in fact, is at all perfect: large trees and many kinds of herbage have shot up and split them asunder. They are covered with the foliage which has hastened or produced their destruction, certainly prematurely; for the stone itself, even externally, and where it would be most perceptible, on the sculpture, exhibits not the least token of decay. The

whole devastation is caused by a most luxuriant vegetation. Towering directly over the temples the *waríngin*, or stately banyan, is conspicuous, both for its appearance and the extraordinary damage it has caused. In short, hardly twenty of the temples give a satisfactory notion of their original form and structure.

Under such circumstances it can hardly be supposed that I examined the interior of many of them. Few could boast of the original four walls alone; but within such as I did examine I found only five of the original images occupying their places. As these five, however, were found in points very remote from, and bearing no relation to each other, and were all exactly counterparts in size, shape, character, and general appearance, I may safely conclude, that each of the two hundred and ninety-six smaller temples contained a similar image. Of these five, which are exactly the same with those Colonel Mackenzie calls *Jain*, only one was perfect: the others had lost their heads and received other damage in the fall of their habitations; but all were manifestly intended to represent the same figure. The Bramin maintained that these were all *tupés-wurri*, or devotees, represented by the Braminical founder of these temples in the act of *tupísya*, around the sanctuary of the divinity himself, situated in the centre of them.

Returning from *Chándi Séwu* towards *Lóro Jóngran*, about half-way on the left of the road, two hundred yards distant, are the remains of a small assemblage of temples, which, on examination, proved to consist originally of a small square of fourteen temples, with a larger one in the centre. Five temples were on the east and west faces, and four on the north and south, including throughout those at the angles. The only difference, however, between these temples and the small ones of *Chándi Séwu* was, that they were rather smaller, and the elevated terraces raised much higher, those of *Chándi Séwu* not being a foot above the ground, while these were raised nearly four feet, and had a small flight of steps and a door-way inwards towards the middle temple. The exterior of all these buildings was perfectly plain, excepting a very simple square pilaster and cornice surmounting it. The central building alone possessed the very same kind of decorative sculpture which is seen on those of *Chándi Séwu*, was about twice the size of its neighbours, and about four feet larger either way than those of *Chándi Séwu*, from which it only further differed from having no porch. I shall only add to this brief notice, that the whole site of this cluster seems comprised

in an area of eighty feet by sixty; that the spaces between the temples of this quadrangle are equal to the extent of each building; that only nine of the exterior temples, of which one is a mere heap of stones, exist in any form indicating their primitive order or position; and lastly, that no statuary of any kind remains, to indicate the deity in whose honour they were erected, except the relievos in the eleven niches round the central building, which certainly seemed, as the Bramin asserted, to be of the tribe of *Gopias*, or demigods and goddesses, which occupy the walls of the two hundred and ninety-six temples of *Chándi Séwu*.

The only name the Javans could give this assemblage was the generic term *chándi*, or temples. The inclosures of the surrounding fields attest the extent to which the farmers have turned to account the devastations made by the *waríngen* trees.

REMAINS at DINÁNG'AN, or RÁNDU GÚNTING.

Taking the road from *Brambánan* to *Yúgya kérta*, a little beyond the seventh furlong, you arrive at an angle bearing nearly south-west. At this angle, about sixty yards off the road to the left, a very large statue is conspicuous, standing close to the corner of the village of *Dináng'an*, which is behind it. Searching about I found the broken scattered remains of five other images exactly similar to it. Twenty yards in the rear of the erect image, and just to the westward of the village, a very extensive heap of blocks of hewn stone (particularly large hollow cylinders intended to hold the water used in ablution in India) intermingled with earth, points out the site of what must once have been a spacious temple, long since prostrate. The principal image is called by the Javans *Béga Mínda*.

CHÁNDI KÁLI SÁRI, or TEMPLE of KÁLI SÁRI.

Returning to the angle of the road which I had left to inspect *Béga Mínda* and his maimed and headless brethren, and proceeding along the high-road, at a distance of little more than two furlongs further, I crossed the small stream now called *Káli Béning*, formerly *Káli Búhus*. A hundred and twenty yards beyond this, having the village of *Káli Sári*, which gives its name to the temple, close to the right hand, you turn up a path between two hedges

in that direction, and at the south-western side of the village, about two hundred yards off the road, you come upon the south-east angle of a large and lofty quadrangular building, having much the appearance of a two-story house, or place of residence of a Hindu Raja. It resembles a temple in no point of view even externally. It is an oblong square, regularly divided into three floors, the ground-floor having in front a large door between two windows, and on the sides two windows corresponding to the others. The first floor appears to have three windows in front, and two in the depth, answering to the apertures below, and through the foliage which decorates and destroys this monument of grandeur, may be seen several small attic windows at intervals, seemingly on the slope of the roof: these, however, are false, as the structure has but the two floors and no other.

The external appearance of this edifice is really very striking and beautiful. The composition and execution of its outer surface evinces infinite taste and judgment, indefatigable patience and skill. Nothing can exceed the correctness and minute beauties of the sculpture throughout, which is not merely profuse, but laboured and worked up to a pitch of peculiar excellence, scarcely suitable to the exterior of any building, and hardly to be expected in much smaller subjects in the interior of the cabinet. It originally stood upon an elevated terrace of from four to six feet in height, of solid stone. The exterior dimensions of this building are fifty-seven feet and a half by thirty-three and a half, measured along the walls just above the terrace or line of the original basement, which is divided obviously enough into three parts, by the centre projecting nearly a foot, and the general correspondent composition or arrangement observable in each. The door in the centre is four feet eight inches and a half wide, surmounted with the wide-gaping, monstrous visage, before described at *Chándi Séwu*, from which runs round each side of the portal a spiral-fluted chord, ending near the bottom in a large sweep or flourish, inclosing each a caparisoned elephant in a rising posture; the space left over its hinder quarters being filled with the face of a *munnook*, or human being, all in the usual style of relief. At either side of the door the original coat of stone has fallen, as far as the extremities of the vestibule, which covered the whole central compartment of the east or front of the building. In the middle of each of the other divisions is an aperture or window, nearly a square of eighteen inches, having a very deep and projected double resemblance of a cornice beneath, resting on the upper fillet of the terrace, while the same single

projection crowns the top of the window, surmounted with a more lofty and elegant device of two elephants' heads and trunks, embellished and joined in a most tasteful way, with a profusion of other devices. On either side of the windows is a small double pilaster, having a space between for the figure of a small *garúda*, an effigy well known by the Hindus, which is human down to the waist, and has the body, wings, and talons of an eagle. Beyond the second pilaster, on each side of the windows, is a large niche rising from the terrace to the cornice or division between the upper and lower story. The niche is sunk in the wall about four inches, and is formed by the adjoining pilasters rising straight to their capitals, whence the top of the niche is formed by a very beautiful series of curved lines, leaving the point clear in the centre, which I can hardly compare to any thing but rounded branches of laurel, or some such foliage. This is crowned with a square projecting fillet, which reaches the central cornice dividing the two floors. Beyond the last pilaster of the niches, a single stone brings you to the angle of the building, which is covered from top to bottom with the running arabesque border, most delicately executed. On entering the building, the mind of every one must be fully satisfied that it was never constructed for, or dedicated to, mere religious purposes. The arrangement is entirely adapted to the domestic residence of a great Hindu chieftain or raja.

The whole building, within and without, was originally covered with a coat of very fine chunam, or lime, about one-sixth of an inch thick, of surprising tenacity.

CHÁNDI KÁLI BÉNING.

Pursuing the high-road from the spot at which you leave it to visit the palace of *Báli Sári*, at the distance of about three furlongs and a half, a lofty, massy pile is seen, about one hundred yards off the road to the left. This ruin is of the same general form and appearance as the larger temples at *Chándi Séwu* and *Lóro Jóngran*, but on a closer examination is found to be superior to the whole, in the delicate and minute correctness of execution of all its decorative parts. It is a cross, with the intermediate angles projected to give space to a large central apartment, which is entered from the east side only. The building is about seventy-two feet three inches in

length and the same in breadth. The walls are about thirty-five feet high; and the roof, which appears to have fallen in to the extent of five feet, about thirty more. Only one front or vestibule is perfect.

On the south face is seen a small door, five feet seven inches high, and three feet five inches and a half wide, situated in a deep niche, which also receives in the recess above the door a small figure of *Síta*, (as the Sepoy called it) in a sitting posture. Beyond the door a small projection contains probably more various elaborate specimens of the best sculpture, than were to be found any where within a small compass, and on similar materials. A very large and well defined monster's head projects over the door, surrounded with innumerable devices of excellent workmanship. I know not how to describe them, nor the niche beneath, containing *Síta*, which, amongst other accompaniments is supported by two small pilasters, the capitals of which are upheld by the small naked figures before described, under the generic term of *munnook*. The central compartment of this southern limb (which is formed by the niche and door below, and the gorgon head above) terminates at the top in a point, by a gradual elliptical slope upwards on both sides. These sides of the slope are filled, on either hand, with a succession of small naked *munnook* figures, all seated on various postures on the steps formed for their reception, along the edges of this ellipse, and closed by a similar one above.

On either side of the door-way is a small niche, three feet high and six inches wide, supported by small pilasters, and filled with relievo figures of the fraternity of *Gópias* and their wives. That occupying the niche to the right, my Cicerone recognised to be *Krésna*. He was peculiarly happy to find *Síta* seated over the door, which he declared to be a decisive proof of the sense and devotional excellence of the founders of this superb temple, which he very justly extolled, as far excelling in sculptural beauty and decorations, any thing he had ever seen or heard of in India, or could possibly imagine had existence any where. This surprise and admiration at the superiority of the Javan architecture, sculpture, and statuary, over those of India, was manifest in every Sepoy who saw them. Nothing could equal the astonishment of the man who attended me throughout this survey at every thing he saw; nor did he fail to draw a very degrading and natural contrast between the ancient Javans, as Hindus and artists, and their

degenerate sons, with scarce a remnant of arts, science, or of any religion at all.

The arch of all the niches is surmounted with a very lofty and magnificent representation, in bas-relievo, of a grand pyramidal temple, on a small scale, though superior in size, and far more so in execution, to those at *Lóro Jóngran* or at *Bóro Bódo*. Beyond these niches to the angles of the building, are a series of pilasters, rising to the cornice, which surmounts the whole face of each projecting vestibule. In the centre, just at the point of each niche, is a gorgon head of the usual aspect, which is surrounded by the lofty temples just described.

The exterior sides of the vestibules occupy an extent of eleven feet and a half, in the centre of which is a niche, much larger and deeper than those in the front, being about six feet high and two wide, and one deep in the clear, supported on either side by a real Hindu pilaster, already described, and the top of the niche surmounted with the gorgon head and pyramidal temple, equally well known by description. Each of these niches was formerly occupied with solid statues, I imagine of *Gopia*. On either side of these single niches are the same series of terminating pilasters (three in number), which occur also on the fronts of the vestibules, of which the centre one is a very magnificent running arabesque, from top to bottom; the two others are plain without any variation.

A very fine coat of stucco, of excellent quality, covers the whole exterior surface of the temple, and is made so to follow the most minute and laboured strokes of skill on the stone underneath it, as even considerably to add to their effect, particularly in concealing the junction of the stones. The walls are surmounted with a deep projecting double cornice. No principal image was found in the temple or vestibules.

REMAINS OF AN ANCIENT HALL OF AUDIENCE, &c. AT KÁLI BÉNING.

The temple which I have just described stands close to the north side of the village of *Káli Béning*, east of which is the river of that name; and as I had never before heard of any thing further in this quarter, I fancied my work was over. I was, however, most agreeably surprised, on being told by my

Javan guides that there was something more to be seen directly south of the village behind us. We accordingly passed through it, and barely one hundred and fifty yards from the temple, in a high sugar-cane and palma christi plantation, we came suddenly on two pair of very magnificent gigantic porters, all facing eastwards, each having stood about twelve feet from the others. The pedestals of all these statues are nearly covered, or rather entirely sunk into the ground. The height of each figure, from the top of the pedestal, is five feet one inch and a half, and breadth at the shoulders three feet six inches. They are generally much better executed, defined, and consequently more marked and striking in their appearance, than those I had seen. The countenance is much more marked and expressive, the nose more prominent and pointed, the eyebrows meeting in a formidable frown. The hair flows all round and down the back in large ringlets and curls, and on the ankles, instead of beads, are the small circular bells common in India, under the name of *googoor*. These figures are called *Gopolo*. Behind the second pair of porters, or west of them, is a heap of ruins of brick and mortar, which proved on examination to be the remains of an ancient hall of audience or state, originally standing on fourteen pillars, with a verandah all round it standing on twenty-two pillars. The porters guarded this building exactly in the centre of its eastern front: the nearest pair scarcely thirty feet distant from it. The greatest length of the building was east and west. The inner apartment over all gave forty-seven feet in length, including the pillars: the width of the hall was twenty-eight feet and a half in the same way. A verandah, of twelve feet and a half wide all round over the pillars, surrounded the hall.

It struck me forcibly, that the house at *Káli Sári* was formerly the residence of some great Hindu Raja of Java; the superb temple at *Káli Béning*, the place of his devotions and prayers; this hall, a little south of it, that of state or audience, perhaps also of recreation after his devotions. Other ruins of brick-work, without any mixture of stone, were close by, and perhaps served as out-houses.

BÓRO BÓDO.

In the district of *Bóro*, in the province of *Kedú*, and near to the confluence of the rivers *Elo* and *Prága*, crowning a small hill, stands the temple of

Bóro Bódo^[210], supposed by some to have been built in the sixth, and by others in the tenth century of the Javan era. It is a square stone building consisting of seven ranges of walls, each range decreasing as you ascend, till the building terminates in a kind of dome. It occupies the whole of the upper part of a conical hill, which appears to have been cut away so as to receive the walls, and to accommodate itself to the figure of the whole structure. At the centre, resting on the very apex of the hill, is the dome before mentioned, of about fifty feet diameter; and in its present ruinous state, the upper part having fallen in, only about twenty feet high. This is surrounded by a triple circle of towers, in number seventy-two, each occupied by an image looking outwards, and all connected by a stone casing of the hill, which externally has the appearance of a roof.

Descending from thence, you pass on each side of the building by steps through five handsome gateways, conducting to five successive terraces, which surround the hill on every side. The walls which support these terraces are covered with the richest sculpture on both sides, but more particularly on the side which forms an interior wall to the terrace below, and are raised so as to form a parapet on the other side. In the exterior of these parapets, at equal distances, are niches, each containing a naked figure sitting cross-legged, and considerably larger than life^[211]; the total number of which is not far short of four hundred. Above each niche is a little spire, another above each of the sides of the niche, and another upon the parapet between the sides of the neighbouring niches. The design is regular; the architectural and sculptural ornaments are profuse. The bas-reliefs represent a variety of scenes, apparently mythological, and executed with considerable taste and skill. The whole area occupied by this noble building is about six hundred and twenty feet either way.

The exterior line of the ground-plan, though apparently a perfect square when viewed at a distance, is not exactly of that form, as the centre of each face, to a considerable extent, projects many feet, and so as to cover as much ground as the conical shape of the hill will admit: the same form is observed in each of the terraces.

The whole has the appearance of one solid building, and is about a hundred feet high, independently of the central spire of about twenty feet, which has fallen in. The interior consists almost entirely of the hill itself.^[212]

Near the site of this majestic edifice was found a mutilated stone image of *Brahma*, and at no great distance, situated within a few yards of the confluence of the rivers *Elo* and *Prága*, are the remains of several very beautifully executed and interesting temples, in form and design corresponding with those in the neighbourhood of *Brambánan*. In niches and on the walls of these are designed in relief numerous figures with many arms, evidently of the Braminical order, most of them having their several attributes perfect. It is remarkable that at *Bóro Bódo* no figures of this description occur.

The image of the harpy (No. 1. of the annexed plate) was taken from the temple at *Bóro Bódo* and brought to England: it is of stone, in length about twenty inches, and exceedingly well executed. The other subjects in this plate were not found in this neighbourhood. No. 2 is a stone box about a foot square, containing a small golden *lingam*: it was recently dug up near *Málang* by a peasant, who was levelling the ground for a cooking place. No. 3 and 4 are representations of ornamental stone water-spouts, collected in the vicinity of *Pakalung'an*. No. 5 is an ornamental corner stone, now lying among the ruins of *Majapáhit*, the figure carved upon which is nearly as large as life.

Next to *Bóro Bódo* in importance, and perhaps still more interesting, are the extensive ruins which are found on *Gúnung Díeng*, the supposed residence of the gods and demigods of antiquity^[213]. This mountain, from its resemblance to the hull of a vessel, is also called *Gúnung Práhu*. It is situated northward and westward of the mountain *Sindóro*, which forms the boundary between *Kedú* and *Bányumas*, and terminates a range of hills running east from the mountain of *Tegál*. There are no less than twenty-nine different peaks of this mountain, or rather cluster of mountains, each of which has its peculiar name, and is remarkable for some peculiar production or natural phenomenon.

On a table-land about six hundred feet higher than the surrounding country, which is some thousand feet above the level of the sea, are found the remains of various temples, idols, and other sculpture, too numerous to be described in this place. A subject in stone, having three faces, and another with four arms, having a ball or globe in one hand and a thunderbolt in another, were the most conspicuous.

The ascent from the country below to the table-land on which these temples stood is by four flights of stone steps, on four different sides of the hill, consisting of not less than one thousand steps each. The ascent from the southern side is now in many parts steep and rocky, and in some places almost inaccessible, but the traveller is much assisted by the dilapidated remains of the stone steps, which appear to be of the greatest antiquity. Time alone, indeed, cannot have so completely demolished a work, of which the materials were so durable and the construction so solid. The greatest part of this wonderful memorial of human industry lies buried under huge masses of rock and lava; and innumerable proofs are afforded of the mountain having, at some period since the formation of the steps, been in a state of violent eruption. Near the summit of one of the hills there is a crater of about half a mile diameter.

At no great distance from this crater, in a north-west direction, is situated a plain or table-land, surrounded on all sides but one by a ridge of mountains about a thousand feet above it. At some very remote period it was perhaps itself the crater of a vast volcano. On its border are the remains of four temples of stone, greatly dilapidated, but manifestly by the effect of some violent shock or concussion of the earth. The largest of them is about forty feet square: the walls are ten feet thick, and the height about thirty-five feet. The only apartment which it contains is not more than twenty feet square, and has only one entrance. The roof is arched to a point in the centre, about twenty feet high above the walls, so that the whole building was almost one solid mass of masonry, composed of the most durable cut stone, in blocks of from one to two feet long and about nine inches square. Yet these walls, so constructed, are rent to the bottom. It was particularly observable, that little or no injury had been done by vegetation, the climate being unfavourable to the *waríngen*, whose roots are so destructive to the buildings of the lower regions. The entablatures of these buildings still exhibit specimens of delicate and very elegant sculpture. Several deep excavations are observed in the neighbourhood. These, it is said, were made by the natives, in search of gold utensils, images, and coins, many of which have, from time to time, been dug up here.

The whole of the plain is covered with scattered ruins and large fragments of hewn stone to a considerable distance. In the centre are four more temples, nearly similar to those before mentioned, but in a much better state

of preservation, the sculpture being in many places quite perfect. Numerous images of deities are scattered about.

On a more minute examination of this plain, traces of the site of nearly four hundred temples were discovered, having broad and extensive streets or roads running between them at right angles. The ground-plan of these, as far as it could be ascertained, with sketches of the different images, ornaments, and temples, which distinguish this classic ground, have been made by Captain Baker, who devoted three weeks to the accomplishment of this interesting object. At present I have it only in my power to exhibit a drawing of one of the temples, in the state in which it was found in 1815, with the same temple restored to what it originally was.

The whole of the country lying between *Gúnung Díeng* and *Brambánan*, in a line nearly crossing the central part of the island, abounds with ruins of temples, dilapidated images, and traces of Hinduism. Many of the villagers between *Blédran* and *Jétis*, in the road from *Bányumas* through *Kedú*, have availed themselves of the extensive remains to form the walls of their buildings. In the enclosures to several of the villages (which are here frequently walled in) are discovered large stones, some representing gorgon heads, others beautifully executed in relief, which had formed the friezes and cornices of temples, all regularly cut so as to be morticed together, but now heaped one upon another in the utmost confusion and disorder.

Along the fields, and by the road-side, between *Jétis* and *Mágelan*, are seen in ditches or elsewhere many beautiful remains of sculpture, and among them many *yonis* and *lin-gams*, where they seem not only to be entirely disregarded by the natives, but thrown on one side as if in the way.

The following is the account given by Dr. Horsfield of the ruins found in the Eastern Provinces of the native princes, in the year 1815.

KEDÍRI, &c.

In the districts of *Jagarága*, *Charúban*, *Ráwa*, *Kalángbret*, *Trengáli*, *Pranarága*, and *Magetán*, these antiquities are dispersed solitary at occasional points, and consist principally of images or *réchas*. The remains of buildings, and of towns and cities, generally distinguished by the name

of *Kóta-bedáh*, are also noticed; but *Mádion*, *Kértasána*, *Kedíri*, and *Sreng'át*, contain very important and interesting antiquities.

In regarding them, the vicinity of the former capital of the princes of the house of *Majapáhit* strikingly offers itself for consideration; and a traveller perceives them to increase in number, as he proceeds from the western to the eastern districts.

Commencing my notices from the westward, I have to point out in *Mádion* four monuments, or stones covered with inscriptions: these, with several pedestals and other remains of ancient buildings, have been collected and employed at *Mauspáti*, the capital of *Mádion*, lately established by *Ráden Ráng'ga*, the well known rebel of the *Yúgya-kerta* court. On the largest of these monuments the characters of the inscription are still in a great degree distinguishable, and these I have carefully taken off; on the others, which are smaller, the characters, although completely perceivable, are too much obliterated by the decomposition and decay of the substance of the stone to afford a copy. Besides these inscriptions; remains of buildings, pedestals, and *réchas* of different sizes, have also been collected from various parts of this province, and employed to decorate a well and bath near the capital. After a considerable interruption, which contains no remains at present, I discovered, in a direction almost due east from *Mauspáti*, in the district of *Anjóg*, a monument with an inscription, in a more perfect state. In form this, as well as the others, resembles the common tomb-stones of our burial grounds, exceeding them only in size: its dimensions have been carefully taken. Four sides are covered with characters; two of these were in a state sufficiently preserved to be copied with only occasional deficiencies. This stone was placed near a *chándi*, of which the ruins only remain. It was two stories high, built of elegant bricks, according to the usual plan and distribution. In size, it nearly agrees with that of *Jábung*, near *Probolíngo*. It is obvious, that both the dimensions and the general plan of the numerous *chándis* found in these eastern districts, built of these materials, are similar; at least they do not exhibit that variety, both in size and distribution, that is observed among the larger edifices built of stone.

Anjóg is connected in the east to *Kértasána*. In this province I found two monuments covered with inscriptions, a *kótah bedáh*, or destroyed capital, and various *réchas*. The district of *Brébeg* has lately been separated from *Kértasána*. The newly-appointed *Tumúng'gung*, in clearing and levelling the

ground for a dwelling and for a new capital, on the site of the village *Brébeg*, discovered, by following the indication of water oozing from the surface, in a slight concavity covered by a wild vegetation, the remains of a bath, constructed with neatness, and not without taste and art. The principal excavation, which appears to have been employed as a bath, is oblong, and about ten feet in length. Six small outlets or fountains pour the water into it, which was conducted from a rivulet flowing at some distance, by small canals cut of stone, but bedded in a foundation of brick. The fountains discharging the water are covered with sculpture in relief, tolerably executed: one of these is a female figure pouring small streams from the breasts. Adjoining to this bath are several other reservoirs of water, included in the same square, and receiving the supply by the same channels. Every thing is constructed massy of regular and elegant bricks. The present *Tumúng'gung* has collected, near this bath, many *réchas* and other antiquities from various parts of the district: among these was found one small inscription. Towards the foot of mount *Wílis*, in a southern direction from *Brébeg*, I visited, at the village *Ng'etos*, a *chándi* constructed of brick, and still entire, with only partial dilapidation of the ornamental parts. It is on the whole very similar to the appearance exhibited by the remains of the *chándi* at *Anjóg*, and to the others constructed of bricks in the eastern districts above mentioned. Near this is a smaller *chándi*, of the same construction, in ruins, with various other remains of antiquity.

The environs of the capital of *Kediri* abound with antiquities of every kind; but it is evident that here, more than at other places, great expense and labour has been bestowed to demolish the buildings and to mutilate the images. In all parts of the site of the present capital I noticed fragments covered with sculpture in relief, broken *réchas*, and regularly chiselled oblong stones, of that kind which was employed in the construction of the *chándis*, besides very extensive foundations, in brick, of walls, buildings, &c. I am further led to suppose, from the regularity and elegance of the materials employed, that a Mahomedan temple and grave have been constructed almost entirely from an ancient building demolished for the purpose, at the period of the introduction of the Mahomedan religion. This temple is called *Astána Gedóng*, but none of the present inhabitants can give any information as to the period of its construction. As it is of Mahomedan origin I took only a very slight view of it, to avoid the disagreeable gesticulations which the natives always exhibited on the

approach of one of their sanctuaries; and it is a very comfortable circumstance that a traveller is freely permitted to examine undisturbed, all those antiquities which are unequivocally derived from a period preceding the introduction of Mahomedanism, or from what the natives call "*wong kúna, kápir, or buda.*"

I shall shortly enumerate the principal antiquities of *Kedíri* which I visited, and only mention the names of those villages where the greatest number of *réchas* are dispersed. These are *Pápar, Kebo-gádung, Gadúngan* and *Págot.*

The cave of *Séla-mángleng* is situated about two miles in a western direction from the capital, at the foot of the hill *Klótok*, an appendage to the large mountain of *Wílis*: it consists of four small apartments cut into the solid rock composing the hill, on a very gentle eminence. The apartments are adjoining to each other, forming a regular series, which stretches from north to south. The two middle apartments, which are the largest, have each an entrance from without, while those at the extremity communicate by an interior door, each with the apartment next to it. They differ but little in size. Their form is square or oblong; the largest is less than twenty feet in length. The walls of the two principal apartments are covered with sculpture, and various platforms and projections indicate the places of devotion or penance. Several *réchas* now arranged in the avenue leading to the cave, as well as the sculpture covering the walls of the apartments within, are handsomely worked; but the external sculpture of the rock is coarse, and the steps by which one ascends, which are cut out of the same general mass of rock, appear to have been made intentionally rude. Several niches for *réchas*, lamps, &c. are cut in various parts of the walls; a *lingam*, several reservoirs of water, and other figures are arranged on the vestibule. Of an inscription on the external rock, one regular line, stretching from the door of the outer apartments to the northern extremity of the rock, is still discernible, but many of the characters are probably too much effaced to afford an explanation.

In an eastern direction from the capital of *Kedíri*, the antiquities of *Séntul* and of *Prúdung* are the most remarkable. *Séntul* is situated near the district of *Tiga-wángi*, in a forest, the condition of which indicates an undisturbed vegetation for many successive ages. The dimensions of the principal edifice, now remaining nearly entire, are comparatively inconsiderable, but the workmanship is executed in a style of elegance, equal to that of any

antiquity found on the island. By the present inhabitants the building is denominated a *chúnkup*, which word, in as far as it admits of a precise translation, denotes a place of burial or a repository of the dead. It appears to resemble, in its general scheme, several of the other principal antiquities of Java, being a solid massy structure, without any internal apartment or chamber, as a *chándi*, but affording, on the summit, an extensive platform or place of devotion, to which one of the sides is appropriated to furnish an ascent, while the others are perpendicular. The access to the *chúnkup* was from the west. Not only the sides of the stairs, but the perpendicular walls of the building, are ornamented by entablatures, the internal divisions of which are covered by elegant sculpture, while the projections are carved into a great variety of forms, which can only be represented clearly by a drawing. A few images, removed from their original situation, are dispersed through different parts of the surrounding area, displaying an exquisite workmanship. On the summit remains an highly elegant reservoir of water of uncommon dimensions. The plan of this building is a nearly regular square, the sides of which are about thirty-six feet in length.

It contains in its foundation a subterraneous cell, to which the descent is by very narrow steps, leading from the south: this consists of three compartments, gradually decreasing in dimensions as they extend into the body of the building. The height of the cell does not permit a person to stand erect, and no vestiges indicate its former appropriation, whether as a place of devotion or penance, or for the reception of the remains of the person to whose memory devotion was paid on the summit.

Near this *chúnkup* is a smaller building of the same kind, equally ornamented by handsome sculpture. The remaining bases of numerous walls shew the division of the surrounding court into many compartments, and the whole adjoining territory was included within a wall constructed of brick, of which I found the vestiges in various points, and numerous separate foundations and detached fragments of chiseled stone remain within the exterior wall in the confines of the *chúnkup*.

In proceeding from *Séntul*, in an eastern direction, to the extremity of the province of *Kedíri*, solitary remains of antiquity are occasionally found; and it is probable that these extend, without considerable interruption, towards the celebrated antiquities of *Málang*. Among these, *túgus* or landmarks are also observed.

The *chándi* of *Prúdung* is situated about eight miles south-west of *Séntul*. Though constructed entirely of brick, this edifice deserves particular notice. It exceeds in its dimensions and importance all other edifices built of the same materials that I have seen. Besides a principal apartment, the entrance to which is from the west, it contains in the east, the north, and the south, smaller apartments on the same floor, whose entrance corresponds to the niches usually observed in the walls. The projecting base containing the stairs has been destroyed, and one ascends at present to view the interior of the *chándi* by a ladder, the height of about twenty feet. The dimensions of the ornaments and figures on the sides correspond to the size of the building, and the sculpture is executed in a superior style. Following a southern direction, *réchas*, reservoirs of water, mortars, fragments of buildings and ornaments, are found at almost every village. Near the boundary, but within the province of *Sreng'át*, a *chándi* of brick, of the usual size, still remains entire near the village *Genéngan*.

The *réchas* which have been accumulated at the capital of *Sreng'át* from the vicinity, indicate the condition of the ancient establishments, as the general review of the antiquities found in this province, strongly points out that its former culture was very different from its present rudeness. Places which are now covered with almost impenetrable forests, like those surrounding the *chúnkup* of *Séntul*, the first appearance of which would indicate an undisturbed growth from the origin of vegetation, are found to conceal the most stupendous monuments of human art and labour. During various botanical excursions which I made through this province, I discovered (or rather was led to them by the natives) the *chándi* of *Gedóg*, the antiquities at *Penatáran*, and various monuments covered with inscriptions, which I shall separately enumerate below.

The *chándi* of *Gedóg* is a structure in the usual style of brick, but executed with superior excellence, while much of the ornamental work is supplied of stone. Several of the sides are still entire, but the base of the entrance or steps has gradually separated. *Gedóg* is situated near *Blitar*, formerly a capital, but now reduced to a simple village. Here, also, interesting antiquities are found, among which the site of a deserted capital, with its walls and many stone pedestals, attract the notice of the traveller.

Proceeding in a nearly north-east direction, I visited the antiquities at *Penatáran*. These, if not of the first rank, must doubtless be considered as

belonging to those of second importance and interest, both on account of extent and execution; but a complete and accurate description would require a detail too extensive for my present purpose. The greatest part of these antiquities is now in ruins. Their general plan indicates an appropriation both to purposes of devotion and habitation. They comprize an extensive area of an oblong form, which was surrounded by an external wall of which the foundations can be traced throughout, and the whole was divided into three compartments. The principal edifice is situated in the eastern compartment, and was only accessible after passing three separate gates, which are all discernible, although much decayed. They are individually guarded as at *Chándi séwu* and *Sínga-sári*, by porters resting on their hams, while a knee is drawn up to support the hand clasping a club of proportionate size. The principal gate, in ancient times probably the only entrance, is of huge dimensions, and guarded by porters of gigantic size. This led to the first subdivision of the whole area, in which two elevated plains, of an oblong form, confined by walls rising above the surrounding territory, and in all probability the floors of former places of dwelling, are the most interesting objects that now remain.

One of these plains extends to the north-east extremity, having been in contact with the external wall, as appears from its relative situation to the gate, and to the foundations that still exist; this is of great dimensions: the other inclines more to the middle of this compartment, and is somewhat less in extent. Both exhibit the appearance of having supported a building, and are elevated at present about three feet above the level of the surrounding forest, while the same depth is concealed by a layer of vegetable mould, accumulated during many successive ages. The sides of the smaller plain are covered with elegant sculpture in relief, the detail of the design of which would alone require a considerable time. Four entrances are indicated by as many flights of steps, the sides of which are elegantly decorated, and the pedestals still remaining at regular intervals along the confines, having the form of truncated pyramids, appear to shew that it was covered by a roof supported by wooden pillars, somewhat in the style of the *pasébans* of the present Javans. Similar pedestals are likewise placed in regular order along the sides of the large plain, which has the same number of entrances as the smaller, of which those in the north and south are guarded by porters of comparatively small stature.

The second compartment is less extensive than the western: a small *chúndi* of excellent workmanship, built of stone, here attracts particular notice. The remains of various buildings, pedestals, and broken ornaments, are also observed, and it is probable that others are concealed by the forest and mould which covers this compartment, which must be considered as the vestibule to the third or eastern division, containing the principal edifice: this of the various remains of the whole area deserves the most attention. It is indeed a surprising and a wonderful work: both the labour required in the construction, and the art displayed in the decoration are incalculable. The general base is a large square, but each of the sides has a particular projection in the middle, the largest being in the west, where the ascents are placed, by which the outline exhibits twelve angles. It belongs to the same class of buildings as that at *Séntul*, containing no chamber or vacancy within, but exhibiting a solid mass, highly decorated at the sides, and affording externally places of devotion. It consists of three different compartments, successively of smaller dimensions. Two pair of steps, one to the north, the other to the south of the most projecting part of the western side, lead to the area furnished by the lower compartment, the form of which agrees with the general base. From the middle of the most projecting part of the western side of this area, a single flight of steps conducts to the second, and is immediately continued to the third area on the summit of the whole building. The second compartment does not agree in form with the general base, but by means of the diverging of the sides in a direction opposite to the most projecting parts of the lower area, it furnishes in the west a plain before the steps, and in the north, the south, and the east, extensive areas or squares, which were probably destined for particular worship. By the form of the second compartment the second area is likewise modified; but to demonstrate this a plan would be required; and I shall only add, that the upper area was a regular square, but as appears from the remains of various foundations, subdivided into partitions.

Here the figure of *Bráma* (the *récha* with four faces) is placed alone, of a workmanship and finish superlatively excellent. It is to be remarked in this place, that besides this, only one image is found on this structure, attached to the walls of the second compartment, facing the smaller area on the base, from which it appears to have been worshipped. I shall not enter into a detail of the sculpture which covers all the sides of the three compartments: its diversity far exceeds the bounds of my examination or description. In the

intelligent visitor it excites astonishment, and displays a degree of art and of taste, equal, as far as my opportunities for observation have extended, to that of any of the other remains of antiquity found on Java.

In clearing up part of the rubbish that surrounded the southern sides of this edifice, I was fortunate enough to discover a monument covered with an inscription of the usual size and form; but the characters have suffered much from time.

Of other antiquities which fell under my observation in the province of *Sreng'át*, I shall only mention those at *Semánding* and *Sangráhan*. These, from their semblance to the edifice at *Séntul*, appear to have contained the remains of the dead, and to have been employed to celebrate their memory. They are considered as *chúnkups* by the natives. Each has something particular in its structure and appropriation; but I shall not extend these details. Various spots were mentioned by the inhabitants, which are now covered with a close forest, in which less considerable remains, *réchas*, &c. are found, and others are probably concealed or unknown. They existed also on the south side of the large river flowing from the east, a branch of the river of *Kedíri* and *Surabáya*, in the tract of *Ludáya*, celebrated at present only on account of the wildness of the territory. Among these I visited a monument covered with inscriptions in a highly preserved condition. In my botanical excursions through this and the neighbouring districts, I also met with various caverns and other remains, the retreat of *fakirs*, hermits, &c. to which the approach is difficult or painful: they are distinguished by the denomination of *Ber-tápa*.

Proceeding further east, the ruins in the district of *Málang* next attract our attention. These I visited in 1815.

RUINS AT SINGA SARI, &c. IN THE DISTRICT OF MALANG.

We first proceeded from *Pasúruan* to *Láwang*, mounting our horses at the ruins of a fort, which for some time withstood the Dutch arms on their first taking possession of these districts. Further on, between *Láwang* and *Málang*, the scene of a famous battle fought at that time was pointed out to us. The family of the present Regent were first appointed to the office for

services rendered on that occasion. The road from *Pasúruan* to *Láwang* lay principally through forests, in which we observed the *waríngen* to predominate.

On the next morning we visited the ruins of *Singa Sári*, which are situated a few paces within the entrance of a teak forest, about four miles from *Láwang*, and on the right of the high-road leading to *Málang*.

The first object which attracted our attention was the ruins of a *chándi* or temple. It is a square building, having the entrance on the western side: its present height may be about thirty feet. Over the entrance is an enormous gorgon head, and a similar ornament appears originally to have been placed on each of the other sides of the building, over the niches, which correspond with the entrance on the western side. In one of these niches we observed an image lying flat on the ground, with its head off: in another, the pedestal of an image, which we were informed had been taken away by Mr. Engelhard; and where the traces of a third niche appeared, the stones had been removed, and a deep hole dug, so as to disfigure, and in a great measure demolish, this part of the building. This was also attributed to Mr. Engelhard's agents.

On entering the *chándi*, to which we ascended by stones which had evidently been once placed as steps, we observed a very deep excavation, and a large square stone upset and thrown on one side. We ordered it to be filled up and the large stone replaced. There was a round hole passing completely through the centre of this stone, which, whether it had been an altar, the pedestal to some image, or a *yóní*, we could not ascertain.

Without the building, on part of the ruins which appeared to have been the lower terrace, we noticed two porters, with clubs in their hands, resting on the shoulder. The features were entirely defaced, and the images rude; but we easily recognized their similarity to the porters at *Brambánan*. They were, however, not above three feet high.

The devices, ornaments, and general style of this temple are not very different from those of the great temple at *Brambánan*: the cornices and mouldings are no less rich and well executed. The external form of the building may differ, but the recess, or chamber within, seems on the same principle. There is no inlet for the light from above.

Proceeding a short distance further into the forest, we found several images of the Hindu mythology, in excellent preservation, and more highly executed than any we had previously seen in the island. In the centre, without protection from the weather, was the bull *Nándi*, quite perfect, with the exception of the horns, one of which was lying by the side of it. This image is above five feet and a half long, in high preservation, and of excellent proportion and workmanship.

Near the bull, and placed against a tree, is a magnificent *Brahma*. The four heads are perfect, except that there is a mutilation about the nose. The figure is highly ornamented, and more richly dressed than is usual.

Not far off we noticed *Mahadéwa*, known by his trident. On the stone from which this is cut in relief are several *Devanágari* characters.

Another stone, with a figure nearly similar, stood by it. A Hindu Sepoy, who accompanied us, asserted that it represented a Bramin, but it was too mutilated for us to ascertain the point.

A car or chariot of *Súria*, or the sun, with seven horses, of which the heads were wanting, was the only other object of antiquity in this groupe. The horses are at full speed, with extended tails, and the square of the chariot seems to have once formed the pedestal of an image.

At the distance of about a hundred yards from this spot, we were conducted to a magnificent *Ganésa* of a colossal size, most beautifully executed, and in high preservation. The pedestal is surrounded by skulls, and skulls seem used not only as ear-rings, but as the decoration of every part to which they can be applied. The head and trunk are very correct imitations of nature. The figure appears to have stood on a platform of stone; and from the number of stones scattered, it is not improbable it may have been inclosed in a niche or temple.

Still further in the wood, at a short distance, we found another colossal statue, of the same stamp as the porters at *Brambánan*. This statue was lying on its face at the entrance of an elevated stone terrace: but the people having excavated and cleared the earth around, we were enabled distinctly to examine the face and front. It measures in length about twelve feet, breadth between the shoulders nine feet and a half, and at the base nine feet by five, and is cut from one solid stone. The figure is represented as sitting

on its hams, with the hand resting on each knee, but no club, although it is not impossible it may have been broken off. The countenance is well expressed and the nose prominent; but this feature, as well as the mouth and chin, have suffered injury from partial mutilation.

The statue seems evidently to have fallen from the adjacent elevated terrace, which is about eighteen feet high in its present dilapidated state, and is built of stones, the upper ones being immense slabs of five feet by four, and three feet thick. A second figure of the same dimensions was afterwards found in the vicinity; these were no doubt porters who guarded the entrance to these temples.

Having visited all that could be traced in the vicinity of *Singa Sári*, we proceeded on to *Málang*, distant thirteen *palls* from *Láwang*, and in the evening we visited the ruins of *Súpit-úrang*, usually called *Kótah Bédah*, or demolished, fort, the site of the last establishment of the refugees from *Majapáhit*.

The wall of this fortification is of brick, and the foundation is traced without difficulty. We rode round it within side, and as far as we could calculate it could not measure less than two miles round. It is of an irregular figure, but in a position rendered remarkably strong by two rivers, which run their course round three-fourths of the wall, and then unite. The depth from the wall to the rivers is from fifty to a hundred feet, and in some places still more; in many parts the descent is nearly perpendicular. Where the rivers do not encircle the walls, a deep moat is cut from one river to the other, which is easily flooded by stopping the course of either river. It is about seventy-five feet wide and not less than fifty deep, even in its present state, filled up no doubt considerably, and in many parts cultivated. There appear to be several dwellings, if not villages, within the walls, and a good deal of cultivation, principally of tobacco.

The next morning we proceeded to visit the ruins at *Kédal* and *Jágu*, the former about seven miles, the latter nearly four from *Málang*, in a southeasterly direction.

At *Kédal* are the remains of a very beautiful temple of stone: its present height about thirty-five feet. The building is supported by a lion at each of the four cornices, and one on each side of the steps of the entrance. In the centre of each of the lower departments, between the lions, are figures in

relief upon the wall. The mouldings and sculpture on this temple are in the same style as those of *Brambánan* and *Bóro Bódo*, but of still greater beauty. The building is surrounded by a square wall, and in the front is a raised terrace. The chamber appears to be of the same form as most of the temples in Java. Over the entrance is an immense gorgon head, and in the chamber itself a deep hole.

There are no Hindu images or other traces of Hindu mythology, except what may be afforded by the lions, and the figures in relief above mentioned. These represent the same principal figure, but with different attributes. On one side three immense serpents entwine over the head, the tail of one of them evidently held in the right hand; on another a water-pot, with a serpent's head attached to it, is on the head of the figure; and on the other there is a female figure with a serpent, the female reclining over the head.

This temple is just within the skirts of a forest.

At *Jágu*, also, we found the ruins a few yards within a forest, but these appeared to have been more extensive than the preceding.

The base of the principal building is much larger than any of the temples we visited in the eastern part of the island, and there appeared to have been originally two or three terraces rising one above the other to the height of thirty feet. The form of the entrance still appears, but the roof, sides, and back part of the building, have entirely given way. Behind the ruin, and apparently in the same spot on which it originally fell, lies a dilapidated image of a Hindu deity. The pedestal of this image is perfect, and lies near it. The head had been carried to *Mélang* some years ago by a Dutchman. On the back stone we observed an inscription, evidently in the *Devanágari* character, and which the Sepoy who accompanied us declared to be Sanscrit. The characters on each side were extremely distinct, but those at the back of the head of the figure were defaced.

This building is most richly ornamented with carved work, and various devices in relief are cut in the first, second, and third stories. One of these relievos represents a battle between an army of apparently polished people and an army of *Rasákṣa*. The figures are very rudely carved and disproportioned, but in general richness of effect may be compared to the style of the ornaments at *Bóro Bódo*. There are a variety of processions and achievements represented in different parts, but no where could we observe

any image or particular object of devotion. Along the cornices, which are most splendidly rich, we noticed birds and beasts of various descriptions interwoven. In one part a palm tree between two lambs approaching each other, in another a perfect boar, apparently led to the sacrifice.

At a short distance from this principal building, say fifty yards, stands the remains of what would appear to have been an elevated terrace of about twelve feet high. The ascent is on one side, by regular stone steps, still perfect.

Previously to leaving *Málang* we took sketches of two images brought in from the fort, and also of the image of a man, peculiar from the manner in which the hair was tied. At *Málang*, also, I received from the *Tumúng'gung* a small square stone-box, containing a golden *lingam*; this had been discovered three months before, about a cubit under ground, by a peasant, while digging for stones to build his cooking place. The *lingam* had originally two very small red stones within it, something like rubies; one of them was lost before it was delivered to me, the other by the party examining it.

TEMPLES AT SÚKU.

The remains of antiquity still existing at *Súku*, though not to be compared with those at *Brambánan* and *Bóro Bódo* in extent and magnificence, seem to claim a peculiar interest, on account of the indication they afford of a different form of worship. These ruins were not known to Europeans until a short time previous to my visit to the central districts, in May 1815. When I visited them, the native inhabitants of *Súra-kérta* were also ignorant of their existence, and we are indebted for the discovery to the British Resident at that court, Major Martin Johnson.

They lie in an eastern direction from *Séra-kérta*, and are distant from that capital about twenty-six English miles, being situated on the summit of one of the smaller hills to be found on the base of the mountain *Láwu*. From *Súra-kérta* our road was a continued ascent, which increased as we approached the hills: the country most highly cultivated, and in the immediate vicinity of the hills, where the dry cultivation predominated, beautiful beyond description.

Súku is the name of the village to which the lands in the neighbourhood of these ruins are annexed; and we were not able to ascertain that they were designated by any other name, or that the term *Súku* had any immediate reference or application to the buildings.

The principal structure is a truncated pyramid, situated on the most elevated of three successive terraces. The ruins of two obelisks, having the form of the section of a pyramid, are also observable in the vicinity of the principal building, and on each side of the western front appear several piles of ruinous buildings and sculpture. The length of the terraces is about one hundred and fifty-seven feet; the depth of the first, eighty feet; of the second, thirty; and of the highest, one hundred and thirty feet.

The approach is from the west, through three porches or gateways, of which the outermost alone is now standing; but enough remains of the second and third to indicate a similarity of construction. This porch is a building of about sixteen feet high, in tolerable preservation, of a pyramidal form. The entrance is seven feet and a half high, and about three feet wide; a gorgon head forms the key-stone of the arch. The ascent is first by seven, and shortly after by three steps; and in relief, on the centre of the flooring under the porch, is a representation of the male and female pudenda.

On the outer face of the porch several figures are sculptured in relief. On the right side, the principal figure is that of a man of monstrous appearance devouring a child: to his right a dog sitting, the head wanting, and a bird of the stork kind near the root of a tree, on one of the branches of which a bird not unlike a dove or pigeon is perched; over the figure is a bird on the wing, either the hawk or eagle. Above the figure of a man with the tail of a writhing snake in his mouth, is another which appeared to us to be that of a sphynx; it is however represented as floating in the air, with the legs, arms, and tail extended. The tail is similar to that of the lizard species, and the hands appear to be webbed claws, but the body, limbs, and face, are human: the breasts distinguish it as female. Over this again is a small curling reptile, like a worm or small snake, reminding us of the asp.

On the north and on the south face of the gateway there is a colossal eagle with extended wings, holding in its talons an immense serpent, plaited in three folds, its head turned towards the eagle and ornamented with a coronet.

It was impossible to reflect on the design of these sculptures, without being forcibly struck with their reference to the ancient worship of Egypt. The form of the gateway itself, and of all the ruins within our view, was pyramidal. In the monster devouring the child we were reminded of *Typhon*; in the dog, of *Anoubis*; in the stork, of the *Ibis*: the tree, too, seemed to be the palm, by which the Egyptians designated the year; the pigeon, the hawk, the immense serpents, were all symbols of Egyptian worship.

Lying on the first terrace we observed several scattered stones, having various devices sculptured on them, some of human figures, one of a tiger wanting the head, which had been broken off, and several of elephants and oxen. On one we noticed the representation of a man on horseback, followed by five spearmen and a *páyong* bearer. We then ascended by five steps to the second terrace, on which were also some scattered ruins of buildings and sculpture. Ascending again three steps we came to the third terrace, when the principal building appeared in front, at the distance of about ninety feet. The ruins of several other temples and buildings also appeared in irregular heaps on each side of its front.

This building is on the centre of the terrace. Its base is a perfect square, of forty-three feet and a half to the side, decreasing in size at each successive layer of stones, so as to form steps to the height of nineteen feet; above this is a sort of cornice, four feet nine inches high. The roof is twenty-one feet two inches from north to south, and nineteen feet nine inches from east to west. In the centre of it we observed a part raised, of about a foot square, pierced by a small round hole. It had the appearance of being intended as a pedestal, or step, to some object which had been removed.

The sides of the pyramid face the cardinal points. The western side contains a flight of narrow steps. At the top, in the front of the building, we noticed two serpents, which appear to have been used for water-pipes; with this exception, the whole building was plain and unornamented by sacred emblems. The sides of the staircase are faced with flat stones. The upper story or cornice is constructed with greater delicacy than the building generally. We were not able to ascertain whether there was any chamber within, and the point cannot be decided without material injury to the edifice. The eastern side seems to have suffered most from the effects of time.

Upon the ground on each side of the ascent is a large stone, in the shape of a tortoise, measuring not less than eight feet in length; the back flat, but the head well executed. A little advanced in front there is a third of the same description.

Near these, on the south side of the entrance, stand the remains of two temples, in one of which we discovered the ashes of fire recently kindled. The natives who attended informed us that the peasantry of the neighbouring villages were still in the habit of burning incense and kindling fire in this temple, and that when they suffered under or dreaded any misfortune, they made an offering of this nature in the hope of averting it. The building is about seven feet square, and on all sides various images are sculptured on it.

The other building, which is still further south, has a terrace in the centre, the steps ascending to which are still perfect. The building appears to retain nothing of its original pyramidal form, except at the south-east corner.

On different sides of this pile of building we noticed two inscriptions, each consisting of four characters. As they both agreed with various other inscriptions in this neighbourhood, except in the last character, which was different in all, we concluded that they were dates. To the north of the principal building, and almost contiguous to it, is an oblong structure, running east and west. On this there has evidently been a low terrace with a raised wall at the back. On the upper part of this terrace, and near the principal building, is a raised platform, from which rises an obelisk, somewhat similar to that noticed in the south, but of a much larger base, and ornamented with various devices on all sides. The spiral top is incomplete. Resting inclined upon the west front of the obelisk, is a statue, about four feet high and three feet broad^[214].

On each side of the terrace, which is narrow and long, we observed, both above and below, various devices cut in relief; also a stone vase for containing water, respecting which a tradition runs, that it could never be empty. We also raised from the ground and took sketches of several slabs and stones in the vicinity, which had been thrown down on their faces. Of these, one represents a horned boar^[215]. On another is an elephant, tolerably well executed. In another the chief figure is represented striking off human heads^[216]. On another there is a dog standing erect, and dressed like a man,

with some buildings remarkable for the correctness of the perspective. On another is a representation of the monkey flag^[217], the standard of *Arjuna*, and even used at the present day by the *Gládak*^[218] established at *Súra-kérta*.

We discovered, nearly buried in the ground, two gigantic statues with human bodies and limbs, but winged from the arms like bats, and with spurs above the heel like those of a cock. This figure occurs frequently in relief with some variation: sometimes with a fan-tail, and its wings extended, so as almost to form a circle^[219]; in another the face appears devoid of flesh, and the figure is standing with one foot on an elephant and the other on a tortoise^[220].

On the lappet of the waistband of one of these colossal statues we noticed an inscription of several lines; but the most interesting and perfect was discovered on the back of the other, after we had with much difficulty raised it to an erect posture. This last inscription is in excellent preservation, and consists of lines, in each of which there are characters. The perfect state of this part of the stone must be attributed to its having been protected from the weather by its position along the ground. This inscription, as well as all the others which we discovered, are raised from the stone in relief, in the same character as that first noticed, which differs from most which had previously been discovered on the island^[221].

We noticed particularly, as forming an exception to the sculptures in general, another figure with four hands. It has a coronet on the head, and ear-rings, and from the back of the ear on each side appear to spring wings, which are half expanded over the back of each shoulder. The arms and hands were too mutilated to enable us to distinguish the attributes.

A little nearer to the north of the tortoises, in front of the principal building, stands a large erect statue^[222], apparently in its original position; at the back of which, on a scroll hanging from the waistband, is an inscription of several lines; a figure holding a double-headed trident in each hand and having three spikes on each elbow, rudely executed, and elsewhere a *phallus*, upwards of six feet long and not less than five in circumference. It had been broken in halves, but the two parts were easily brought together: round the upper part are four large balls of equal dimensions: along the urethra is an inscription in two lines, the letters being one above the other,

and on the upper part of one of these lines is the representation of a *kris* blade, and two squares crossing each other just above the point, with a circle and other ornaments in the centre, so as to represent the sun; to the right of this is a representation of the moon in the first quarter; and further again to the right a small circle, representing a star: the whole in relief, very correctly executed, and in good preservation.

On one of the temples adjacent there are representations of a similar symbol cut in relief.

We observed several monstrous figures with clubs of different sizes. One in particular fronting the principal building, grinning most horribly, and two near the steps leading to the upper terrace from the south.

Below the upper terrace, on the south side, we noticed the foundation of a building of an oblong shape, with three large slabs, on which were sculptured several objects which appeared much to interest the Javans. On one we observed a manufacturer of *kris* blades in the act of striking the steel. Above him are placed, as in his workshop, among several blades of different forms, a trident, a water-pot, a pair of shares, and something not very unlike Mercury's wand. On another stone is seen a man with the proboscis of an elephant, and in his hand a dog; on the third is a man blowing a Javan bellows.

The natives informed us, that the country people were in the habit of making offerings to these sculptures, which they highly esteemed, from a tradition that they represented the original Javan *túkang bési*, or workman in iron and steel.

The workmanship is ruder than that in the temples at *Brambánan*, *Bóro Bódo*, or *Málang*, and the worship must have been different.

Most of the images which are not in relief have been decapitated, and the heads are not to be found; but there still remains enough to enable a person well acquainted with heathen mythology, to decide on the classes to which they may generally be referred.

I could find no traditions regarding these temples; but subsequent examination has enabled us to decide that the character found in the inscriptions is an ancient form of the Javan, and that the dates are, on one of the stones, 1361, and on the larger phallus, 1362.

Besides the ruins of temples in brick noticed by Dr. Horsfield in the eastern provinces of the native princes, numerous buildings constructed of similar materials, are found extending from the site of *Majapáhit* eastward as far as *Probolíngo*, near which, a few yards off the high road, are situated two temples in brick. The larger temple may be about sixty feet high.

All the temples of this class (that is to say, constructed in brick, for they all vary in their style) were probably built during the latter years of the Hindu religion. Those constructed of stone must be referred to a much earlier period.

Near Buitenzorg, and also at *Récha Dómas*, a few miles further inland, both places adjacent to the site of the ancient capital of *Pajajáran*, are found several rude images in stone, and among them a figure with three faces (*trimúrta*). Images of the same kind, as well as casts in metal, are also found in *Chéribon*. The latter are particularly prized by the chiefs of *Telága*, who are descended from the princes of *Pajajáran*, and consider these relics as representations of their forefathers. In the possession of the present *Tumúng'gung* of *Telága* is an ancient manuscript written on Javan paper, and folded up in the manner of the manuscripts of Ava. The characters appear to be ancient Javan or *Káwi*, but ill written. This manuscript contains drawings of deities, of the signs of the Zodiac, and numerous other astronomical, or perhaps rather astrological devices^[223]. Of the history of the manuscript nothing is known, further than that the *Tumúng'gung* and his family believe it to have come with the relics before-mentioned from *Pajajáran*. A copy of it has been brought to England.

Besides the extensive remains of temples and other edifices already mentioned in the districts east of *Chéribon*, where alone the antiquities deserve attention as works of art, there are to be found on the mountains of *Ung'arang* the ruins of several very beautifully executed temples in stone, with numerous dilapidated figures, and among them several chariots of *Súría*, or the sun. Most of them are sadly mutilated, but enough was left to authorize a sketch of their original design^[224].

The *Chándi Banyukúning* (yellow water), which are so called from their vicinity to the village of that name, are situated within a few yards of a small volcanic crater, which at the time I visited them was in many parts too hot to be trodden with safety. They appear to have been built on extensive

terraces cut out of the mountain, and rising one above another at intervals of some hundred yards. The natives assert, that the temples were formerly far more extensive, and that near the summit of several of the adjoining peaks other temples are to be found. But here, as in most parts of Java, the mountains for a considerable way below the summit have been covered for ages, with an almost impenetrable forest: and where this is not the case, the mountains have either been rent near their summit, or are covered with lava or ashes from volcanic eruptions, so that whatever may have formerly been the extent and grandeur of the edifices which once crowned these towering heights, they are at present either concealed or more frequently destroyed. Notwithstanding the diligent search made by the British during the short period of their stay on Java, there are doubtless many very interesting discoveries to be made.

In *Banyuwangi*, the most eastern province of the island, besides figures of Hindu deities, several others are to be found of extraordinary and grotesque appearance, which appear to represent the local deities of the island, and corresponding with those which are still worshipped on *Báli*. But whether they are to be considered as the deities of the Javans or *Bálians* is doubtful, as the *Bálians* long had possession of this province; and it is remarkable, that no such figures are to be found in the provinces further westward.

The traditions of the country concerning the former seats of government, enable us to trace at this day the site of *Médang Kamûlan*, *Jang'gála*, *Gegélang* or *Sínga Sári*, *Dahá* or *Kedíri*, *Pajajâran*, and *Majapáhit*, existing in remains of immense tanks, heaps of building materials, and other unequivocal vestiges of former cities.

Médang Kamûlan^[225] was situated in the district of *Wirasába*, where in the centre of an extensive forest is pointed out the site of the *Setíngel*, distinguished by heaps of stones and bricks; and at no great distance from it are the walls and excavations of an extensive tank, several hundred feet in length and breadth. These ruins, of which little more can be said than that they are clearly discernible, are situated between *Penwadádos* and the most eastern of the volcanic wells alluded to in a former part of this work. The natives have a superstition, that the site of this ancient capital cannot be visited without some misfortune attaching to the party who undertake the visit. Those whom I had, with some difficulty, induced to accompany me to the spot, did not fail to assure me that I should lose my government within

the year. As the event justified the prediction, it is probable that the superstition has rather gained ground than otherwise. Many Javans maintain, that *Brambánan* was the original of *Médang Kamúlan*; it is at least highly probable that it was once the seat of empire.

The site of *Jang'gála* is still pointed out in the district of that name in the division of *Surabáya*, and the country around is strewn with antiquities. The same may be said of *Síng'a Sári* and *Kedíri*. At *Pajajáran*, a heap of stones is pointed out as the ruin of the *Setíngel*, and numerous lines crossing the country between rivers, attest the care with which this position was entrenched. They may be seen close by the road side, at a few hundred yards from the governor-general's country residence, and in many places they have been cut through to make a passage for the high road.

At *Majapáhit*, in the district of *Wirasába*, the marks of former grandeur are more manifest. Here the walls of the tank, upwards of a thousand feet in length, and not less than six hundred in breadth, are quite perfect. They are of burnt brick, and about twelve feet high. The whole area of the tank, when I visited it, was one sheet of beautiful rice cultivation, and almost surrounded by a noble forest of teak.

A village adjacent is called *Tra Wúlan*, or *Tráng Wúlan* (the light of the moon): here we found the tomb of *Pútri Chámpa*. Proceeding through three regular squares, each enclosed with a wall, and in each of which were erected several *pendápas* or sheds, we came to the interior on ascending a few steps. On the right side of this enclosure, and elevated a few feet, was the tomb of the princess and her nurse; the tomb being in the Mahomedan style, and having upon it, in ancient Javan characters, the date 1320, perfectly distinct and in relief. On the other side are the tombs of *Kiái Tumúng'gung Jáya Báya*, *Den Mas*, and nine other chiefs whose names are mentioned. The tomb is religiously guarded by several priests.

The ruins of the palace and several gateways of burnt brick are to be seen; but the whole country, for many miles, is thickly covered with a stately teak forest, which appears to have been the growth of ages, so that it is difficult to trace the outline of this former capital. Ruins of temples, mostly executed in brick, are scattered about the country for many miles, and attest the extent and grandeur of this "pride of Java."

I observed near the former site of *Majapáhit* two images of *Ganésa*, and some other mutilated deities of the Hindu mythology. Near the tank was the figure represented in one of the plates^[226], partly human and partly of the form of a bird, and a distorted figure, which the Javans called *Ménak Jing'ga*; but in general the vicinity of *Majapáhit* is remarkable for the absence of any representations of the Hindu deities. The temples are beautifully decorated with representations of flowers, and other peculiar ornaments, which it would be difficult to describe.

The only collection which appears to have been made by Europeans of these interesting remains of antiquity, previously to the establishment of the British government in 1811, was by Mr. Engelhard, formerly governor of *Semárang*. In the garden of the residency of that station, several very beautiful subjects in stone were arranged, brought in from different parts of the country. Of them, and of several others, which appear to have been brought into some of the native villages from the vicinity of the different temples, drawings have been taken, and the representations of *Ganésa*^[227] and *Dúrga* (called *Lora Jóngran*), both from subjects as large as life, wrought in close-grained stone, will serve to convey some notion of the beauty and delicacy with which they are executed.

I shall conclude this very general and imperfect account of sculpture on Java, by referring the reader to the plate, containing representations of several subjects in stone^[228], collected and arranged in the Chinese temple of worship in the neighbourhood of Batavia. The period at which they were collected is not known, and the subjects in general are not so well executed as those found in the eastern parts of the island; but it is remarkable, that the Chinese, whose form of worship is at present so different from that of the Hindus (however similar it may have been formerly) should in a foreign land thus prize and appreciate the idols of the people whom they affect to hold in contempt^[229].

Another plate exhibits several subjects in stone, collected from the vicinity of *Bóro Bódo* in *Kedú*. The originals are as large as life, and the sculpture and ornaments are executed with great skill. No. 2 is an image with three heads (or *trimúrti*), similar to one on *Gúnung Dieng*. No. 3 is a mutilated image of *Bráhma*, having four faces; this was found in a field within a few

hundred yards of the great temple of *Bóro Bódo*. The image No. 4 also occurs on *Gúnung Práhu*.

The casts in metal which have been discovered in the central districts of Java are numerous. The subjects represented in the plates annexed were selected from a collection of about a hundred brought by me to this country. They had most of them been found at different times near the ruins of the temples, and preserved in the families of the petty chiefs. I am indebted to Mr. Lawrence, the Resident of *Kédú*, for many of them, which were brought in to him by the natives, on its being generally known that subjects of the kind were interesting to the British authorities.

These casts are generally of copper, sometimes of brass, and rarely of silver. The majority and best executed were found in the vicinity of *Gúnung Dieng*; and it is asserted that formerly many gold casts of a similar description were discovered, which have been melted down. The village of *Káli Béber*, situated at the foot of the mountain, is said from time immemorial to have paid its annual rent, amounting to upwards of a thousand dollars, in gold, procured by melting down the relics of antiquity discovered in the vicinity; but for some years past, no more golden images being found, the rents are paid in the coin of the country.

Among the casts which are now exhibited will be observed two images of *Bráhma*; one with eight arms, standing upon a male and female figure; the other with four, on a pedestal surmounted by the lotus, having a fragment of the goose in front. The former, in particular, is most beautifully executed.

The casts vary from three to six inches in height, and abound in a variety of delicate ornaments, which it has not been attempted to represent in the plates.

Several copper cups, varying from three to five inches in diameter, and having the signs of the zodiac and other designs represented upon them in relief, have likewise been discovered in different parts of the island. A fac simile (reduced) of them is given in the annexed plate.

As the Javans of the present day attach no particular designation to the different deities, except that of *Gána* and other terms to *Ganésa*, and that of *Lóro Jóngran* to *Dúrگا*, I have not thought it necessary to attach to all the representations the names which some of them may bear in the Hindu

mythology of continental India. Many of them do not occur in Moor's Pantheon: some are decidedly Braminical, others Budh, and some it is difficult to class under either head.

A variety of bells, tripods, and ornaments of various descriptions, occur in casts of metal, and form part of the collection brought to England. These are of a small size, seldom exceeding a few inches in length, although bells sometimes occur much larger; several of them are represented in one of the plates.

The inscriptions engraved on stone, and in characters no longer understood by the people of the country, are innumerable: similar inscriptions engraved on copper have also been found in particular districts. The whole may be classed under the following heads:

1. Inscriptions in the ancient *Davanágari* character of continental India.
2. Inscriptions in characters which appear to have some connection with the modern Javan, and were probably the characters used by the people of *Súnda*.
3. Inscriptions in various characters, not appearing to have any immediate connection with either the *Davanágari* or the Javan characters, and which it has not been practicable to decypher.
4. Inscriptions in the *Káwi* or ancient Javan character.

Of these the first seem to lay claim to the highest antiquity. The principal inscription of this kind, and indeed the only one of any length, is that found at *Brambánan*, and noticed by Colonel Mackenzie in his interesting account of the ruins of *Brambánan*, as a real Hindu *Sassanum*. The stone, which is now broken into six parts, was originally six feet nine inches long and three feet six wide, in the shape of a tomb-stone, and the whole of one face is covered with characters, which appear to have been very well executed.

Fac-similes of this inscription having been brought to Europe, the characters were immediately recognized by Mr. Wilkins as an ancient form of the *Devanágari*, in use upon the continent of India, probably about eight or nine centuries since. It is to be regretted, that from the constant exposure of the stone, and the fractures which it has received, the characters are in many parts effaced, so as to render it almost impossible to connect the sentences. No date can be discovered, nor any name which might afford a

clue to the object or origin of the inscription. From such detached parts as are legible, it appears to be a record of some grant of honour or riches to the party whose praises it records. A specimen of a sentence from this inscription, of the same size as the original, with the corresponding characters in the modern *Devanágari*^[230], appears in the chapter on Language and Literature.

Similar characters, though apparently somewhat more modern, are found on several images at *Sínga Sári*, transcripts of some of which will be seen in the plates to this work.

Of the second class are the inscriptions on the *Bátu túlis*, or engraved stone, standing near the ruins of the ancient capital of *Pajajárán*, and those found at *Kwáli*, in the province of *Chéribon*, to which place it is related that some of the princes of *Pajajárán* fled on the overthrow of that capital by the Mahomedans. The characters on these inscriptions appear very nearly to resemble each other. The stone at *Pajajárán*, as far as I could decypher it, with the assistance of the *Panambáhan* of *Súmenap*, appears to be a record in praise of a certain *Maharája*, whose name is not mentioned. One of these at *Kwáli*, a fac-simile of which is exhibited in the plate, we were enabled to translate as follows:

"The *Pandíta* is able to check the evil course of men, by washing away their evil inclinations, and he can shew them the right way, and prevent covetousness and slander by his good advice. 1363."

At *Kwáli* there are several other inscriptions in the same character, but in common with the whole of this class very rudely executed. Several of the characters and signs were found, on strict examination, to be on the same principle as the Javan.

Of the third class the reader will find a fac-simile on a reduced scale^[231].

But the inscriptions of the last of these classes are the most numerous, the best executed, in the highest state of preservation, and as they admit of translation, are of perhaps higher interest than the others. Of these some have been already noticed in Dr. Horsfield's account of the remains of antiquity in the vicinity of *Kedíri* (formerly called *Dahá*); many have been found in the vicinity of the supposed site of the ancient capital of *Jang'gála*, in the division of the modern *Surabáya*, and some at *Bátu*, near *Sínga Sári*.

These are invariably engraved on large flat stones, in the shape of tomb-stones, resting upon a kind of throne of lotus leaves^[232]. Fac-similes of the whole of these have been brought to England, and several have been translated into English.

In the collection of inscriptions at *Surabáya*, the following dates appear:

On a stone found near *Jang'gála* 863
On another found near the same place 845
On another from the *Kendang* hills 865

Several prior dates, as 116, 363, 647, 773, are mentioned in the body of these inscriptions, which seem to refer to historical events of preceding centuries; but the dates above mentioned, with some others, appear in the usual place to shew the actual date of the inscription itself.

The date of a similar inscription found in *Kedú* is 505, and of another stone found in the central districts, 506; but it has not yet been ascertained what particular events these inscriptions record. The annexed translations from three of the stones collected at *Surabáya*, were made by Captain Davey at my request, with the assistance of the *Panambáhan* of *Súmenap*^[233].

Inscriptions in the same character have likewise been found on copper, very beautifully executed, and in a high state of preservation. The date on one of these has been ascertained to be 735, and on another, 865. I found several collected in the Museum of the Society of Arts and Sciences at Batavia^[234].

The *Panambáhan* of *Sumenap* was able to read the latter without difficulty; but finding them to be filled with terms of praise and devotion which he could not comprehend, it was not attempted to render a literal translation. One of the plates (No. 3), to which at my request he devoted particular attention, contains an invocation to *Sang yang Bráma*, to favour and prosper the country of *Gegélang* (*Sínga Sári*), and to give assistance, by means of *Jáya Kátsang*, in repelling all evils and attacks, so that the country may become celebrated and flourishing.

The country of *Gegélang* (*Sínga Sári*) flourished in the time of *Pánji*.

Another of these plates (No. 9) contains an invocation of a similar nature, in favour of the country of *Dahá* (*Kediri*), which flourished at the same time.

In some of the eastern districts of the Native Provinces and at *Súku*, near the mountain *Láwu*, inscriptions on stone occur in relief. Some of them occupy stones several feet high, and are written in well executed letters, above an inch square. The date of one of these is 1363. A fac-simile of another of the same kind reduced, is given in the plate^[235].

The following is a translation of this inscription, as far as it could be rendered into modern Javan by the *Panambáhan* of *Súmenap*.

"This is an advice to mankind, whose ignorance arises out of a covetous desire to obtain more than they possess. If mankind were not by their disposition inclined to be covetous of what others possess, and to scandalize each other, where would be the use of advice; when they are receiving advice, they have a confidence in doing what is right, but afterwards they follow their natural inclinations. Therefore, oh ye men of the city, be advised by this, not to follow such dispositions, but to do what is required of you by the times and the customs of the country, and be not singular."

In the present burial place at *Grésik* are the tombs of several of the early Mahomedan missionaries, most of them of stone, bearing inscriptions with dates. That of *Sheik Mulána Ibrahim* is in marble, and in good preservation, having the date 1334 (409 years since). Here is also the tomb of *Mulána Mach'ríbi*, who was antecedent to *Ibrahim*. This has, however, fallen to decay, and has no legible inscription.

The entrance to the cemetery is through several squares enclosed by walls and gateways, some of them very ancient, and in the same style of architecture as distinguishes those of *Majapáhit*. On the side of the gateway leading to the division in which are the most ancient tombs, is a small stone pillar, with the date 1340 upon it in relief. Passing on to the division in which the family of the regents is interred, are also to be noticed many relics in stone, brought from some of the Hindu ruins. Among these is a gigantic toad or frog, and an oblong vessel of three feet long, having in relief the date 1246. On the side of the tomb of the great grandfather of the present regent, is a *Yóni*, said to have been brought from *Majapáhit*, and in this Mahomedan sanctuary serving as a kneeling or resting place to the tomb. Similar relics are to be found in other burial places in the eastern part of the island, most of the chiefs priding themselves upon having some remnant of *Majapáhit*. At the residence of the regent of *Surabáya* are also collected several curious remains; and in particular a large bath, excavated from a solid stone about six feet long.

In the central and eastern districts of Java, in the vicinity of the dilapidated temples, are found numerous ancient coins in brass and copper, exhibiting various subjects in relief, and invariably with a hole in the middle for the

convenience of stringing them. Those which are represented in the plate^[236] are taken indiscriminately from a collection of upwards of a hundred brought to England, the dates annexed to each being determined by the *Chándra Sangkála*, as explained for each particular coin by the *Kiái Adipáti* of *Demák*. Thus the last, which has the date 1568, is explained as follows:

Naga hoba wisaya jalma
Snakes move work men
8 6 5 1

That is to say, "snakes are moving while men are working:" alluding to the two snakes which appear entwining together between and above the two men who are mastering an animal. The coin with the date 1489, bears a Javan inscription of *Pangéran Rátu*, the title by which a prince of Bantam, who reigned in that year, is recognized by the Javans.

The mode of determining these dates by the *Chándra Sangkála*, appears however so uncertain and ill understood, that perhaps but little reliance is to be placed on it. I have, nevertheless, given them, in order to show the notion of the Javans on the subject, and as it is not improbable they may be found useful in illustrating the early history of the country. Many of the coins not European or Indian, found in the Archipelago, as well as in China and Japan, have a hole in the centre. These coins seem to have been of home manufacture: the execution is rude; but the figures, such as they are, in general well defined and clearly expressed. In the vicinity of the principal temples have been found small silver coins, about the size of a Madras pagoda, bearing the impression of a small cross, and of some rude and unintelligible characters.

But perhaps the most striking and interesting vestige of antiquity which is to be found in the Eastern Seas, is the actual state of society in the island of *Báli*, whither the persecuted Hindus took refuge on the destruction of *Majapáhit*, and where the Hindu religion is still the established worship of the country. This interesting island has hitherto been but little explored by Europeans, and what we know of it is only sufficient to make us anxious to know more. I visited the island in 1815, and such particulars concerning it as the limits of the present work admit of will be found in Appendix K.

In the course of the present work it has been my object to convey to the public, in as compressed a form as my time permitted, and without bias from previously conceived opinions or new theories, the information which I possessed. The antiquities of Java, however, afford such an ample and interesting subject for speculation, that I shall presume on the reader's desire for some opinion concerning their origin and purpose.

With respect to the remains of architectural grandeur and sculptural beauty which have been noticed, I shall simply observe, that it seems to be the general opinion of those most versed in Indian antiquities, that the large temple of *Bóro Bódo* (a corruption perhaps of the *Bára Búdha*, or the Great Budh,) and several others, were sacred to the worship of *Budh*. The style and ornament of this temple are found much to resemble those of the great *Budh* temple at *Gai-ya*, on the continent of India, and it is probable that it may have been constructed by the same people, perhaps even by the same artists. The *Devanágari* characters on the inscription found at *Brambánan* are recognized by Mr. Wilkins to be such as were in use on continental India eight or nine hundred years ago. The date of several inscriptions in the ancient Javan characters, found in the central part of Java, is in the sixth century, supposed to be of the present Javan era, and the traditions of the Javans concerning the arrival of enlightened strangers, and an intimate connexion between Java and continental India, for the most part refer this intercourse to the sixth and three following centuries, that is to say, to the period of the empires of *Medang Kamúlan* and *Jáng'gala*.

Mahomedanism having become the established religion in the year 1400 (A.D. 1475,) all the great works of a Pagan character must, of course, be referred to an earlier period.

The ruins at *Majapáhit* and its vicinity are distinguished by being principally, if not entirely, of burnt bricks, a circumstance which justifies us in assigning an anterior date to most of the edifices constructed of a different material. The date found on the ruins at *Súku*, and some few other places, may be an exception to this rule; but the sculpture of these is coarse and rude compared to the magnificent remains in stone found elsewhere. On this account it is reasonable to conclude, that the arts at that period had considerably declined. The edifices and sculptures at *Sínga Sári* were probably executed in the eighth or ninth century, that being the period of the greatest splendour of this state; and as the style and decorations of the

buildings, as well as the execution of the sculpture, appear very nearly to resemble those of *Brambánan*, *Bóro Bódo*, &c. it is probable that the whole were constructed about the same period, or within the same century, or at any rate between the sixth and ninth century of the Christian era.

From the extensive variety of temples and sculpture, as well as from that of the characters found in the ancient inscriptions, it is probable that Java has been colonized from different parts of the continent of Asia.

The Buddhist religion is by many deemed of higher antiquity than what is now called the Braminical; and it seems generally admitted, that the followers of *Budh* were driven by the Bramins to the extremes of Asia and the islands adjacent. The Jains and Budhists had probably the same worship originally, from which the Bramins or priests may have separated, after the manner in which it has been said the Jesuits of Europe once aimed at universal empire; and when we consider that the religion of *Budh*, or some modification of it, is still the prevailing worship of Ceylon, Ava, Siam, China, and Japan, we are not surprized to find indications of its former establishment on Java.

To trace the coincidences of the arts, sciences, and letters of ancient Java, and those of Egypt, Greece, and Persia, would require more time and more learning than I can command. Such investigations I must leave to the reader, deeming myself fortunate, if in recording their vestiges in the traces of a high state of civilization, to be found in the ruins, languages, poetry, history, and institutions of Java, I have succeeded in obtaining any share of his interest and respect for a people whom I shall myself ever consider with peculiar esteem and affection.

In the archives of the princes of Java are deposited histories of their country, extending from a remote antiquity to the latest date. It is principally from abstracts of these, made at my request, in three different parts of the country, by the *Panambáhan* of *Súmenap*, the late *Kiái Adipáti* of *Demak*, and the secretary of the *Pangéran Adipáti* of *Súra-kérta*, all distinguished among their countrymen for literary attainments, that the two following chapters have been compiled. The abstract presented by the *Kiái Adipáti* of *Demák* being the most continuous, forms the main stream of the narrative.

Copies, versions, and detached fragments of history, are found in the possession of every family of distinction. Of these I have occasionally availed myself.

So much of the native accounts as relates to the period anterior to the establishment of the empire of *Jang'gala*, in the ninth century, is confused, obscure, contradictory, and interpolated with the fabulous and heroical histories of continental India; but from that epoch they correspond essentially, and from the subversion of Paganism (A.D. 1475) they are circumstantial, and claim attention, not only as illustrative of the character of the people, but as historical records of the transactions of the times. Much abridgment has been requisite: the passages between inverted commas are however literal translations from the native writings; and those so distinguished, subsequent to the arrival of the Dutch, are from the original histories. In the course of the narrative, a Dutch abstract of the native history, by Mr. Middlecoop, has occasionally been consulted.

Besides these historical relations, called *Bábat*, as *Bábat Jang'gála*, *Bábat Matárem*, &c. the native princes and chiefs have been in the habit of keeping a register of the principal events, in the form of a chronological table. These are not very consistent in what regards events anterior to the Mahomedan conversion. From these tables is formed that which is annexed to the following history. All that is subsequent to the establishment of *Matárem* is translated from the records of the court of *Suru-kérta*.

FOOTNOTES:

[203] See Chapters on History.

[204] "The religion of the Javans is in general Mahomedan, but mingled with many superstitious doctrines derived from the ancient Pagan worship. The Javans, however, are far from bigots to their religion, as other Mahomedans generally are. They are mild and tractable by nature, and although they do not easily forget or forgive an injury, they would be a quiet well disposed people under good laws and a mild government. The murders, and other crimes, which are now committed in some places, are to be attributed more to the present faulty administration than to any bad dispositions in the people. The same may be remarked of the indolence and indifference which now characterize them. Property in the land, with personal and commercial freedom and security, would soon render them industrious."—*Hogendorp's Memoir on Java*, 1800.

[205] The Javans observe of the Mahomedans of continental India, that they would rather drink wine than eat pork; while the Javans, on the contrary, would rather eat pork than drink wine.

[206] In the account which has been given of the literature of the Javans, the most esteemed compositions connected with their ancient faith have been referred to; but as most of these, such as the *Ráma*, *Bráta Yúdha*, *Níti Sástra*, and others, are in many respects similar to corresponding works on the continent of India, it may not be uninteresting, while treating of the religion of the country, to give some account of the *Mánek Máya*, a composition in prose, which in its origin and story appears to be perfectly local, and which contains many of the peculiar notions still entertained by the people of the beginning of the world, &c. It is a work in high estimation among the modern Javans, and continually referred to. The copy in the Javan language from which the annexed translation was extracted, was procured as an especial favour from the present *Susúnan*. It has obviously been compiled since the establishment of Mahomedanism, but neither the time at which it was written, nor its author, is known.

[207] Now Surveyor-General of India.

[208] *Bándar* is the term given to the Chinese farmer of the toll ports or transit duties; whence *bandáran*, the place or residence of the *bándar*.

[209] *Récha* is the term given by the Javans to all the remains of antiquity generally, but particularly to the images of their former worship.

[210] So termed by the people of the neighbouring villages. *Bóro* is the name of the district, *bódo* means ancient.

[211] These figures measure above three feet in height in a sitting posture, and with the images found in the towers exactly resemble those in the small temples at *Chándi Séwu*.

[212] Drawings of the present and former state of this edifice, and illustrative of the sculptural ornaments by which it is distinguished, have been made, and have been long in the hands of the engraver.

[213] Here, according to the tradition of the Javans, are to be found the ruins of *Arjúna*, *Gatut Kácha*, *Bíma*, *Derma Kasúma*, *Sa Déwa*, and other characters who figured in the *Bráta Yúdha*, or war of the *Pándus*.

CHAPTER X.

The History of Java from the earliest Traditions till the Establishment of Mahomedanism.

Amongst the various traditions regarding the manner in which Java and the Eastern Islands were originally peopled, and the source whence its population proceeded, it has been related, that the first inhabitants came in vessels from the Red Sea (*Láut Míra*), and that, in their passage, they coasted along the shores of Hindustan; that peninsula then forming an unbroken continent with the land in the Indian Archipelago, from which it is now so widely separated, and which, according to the tradition, has since been divided into so many distinct islands, by some convulsions of nature or revolution of the elements^[237].

These people are supposed to have been banished from Egypt, and to have consisted of individuals professing different religious persuasions, who carried along with them to the land of their exile, their different modes of worship and articles of belief. Some are said to have adored the sun, others the moon; some the elements of fire or water, and others the trees of the forest. Like all other uncivilized men, they were addicted to the arts of divination, and particularly to the practice of astrology. In other respects, they are described as savages, living in hordes, without fixed habitations, without the protection of regular government, or the restraint of established law. Respect for age was the only substitute for civil obedience. The oldest man of the horde was considered its chief, and regulated its simple movements, or prescribed its political duties. When the crop was gathered and the accustomed devotions performed, it was he who appointed the mode and time of its departure from one place to another. On these occasions, the horde, after offering their sacrifices and feasting in an open plain, left the remains of their repast to attract the bird called *úlunggága*^[238]; and the young men shook the *ángklung*^[239], and set up a shout in imitation of its cry. If the bird did not eat of the meal offered to it, or if it afterwards remained hovering in the air, perched quietly on a tree, or in its flight took a course opposite to that which the horde wished to pursue,

their departure was deferred, and their prayers and sacrifices renewed^[240]. But when the bird, having eaten of its meal, flew in the direction of their intended journey, the ceremony was concluded by slaying and burning a lamb, a kid, or the young of some other animal, as an offering of gratitude to the deity; and for the favourable omen a second feast was enjoyed, which ended with the most violent demonstrations of joy, the whole party dancing and springing to the music of the *ángklung*. Every thing being arranged for the journey, the eldest of the horde, with his wife and children, were either placed upon an elephant, or carried in a litter shaded by mats; the rest moved on foot, preceded by young men and boys, shaking the *ángklung* and shouting aloud, for the double purpose of doing homage to the chief and of frightening away the wild beasts, which at that time abounded in the island^[241].

But it is only from the supposed arrival of *Adi* or *Aji Sáka*, that the Javans, even in their traditions, enter with any confidence into details. This event is generally referred to the first year of the Javan era, which corresponds with the seventy-fifth of the Christian era, and in some accounts is thus related.

"*Prábu Jáya Báya* was a great and powerful prince of *Astína*, and the fifth in descent from *Arjúna*, the son of *Pándu Déwa Náta*; after whom had reigned successively, *Bimányu*, *Parakísit*, *Udayána*, and *Gandra Yána*. His *Peng'gáwa*, or chief minister, being a man of great enterprize and ability, was sent to visit and civilize foreign countries. In the course of his travels, he landed on Java, then the abode of a race of *Rasákxa*, and known by the name of *Núsa Kéndang*. This happened in the first year of the Javan era, and is distinguished in the *Chándra Sangkála* by the words, *nir, ábu, tánpo, jálar*, meaning literally, 'nothing dust, not any thing (but) man,' and metaphorically the figures 0001.

"He here discovered the grain called *jáva-wut*, at that time the principal subsistence of the inhabitants; and, in consequence of this discovery, he changed the name of the country from *Núsa Kéndang* to *Núsa Jáwa*. In his progress through the island he met with the dead bodies of two *Rasákxa*, each holding a leaf with an inscription on it, one in *púrwa*, (ancient), the other in Siamese characters: these he united, and thus formed the Javan alphabet of twenty letters.

"He had several combats with the *Rasákṣa*, particularly with one *Dewáta Chéngkar*; and after fixing the date of his different discoveries, and leaving mementos of his visit wherever he went, he finally returned to *Astína*, and delivered to his sovereign a written account of all he had seen and done."

The accounts of the real character of *Aji Sáka* are various. Some represent him as a great and powerful prince, who established an extensive colony on Java, which a pestilence afterwards obliged him to withdraw; whilst others consider him as a saint and deity, and believe that on his voyage to Java he sailed over mountains, islands, and continents. Most, however, agree in attributing to him the first introduction of letters, government, and religion; the only trace of anterior civilization being a tradition, that before his time there existed a judicial code, under the title of sun and moon, the punishments of which appear not to have been severe: a thief was bound to make restitution of the property stolen, and to pay in addition a fine in cattle or produce; and if the theft was considerable, he became the slave of the injured party or his relations, without, however, being transferable to another master: murder was not punished by death, but by a heavy fine, and perpetual servitude in the family of the deceased. This code *Aji Sáka* is represented to have reformed; and an abstract collection of ordinances, said to have been made from his instructions, is believed to have been in use as late as the time of *Janggála* (A.D. 900), and even of *Majapáhit* (A.D. 1300).

In the Sanscrit language *Sáka* means an era, and is applied to the founder of an era; and in the chronology of the Hindu princes of India, *Sáka* is a name or title, which has so often been assumed, that it is sufficient to say to whom it is most appropriately due. According to Sir William Jones, *Sáka* is a name of *Budha*. In the chronology of the kings of *Magádha*^[242], by Major Wilford, the Hindus are stated to have divided the *Kaliyúga* into six unequal portions, or subordinate periods, called *Sákas*, because they derived their origin from six *Sákas*, or mighty and glorious monarchs, of whom three have already made their appearance and three are still expected. The third *Sáka* was *Salavahana*, who is believed to have lived at the same time with our Saviour, and is represented to have corresponded with him in some of the principal features of his life. The era which bears his name commenced from his death (namely, seventy-eight years after the Christian era), and is doubtless that adopted by the Javans, which corresponds with it within

about three years: and the slight difference between them may be accounted for, by the introduction of the Mahomedan mode of reckoning during the last three centuries.

The same writer informs us, that the first *Bála Rája*, a title peculiarly given to the ancient sovereigns of *Guj'rat*, and who is supposed to have lived in the seventh century of the Christian era, was called *Di Sáka*, or *Déva Sáka*; which being also one of the titles of *Salivahana*, might induce an opinion that they were the same person, if, as Major Wilford acknowledges, the confusion and uncertainty of the Hindu records did not almost deter us from forming any fixed opinion whatever. According to the Japanese historians, *Sáka* lived a thousand years before our Saviour; and the worship of that country is still denominated by them the religion of *Sáka* or *Siáka*^[243].

According, however, to a prophetic chronology of the Javans, which is now in the possession of the *Susuhúnan*, and is ascribed to the pen of the *Aji Jáya Báya*, but is doubtless of a more modern composition, the supposed arrival of *Aji Sáka* did not take place till after the year 1000. In this chronology, the author himself is described as sovereign of *Kedíri* in the year 800 of the Javan era.

"What was first known of Java," says this account, "was a range of hills, called *Gúnung Kéndang*, which extends along the north and south coasts; it was then that the island first came into notice, and at that period commenced the Javan era.

"After this the Prince of *Rom* sent twenty thousand families to people Java; but all of them perished, except twenty families, who returned to *Rom*.

"In this year, twenty thousand families were sent to Java by the Prince of *Klín* (India). These people prospered and multiplied. They continued, however, in an uncivilized state till the year 289, when the Almighty blessed them with a prince, named *Káno*, who reigned for one hundred years, at the end of which period he was succeeded by *Básu Kéti*. The name of the sovereignty was called *Wiráta*. *Básu Kéti* dying, he was succeeded by his son, *Mángsa Páti*. The father and son together reigned three hundred years.

"Another principality, named *Astína*, sprung up at this time, and was ruled by a prince, called *Púla Sára* who was succeeded by his son *Abiása*, who

was again succeeded by his son *Pándu Déwa Náta*; the reigns of the last three princes together amounting to one hundred years.

"Then succeeded *Jáya Báya* himself, who removed the seat of government from *Astína* to *Kedíri*.

"The kingdom of *Kedíri* being dismembered on the death of its sovereign, there arose out of its ruins two other kingdoms, the one called *Brambánan*, of which the prince was called *Báka*; the other *Péng'ging*, of which the prince's name was *Angling Dría*.

"These two princes having gone to war with each other, *Báka* was killed in battle by *Dámar Máya*, the son-in-law of *Angling Dría*. On the death of *Báka*, the kingdom of *Brambánan* was without a prince, and continued so, till *Angling Dría* dying a natural death, *Dámar Máya* succeeded him and ruled the country.

"*Dámar Máya* dying, and the sovereignty becoming extinct, there arrived from a foreign country a person named *Aji Sáka*, who established himself as Prince of *Méndang Kamúlan*, in the room of *Dewáta Chéngkar*, whom he conquered.

"In the year 1018 the *Chándi Séwu* (thousand temples) at *Brambánan* were completed.

"The empire of *Méndang Kámulan* and its race of princes becoming extinct, the kingdoms which rose up and succeeded to it were;

- | | |
|-------------------------|--|
| 1. <i>Jang'gála</i> , | of which the prince was <i>Ami Luhúr</i> . |
| 2. <i>Kedíri</i> , | <i>Lémbu Ami Jáya</i> . |
| 3. <i>Ng'aráwan</i> , | <i>Lémbu Ami Sésa</i> . |
| 4. <i>Sing'a Sári</i> , | <i>Lémbu Ami Lúeh</i> . |

"These kingdoms were afterwards united under *Pánji Súria Ami Sésa*, the son of *Ami Luhúr*.

"*Pánji Súria* dying, he was succeeded by his son, *Pánji Laléan*, who removed the seat of government from *Jang'gála* to *Pajájaran*. This took place in 1200^[244]."

In some accounts it is stated, that the religion and arts of India were first introduced into Java by a Bramin named *Tritrésta*, who with numerous followers landed on Java about this period, and established the era, in consequence of which he is considered the same with *Aji Sáka*. The descendants of *Tritrésta* are accordingly said to have succeeded to the government of the country; and a list of eighteen princes is adduced, to bring down the history to the ninth century, in which the empire of *Jang'gála* was established. From these accounts, with some minute details regarding the different adventurers, who are supposed to have arrived during the three first centuries, it has been inferred, that these were probably followers of the religion of *Búdha*, and that those who crowded to Java, about the close of the fifth century, are to be considered as the first settlers professing the Braminical faith; but whatever authority this inference may derive from the knowledge we possess of the religious revolutions which have taken place elsewhere, and however probable it may be, that the followers of *Búdha* were at an early period established on Java, we apprehend that the conclusion will derive but little support from a chronology which, on the slightest investigation, will be found borrowed from continental India. Even the names of the principal characters, who are thus represented as having ruled Java for a period of so many centuries, will be readily traced in the accredited lists of Indian sovereigns^[245]; and when it is considered, that the princes of Java pretend to derive their descent from *Parakísit*, the descendant of *Arjúna*, that the scene of the celebrated war of the *Pandáwa*, which forms the subject of the most popular poem in the country, as well as that of the great Indian poem, called the *Mahabárat*, is believed to have been laid on Java, and that not only the countries mentioned in that war, but the dwelling places and temples of the different heroes who distinguished themselves in it, are at the present day pointed out on Java, it is easy to account for the indistinctness and inaccuracy of the line drawn between the princes of India and those who may have actually ruled on Java.

Without entering into the mythology of the ancient Javans, which has been more particularly treated of in another place, it may be sufficient to observe generally, that in some of the copies of the *Níti Sástra Káwí*, a work of the highest antiquity and celebrity, the following is the duration prescribed for the several ages of the world.

"The *kérta yóga* was of one hundred thousand years duration; the *tréta yóga* was of ten thousand years; the *duapára* was of one thousand years; the *sandiníka* (which began A.D. 78) is now in its course."

The *kérta yóga* is considered to have terminated with the expulsion of *Víshnu* from *Suraláya*. The *tréta yóga* commences with his becoming incarnate in the person of *Arjúna Wijáya*, sovereign of *Mauspáti*, and ends with the death of *Ráma*, an event supposed to have taken place about the time of *Sákri*, in the following line of princes.

Mánu Manása,
Tritrésta,
Parikéna,
Sutápa,
Sapútram,
Sákri,
Pulasára,
Abiása,
Pándu Déwa Náta.

Many of these princes, with their descendants, are in the traditionary accounts of the country, believed to have established themselves on Java; and while we find *Tritrésta* founding a colony in the first year of the Javan era, or about seventeen hundred and forty years ago, it is the less surprising that the war of the *Pándus* should have been transferred from the *duapára yóga* to the present age, and believed to have taken place in Java about twelve hundred years ago.

In the Javan, or modern version of the *Níti Sástra*, the following periods are assigned to the principal events of fabulous history. "In the beginning every thing was at rest and quiet. During the first years, kings began to start up, and wars arose about a woman named *Déwi Darúki*; at this period writing was introduced. One thousand five hundred years after this, another war began, about a woman named *Déwi Sínta*. Two thousand years after this, a third war broke out about a woman named *Déwi Drupádi*; and two thousand five hundred years afterwards another war took place, about the daughter of a spiritual man, not named in history."

The following account of princes, commencing with *Tritrésta*, who is believed to have established his government at *Gíling Wési*, at the foot of the mountain *Se Míru*, with the dynasties which they severally established, and the dates at which they respectively succeeded to the government, while it shews the manner in which these islanders have interwoven their fabulous history with that of the continent, will prove how little credit is due to those accounts, which furnish local details during a period so remote and obscure.

This account is extracted from a collection of the legends of the country, compiled by *Náta Kasúma*, the present *Panambáhan* of *Súmenap*; a man who is not only distinguished among the Javans for his eminent erudition and information, but who, from the superior endowments of his mind, would command a high degree of respect among the more civilized people of Europe.

"Before there were any inhabitants on Java, *Wísnu* (Vishnu) presided therein; but having offended *Sang yáng Gúru*, *Tritrésta*, the son of *Jála Prási*, and grandson of *Bráma*, was sent to Java as sovereign of the country. This prince was married, at ten years of age, to *Bramáni Káli*, of *Kámbója*, and with eight hundred families from the country of *Kling*, established the seat of his government at the foot of *Gúnung Semíru*, the capital of which he called *Gíling Wési*. He had two sons, *Mánu Manása*, and *Mánu Madéwa*, and his people increased to 20,000.

"In the country of *Kling* there was a man named *Watu Gúnung*, son of *Gána*, of *Désa Sangála*, who heard of the fame of *Sínta* and *Lándap*, two beautiful women residing at *Gíling Wési*. *Wátu Gúnung* went in search of them, and finding them under the protection of *Tritrésta*, attacked and defeated him. *Tritrésta* was slain, and *Wátu Gúnung* reigned as sovereign of *Gíling Wési* for one hundred and forty years. Under his government the country became very flourishing. He adopted forty sons and as many daughters of the princes of the country, and gave them the names of the deities of *Súrga* (Swerga), for which, and for other acts, he was in the end punished with death by *Wísnu*, in the year 240^[246].

"After this *Batára Gúru* sent *Gutáka* from the mountain *Sawéla Chála* in *Kling*, to be sovereign of *Gíling Wési*, where, after a reign of fifty years, he died, and was succeeded by his son, *Ráden Sawéla*, in the year 290. This

last prince reigned twenty years, and was succeeded by *Gutáma*, who removed from *Gíling Wési* while yet unmarried, and went to a country (*Astína*), which was possessed by an elephant that desired the princess *Endrádi* in marriage. He fought and killed the elephant, and married the princess, and afterwards proceeded to *Lagrestína*.

"There was a *Pandíta* of *Gúnung Jáli*, in the country of *Kling*, who had a son called *Ráden Dása Wirià*, who, when twelve years of age, having obtained leave of his father to go to Java, took up his abode at the foot of the mountain *Láwu*. His son, *Dása Báhu*, when ten years of age, determined to make himself independent, and travelled with one hundred followers, until they smelt the dead elephant which had been killed by *Gutáma*. There he established himself, calling his capital *Gája-huia*, or *Astíná Púra*. This was in the year 310.

"*Dása Báhu* was succeeded by his son *Suantána*, who had wars with the giant *Púru Sada*. This prince had a son, named *Déwa Bráta*, whose mother died immediately after the birth of the child; and the prince finding no one from whom the child would take milk, was obliged to carry it about in search of some one to whom it might take a liking.

"Of the descendants of *Tritrésta* were first, *Mánu Manása*; second, *Sutápa*; third, *Sapútram*; fourth, *Sákri*. The last begot *Púla Sara*, who had a son named *Abiása*. It happened that *Abiása*, when an infant, was borne in the arms of his mother *Ambu Sári*, at the time when *Suantána* was in search of a wet nurse for his son. Upon seeing her the infant *Déwa* immediately cried out and wanted milk from her, which, however, she would not consent to give, until after much altercation *Suantána* agreed to give his country in exchange; so that *Ambu Sári* received the country of *Astína* for her son *Abiása*, who, when arrived at a proper age, succeeded as sovereign in the year 415. *Déwa Bráta* was made Prince of *Kumbína*.

"*Abiása* was married to a woman advanced in years, by whom he had three sons: *Drésta Ráta*, who was blind; *Pándu Déwa Náta*, who was very handsome; and *Ráma Widára*, who was lame. After twelve years he retired, and transferred the government to his second son.

"*Pándu Déwa Náta*, at the age of fourteen, then succeeded as sovereign of *Astína*, and married *Déwi Kúnti*, daughter of *Básu Ketí*, Prince of *Madúra*, by whom he had three sons, *Kúnta Déwa*, *Séna*, and *Jináka*. *Déwa Náta*

also married *Madrín*, daughter of the Prince of *Mandarága*, and died, leaving her pregnant. She was delivered of two sons, and died also; but *Déwi Kúnti* gave the children milk, and called the one *Sadéwa* and the other *Nakúla*. At that time the children of *Pándu Déwa Náta* were very young; *Drésta Ráta* was therefore nominated protector during their minority; but instead of resigning the kingdom to them, he gave it to his own son, *Suyudána*; who, becoming sovereign of *Astína*, the five children were sent by *Abiása*, with a thousand families, to establish a new country, to which they gave the name of *Amérta*.

"*Suyudána* married the daughter of the Prince of *Mandarága*, by whom he had a son, and the country became great, flourishing, and happy. There was none more powerful; and the dependant chiefs were the Princes *Kérna* of *Awáng'ga*, *Bísma* or *Déwa Kráta*, of *Kúmbina*, *Jáya Páta* of *Dála Sejána*, *Jákar Sána* of *Madúra*, and *Sália*, of *Mandarága*. But *Púnta Déwa* and his brothers in the country of *Amerta* were not satisfied: they wished for their father's inheritance, and sent their cousin, *Krésna* of *Diarawáti*, to confer with *Suyudána*, and to demand their rightful possessions. For the sake of peace with their cousin, they offered to accept of half: but *Suyudána* rejected their demand and replied, 'that without the decision of the sword they should have none.' Then began the war called *Bráta Yúdha*, because it was a contest for their just rights. The war lasted long, and during its continuance the sons and followers of both parties were nearly all killed: at last *Suyudána* himself fell, after a reign of fifty years^[247].

"*Púnta Déwa* then became sovereign of *Astína* in the year 491; but after two years he transferred the government to *Parikísit*, son of *Abimányu*, and grandson of his brother *Jenáka*. After defending the country successfully against the giant *Usi Aji*, of *Surabáya*, whom he slew, he was succeeded by his son *Udayána*, who died after a reign of twenty-three years. His son *Jáya Déрма* succeeded. This prince had two sons, named *Jáya Misána* and *Ang'ling Déрма*. The former succeeded his father after a reign of twenty-seven years, and died at the expiration of five years. During the reign of *Jáya Misána* there was a dreadful pestilence and a violent earthquake, which destroyed the country, and his son removed to *Miláwa*, where he became a *tápa*.

"To this country *Ang'ling Déрма* had already removed with three thousand families, during the lifetime of his brother, and was acknowledged as

sovereign of *Miláwa Páti*, where he reigned in prosperity for ten years. At the expiration of this period, it is related that his princess burnt herself, in consequence of being refused the knowledge of a certain prayer, by which she might understand the language of all animals. The prince afterwards became insane, wandered about, and was transformed into a white bird.

"The son of *Jáya Misána*, *Jáya Purúsa*, begat *Púsapa Jáya*, who begat *Púsapa Wijáya*, who begat *Kasúma Wíchitra*, who again begat *Ráden Aji Nirmála*, who reigned for twenty years at *Miláwa Pati*, but in whose days the country was greatly afflicted with pestilence. In consequence of this, his son, *Bisúra Champáka*, departed with his followers, and proceeded to *Méndang Kamúlan*, where he abode as a *Pandíta*. He had, however, a son, named *Ang'ling Dérma*, from whom descended *Aji Jáya Báya*, who became sovereign of the country, and gave it the name of *Púrwa Chiríta*; under his government the country greatly increased, he acquired large possessions, and all under his administration was flourishing and happy. It is related of him, that he dictated the poem of the *Bráta Yúdha*, by order of *Déwa Batára Gúru*, in the year 701. He was succeeded by his son, *Salápar Wáta*, in 756, whose son, named *Kandiáwan*, afterwards came to the government, under the title of *Jáyu Langkára*. This last named prince had a sister, called *Chándra Suára*, four sons, *Subráta*, *Pára Yáta*, *Játa Wída*, and *Su Wída*, and a daughter, named *Pambáyun*. His *Páteh* was named *Jáya Singára*, and among his dependents were *Gaja Iráwan* of *Ludáya*, *Lémbu Súren Gúna* of *Jang'gála*, *Wíra Tíkta* of *Kedíri*, and the *Arias* of *Síng'a Sári* and *Ng'ráwan*.

"In course of time this prince became very wicked, and married his sister, *Chándra Suára*. When his *Páteh*, chiefs, and followers, heard of it, they rose in arms, but feared to attack the prince, as it had been predicted that he could only be killed at the full of the moon. The prince, in the mean time, being informed of the conspiracy, immediately attacked the party, and killing the *Páteh*, committed great slaughter among his followers.

"When the battle was over, he assembled his sons, and after telling them they were not ignorant of his deeds, and that it was his intention to burn himself at the full of the moon, he desired that they would thereupon remove from the place, and leave the country of *Méndang Kamúlan* to become a wilderness. He then divided his possessions into four parts: to the eldest son, *Subráta*, he gave the country of *Jang'gála*; to his second son, *Pára Yára*, he gave *Kedíri*; to his third, *Játa Wída* he gave *Síng'a Sári*; and

to his fourth son, *Su Wída*, he gave *Ng'aráwan*: and these princes severally became independent chiefs of those kingdoms.

"When the full of the moon arrived, *Sri Jáya Langkára*, with his wife and sister, *Chándra Suára*, went to the *Sáng'gar* of *Déwa Pabayústan*, where they burnt themselves. The families of the *Páteh* and the chiefs slain in the late battle also accompanied him, and committed themselves to the flames. *Pembáyun*, his daughter, was not however permitted to sacrifice herself, in consequence of which she bore great ill will to her father; and it is related that she is the same person who afterwards went to *Jáng'gála*, and abode at *Wána Kapucháng'an*, where she assumed the name of *Kíli Súchi*, and went about from place to place, being much beloved; for she was very learned, and made inscriptions upon stones, one of which is called *Kála Kérma*^[248]."

But other accounts, which attempt to draw a line between the Indian and Javan princes, date the commencement of the latter, five centuries subsequently to the first landing of the *Aji Sáka*, and consider the kingdom of *Méndang Kamúlan* as the first regular establishment on Java. As these, if not the most consistent with the historical data which have been admitted on continental India, have the advantage of being the least confused, a more particular account of the first establishments may be interesting. With regard to the statements that commence with a more remote antiquity, it may be sufficient to shew, at one view, the line of princes who are represented to have ruled on Java, according to the two different authorities which have been referred to.

LINE OF HINDU SOVEREIGNS

Who ruled on Java, according to the Manuscript ascribed to Aji Jáya Báya, in the Possession of the present Susuhunan.

Date of Accession, Javan Year.	SEAT OF GOVERNMENT.	SOVEREIGNS.
289	Wiráta	1 Bàsu Ketí.
		2 Mángsah Pati.
700		3 Púla Sára.
		4 Abiása.
	Kedíri	5 Pándu Déwa Nàta.
800		6 Aji Jáya Báya.

	Péng'ging	7	Angling Dría.
900-2	Brambánan.	8	Báka.
		9	Dámar Máya.
1002	Méndang Kamúlan	10	Aji Sáka.
	Kedíri		Lémbu Ami Jáya. [249]

		35	Prábu Kánya, a Princess married to Dámar Wúlan.

		36	Lémbu Ami Sáni.
		37	Bráma Túnggung.
		38	Ráden Alit, or Browijáya.

The following is the chronology of the Javan princes, according to the legends abstracted by *Kiai Adipáti Adi Mang'gála*, formerly Regent of *Demák*, and in which the Javan princes commence in the sixth century.

Date of Accession, Javan Year.	SEAT OF GOVERNMENT.	SOVEREIGNS.
525	Méndang Kamúlan	1 Sawéla Chála. 2 Ardi Kasúma. 3 Ardi Wijáya. 4 Rési Déndang Géndis.
846	Jang'gála	5 Déwa Kasúma. [251] Lémbu Ami Luhúr. 6 [251] 7 Panji Kérta Pati [251]
1000	Pajajáran (2)	8 Pánji Maisa Tandráman, or Laléan. 9 Múnding Sári. 10 Múnding Wángi. 11 Chiong or Siung Wanára.
1221	Majapáhit	12 Tandúran. 13 Bro Kamára. 14 Ardi Wijáya. 15 Méрта Wijáya. 16 Anáka Wijáya.

"When *Prábu Jáya Báya* of *Astína* died, he was succeeded by his son and descendants, named *Ami Jáya*, *Jaya Ami Sána*, *Páncha Dría*, and *Kasúma Chitra*. During the reign of the last of these princes, either the seat of government had been removed, or the country had changed its name, for it

was then called *Kúj'rat* or *Gúj'rat*; and it having been foretold that it would decay and go to ruin altogether, the prince resolved to send his son^[252] to *Jáwa*, and possessing the written account of *Aji Sáka*, which had been preserved in his family, he gave it to his son, and embarked him with about five thousand followers for that island. Among these followers were *Jálma-táni*, *Jálma-undági*, *Jálma-újam-dudúkan*, *Jálma-pangniárik*, *Jálma-prajúrit*; that is to say, people skilled in agriculture, artificers, men learned in medicine, able writers, and military men.

"They sailed in six large ships and upwards of a hundred small vessels, and after a voyage of four months reached what they conceived to be the island of *Jáwa*, and many landed; but as it did not accord with the account given by *Aji Sáka*, they re-embarked. In a few months, however, they came in sight of an island with a long range of mountains, and some of them, with the prince at their head, effected a landing at the western extremity, while a part were driven to the southward. They soon met with the grain *jáwa-wut*, as described by *Aji Sáka*, and ascertained that they had at last reached their destination: then opening the book of *Aji Sáka*, the days of the week and the *panchawára*^[253] were named. The prince, however, did not long remain in this part of the island; for on clearing the forest, a lingering sickness appeared among his followers, and many died from drinking the water: so he moved to the south and east, in quest of a more salubrious position, and with the hope of falling in with their companions. These they found at that part of the island now known by the name of *Matárem*, when the high priest opening the book of *Aji Sáka*, and referring to the prophecy, that *Jáwa* should become an inheritance to the descendants of *Prábu Jáya Báya*, he summoned the whole party together, and formally proclaimed the prince sovereign of the country, under the title of *Browijáya Sawéla Chála*. The name of *Méndang Kamúlan* was then given to the seat of government.

"The prince now found that men alone were wanting to render it a great and flourishing state, and he accordingly applied to *Gúj'rat* for assistance. The ambassadors whom he sent proceeded down the river and embarked at *Grésik*, so called from *Gíri-sik*, in consequence of the hills (*Gíri*) running in this part of the island close to the sea shore (*sik*); and when they reached *Gúj'rat*, the father of *Sawéla Chala*, delighted to hear of his success, immediately sent him a reinforcement of two thousand people. The kindred and friends of the new colonists were permitted to proceed in great numbers

to *Jáwa*, where they established themselves principally in the southern and eastern provinces. The prince lost no time in improving his capital, which became an extensive city in the year 525. From this period *Jáwa* was known and celebrated as a kingdom: an extensive commerce was carried on with *Gúj'rat* and other countries, and the bay of *Matárem*, then a safe place for shipping, was filled with adventurers from all parts."

In some of the accounts, the father of *Sawéla Chála* is named *Bália Achar*; and previously to the establishment of *Méndang Kamúlan*, *Sawela Chéla* himself is usually known by the name of *Awap*.

"Nothing, however, is represented to have tended more to the prosperity of this establishment, than a supposed union which is said to have taken place between the family of *Sawéla Chála* and that of *Aru Bándan*, a prince who had recently arrived from the Moluccas, and established himself on *Balambáangan*. Hearing of the arrival of *Sawéla Chála*, this prince, with his followers, proceeded to *Méndang Kamúlan* and submitted to his authority, on condition that the eastern provinces, including *Balambáangan*, should be confirmed to him and his descendants. According to the tradition of the country, this prince was principally induced to submit, in consequence of the other party being able to explain the inscription and signs of *Aji Sáka*, which he himself could not, and in consequence of the production of the writings, in which it was prophesied that the country should become the inheritance of the family of this prince.

"*Sawéla Chála*, after a long and prosperous reign, was succeeded by his son, *Ardi Kasúma*; and he again, on his death, by his son, named *Ardi Wijáya*.

"During the sovereignty of these princes, the country advanced in fame and prosperity, and the city of *Méndang Kamúlan*, since called *Brambánan* or *Prambánan*, increased in size and splendour. Artists, particularly in stone and metals, arrived from distant countries; the temples, of which the ruins are still extant, both at this place and at *Bóro Bódo* in *Kédu*, are stated to have been constructed during this period, by artists invited from India; and the remains of the palace, situated on a range of low hills near the site of the thousand temples, still attest the existence of this first capital of Java.

"*Ardi Wijáya* had five sons, besides a numerous illegitimate offspring. The eldest was appointed chief of the class of cultivators, the second of the

traders, the third to the charge of the woods and forests, the fourth chief of the manufacturers of oil, sugar, and spirits, and the fifth, named *Rési Déndang Géndis*, remained as assistant to his father.

"When this prince died, his youngest son, *Rési Déndang Géndis*, found himself in charge of the capital, and invested with the general administration of the country; but his brothers having formed independent governments in other parts of the island, refused to acknowledge his supremacy. One of them was established at *Bágalen*, another at *Japára*, and a third at *Kóripán*. He is said to have died of a broken heart, in consequence of these secessions, leaving a numerous progeny, who established themselves in different parts of the country.

"The next prince who," according to these accounts, "appears to have succeeded to the government of *Méndang Kamúlan*, was *Déwa Kasúma*, who being of an ambitious character, is said to have proceeded eastward, and established the kingdom of *Jang'gála*, the capital of which, so called from his attachment to the chace (*jang'gála* signifying "a dog" in the Javan language) was built in the forest of *Jeng'áwan*, a few miles to the eastward of the modern *Surabáya*, where its site, with many interesting remains of antiquity, is still pointed out. This event is supposed to have taken place about the year 846."

Of the earlier history of Java it is probable, that each of these three accounts contains some true particulars; but without unnecessarily discrediting the claims which that country asserts to a higher antiquity, we must confess ourselves unable, in the present state of our information, to separate truth from fable, till we arrive at a period when its records are more consistent. Unconnected with the line of princes whose names have been brought forward, many small states, petty dynasties, and separate interests, no doubt existed on Java in earlier times: of which little mention is made by tradition, which seldom busies itself, except with extensive and sanguinary wars, or great political changes. Among these may have flourished the celebrated *Jáya Báya*, in whose reign the *Bráta Yúdha* is said to have been composed by the *Pandíta Puséda*. In the account obtained from *Súra-kérta*, this prince, as we have seen, is related to have reigned in the eighth century in the country of *Kedíri*.

The temples at *Brambánan* (the extensive remains of which, with the numerous casts in metal found in their vicinity, prove the high state which the arts had attained in a remote age, and afford incontestible evidence of the establishment of the Hindu worship in the earliest periods of Javan history), are stated in some accounts to have been constructed in the year 525, and in others in the year 1018; but as far as the general tradition may be relied on, it seems most probable that they were the work of the sixth or seventh centuries. This opinion derives confirmation from the fact, that during this period idol worship increased in Japan. Abundance of idols and idol carvers, and priests, arrived in that quarter from several countries beyond sea; and local traditions assert, that at that time similar emigrations first took place to Java and the eastern islands^[254].

Déwa Kasúma is represented by the Javan writers to have been a prince of great talent and enlarged views, and by his mild and beneficent government to have induced many of his relations to submit to his authority, which in a short time extended over all the provinces eastward of *Jawána*. But the most interesting fact related of him is, that he sent his children, consisting of four sons and a daughter, to India (*Kling*), in order that they might there be educated and instructed in the religion of *Bráma*; from whence the eldest son having married the daughter of one of the greatest princes of the country, returned to Java with three large ships, laden with long cloth and other valuable manufactures, and bringing with him able artists of different professions, and a thousand chosen troops presented to him by his father-in-law as a body guard. How far this relation is correct it may be difficult to determine; and a suspicion may even be entertained, that it was a fiction invented by national vanity, for the purpose of concealing from posterity the successful invasion of foreign adventurers. What we know for certain is, that during the reign of the reputed sons of this prince, the Hindu religion, institutions, and literature, with the ornaments of continental India, were very generally introduced and diffused; and it is from this date that we may speak with some degree of confidence as to history.

Déwa Kasúma, on the return of his children from India, divided his kingdom among them. To the eldest, *Ami Luhúr*, he gave the succession to Jang'gála, with a jurisdiction of limited extent; to *Ami Jáya* he gave the country of *Gegélang* or *Sínga Sari*; to *Lémbu Meng'arang* he gave the country *N'garáwan* or *Browérno*, and to *Lémbu Ami Luhúr* he gave the

country of *Dahá* or *Kedíri*; so that, when he died, the island of Java became divided into four kingdoms. His daughter, who was the eldest of his children, and named *Déwi Kilí Súchi*, remained unmarried, and performed a conspicuous part in the transactions of those days. The temples at *Síng'a Sari*, the ruins of which still remain, are stated to have been constructed by that princess.

The reign of *Ami Luhúr* is celebrated for the extensive intercourse which at this period took place with foreign nations, and still more on account of the exploits and adventures of his son, *Pánji Ino Kérta Páti*, the issue of his marriage with the Indian princess, and who, under the name of *Pánji*, became the most renowned hero of Javan story. The adventures of *Pánji* are described in numerous romances, which form the subject of still more numerous dramatic exhibitions, and constitute a principal portion of the polite literature, as well as of the popular amusement of Java. In these romances the hero is represented as devoted to love and war. At an early age he marries *Angréné* or *Sékar'táji*, the daughter of his father's *Pepati*, to whom he is passionately attached. His father, desirous of uniting him with his cousin, the daughter of the chief of *Kedíri*, causes the first object of his affections to be put to death. *Pánji* on this embarks with the dead body, and a storm arising, most of the vessels which accompanied him being lost, he is supposed to have perished. He, however, reaches the island *Tanábang* in safety, and after burning the body of his lamented *Angréne*, proceeds with all the followers he can muster to *Báli*, where he assumes the name of *Klána Jáyang Sári*. Having obtained assistance from the prince of the island, *Andáya Prána*, and received in marriage the princess his daughter, usually known under the name of the *Pútri* or princess of *Báli*, he crosses to *Balambáangan*, the most eastern province of Java, and also uniting in marriage with the princess of that country, he obtains numerous auxiliaries, and moves westward to *Kedíri*, in quest of the princess *Chándra Kirána*, the fame of whose beauty and accomplishments had been widely celebrated. Here, in consequence of his change of name, and the general belief that he had perished in the storm, he is considered as a powerful Raja from *Sábrang*, or the opposite shore, and joining the chief of *Kedíri*, he secretly makes himself known to his daughter, and marries her.

According to some of the romances, a prince from *Núsa Kanchána*, or the Golden Isle, with numerous followers, and accompanied by two princesses

from *Núsa Rétna* arrives at *Jang'gála* about this period, and giving himself out for the long-lost *Pánji*, imposes on the credulity of the father, who receives him as his son. This prince is represented as the son of a *Bramána* possessing supernatural gifts, which enable him to succeed in the deception, and is said to have been lord of many rajas, among whom were *Báka*, *Mordáda*, and many others who are named. He is reported to have had a sister, named *Angréna Suára*, excelling in beauty, and in every respect resembling the princess *Angréné*, who with her nurse accompanied his four wives and numerous concubines to Java.

Klána Jáyang Sári now resuming his name as the real *Pánji*, his father, the prince of *Jang'gála*, proceeded to *Kedíri* with the auxiliaries brought over by the impostor, when a combat takes place between the two princes, and the true *Pánji* becomes manifest.

According to other accounts, the storm in which *Pánji* was supposed to have perished, occurred when the princess *Angréné* was living. She is cast on the *Báli* shore, where assuming a male habit, and becoming a favourite of the prince, she in time obtained the sovereignty of that island under the title of *Jáya Ang'ling Dára*. *Pánji* is thrown on the south shore of Java, and afterwards sent by his father to reduce the refractory chief of *Báli*, in whom he recognizes *Angréné*. In another romance his second wife, *Chándra Kirána*, is represented as becoming chief of *Báli*, under the title of *Kuda Narawáng'a*.

It is also related, that, about this period the Prince of *Sínga-sári* being attacked by the *Bálíans* under *Klána Ráng'ga Páspíta*, and defeated in an engagement near *Arára Bidáli*, applied for assistance to *Jang'gála* and *Browérno*. The forces sent as auxiliaries from *Jang'gála*, were defeated, and it was not until the arrival of a celebrated warrior from *Browérno*, that the *Bálíans* were obliged to retreat. The river which flowed by the scene of action still bears the name *Káli Géti*, from its stream having been converted into blood on this occasion.

With regard to the Raja of *Núsa Kanchána*, it is related that he possessed very extensive influence over all the islands of *Sábrang*. He is sometimes called *Klána Tánjung Púra*, and said to have obtained his authority by means of a *Bramána*, named *Kánda* or *Sakéndo*, and sometimes *Satírti*, who performed a severe penance on the island *Tambína*. His first

establishment was at *Goa* on Celebes; afterwards he attained supreme power: every island which he visited submitted to his sway. He established himself on Sumatra, in the country which has since been called *Palémbang*, whence he waged war against Java, in order to obtain the celebrated princess of *Dáha* in marriage. In other accounts, again, this prince is supposed to have been the son of the chief of *Browérno* on Java, carried off when an infant by a *Bramána*, who left his own son in his place.

In the dramatic performances of the *Bálians*, *Klána Tánjung Púra* is the same with *Si Maláyu*, which means a wanderer, and from which it has been supposed probable that the *Maláyus* have derived their name.

The poetical latitude given to the compositions which describe the life and adventures of *Pánji*, leaves it doubtful whether he was in fact the real son of a Javan prince, or some aspiring adventurer from India, whose attachment the chief of *Jang'gála* might have found it his interest to secure. In the dramatic exhibitions of the same subject, it is difficult to decide whether the heroes of the piece are intended to represent the real personages whose names appear in history, or whether they are merely invested with historical titles, for the purpose of giving dignity to fictitious characters.

Some idea may be formed of the reverence in which *Pánji* is held by the Javans, from their representing him as an incarnation of *Vishnu*, and his second wife, *Chándra Kirana*, under the name of *Déwi Gélu*, as an incarnation of *Sri*.

This belief, together with the miraculous transformations and supernatural events attributed to the interference of the Hindu deities, while heightening the colours of these compositions may have rendered them more popular subjects for dramatic exhibition, but it has deprived them of nearly all authenticity and value as historical records. Perhaps the only inferences, with respect to the hero of them, which we can be justified in drawing, is that the prowess, enterprises, and accomplishments of this chieftain, who has been termed the Charlemagne of the East, far excelled those of his contemporaries, and that he visited *Báli*. It appears also, that during this period some government was established in the other islands of the Archipelago, in which a similarity of religion, character, and usages prevailed. As descriptive of the manners and customs of the country, and as affording incontestible evidence, not only of the existence of the Hindu

religion on Java, but of its universal diffusion as the prevailing worship of these islands at this period of their history, these traditionary remains possess a high value; and with the traces of foreign influence still to be found in their languages, and in the numerous monuments of the arts, will materially contribute to the developement of their earlier history, while they throw light on the character of the people, and the progress that had been made in civilization.

The *kris* is believed to have been first introduced into the Eastern Islands by *Pánji*; and some go so far as to assert, that all the countries in which it is now worn acknowledged his supremacy. The *gámelan*, or musical instruments of the Javans, together with the various dramatic exhibitions which still form so essential a part of the popular amusement, and compose so distinguishing a characteristic of national literature, are all supposed to have been introduced by him.

The adventures of *Pánji* are related in the Malayan romances, where that hero is represented under the appellation of *Chékel Wáning Páti* (literally, "when young brave to death"), and in the Malayan annals a particular account is given of a chief of *Sábrang*, who, according to their story, obtained the princess *Chándra Kirána* in marriage^[255].

About this period the first intercourse with China is believed to have taken place: a large Chinese *wángkang* was wrecked on the north coast of Java, and the crew landed, some near *Japára*, others at *Semárang* and *Tégal*. The rider of the vessel is represented as bringing with him a magical stone, by which he performed many wonderful effects, and by means of which he ingratiated himself with the chief of *Tégal*, who allowed him to collect the remainder of his crew into a regular establishment, and conferred upon them many privileges.

The accounts regarding the succession of *Pánji* to the throne of his father are very discordant. In some he is represented as having succeeded on his death, and having continued to administer the government for several years; in others, he is represented as dying prematurely, during the lifetime of his father: *Prába Jáya Sangára*, chief of *Madúra* (then called *Núsa Antára*, or the island lying between), jealous of the power of *Jang'gála*, is said to have landed, and in a desperate action killed *Pánji* with an arrow from his own bow, in fulfilment of a prophecy which foretold that he would be

invulnerable, except to the iron staff of *Jáya Langkára*, of which, it is added, this prince had manufactured his arrow. The account of this affair, as related in the *Madúra* traditions, is as follows:

"Then the prince of *Núsa Antára*, called *Klána Prábu Jaya*, consulted with *Gúra Bramána Kánda*, and others of his council, on the probability of his being acknowledged as chief prince over the adjacent countries. *Gúra* observed, that while *Déwa Kasúma* lived he could not permit the attempt; but the prince informing him that intelligence had been received of the death of that prince, then said, '*Gúra*, it is well; you are permitted to effect your object by force, if necessary, but in the first instance try negotiation.' A letter written on the leaf of a tree was then dispatched, and when the messenger arrived at *Jang'gála*, he found the prince *Angráma Wijáya* seated on his *setingel*, attended by his *patéhs*, *Kúda Nawársa* and *Brája Náta*. At that time they were discussing the prince's intention of transferring his title to his son, *Ino Kérta Pati*^[256]. The question was not decided when the messenger appeared. The prince declined reading the letter himself, but desired his minister to do so. As soon as *Brája Náta* read the demand of the prince of *Núsa Antára* to be acknowledged the superior, and the threat that he would lay waste the lands of Java in case of refusal, he became enraged to the highest degree, and without communicating the contents tore the letter, and seizing the messenger by the neck, threw the pieces in his face, and desired him to return to his master. After his departure *Ino Kérta Páti* arrived, and being apprized of the circumstances, entreated his father to permit him to go over in disguise to *Núsa Antára*.

"On the return of the messenger to *Núsa Antára*, he reported the result of his mission, when preparations were immediately made for the attack upon *Jang'gála*, and the chief, on this occasion, received the title of *Jáya Sankára*. But before the troops had departed, *Ino Kérta Páti* contrived to carry off from the palace the wife of the prince, named *Dewi Sinawáti*, which raised the enmity of the parties to the highest pitch.

"The prince of *Jang'gála*, when he was informed of these preparations, summoned his brothers from *Ng'aráwan* and *Sínga Sári*, who resolved to unite with him against the expected attack. The three princes were in conversation, when information was brought them that the hostile troops had landed in great numbers. Then they drew out their people, and a battle ensued with the prince of *Núsa Antára*, who lost many chiefs and followers.

This prince finding the battle going against him, recollected the advice of *Gúru Bramána Kánda*, the loss of his wife, and the many insults he had received from *Ino Kérta Páti*: then throwing off his princely attire, he disguised himself as a common man, and arming himself with an arrow mixed with the people of *Jang'gála*, and went in search of *Ino Kérta Páti*. He had no sooner found him, than he discharged his arrow, and *Ino Kérta Páti* fell dead, it having been foretold that this chief could not be killed except by the iron staff of *Jáya Langkára*, of which the prince of *Núsa Antára* had made his arrow, *kris*, and knife.

"*Brája Náta* immediately acquainted his prince with the fall of *Ino Kérta Páti*, who thereupon rose and rushed into the thickest of the fight. The prince of *Jang'gála* attacked the prince of *Núsa Antára* with his *kris*, and slew him. *Gúru Bramána Kánda* seeing his prince slain, wished to escape, but his supernatural power was no more; and being seized by the prince of *Jang'gála*, he was put to death, with all the people of *Núsa Antára*, who did not save themselves by flight. Thereupon *Agráma Wijáya* assembled his council as before the war, and seated upon his setingel declared, that as *Ino Kérta Pati* was no more, it was his intention to nominate his grandson, *Máisa Laléan*, to succeed him. *Máisa Laléan* accordingly became chief of *Jang'gála* in the year 927, and after a time made his uncle, *Brája Náta*, *Tumúnggung* of *Jang'gála*, and retired himself to the district of *Kédu*. He had a son, named *Banjáran Sari*, who succeeded him, after whom were *Múdaníngkung*, and *Múda Sári*, who had a son called *Ráden Pánkas*, who succeeded to the government of Java in the year 1084. This prince established his capital at *Pajajáran*."

The fame of *Pánji* naturally throws the other events of the day into the back-ground, and whatever credit may be due to the earlier administration of his successor, it is eclipsed by the brilliancy of his exploits. But it seems agreed that *Kúda*, or *Máisa Laléan*, who is the next prince in the line of succession of whom tradition makes mention, at an early period of his reign induced the separate authorities which had been established at *Browérno*, *Sínga Sári*, and *Kedíri*, to acknowledge the supremacy of *Jang'gála*. Having, however, come to the throne at a tender age, and being under the influence of a crafty and designing minister, named *Báka*, who, with one of the brothers of the prince, entered into a league to deprive him of his inheritance, he quitted his capital, and on the dismemberment of his eastern

kingdom, became the founder of a new one in the west. The causes which induced him to leave his capital are related to have been a dreadful sickness, which at that period prevailed in the eastern districts of Java, and the designs of his minister, who hoped to possess the means of aggrandizing himself in the attempt to form a new establishment. The first eruption of the mountain *Klut*, of which tradition makes mention, is recorded to have taken place at this time, when the discharges from it are represented "to have been like thunder, and the ashes to have involved the country in impenetrable darkness." The sickness having continued to prevail after the departure of the prince, the inhabitants who had remained at an early period, are said to have embarked in vessels and proceeded to sea, no one knowing whither they went or hearing more of them.

Kúda Laléan, accompanied by his mother *Chándra Kirána*, proceeded west as far as *Blóra*, where he laid the foundation of a new capital, under the designation of *Méndang Kamúlan*, the name of the ancient capital of the island. From thence, however, owing to the treachery of his minister *Báka*, who aspired to the sovereignty, he was soon obliged to fly, and to take refuge with a devotee, until the chief of *Gíling Wési*, named *Prau Chátor*, going to war with *Báka*, an opportunity was afforded him of regaining his authority. Uniting with the forces of that chief, he succeeded in overpowering *Báka*, and laying waste his capital, which he afterwards burnt.

This *Báka* is said to have had a criminal passion for his own daughter, and in consequence of her refusing to gratify his desires, to have secreted her in an adjoining forest. In his service was a man named *Bándung Prakúsa*, descended from *Aru Bándung*, of *Balambárgan*, and also from *Káran Kálang*, the last chief of *Brambánan*. This man aspired to obtain the daughter in marriage. The father consented to the match, on condition that he would remove the temples from the old site to the new *Méndang Kamúlan*. Having made the usual offerings at the *Sáng'gar*, and done penance for forty days without sleeping, in the middle of the last night, when his *tápa* was all but accomplished, it happened that a maiden rose in her sleep, and without awaking, began to beat the rice block. On this, considering it daylight, he quitted his penance, and finding the stars still bright, he called down a curse on the women of *Brambánan*, that they should never be married till their hair was grey. This man is then said to

have been transformed into a dog, or in other words, to have become a wanderer as a dog in the forests, where he met with the daughter of *Báka*. From their intercourse is born a son, who in time destroys his father and marries his mother. From this union the people known at this day by the term *Kálang*, trace their descent, although it is more generally believed that they are the real descendants of the first inhabitants of the island.

The brother of *Kúda Laléan*, *Chitra Arung Báya*, also called *Chamára Gáding*, being deceived by *Báka*, formed a party at *Jung'gála*, and embarked from thence for the island of Celebes, where he established himself, and is supposed to be the same with *Sawíra Gáding*, the first prince of whom the *Búgis* accounts make mention.

Kúda Laléan having been requested by the chiefs of *Bányu Mas*, *Lúrung Téng'a*, and *Tégal*, to render them assistance against the Chinese, who, by their extortions and oppressions, had thus early become troublesome to the people of the country, attacked them, and killing their chief, relieved the inhabitants of these districts from their oppressions. From this period the Chinese have been dispersed over the whole island.

Kúda Laléan with his followers then proceeded westward, as far as *Gíling Wési*, which was situated in the southern provinces among the mountains of *Chidámar*, a district of the modern province of *Sukápura*, and in the fabulous and mythological accounts supposed to have been the ancient capital of *Wátu Gúnung*. Finding two brass cannon in the neighbourhood, he considered them as the signal for the foundation of his new capital, and built a city and *kráton* on the spot, to which he gave the name of *Pajajáran*, where, assuming the sovereignty of the country, he was acknowledged under the title of *Browijáya Máisa Tandráman*.

This prince was a great promoter of agriculture, and encouraged the common people in the labours of cultivation by his personal example. He was the first who introduced the rice husbandry into the western provinces, and trained the buffalo to the yoke, from which circumstance he is called *Maisa*, and his descendants *Múnding*, both signifying a buffalo, the former in the Javan and the latter in the *Súnda* language. According to the tradition of the *Súndas*, the wild buffaloes came from the woods of their own accord during the reign of this chief.

This prince had two sons, the elder of whom, not contented to remain at home, engaged in foreign commerce and went beyond sea; and the younger succeeded his father in the year 1112, under the title of *Prábu Múnding Sári*.

It was seven years before he was enabled permanently to establish his authority; and soon after he had done so, his elder brother returned, who having resided in India and having become a convert to the Mahomedan faith, is known by the title of *Háji Púrwa*. He was accompanied by an Arab from the country of *Kóúje*, who was descended from *Sáyed Abás*, and attempted in vain to convert his brother and family to the same faith. The troubles which were occasioned by their intrigues, and the endeavours which they used to effect their purpose, and which are allegorically described by the rapid growth and destructive effects of the *lagóndi* plant, were such as led to the removal of the capital further westward. In this new site it still retained the name of *Pajajáran*, being situated in the district of *Bógor* and in the vicinity of the modern *Buitenzorg*, the country residence of the European governor of the colony.

Háji Púrwa being unsuccessful in his attempts, and fearing the rage of the common people, quitted this part of the country, and is believed to have found an asylum in *Chéribon*, then an uninhabited wilderness.

This is the first mention of the Mahomedan religion on Java.

The next chief of *Pajajáran* was *Múnding Wáng'i*, who succeeded to the government about the year 1179. He had four legitimate children; the eldest a daughter, who refusing to be married was banished to the southern coast, where her spirit is still invoked, under the title of *Ratu Kidul*; the second, also a daughter, was born white and diseased, and was in consequence sent to an island off *Jakarta* (named from this circumstance *Púlu Pútri*), from whence she is said to have been carried away by the white men, who according to the Javan writers traded to the country about this period; the third a son, named *Aria Babáng'a*, who was appointed *Rája* of *Gálu*; and the fourth *Raden Tandúran*, who was destined to be his successor in the government. He had also a son by a concubine; but in consequence of the declaration of a devotee, who had been unjustly executed by *Múnding Wáng'i*, that his death would be avenged whenever the prince should have a child so born, he was desirous of destroying him in his infancy, but not

being able, on account of the extreme beauty of the child, to bring himself to kill it with his own hands, he enclosed it in a box, and caused it to be thrown by one of his *Mántris* into the river *Kráwang*. The box being carried down the stream was discovered by a fisherman, who brought up the child as his own, until he arrived at twelve years of age. Finding him then to possess extraordinary abilities, he carried him to *Pajajáran* for further instruction, and placed him under the charge of his brother, who was skilled in the working of iron and steel. To the boy he gave the name of *Baniák Wédi*.

The youth soon excelled in the manufacture of all kinds of iron-work, and in the wild tradition of the country, he is said to have fashioned the red hot iron with his fingers. In a short time he was made chief of the *Pándi*, or ironsmiths, and admitted to the familiar intercourse of his father, *Múnding Wang'i*. Having constructed an iron chamber or cage, which particularly attracted the attention of the prince, he succeeded in persuading him to sleep in it, when closing the door, he, according to some accounts, burned him alive; or, according to others, caused him to be thrown into the South Sea at *Kándang Wési*, thus fulfilling the prophecy of the devotee.

Baniák Wédi now assumed the government, declaring who he was; but being opposed by his brother, *Tandúran*, who had been destined to succeed his father, it was some time before his authority was acknowledged. At length defeating his brother in a general engagement, the latter escaped with only three followers, and *Baniák Wédi* was declared sovereign, under the title of *Browijáya Chióng Wanára*.

Ráden Tandúran arriving at the river *Gúntung*, took refuge at the house of a widow, and afterwards meeting with his sister, who was performing a penance on the mountain *Chérmai* (the mountain of *Chéribon*), he was encouraged by her to proceed further east, following the course of a bird which she desired that he would let loose for the purpose, till he reached the district of *Wirasába*. Here he observed a plant, called the *mája*, entwined round a tree. He wished to eat of the fruit, but finding it extremely bitter threw it away, and asked one of his followers, *Kiái Wíra*, the reason of its bitterness. "I have heard," replied *Kiái Wíra*, "that it was here your forefathers fought in the war *Bráta Yúdha*." On which the prince said, "Then let us stop here and establish our kingdom, and let us call it *Majapáhit*" This was in the Javan year 1221.

In the Javan language *mája* and *páhit* both signify "bitter;" but the name of this kingdom, also called *Mauspáhit*, is more probably derived from *Maus Páti*, the ancient capital of *Arjúna Wijáya*, in whom the Javans believe *Vishnu* to have been incarnate.

Ráden Tandúran was first assisted by the people of *Túban*, who hearing of the arrival of a prince of royal descent, immediately flocked to his standard. Afterwards *Aria Babáng'a*, who had been driven from *Gálu* by the forces of *Chióng Wanára*, joined his younger brother, *Ráden Tandúran*, and was appointed to the charge of the eastern districts along the Solo river, under the title of *Aria Panúlar*. In a short time considerable emigrations took place from *Pajajáran*, in consequence of the heavy demands made upon the people. Among others, *Bráma Dedáli* at the head of eighty *Pándi*, or ironsmiths, with their families, are said to have deserted their country. They were pursued as far as the river *Pamáli* in *Brébes*, but effected their escape, and were received with open arms at *Majapáhit*.

Chiong Wanára, on demanding that the *Pándi* should be delivered up, received a positive refusal, and in consequence declared war against his half-brother, whose authority by this time extended as far as *Bátang*. Both princes, with their respective armies, moved towards the centre of the island: the forces of *Majapáhit* encamped at *Ung'arang*, and those of *Pajajáran* at *Kaliwúngu*. A general engagement now took place; which proving indecisive, a personal combat between the two chiefs was about to occur, when it was mutually agreed, that from thenceforth the countries to the west should be subject to *Pajajáran*, and those to the east to *Majapáhit*, a line being drawn due south from a stone column placed near the spot in commemoration of the agreement. This column is still to be seen at *Túgu*, a few miles west of *Semaráng*. This treaty, supposed to have been made in the Javan year 1247, does not appear to have lasted longer than the life time of *Chiong Wanára*; for several of the finest provinces, and particularly those to the east of *Chi Pamáli*, had been laid waste, and the succeeding chiefs not being able to reduce the country to order and submission, appear to have placed themselves under the immediate protection of *Majapáhit*. They accordingly delivered up the gun *ng'ai stómi*, and several of smaller calibre, which were considered as the *pusáka* (inheritance or regalia) of *Pajajáran*, and are still held sacred by the princes of Java. The gun *stómi* is now in the possession of the *Susuhúnan*.

An ineffectual attempt was made by *Rátu Déwa*, a native of *Kuníng'an* in *Chéribon*, who, on the departure of *Aria Ba-bang'a*, had been entrusted with the administration of *Gálu*, to maintain an authority independent of *Majapáhit*; but he lost his life in the struggle, and his widow, *Torbíta*, who persevered, and was for a time successful, was at length overcome, and went over to *Majapáhit*^[257].

A different account of the first establishment of the *Majapáhit* empire is given in a manuscript recently obtained from *Báli*, which may deserve attention, in as far as it differs from the usually received opinion in Java. This account is as follows:

"The history of the kingdom of *Tumápel*, being an account of the origin and rise of the kingdom of *Majapáhit*, written on the day of *Respáti* (Thursday,) the 10th of the fifth season. Date

5 6 4 1
wisaya rasa toya wasitan

(literally 1465.)

"In the kingdom of *Tumápel* there reigned a king, named and styled *Rátu Sri Jáya Purúsa*, who in his demise was succeeded by his son, known by the name and title of *Sri Láksi Kirána*, who on dying left two sons, the elder named and styled *Sang Sri Síwabúda*, who succeeded to the throne; the younger *Ráden Wijáya*, who was remarkable for the beauty of his person.

"During the reign of *Sáng Sri Síwabúda* the state had very much declined. Every district was going to ruin, in consequence of which the *páteh*, named *Mángku Rája Náta*, addressed himself to the prince, reminding him of the manner in which his forefathers used to treat the people, and which the welfare of his kingdom required of him to follow. To this, however, the prince would not listen, and as a punishment to the *páteh* for his presumption, he immediately ordered him to quit *Tumápel*.

"*Sang Sri Síwabúda* had a man in his service named *Wíra Rája*, whom, in consideration of his useful services, he had made ruler over the eastern part of *Madúra* called *Súmenap*. On being informed that the king intended to accuse him of a crime of which he was innocent, and considering himself in

danger, sent a messenger to *Sri Jáya Kátong*, sovereign of *Kedíri*, to say, 'that as the kingdom of *Tumápel* was almost in a state of confusion, he might attack and conquer it without difficulty.'

"*Sri Jáya Kátong*, on hearing the intelligence, was very much delighted, and accordingly he ordered his *patéh*, *Kébo Mundárang*, to make preparations for the purpose of invading *Tumápel*.

"When every thing was ready the king gave orders to his *patéh* that he should march with a considerable force to *Tumápel*, and attack the southern part of the kingdom, while himself and his followers began the attack on the west.

"*Sri Síwabúda* being informed that his kingdom was invaded by the sovereign of *Kedíri*, appointed his younger brother, *Ráden Wijáya*, to command the forces, and meet the enemy coming from the west. Instead of marching out himself to meet the attack from the south he remained in his *kadáton*, and amused himself with his concubines. This enjoyment, however, was soon interrupted; for *Mundárang* having reached the *kadáton* obliged him to come out and meet him, and on his making his appearance, *Mundárang* and his followers lost no time in deciding his fate. *Sri Síwabúda* was accordingly killed before the palace gate. *Ráden Wijáya* and *Jáya Kátong* had by this time fought several battles, as well as skirmishes, in which a great number of men were killed on both sides.

"They continued to oppose each other when *Mundárang* came up and attacked *Wijáya* in the rear. This soon determined the victory in favour of *Kedíri*, and obliged *Wijáya* to fly to *Súmenap* for the safety of his person, where he remained in the house of *Wíra Rája*, to whom he gave a full account of all the circumstances.

"Among the spoils which *Mundárang* had taken from the palace was the beautiful wife of *Wijáya*, who was afterwards delivered to the sovereign of *Kedíri*. He was very much struck with her beauty, and proposed to make her his lawful wife.

"This proposal was however refused, and the king, instead of being offended by the refusal, adopted her as his daughter.

"*Ráden Wijáya* had by this time remained a good while with *Wíra Rája* at *Súmenap*, and was then advised by him to repair to *Kedíri*, that *Jáya Kátong*

might forgive him, and employ him in some way or other. He accordingly went over to *Jáya Kátong*, who received him very kindly; and he had not remained long at *Kedíri* when *Jáya Kátong* granted him an extensive forest, with which he might do as he liked.

"*Wijáya*, with a view of making a large town in the forest, sent a messenger to *Wíra Rája* to get some assistance. *Wíra Rája* accordingly sent over a good many people to *Wijáya*, who, after procuring every thing necessary for such an undertaking, began to cut down the forest. While they were at work they found a large *mája* tree loaded with fruit, but when they tasted the fruit they found it quite bitter; whence the place was called *mája páit*, (literally the bitter *mája*.)

"*Ráden Wijáya*, after making *Majapáhit* a very large town, assumed the title of *Bopáti Sang Browíjáyá*, having for his *Páteh* a son of *Wíra Rája*, whose name and title was *Kiaái Pateh Ráng'ga Lávé*.

"The population of *Majapáhit* increasing very rapidly, *Browijáya* thought, that with the aid of *Wíra Rája* he should be able to invade *Kedíri*. He accordingly sent a messenger to *Wíra Rája* to request some assistance. *Wíra Rája* willingly sent a considerable force to *Browíjáyá*, and after the two armies had joined together *Browíjáyá* began his march to *Kedíri*.

"*Jáya Kátong*, on being informed that a considerable force from *Majápáhit* was coming to invade his kingdom, immediately sent out a band of fighting men to meet the enemy. Several battles were fought in which many fell on either side.

"*Jáya Kátong*, previous to the invasion of *Browijáya*, had promised his guest, the King of *Tátar*^[258], whose name and title was *Srí Laksemána*, to give him his adopted daughter (wife to *Browijáya*) in marriage. This was however delayed. Several times did *Laksemána* press *Jáya Kátong* to fulfil his promise, but he never received a positive answer.

"*Laksemána* therefore being informed that *Browijáya* of *Majápáhit* had attacked *Kedíri*, forthwith sent a letter to him, saying that he would co-operate with the people of *Majapáhit*, provided *Browijáya* would be on good terms with him.

"*Browijáya* on receiving this intelligence was very much delighted, and accordingly returned a letter of approbation to *Laksemána*.

"*Láksemána* and his followers then joined *Browijáya*, and fought several battles with *Jáya Kátong*, in which a great number of men, as well as chiefs, were killed on both sides.

"In the heat of the action *Jáya Kátong* and *Laksemána* met, and a fierce encounter took place between these chiefs. *Jáya Kátong* threw his javelin at *Laksemána*, but missed him; and *Laksemána*, in return, struck him on the breast with his poisoned spear, and killed him on the spot.

"*Páteh Mundárang*, and the whole force of *Kedíri*, perceiving that their king was fallen, immediately surrendered.

"*Browijáya* then eagerly went into the *kadáton*, and was received by his faithful wife. They embraced with tears of joy; and *Browijáya* was so enraptured at recovering her, that without taking further notice of the *kadáton*, he returned with his wife to *Majapáhit*. He invited the King of *Táatar* to visit him. On his arrival *Browijáya* received him with every attention, and made him a present of a beautiful virgin.

"*Laksemána* remained for some time at *Majapáhit*, during which *Browijáya* gave him two or three grand entertainments. He afterwards embarked on board of his own vessel and returned to his kingdom of *Táatar*."

The story concludes with stating that *Browijáya*, with his *Páteh*, *Rang'ga Lawé*, reigned at *Majapáhit*, and governed the whole of the island of Java, and his people were very happy.^[259] Under the second prince of *Majapáhit*, called *Brokamára* or *Brow'yáya* the second, the manufacture of arms of various descriptions was brought to the highest perfection; and the first damasked *kris*es were now made by the *pándi* (smiths) from *Pajajáran*, who became so distinguished that they were appointed to the charge of districts with a thousand *chácha* each. The *kris*, which was afterwards placed on the tomb of *Susúnan Gíri*, is said to have been manufactured at this time from a piece of old iron found by the prince.

The reign of the third prince of *Majapáhit* was of very short duration, and he was succeeded by *Ardi Wijaya*, who putting to death the prime minister, eventually fell a sacrifice to the just revenge of the minister's son.

This prince, however, is distinguished by the extent of his conquests, and for the victory he obtained over *Sri Sin Dérga*, King of *Sing'apura* on the

Malayan peninsula, whose subjects lived by piracy, but by this event became tributary to *Majapáhit*.

To him succeeded the fifth prince of *Majapáhit*, named *Mérta Wijáya*, whose minister, *Gúja Mada*, became celebrated for his virtues and abilities, and for the code of regulations which at this day exists under his name. In his reign the conquest of *Indragíri*, or Sumatra, which had begun by his predecessor, was successfully completed.

Accounts differ regarding the successor of his prince, some considering *Ráden Alit*, his brother, to have succeeded at an early age, and others that *Ráden Alit* is the same with *Angka Wijáya*, the last sovereign of *Majapáhit*. According to the latter accounts, many of the principal events reported to have taken place in the reign of *Alit* are brought under that of *Mérta Wijáya*.

One of the sovereigns of *Majapáhit*, according to the Malayan annals, had two sons by the daughter of the Raja of the mountain *Sa Guntang*; the eldest named *Ráden Ino Mérta Wángsa*, and the younger *Ráden Mas Pamári*. The eldest succeeded to the government of *Majapáhit*, the authority of which then extended over the whole of Java, and all the Rajas of *Núsa Tamára* (probably *Báli*) likewise paid allegiance for half their lands. The sovereign of *Majapáhit* heard of the extensive country of *Malacca* which did not owe him allegiance, and sent a large fleet against it, under the command of *Demáng Wirája*. The Javans, however, did not succeed: they were forced to retreat to their *práhus* and to return to *Majapáhit*.

Through the wisdom of the minister, *Gája Mada*, who was continued in office, and the prudent direction of *Alit Wijáya*, the kingdom of *Majapáhit* rose to the highest pitch of wealth and glory. Several nations on Sumatra, and among them the people of *Palémbang*, as well as the inhabitants of the southern states of Borneo, who had no regular government at that period, obtained from him protection against the people of *Lámpung*, and in return acknowledged the supremacy of *Majapáhit*. The authority of this empire now extended eastward over *Balambárgan* and *Báli*, and westward over what was then termed the kingdom of *Súnda*, which included the western districts of Java, part of Sumatra, and all the islands situated in the straits. The inhabitants of the islands situated in the straits of Sunda consisted for the most part of the dregs of all nations, who having fled from the wars, or

having been otherwise obliged to desert their own country, had elected a chief, under whom they committed extensive depredations by sea and land.

During the reign of *Alit Wijáya*, the *pusáka kris*, named *jala sémlang jándring*, was carried off by stealth, by emissaries employed by *Ménak Dáli Púti*, prince of *Balambáangan*; but was recovered by the dexterity of a *pándi* (or smith) named *Súpa*, who in reward for his services was made chief of *Madirángin* (now called *Sidáyu*), and was the first distinguished by the title of *Adipáti*. This chief afterwards proceeded with a force to *Balambáangan*, and an engagement took place near the river *Káli Tíkus*: *Ménak Dáli Púti* was defeated and put to death, and his family obliged to seek refuge with the chief of *Báli Klóngkong*. The enemy was pursued as far as his capital; *Máchang púti*, and the whole coast was divided into districts, under the sovereignty of *Majapáhit*.

The chief of *Báli Klóngkong* sent an embassy to *Majapáhit*, and concluded a treaty acknowledging its authority.

During this reign, a violent volcanic eruption took place from one of the mountains in the western districts of *Balambáangan*.

Mérta, or according to others, *Alit Wijáya*, left two children, a daughter named *Kanchána Wúnga*, and a son named *Angka Wijáya*, who according to some accounts administered the government jointly. The princess, however, is better known as an independent sovereign, under the title of *Prábu Kánya Kanchána Wúng'u*. It is related, that during this reign the chief of *Balembáangan*, named *Ménak Jéng'ga*, made a successful attack on *Probolíng'go*, and reduced under his authority all the countries which had been dependent on *Majapáhit*, as far west as *Túban*, so that the capital was nearly surrounded by enemies. In this state of affairs, *Ménak Jéng'ga* offered terms, on condition of obtaining the hand of the princess in marriage; but she, disgusted by the deformity of his person, and a stench that exhaled from his body, not only rejected his suit, but declared she would give her hand to the man who would destroy him. *Dámar Wúlan*, the son of a *tápa* or devotee, named *Udára*, and a descendant of *Aria Babáng'a*, obtained a single victory over the rebels at *Probolíng'go*, and cut off the head of *Ménak Jéng'ga*: he was rewarded by the hand of the princess; and all the provinces again fell under the authority of *Majapáhit*. According to

some accounts, *Dámar Wúlan* had also been successful in repelling an invasion from *Kambója*.

Angka Wijáya having by this time attained a sufficient age, assumed the chief authority; the princess retiring with *Dámar Wúlan*, to whom was entrusted the charge of *Probolíng'go* with the more eastern districts, and of *Súmenap* and *Sámpang* on *Madúra*.

The first attempts to introduce the Mahomedan religion in the eastern provinces of Java, appear to have been made at *Grésik*, about the close of the thirteenth century of the Javan era. In the origin and rise of *Grésik*, they are thus related by the native writers:

"*Mulána Ibrahim*, a celebrated *Pandíta* from Arabia, descended from *Jenal Abidin*, and cousin to the Raja of *Chérmen* (a country of *Sábrang*), had established himself with other Mahomedans at *Désa Léran* in *Jang'gála*, when the Raja of *Chérmen* arrived at Java. This prince, who was a Mahomedan, perceiving with regret that the inhabitants of the large and populous island of Java were still heathens, resolved to attempt the conversion of the King of *Majapáhit*, *Prábu Angka Wijáya*, and with this view to present to him his maiden daughter in marriage. Embarking with his daughter, and all his relatives and followers of every description, he reached *Jang'gála* in safety, and landing at the *Désa Léran* he immediately built a mosque there, and in a short time succeeded in obtaining many converts.

"The Raja of *Chérmen* having consulted with his relations whom he found at *Léran*, deputed his son, *Sídek Mahómed*, to proceed to *Majapáhit*, and apprise the king of his intended visit. He afterwards set out himself, with all his party, among whom were forty holy men, his relations, who had come with him from *Sábrang*.

"The King of *Majapáhit* came forth, and met Raja *Chérmen* at the confines, where they both remained under a *pasang'grahan*, erected for their accommodation. *Angka Wijáya* evinced the greatest respect for Raja *Chérmen*, and treated him with every mark of hospitality.

"The Raja of *Chérmen* now presented to the King of *Majapáhit* a pomegranate in a basket, in order that, by his acceptance or rejection of it, he might ascertain whether or not he would become a convert. The king accepted of the present, but not without wondering how a Raja from *Tána*

Sábrang could think of presenting him with such a fruit, as if it had been unknown on Java. His thoughts, however, he kept to himself; but *Raja Chérmen* knew what was working in his mind, and soon after took his leave, and returned with his people to *Léran*. His nephew, *Mulána Máhfar* (son of *Mulána Ibrahim*) alone remained with *Angka Wijáya*. Some time after this, the king having contracted a kind of giddiness in the head, opened the pomegranate; when, instead of the usual seeds, he found it filled with precious stones (rubies). Surprised at this, he observed to his minister, that *Raja Chérmen* must indeed be a very superior kind of person, and sent *Mulána Máhfar* to request the Raja to return; but the Raja refused to do so, and proceeded on.

"When *Raja Chérmen* had been four nights at *Léran*, his people fell sick and many died. Among them there were three out of five cousins, who had accompanied him from *Sábrang*, named *Sáyed Jáfar*, *Sáyed Kásem*, and *Sáyed Ghárt*, whose tombs are known by the name of *Kúbur Pánjang*^[260]. The princess also fell sick, when her father attended upon her himself, and besought the Almighty to spare her and restore her to health, that his intention of giving her to the Raja of *Majapáhit* might be fulfilled: he prayed, however, at the same time, that if it was ordained that *Angka Wijáya* was not to be converted, her days might be shortened. The princess shortly afterwards died, and was interred near the graves of her relations^[261].

"The usual tribute having been paid to the memory of the deceased, on the different days appointed for the performance of the ceremony, and *Mulána Ibrahim* having been appointed to look after and take care of the graves, the *Raja* of *Chérmen*, with all his people, set out to return home. On his way *Sáyed Jáfar* died. He was sent on shore at *Madúra*, and his remains were interred to the west of the village *Plakára*. *Sayed Rafidin*, the only remaining cousin of the *Raja*, died near *Bovian*, and was buried on that island.

"*Angka Wijáya*, desirous of meeting again with *Raja Chérmen*, arrived at *Léran* three days after his departure, and hearing of the death of the princess, observed, that he thought the religion of *Rajá Chérmen* would have prevented such a calamity as the premature death of the *pútrí* (princess), that it would have enabled her to hold out against the sickness of Java, and that he must now think meanly of it: to which *Muléna* replied, that such ignorance was only the consequence of worshipping *Déwas*

instead of the true God. *Angka Wijáya* became highly enraged at this retort; but being pacified by his followers, returned to *Majapáhit*, without taking any further notice of it. This happened in the year 1313.

"*Múlana Ibrahim*, who remained in charge of the tombs of the deceased, afterwards removed from *Léran* to *Grésik*, which, however, had not become a separate state. Here he died, twenty-one years after the departure of the Raja of *Chérmen*; and here his tomb, which is known by the name of *Gapúra Wétan*, is still to be seen. He died on Monday, the twelfth of *Rabíulawal*, in the Javan year 1334.

"It is related, that about this period there was a woman of *Kamboja*, named *Niái Gédi Pináteh*, the wife of the *patéh*, or minister of that country, who on account of her being a great sorceress was banished to Java, where, on her arrival, she went to the king of *Majapáhit* and implored protection. The king taking pity on her, the more so as she was a woman of advanced age without any children, and had been removed from a situation where she had once been comfortable and happy, provided for her by making her a kind of *shabándar* (chief of the port) at *Grésik*, where there was already a mosque and a considerable population. *Niái Gédi* afterwards became very religious and charitable, and was revered for becoming the foster-mother of *Susúnan Gíri*. Her death took place forty-five years after that of *Múlana Ibrahim*; being a short time previous to the destruction of *Majapáhit*, and her tomb is still to be seen at *Gresík*."

To return, however, to the proceedings of the King of *Majapáhit*, it appears that early in his reign, *Angka Wijáya*, hearing from the merchants who resorted to Java of the beauty and accomplishments of a princess of *Chámpa*, sent an embassy to that country to demand her in marriage; and on her arrival at *Grésik*, received her there in person, with great attention and state. The princess, nevertheless, for a long time refused to cohabit with him, on account of the great number of his concubines, and particularly on account of the powerful hold obtained over his affections by a Chinese of great beauty, who had been sent to him as a present from one of the chiefs of China, at the request of the merchants and with the consent of the emperor, with a view to obtain greater privileges for their trade with Java.

The princess is represented as the second daughter of the Raja of *Chámpa*. Her name was *Dára Wáti*, and her eldest sister had been married to an Arab,

by whom she had a son, named *Ráchmat*.

Previous, however, to this marriage, *Angka Wijáya* is said to have had an intrigue with a woman, of whom there are various accounts, some describing her as a witch, residing on the mountain *Láwu*, and others as a *rasák*. The fruit of this illicit connection was a son, called *Aria Dámar*. Unknown to his father, this youth distinguished himself at an early age, by bringing together all the wild animals of the forest, as an amusement for the prince and his family. In consequence of an exploit so hazardous, he was first appointed chief of a province, and afterwards promoted to the command of an army proceeding against *Báli*, during a war in which the forces of *Majapáhit* suffered great loss, but were ultimately successful^[262]. The capital, called *Klónkong*, was surprised and carried, and the chief himself, with the whole of his family, except one sister, put to the sword. She being very beautiful, was sent to *Majapáhit*. The island of *Báli* became tributary to *Majapáhit*.

Aria Dámar, on his return, presented the various arms which had been taken as tokens of his success; and his conduct being highly approved of, he was appointed *Adipáti*, or chief, of *Palémbang* on Sumatra.

The discontent of the Princess of *Chámpa* still continuing, the Prince came to the resolution of parting with his Chinese consort, and gave her to *Aria Dámar*, on condition that he would not cohabit with her until she was delivered of the child, of which she was then pregnant, and that he would afterwards rear up the child as his own. *Aria Dámar* then accompanied by the princess, and about three hundred chosen troops, given to him by the prince of *Majapáhit*, embarked for *Palémbang*, where he was well received, and immediately acknowledged as chief. He soon, however, became involved in a war with the *Lámpung* states and the neighbouring isles of *Súnda*, the inhabitants of which were continually committing depredations in the territories of *Palémbang*. He proceeded into the *Lámpung* country, but before he could reduce it to subjection, internal commotions obliged him to return to *Palémbang*, where the Chinese princess was now delivered of a son, to whom he gave the name of *Ráden Pátah*. He had afterwards a son by this princess, whom he named *Ráden Húsen*; but observing that the people of *Palémbang* disliked the princess, on account of her Chinese extraction, he took from one of the first families of the place another wife,

whose son might become his successor, and resolved to send *Ráden Pátah* and *Ráden Húsen* to *Majapáhit*.

After *Aria Dámar* had resided about three years at *Palémbang*, *Ráden Ráchmat*, son of the Arab priest, who had married one of the daughters of the Raja of *Chámpa*, arrived there, being the bearer of letters and presents for *Majapáhit*. *Ráchmat* was then about twenty years of age, carefully educated, and well instructed in the Mahomedan religion. In a short time *Aria Dámar* felt inclined to embrace the faith, but on account of the attachment of the people of *Palémbang* to their ancient worship, he dared not openly profess it. *Ráchmat* remained two months at *Palémbang*, and then proceeded on his voyage to *Majapáhit*, touching at *Grésik* on the way, where he visited *Sheik Mulána Jomadil Kóbra*, a devotee who had established himself on *Gúnung Jáli*, and who declared to him that his arrival at that particular period had been predicted by the prophet; that the fall of paganism was at hand, and that he was elected to preach the doctrine of Mahomed in the eastern parts of Java, where a rich harvest of conversion awaited his apostolic labours.

Arriving at *Grésik* he proceeded to *Majapáhit*, where he was kindly received by the prince, and by his relative the princess of *Chámpa*. *Angka Wijáya*, notwithstanding he disapproved of his religious principles, and himself refused to become a convert to them, conceived such an attachment for his person and such a respect for his character, that he assigned to him three thousand families, and formed an establishment for him at *Ampel*, situated in the vicinity of *Surabáya*, where he allowed him the free exercise of his religion, with permission to make converts of those who were inclined. In a short time *Ráchmat* gained the affection of all those placed under him, and most of them were by degrees converted to the faith, whence he acquired the title of *Sunan*, meaning, according to some, "messenger from God," or he of whom requests are made, and which title, indifferently termed *Sunan* or *Susuhunan*, the sovereigns of Java have since continued to assume^[263]. As a further testimony of his regard for *Ráchmet*, the prince of *Majapáhit* gave to him in marriage the daughter of his first *Klíwon*, whose brother, *Wíla Tíkta*, he had appointed chief of *Túban*. By this wife *Ráchmat* had three children, a daughter and two sons, who were afterwards appointed *Adipátis* of *Bónang* and *Drájat*, now called *Lasem* and *Sedáyu*.

The next Arab missionary who arrived at *Grésik* was *Mulána Ishak*, the father of the celebrated *Súnan Gíri*. The circumstances attending his arrival, and the establishment of his son, are thus related.

"*Mulána Ishak*, otherwise called *Mulána Alul Islam* of *Pási Málaca*, a celebrated *Pandíta*, who had given himself up to penance and mortification, having heard that there was at *Ampel*, on Java, a prince who was busily employed in propagating the Mahomedan religion, and that many persons, through his means, had embraced the faith, went over and assisted *Súnan Mákdum* in the work of conversion: and having received his sanction to go to *Balambáangan*, for the purpose of teaching the Mahomedan religion, there embarked in a *práhu*, and set out on the sacred mission.

"It happened that at this time the chief of *Balambáangan* was greatly distressed on account of his daughter, who was very sick, and whose malady would not yield to the power of medicine. One night a voice from heaven told him, that if he would have his daughter speedily recover he must send her to *Gúnung Patukáng'an*, where there would be found a *Pandíta* from *Sábrang*, who would cure her, and afterwards become her husband.

"A storm arising, the *práhu* in which *Malána Ishak* had embarked was driven close to the foot of *Gúnung Patukáng'an*, and he landed there, when the chief, having sent his daughter to the mountain, directed that the *Pandíta* might be conveyed thither, in order that the prophecy might be fulfilled. *Malána Ishak* first objected to undertake the cure, on the plea that he was not skilled in medicine, but at last agreed to comply, on condition that the chief would embrace the Mahomedan religion if he were successful. To this the latter consented, on which *Ishak*, addressing the priest, said, 'I am not a person skilled in medicine, neither do I know how to administer it, but if your daughter would be well she has now only to wish herself so.' The princess immediately recovered.

"The prince afterwards bestowed upon the *Pandíta* his daughter in marriage, and she soon acquired a thorough knowledge of the tenets of Mahomedanism.

"On one occasion, when the prince was sitting in the hall of audience before all his people, the *Pandíta* went up to him and reminded him of his promise to become a Mahomedan, adding, that he was ready to instruct him in the

doctrine of that system. On this the prince became angry, and told him in haughty terms that he never would change his religion. No sooner had he spoken than his mouth was distorted. At this, however, he only became the more exasperated, and approaching the *Pandíta*, was going to strike him, when his legs gave way under him and he fell to the ground.

"The *Pandíta*, returning to his wife, took leave of her, exhorting her to adhere to the religion he had taught her, and telling her that he must now proceed upon the mission on which he had originally embarked. Though desirous of accompanying him he would not permit her. After he was gone the land was afflicted with a pestilence, which carried off great numbers of the people.

"The prince, greatly vexed, and enraged at the havock thus made among his subjects, told his minister that it must be in consequence of his daughter being pregnant by the *Pandíta*; and that, as soon as the child should be born he was determined to make away with it.

"The Almighty, however, took the child under his especial protection, and it was safely conveyed to *Grésik* in a trading vessel, where it was brought up by *Niái Géde Pináteh*, until it was twelve years of age; when, turning out a promising boy, she resigned him to *Ráden Ráchmat*, then called *Súnan Ampel*, for the purpose of his receiving religious instruction. The *Súnan* soon discovered the boy was of Arab descent, and gave him the name of *Ráden Páku*, observing, that he would one day become the *pepaku* (that is, the *support-nail*, or axle) of Java; he subsequently gave him his daughter in marriage.

"*Ráden Páku* afterwards, accompanied by *Mákdum Ibrahim*, son of the *Súnan*, proceeded on a pilgrimage to *Mecca*; but touching at *Pási Malácça*, they were there presented to the great and holy teacher, *Mulána Alúl Islam*, who persuaded them, instead of prosecuting their voyage, to return to their own country, in order to make converts and become great and glorious; and giving to each of them an Arab turban and a long gown, at the same time conferred upon them the names of *Prábu Suswáta* and *Prábu Anyak Kraswáti*. He moreover told them, on their return to *Grésik*, to erect a mosque at *Gíri*.

"On reaching *Ampel*, after their return to Java, the *Súnan* informed *Ráden Páku* that the holy man to whom he had been presented at *Pási Malácça*

was his own father, and that by obeying his instructions in building a mosque at *Gíri* he would fulfil a prophecy, and he and his companion become great princes in Java.

"*Ráden Páku* then went to *Gíri*, and having cleared a spot, a mosque and dwelling were soon erected. Numerous proselytes being attracted thither, he was called *Prábu Satmáta*, and sometimes *Susúnan Rátu Ainul Yákin*, but more commonly *Súnan Gíri*. He was afterwards appointed by the king of *Majapáhit* to be chief of the province of *Grésik*, in the same manner as *Susúnan Ampel* had been previously appointed. He was born A. J. 1355. *Prábu Anyák Kraswáti*, his companion, afterwards assumed the title *Susúnan Bónang*, under which name he was a distinguished character in subsequent transactions."

In the western provinces the work of conversion was also advancing, under the influence of *Sheik Ibn' Mulána*, who in A. J. 1334 had established himself in *Chéribon*, where he is better known as *Susúnan Gúnung Játí*, a name given him on account of his fixing his abode on the hills so named. A woman afflicted with the leprosy (a complaint which has been declared incurable) was recovered by him, and thus procured for him the character of being able to perform miracles. The number of people who in consequence of the cure resorted to *Gúnung Játí* was so great, that the chiefs, in the first instance, thought themselves bound to interfere, and did so with the hopes of success; but finding afterwards that they could not resist the tide, many of them, among whom were the chiefs of *Gálu*, *Sukapúra*, and *Limbangan*, became themselves converts to the faith.

When *Lémbu Pétang*, son of *Angka Wijáya*, by the Princess of *Chámpa*, was appointed to the charge of the island of *Madúra*, under the title of *Panambáhan*, the *Súnan Gíri* deputed *Sheik Sárif*, commonly called *Kalipha Kúsen*, to accompany him, in order to make converts on that island. This missionary was buried at *Aros Báya*, where he had built a mosque, and is generally known on *Madúra* by the name of *Pangéran Sárif*.

In the meantime the name of *Majapáhit* stood high among surrounding nations; and at no time was the authority of that state more extensively acknowledged. Some disturbances, however, had taken place on *Báli*, promoted by chiefs of districts, who oppressed their subjects, and interfered with the authority of each other. These commotions were so exasperated by

the difficulties which arose in collecting the tribute, that the prince was obliged to send an army thither, under the command of *Adáya Níngnat*, the *Adipáti* of *Pájang Peng'ging*, who soon restored order and tranquillity. In return for this and other eminent services he obtained in marriage *Rátu Tímbo*, the legitimate daughter of *Angka Wijáya*. *Déwa Agung Kátut*, a natural son of the prince by the princess of *Báli*, being then appointed chief of that island, proceeded thither with a select force, and continued tributary to *Majapáhit* until its downfall.

[The following account is given of the further success of the *Majapáhit* arms in the Eastern Seas, under *Andáya Níngnat*, commonly known by the title of *Rátu Péng'ging*, and of the motives which induced the Prince of *Majapáhit* first to give him his daughter in marriage, and afterwards to admit him to a share in the government.]

"Every time that the Prince of *Majapáhit* received accounts of the success of *Rátu Péng'ging* his alarm and uneasiness increased; for in these accounts it was stated that he wanted no further assistance, as he met with but little opposition, all the rajas of *Sábrang* submitting to him, among whom were those of *Makásar*, *Góa*, *Bánda*, *Sembáwa*, *Endé*, *Tímor*, *Ternáté*, *Súlu*, *Síram*, *Maníla*, and *Búrni*, in short, he and his followers conquered wherever he went, being themselves invulnerable.

"At length the Prince of *Majapáhit* recollected that *Palémbang* had not yet submitted, and in consequence sent a handsome present to *Ratu Péng'ging*, accompanied by a request to subdue *Palémbang* without delay.

"The Prince of *Majapáhit* then calling his minister, *Gaja Máda*, inquired of him how it was that *Rátu Péng'ging* met with such success, and was becoming so great, that no country could withstand him, and told him, that his alarm was excited even for his own safety, least on his return to *Péng'ging* the island of Java should become subject to two chiefs. To which *Gaja Máda* replied, 'he knew not how to account for it, or to remove the uneasiness of the prince, but that he was always ready to obey the orders of his prince: in the present case *Rátu Péng'ging* had been thrown into the greatest danger possible, and yet his life was preserved; what more could be done?' The prince then said, 'let us both perform penance, and inquire of the Deity how to remove this uneasiness.' *Gaja Máda* assenting to this proposal, they both kept themselves apart from the people of the court, and

fasted for forty days and forty nights, at the expiration of which *Batára Naráda* appeared to *Gaja Máda*, saying, 'it is impossible for you to destroy or kill *Rátu Péng'ging*, for he is a good man, and favoured by the gods; but if the Prince of *Majapáhit* wishes to get rid of his uneasiness, he had better make him his son-in-law, by giving him his eldest daughter, *Rátu Pambáyun*, in marriage.'

"The prince on hearing this became much astonished, adding, that he had received a similar communication from *Sang'yang Túng'gal* (the great and only one,) and it was agreed to send for *Rátu Péng'ging* without delay.

"In a short time *Rátu Péng'ging* reached *Majapáhit*, with numerous princes in his suite, in proof of what he had written, that all the rajas of *Sábrang* had submitted, and were willing to obey the will of *Majapáhit*. *Rátu Péng'ging* then informed the prince, that in the conquest of *Palémbang* the raja of that country had been killed, and that he had himself appointed a person to administer the government provisionally, until the Prince of *Majapáhit* should nominate a new raja.

"The prince received him with great distinction, saying, he knew not how to reward such eminent service, and offering to him his daughter in marriage.

"After the marriage had taken place the prince assembled all his chiefs, and placing *Rátu Péng'ging*, now his son-in-law, on the *setíngel*, appointed him in their presence, under the title of *Prábu Anom*, to a joint administration of the country with himself.

"The prince, however, some time after, became jealous of the authority of this chief, and removed him to *Péng'ging*, afterwards called *Pájang*.

"During the administration of *Lémbu Pétang* on *Madúra*, *Súmanap* with the subordinate islands became a separate province under *Járan Panúlan*, a native of *Pamakásan*, who, by his skill and courage, had raised himself to the rank of commander of the *Majapáhit* cavalry, and was married to an illegitimate daughter of the prince.

"About the year 1360 ambassadors arrived from *Pánjar Másin*, when the prince sent one of his sons, *Kúda Banjáran Sâri*, also called *Chákra Nagára*, to be the chief of that country. He proceeded with many vessels, and numerous followers and troops.

"The prince afterwards gave one of his daughters, the sister of *Chákra Nagára*, in marriage to a celebrated commander, named *Járan Línau*, who was appointed *Adipáti* of *Lokáno*, and appointed *Pánji Diwírio* chief of *Pranarága*, with the title of *Batára Kátong*.

"The prince falling ill of a complaint, declared by the physicians to be incurable, was advised, as the only means of recovery, to cohabit with one of his female slaves, a woolly-haired girl. The fruit of this intercourse was a son, who, on account of his birth, was called *Búndan Kajáwan*. This child, shortly after its birth, was delivered over to *Kiái Géde Tárup Siséla*, chief of the prince's *sáwa*, or rice lands, with directions to bring it up as a foundling."

Returning, however, to the progress of Mahomedan conversion, which is now more rapidly advancing, the history goes on to state that the sons of *Aria Dámar*, of *Palémbang*, who were destined to take a most conspicuous part in succeeding events, came to *Grésik*, the former at the age of twenty, and the latter of eighteen. *Ráden Pátah*, aware of his extraction, and of the treatment which his mother had received, would not proceed to *Majapáhit*, but remained with the *Susúnan* at *Ampel* for some time. *Húsen*, however, went to *Majapáhit*, with injunctions not to say any thing of *Ráden Pátah*. He was well received there, and soon after was appointed to the command of the troops, and to administer the district of *Trong*.

Ráden Pátah afterwards marrying the grand-daughter of *Súnan Ampel*, and leaving her during her pregnancy, proceeded to the westward, in order to form an establishment, which he was directed to fix at a place where he should find the sweet-scented grass, called *bíntara*. This he discovered in a place where there were but few dry spots to be found, in an extensive swamp, termed in Javan *Demalákan*, whence the contraction *Demák*, first called *Bintára*.

As soon as the prince of *Majapáhit* heard of this new establishment at *Bintára*, he directed *Húsen* to proceed thither and destroy it, unless the chief was willing to acknowledge the authority of *Majapáhit*. *Húsen* in consequence prevailed on *Ráden Pátah* to accompany him to *Majapáhit*, where he was recognised by his likeness to the prince, and permitted to return to *Bintára* with the title of *Adipáti*.

When *Ráden Pátah* quitted *Majapáhit*, instead of returning to *Bintára* he went to *Ampel*, and communicated to him the shame and rage which he felt on the discovery of his birth and a determination which he had made to destroy *Majapáhit*. The *Súnan*, however, moderated his anger, by telling him that while the prince was just and beloved, and he himself received such benefits from him, his religion did not admit of his making war against him, or in any way injuring him.

Ráden Pátah then returned to *Bintára*, taking with him his wife, but leaving with the *Súnan* his son, *Ráden Abdala*. *Bintára* now rose in consequence and prosperity, proselytes became numerous, and the population daily increased.

Shortly after the mosque had been commenced, intelligence was received of the severe illness of the *Súnan Ampel*, in consequence of which *Ráden Pátah*, together with all the chiefs and people who had embraced Mahomedanism, proceeded to *Ampel*, where, after they had attended him for a few days, he died, previously delivering into the hands of the *Súnan Gíri* a *pusáka kris*, which had been given to him by the prince of *Majapáhit*, and which he required of him never to transfer into unhallowed hands.

The prince of *Majapáhit* is represented as paying every honour to the deceased, and as having provided the usual feast on the occasion. After this event, *Ráden Pátah* returned to *Bintára*, whither eight missionaries, who had assumed the title of *Súnan*, viz. *Súnan Bónang* of *Túban* (son of *Súnan Ampel*), *Súnan Undang* of *Kúdu*s, *Súnan Gíri* of *Grésik*, *Súnan Agum* (*Mulána Jomadil Kobra* of *Chéribon*), *Sunan Káli Jenar*, *Sunan Káli Jága*, *Súnan Tanggung* (of *Tegal*), and *Súnan Drája* of *Sidayu*, now proceeded to assist in the completion of the mosque. This mosque is still standing, and is of a shape different from those constructed at a later period, having, as it is asserted, eight pillars, to commemorate the circumstance of the eight religious men engaged in its construction. This event occurred in the year 1390.

It was now that *Ráden Pátah*, finding advisers who were perhaps less scrupulous than the revered *Súnan Ampel*, gave vent to his deep-rooted animosity against his father, and formed a league with the assembled missionaries to make war upon the pagan empire of *Majapáhit*. In consequence of this confederacy, which was joined by all those who had

embraced the Mahomedan faith, with the exception of *Húsen* and his followers, who remained true to the prince, a numerous army was soon collected at *Demák*, where *Ráden Pátah* openly declared war.

Súnan Undang of *Kúdus* was appointed to the chief command, and under him the Mahomedan army marched towards *Majapáhit*; but owing to the dexterity of *Húsen*, who commanded the *Majapáhit* forces, a general engagement was avoided, and for four years the hostile army was kept at bay. The troops of *Majapáhit* at last dissatisfied with this uncertain state of affairs and constant harassing, called loudly for action, and in compliance with their wishes a decisive battle was fought near the *Sidayu* river, in which the Mahomedans were completely routed, and their chief, *Súnan Undang*, killed. *Húsen* is accused of not having followed up this victory to the utmost of his power, on account of his fraternal affection for *Ráden Pátah*. The remains of *Súnan Undang* were interred in the north side of the temple at *Demák*.

The prince of *Majapáhit*, after this success, again endeavoured to reduce *Ráden Pátah* to obedience by amicable means, and for that purpose invited him to *Majapáhit*. *Pátah* promised to comply as soon as he should recover from a distemper which then confined him. By this, and other excuses, which were only urged to gain time, he contrived to deceive the prince; and *Bintára*, with the other provinces, continuing to pay the usual tribute, his vengeance was disarmed.

Considerable depredations were now made by the *Súnda* people, who landing on the north coast proceeded by the river *Losári* into the interior of the country, as far as *Bányumas* and *Dáyu Lúhur*, which probably attracted the attention of *Angka Wijáya*, more than the immediate danger which threatened his empire from the members of his own family.

Ráden Pátah, in the meantime, was very active in making preparations for a fresh attack, and sent to *Palémbang*, for the double purpose of asking assistance from that state and of reconciling *Aria Dámar* to the part which he was now taking against *Húsen*.

To the latter part of the message *Aria Dámar* replied, "that it was the will of God to extirpate paganism, and to establish the doctrine of Mahomed; that therefore, if *Húsen*, who was a Mahomedan, still continued to assist the infidels, he must abide by the consequences, and that he, as his father,

would in such case take no vengeance for the death of his son, should it ensue."

The confederates gaining courage from this support, the several chiefs sent numerous troops to *Demák*, and a second army was soon assembled. The overthrow of the ancient kingdom, if we are to believe the Javans, was not to be effected by human means alone, and supernatural expedients were resorted to. *Aria Dámar* is said to have sent to *Ráden Pátah* the box which had been given him by his mother before he quitted Java, directing him to carry it to the wars. *Súnan Gúnung Játí* sent him a *báju ránté*, or chain jacket, with an injunction not to open it until the engagement was at its height, when thousands of rats would issue from it, and assist in putting an end to the struggle. *Súnan Gíri* contributed with the same instructions the sacred *kris*, from which a swarm of hornets was to issue; and *Súnan Bónang* sent a magical wand or cane, which in cases of extremity possessed the power of producing allies and warriors on all sides.

Thus provided, the Mahomedan army took the field under *Pangéran Kúduś*, son of the deceased *Súnan*. The progress of the confederates is thus described.

"The army of the faithful, highly elated and determined upon the downfall of paganism, were met by the united forces of *Majapáhit*, under *Húsen*, and a severe and desperate battle took place, which lasted for seven successive days. In this protracted engagement the former were at first worsted; but the commander, *Pangéran Kúduś*, availing himself of the enchanted box and miraculous weapons, at last succeeded in driving the enemy before him, and the city of *Majapáhit*, surrounded on all sides, submitted to the hostile forces, the prince and his immediate followers having previously quitted it in disorder and fled to the eastward."

Thus in the year 1400 fell the great capital of Java, the boast and pride of the Eastern Islands: thus did the sacred city of *Majapáhit*, so long celebrated for the splendour of its court and the glory of its arms, become a wilderness. "Lost and gone is the pride of the land."

The main force of the allies remained at *Majapáhit*; but *Pangéran Kúduś* proceeded to *Trong*, whither *Húsen* had retreated, raising combatants, by means of the magical wand of *Súnan Bónang*, as he advanced. Here he attacked *Húsen*, who had entrenched himself in a strong position, and soon

carried his lines. That chief immediately acknowledging his defeat, entered into terms, and accompanied the *Pangéran* to *Demák*, taking with him his principal followers and daughter, whom *Ráden Pátah* was allowed to dispose of. He was well received, and his daughter given in marriage to *Pangéran Aria* of *Túban*.

On their way *Pangéran Kúdus* and *Húsen* went to *Majapáhit*, whence the regalia had already been removed to *Demák*, and assisted in the further removal of all property, public and private, of every description: so that in the course of two years the country was entirely laid waste, 1402.

To be seen nought form city^[264].

Nothing certain is known of the fate of the prince of *Majapáhit*. According to some accounts, he, his family, and immediate adherents were put to death on the assault of the city; according to others, he fled to *Málang*, and ultimately to *Báli*. But the temporary establishment formed at *Málang*, after the fall of *Majapáhit*, is ascribed by the tradition of that district, not to the sovereign, but only to the *Adipáti* of *Majapáhit*, probably one of the sons of *Angka Wijáya*, who had remained with his father, and was indifferently termed *Depáti Gúgur* or *Depáti Majapáhit*. The date at which *Angka Wijáya* ascended the throne scarcely allows us to believe that he was living at the period of its final overthrow. This date may be determined from the inscriptions on several tombs still in a state of preservation. The year marked on the tomb of the princess of *Chámpa* (which is within the ruins of *Majapáhit*) is 1320; that on the tomb of *Mulána Ibrahim*, who died twenty-one years after the arrival of the *Raja Chérmen* in 1313, is 1334; and as the princess of *Chámpa* must have been living at the period of *Aria Dámar's* being sent to *Palémbang*, when that prince had at least attained the age of puberty, the accession of *Angka Wijáya* to the throne of *Majapáhit* must have been anterior to the year 1320, and a reign of eighty years more than exceeds the limits of probability. All the accounts which are given of the fate of this prince and his family agree in stating that the princess of *Chámpa*, who must, if living, have been nearly a hundred years of age, fell into the hands of the conquerors, and found an asylum with the *Súnan Bónang* of *Túban*: but this statement is disproved by the recent discovery at *Majapáhit* of the tomb of this princess, who appears to have been buried according to the Mahomedan custom, and on whose tomb-stone the date 1320 is found, in the old Javan characters, in the highest state of preservation.

In those accounts which represent the prince as having retreated from *Majapáhit* the following particulars are related.

"About twelve months after the establishment of the supreme authority at *Bintára*, or *Demák*, the people of the more eastern provinces again reverted

to the standard of *Browijáya*, who had received assistance from his son established on *Báli*; upon which *Pangéran Aria* of *Kúdu*s and *Húsen* were directed to proceed against them with a powerful army. A desperate engagement took place near *Málang*, in which the *Pepáti Sindu Rája* was killed. The Mahomedan forces were however victorious, and following up their success, they pursued the *Majapáhit* people to *Grojógan* (*Balambánga*) whence *Browijáya* and those of his followers who still adhered to his fortune took refuge in boats, and fled to *Báli*. This event happened in the Javan year 1403."

The following, however, is the traditionary account given by the people of *Málang*, of the party who retreated thither from *Majapáhit*.

"When the people of *Majapáhit* were defeated, and obliged to fly their capital, the *Páteh* of *Majapáhit* took refuge at a place now called *Sing'gára*, to the south-west of *Málang*, where he met with protection from a devotee, named *Kiái Gédé Seng'gára*, who becoming attached to him gave him his daughter in marriage.

"After the death of the *Pátah* of *Majapáhit*, and of *Kiái Gédé Seng'gára*, the son of the former disagreeing with his wife, quitted *Seng'gára*, and built a small village at *Gedádang*, where afterwards he constructed a fort, and assumed the name of *Ráng'ga Permána*.

"In a short time this new country was known by the name of *Súpit úrang*: its inhabitants commenced the manufacture of bricks, of which the walls of the town and ramparts were completed; they then dug a moat or ditch round the whole, and rendered it a place of great strength.

"The fame of this new establishment had no sooner reached the ears of the Mahomedan chief of *Demák*, who had now assumed all the authority formerly possessed by *Majapáhit*, than he sent his forces against it. The people of *Súpit úrang* remaining however within their fortification, the besiegers continued a long time before the place without being able to make any impression upon it, and were about to retire, when it occurred to them that a stratagem might be successful. This was to catch ten doves or pigeons, which in the course of the day might come from without the fortification in search of food, and, after fastening to their tails lighted brands, to let them loose into the city. The project succeeded, for the birds, flying towards their homes, set fire to the buildings within *Súpit úrang*,

(which were constructed of light materials,) and all was confusion. The conflagration becoming general alarmed the people, who fled in every direction; the prince proceeded eastward as far as *Gúnung Buréng* (a rising ground within sight of the town,) where he is supposed to have perished, as nothing was afterwards heard of him. The besiegers then took possession of the place, which since that period has been called *Kóta Bedak* (the deserted fort.)"

All the chiefs and priests went to *Gíri* on their return from *Seng'gára*, to offer up thanks for their victory. The *Súnan* was much indisposed when they arrived, and soon after died, at the age of sixty-three years. The tomb of the *Súnan Gíri* is still kept in a state of preservation, and highly revered. It is remarkable for still containing the *pusáka kris*, which he desired should be placed near his grave, and to which superstition has attached many virtues^[265].

To return, however, to *Ráden Pátah*. No sooner had this chief caused the removal of the regalia from *Majapáhit* to *Demák*, than the *Súnans*, *Gíri*, *Bónang*, and *Káli Jága* formally invested him with the government, under the title of *Panambáhan Jímbun*, and declared him the deliverer from paganism and the head of the faithful. The manner in which *Ráden Pátah* obtained the sovereignty is otherwise related in other accounts.

While these events were passing in the eastern and more populous districts of Java, the missionaries were not idle in the western districts. *Sheik Mulána*, of *Chéribon*, after effecting the conversion of the chiefs and people in his neighbourhood, sent his son, *Mulána Hásen-u-din*, to Bantam, where, in the vicinity of the mountain *Pulasári*, a body of eight hundred recluses at once embraced the faith, and his disciples soon became numerous.

Hásen-u-din went afterwards with his father to Mecca. On their return they visited the court of *Menangkábau* on Sumatra, where they were received with great distinction by the Raja, who at their departure presented the father with a celebrated *kris*. From *Menangkábau* they proceeded to the mountain *Pulusári* in Bantam, whence the father returned to *Chéribon*, leaving the *Menangkábau kris* with his son. *Hásen-u-din* shortly after went to *Chéribon*, to be married to a daughter of the *Súnan Demák* (*Ráden Pátah*), and from thence to *Demák*, where he found *Ráden Pátah* engaged in war with the prince of *Majapáhit*. He there obtained his daughter in

marriage, and assisted in bringing the war to a favourable conclusion, after which he returned with his wife to Bantam. Bantam at this period was a province dependent on *Pajajáran*.

About twelve months after his return to Bantam, where he assumed the chief authority, *Hásen-u-din* went over to the *Lampung* country in Sumatra, accompanied by *Pangéran Bálu*, a chief of *Tulangbáwang*, and proceeded as far as *Indrapúra*, where he married the daughter of the Raja as his second wife. On this occasion it is said that the Bencoolen river was fixed upon as the boundary of his possessions in that direction; but it does not appear whether, by this new boundary, his possessions became more extended or more circumscribed than before.

During the whole of his progress from *Tulangbáwang* to *Indrapúra*, it is said that the sword was never out of the scabbard. It is therefore probable, that his title to these more distant regions was founded upon some previous claim, and either that the *Lampung* country was transferred to his father, *Sheik Mulána*, along with the *Menangkábau kris*^[266], or that Palembang and the southern part of Sumatra might have devolved to Bantam, in consequence of *Hásen-u-din's* marriage with the daughter of *Ráden Pátah*, who had then assumed the sovereignty of Java and its dependencies.

On *Hásen-u-din's* return from *Indrapúra*, he assembled a large body of men, principally from the southern districts of Sumatra, and marched against *Pákuan Pajajáran*, the chief of which, with his followers, still adhered to the ancient faith, and attacking that capital at midnight completely annihilated its authority. On this occasion *Kráwang* is said to have been fixed as the boundary between the possessions of *Sheik Mulána* of *Chéribon* and those of Bantam, there being at that time no intermediate power.

The manner in which this ancient capital was annihilated, is described with great minuteness in the different traditions of the *Súnda* people, and the descendants of those who escaped and continued to adhere to their ancient faith, are to be traced in the districts of Bantam, where they still continue distinguished from the rest of the population under the designation of *Bedui*^[267].

Among the articles removed from *Majapáhit*, and still preserved with superstitious veneration, was the *paséban*, or hall of audience, a large

building, supported by a double row of lofty pillars. This was placed in front of the mosque at *Demák*, where it is still to be seen. At *Kúdu*s there is a carved door belonging to the place of worship which *Browijáya* used to attend; and in the burial places at *Túban*, and several of the eastern districts, are still to be found relics of a similar kind, which are revered as sacred.

On the destruction of *Majapáhit*, the numerous *pándi*, or workers in iron and steel, who were considered the strength of the empire, and who in consequence enjoyed many privileges, were dispersed over the eastern districts of Java, Madúra, and Báli, forming separate establishments under their respective chiefs. At this period the custom of wearing the *kris* is said to have been introduced among the common people.

FOOTNOTES:

[237] Middlekoop's Collection.

[238] Supposed to have been a crow or raven.

[239] A rude instrument of music still in use, particularly in the *Súnda* and mountainous districts.

[240] The *Dáyas* of Borneo still hold particular kinds of birds in high veneration, and draw omens from their flight, and the sounds which they utter. One of the principal of these is a species of white-headed kite, which preys on fish, snakes, and vermin. Before the *Dáyas* enter on a journey or engage in any war, head-hunting, or indeed any matter of importance, they endeavour to procure omens from these kites, and, for this purpose, invite their approach by screaming songs, and scattering rice before them. If these birds take their flight in the direction they wish to go, it is regarded as a favourable omen; but if they take another direction, they consider it as unfavourable, and delay the business until the omens are more suitable to their wishes.—*Transactions of the Batavian Society*, vol. vii.

[241] The manner in which the mountaineers of the *Súnda* districts still spring and shout to the sound of this rude instrument, as already described, corresponds with this account; and on occasions of public rejoicings or ceremony, the native princes of the eastern part of the island frequently introduce a party of wild men, with dishevelled hair, and covered with leaves, shaking the *ángklung*, and shouting, springing, and distorting their limbs in the rudest manner: the object being to exhibit the original inhabitants, in contrast with what they have been rendered by civilization.

[242] Asiatic Researches.

[243] Kempfer's Japan, vol. i. p. 148.

[244] This history, which is written in the Mahomedan style of inspiration and prophecy, commences by a declaration on the part of *Jáya Báya*, that it is clearly ascertained, the island of Java will be annihilated in two thousand one hundred years from the date of its first existence; and after detailing every event, down to the Javan year 1743 (the present year, A.D. 1816), has the following extraordinary conclusion.

"The whole of the above chronological relation of events, from the first year to the present date, was written by the inspired *Aji Jáya Báya*, who himself lived about the year 800. What follows is a

continuation of events which were foretold by him, and which are still to happen, viz.

"In the year 1801, *Sura-kerta* being no more, the seat of government will be removed to *Katáng'ga*, which being afterwards demolished, the seat of government will be removed in 1870 to *Kárang Báya*.

"In 1950, the seat of government will be removed to *Kedíri*, where it was of old. The *Pringi* people (Europeans) will then come, and having conquered Java, will establish a government in the year 1955. The Prince of *Kling*, however, hearing of the conquest and ruin of Java by the *Príngis*, will send a force which will defeat and drive them out of Java; and having given up the island once more to its Javan government, will, in the year 1960, return to his own country.

"On regaining possession of the country, the new Javan government will desert the former capital of *Kárang Báya*, as being an unlucky site, and remove it to *Waríngin Kúbu*, which is near the mountain *N'gmárta Láya*. This will take place in 2020.

"By the year 2100 there will be an end of Java entirely."

[247] See vol. i. Poetry—*Brata Yudha*.

[248] To this popular account of the early and fabulous history of Java, it may be interesting to add the equally popular and generally received ancient history of *Madúra*, formerly called *Mandúra*, and in the *basa*, or court language, *Mandurétna*.

"*Batara Rama Yana* having completed the wars, and conquered *Dasa Muka*, of the country of *Alinka*, thought of making a new settlement from the wilderness. To this he gave the name of *Durjayapura*; and after a long reign, resigned the government of it to his son, *Butlawá*, ending his days in solitude. *Butlawá* reigned for some years over the country of *Durjayapura*, and was succeeded by his son, *Kunti Buja*, who married the daughter of his *Páteh*, named *Kasa*. This prince removed the seat of government, or rather changed the name of it, to *Mandura Rája*, and was succeeded by his son, *Basu Ketí*, who ascended the throne at nine years of age. During his reign there arrived a beautiful woman, named *Dewi Sani Gatra*, daughter of *Bengawan Adi Rusa*, who had fled from the Prince of *Nusa Kambangán*, called *Jura Mataraja*. The prince married her, and was in consequence attacked by *Jura Mataraja*; but by the assistance of *Pula Sara*, the father of *Abiasa*, who afterwards became sovereign of *Astina*, he defeated him, and remained in quiet possession of his country. By the princess he had four children; three sons, named *Basu Dewa*, *Aria Prabu*, and *Angrasana*, and a daughter named *Dewi Kunti*. When *Basu Dewa* was fifteen years of age, his father wished him to marry a princess of the country, but the youth having fixed his affections upon the daughter of *Raja Sirwonga*, named *Dewi Angsa Wati*, refused compliance, and was in consequence dismissed from the royal presence.

"*Basu Dewa*, learning that the daughter of *Sirwonga* had been carried off by a giant into the woods, succeeded in overpowering the giant, and married *Dewi Angsa Wati*; but intelligence being given thereof to the chief, the prince of *Ambulutiga*, a chief called *Tiga Warna* (tri-coloured) was sent in pursuit of *Basu Dewa*, whom he overtook on his return to *Mandura Raja*. *Basu Dewa* was vanquished and fell into a cave: the princess fell into the hands of *Tiga Warna*.

"It was about this time that *Pula Sara* obtained the kingdom of *Astina* for his son *Abiasa*, and was desirous of betrothing him to *Dewa Ambalika* of *Astina*; but the young prince would not consent; and one day, when he was wandering in the forests, he heard a voice issue from a cave, and discovered *Basu Dewa*, who related his case and intreated his aid in the recovery of his wife. The young prince then proceeded in search of *Tiga Warna*, and having discovered him, *Basu Dewa* discharged an arrow at him and killed him. *Dewi Angsa Wati* was in consequence restored to her husband. *Basu*

Dewa and *Abiasa* then exchanged vows of perpetual friendship between themselves and their descendants, invoking a curse upon whomsoever of them should be guilty of breaking it. After this, *Basu Dewa* returned to *Mandura Raja*.

"*Basu Dewa* at length succeeded his father in the government of *Mandura Raja*, and had several children; of whom one was white, named *Kakra Sana*, the other black, named *Kresna*. He was succeeded by a son whom he had exposed in the woods, but to whom he afterwards became reconciled, named *Raden Kangsa*, to whom he gave the country. At this time *Pandu Dewa Nata* reigned over the kingdom of *Astina*. One night a voice said to him in a dream, 'When you meet with children of *Madura*, white or black, put them to death.' His father, who was still living, apprehensive for the fate of his favourite sons, *Kakra Sana* and *Kresna*, sent them to *Widara Kandang* for concealment, with *Angga Gopa*. These two princes afterwards hearing of an exhibition of fighting men, proceeded with their sister *Sambádra* to the *Alun alun*, where the combatants were assembled, and here they met *Raden Aria Jenaka* and *Sena*, sons of *Pandu Dewa Nata*, from *Astina*, who when their father died heard of the fame of *Madura*, and came in quest of the country.

"*Raden Kangsa* was seated in the *paseban*, surrounded by his chiefs, when his *Páteh* informed him that the proscribed children had at last appeared. The prince, delighted that those whom he had so long sought in vain had now appeared of their own accord, ordered his *Páteh* immediately to seize them; but *Kakra Sana* fought with the *Páteh*, and drove him back upon the prince, who then seized him himself, and throwing him on the ground with violence, blood gushed from his mouth. *Kakra Sana* then called for assistance from *Krésna*, who with *Raden Sena* immediately came and overpowered *Raden Kangsa*. Upon this *Kakra Sana* put him to death with his weapon *Lugúra*. The *Páteh*, ignorant of the fate of his prince, rushed upon the parties, but was pierced with a spear by *Kakra Sana*, who immediately exclaimed, 'I am *Resi Anapita* of *Repat Kapanasan*; I am *Resi di Jala dana Baladewa*, the son of *Basu Dewa* of *Madura*.'

"Then his uncle, *Aria Prabu*, spoke; and having embraced him, carried him to his father, *Basu Dewa*, who conferred the country upon him. At night, however, *Kakra Sana* heard a voice in his sleep, saying, 'to-morrow will I be revenged in the war *Brata Yudha*: there will be one of the country *Chámpala Raja*, I am he.' *Kakra Sana* replied, 'well I dare you.'"

[249] The Chandi Sewu, or one thousand temples at Brambanan, according to this chronology, are supposed to have been completed in the year 1018.

[250] The temple of Boro Bodo is also supposed to have been completed in 1360.

[251] At this time there were also three other cotemporary kingdoms, *Daha*, *Singa Sári*, and *Ng'arawan*.

[252] By these accounts, *Sawela Chala* is represented as the thirtieth in descent from *Nurchaya*, and the eleventh from *Arjúna*, according to the following line of Indian princes who ruled at *Astína-púra* and *Guj'-rat*.

11 *Sawela Chata*

[253] For an explanation of the week of five days, so termed, see vol. i. Astronomy.

[254] "King *Me* succeeded his brother (as Emperor of Japan) in the year of *Synmu*, of Christ 540.

"He was a very religious prince, and very favourably inclined to the foreign pagan *Budsdo* worship, which during his reign spread with great success in Japan, insomuch that the emperor himself caused several temples to be built to foreign idols, and ordered the idol of *Buds*, or *Fotoge*, to be carved in *Fakkusai*, that is in China.

"My Japanese author mentions what follows, as something very remarkable, and says, that it happened in the thirty-first year of his reign, and contributed very much to the advancement of the *Budsdo* religion. About a thousand years ago, says my author, there was in "*Tsiutensiku* (that is the middle *Tensiku*, whereby must be understood the country of the Malabarians and the coast of Coromandel in India) an eminent *fotoke* called *Mokuren*, a disciple of *Siaka*. About the same time the doctrine of *Jambaden Gonna Niorai* (that is, *Amida* the great god and patron of departed souls) was brought over into China, or *Fakkusai*, and spread into the neighbouring countries. This doctrine, continues he, did now manifest itself also in *Tsinokuni*, or Japan, at a place called *Naniwa*, where the idol of *Amida* appeared at the entry of a pond, environed with golden rays, nobody knowing how it was conveyed thither. The pious emperor, in memory of this miraculous event, instituted the first *Nengo* in Japan, and called it *Konquo*. The idol itself was by *Tondo Josijmitz*, a prince of great courage and piety, carried into the country of *Sinano*, and placed in the temple of *Sinquosi*, where it afterwards, by the name of *Sinquosi Norai* (that is, the *Norai* or *Amida* of *Sinquosi*) wrought many great miracles, which made that temple famous all over the empire. Thus far my Japanese author. He was succeeded by his son, *Fit Atzu*, or *Fint Atz*, in the year of *Synmu* 1232, of Christ 572. My author makes no mention of his age, but sets down the following remarkable events which happened during his reign.

"In the third year of his reign, on the first day of the first month, was born at the emperor's court *Sotoktais*, the great apostle of the Japanese. His birth was preceded and attended with several remarkable circumstances.

"The idol worship in general increased greatly in Japan during the emperor's reign. Abundance of idols, and idol carvers, and priests, came from several countries beyond sea.

"In the eighth year of his reign the first image of *Siaka* was brought over from beyond sea, and carried to *Nara* into the temple of *Kobusi*, where it is still kept in great veneration, possessed of the chief and most eminent place in that temple.

"In the fourteenth year of his reign one *Moria*, a great antagonist and professed enemy of *Sotoktais*, occasioned great troubles and religious dissensions in the empire. He bore a mortal hatred to all the

Fotoge or idols of the country, which he took out of the temples and burnt wherever he could come at them: but within two years time his enemies got the better of him, for he was overcome, and paid with his life for his presumptuous enterprise. It is added, that having thrown the ashes of the idols, which he had burnt, into a lake, there arose suddenly a most dreadful storm of thunder, lightning, and rain."—*History of Japan by Kempfer*, vol. i. page 167.

It is remarkable, that a peculiar people seem to have traversed Mexico in the following century, and according to Humboldt in like manner to have left behind them traces of cultivation and civilization. "The *Toultecs*," says that eminent author, "appeared first in 648, the *Chichimecs* in 1170, the *Nahualtics* in 1178, and the *Aztecs* in 1196. The *Toultecs* introduced the cultivation of maize and cotton; they built cities, made roads, and constructed those great pyramids which are yet admired, and of which the faces are very accurately laid out. They knew the use of hieroglyphical paintings; they could found metals and cut the hardest stones, and they had a solar year more perfect than that of the Greeks or Romans. The form of their government indicated that they were the descendants of a people, who had experienced great vicissitudes in their social state." "But where," asks Humboldt, "is the source of that cultivation; where is the country from which the *Toultecs* and Mexicans issued?"—*Humboldt's Political Essay on New Spain*.

[255] In these annals, the princess *Chándra Kirana* of *Daha* is represented as being demanded in marriage by the son of the Mahomedan *Raja* of *Malacca*, and the story, in which an account is evidently given of a visit to Java at a much later period of its history, blended with the earlier romances of Java, after detailing the particulars by which the prince of *Tanjung-pura* became *Raja* of *Majapáhit*, is thus told:

"The *Batára* had a daughter, named *Raden Galu Chandra Kirana*, "whose beauty was celebrated far and wide, and many *Rajas* sought her in marriage. Her fame reached *Malacca*, and *Sultan Mansur* became enamoured of her by description. He ordered *Paduka Raja*, the *Bendahara*, to fit out a fleet of five hundred large *prahus* with innumerable small ones. At *Singapura* were fitted out a hundred with three masts, and at *Singi Raya* as many more of the same sort.

"Then the prince selected forty nobles of the country, and forty virgins of noble family. He summoned *Maha Ruja Merlang* of *Indragiri*, and the *Raja* of *Palémbang*, the *Raja* of *Jambi*, and the *Raja* of *Linga*, to attend him to *Majapahit*; all the young warriors attending the prince, and all the great men remaining for the government of the country.

"When they reached *Majapahit*, they were well received by the *Batara*. At this time the *Rajas* of *Daha* and *Tanjungpura*, the younger brothers of the prince, were present at *Majapahit*.

"Among the chieftains who accompanied the *Raja* of *Malacca* was the celebrated *Hang Tuah* or *Laxamana*, who was highly admired, and exhibited wonderful feats.

"The *Batara* gave his daughter, *Chandra Kirana*, in marriage to the *Raja* of *Malacca*; and the *Batara*, delighted with his son-in-law, caused him to be placed on a seat of equal honour with himself, both on public occasions and at meals.

"Then being about to depart, the *Raja* requested to be presented with the kingdom of *Indra-giri*, which was accordingly given to him. He then bestowed *Siantan* on *Laxamana*, from which time the rulers of *Siantan* are descendants of *Laxamana*.

"By the princess he had a son, named *Raden Galang*, who was killed one day by a man running amok."—*Malayan Annals*.

[256] Pánji.

[257] According to the traditions of the *Sunda* people, these two brothers, *Chiong Wanara* and *Raden Tanduran*, were descended from a prince of *Galuh*, and their empires were divided by the river of

Brebes, thence called *Chi Pamali*, or the River of Prohibition.

"*Raja Galu*, otherwise known by the name of *Raja Pamakás*, and whose country was called *Bajong Galu*, had two sons, named *Raden Aria Bang'a* and *Tanduran*. There was a pestilence in those days, which, carrying off great numbers of the inhabitants, caused the prince to be much afflicted in his mind; whereupon, sending for his *patéh* (or minister), he thus addressed him: 'Go thou to *Bukit Padang*, and call one there named *Si Ajar*, failing not to bring him along with thee, as it may perhaps be in his power to administer relief to my distressed and suffering subjects.' The *patéh* immediately took leave of his Sovereign, and repaired forthwith to *Bukit Padang* to summon *Si Ajar*, who soon after appeared before the *Raja*, presenting him with some herbs which he had brought for that purpose. When *Si Ajar* had seated himself in the usual manner before the monarch, the latter thus addressed him: '*Ajar*, a great pestilence at present rages in the country, and makes great havock amongst my subjects; it is therefore that I have sent for thee, in hopes that thou mayest be able to put a stop to the mortality which now prevails.' *Ajar* immediately replied, 'O *Raja*, it is my opinion, that he to whom the country belongs is the proper person to do what is requisite for the good of it and its inhabitants.' When the *Raja* heard these words, he was exceedingly wroth; so much so, that he was on the point of putting *Ajar* to instant death, when the latter thus addressed him; 'Prince! if you are determined to kill me, I resign my life, but depend upon it you will be made to answer for it, and that by your own son.' *Si Ajar* then returned to *Bukit Padang*, wherupon *Raja Galu* thus spoke to his *patéh*: 'Repair instantly to *Bukit Padang*, and put *Si Ajar* to death; let him not longer live.' The *patéh* accordingly went, and having executed the *Raja's* orders, returned and reported the circumstance to his prince, who felt much joy on the occasion. Shortly after this the *Raja's* concubine became pregnant, and when her time was come she was delivered of a son, whose features were exquisitely beautiful. When the prince was informed of this, he desired the child might be brought to him. The prince no sooner cast his eyes upon it, than he thought of the words of *Si Ajar*; upon which he administered a dose of poison to the child, which however did not cause its death. He then told his *patéh* to take the child, and having put it in a basket, to send it floating down the river. The *patéh* took the child, and having disposed of it as he was ordered, returned and made his master very happy by the report of what he had done. The basket in which the child was turned adrift on the river *Chitandui* being stopped by some stakes placed there by a fisherman, named *Ke Balangantrang*, it was picked up and carried home by him. He was highly pleased with the child, and adopted it, and gave it the name of *Ke Jakah*, and cherished it till it arrived at the age of manhood. *Ke Jakah* then invited his reputed father to accompany him to *Bajong Galu*. They had nearly got half way, when *Ke Jakah* looked up and saw a bird fly past. He asked *Ke Balangantrang* what might be the name of that bird? and was told that it was called *chiong* (the black minor of India). *Ke Jakah* then saw a form like that of a human being, and inquiring what it was, he was told that it was a *wanara* (monkey). *Ke Jakah* then exclaimed, 'if such is the case, then must my name be *Chiong Wanara*.'

"After this the travellers prosecuted their journey, and in due time arrived at *Bajong Galu*, where they went to the house of a relation of *Ke Balangantrang*, named *Ke Haziali*, the chief of all the blacksmiths. *Chiong Wanara* was then delivered over by *Ke Balangantrang* to *Ke Haziali*, who treated him as his own son, and instructed him in the art, in which he soon became eminent.

"*Chiong Wanara* had not been long in this new situation, before *Raja Galu*, hearing of the circumstance, sent for and begged him of the head blacksmith. The *Raja* in time owned him for his own son, and was so delighted when he first beheld him, that he sent for his son, *Raden Aria Bang'a*, and desired him to take every care of his newly-found brother.

"A short time after this, *Chiong Wanara* went to his royal father, and asked him to give him some hereditary property. When the *Raja* heard this, he immediately addressed *Chiong Wanara* thus:—'My son, the whole of my property I have bestowed on thy eldest brother, and nothing is left except the head blacksmith, whom thou hadst better accept of.' *Raden Chiong Wanara* said he would take him with much pleasure.

"Soon after the head blacksmith came into his possession, *Raden Chiong Wanara* went again to his father, and solicited permission (which was granted to him) to construct an iron cage of very great strength, and of the most exquisite workmanship. *Chiong Wanara* then gave orders to his head blacksmith to have this cage made, and all the blacksmiths in the kingdom having been set about it, it was very soon finished, and had all the strength and beauty that was intended and wished for. Carpets and cushions, such as princes are accustomed to recline on, were spread within it. *Chiong Wanara* then went and acquainted *Raja Galu* that it was completed. When the *Raja* saw it, he was greatly pleased, and being entreated by *Chiong Wanara* to enter and examine whether or not there might be still something wanting to render it more complete; without suspecting any treachery, he did as he was requested. No sooner was he fairly in, than *Chiong Wanara* closed and locked the door, saying, at the same time to *Raja Galu*, 'Now is fulfilled the prediction of *Ajar of Bukit Padang*, whom you caused to be unjustly put to death.' The *Raja* answered from within the cage, 'I submit to this just judgment.'

"When *Raden Aria Bang'a* saw his father shut up in the cage, he could not contain his rage against *Chiong Wanara*, and a quarrel between the two brothers ensued.

"*Raja Galu* perceiving this, immediately exclaimed, 'For shame! that two brothers should thus fight with each other; such conduct is strictly forbidden by the elders of the people.'

"Without paying any regard to the words or admonition of *Raja Galu*, the two brothers engaged in single combat, stabbing, pushing, and striking each other in turn. Both parties being of equal strength, they continued fighting all the way from the place above described until they got far to the eastward, when finding themselves fatigued, they suspended the conflict under a certain tree. *Chiong Wanara* forthwith asked his brother what the name of the tree was under which they were: *Aria Bang'a* answered, it is called *mája*. They then took one of the fruit, and having split it in two, each took a part. That which *Aria Bang'a* ate was sweet, but that which *Chiong Wanara* ate was on the contrary very bitter (*pait*); so *Chiong Wanara* called the place *Majapait*, or as more generally pronounced, *Majapahit*.

"The combat was then renewed with the same vigour as before, and they continued fighting towards the westward, until they came to a row of trees (*jajar*), where they halted. On being asked by his brother the name of those trees, *Chiong Wanara* answered *paku*: *Raden Aria Bang'a* then said, 'the name of the place must be *Pakuan Pa-jajar-an*.'

"The two brothers then recommenced fighting, till they came to a river of *Brebes*, where being both much fatigued, they rested by the side of it and drank of its water.

"*Raden Aria Bang'a* then said: 'It was declared by our father to be wrong for brothers to fight with each other, it is also contrary to ancient usage, let us therefore put an end to this forbidden contest, and let us call this river *Chi Pamali*' (that is to say, the river of prohibition). The river *Brebes* thus obtained the name of *Chi Pamali*.

"*Raden Aria Bang'a* then said to his brother: 'do thou go to *Pakuan Pajajaran* while I go to *Majapahit*.' They accordingly separated, *Raden Aria Bang'a* proceeding to *Majapahit*, and *Chiong Wanara* returning to *Bajong Galu*, for the purpose of visiting his father in the cage.

"When *Chiong Wanara* arrived at *Bajong Galu*, and found the cage empty, his astonishment was very great. He then addressed himself to one of his people, named *Ke Jampang*, and asked what was become of *Raja Galu*. *Ke Jampang* replied, 'he went out of the cage of himself, without the assistance of any one, and has returned to his usual place of residence at *Surga Luka*, where he now is, having assumed the name and title of *Guru Putra Hinga Baya*.'

"When *Chiong Wanara* heard all this he thought he might as well throw away the empty cage, which he accordingly did, on the beach of the south coast, from whence the place is called *Tana Kandang*.

Wesi, or the land of the Iron Cage.

"Chiong Wanara forthwith invited Ke Jampang to accompany him to *Surga Luka*, in search of his father, *Guru Putra Hinga Baya*.

"In a short time they arrived at *Surga Luka*, and Chiong Wanara surrendered himself, entreating his father's forgiveness for what had passed. *Guru Putra* then said, 'to a certainty there must be two kingdoms on the island of Java, of which the (intermediate) boundary will be the river *Pamali*. The kingdom of *Raden Tanduran* will be to the eastward, and shall be called *Majapahit*; that of Chiong Wanara will be to the westward, and shall be called *Pakuan Pajajaran*: the latter kingdom will cease first (*tunda dahulu*.)' Whence the people under Chiong Wanara were called *Orang Sunda*, and their language *Sunda*.

"*Guru Putra* then gave Chiong Wanara a black monkey-skin jacket, which the latter forthwith put on, and immediately became in appearance like that animal. He at the same time gave him the name of *Guru Minda-sida tanda Prabu lutung Kasarong*, and furnished him with some rice-seed, and appointed Ke Jampang to be his follower.

"*Guru Minda* and Ke Jampang then took their departure: and when they came to a place not far from *Bajong Galu* they set out about sowing their rice-seed, distributing it among all the poor people of the place for that purpose.

"*Pandi Chacha Domas* and all the *Peng'gawas*, as well as all the people of *Bajong Galu*, who were attached to Chiong Wanara at the time he went to see *Guru Putra Hinga Baya* of *Surga Luka*, being without a sovereign, went all of them to the eastward, to reside in the country of *Majapahit*.

"When *Prabu Lutung Kasarong* had given orders for the sowing of the rice, he and his follower, Ke Jampang, proceeded to a place on the south sea coast, called *Kedu Pondok*, where Ke Jampang being left to settle, the place took its name from him, and was ever after called *Chutak Jampang*.

"After *Prabu Lutung Kasarong* had left Ke Jampang at *Kedu Pondok* he went through the woods, till coming near *Pakuan Pajajaran* he found a very large tree, called *pundi*, situated on the banks of the river *Chili-wong*. He remained under it to rest himself, and gave the place the name of *Kampung Pundi*.

"*Kuwu Mangkubumbi*, of *Jambadipa*, in the district of *Jeledud*, had several children, all of them females. The youngest was called *Purba Sari*, and was established in the interior, near the tree called *gadug*, from which the *kampung* so called took its name.

"Having placed his youngest daughter, *Purba Sari*, in the interior of the country, he was desirous to send out people to shoot birds with a pellet, and accordingly created and appointed one a pellet-shooter, who went regularly every day to shoot, agreeably to the order of *Kuwu Mangkubumi*. One day the pellet-shooter came to the large *pundi* tree, and observing on it what he supposed to be a large black monkey, he wished to shoot it, whereupon *Prabu Lutung Kasarong*, whom he mistook for the monkey, thus addressed him: 'Don't shoot at me; you had better go home and tell your master to come here to me himself.' When the pellet-shooter perceived that the black monkey was gifted with speech he stood aghast and astonished beyond measure, and returned immediately to his master to acquaint him with the circumstance.

"*Kuwu Mangubumi*, together with the pellet-shooter, then repaired to the great *pundi* tree. On his arrival there he called to *Prabu Lutung Kasarong*, who was upon it. No sooner did the latter hear the summons, than he descended and talked with the *Kuwu*, who then took him home with him, highly delighted at being possessed of so extraordinary and accomplished a creature. In the course of a short time he wished to present him to his eldest daughter, and on her refusing to accept of him he offered him to a younger one, but neither would receive *Prabu Lutung Kasarong*.

"He then gave him to the youngest of all, named *Niái Purba Sari*, who accepted of him with great pleasure.

"In the course of time, *Niai Purba Sari* built a house at *Wangun*, and the place was afterwards called *Kampung Wangun*. He then planted some *tagur* trees, from which the place received the name of *Kampung Tagur*. After this, *Prabu Lutung Kasarong* caused *Niai Purba Sari* to remove from the *gaduga* tree to *Kampung Wangun*.

"When *Niai Purba Sari* became *Prabu Lutung's* wife, he laid aside the black monkey's skin with which he was clothed, and immediately resumed his former and usual beautiful appearance.

"He afterwards received the name of *Niang Galarang*, and established himself at *Pakuan Pajajaran*, where the *Batutulis* (inscribed stone) now is, and which was the seat of government of the *Maha Raja Prabu Niang Galarang*. After this his wife became pregnant, and *Prabu Niang Galarang* left *Pakuan Pajajaran* to the care of his *Peng'gawas*, or ministers of state, and went to *Bukit Padang*, where he became a *Pandita*.

"When the time was come, *Niai Purba Sari* brought forth a son of the most exquisitely beautiful features, to whom she gave the name *Silawang'i*.

"When *Silawang'i* grew up, he removed from *Pakuan Pajajaran* to *Sumedang Larang*, where he was soon afterwards married; first to *Niai Raden Raja Mantu*, and then to the daughter of the *Peng'gawa* of that place, so that he had many wives. He at the same time received the title of *Baginda Maha Raja Prabu Silawang'i*.

"*Prabu Lutung Kasarong* had afterwards two other sons, the elder named *Ke Glap Nyawang*, the younger, *Ke Kedang Panjang*, both of whom were strong and well made; and when they grew up they went with their father to *Sumedang Larang*, where they all remained with *Prabu Silawang'i*.

"*Prabu Silawang'i*, when he had got a number of wives and *peng'gawas*, returned to *Pakuan Pajajaran*, bringing them all with him, as also his two sons, and his man *Ke Jampang*, who was then called *Purwa Kala*. In returning to *Pakuan Pajajaran*, *Prabu Silawang'i* first went to a place on the south coast, called *Nusa Kambangan*, and there embarking in a vessel with all his family, he sailed westward, till they came to the anchoring place, to which was given the name of *Palabuan Ratu* (Wyn Coops Bay), and having disembarked, they all proceeded to *Pakuan Pajajaran*.

"On his arrival there, *Prabu Silawang'i* established himself as *Raja*, and having assembled all the *Mantris*, *Peng'gawas*, and other chiefs and officers, together with all the military forces, he caused great rejoicings to be made on the occasion, and each day and night every kind of play was performed to amuse him. *Pakuan Pajajaran* was crowded with the happy and delighted multitude, and so great and powerful did *Prabu Silawang'i* become at that time, that all the princes from the river *Chi Pamali* beyond Java Head (in Bantam) on the west, submitted to him and were subject to *Pakuan Pajajaran*.

"*Prabu Silawang'i* then built without the *kraton* (or palace) a hall of audience (*paseban*), which was styled *Sasaka Domas*, or the hall of eight hundred pillars; and in the interior of the *kraton* another, called *Rarawis Kanchana* (or that of golden flowers). This was where the *Batutulis* now is."

The tradition goes on to relate, that *Prabu Silawang'i* had one hundred and fifty wives, and that his sons-in-law, of whom there were also one hundred and fifty, were made great public officers.

In the course of a little time one of his highness's wives, named *Niai Mantri Manek Mayang Sunda*, the sister of *Ke Marugal Sang Mantri Ayung*, became pregnant, and in due time brought forth a beautiful boy, who was called by his father *Raden Guru Gatangan*, and who was made *Raja Muda* of *Pakuan Pajajaran*, with the name and title of *Prabu Guru Gantangan*.

Both father and son continued as *Raja Tuah* and *Raja Muda* to live in the *kraton of Pakuan Pajajaran*, happy and on good terms with each other; the management and direction of the state being entirely vested in the hands of the *Raja Muda*.

[258] The Javan traditions furnish no information respecting the locality of this state.

[259] Having thus detailed the traditions which exist among the Javans respecting the establishment of foreign colonies in the Eastern Archipelago, and brought down this part of the history to the establishment of the kingdom of *Majapahit*, it may not be amiss to transcribe those which prevail among the *Malayus*, who, it is well known, endeavour to trace their descent from the Macedonian hero, Alexander the Great. The following account is taken from the *Sejara Maláyu*, or Malay annals, a work written in the year 1021 of Hejirat:

"It happened that *Raja Sekander*, the son of *Raja Darub* of *Rum*, of the race of *Makaduniah*, the name of whose empire was *Zulkarneini*, wished to see the rising of the sun, and for this purpose came to the confines of the land of Hind. There was a Raja in Hindustan, named *Raja Kideh Hindi*, who was very powerful, and whose empire extended over the half of Hindustan. Immediately on the approach of *Raja Sekander*, *Raja Kideh Hindi* sent his prime minister to collect his forces, and marched out to meet him. The armies engaged, and a battle ensued, as is fully recorded in the history of *Raja Sekander*. *Raja Kideh Hindi* was defeated and taken prisoner, after which he was sent back to his own country. This *Raja Kideh* had a daughter: after sending his minister, *Perdana Mantri*, to consult with the minister of *Raja Sekander*, he gave her in marriage to *Raja Sekander*, on condition of receiving three hundred thousand dinars of gold.

"*Raja Sekander*, after tarrying ten days in honour of the ceremony, pursued his journey towards the rising sun, attended by his bride. On their return, however, her father requested her to remain some time with him: *Raja Sekander* consented and took his leave.

"The princess was already pregnant by *Raja Sekander*, but he was unacquainted with this circumstance; nor was the princess herself aware of it, till a month after her return to her father. At the expiration of her time, the princess was safely delivered of a son, whom *Raja Kideh Hindi* named *Aristan Shah*.

"*Raja Aristan Shah* was in course of time married to the daughter of the Raja of *Turkistan*, by whom he had a son, named *Raja Aftus*.

"After an absence of forty-five years, *Raja Sekander* returned to *Makaduniah*, and *Raja Kideh Hindi* died, leaving as his successor *Raja Aristan Shah*, who (or rather whose dynasty) reigned three hundred and fifty years. After him reigned the following princes in succession:

Raja Aftus, who reigned one hundred and twenty years.

Raja Askayinat, do. three years.

Raja Kasidas, do. twelve years.

Raja Amastubusu, do. thirteen years.

Raja Zamzeius, do. seven years.

Raja Khuras Khainat do. thirty years.

Raja Ahat Sakayinat.

Raja Kuda Zuguhan, son of *Amastubusu*.

Raja Nikubus, who reigned forty years.

Raja Ardasir Migan, who married the daughter of *Raja Nushirwan Adel*, sovereign of the west, by whom he had a son, named *Raja Derm Nus*.

Raja Tarsia Burdaras, son of Raja Zamarut.

The last of these princes married the daughter of *Raja Sulan* of *Amdan Nagara*. This *Raja Sulan* was the mightiest prince of the land of Hind, and of all the Rajas under the wind. By the princess, his daughter, *Raja Narsa* had three sons:

Raja Herian, who reigned in the country of Hindostan:

Raja Suren, whom *Raja Sulan* appointed in his own place; and

Raja Panden, who reigned in *Turkestan*.

"After a short time *Raja Sulan* died, and his grandson, *Raja Suren*, reigned in his place in *Amdan Nagara*, with still greater authority than his predecessors, and all the lands of the East and West, except China, acknowledged him.

"Then *Raja Suren* formed the design of subjugating China, and for this purpose marched towards that country. Two months he marched on without any obstruction, and every country submitted, till he approached the country of *Gang'ga Nagara*, the Raja of which was named *Gang'gi Shah Juana*. Here an engagement took place, in which *Raja Suren* smote off the head of *Raja Gang'gi Shah Juana*, whose subjects having lost their chief submitted to *Raja Suren*, who married *Patri Gang'ga*, the sister of the deceased Raja. From *Gang'ga Nagara*, *Raja Suren* advanced to the country of *Klang Kins*, which in former times was a great country, possessing a fort of black stone (supposed to be up the river *Johor*). The name of the Raja of this country was *Chulen*, who was superior to all the Rajas of the country lying under the wind. Here another desperate engagement took place, in which *Raja Chulen* also was killed, and the country submitted to *Suren*. Then *Raja Suren* married the daughter of the deceased monarch, and advanced to *Tamarak*. He returned, however, to the land of *Kling* without proceeding on to China. On the return of *Raja Suren* he founded a city of great size, the fame of which became renowned, and the name of which was *Bisnagur* (a well known and celebrated city of the south of India), which even at the present time is a great city in the land of *Kling*.

"*Raja Suren* had by the daughter of *Raja Chulen* a daughter, named *Chandu Wani Wasias*, and by *Putri Gang'ga* he had three sons, one of them named *Bichitram Shah*, another *Palidutani*, and the third *Nilumanam*.

"*Palidutani* succeeded to the government of *Amden Nagara*, and *Nilumanam* was appointed to the government of *Chandukani*: but on the eldest son, *Bichitram Shah*, was only conferred a territory of small extent, which so displeased the young prince, that he resolved to abandon the country. He accordingly embarked with twenty vessels, fitted out with all the appurtenances of war, determining to conquer all the maritime countries; but his fleet was dispersed by a storm, and part of them returned to their country.

"*Bichitram Shah* is then represented as arriving in the country now called *Palembang*, where *Demang Lebar Daon*, great grandson of *Raja Chulen*, was chief. Here marrying the daughter of the Raja, he assumed the government, under the title of *Sang Sapurba Trimurti Tribuna*, and had by her four children; two daughters, named *Chandra Dewi* and *Putra Sri Dewi*, and two sons, named *Sang Mutiaga* and *Sang Nila Utama*.

"After some years *Sang Sapurba* was seized with a desire to view the ocean, and went in search of a good situation for a new settlement, leaving the younger brother of *Demang Lebar Daon* in the government of *Palembang*; and the fleet being prepared, they set sail from the river of *Palembang*, and after steering six days and nights towards the south, arrived at *Tanj'ung pura*, where *Sang Sapurba* was very honourably received by the Raja, and a thousand chiefs introduced him into the country, seated him on the throne, and honoured him like a prince. As soon as the news of his arrival reached *Majapáhit*, the *Bitara*, who was very powerful, came to make him a visit. *Sang Sapurba* received him very graciously, and gave him in marriage his daughter *Chandra Dewi*. After this

ceremony the *Bitara* of *Majapáhit* returned to his capital; and it is from this marriage (say the Malayan traditions) that the rajas of *Majapáhit* are descended.

"After a long residence at *Tanj'ung pura*, *Sang Sapurba* set out again in search of some other country; but he first married his son, *Sang Mutiaga*, to the daughter of the Raja *Tanj'ung pura*, and established him on the throne of that country, giving him a superb crown. After leaving *Tanj'ung pura* he traversed the sea until he arrived in the strait of *Sambor*, in view of the hills of *Ling'ga* (Lingen.) The news quickly reached *Bentan*, at this time under the sway of a queen, named *Pramiswari Sehandar Shah*. *Sang Nita Utama*, the younger son of *Sang Sapurba*, was married to her daughter, named *Wan Sri Bini*, and afterwards became raja of the country.

"*Sang Sapurba* then left *Bentan*, and having sailed for a day and a night, arrived at *Ruko*, whence he proceeded to the point of *Balang*, and ascended the river *Buantan*, where it was reported the country was extremely populous. When he had ascended far up the river he arrived at *Menangkabau*: all the *Menangkabaus* were surprized at his appearance, and the splendour of his diadem, and they all came to inquire whence he came. As soon as they heard of his adventures, and that he was a descendant of Sultan *Sekander Zulkarneiné*, all the chief men of *Menangkabau* consulted about appointing him Raja, since they had none; and after he had, as a condition, succeeded in destroying an immense snake which harassed the country, he was unanimously elected Raja by the people of *Buantan*, and of him are descended all the generations of the Rajas of *Pagaruyang*.

"*Sang Nila Utama* afterwards quitted *Bentan*, and founded the city of *Singa pura*, situated on the southern extremity of the Malayan peninsula. This event is supposed to have taken place A.D. 1160.

"The successors of *Sang Nila Utama* were *Paduka Sri Wikrama*, *Sri Rama Wikrama*, and *Sekander Shah*, who, being driven out of *Singa pura* by the *Majapáhit* forces, afterwards established the city of *Malaca*. His successor, *Mahomed Shah*, first embraced Mahomedanism, in the year 1276."—*Malayan Annals*.

[260] The long graves which are still pointed out near *Léran*.

[261] Her tomb is still preserved.

[262] The occasion, of the war with *Báli* is thus related:—"At this period the royal family of *Báli* consisted of three brothers; the eldest of whom was named *Maya Dináwa*; the second, *Dewa Machuwel*, who was the chief; and the youngest, *Kabu Wihaha*. *Kabu Wihaha* is said to have been of extraordinary size, and to have had a head like a hog, devouring the flesh of that animal in great quantity. He was, moreover, very wicked and destructive, regardless of the rights or property of any one. On this account the people became dissatisfied with his sway, and his brothers, desirous of getting rid of him, advised him to proceed to *Majapáhit*, in order to obtain in marriage *Loro Jongrang*, of the family of *Browijaya*, a lady whom they represented as of a stature similar to his own. The Raja of *Báli*, as a further inducement to him to go, sent an embassy to make the request; but *Browijaya*, considering it as the forerunner of war, made his preparations accordingly. He sent for a celebrated painter, named *Sung'ing adi Warna*, and putting down the dimensions of a large woman, such as had been requested, desired him to paint the figure of a most beautiful woman of the same size, and when it was done dismissed the ambassadors, accompanied by *Aria Damar*, who had especial instructions to make observations of every thing in *Báli*, to that the way might be clear for hostilities, should the same become necessary."

[263] *Súnan*, in the Javan language, means the ridge pole of the roof; and *tíang* the pillars or supports of a house. The former is the term adopted by the sovereign! the latter is applied to the common people or men in general.

[264] The following account of this great capital, and of the country in general, is given by the *Chinese*; it was furnished by *Han-Cham-pit*, a Chinese, whose family have for many generations

been settled on Java, and translated into English by Mr. Crawford, when Resident of Surabaya.

"Extract from a Chinese book called *Bun-kyan-tong-ko*, printed at Pekin one hundred and five years ago, in the reign of the Emperor *Bang-he*, and compiled under the direction of his ministers, *Tyng*, *Ong-un-Chin*, *Ong-Tam*, *Tyn-yong-twan*, and others.

"There is a country called *Jaw-wa*, formerly called *Cha-po*; on the sea-coast of it there is a country called *Po-kyalung*, by which is the entrance into the country.

"In the reign of the Emperor *Hut-pit-lyat*, of the family of *Gívan Jaw-wa*, it was described as being bounded in the following manner: to the east by *Ko-li-gin*, to the west by *Sam-bu-che*, to the north by *Ko-ta-sit*, and to the south by *Cham-Sya*.

"Subject to this country of *Cha-po* are *Sokit-tan*, *Ta-pan*, *Ta-kong*, *Te-but*, and other countries.

"In coming from *Chwan-cha* (*Emwi*) by sea one first makes *Cham-Sya*.

"The people of that country are of a strange appearance, and exceedingly ugly.

"In genius, habits, and language, they are entirely different from the Chinese.

"*Jaw-wa* became first known to the sovereigns of *China* in the reign of *Saow-Gil-yang*, of the dynasty *Song* ^[268]. The intercourse was, however, afterwards interrupted.

"After this, in the reign of *Tyo-kong-in*, of the family of *Tyo* ^[269], the king of *Jaw-wa*, whose name was *Bak-lo-cha*, sent an embassy with gifts to the Emperor of *China*.

"The intercourse was again renewed in the reign of *Tyo-kyat*, of the same family, when the Javans sent a mission with gifts to *China*.

"Afterwards, in the reign of the Emperor *Hut-pit-lyat*, and in the thirteenth year of his reign, soldiers were sent from *China*, but the Javan subjects were very numerous, and they could not succeed ^[270].

"The water of that country is called *pa-chak-an*. Here is the mouth of a river. This is the place to invade the country. It was here that *Su-pit* and *Rohin*, the generals of *Hut-pit-lyat*, fought the people of the country.

"The country of *Jaw-wa* is divided between two kings, one to the west, and one to the east. In the reign of the Emperor *Chee-Te*, of the dynasty of *Beng*, when that prince had sat five years on the throne, the western prince, whose name was *Fo-wan-pan*, made war on the prince of the eastern half of the island, and overthrew his kingdom.

"In the reign of the same Chinese prince, and in the sixteenth year of his reign, the western king of *Jaw-wa*, whose name now was *Yang-wi-see-sa*, sent a mission to *China*, with a present of a white parrot.

"Half a day's journey to the south-west of the river is the king's palace, close to a tank. Within this are two or three hundred houses. Seven or eight persons wait on the king, clothed in silk of various colours.

"The king's palace is built of bricks. In height the wall is thirty feet. Its circumference is about 30,000 paces. The hair on the king's head is in appearance like growing grass; he wears a cap ornamented at top with gold fashioned like leaves. A piece of silk is wrapped over his bosom; round his waist he has a piece of embroidered silk; he wears a short weapon; his feet are bare. Sometimes he rides on an elephant, and sometimes on a bullock.

"With respect to the people, the hair of the men has the appearance of growing grass. The women tie it in a knot at the top of the head; they wear a coat and a long cloth. The men invariably wear a short weapon at the waist, which is of exquisite workmanship.

"Their laws never punish by corporal infliction. They take no account of the measure of a man's offences; the criminal, in all cases, is secured with rattans, and then put to death by stabbing him.

"In their traffic they use the money of China, but of a coinage older than the present times. These coins bear a value double of what they do in China.

"The inhabitants of the country have names, but no surnames. They are of a quarrelsome disposition. In their persons they are ill-favoured and filthy. Their colour is a blueish black. Their heads are like those of large monkeys, and they go bare-legged. They believe in evil spirits. In sitting and sleeping they neither use chairs nor beds: in eating they use neither spoons nor *chop-sticks*. With respect to food, they do not reject snakes, caterpillars, worms, and insects. They do not scruple to eat and sleep with their dogs.

"In their marriage ceremonies it is the practice for the man to go to the house of the woman, where he stays five days; at the end of this time the bride is received with music and noise at the house of the bridegroom. The bride wears no coat, her hair is loose, her feet are bare, and she wears a piece of silk round her bosom. Sometimes she wears ornaments of gold, pearls, and precious stones.

"With respect to the dead, some are thrown into the water, some burnt, and some buried; all this according to the will of the person expressed before his death. The exports of the country are gold, silver, pearls, rhinoceros' horns, elephants' teeth, tortoise-shell, beetle-nut, black pepper, sapan wood, garu wood, kanglong, cotton, Sundit birds, green pigeons, and doves of various colours, parrots of various colours, red, green, and white, with white deer and white monkeys."

[265] Various stories are related of this kris.

[266] Known by the name of *Kemándang*.

[267] The *Bedui* are to be found at three different places in Bantam. At *Gunung Perahiáng*, where the chief is called *Girang Pohon*, there are twelve families; at *Gunung Párangkujang*, where the chief's name is *Wanklang*, there are forty men and women; and at *Gunang Bungbang*, where the chief is called *Kiang*, there are twelve families. In the *Rawayans*, the name given to the place in which they respectively reside, this exact number is constantly preserved, by the removal of any increase that may occur, and by supplying any deficiency from those without who have not embraced the Mahomedan faith.

The history of these people, who consider themselves as descendants of *Prabu Seda*, the last chief of *Pajajaran*, is intimately connected with the period of which we are now treating, and with the establishment of Mahomedanism in the western districts. The origin of the *Bedui* is thus related:—

"During the reign of *Prabu Seda*, the last prince of *Pajajaran*, he was informed that a certain recluse, named *Seda Sakti*, had an incestuous intercourse with his sister, and determined to punish him for thus bringing disgrace upon the country; the man pleaded his innocence to no purpose, and was put to death by being pressed between two large logs of wood, previously making a stipulation, which was deemed reasonable enough, and which obtained the concurrence of all present, viz. that if he had actually been guilty of the crime laid to his charge, his descendants might lose their religion and live

in the low lands; if not, that *Prabu Seda*, with his nobles and court, might lose their religion and place of residence, and become for ever slaves: and as a sign that this stipulation was approved and ratified from on high, immediately the sun was eclipsed, the rain descended in torrents, the thunder roared, the earth shook, and under the mountains were heard sounds like the discharge of great guns.

"*Pachukaman*, son of *Prabu Seda*, who resided with his people at *Gunung Pulusari*, at the period when the Mahomedan religion was about to be introduced, apprehended the consequences of the stipulation made with *Seda Sakti*, and determining not to change his ancient faith on any account, he quitted the place in secret, leaving his people, of whom eight hundred, who were holy men, went in search of him in vain, and only returned to deplore his loss."

Hasen-u-din subsequently fell in with these eight hundred *recluses* and converted them. He afterwards invaded *Pajajaran*. On his return to *Pulusari*, he was accustomed to come down to *Sirang* twice in seven days to sell fruit, and in the course of time he became acquainted with every thing relative to the people of Bantam. He afterwards subdued *Girang*, the ancient capital, situated a few miles inland of *Sirang*, of which the ruins are still visible, more by means of conversion than by arms, and when firmly established, *Prabu Seda* and his children, who refused to become converts, were there put to the sword.

The *Bedui* are the descendants of those who on the fall of *Pajajaran* escaped into the woods, and who refused to change their religion, remaining firmly attached to that of *Prabu Seda*. There is a tomb of one of them which they hold sacred, and which they will not allow any one but themselves to approach, even to this day. In after times, when the *Bedui* submitted to the Sultan of Bantam, and shewed no disposition to oppose the Mahomedans, they were exempted from the necessity of becoming converts, upon the condition, at the time they yielded, that the number in each *Rawayan* allowed to profess the ancient worship should be limited^[271].

When the Mahomedan religion became more generally established, it was declared that all those people who should not have embraced the faith before a certain day, should, with their descendants, be considered as outcasts or slaves. This is the origin of the people termed *Abdi*, and who are quite distinct from the *Bedui*.

The name, however, given in the *Sunda* traditions to the last chief of *Pajajaran*, is *Sila Wangi*; and it is from some of his original adherents, who became converts to Mahomedanism, that the present regents of the *Sunda* districts are descended. One of them, *Guru Gantang'an*, with many followers, is said to have retired to the forests on the mountain *Gedé*, since called *Recha Domas* (eight hundred images), where many rude idols are still to be found. There it is said they afterwards became extinct, and according to the notion of the *Sundas*, the term *Per-hiang'an*, still retained by the descendants from *Nga-hiang*, signifying annihilated, is derived from the fate of this people.

^[268] "Thirteen hundred and ninety-four years ago."

^[269] "Eight hundred and fifty-one years ago."

^[270] "Four hundred and fourteen years ago."

^[271] For a further account of these people, see vol. i. page ³⁷².

CHAPTER XI.

History of Java, from the Establishment of Mahomedanism (A.J. 1400), till the Arrival of the British Forces in A.D. 1811. (A.J. 1738).

About a year after the establishment of the chief authority at *Demák*, the Sultan, accompanied by the different heads of the Mahomedan worship, visited *Sheik Mulána Ibrahim* at *Chéribon*. On this occasion, the chiefs were distributed over different quarters appropriated for them, in the vicinity of *Palimánan*, and the places where they resided still bear their respective names.

Kábu Kanigára, the chief of *Pájang*, second son of *Andáya Níngnat* by one of the daughters of *Browijáya* and the princess of *Chámpa*, was put to death, although he had embraced the Mahomedan religion, for refusing to acknowledge the supremacy of Sultan *Demák*, by presenting himself at court when required. The following is the account of this transaction, as given by the native writers.

"The *Pangéran Kúdu*s then departed alone, and having entered the *dálam* was observed by a female attendant of the chief, who demanded his name and errand; to which he replied, that he should have the honour to make himself known to her master. The female observed that the prince was ill, and in mourning for the death of one of his best friends, *Kiái Gédé Tingkir*. *Pangéran Kúdu*s then desired her to tell her master that he was a messenger from the Almighty, who brought good tidings. Having thus obtained admittance to the chief, he informed him that he was commissioned to require his immediate attendance at *Demák*, and in case of refusal to put him to death. But *Kábu Kanigára* still persisted in his refusal, and delivered his *kris* into the hands of the *Pangéran*, who immediately wounded him in the arm, of which he shortly expired. He had however previously stipulated, that as his wife was pregnant, the circumstances of his death should be kept secret from her, and that her life should be preserved. The widow shortly after quitted the *dálam*, and found an asylum with the widow of *Kiái Gédé*

Tingkir, where she was delivered of a son, destined to perform a conspicuous part in the transactions of those days."

Panambáhan Jimbua reigned according to some twelve, and according to others nine years after the fall of *Majapáhit*. He had several children, one of whom, named *Pangéran Sábrang Lor*, succeeded him as sultan of *Demák*: another, named *Niái Bintára*, was married to *Mulána Ibrahim* of *Chéribon*, who was in consequence honoured with the title of *Panambáhan Makdum Játi*.

Panambáhan Jimbun is represented as having resided in a small unadorned dwelling, while the principal buildings at *Demák* were constructed by *Pangéran Kúdus*, who had married the daughter of *Húsen*, and being entrusted with the highest offices, was considered as the second person in the state.

Pangéran Sábrang Lor, who succeeded his father in 1409, after a reign of less than two years, died of an inflammation of the lungs, and was succeeded, in 1412, by his brother, named *Pangéran Tranggána*, the third sultan of *Demák*.

On the inauguration of *Pangéran Tranggána*, he received the benediction of *Panambáhan Mákdum Játi*, and *Pangéran Kúdus* was appointed high priest. Two *krises* and a *bádi bádi* were made by the celebrated smith named *Súra*, from the iron wand which was supposed to have wrought miracles in the *Majapáhit* war. One of them was presented to the new sultan, and became a royal *pusáka*; the other was delivered to the *Pangéran* of *Kúdus*, with the appointment of *Susúnan Pangúhu*, or high priest. The *bádi bádi* was sent to *Súnan Bónang*.

Before the year 1421, the whole island of Java had submitted to the authority of *Pangéran Tranggána*, the chiefs of the several provinces, from *Bantam* to *Balambárgan*, presenting themselves at his court, and universal tranquillity was restored. The Mahomedan religion was now firmly established throughout the island: the mosque was completed, and treaties of amity and peace were concluded with the princes of Borneo, *Palémbang*, *Báli*, *Singapúra*, *Indragíri*, and other states of the Archipelago, which had become independent of Javan authority after the fall of *Majapáhit*.

This prince is represented to have been an intelligent, good, and virtuous man, and to have enforced the strictest obedience to the laws. Under his superintendence was composed a work, entitled *Jáya Langkára*, in which the principles of the Mahomedan law and precepts were blended with the ancient instructions of the country, and thus rendered agreeable to the people.

It is related, that on the occasion of the assemblage of the different chiefs at the funeral of the deceased Sultan, and the inauguration of *Bangéran Tranggánaa*, a dreadful storm arose, with much thunder and lightning, when a youth, named *Jáka Siséla* (the son of *Browijáya* by *Búdan Kajáwan*, who had been delivered over to the superintendent of his *sáwah* or rice fields) going out of the mosque to observe the weather, saw a meteoric stone fall on the ground beside him, without doing him harm. This stone he carried to the *Súnan Kali Jága*, who declared it to be an omen prophetic of much good to the youth. After thanks were returned to the Almighty for having averted the danger from the mosque, a sketch was made of the stone, which is still exhibited on the door facing the north. This youth *Siséla* failing in an endeavour to become chief of the sultan's guards, and afterwards in an attempt upon the prince's life, was obliged to fly from the capital.

It is necessary here to advert to *Jáka Tingkír*, the offspring of *Kábu Kanigára*, a chief who had been put to death by order of the first sultan of *Demák*. It having been foretold that he would one day become sovereign of Java, he was taken by his mother to *Demák* in his eleventh year, where he soon found means to ingratiate himself with the Sultan, who gave him the name of *Pánji Mas*, and caused him to be instructed in the Mahomedan religion and in the precepts of *Jáya Langkára*, appointed him to the command of the body guard consisting of eight hundred men, and afterwards, in the year 1449, gave him his daughter in marriage, with the administration of the province of *Pájang*, where, with the permission of the Sultan, he built a *kráton*; but afterwards having put to death a person who had arrived from the *Kedú*, applying for an appointment in the body guard, he was banished to the forests. During his exile he visited a village named *Bányu-bíru*, near the *Solo* river, where he was instructed by a *Pandíta* how to conduct himself for the future, the holy man predicting, at the same time, that he would become sovereign of Java and hold his court at *Pájang*.

Several exploits against alligators are recorded of him; and the opinion that no descendant of the princes of *Pájang* need fear injury from these animals is so prevalent, that it is not unusual for a Javan of the present day, seeing himself in danger from one of them, to exclaim aloud that he belongs to that family.

Not long after the return of *Pánji Mas*, the island of Java was again formed into two separate and independent governments, corresponding with the former limits of *Majapáhit* and *Pajajaran*. The eastern provinces remained subject to the Sultan of *Demák*, and the western were ceded in perpetuity to *Mulána Ibrahim*, with the title of Sultan. To both sultans was reserved the right of dividing their lands on their demise among their children, as they might think proper. The *Súnan Káli Jága* obtained as an hereditary property, free from all kinds of requisitions, the small district of *Adilángu*, in the province of *Demák*, where he was afterwards buried.

From this period until the death of the Sultan of *Demák*, the eastern provinces enjoyed the most undisturbed tranquillity; but the Sultan of *Chéribon* found some difficulty in establishing his authority over the western people, and in converting them, particularly those of Bantam, to the Mahomedan faith.

The Sultan of *Demák*, besides several natural children, had two sons and four daughters. Of these daughters one was married to a Madurese prince, who resided at *Lampung*; another, *Balíga*, to a son of the Sultan of *Chéribon*, who was the chief of *Bantám*; a third to *Ráden Pánji*, who after the return of the Sultan from *Chéribon* was appointed chief of *Pájang péng'ging*; and the fourth to the son of *Pángéran Kedíri*, who was chief of *Japára*.

Pangéran Tranggána, the third Sultan of *Demák*, died in the year 1461, having previously made a division of his dominions among his children.

His eldest son, *Aria Ráng'ga*, was appointed Sultan of *Prawáta*, to which was annexed all the land to the eastward along the Solo river, as far as *Surabáya*, together with *Demák* and *Semárang*. His son-in-law, *Pangéran Hadíri*, was made *Súnan* of the *Kali Niámat*, and possessed all the districts of *Japári*, *Páti*, *Rémbang*, and *Jawána*. The *Adipáti* of *Pájang Péng'ging* (*Ráden Pánji*) received the title of *Brébo Páti* of *Pajang* and of *Matárem*, with the lands attached to it. His son, *Mas Timor*, was appointed *Adipátí*,

with the lands of *Kedú* and *Bágalen*. His son-in-law, the prince of *Madúra*, was made chief of *Madúra*, *Suménap*, *Sedáyu*, *Grésik*, *Surabáya*, and *Pasúruan*. His youngest son, *Ráden Panángsang*, was appointed chief of *Jípang*.

The Sultan of *Chéribon*, better known by the name of *Súnan Gúnung Játi*, died in 1428, at an advanced age, leaving three sons by his wife, the princess of *Demák*, and one son and a daughter by a concubine. His eldest son, *Hásen*, succeeded him as Sultan of *Chéribon* and of the provinces lying between the *Chi-tárum* river and *Túgu*, and stretching in a southern direction to the *Kéndang* hills, so as to include all the *Priáng'en* districts and lands lying to the east of the *Chi-tárum*. From this prince are descended the present Sultans of *Chéribon*. To his second son, *Baradin*, he left the kingdom of *Bantam*, which extended westward from the river of *Táng'ran*, to the south-east part of Sumátra, including all the islands in the straits of *Súnda*. From him are descended the present kings of *Bantam*. His third son, named *Chenámpui*, died when young, and was buried at *Mánda* in *Chéribon*. To his natural son, *Káli Játan*, he assigned the lands lying between the *Chitárem* and *Tang'ran* rivers, which had formerly formed part of *Chéribon* and *Bantam*. This prince assumed the title of *Raja* of *Jokárta* or *Jákatra*, fixing his capital near the *kámpung* of that name, where he and his descendants continued to reign, until they were expelled, in the year 1619 of the Christian era, by the Dutch, who established on its ruins the modern Batavia, the capital of their possessions in the East Indies.

The tomb of the *Susúnan Gúnung Játi*, situated on the mount so called, at a short distance from the present town of *Chéribon*, is still an object of the highest veneration and respect.

Thus was the ancient empire of Java divided under no less than eight separate and independent governments. *Bantam*, *Jokárta*, *Chéribon*, *Prawáta*, *Kaliniámat*, *Pajang Kedú*, and *Madúra*; the several chiefs of which, in general, either assumed the title of *Kiái Gédé* or Sultan, or the more religious distinction of *Súnan*.

In about a year after the death of the Sultan *Tranggána*, the country of *Pájang* rose to considerable importance; its chief, on account of his possessing the regalia of state, being considered as the first in rank of the several princes in the eastern districts. Hatred, envy, and ambition, however,

soon inflamed the breasts of the different princes of Java. The most ambitious among them, and the first who disturbed the peace of the country, was the *Adipáti* of *Jípang*, *Ráden Panángang*. The history proceeds thus:

"The *Adipáti* of *Jípang*, by the advice of *Súnan Kúdus*, dispatched one of his body guard, named *Rákut*, to Sultan *Prawáta*, with orders to watch an opportunity and assassinate him. On the arrival of *Rákut*, it happened that the Sultan was labouring under an indisposition; but when he was sufficiently recovered, he went one evening after prayers, and sat down at the second gate of the *dálam*, his wife standing behind and holding his head, accompanied only by some female attendants. At that moment, *Rákut* went up to him, and declared his commission; to which the Sultan replied, 'I am aware that my time is come; execute your orders, but do not hurt any one but me.' Upon this, *Rákut* drew his *kris* and stabbed him; after which, retreating a few steps, it occurred to him that the chief might not be actually dead; and returning with an intention of completing his purpose, he missed his aim, and struck the wife. The prince observing this, immediately threw his *kris* at the assassin, which, striking him in the leg, threw him on the ground, where he was soon dispatched by the people, who were assembled by the cries of the women."

The prince and his wife soon after died of their wounds, and left their dominions and property to their brother, the *Súnan Káli Niámat*, with authority to administer the same until their son, *Aria Pangíri*, should come of age. Both the prince and his wife were interred in the burial place of their ancestors at *Demák*; and the provinces of *Prawáta* thus became incorporated with those of *Káli Niámat*.

The *Súnan Káli Niámat* immediately went to *Kúdus*, and demanded that justice and condign punishment should be inflicted on the persons concerned in this murder; and the *Súnan Kúdus*, expressing great indignation at the act, promised compliance; but the *Sunan*, while returning to *Káli Niámat*, was murdered on the road by persons in the pay of the *Adipáti* of *Jípang*. This prince, having thus far succeeded in his designs, then plotted the death of the chief of *Pájang*, hoping by that means to remove the only obstacle to his obtaining the supreme authority in the eastern districts of Java. The assassins, however, whom he employed for this latter purpose were not equally successful. They found the prince at midnight in an inner apartment, sleeping among his wives: but while

approaching him to execute their design, one of them happened to tread upon a woman, whose shriek awoke the prince. He demanded the reason of their visit, and promised them pardon, on their confessing by whom they were employed: they disclosed the whole, and obtained pardon with their dismissal. Thus disappointed in his scheme, the *Súnan Kúdus* invited the chief *Patéh* of *Pájang* to visit *Kúdus*, and assembled as many religious people as possible, in the hope that an opportunity might be afforded of assassinating him when off his guard; but a letter arriving at this period from the Sultan of *Chéribon*, upon whose protection the widow of the *Súnan Káli Niámat* had thrown herself, in which the Sultan declared that he should hold the *Súnan Kúdus* responsible for the discovery of the murderers, the intended assassination was deferred.

The chief of *Pájang* having communicated with his sister, the widow of *Súnan Káli Niámat*, who had made a vow never to rest or to leave her home until the death of her husband, brother, and sister, should be avenged, informed his *Panambáhan*, that if they could find a suitable opportunity to take revenge on *Ráden Penánsang*, they had his full consent. The meeting which took place between the parties is thus described.

"After having laid the troops in ambush, the chiefs of *Pájang* crossed the river, and seizing one of the grass-cutters belonging to *Ráden Penánsang* they cut off a piece of his right ear, and told him to go to his master with a letter, which they hung about his neck, containing a challenge from the prince of *Pájang*; they then returned to their own camp. In the meanwhile the grass-cutter running with a great noise to the quarters of *Ráden Penánsang*, who happened to be at dinner, delivered the message.

"At this summons the *Ráden* came forth in a great rage, and ordering his horse and spear, galloped down to the river side, and called upon the prince to come over to him; but the chief of *Pájang* answered, that if he was the man of courage he pretended to be, he would himself cross to the side he occupied. The *Ráden*, accompanied by two *Panakawans* only, then crossed the river, and inquiring for his opponent, was informed that he remained in his *póndok*, and had sent his son to fight in his room, and would only appear in the event of his being conquered. *Ráden Penánsang* then said with a contemptuous smile, 'Is the *Brébo Patéh* afraid, that he sends me a child with whom he knows I will not fight? I will teach him something. Go, child, and call your father.' He then amused himself galloping about, until one of

the chiefs of *Pájang* let loose a number of mares, on which his horse became unmanageable, and he was thrown, and killed on the spot. *Túmung'gung Matáok*, his principal chief, now crossed the river with all his followers; but they were soon overpowered, and the *Tumúng'gung* being slain, his head was stuck upon a pole by the river side."

From this period the provinces of *Jíjang* became subject to the chief of *Pájang*; and his sister at *Kali Niamat*, being informed of this success by *Panambáhan* expressed her readiness to fulfil a promise which she had made, of conferring upon him all her lands and property, *Panambáhan* declined accepting this offer, alleging that he had only obeyed the orders of his sovereign. He however received from her, on this occasion, two *pusáka* rings, in one of which was set a large diamond, in the other a ruby, which had formerly belonged to the house of *Majapáhit*.

The spoil taken in the war was then divided according to usage, and to *Panambáhan* was assigned a population of eighteen hundred working men in the district of *Mentáuk*, afterwards called *Matárem*. The lands of *Káli Niámat* were left in the possession of his sister, and those of *Demák* restored to his nephew. *Aria Pangiri* received the title of Sultan of *Demák*.

The province of *Mentáuk* or *Matárem*, at that period did not contain more than three hundred villages, scattered in different parts of the country. On the arrival of *Panambáhan* near *Brambánan*, he was received by the *Súnan Adi Jága*, who would not allow him to perform the usual ceremony of kissing his feet, thus by implication predicting the future greatness of his descendants. At *Páser Gédé*, then a wilderness, *Panambáhan* was duly installed, under the title of *Kiái Gédé Matárem*.

When the government of *Kiái Gédé Matárem* was fully established, he was desirous of obtaining his son from the prince *Pájang*, who had retained him as an adopted child, and feared to part with him, in consequence of the prophecy of which he was aware, predicting the future greatness of the descendants of *Jáka Sisíla*; but on the entreaties of the *Súnan Káli Jaga*, he consented to part with him, under a stipulation, upon oath, from *Panambáhan*, that he would not undertake any thing prejudicial to him during his lifetime.

In the year 1490, the chief of *Pájang*, from religious motives, paid a visit to *Súnan Gíri*, accompanied by *Kiái Gédé Matárem*, and a numerous retinue

of chiefs and priests. He was mounted on an elephant, and assumed all the pomp which had been customary with the sultans of *Bintára*. On this occasion he was formally installed as sultan, in the presence of the chiefs of the eastern provinces. The *Súnan Gíri*, at the same time, noticing *Kiái Gédé Matárem*, and being informed of his descent, declared that his family would one day rule all Java, and urged the Sultan of *Pájang* to protect and befriend him. It was during this visit that the Sultan of *Pájang* gave orders for digging the extensive fish-ponds which are now preserved at *Grésik* for the *Ikan Bándang*.

On the return of *Kiái Gédé Matárem* to his capital, he called together his relations, and recommended to their kindness the forty friends who had accompanied him on his first coming to *Matárem*, and their descendants, enjoining them, on no account whatever, to shed their blood, whatever crime they might commit, but if necessary, to punish them in some other way. To this they most solemnly bound themselves; and from this period, strangling is said to have been introduced as a capital punishment among the Javans.

His son, now called *Mas Anghebái Súta Wijáya*, had an amour with the grand-daughter of *Sheik Wáli ben Húsen*, who was intended to become one of the concubines of Sultan *Pájang*. Upon her becoming pregnant, he fled first to *Chéribon*, where he implored protection from the Sultan, but to no purpose, and afterwards towards *Luánu*, where collecting the rabble of the country, he commenced hostilities against the chief. The Sultan of *Pájang*, however, at length offering him a pardon, on condition of his marrying the girl, he returned, and was again received into favour; but not before he had reduced the chief of *Luánu* to submission, and rendered that province tributary to *Matárem*.

The chiefs of *Surabáya*, *Grésik*, *Sidáyu*, *Túban*, *Wirasába*, *Pranarága*, *Kedíri*, *Mádion*, *Blóra*, *Jíjang*, and *Pasurúan*, declared themselves independent of the prince of *Madúra*, and elected *Pánji Wíría Kráma*, the *Adipáti* of *Surabáya*, who acted as *Widána* to Sultan *Pájang*, to be their chief. About the same time, *Sánta Gúná*, the chief of east *Balambánga*, with the assistance of auxiliaries from *Báli* and *Celebes*, again reduced the western districts of that province under his authority, subduing the principality of *Panarúkan* and expelling the prince and his followers.

Kiái Gédé Matárem died in the year 1497, after having, by his mild and equitable administration, converted the province of *Matárem*, from a wilderness into a fertile and populous country, and induced many of the surrounding districts voluntarily to submit to his authority.

The relations of the deceased appearing at the court of the Sultan of *Pájang*, he appointed his son, *Anghebái Súta Wijáya*, to succeed him as chief of *Matárem*, conferring upon him, at the same time, the command of all the troops of the empire, under the title of *Kiái Gédé Agung Senapáti Ingalága*, commonly distinguished by the single title of *Senapáti*, enjoining him annually to present himself at his court on the feast of *Múlut*.

It is noticed, that at this period the island was frequented by Portuguese and other European navigators, who had established factories at Bantam.

The ambition of the court of *Matárem* being kept alive by various predictions, dreams, and enchantments, by which *Senapáti* was promised the assistance of *Kiái Gédé Laut Kidúl* the goddess of the great South Sea, who declared herself wedded to him, he was instigated to build an extensive *kráton* on the spot where his *dálam* then stood.

He now placed guards at the limits of his territories, burnt some of the adjacent villages, and assumed an attitude of complete independence, subjecting by degrees many of the neighbouring districts. Ambassadors were immediately sent from *Pájang* to demand an explanation. They were in the first instance duped by the flattering manner in which they were received; but afterwards discovering the real state of affairs, and reporting it to the Sultan their master, he is represented as having called his son before him, and having said, "the will of Providence rules all events. *Senapáti* will not, during my life, commence hostilities against me, but after my death he will render you subject to him. Yield to his power, on which depends your happiness and that of your descendants." At length, however, the chiefs of *Túban* and *Demák*, apprehensive of the growing power of *Matárem*, prevailed upon him first to banish the *Tumung'gung Pájang*, as the instigator of this feud, and afterwards to send a considerable force against *Matárem*. The *Tumung'gung*, however, was rescued by forty chosen men dispatched by *Senapáti*, and a stratagem induced the forces of *Pájang* to retreat. The *Pájang* forces consisted of five thousand men, commanded by the Sultan's son: those of *Senapáti* did not exceed eight hundred. The latter

seeing that it was rash to risk an engagement against such a superiority of numbers, particularly as the few troops he had raised on the emergency were altogether unexperienced and undisciplined, while those of *Pájang* were in the highest order, halted at a short distance from *Brambánan*, where the enemy's forces were encamped. During the night he burned all the villages in the vicinity, and set fire to the reeds and long grass at some distance from *Brambánan*, and to the rear of the enemy's camp, by which means he persuaded them that the *Matárem* forces had taken their departure, in order to obtain *Pájang* by surprise.

During the succeeding night there was a heavy thunder storm, and on the following morning the mountain *Merbábu* burst with a dreadful explosion, throwing out ashes and large stones; the rivers overflowed their banks and inundated the low country, occasioning great confusion and destruction in the *Pájang* camp, and inducing the commander to retreat with his army forthwith to *Pájang*. Halting at the village *Tumpáit*, situated near *Kárbu Súru*, he visited the tomb of the *Pangéran* of that name, who was descended from *Abdálah*, the eldest son of *Ráden Pátah*. Here the sultan is said to have been informed of a prophecy which foretold the immediate downfall of *Pájang*, and to have fainted and fallen from his elephant in consequence.

Senapáti immediately bent his course to *Pájang*, where the sultan was again willing to receive him as his adopted son, and to pardon his past conduct; but a youth in the retinue of *Senapáti*, after first proposing to assassinate the sultan, a proposition to which *Senapáti* refused to listen, at last of his own accord succeeded in administering poison to him, of which he died. This happened, however, after the return of *Senapáti* to *Matárem*.

Being summoned by *Ráden Benáwa*, son of the deceased, *Senapáti* immediately repaired to *Pájang*, where he found already assembled *Pangéran Kúdu*s and the principal chiefs of the country, who after the funeral proceeded to the election of a new sultan. *Senapáti* was for investing the son of the deceased with the authority enjoyed by his father, but the *Súnan Kúdu*s, who though he had been the cause of his son's death, still breathed vengeance against the *Pájang* family, for the ignominious manner in which the punishment was carried into effect, opposed this nomination, and favouring the pretensions of Sultan *Démak*, that chief was duly proclaimed Sultan of *Pájang*, *Ráden Benáwa* being appointed chief of

Jíbang. From this period the different states which had acknowledged the supremacy of *Pájang* successively broke off from their allegiance.

The new Sultan of *Pájang* commenced his career by removing from office most of the *Pájang* chiefs, and replacing them by his adherents from *Demák*, which occasioned a general discontent. At last *Ráden Benáwa*, who was not inclined quietly to submit to the loss of his kingdom, succeeded in inducing *Senapáti* openly to adopt his cause, and join the forces which he could himself send from *Jíbang* and the discontents of *Pájang*.

Senapáti accordingly marched against *Pájang*, and an engagement taking place, most of the troops deserted the sultan's cause, and the remainder, who continued faithful, were soon put to flight. *Ráden Benáwa*, alarmed at a dream, in which he heard a voice saying, "Every thing in life has a beginning and an end, all worldly greatness is vanity, and no man can call himself happy until his death; do you always bear this in mind:" withdrew, and having followed the course of the *Sólo* river down to *Grésik*, proceeded thence to *Kendál*, where he attracted many followers by his irreproachable conduct. At last he settled on the mountain *Parákan*, where he was buried.

Senapáti, after this success, proceeded to carry the *kráton* by assault, and having entered the front gateway, the wife of the sultan came forth, entreating that her husband's life might be spared; but *Senapáti* reminding her that he was the friend of her father, and had nothing to fear, desired her instantly to produce her husband, which being complied with, he informed the sultan that the people of *Pájang* being displeased with him he could no longer remain sovereign, but that he and his followers might return to *Demák* as soon as they pleased, the sovereignty being now conferred on *Ráden Benáwa*.

Search was made for *Ráden Benáwa* without effect, but that chief was duly proclaimed as sultan, and the brother of *Senapáti* appointed to administer the country until his arrival.

The retreat of *Ráden Benáwa* being at length discovered, and that chief declining to accept the government of *Pájang*, his brother, *Pangéran Gája Búmi*, was appointed sultan in his room. The latter shortly after died, and was succeeded by the son of *Benáwa*, *Ráden Sidawíni*, on whom the title of *Pangéran Pájang* was conferred.

As soon as order was again restored, *Senapáti* returned to *Matárem*, carrying with him the saddle called *gatáya*, the head-dress called *máchang gúguh*, and a set of *gámelan* called *sekar dalíma*, which he had taken at the assault of *Pájang*, as trophies of his victory, together with the cannon called *niái stómi*, and all the insignia and ornaments of royalty, which had descended for the most part from the princes of *Pajajáran* and *Majapáhit*, and which are still preserved in the regalia of the princes of Java.

Senapáti, in consequence of these arrangements and the possession of the regalia, transferred the seat of empire to *Matárem*, and lost no time in raising his family to the highest dignities. Assuming himself the title of sultan, he elevated his nephews to the rank of *Pangérans*.

His ambitious views being now so far realized, he consulted the *Súnan Gíri*, wishing to obtain his opinion, whether the time for the complete fulfilment of the prophecy was not arrived. The *Súnan* replied, that if the Sultan of *Matárem* wished to be sovereign of the whole island of Java, it was essential that he should, in the first instance, bring the eastern provinces under subjection. In consequence of this reply, the sultan immediately collected his troops, trained them to the use of arms and regular discipline, and in the month of *mohárem* marched eastward.

The *Adipáti of Surabáya*, who had held the supreme authority over all the eastern districts, as *Widána* to the sultan of *Pájang*, no sooner heard of these preparations, than he directed all the subordinate chiefs with their forces to assemble at *Jípang*, there to await the arrival of the army from *Matárem*; but at the moment when a general engagement was about to take place between the two armies, an open letter was delivered to both chiefs from the *Súnan Gíri*, requesting them to desist, and proposing an arrangement, by which the eastern provinces were to become subject to *Matárem*, but to continue under the immediate administration of the *Adipáti*. This arrangement was agreed to by both parties, but the *Adipati* soon repented of it, who in consequence was preparing for hostilities, when an open rapture was again averted by the interference of the *Súnan Gíri*; but soon after being joined by the forces of *Pranarága* and *Madion*, the *Adipáti* assembled his troops and marched to invade *Matárem*.

Senapáti no sooner heard of these hostile preparations, and that the *Adipáti* was levying the revenue of *Pájang*, than accompanied by his uncle, *Kiái*

Gédé Páti, he marched towards *Madion*, and obtained possession of the *dálam*, the chief having previously fled with his son to *Surabáya*, leaving behind him a daughter whom *Senapáti* married. His uncle, displeased at his conduct, returned to *Páti*; but *Senapáti* prosecuted his march towards *Pasúruan*, with an intention to render himself master of that province.

The chief of *Pasúruan* was inclined to surrender at discretion, but was dissuaded from doing so by his *Páteh*. One day when *Senapáti* accompanied by only forty men of his body-guard, was reconnoitering the enemy's camp, he met the *Páteh*, who had come out with a similar intention, when a skirmish taking place, the *Páteh* was wounded by a lance and fell to the ground. The sultan lifting him up and placing him on a mare, sent him back to the chief, with a letter tied round his neck. The chief no sooner saw him in this disgraceful predicament, than he repented of having taken his advice, and ordering his head to be immediately severed from his body, sent it to *Senapáti* in token of submission.

After this *Senapáti* returned to *Matárem*, where he married one of his daughters to the son of the late chief of *Madion*, and appointed him chief of *Jipang*.

Súra Manggála, a chief of *Kedíri*, was now willing to submit to the authority of *Matárem*, but *Senapáti* returned no other answer to his messenger, than that it was his intention to march at the next *mohárem*, when it would be the duty of *Súra Manggála* to surrender that province. Accordingly, in the month of *mohárem*, an army proceeded against *Kedíri*: the *Matárem* forces were successful, and the chief and his three brothers submitted. *Senapáti* was so pleased with the conduct of *Súra Mang'gála* on this occasion, that he appointed him to the command of the *Matárem* troops.

This chief, better known by the name of *Senapáti Bálek*, served the sultan of *Matárem* with great ability and fidelity. He gained numerous victories, brought all the western provinces, as far as *Chéribon*, to acknowledge the supremacy of *Matárem*, limiting the authority of that chief within the rivers of *Losári* and *Indramáyu*. He is said to have removed the mud wall which surrounded the *kráton* of *Matárem*, and built in its stead a strong wall of stone. He was at last killed in a desperate engagement with the eastern people, which took place in *Pájang*, in which however the *Matárem* troops were successful.

Shortly after the death of this chief, *Senapáti* received intelligence of hostile preparations against *Matárem* being made by his uncle, *Kiái Gédé Páti*. He accordingly proceeded to meet him, accompanied by all his sons and a numerous army. After a long and a desperate action, the *Matárem* forces were again successful, and the sultan returned to *Matárem*, with the wives, children, and all the valuables of his uncle.

His son, *Pangéran Séda Krápiak*, being wounded on this occasion, the sultan published a proclamation, declaring that prince to be his successor after his death, by the title of *Panambahan Senapáti*.

The continued opposition of the eastern people, however, and the revolt of *Kedíri* and *Pasúruan*, obliged him again to take the field, when finding the numbers and strength of the enemy far superior to his own, he conducted an able but slow retreat to his capital, and during the whole course of his reign found it impracticable to subject these provinces to his authority. To the provinces, however, of *Matárem*, *Bágelen*, *Bányumas*, *Pájang* and *Jíbang*, which descended to him from his father, he added those of *Páti*, *Kúduś*, *Semárang*, *Kendál*, and *Kaliwúng'u*.

The days of *Sénapati*, the founder of the *Matárem* empire, and of the dynasty which still retains a nominal rule on Java, were now brought to a close, after a reign of continued warfare. As the founder of the last native empire on Java, his memory is naturally held in high estimation; but he is also respected for the discipline he introduced into his army, and the valour, ability, and noble-mindedness which he displayed throughout. With the Javans he is considered as another Alexander, and he is the first in their modern history who is considered to have understood the art of war.

He was succeeded, in the year 1524, by his son, since called *Séda Krápiak*, from the place of his interment, but who during his reign, bore the title of *Panambáhan Senapáti*. The succession was, however, opposed by his elder brother, *Pangéran Púger*, who did not attend to kiss the sovereign's feet, as customary, on the day following his installation. This chief proceeding to hostilities, was soon taken prisoner near *Ungárang*. He was banished to *Kúduś*, and his minister was put to death, which offended one of his younger brothers, *Jajarága*, so much, that he instantly quitted *Matárem* and proceeded to *Pranarága*, of which province he had formerly been appointed chief, with an intention of stirring up a rebellion in the distant provinces;

but the sultan obtaining information of it, secured his person and banished him also. He was shortly afterwards pardoned and permitted to return.

It was during this reign that the Dutch and English first visited Java.

This prince reduced the provinces of *Madion* and *Pranarága*, and built a palace, the walls of which are still standing at *Krapiak*, a place at the foot of a range of hills lying along the South Sea, a short distance from *Matárem*. He died after a reign of twelve years, esteemed on account of the general tranquillity which prevailed after the firm establishment of his government.

He was succeeded by his eldest son, named *Panambáhan Merta Púra*, in the year 1540; but this prince not being able to conduct the government, on account of his infirm state of health, or more probably removed by the intrigues of his family, who declared him to be insane, made way for his younger brother, who was raised to the throne in the following year.

This prince, distinguished by the title of *Agung*, or the great, commenced a flourishing reign by a signal victory over the *Surabáyan* and *Madurese* forces, by which he brought the eastern provinces of *Málang*, *Untung*, *Jápan*, *Wirasába*, *Pasúruan* and *Surabáya*, under subjection; and following up his success, subdued all the eastern provinces, as far as *Balambárgan*. Dissensions arising at this period between the people of Bantam and those of the *Súnda* districts, the chief of *Súmedang* applied to *Matárem* for assistance; and being invested by the sultan with the chief authority over those districts, soon brought the whole of the western chiefs, alarmed at the approach of *Matárem* arms, to acknowledge his supremacy. A force was now sent to *Madúra*, and that island being conquered was united to his dominion, which then extended through all Java and *Madúra*. An enemy, more powerful than any with whom he had been accustomed to contend, and destined to strip his posterity of all but the semblance of sovereignty, now appeared. The Dutch, availing themselves of the divisions and convulsions by which the empire had been previously distracted, had established themselves at *Jákatra*.

On their first arrival at Bantam, the prince of that country was absent on an expedition against *Palémbang*, which country, as well as a great part of the north and west coast of Sumatra, was then subject to his sway. They found the influence of the Portuguese, who had previously established a factory there, on the decline, and with little difficulty entered into a treaty with the

chief, on whom the administration of the country was provisionally conferred during the absence of the prince. By this treaty, the contracting parties agreed to trade honestly and fairly with each other, and to afford mutual assistance in case of being attacked by an enemy.

Complaints, however, were soon made of the high tone which the Dutch assumed, and of the insolence of their menaces. Hostilities ensued, and according to the Dutch account, upwards of a hundred of the natives were killed or wounded. The consequence was, that they were obliged to quit Bantam. Touching at *Jákatra*, *Japára*, *Túban*, and *Sidáyu*, they had an affair with the Madurese, but ill calculated to make an impression in their favour. The prince of that country, anxious to pay his respects to the Europeans, requested, through his interpreter, to be permitted to visit the principal person among them, and an arrangement was accordingly made that he should be received on board a particular ship. As the prince left the shore with his suite, accompanied by their women and children, the Hollanders became alarmed at the appearance of so numerous an assemblage, and observing that they did not appear to be proceeding direct to the ship pointed out for their reception, discharged three guns. The terror occasioned by the report threw the procession into the utmost confusion, all the people in the boats falling as if killed. The crews of the other European vessels taking these guns as a signal for action, threw themselves with such impetuosity upon the native boats, that out of this numerous assemblage only twenty-one are said to have escaped. Among the slain was the prince, and his interpreter or high priest, and their bodies, as soon as discovered, were thrown with indignity into the sea.

It is remarkable, that the leading traits which distinguish the subsequent administration of the Dutch on Java (a haughty assumption of superiority, for the purpose of overawing the credulous simplicity of the natives, and a most extraordinary timidity, which led them to suspect treachery and danger, in quarters where they were least to be apprehended) were manifested in their earliest transactions in this quarter. On their first arrival at Bantam, we find the clerks of their trading vessels styling themselves captains; and such was the state and consequence assumed by Houtman, the chief of the expedition, who took the title of Captain Major, that a Portuguese, who had known him before, asked him significantly if he had been created *a duke* since he last saw him. The murder of the unfortunate

prince of *Madúra* and his followers (for it can be called by no other term) was as detestable and unjustifiable as the subsequent massacre of the unfortunate and unoffending Chinese in the streets of Batavia. In neither case was there a plea to palliate the crying guilt, but such a degree of danger, as the basest cowardice could alone be sensible of.

This aggression did not pass unpunished, for the Dutch Admiral having allowed some of his men to land near *Arosbáya*, then the capital of the island, they were seized by the Madurese, and their enlargement was not effected without the loss of many lives and the payment of a liberal ransom.

Bantam was already a place of considerable trade: Chinese, Arabs, Persians, Moors, Turks, Malabars, Peguans, and in a word, merchants from all nations were established there. The principal produce for the European market was pepper. With this province the Dutch renewed their commerce in the year 1598 A.D., and four years afterwards they obtained permission to establish a factory there. In the following year, accordingly, they erected a permanent building, and formed a commercial establishment. At this time they had granted passes to the vessels belonging to the chief of *Túban*; and, in 1609, they left an agent at *Grésik*. A second treaty was now entered into with the king of Bantam, in which the States General stipulated to assist him against foreign invaders, particularly Spaniards and Portuguese; and the king on his side agreed to make over to the Dutch a good and strong fort, a free trade, and security for their persons and property, *without paying any duties or taxes*, and to allow no other European nation to trade or reside in his territories. The Dutch observing the serious differences which occurred among the chiefs of Bantam during the minority of the sovereign, made overtures, in the same year, to the prince of *Jákatra*, and removed to that province soon after.

In 1612, a convention was entered into between them and the prince of *Jákatra*, by which a free trade was allowed to them, together with an eligible place to reside at; both parties contracting to assist each other in war on the territory of *Jákatra*. It was moreover stipulated, that all goods should pay duty, except such as were imported in Dutch ships, or Chinese junks; and that the prince should prohibit the Spaniards and Portuguese from trading with his dominions.

On the 19th January, 1619, a further treaty was made with the same prince, confirming the former contracts, and stipulating that the fort should remain in its present state until the arrival of the Governor General, and that the English should be obliged to build their factory, and the other nations their houses, at a certain distance from the fort; but on the 1st of February following, in consequence of the success of the English, who had espoused the cause of the native chiefs, we find a convention entered into by the prince of *Jákatra*, the commanding officer of the English, and the commandant of the Dutch fort, by which the latter promised to deliver over the fort to the English, and the treasure, merchandize, &c. to the prince: the English agreeing to furnish the Dutch garrison with a ship and a safe conduct for six months.

On the 11th March, a contract was entered into between the king of Bantam and the commissioners of the Dutch Company, still in the fort of *Jákatra*, whereby the former promised to protect the Dutch against all hostile attempts, and to permit the re-establishment of a free trade on its former footing. The Dutch, on their part, agreed to keep the fort in good order, and to abandon the same on the arrival of their ships, when they would also deliver to the king (in return for the protection he afforded them) one-fourth of the Company's property, and one-half of the ordnance, &c.

In consequence, however, of the arrival of reinforcements from Europe, under Koen, and of the political understanding which then existed between the English and Dutch nations, the Dutch still maintained their ground, and in the month of August following laid the foundation of their establishment at *Jákatra* on an extensive scale. They had previously, in the years 1618 and 1619, plundered and laid in ashes the town of *Japára*, because the chief of that province had, in the former year, taken possession of the factory, made prisoners of the Dutch, and sent them into the interior.

The Javan historians considering the Dutch in the light of other foreign nations, who were in the habit of trading to the sea coasts, do not furnish us with any information concerning the disputes which took place at Bantam, or in the first instance at *Jákatra*. Even in their accounts of the occasion of the first hostilities which took place with the sultan of *Matárem*, they convey rather a notion of what is the general impression regarding the first establishment of the Dutch, than any particulars calculated to throw light on the history of that period. "The Dutch," say they, "before they arrived at

Jákatra, had formed an alliance with the sultan of Bantam. They subsequently treated with the English, and with *Pangéran Jokárta*; but in a short time they found the way to play off a foul stratagem on the latter. In the first place, when they wished to ascertain the strength and resources of *Jákatra*, they landed like *máta-mátas* (peons or messengers), the captain of the ship disguising himself with a turban, and accompanying several *Khójas* (a term by which the natives of the Coromandel coast are distinguished). When he had made his observations, he entered upon trade, offering however much better terms than were just, and making more presents than were necessary. A friendship thus took place between him and the prince: when this friendship was established, the captain informed the prince that his ship wanted repair; and the prince, at his request, allowed the vessel to be brought up the river. There the captain knocked out the planks of the bottom and sunk the vessel, to obtain a pretence for farther delay, and then requested a very small piece of ground, on which he might build a shed, to store the sails and other property, while endeavours should be made to raise the vessel. This request was also complied with. The captain then made a wall or mound of mud, so that nobody could know what he was doing, and in the mean time courted the friendship of the prince. He afterwards waited on the prince, and requested as much more land as could be covered by a buffalo's hide, on which he might build a small *póndok*. This being complied with, he cut the hide into strips, and claimed all the land he could enclose with them. To this also the prince, after some hesitation, consented. The captain then went on with his buildings, engaging that he would pay all expenses. When the fort was finished, the mud wall was removed; batteries were unexpectedly displayed, and under their protection the Dutch refused to pay a *doit*. War then commenced, in which the Dutch were reduced to such an extremity, as to be obliged to use stones in lieu of balls, which were expended. Even this resource failed; and, as a last expedient, bags of the filthiest ordure were fired upon the Javans, whence the fort has ever since borne the name of *Kóta tái*."

Such is the aversion of the Javans for the *Khójas*, as well on account of their general character as of their conduct on this occasion, that it is a proverb among them, "If you meet a snake and a *Khoja* in the same road, kill the *Khoja* first, and afterwards the snake."

Another account is as follows. "The Dutch having obtained the desired spot built on it a storehouse, and formed a garden for vegetables. When *Pangéran Jokárta* inquired why they did this, they replied, they must have their conveniences, and that it was not the custom of the Dutch to live and eat like the Javans. The *Pangéran* was satisfied with the reason given, and allowed the work to proceed; but they had no sooner completed several buildings, by means of the people landed from their ships, than they began to surround them with a battery. The *Pangéran* again was roused, and inquired the reason of this, to which they replied, that there were a great many traders about to arrive, and that it was necessary to protect their property from thieves. When the batteries were completed they planted cannon in them: the *Pangéran* inquired the reason of this preparation, to which they only replied, it was to keep off bad people.

"In a short time, however, when the Dutch had increased in numbers, they fired one of the guns, and the ball discharged from it fell in front of the *Pangéran's* palace. The *Pangéran* inquired why they did so, to which they replied, they were only trying how far the gun would carry, in order that they might be able to assist the *Pangéran*, should he be attacked by an enemy. The *Pangéran*, however, was not satisfied with this reason, and demanded a fine of two thousand dollars for the insult, which the Dutch immediately paid. But it was not long before they fired another gun, the ball of which went over the palace, on which the *Pangéran* became highly incensed, and demanded a fine of four thousand dollars, threatening if it was not paid forthwith, to write to the sultan of *Matárem*, who would order them immediately to be driven from the island. To this menace the Dutch said nothing, but paid the money, which the *Pangéran* received with delight. The Dutch, at last, fired a gun, the ball of which fell within the palace, on which the *Pangéran* conceiving it to be their intention to attack him, immediately considered them as enemies, and collected his people, in order to fall upon them and destroy them without delay. As soon as the Dutch saw the people thus assembled, they fired from their batteries, dealing slaughter all around, and obliged the *Pangéran* and his people to retreat out of the reach of the shot."

While these events were in progress in the western provinces, a serious revolt took place in the central and eastern districts, in consequence of the intrigues of *Aria Mandúra*, the favourite and chief minister of the sultan,

who by means of his treacherous conduct to the chief of *Pájang*, had obtained the administration of that province for himself. The chiefs of *Madúra* and *Surabáya* availing themselves of the disturbance thus occasioned at *Pájang*, declared their independence of *Matárem*, and were not reduced to subjection till two armies had been sent to the eastward against them.

Not long afterwards, the chief of *Surabáya*, *Tumúnggung Sapánjang*, having refused to give up two beautiful horses which the sultan demanded of him, an army was sent to compel his obedience; but the chief being reinforced from *Madúra*, repulsed the *Matárem* forces, obliging them to return to their capital.

The sultan, who had hitherto shown himself anxious to maintain a good understanding with the Dutch, and consented to their enjoying a free trade to the different parts of Java, with permission to establish a factory at *Japára*, is represented as having acted upon their advice in the present juncture, in marching to the eastward in person with his whole forces; but they no sooner saw him undertake the expedition, than availing themselves of the opportunity, they took possession of *Jákatra*.

He immediately sent two armies against them, under the command of *Tumúnggung Wíra Kusúma*, and a battle ensued, in which the Javan chief, with about ten thousand of his followers, were either slain or drowned in the river *Chilúang*. *Tumúnggung Náta Jawána* coming up afterwards, collected the fugitives, and joining them with his forces surrounded the town. He posted troops on all the roads towards the south and west, at the distance of cannon-shot from the town, at the same time cutting channels to lead off the streams by which the Dutch were supplied. After an unsuccessful attack made by the chiefs *Mandúra Réja* and *Wíla Tíkta*, for which they were put to death by their commander, a sally was made on the part of the besieged with so much success, that *Tumúnggung Jawána* determined to break up with his army, and no further attempt against the Dutch was made until the year 1629, A.D.

"In this year a second army from *Matárem*, composed of Javans and Madurese, appeared before Batavia. The siege lasted for a considerable time, and the assaults on the town and fort, as well as the sallies of the besieged, were very bloody. Anxious to know the fate of his army, the

sultan dispatched his uncle, *Pangéran Purbáya*, to Batavia, to obtain information. This chief having destroyed the Dutch factory at *Japára*, embarked in a swift sailing *práhu* of the size of the trunk of the largest teak tree, which when seen at a distance looked like a serpent on the sea. On reaching the bay of Batavia, *Purbáya* perceived three ships at anchor. Two of them, after firing upon him, were sunk, and notwithstanding the fire from the third he brought his *práhu* safe up to *Jákatra*, when he was fired upon from the fort. On this *Purbáya* with three followers landed from the *práhu*, and passing like a shadow to the Dutch fort, which he touched with his hands, proceeded on to the Javan lines, where he informed them that he had come by order of the sultan, to give them a proof how near they might approach the Dutch fort. He then hastened back to *Matárem* and reported the disastrous state of the war, on which the sultan withdrew his forces to *Kaliwúngu*."

The Dutch sent an ambassador with rich presents, and the war ended in the Javan year 1551.

During the latter part of this prince's reign the country appears to have enjoyed tranquillity, the only two occasions in which it was disturbed being the revolt of the chiefs of *Balambárgan* and *Súmedang*, which may be considered as the extreme points of the *Matárem* dominion, *Jákatra* and *Bántam* having been effectually separated from them.

Sultan *Agung* is represented, even by the Dutch, as a well informed and enlightened prince. He extended his dominion not only over all Java and *Madúra*, but carried his conquests to *Lándak* and other states on Borneo. He died in the Javan year 1568, and was succeeded by his son, *Pangéran Aria Prábu*, or *Aria Matárem*, then twenty-six years of age.

This prince, on account of his mother being a princess of *Chéribon*, succeeded, to the prejudice of his elder brother: he held his court at *Pléret*, and is represented as the most severe and tyrannical of Javan sovereigns. During a visit made by the chief of *Chéribon* to *Matárem*, he received the distinction of *Abdul Ráchman Sakiden*, in addition to the title of *Susúnan Amangkúrat Senapáti Ingalága*, which he had assumed on his accession. On this occasion it is stated, that he again conferred on the sultan of *Chéribon* all the eastern districts of the island to the westward of *Túgu*, the supposed limit of the *Majapáhit* empire, that is to say the districts of

Brébes, *Tegál*, *Pamálang*, *Ulujámi*, *Wiradésa*, *Pakalóng'an*, *Bátang*, *Kendál*, and *Kaliwúngu*. The Dutch had already firmly established their capital at Batavia, and secured an influence in many of the former dependencies of Java, particularly at *Sukadána* on Borneo and *Palembang* on Sumatra.

During the troubled reign of this prince, the Dutch appear first to have entered into a written agreement with the acknowledged sovereigns of Java. A treaty was ratified at Batavia in the second year after his accession, on the 24th September 1646, the conditions of which were that the *Susuhúnan* should be informed annually, by an ambassador, of the nature of the curiosities which had arrived from Europe; that all priests, or other persons, whom he might be desirous of sending to foreign countries, should be conveyed thither in the Company's ships; that all persons who should desert to either country, for the purpose of evading their debts, should be given up; that the Company and the *Susuhúnan* should assist each other against their common enemies; that the vessels of the *Susuhúnan*'s subjects should be allowed to trade to all places under the Company's authority, except *Ambon*, *Banda*, and *Ternáté*, and that those bound to *Malácça*, or places situated to the northward of that settlement, should be obliged to touch at Batavia and to apply for passes.

A treaty was also entered into on the 10th July 1659, between the Dutch and the sultan of Bantam, through the mediation of the ambassadors of the *Pangéran* of *Jámbi*, in which it was stipulated, that all prisoners of war and deserters should be mutually restored, with the exception, on the part of the sultan, of those who had embraced the Mahomedan faith more than three months previous to that date, those who had submitted to circumcision since that date to be sent back, or if slaves and unwilling to return, the sultan to pay the value of them to their masters: that the Dutch should, as heretofore, have a permanent residence at Bantam, for which purpose the same building was to be given which they had occupied before the war, free of rent, and this building to be secured, at the sultan's expense, against any hostile attempts: that the river of *Untung Jáwa* should form the boundary of the Bantam territory.

Certain provisions were made also to prevent illicit trading.

Shortly after his accession, the chief of *Balambárgan*, aided by forces from *Báli*, again revolted, and an army was sent against him. The troops, however, were no sooner set in motion, than a plot was concerted against the prince's life, with the knowledge of his younger brother, *Alit*; but intelligence of it being communicated to the prince, *Aria Salíngsing*, who had been the instigator of the plot, was with his son beheaded, on the spot where a new *kráton* was erecting. On the intercession of *Pangéran Purbáya*, the prince was disposed to be lenient to his brother, as well on account of his age as a strong affection which he bore towards him. Ascending the royal eminence, the prince ordered the heads of the parties to be brought, and summoning his brother *Alit* into his presence, placed the heads before him, saying, "behold the reward of those who have attempted to overthrow my authority. Bring before me without delay all your followers." The *Pangéran* immediately retired, and not knowing what was to be the result, immediately assembled all his adherents and attendants, and informed them of what had passed, when they unanimously agreed to *amók* the *Susúnan*'s party, urging that, as soon as the *Matárem* people saw them commence to *amók*, they would join them. The *Pangéran*, who was quite a youth, gave into the plan, and they forthwith proceeded to the *alun alun*, where they were not joined by a single man of the *Matárem* people. They however commenced *amók*, and the people fled in every direction, until *Pangéran Chákra Níngnat* of *Madúra* approached *Alit*, kissed his feet, telling him it was the order of the prince, who was aware of this proceeding, that his person should be seized, but on no account wounded or hurt, and implored him to surrender; but *Alit*, disregarding his proposal, drew his *kris* and stabbed the *Pangéran*, who died on the spot. The *Madurese*, who witnessed this scene, immediately fell upon *Alit*, who was soon dispatched. The *Susúnan* was deeply affected at the loss of his brother, and in the violence of his agitation, on receiving the account of what had passed, wounded himself in the left arm; and from this period, the Javan historians state, "that he never forgave an offence however trifling. When he was unhappy, he always put to death those who were the cause of his unhappiness, and on the slightest occasions was subject to the most violent gusts of anger."

It is related that the prince evinced great sorrow for the loss of his brother, and that when the time of mourning had expired, he wreaked his vengeance on the supposed authors of this calamity, by a massacre unparalleled in the

annals of the country. A rigorous investigation was instituted to ascertain the abettors and accomplices in this attack against the prince's life, and for this purpose a commission was appointed under the direction of his favourites. The chiefs of the four quarters of the capital were directed to inscribe the names of all the priests within their respective divisions, under pretext that the prince intended to confer certain marks of distinction upon those who resided at *Matárem*, but in fact to prevent their escape; for no sooner were the registers made than a cannon was fired from the palace, as a signal to commence the slaughter, and within less than half an hour all the priests, whether guilty or innocent, with their wives and children, amounting to upwards of six thousand souls, were inhumanly and indiscriminately butchered.

On the following morning when the *Susúnan* appeared in public, he seemed much agitated, and remained without saluting his courtiers or uttering a word for the space of an hour. He then addressed himself to his uncle *Purbáya*, saying that the priests, who ought to have set an example to others, had conspired against his life; and to cover the atrocity of the massacre, he brought forward three or four priests, who had been purposely saved from the general slaughter, and from whom it was easy to obtain whatever evidence best suited his purpose.

In the war against *Balambárgan*, although the *Matárem* forces were successful in obtaining possession of the capital, the chief and his principal adherents fled to *Báli*. *Wíra Gúna* was anxious to follow them; but a serious illness breaking out among the troops, he was obliged to withdraw them, and retreat with the few who had survived, in number not exceeding a thousand. On reaching *Kedíri*, intelligence was sent to *Matárem* of the failure of the expedition, when the *Susúnan* immediately ordered the chief, *Wíra Gúna*, with all his family, to be put to death, under the pretext of punishing his want of success, but in reality to satisfy a revenge, which he had long been anxious to gratify against this chief, on account of his having, during the lifetime of his father, preferred a complaint against him for carrying off one of his concubines.

It is said that the father of his first *rátu* (queen) having a pet fowl, which had been produced from a jungle hen and a domestic cock, brought it as a curiosity into the *kráton* and gave it to the *Susúnan*. The *Susúnan* conceiving it to be an omen, that as soon as the *Pangéran Adipáti* became

of age he would quickly obtain the throne, assembled his *pengáwa* and informed them of his apprehensions. The *Pangéran* on hearing of it, immediately called all his family together, to the number of sixty persons, who, on the first day that the *Susúnan* appeared in public, sat themselves down in tears under the *waríngen* tree. The *Susúnan* inquiring their object, they called God and the Prophet to witness, that they were innocent of the bare thought of any thing which should alarm the mind of the *Susúnan*, and intreated that, if he anticipated sorrow or misfortune from them, he would put them to death immediately, and avert the apprehended calamity. The *Susúnan* desired them not to listen to people who told them such stories, and retired. Some time afterwards, the *Pangéran Adipáti* fell desperately in love with a young woman, who from her infancy had been brought up under an aged *mántri* for the royal embrace. Becoming dangerously ill on her account, he at length communicated the cause to his grandfather, *Pangéran Pákik*, who prevailed on the *mántri* to part with her for two thousand rings, one thousand dollars, and a *káti* of gold. The young pair were immediately married. As soon, however, as the *Susúnan* became apprized of the transaction, he caused his son, the *Pangéran Adipáti*, to appear before him with his young bride, and then directed him, in his presence, to stab her to death. He afterwards banished his son, and sentenced the *Pangéran Pákik*, with all his family, to capital punishment; and this aged chief, with his wife, *Rátu Pándan*, and his relations, to the number of forty, were accordingly put to death on the *alun alun*.

It is even related, among the atrocities committed by this prince, that he violated his own daughter, *Rátu Bráwa*, who was affianced to the son of *Panambáhan Gíri Láya* of *Chéríbon*, and that on the death of one of his wives, *Rátu Pamálang*, he confined sixty of her attendants in a dark room, and deprived them of food until they all died.

The injustice and severity of the *Susúnan* became still greater as he advanced in years. His fits of anger became more frequent, and the day and night were employed in barbarous executions. Life enjoyed no security: every one was upon his guard, and fears and apprehensions wrought among people of the highest and the lowest rank. At length the attention of the chiefs having been directed to the *Pangéran Adipáti*, who had evinced a kind disposition in the presents he was continually making to the poor, they implored him to assume the government; and the young prince, entering

into their views, formed an agreement with the celebrated chief, *Trúna Jáya*, who was the nephew of the *Bopáti* of *Madúra*, *Chákra Níngnat*. It was by these means arranged, that while *Chákra Níngnat* was at *Matárem*, *Trúna Jáya* should forthwith proceed to *Madúra*, and there heading the Madurese and the people of the eastern provinces, first rear the standard of rebellion, while the young prince himself, to preserve appearances, should remain at the court of his father, in seeming ignorance of what was going on. No sooner had *Trúna Jáya*, in prosecution of this plan, declared the independence of *Madúra*, than there arrived at *Pasúruan* a considerable force from *Makásar*, headed by *Dáin Galéngsong* and *Dáin Manápok*. An army sent against them from *Matárem* was repulsed, and the provinces of *Pásúruan*, *Probolíngo*, *Wirasába*, and *Jápan*, submitted to their arms.

The first establishment of the Makásars in Java, appears to have taken place A.D. 1675, when a chief from *Celebes*, named *Kráin Monte-maráni*, with numerous followers, left his country in discontent and settled in Java, to the eastward of *Surabáya*, near *Besúki*, where he collected all the vagabonds of the country, and committed great depredations by sea and land.

In this dilemma, and finding himself unequal either to dislodge the Makásar establishment or to reduce the Madurese to submission, the *Susúnan* dispatched his son, *Pangérán Púgar*, to the Dutch, A.D. 1676, with various presents, soliciting their aid.

A second army was immediately assembled, and directed to proceed by the route of *Japára*, where, according to the Javan accounts, the chiefs had instructions to ask the assistance of all the white people who had factories there, Dutch, French, and Portuguese, and in case of refusal, to drive them from the country. On this occasion the Dutch commandant at *Japára* is represented as having said, "that this application on the part of the *Susúnan*, was what the Dutch had been long anxious for, and that he was ready to obey his orders and sacrifice his life in his service."

This army was not more successful than the former in reducing the revolted provinces to submission; but by the aid of the Dutch, who had embarked a considerable force from *Japára*, the Makásar chief was driven from his post: all the wounded were brought to *Japára*. They also saved the body of their chief, *Pra Wira Trúna*, who was killed on the occasion, and sent it to *Matárem*.

It appears that the assistance sent by the Dutch on this occasion, consisted of four ships and several smaller vessels with troops, which were reinforced at *Japára* by the *Susúnan*'s troops and vessels. "Having arrived to the northward of *Madúra*, they landed the troops, during the night, in the forest, and in the morning sent a present to the Makásar chief, requesting his permission to take in fresh water, of which they stood in need, alleging it to be their intention to depart immediately. This request being granted, the guns were landed, and batteries thrown up behind the water-casks. An attack was then made upon the enemy's works, and in a few days the whole were demolished, the chief, *Krain Monte-maráni* killed, and numerous prisoners taken."

On this intelligence reaching *Matárem*, the *Susúnan* assembled all his family and chiefs, and directed another attack to be made upon the hostile forces. A third army was soon assembled at *Japára*, where the Dutch were ready to join them: in the mean time, however, *Trúna Jáya* formed an alliance with the Makásars.

The *Pangéran Adipáti*, who was appointed to a command in this army, had charge of the rear division, which he had so arranged as to be able to act as emergency might require: but he was soon released from his doubts, for *Trúna Jáya* forgetting the agreement which he had entered into with this prince, no sooner saw himself thus successful in the eastern provinces, than he assumed the sovereignty himself, and caused himself to be installed, under the title of *Prábu Máduréta Senapáti Ingalága*, and confirmed his alliance with the Makásars by giving his daughter in marriage to their chief, *Dáin Galéngsong*.

The conditions of this alliance are said to have been, that *Trúna Jáya* should be placed on the throne of *Matárem*, *Dain Galéngsong* appointed chief of *Surabáya* and *Pasúruan*, *Dain Manápok*, chief of the eastern and western districts of *Balambárgan*, and *Sheik Kajúran*, a crafty Arab chief of *Madúra*.

After a desperate engagement, the forces of *Trúna Jáya* were again successful. As a last effort, therefore, the venerable *Pangéran Purbáyá*, uncle of the *Susúnan* and nearly eighty years of age, summoned all the chiefs to follow him, and going himself into the field of battle, performed extraordinary feats of valour, till his horse having been shot under him, and

having himself for some time fought on foot, he was overpowered, and his scattered forces compelled to retreat towards *Matárem*.

Trúna Jáya being now in full possession of *Surabáya* and the eastern districts, pursued his success as far as *Japára*. Here, however, he was effectually resisted by the chief, *Angébái Wángsa-dípa* and the Dutch, and obliged to retreat.

As another division of his army, under *Ráden Dánang Wichána*, rapidly approached *Matárem*, the *Susúnan* again applied to the Dutch, who sent one of the members of government, Admiral Speelman, to assist him with a considerable force by land and sea. The admiral left Batavia in December, 1676, A.D., and shortly appeared before *Chéribon*, reducing to submission the coast districts from thence to *Japára*. The fruit of this success, on the part of the Dutch, was the contract of February 1677, of which the chief stipulations were:—that the *Susúnan* and Dutch should assist each other against their common enemies, on condition that the expenses of the war should be repaid by the party assisted: that the Dutch jurisdiction at Batavia should extend to the *Kráwang* river, and the Javans living to the westward of a line drawn from that river to the southern shore, should be considered on the Dutch territory: that the Dutch should be allowed to export and import all species of goods and merchandize duty free, and to establish a factory on any spot which they might deem convenient: that Makásars, Maláyus, and Moormen, who had not Dutch passes, should not be permitted to trade or settle in the states of the *Susúnan*: that the *Susúnan* should engage to reimburse the Dutch for the expense incurred in assisting him against the Makásars and Madurese, amounting to two hundred and fifty thousand dollars, and three thousand lasts of rice, deliverable at Batavia: that in the event of a peace being concluded between his highness and his enemies, through the mediation of the Dutch, his highness should abide by their decision; but, that if no accommodation was effected by the 30th July following, he should pay to the Dutch monthly the sum of twenty thousand reals, for the expenses of the war: that the Dutch should station an adequate force on *Japára* hill, in order to preserve that place for the *Susúnan*, which force was also to be maintained at the expense of his highness.

Admiral Speelman was invested by the *Susúnan* with full powers to act against the Madurese and Makásars, and to conclude such treaties with them as he should deem proper, without any restriction whatsoever, and all

the *Susúnan*'s subjects were commanded to join the standard of the admiral wherever he might arrive.

In May following the allied forces of the Dutch and the *Susúnan* gained a victory over *Trúna Jáya*, who was obliged to fly to *Kedíri*, leaving behind him upwards of a hundred pieces of cannon.

At length, the enemy being still in possession of all the central provinces, and the trifling force which it was in the power of the *Susúnan* to raise being defeated in every skirmish, fear and dismay struck the remnant of the *Matárem* forces; and the invading army having subdued *Pájang*, were entering *Matárem*, when the *Susúnan*, seeing no hope for safety except in flight, assembled his family in the dead of the night, and collecting the regalia, quitted his capital with his four sons, and mounted on an elephant, took a westerly direction. This was in the Javan year 1600.

On the next day June 1677 the hostile troops entered *Matárem*, when a force was immediately detached in pursuit of the fugitive prince, who had pushed on to the *Kéndang* hills, and halted at *Kájinár*, with an intention of making a stand. Hearing of the strength of the pursuing force, however, he left his family at that place, and proceeded with only his son, the *Pangéran Adípáti*, to the village *Pasiráman*, where being seized with a mortal complaint he soon died. On his death-bed, informing his son that he felt his end approaching, he thus addressed him: "You must assume the sovereignty of Java, which has descended to you from your forefathers. Make friends with the Dutch, and by their assistance you may be enabled to reduce the eastern provinces to submission. I deliver over to you part of the sacred *pusáka* and regalia of the country; and now let my body be carried to a spot where the earth is fragrant, and there let it be buried."

In conformity with the wish of the deceased his body was carried across the country towards *Tegál*, in search of a spot where the earth was sweet-scented, and deposited a few miles inland from the town. The tomb is still held in high veneration; and it is from this circumstance that this prince is distinguished by the appellation of *Susúnan Tegál-wáng'i*, or *Tegál-árum*; *árum* and *wáng'i* signifying fragrant.

The rebel forces had, in the mean time, taken possession of *Matárem*, and found among the articles of plunder the crown of *Majapáhit*, with several other parts of the regalia, which had been left behind in the hasty departure

of the prince, together with two of his daughters, named *Keletíng Wúng'u* and *Keletíng Kúning*. The plunder was immediately dispatched to *Kedíri*, where the rebel chiefs had established their head quarters, and equally divided between *Trúng Jáya* and *Dain Galéngsong*, with the exception of the regalia and of the daughters of the *Susúnan*, whom *Trúna Jáya* espoused.

The loss on the side of the *Matárem* people is estimated at fifteen thousand killed, and on the side of the eastern people at somewhat less.

It is said in some accounts that the late *Susúnan* having failed to persuade his son, *Pangéran Adipáti*, to assume the government, gave to another of his sons, *Pangéran Púgar*, the *pusáka kris*, *máisa núlar*, and the spear *kiái paléret*, in consequence of which *Pangéran Púgar*, with his brothers, returned to *Bágelen*, where, assuming the title of *Susúnan Senapáti Ingalága Abdul Ráchmen Sahídin Panatagáma*, he assembled a considerable force, and proceeding to *Matárem* regained possession of it.

After the interment of the deceased *Susúnan* at *Tegál*, *Márta Láya*, the chief of that province, urged the *Pangéran Adipáti* to assume the government, and first to establish himself at *Tegál*, until he had collected a sufficient force to attack the eastern people, offering his services to collect for him as many people as would be required; but the prince still declined, not having the courage to attempt the recovery of the authority that belonged to his family, and requested *Márta Láya* to procure for him a vessel, in which he might proceed to *Mecca*, being resolved to relinquish for ever the cares of government, and to become a *Háji*. *Márta Láya*, although he had vessels at his disposal, evaded a compliance with the prince's request, in the hope that he might alter his resolution, and still be induced to assume the government. The prince retired to *Bányumas*, and performed a penance in one of the mosques. He is said on the seventh day to have fallen asleep, and to have dreamt, "that the roof of the mosque opened, as if it were carried up in the air, when a full and bright moon appeared, which diffused its lustre over all Java, after which it approached and entered his breast." Encouraged by this omen, the prince changed his determination, and recollecting the words of his father, bethought himself of obtaining the assistance of the Dutch. He in consequence dispatched two messengers to Batavia for aid.

The prince then sent orders to *Márta Láya* at *Tegál* to collect as many forces as possible; he likewise dispatched trusty people to the *Désa Dúnan*, in search of the flower called *wijáya mála*, there being a superstitious notion among the Javans that if in their distress they are able to obtain this flower, whatever they undertake will prosper.

Márta Láya immediately exerted himself with great zeal and effect to assemble his adherents, in the hope that by shewing a large force he might induce the prince to relinquish his idea of receiving succour from the Dutch. On the arrival of this succour at *Tegál* he addressed him publicly as follows:—"Sire, I have felt excessive shame in hearing that your highness is desirous of soliciting aid from the Hollanders, as if you were yourself in want of men. I am now ready, with numerous followers, to perform whatever you please, if you will only confer upon me the necessary authority. Give me but your orders and I will myself extirpate your enemies." The prince replied, "What signifies your shame, *Márta Láya*? I have requested assistance from the Dutch, because it is always agreeable to rely on one's friends; and it was foretold by my great grandfather, *Sultan Agung*, that the Dutch would assist his descendants." *Márta Láya* was silent. The messengers now returned with the *wijaya* flowers, on which the prince assumed the title of *Susúnan Amangkúrat Senapáti Ingalága*, &c.; and soon afterwards the Dutch agreed to give him the assistance required.

When the Dutch force was landed, the *Susúnan* received the visit of the admiral and officers in state. The Dutch officers being introduced, stood in a row with their hats in their hands; but *Márta Láya*, considering it disrespectful that any one should stand in the presence of the sovereign, ordered them immediately to sit down in the manner of the Javans, and was proceeding to compel the admiral to do so, when the *Susúnan*, seeing the confusion in which all were thrown, applied to his late ambassador to the Dutch for an explanation. When he learnt that they shewed respect by bowing their heads only, he was satisfied, and desired *Márta Láya* not to interfere with them.

"The *Susúnan* then inquired the name of the commander, who after informing him that he had the rank of admiral, approached him, saying, that he was ordered by the government of Batavia to proceed to *Tegál*, with a force of Europeans, Makásars, &c., and to afford him every assistance he might require in the establishment of his authority. There were landed

valuable presents for the prince, among which was very splendid apparel as worn by the Hollanders, to which the prince took such a liking that he immediately clothed himself in it. The Dutch force was then divided, and the admiral embarked with one division for *Japára*, while the other accompanied the prince, who proceeded by land to *Pakalóngan*, and afterwards with his followers by sea to *Japára*."

"On the arrival of the admiral at *Japára*, he inquired of *Wángsa Dípa*, the chief of that place, who had rendered assistance in repelling the rebels, at the time they attacked *Japára*? To which the latter replied, 'The successful resistance was principally owing to the conduct of the French, English, and Dutch factories.' The admiral then consulted with his officers, and observing that the English and French seemed to be preferred to the Dutch, or at any rate considered on the same footing, he called the chiefs of the French and English factories, and presenting them with twenty thousand dollars, said it was the gift of the *Susúnan*, who directed that they would quit *Japára*. The chiefs of the two factories took the money, but did not wish to depart, alleging that there were no vessels to convey them away; to which the admiral replied, that in that case he had the further orders of the *Susúnan* to provide them with a vessel. The people belonging to the two factories were then, with all their property, public and private, embarked on board a Dutch transport. The vessel sailed, but nothing more was ever heard of the English and French who were embarked in her. The Dutch then repaired their instruments of war."

Another account is as follows: "When the admiral arrived at *Japára*, he found there two foreign vessels, an English and a French ship, the officers of which said they had put in there in distress, and could not proceed further on account of the bad state of their ships. They also represented that they had assisted the Dutch when the rebels attacked *Japára*. The admiral thanked them for the service they had rendered, and presented them with ten thousand dollars, and ordered them to proceed to their own country in one of his vessels."

"On the arrival of the *Susúnan* at *Japára*, he was joined by a considerable force from *Tegál* and *Demák*; and among those who were most active in the support of the *Susúnan*'s authority was *Márta Láya*, whose aversion to the Dutch still continued. The admiral, apprized of his sentiments, applied to the *Susúnan* for his destruction, supporting his application by a written

request to the same effect from the government of the capital, and threatening an immediate departure to Batavia in case of non-compliance.

"To accomplish this end, the *Susúnan* first attempted to send him to *Kedíri* against *Trúna Jáya*; but *Márta Láya* obtaining information of the demand made by the Dutch for his life, refused to attend the summons, on the pretence of sickness. His disobedience so enraged the *Susúnan*, that he ordered his instant death, which was effected in the following manner. *Márta Púra* having received the orders of the prince to put *Márta Láya* to death, went to his house, accompanied by two hundred followers. *Márta Láya* having been apprized of the *Susúnan's* anger, he collected an equal number of men.

"When *Márta Púra* approached him he was seated on a yellow carpet with a drawn *kris* in his hand, and being informed that he was to be put to death by order of the *Susúnan*, *Márta Láya* replied, 'If it is the wish of the prince that it should be so, do your duty, I am prepared.' *Márta Púra* then drew his *kris* and stabbed *Márta Láya* in the belly; but while he did so his neck received in return the *kris* of *Márta Láya*, which separating the throat in two, killed him on the spot. The two chiefs were no sooner wounded than the followers of both parties rushed on each other, and a most bloody and obstinate engagement ensued, which lasted till the bodies of nearly the whole lay weltering round those of the chiefs."

Measures had already been taken for the dispersion of the rebel forces in *Kedíri*. A Makásar chief, named *Kráin Kadádrang*, in the service of the Dutch, discovered his relationship to the Makásar chief *Galéngsong*, and offered to bring him to terms. He was in consequence dispatched secretly to *Kedíri*, where he had an interview with the *Makásar* chief, who was his brother. On the part of the Dutch, he promised that they would assist him on Celebes. He hesitated to come over immediately, lest he should betray *Trúna Jáya*, but promised to join the allied forces when they should arrive and attack *Trúna Jáya*.

Having thus secured an interest with the Makásars, one division of the Dutch forces, under the admiral, embarked for *Surabáya*, and the other, with the *Susúnan*, commenced their march by land. A decisive battle took place at *Kedíri*; on the evening previous to which, it is asserted the Dutch had a communication with *Dain Galéngsong*, to know his intentions, when

the latter told them, "Attack me to-morrow, and I will make arrangements for the flight of my forces." Accordingly the next morning, before the daylight, the Dutch troops marched to the hostile camp, where they found no preparations for resistance. *Dain Galéngsong* immediately ordered a retreat, and fled himself the first, leaving behind him all the plunder that had been taken at *Matárem*, and among other things the crown of *Majapáhit*.

The siege of *Kedíri*, according to the Dutch accounts, lasted fifty days, and it was at last taken by assault, *Trúna Jáya* making his escape. Great riches were found in the interior of the palace, and many chests of Spanish dollars, besides ingots of gold and the most valuable part of the regalia. The *Susúnan* claimed nothing but the crown of *Majapáhit*, leaving the remainder to be distributed among the troops.

When the crown was delivered to him, it appeared that its most splendid ornament, the large centre diamond, was missing. This the *Susúnan* immediately noticed, and inquiries were set on foot; but to the great affliction of the *Susúnan* and all the Javan chiefs, the jewel was never recovered.^[272]

Nine Makásar chiefs afterwards surrendered to the Dutch on the 9th December, when they received pardon, and a promise that they should be sent to Makásar.

After this *Trúna Jáya* collected all his forces, and marshalled them upon the plain, as if to receive the enemy; but on the approach of the Dutch troops from the left and the Javans from the right, his army was panic struck and fled in various directions, he himself with his two wives escaping to *Antang*. The *Susúnan* allowed the Dutch soldiers to plunder and possess themselves of every thing left by the rebels.

Chákra Níngnat having quitted his place of banishment and joined the *Susúnan*, was sent to urge the submission of his half-brother, *Trúna Jáya*. *Chákra Níngnat* accordingly went in search of *Trúna Jáya*, accompanied by a very few followers, and having found him at *Antang* he addressed him as follows. "Brother! what are you doing and whither would you fly? Depend upon it, if you persist in your resistance to the will of the *Susúnan*, he will disappoint your expectations, and if you compel him to send people to arrest you, you will excite his implacable displeasure. I have come to you as

quickly as possible, for my heart yearns towards you, and I dread lest you should come to any misfortune. If you wish it, I will go and meet the *Susúnan*. Bring your two wives, who are both the sisters of the *Susúnan*, throw yourselves together at his feet, ask forgiveness for any offence you have committed, and perhaps he will be merciful towards you and grant you pardon. If you come alone in that way, the *Susúnan* cannot act against you, for are you not married to his sisters?" *Trúna Jáya* reflected upon what *Chákra Níngnat* said, and was inclined to follow his advice, saying, "I return abundant thanks to you for your kindness towards me. Your advice is good and I will follow it: I will follow you, accompanied by my wives." *Trúna Jáya* with his wives afterwards accompanied *Chákra Níngnat* to *Kedíri*.

Chákra Níngnat then led *Trúna Jáya* with his wives to the hall of audience, where the *Susúnan* was seated with the admiral and numerous Dutch officers. *Trúna Jáya* on this occasion did not wear his *kris*, but rolled a *chíndi* cloth round his body, as if he were a prisoner.

They fell at the feet of the *Susúnan*, imploring forgiveness for the offence of *Trúna Jáya*, on which the *Susúnan* said, 'It is well! *Trúna Jáya*, for this time I forgive you. Go without and clothe yourself in becoming apparel, and then return to me, when I will present you with a *kris*, and instal you as my minister, in the presence of all assembled.' The *Susúnan* then gave orders that he should be served with apparel. The heart of *Trúna Jáya* became highly elated: he went out and received the apparel from the *Susúnan*'s people, and then returned into the presence, but without wearing a *kris*, as the *Susúnan* had intimated his intention to present him with one.

"As he approached, the *Susúnan* desired his women to bring him the *kris* named *Kiái belábar*, which was still unsheathed. As soon as it was delivered into the hands of the *Susúnan*, he said to *Trúna Jáya*, 'Know, *Trúna Jáya*, that I have given my word that I would never sheathe this *kris* except in your body: receive now your death from it in punishment of your offence.' *Trúna Jáya* was silent, while the *Susúnan* standing up approached and stabbed him with his *kris* in the breast. Returning then to his throne he seated himself, and ordered his people who were assembled to finish the work which he had begun, whereupon they all fell upon *Trúna Jáya*, the unfortunate wretch, stabbing him in a thousand places and cutting his body to pieces. They then severed the head from the trunk, rolled it in the mud,

made a mat of it, and at last cast it into a ditch by the express order of the *Susúnan*. The admiral and all the Dutch officers and party were present at this execution; but though they appeared astonished at the conduct of the *Susúnan*, they remained quiet spectators of it."

Such is the account given by the Javans, without reference to the share which the Dutch had in the transaction; but from the Dutch accounts it appears that *Trúna Jáya* delivered himself up under a stipulation with the Dutch that his life should be spared. A young officer of the name of *Jengker*, who had been placed by the General (Cooper) in charge of the *Susúnan's* guard, was sent by the *Susúnan* to treat with *Trúna Jáya*, without any communication with or authority from his commanding officer. Valentyn says positively, that *Jengkér* promised him pardon, and assured him of his life; but Cooper, annoyed that the credit of taking this chief should thus have been wrested from him by a junior officer acting without authority, exasperated the *Susúnan* against *Trúna Jáya*, and threw that unfortunate chief in his way at a moment when his passion was at its height. This catastrophe, says Valentyn, is to be ascribed to no one but the jealous Cooper, who brought it about, in order that his bad conduct, oppressions, and extortions, which were well known to *Trúna Jáya*, and which he had intended to complain of, should remain concealed.

Trúna Jáya, at the time of his surrender, was dressed in a Portuguese jacket, and wore on his head a black turban edged with lace. He gave short and pertinent answers to the questions put to him. On his coming before *Jengker* he fell at his feet, saying, that in his youth it had been predicted that, however great his fortune might be, still he should, at one time of his life, be taken prisoner, and that since this was his destiny, he rejoiced in having fallen into the hands of a person so well known for his humanity. He then presented to him his *krís* with a golden bow, requesting *Jengker* to keep them in token of his esteem. *Jengker* lifted him up, promised that his life should be spared, and further, that all his influence with the Dutch government and the *Susúnan* should be used in his behalf. It is alleged in the Dutch accounts, that the immediate cause of the *Susúnan's* conduct on this occasion, was the irreconcilable hatred which *Trúna Jáya* still evinced towards that prince, who, he said, had in his youth encouraged him to the steps he had taken, and afterwards abandoned him.

Trúna Jáya surrendered on the 25th December, 1679, A.D., and general tranquillity ensued, which however was not of long duration. The *Panambáhan Gíri* having in his possession the *kris* deposited in the tomb of the first *Súnan*, it was demanded of him by the *Susúnan* as royal property; but the *Panambáhan* not being inclined to part with it, and disapproving of the conduct of the *Susúnan*, who was guided by Dutch councils, and had even adopted their dress, replied, that he did not wish to know any thing of the *Susúnan*, or to be acquainted with him; that he wished to wear the *kris*, *kálam múning*, himself, and that he preferred his own dignity to that of such a chief. The *Susúnan*, enraged at this answer, proceeded to *Gíri* with his Dutch allies, where an engagement took place and the *Gíri* people were obliged to fly: the *Panambáhan* was taken and put to death. In this affair, a cousin of the *Súnan Káli Jága* of *Adilángo*, who had followed the *Susúnan*, distinguished himself in destroying the brother of the *Punambáhan Pangéran Sínga Sári*, who was running *amók*, and doing much mischief; as a reward for which service the *Súnan*, in the presence of the Dutch commander, declared that, for ever after that, the descendants of that chief should be permitted to reside at *Adiláng'o*, and not be called upon to perform any duties of the state.

The whole of the eastern provinces having now submitted, the *Susúnan* returned to *Semárang*, where when he had made acknowledgments to the Dutch for the assistance they had rendered him, the commander requested that he would give them a small piece of ground at *Semárang* to build a fort upon, which would not only be convenient for the protection of their trade, but would enable them to come to the assistance of the *Susúnan*, if necessary, at a shorter notice.

The admiral having promised that he would station a suitable force at *Semárang*, which the *Susúnan* might at any time employ as he thought proper, obtained the permission he applied for.

The Javans have a superstitious belief, that when once misfortune has fallen on a place so generally as to extend to the common people (which was the case at *Matárem*), it will never afterwards prosper; it was therefore determined by the *Susúnan* to change the seat of empire, and some were for fixing it at *Semárang*, but at last it was determined to erect it in the wood *Wána Kérta*, in the district of *Pájang*, which was good land but uninhabited.

The new capital was called *Kérta-súra*, the walls of which are still to be seen on the road to *Súra-kérta*, the present capital of the *Susúnan*.

During all these transactions *Pangéran Pugar* remained at *Matárem*. The *Susúnan* now, for the first time, sent him information of his establishment, and required his attendance at court. The *Pangéran*, who having heard that the *Susúnan* was in the constant habit of dressing after the Dutch fashion, had been strengthening himself as much as possible, under an impression, that the *Susúnan* supported by the Dutch was not his brother, but a foreigner, whom they had raised to answer their own purposes, received this intimation with great surprise, and sent two of his family to ascertain the truth. The messengers, who were interested in upholding the separate authority of their master, determined to encourage his mistake, and they represented the *Susúnan* as a foreigner from *Sábrang*, elevated by the Dutch. Upon this report the *Pangéran* informed the *Susúnan* that he could not proceed to *Kérta Súra*, as he preferred remaining at *Matárem*, where he was established as the legal sovereign. A force, consisting of Dutch and Javan troops, was in consequence marched against *Matárem*; at first the troops of *Kérta-súra* were defeated, but in a second attack they were more successful, and the *Pangéran* was obliged to take to flight.

By means of the *Adipáti*, the *Pangéran* was afterwards assured of the *Susúnan* being his brother, when he agreed to go to *Kérta-súra*, provided the *Susúnan* would throw off his Dutch dress and appear in his native costume. To this the sovereign consented, and publicly received his brother with the greatest demonstrations of joy and affection.

The authority of the *Susúnan* was now firmly established, and general tranquillity prevailed for some years.

A new character now appears on the stage, under the title of *Surapáti*. This man, whose name was *Sí Untung*, had been the slave boy of a Dutchman at Batavia, of the name of Mor, who is represented to have been of low origin, but to have been advanced to the highest dignities, even a seat in the high regency, by means of the riches and influence he had acquired through the services of this slave, to whom he became, in consequence, much attached. Mor, however, discovering an improper intimacy between *Untung* and his natural daughter, chastised him severely, and afterwards had him confined in the public block or stocks. *Untung* contrived to effect his escape from

them during the night, and to release his fellow prisoners. They then fell upon the guard which came to mount at daylight, and taking them unawares massacred the whole. Being thus committed, *Untung* bent his course to the high lands, and afterwards to *Chéribon*. While in the high lands he formed a connection with a formidable party from Bantam, where a civil war had been excited, in consequence of the Dutch having elevated to the throne a son of the deceased king, contrary to the express directions of the father. One of the brothers, *Pangéran Purbáya*, was prevailed upon to join a certain *Abidin*, a fanatic rebel, who had raised about two thousand followers, and with him passed through *Jasíngá* and the *Jákatra* and *Preángan* highlands, increasing their numbers as they went.

Abidin having proposed to proceed by that route to *Matárem*, there to stir up the *Susúnan* against the Dutch, the *Pangéran* being tired of the journey surrendered to the Dutch force sent against them; but *Abidin* stood a severe engagement, and was only induced to surrender by means of an artifice practiced upon him. An European officer belonging to the Dutch troops disguised himself as an Arab, and being well versed in the Arabic and Malayu languages, obtained an interview with *Abidin*, to whom he represented, that having himself been once taken prisoner by the Dutch he had been so well treated that he would advise him to go and surrender himself. The unfortunate man took his advice, and was conveyed to the commanding officer, then at *Chikálong*, who immediately forwarded him to Batavia, whence he was sent to the Cape of Good Hope for the rest of his life.

The party of runaway slaves under *Untung*, who had now assumed the name of *Santána* being surprized by the Dutch force, were by special orders from Batavia allowed to remain undisturbed for the present. The chief appears to have been useful to the Dutch, and to have been employed, in order the better to secure the surrender of *Pangéran Purbáya*. When the Dutch officer went with a small party to receive the submission of this chief, he found that he had already tied his spears together (the sign of surrender) and kept no arms but his *kris*. Ignorant of the customs of the country, the officer demanded that the *Pangéran* should also deliver this weapon and his personal ornaments. The demand created the utmost astonishment in the *Pangéran*, who instantly asked if it was not sufficient humiliation to a prince of the royal blood that he and his people had given

up their arms. *Santána* entreated of the Dutch officer not to urge the delivery of the *kris*, and to consider "that the bird, although caught, was not yet in the cage," but to no purpose: the officer persisted in his demand, and insulted *Santána* in presence of all who were there assembled. The *Pangéran* seeing that resistance was now vain, promised compliance next morning; but during the night, to the inexpressible mortification of the officer, he effected his escape. The rage of the officer now fell so violently upon *Santána*, that a quarrel ensued. *Santána* and his followers fell upon the Dutch party and killed many of them; the officer however escaped. *Santána* then moved towards *Chéribon*, where he had an affair with a chief, named *Ráden Surapáti*, which being reported to the sultan, that chief was put to death, and his title of *Surapáti* conferred upon *Untung*. *Surapáti* then proceeded towards *Kérta-súra* to beg assistance against the Dutch, leaving several of his followers in *Bányumas*, under the direction of two chiefs, who soon became dreaded as noted *kramans* or rebels. At *Kérta-súra* he found protection from the prime minister, to whom he related all the particulars of the story, with the exception of that part which related to the establishment he had formed in *Bányumas*. This district being now declared in a state of revolt, he offered to bring it to submission, and was employed by the *Susúnan* for that purpose; he accordingly proceeded secretly to *Bányumas*, where, aided by the plan he had before laid, he caused the heads of the two *krámans* to be secretly cut off in the night, and the rebels to disperse; when returning to *Kérta-súra* and producing the heads, he was received into the highest favour by the *Susúnan*.

The Dutch hearing of his fortune, demanded from the *Susúnan* that his person should be given up; but the reply of the *Susúnan* was, "that *Surapáti* having thrown himself on his protection and performed a signal service to the empire, he could not give him up; but that if the Dutch wished that he should be arrested, they were at perfect liberty to arrest him in any part of his dominions."

The Dutch, accordingly sent a force, consisting of four hundred Europeans and six hundred islanders, under the orders of one Tak, an officer who had incurred the suspicion of having purloined the centre diamond from the *Majapáhit* crown, and on whom, according to the impression which pervades the Dutch accounts, the *Susúnan* had determined to be revenged.

On the approach of the Dutch troops, the *Susúnan*, alarmed lest they should succeed in arresting *Surapáti*, determined to afford him every assistance, and for that purpose directed, that when they arrived, the *Ráden Adipáti* (prime minister), who had given his daughter in marriage to *Surapáti*, should openly espouse his cause, and proceed, in the first instance, to attack the lines of the *Adipátis* of *Madúra* and *Surabáya*, who after a skirmish should retreat to the *alun alun* in confusion, exhibiting all the appearance of a defeat, while the united party of the *Ráden Adipáti*, and *Sarapáti* should appear to threaten the *kráton*. The *Pangéran Púgar* being strongly attached to *Surapáti*, received orders, that if, in the affair with the Dutch, the party of *Surapáti* and the minister should be worsted, he should render them assistance, by sending his people to them clothed in white, the distinction adopted by *Surapáti*.

When the Dutch arrived, to cover appearances, a new prime minister was appointed. The commander requested assistance from the *Susúnan*, who pointed out to him the apparent state of affairs, and induced him to believe that he was himself in danger from the attack of *Surapáti*. Under this impression, Tak made his arrangements; and the Dutch troops appeared on the front *alun alun* at eight o'clock in the morning, when they were immediately attacked by *Surapáti*. After four hours of hard fighting, *Surapáti* was repulsed; but reinforcements being sent by *Pangéran Púgar*, and by the whole population of the city, the Dutch were completely destroyed. Tak, at his last extremity, ordered out from the fort two hundred soldiers remaining there; but as they could not join their companions, they were immediately surrounded and cut up. Of the two thousand men, eleven hundred and eighty-three lost their lives; and among them Tak, who was mortally wounded in the neck by the celebrated *pusáka* spear of *Pangéran Púgar*. The weapon was found blunted at the point by the chain jacket which Tak is said to have worn on the occasion.

The *Susúnan* now directed the *Ráden Adipáti* and *Surapáti* to take refuge in the province of *Pasúruan*, and assume the habit of devotees; while to the *Adipátis* of *Madúra* and *Surabáya* orders were given to follow them at a certain distance, burning the villages and laying waste the country, as if in pursuit of an enemy. When *Surapáti* reached *Pasúruan*, he took the name of *Adipáti Wíra Nagára*.

The few Dutch who had survived made their escape to the fort of *Japára*, which was then more extensive than that at *Semárang*.

After this the *Susúnan* wrote to the commanding officer at *Japára*, informing him that Tak, with all the party, had been killed by the *Ráden Adipáti* and *Surapáti*, who had also attacked him, but that they had at last driven them to the eastward, by the force he had collected under the *Adipátis* of *Madúra* and *Surabáya*. He also informed him that he had elected a new prime minister, in lieu of the one who had espoused the cause of *Surapáti*. The *Susúnan*, fearing lest this story might not be believed, and that he might be suspected of having assisted *Surapáti*, sent with this letter five *píkuls* of birds' nests, forty oxen, and other articles of value, which he entrusted to the care of a *priái gándok* (a messenger of distinction) named *Jága Rága*, with instructions to mark well the thoughts of the commander or officer who was the chief of *Japára*, and if he shewed the least suspicion of the part the *Susúnan* had taken, mainly to deny it, and firmly to insist that the *Susúnan* was true-hearted to the Hollanders. He moreover promised to his ambassador, that if he succeeded in averting the anger of the Dutch, he would reward him on his return.

This messenger accordingly proceeded to *Japára*, when the chief officer, after reading the letter, said he had heard the *Susúnan* was of one heart with *Surapáti*; to which *Jága Rága* replied, that what he had heard was false, and that perhaps the story might have originated in the part taken by the *Ráden Adipáti*, whose attachment to *Surapáti* was well known. He then referred to the circumstance of the country's being laid waste by *Surapáti* on his flight to the eastward, in proof of his enmity. The commander heard this explanation with patience, and after receiving the presents, with which he was much pleased, returned for answer to the *Susúnan*, that he had first heard that he was favourable to *Surapáti*, but was now convinced, from the explanation afforded, that these reports were unfounded, and that he was satisfied of the lasting attachment of his highness to the Dutch. He then thanked him for his present, and in return sent one thousand ducatoons, with an assortment of velvets and cloth. The messenger having thus succeeded, was raised to the rank and station of *Tumúng'gung* of *Japára*, by the name and title of *Kiái Tumúng'gung Márta Púra*.

The next indignity offered to the Dutch was by this man, who laid hold of a half cast Dutch soldier at *Japára*, and insisted upon his sitting on the

ground on his hams and dancing the *tandák*, after the fashion of the Javans, for his amusement. The Dutch, highly incensed, demanded the immediate release of the man; but the *Tumúng'gung* refusing, an application was sent to the *Susúnan*, requesting that *Márta Púra* might be put to death. The *Susúnan* immediately sent for *Pangéran Púgar* and his minister, and desired them to communicate with *Márta Púra*, and if they found he had the courage to oppose the Dutch to give him assistance under hand, or to promote his success by some stratagem, in the same manner as he had done to *Surapáti*; but if not, to let him be sacrificed, as a punishment for his cowardice. He then replied to the commodore, saying, that he had sent his own people to arrest *Márta Púra*, and to deliver him to the commander, who might act with his person as he thought proper. When the minister arrived at *Japára* it was agreed that *Márta Púra* should be invited into the Dutch fort, and there apprehended early next morning; but in the meantime the agents of the *Susúnan* had a secret interview with the chief, who declared himself ready to oppose the Dutch, and it was determined that their pretending to seize him should be a signal for all to join and *amók* the Hollanders: but in the morning the heart of *Márta Púra* failed him. He twice refused to quit his retreat, and when at last he came into the presence of the party, he appeared trembling and pale, and his knees tottered under him, so that he was scarcely able to stand. They then gave him a chair to sit down upon, and plied him with wine. An officer having taken his *kris* from behind him, he rose from his chair and attempted to escape, but was bayoneted by a soldier on his way. The agents of the *Susúnan*, enraged to see him so thoroughly frightened, gave him no assistance, but ordered the dogs to devour his carcase. When the *Susúnan* heard of the cowardly conduct of *Márta Púra* he ordered that it should be publicly prohibited, on pain of his severest punishment, to harbour or afford assistance to his relations or children.

Afterwards the former *Tumúng'gung* of *Japára*, *Sécha Nagára*, was replaced, and a communication was, through him, made to the Dutch, intimating the willingness of the *Susúnan* to co-operate against the *Surapáti*, in consequence of which orders were given for the Dutch troops to proceed from Batavia. When the *Susúnan* had thus drawn the Dutch into a second attack upon this chieftain, he is represented "as being most delighted at the prospect which it afforded, that on the present occasion

more of the Dutch troops might be sacrificed, in the same manner as in the recent affair at *Kérta Súra*."

The *Adipáti* of *Surabáya* and *Madúra* were immediately dispatched to *Pasúruan* to meet the Dutch, but having waited some time in vain for the arrival, a mock battle took place with *Surapáti*, when it was arranged that the *Kérta Súra* troops should take to flight, burning and laying waste the country as they retreated. A regular communication appears to have been kept up during the whole time between *Surapáti* and the *Susúnan*, who allowed him quietly to possess himself of the adjoining districts of *Málang* and *Mádion*. The *Ráden Adipáti Aúrang Kasúma* died about this time.

The Dutch troops now arrived in the eastern districts, and the commandant of *Japára* applied for the assistance of the *Susúnan*; but the latter, alleging that his chiefs had been recently beaten and obliged to retreat from *Pasúruan*, urged delay, on the plea of waiting a more favourable opportunity of attack.

In the meantime family feuds disturbed the peace of the *kráton*. The hereditary prince, *Pangéran Adipáti Amángku Nagára*, had married the daughter of his cousin, *Pangéran Púgar*, but after the expiration of the forty days he disregarded her, and she returned to her father's protection. One of the most distinguished characters at the court was the son of the prime minister. The hereditary prince, jealous of the universal admiration which he enjoyed, determined to lower him by the infliction of the greatest disgrace which could be endured. Naturally of a fiery disposition, he became excessively enraged at an accident which occurred to him while hunting in the forest of *Ránda Wahána*, and which occasioned a lameness in his legs. As soon as he returned home he sent for this youth, whom he immediately ordered to be bound and severely flogged with a rattan: he then directed him to be tied to a tree abounding with ants, which soon covered his body; a favourite mode of inflicting cruel punishment. There the young man suffered dreadfully, but his tortures were not at an end: he was afterwards flogged till he nearly expired, and then sent to the house of his father, the prime minister, who, although much enraged, was obliged to suppress his resentment. Determined afterwards to revenge himself, he seduced the wife of the *Pangéran Adipáti*, who had returned to her father's house, as above stated. The connection was discovered, and all parties were put to death.

The *Susúnan* becoming now dangerously ill, from an affection of the spleen which he had contracted at the time of the massacre of the Dutch under Tak, called into his presence his eldest son, the *Pangéran Adipáti*, his brother, *Pangéran Púgar*, and his two firm adherents, the *Adipátis* of *Madúra* and *Surabáya*, and thus addressed them: "The time which is allotted to me in this world has nearly expired; but before I depart let me impress upon you all the necessity and advantage of your mutually supporting each other. If you hold together, then will the sovereignty of Java become pure and strong. The *Adipátis* of *Madúra* and *Surabáya* will be as the surface of the *támpa* (or sifter) on which rice is cleansed from the husk; the *Pangéran Púgar* as the *wángku* (or rim of the sifter); and the *Pangéran Adipáti* will be as the one who sifts or fans the rice. When the *Pangéran Adipáti* ascends the throne, let him attach himself to the other three, by which means he will cleanse and strengthen his government, even as the rice is cleansed from the husk in the *támpa*. Let him study the writings *Níti Prája*, *Níti Sastrá*, *Srúti*, *Asta Bráta* and *Jáya Lángkara*; to abandon his vicious habits, never to ill use his wives, and to be kind and constant to his present wife (another daughter of the *Pangéran Púgar*.)"

In a short time the *Susúnan* died. The *Pangéran Adipáti*, who was destined to succeed him, excited much disapprobation and disgust by his ungrateful neglect of the customary rites due to the body of the deceased, and his indecent eagerness to ascend the throne before it was even vacated. The practice of the country required him to wash and purify the corpse with his own hands; but he left the task to the women, while he shut all the gates of the *kráton* and seated himself in front on the *setíngel*. The deceased was buried at *Megíri*, and his widow, *Rátu Kanchána*, attended the procession, distributing money as she past along, to the amount of one thousand dollars and more.

As soon as the body was removed the *Pangéran Adipáti* assembled all his chiefs, and addressed them to the following effect: "All ye who are present bear witness, that the *Pangéran Adipáti Amángku Nagára* has succeeded to the sovereignty of his late father, *Susúnan Mangkúrat*, and as ye acknowledged and respected the father, now do the same to the son;" to which they all ejaculated assent. To this *Ráden Subráta*, who wished to shew his attachment to the young prince by raising him in the eyes of the people, added, "the sovereignty descends to you by the will of the

Almighty; it has not been assumed by yourself;" but no one answered. All the chiefs present, however, approached the prince and kissed his feet, in proof of their acknowledgment of his authority. The new *Susúnan* then declared *Rátu Kanchána* his queen, and nominated the principal officers of state: and as soon as he returned to the *dálam* addressed three letters, one to the Governor General of Batavia, one to the commandant at *Japára*, and one to the commandant at *Semárang*, informing them of his having assumed the sovereignty in succession to his ancestors. He likewise entrusted a letter for Batavia, and another for the Governor General, to the care of Captain Knol at *Semárang*.

On first granting their support to the deceased prince, the Dutch required that he should enter into a bond, dated 10th October 1677, confirming the treaty of the 25th February preceding, and acknowledging a debt to the Dutch of thirty thousand dollars, together with three thousand *kóyans* of rice, as a security for which he was required to mortgage to the Dutch all the sea-ports from the river *Kráwang* to the eastern extremity of the island. The whole revenues of these places, including in particular all the rice deliverable to the state, were also to be received by the Dutch in diminution of this debt.

At the same time, also, the *Susúnan* was called upon to execute a deed of cession, confirming the act of the 28th February preceding, and setting forth that his father, having already verbally expressed an intention to make over to the Dutch his rights on the kingdom of *Jákatra* (or land lying between the river of *Untúng Jáwa* and *Kráwang* and the northern and southern sea-coasts), the said grant was further confirmed, and the whole of the province of *Jákatra* ceded accordingly, the inhabitants who wished to remain being ordered to acknowledge the Dutch as their lawful sovereign, but all being at liberty to place themselves under the *Susúnan* and to leave the Dutch territory, till the expiration of twelve months after the publication of this act.

By this deed of cession, the *Susúnan* also ceded to the Dutch, in acknowledgment of the services rendered by Admiral Speelman against the rebels, the country between the *Kráwang* and *Pamanúkan* rivers, in a straight line to the South Sea, with all the immunities and privileges attached to it.

This document further prohibited the importation of cloths and opium by any one except the Dutch, and contained the appointment of *Adipáti Mandaráka* to be chief of *Tegal* and the western, and *Aria Urawán* to be chief of *Jápára* and the eastern sea coast.

On the 15th January 1678, a charter was procured from the *Susúnan*, placing the sugar trade of *Japára* entirely in the hands of the Dutch. A grant was made them of the management of the town and jurisdiction of *Sámrang* and the village of *Kaligwái*, that is to say, the right of appointing governors of their own at those places, without the least interference on the part of the *Susúnan*; on condition, however, that the revenues should be duly accounted for and paid to his highness's officers by those of the Dutch. But as his highness was still in debt to the Dutch, those revenues were provisionally taken in diminution of the debt.

In Bantam the Dutch had made various treaties with the princes.

On the 17th April 1684 a contract was signed with the sultan of Bantam, by which it was stipulated, among other articles, that the contract of the 10th July 1659 should be renewed and confirmed; that the sultan should give no kind of assistance to the enemies of the Dutch, and undertake nothing hostile against their allies, particularly the *Susúnan* and the prince of *Chéribon*; that the *Táng'ran* river, from its mouth to its origin, and from thence a line drawn from south until it meets the South Sea, should be the boundaries fixed upon between the Dutch jurisdiction and the Bantam country, it being understood that the whole of the *Táng'ran* or *Untong Jáwa* river, with its mouths, should be the property of the Dutch, together with six hundred rods of land to the northward from fort *Bábakan* to the sea, with liberty to erect such *pággars*, or forts, on the western banks of the river, as should be deemed necessary for purposes of safety; the inhabitants of the Bantam side to be permitted to fish in the river, and to appropriate its waters to the purposes of cultivation, but no vessels to be allowed to enter the river from the sea without Company's passes; that the claims of the Dutch on the government of Bantam should be reduced to twelve thousand rix dollars, or one-eighth of its original amount; that his highness should give up all claims to the principality of *Chéribon*; that the fourth article of the contract of 1659 should remain in force, and consequently that no ground or factory rent should be paid by the Dutch, but that the sultan should give as much ground gratis, as the purposes of the factory might require; that his highness

should conclude no contracts with other powers contrary to the present treaty.

On the same day, however, a bond was executed by the Sultan, in favor of the Dutch, for the payment of the expenses incurred in assisting his highness against the rebel sultan, and his friend the British resident, who it is stated in this document would have received the punishment due to his conduct but for the interference of the Dutch, to whose protection he was indebted for the moderation with which his highness had restricted his punishment to a final removal from Bantam. This obligation states the sultan's debt to be six hundred thousand rix-dollars, which he promises to pay either in specie or pepper, or by remission of duties; and he also grants therein to the Dutch the sole trade in pepper and cloths, in the countries of *Bantam, Lampung, and Silebar*.

On the 28th April 1684, a deed was executed, by which the sultan of Bantam's debt of six hundred thousand rix-dollars was remitted, on condition that the Company should enjoy the privileges mentioned in the bond of the 17th instant; but whenever the above privileges were violated on the sultan's part, the Dutch held themselves justified in requiring payment of the debt in question.

On the 15th February 1686, an agreement was entered into with the sultan of Bantam, by which, among other stipulations, the Dutch engaged to assist the sultan against his rebellious subjects, with men, ammunition, and vessels, on condition that he would pay the expense; it being stipulated that they should not leave their factory during the night; that they should not be permitted to walk outside the town without the sultan's and the Resident's permission; that they should not enter the houses of the natives, much less stay there during the night; that they should not take away any articles in the bazars without duly paying for the same; that they should not enter any gardens or premises without permission from the proprietors; that they should not enter any temples without previous leave; that they should not detain any females in their houses, nor stop them in the streets; on meeting the sultan in the streets, that they should shew his highness the accustomed honours; that they should not stop whenever the sultan or sultana bathed in the river, but pass without looking at their highnesses; that they should not interfere with the disputes and judicial proceedings of the natives. By the eighteenth article it was mutually agreed, that offenders, of either party,

should be punished according to their respective laws, and each by his own nation; and that the whole of the black and white pepper produced at Bantam should be sold to the Dutch at a fixed price.

On the 4th December 1687, on the occasion of the accession to the throne of a new sultan of Bantam, an act of renovation of all former treaties was passed, together with a renewal of the bond for six hundred thousand dollars, and of the deed remitting the same, on condition that the privileges heretofore specified were granted to the Dutch at Bantam.

On the 3d March 1691, on occasion of the elevation to the throne of another sultan, an act of renewal was passed of the contracts concluded at different periods between the Dutch and the sultans of Bantam.

On the 6th January 1681 an agreement was signed with the three chiefs of *Chéribon*, setting forth the gratitude of those princes for the signal services rendered them by the Dutch, and their determination to follow the Dutch Company's advice under all circumstances, and to assist the Dutch government whenever their aid might be required, on condition that they should, in like manner, be assisted by the Dutch in cases of emergency, each party bearing the expense of all armaments undertaken for his benefit. The three princes promised to live upon good terms with the *Susúnan*.

In the event of one of the three princes, or other persons, committing any acts prohibited by the present articles, or derogatory to his highness the *Susúnan*, it was agreed, that such conduct should be punished with the utmost severity.

The other stipulations of importance were, that no fortifications should be erected by the princes without the consent of the Governor-General, who should have leave to build a factory at *Chéribon*, and to cause all species of merchandize to be imported *duty free*. That all pepper growing in the kingdom of *Chéribon* should be disposed of to the Dutch at the bazaar price; that the trade in sugar and rice should be free to all, upon payment of an export duty of two per cent. to the princes; that vessels belonging to powers at war with the Dutch should not be permitted to enter the ports of *Chéribon*, but be dealt with as enemies.

On the 7th September 1680, another contract was entered into with the princes of *Chéribon*, by which all former differences were declared to be

forgotten, and *Panambáhan*, *Chéribon*, and sultan *Anom*, promised to respect and honour their elder brother, sultan *Sépu*, as the first-born of their *Panambáhan Kiái Gíri Láyah*. Sultan *Sépu* promised, on the other hand, not to slight his brothers in any way, but on the contrary to treat them, on every occasion, with the deference due to their rank. It was agreed, that there shall be one place only for holding tournaments, where the royal brothers would appear every Saturday in their state dresses, attended by their *mántris*, and that, to prevent disputes, they should be seated to the right and left of sultan *Sépu*, and all the *mántris* below; but that, should indisposition prevent one of them from attending the tournament, they should send due notice thereof on the Saturday morning. At the tournament the sultan only had the right to speak; but sultan *Sépú* not being present, that right was to devolve on the second, and in his absence on the third chief. In the event of all the princes being prevented from attending, the eldest sons of sultan *Sepu* and *Anom* should make their appearance, and the command devolve on the *Pangéran*. That in consequence of frequent disputes having arisen among the princes, with reference to the appointment and super-cession of prime minister, the right of nominating to that office was vested exclusively in the governor-general of Batavia. That in the event of any difference occurring between the princes, which they could not adjust themselves, the resident of *Chéribon* should be requested to act as arbitrator on the part of the Dutch. That should one of the princes refuse to comply with this article, the other brothers should on no account molest him, but simply report the matter to the Batavian government, through their ambassadors. The dissenting prince should, however, in that case, voluntarily place himself in the resident's custody, who should not be permitted to convey him out of *Chéribon*.

Mr. Middlekoop mentions, that during the reign of this prince, the principality of *Madúra* was conferred by the *Susúnan* on *Chákra Diníngrat*; but the inhabitants of *Súmenap* being discontented with this choice, they informed the *Susúnan* that they would rather die than submit to that authority; upon which the *Susúnan* thought proper to divide that country into two parts, giving to *Chákra Diníngrat* the western district, and the eastern, or *Súmenap* district, to *Mas Yáng Wúlan*, who took the name of *Yúdha Nagára*. In the year 1683, the whole island of *Madúra* revolted, and became subject to the Dutch government.

But to return to *Pangéran Adipáti Amángku Nagára*, usually called *Mangkúrat Más*. The authority of this prince seems to have been attacked almost immediately after his accession to the throne; for *Ráden Súria Kasúma*, a son of the *Pangéran Púgar*, having accompanied the procession which attended the body of the late *Susúnan* to the grave, persuaded many of the party to declare him sovereign of Java, under the title of *Súnun Panatagáma*. The *Susúnan Mangkúrat Mas* no sooner heard of this, than he became highly enraged with his uncle, the *Pangéran Púgar*, and sent back to him his daughter, the queen *Ratu Kanchána*. He afterwards ordered the *Pangéran* with his wives and children into his presence, and commanding them to be seized, publicly exposed them on the *alun alun*, in a pen or railing made for that purpose, which the Javans call *betek*. *Ráden Suria* was apprehended.

On the one hundredth day after the death of the late *Susúnan*, the wives of the chiefs being assembled to prepare a customary feast, intended "to give a blessing to the journey of the deceased," the *Susúnan* conceived a passion for *Ayu Pakúwati*, the wife of the *Adipáti* of *Madúra*, and availed himself of his power over her to gratify it. She, however, soon made her escape, and reported the particulars to her husband, who in revenge concurred with the *Adipáti* of *Semárang*, in urging the *Pangéran Púgar* to assume the sovereignty. "So large a party," said these chiefs, "being in favour of your pretensions, you can never be condemned for assuming the government; for as with men who drink a bottle of wine, if there are few of them they must necessarily become intoxicated, but if there are many, truly it is nothing at all."

Being assured by the *Adipáti* of *Semárang*, that the Dutch were not cordial friends of the present *Susúnan*, the *Pangéran* was at last prevailed upon to escape with his family and a chosen band to *Semárang*, where the Dutch received him, and conditionally proclaimed him sovereign of Java.

As soon as the *Susúnan Mangkúrat Mas* was informed of the departure of the *Pangéran*, he applied to the commissioners at *Semárang* to have him delivered up; but received for reply an intimation, that he was under the protection of the Dutch, and that if the *Susúnan* wanted him he must come for him himself. Enraged at this evasion, he ordered that *Ráden Súria Kasúma*, the son of the *Pangéran*, should immediately be put to death. The young prince was accordingly brought into his presence for the purpose,

when a great eruption suddenly took place from *Merápi*, the mountain emitting a sound louder than thunder, and flame which enlightened all *Kérta Súra*. The *Susúnan*, thinking that his end was approaching, sent the young king back into confinement, when the sounds immediately ceased, and the mountain emitted no more flame. The *Susúnan* conceiving all danger at an end, once more ordered the execution of the prince, but a more violent eruption than the first instantly rent the mountain asunder. The alarm of the *Susúnan* was increased, and considering this was a *gáro-gáro*, or sign, that the prince was favoured by the Almighty, he altered his intentions, received his intended victim into favour, and appointed him a *Pangéran*, under the title of *Pangéran Ang'ebái Saléring Péken*, with an assignment of one thousand *cháchas* of land.

He appointed the *Adipáti* of *Madúra*, under the name of *Panambáhan Chakra Níngnat*, chief over all the coast districts, from *Brébes* to *Banyuwáangi*, and the *Tumúng'gung* of *Surábaya*, under the name of *Adipáti Jaeng Rána*, to be his *Páteh*. To the *Tumúng'gung* of *Semárang* he also gave the title of *Adipáti Súra Adimang'gála*.

Immediately after his accession he had written to the Dutch government; but it appears that the letter was not forwarded from *Semárang* to Batavia until after the *Pangéran Púgar* had taken part against him. According to the Dutch accounts, the ambassadors of both parties arrived nearly at the same time at Batavia, were admitted to audience the next day, and were received, not like ambassadors, but rather as messengers.

The objections urged by the Dutch to the acknowledgment of the *Susúnan* were the following:—1st. Because he was a great tyrant, and well known to have instigated his father to a rupture with the Dutch, and to have himself menaced hostilities against them, as soon as he should have mounted the throne. 2d. Because his embassy did not consist of princes of his family, and the prime minister, as usual, but of two common regents only. 3d. Because the letter which communicated his father's death, and announced his own accession, although it contained a request for protection against his enemies, did not apply for their sanction or confirmation, nor declare his readiness to renew the contracts, to acknowledge the debts, and to fulfil the engagements formerly stipulated, though he ought to have known that this was the basis upon which alone the Dutch could have recognized his title as sovereign of Java. 4th. Because letters had been intercepted, in which he

invited the prince of *Madúra* to join him against the Dutch, calling them his mortal enemies, whom he intended to expel from the island of Java.

These combined circumstances induced the Dutch government not to acknowledge him as successor to his father, although they, with a view to gain time until the arrival of a fleet expected from Holland with a reinforcement of troops, wrote to him, merely declining to receive his ambassadors as such, and requiring him to send others, whose family connections and rank might entitle them to more consideration, and with whom they might treat.

After it was arranged that *Pangéran Púgar* should become sovereign, the three chief Dutch authorities then at *Semárang* waited upon him, to inform him thereof, at the same time requiring that, in return for the assistance intended to be afforded him, he should, on assuming the authority, cede to the Dutch the provinces of *Demák*, *Japára*, and *Tégal*, in compensation for the expenses they might incur on his account. *Pangéran Púgar* feeling no inclination to comply with these conditions, though anxious to avoid a rupture with the Dutch, proposed, instead of a cession of territory, that he should become generally responsible for all the expenses of the war; "for," said he, "if it is through the assistance of the Dutch that I am placed upon the throne, of course it would not be becoming in me to refuse them any thing they require: but with respect to this request, is it not better that, at present, we attend to what is necessary to secure the throne, and afterwards talk of minor matters? I am willing to pay all the expenses which it may occasion to the Dutch." With this the commissioners were satisfied; and the troops having arrived from Europe, it was resolved, on the 18th of March, 1704, to place *Pangéran Púgar* upon the throne, and to maintain him on it.

The Dutch ships and troops having reached *Semárang* in April, and the part they intended to take being now for the first time manifest to *Susúnan Mangkúrat Mas*, he dispatched three messengers to the Dutch representative at *Semárang*, with the sum of seventy thousand dollars in specie, and authority to renew former contracts, and comply with every requisition which the Dutch might make, provided they would acknowledge his succession to the throne; but these messengers had only reached *Tínker* when they fell in with the Dutch troops, and were obliged to secure their safety by flight, leaving the money behind.

The *Pangéran Púgar* was publicly installed by the Dutch at *Semárang*^[273] on the 19th of June.

The districts of *Demák*, *Grobógan*, *Siséla*, and all the lands beyond *Semárang* as far as *Un'gárang*, were immediately taken possession of by the Dutch, and the troops of the *Susúnan Mangkúrat Mas*, which had moved towards *Semárang*, were forced to retreat on *Kerta Súra*.

Before the departure of the *Pangéran*, the Dutch had again pressed him to cede the provinces of *Semárang*, *Tégal*, and *Japára*, but by the advice of the *Panumbáhan* of *Madúra* and his principal chiefs, he still refused compliance, and they were not able to obtain any decided promise from him, beyond reimbursement for the expenses of the war. When they were arrived, however, at *Ung'árang*, the prince happening to be alone, unattended by any of the *Bopáti*, the Dutch commander seized the opportunity which he had been so long watching for, to assure him how truly and sincerely the Dutch were inclined to assist him, not only on the present occasion, but hereafter, whenever he might require their aid. "The Dutch," added he, "are in great want of rice, and request your highness will have the kindness to grant them a thousand *koyans* (two thousand tons) a year without payment."

The *Pangéran* made no reply: he wished for time to think upon it; but the chiefs of the Dutch came up to him, and returned him many thanks and compliments for his having thus, as they said, agreed to their request. The prince, though he wished to say he had not given his promise, yet felt ashamed, after the thanks and compliments he had received, to express what he thought. He therefore bowed his head and was silent. They then entreated him to draw out his assent in writing, and to affix his seal to it, as a proof of his voluntary surrender of the present. With this he complied.

The paper was no sooner obtained, than the Dutch officers again returned their thanks. They then withdrew, and the troops being under arms, a salute was fired on the occasion. When this circumstance came to the ears of the *Adipáti* of *Semárang*, he hastened to the *Pangéran*, and thus addressed him, "Be not offended, my prince, if I presume to open your eyes to the proceedings of these Hollanders, who are so rapacious in their demands. They had already consulted with me on the subject of this rice, and they knew the opinion of your advisers to be against it, they therefore watched

for their opportunity to find you alone. I little thought you would have taken upon yourself to act thus, without consulting your chiefs. I imagined the Dutch were satisfied with the answer I had given them, and would not have thought of going to you about it." The *Susúnan* gave him in return the history of the grant, and promised faithfully that, if ever they made another request of the kind, he would send for his advisers immediately.

Before the Dutch moved towards the interior, they contrived to bribe *Jága Diníngnat*, the chief who commanded the *Kérta-súra* troops, and with his assistance possessed themselves without difficulty of the fortified stations of *Pedak-páyang*, *Ung'arang*, and *Selatíga*. The main force of the *Kérta-súra* troops, consisting of about forty thousand men, was encamped in a strong position, not far from the latter place. After making considerable resistance, they were obliged to retreat in confusion, and the combined army prosecuting its march towards the capital, carried *Asem* by assault, and reached *Kérta-súra* shortly after *Susúnan Mangkúrat Mas* had quitted it. All the chiefs who remained submitted to the new authority, and were received under its protection, with the exception of the son of *Pangéran Púgar*, who was strangled. *Susúnan Mangkúrat Mas*, called also *Susúnan Pínchang*, on account of his lameness, was at this time about thirty-four years of age. His reign was short, but remarkable for severity and cruelty.

Pangéran Púgar was fifty-six years of age when he ascended the throne. He had seven legitimate children, *Pangéran Matáran*, *Ang'ebái Léreng Páser* (who had remained with the deposed *Susúnan*), *Jága Rága*, *Mángku Nagára*, *Mángku Búmi* (who was declared hereditary prince, and succeeded his father), *Blítar*, and *Tepa Séna*.

The title assumed by *Pangéran Púgar*, with the concurrence of the Dutch, was *Susuhúnan Pakabúana Senapáti Ingalága Abdul Ráchman Panatagáma*, which may be rendered "The saint who is the nail of the empire, the chief commander in war, the slave of God, and propagator of the true faith."

An occurrence which took place shortly after the assumption of the government by this prince is noticed by the Javan writers, and argued highly in favour of the justice and impartiality of this prince.

The wife of *Mérta Yúdha*, writer to the *Susúnan*, and nephew of the *Adipáti* of *Semarang*, presented herself before him, alleging that her life was

endangered by the cruel treatment of her husband, and imploring that she might be divorced from him, or protected against his ill usage. The *Susúnan* inquiring into the particulars, ascertained from the testimony of the woman herself, that she was attached to *Pangéran Adipáti*, the son of the *Susúnan*, who had frequently visited at her house in the absence of her husband, and that the severities she had suffered were the consequence of the rage which a discovery of that fact had occasioned. He called upon the *Pangéran Adipáti* to say if it was correct; and the prince, being ashamed to tell a falsehood, acknowledged the fact: wherefore his father reproved him in the strongest terms, and cautioned him not to be guilty of a like transgression a second time. Then calling for *Mérta Yúdha*, he thus addressed him: "*Mérta Yúdha*, your wife has come to me requesting my interference to procure her a divorce from you, or that I should prohibit you from again ill-treating her in the same severe manner you have before done, on account of her attachment to my son, the *Pangéran Adipáti*." To which *Mérta Yúdha* replied, "Respecting this affair, allow me to explain. She committed an offence towards me, and she now comes to you to complain of me, saying I had beaten her until she was nearly dead. That I did beat her is true, but that I did so until she was nearly dead is utterly false. I beat her when I was enraged; but, as my anger subsided, I quickly became kind to her again; and yet she has the audacity to request a divorce. This completes three offences; in the first place, she committed the fault; in the second, she has told a falsehood; and in the third, she has requested a divorce. These points I submit to the justice of your majesty." The *Susúnan* then reflected that as the *Pangéran Adipáti's* conduct had been the cause of this woman's offence, it would not be just to punish her, without also punishing his son; and being disinclined to be severe with him on account of his youth, he felt at a loss how to decide with justice. At length, seeing but one way to get rid of the difficulty, he thus addressed *Mérta Yúdha*: "Enough, *Mérta Yúdha*; the fault rests with my son the *Pangéran Adipáti*, and your wife cannot be condemned to punishment, unless my son be also condemned. Now I have not the power to condemn my son, on account of his youth; therefore, I publicly request your pardon for my son's offence. If you wish to be divorced, the permission is granted, and I will provide you with another wife. You want her immediately—it is well;—but I have no women at present except my own, none but the *Rátu* and my own daughters. Make your choice, and whichever you prefer of them, I will present to you in

marriage. Place your confidence in what I say, and believe that I say no more than what I will do."

Mérta Yúdha, struck with astonishment, knew not how to reply. At last, after bowing his head several times to the ground, he declared that he was overcome by this act of magnanimity; that he forgave the young prince from his heart, and would willingly receive his wife back again, and treat her with kindness. The *Susúnan* then dismissed the parties, giving them advice as to their future conduct, and presenting them with a sum of money and several rich presents. *Mérta Yúdha* and his wife, say the Javan writers, afterwards lived most happily together, and never ceased to praise the justice and magnanimity of the prince.

In the spring of 1705, the Dutch government again sent a force to *Semárang*, which was joined by seven thousand Madurese, under the command of *Panambáhan Chákra Diníngnat*.

At this time *Surapáti*, who, after his first arrival at *Matárem*, had offered to surrender, again made an application to the Dutch for protection, and offered to send six thousand auxiliaries, promising at the same time to conduct himself as a faithful subject; but his offer was rejected.

On the 5th October, 1705, a contract was entered into by the new sovereign with the Dutch, by which, 1st, the contracts of the 24th September, 1640, and 20th October, 1677, and all privileges and immunities granted by *Susúnan Mangkúrat Mas* to Messrs. Speelman and Cooper, were confirmed. 2d. His highness ceded to the Dutch the district of *Gebáng* as situated within the following boundaries; viz. "From the mouth of the *Dónan*, on the southern shore, in a westerly direction along its banks as far as *Pasúruan*, where there is an inland lake; thence along the north-eastern sea-shore to the mouth of the river *Che-brom*, and further on along the north-eastern side of an accessible swamp to *Che-satia*, near the village *Madúra*, thence in a north-easterly direction over the mountains of *Dáyu-luhur* to mount *Sumána* or *Subáng*, and then south-east over the mountains of *Bonkok*, where a northerly direction is taken, and continued to the river *Losári*, and further on along the banks of that river to its mouth on the northern coast of the island." 3d. The *Susúnan* acknowledged *Chéribon* as an independent state, in consequence of that country having, in 1680, been saved by the Dutch from the ravages of a banditti. 4th. The *Susúnan* resigned to the

protection of the Dutch the countries of *Súmenap* and *Pamakásan*, stated to have been forced on them during the reign of *Susúnan Tegál-arom*, by the chief *Yúdha Nagára*. 5th. The *Susúnan* renewed and confirmed the cession of *Semárang* and *Kaligawé*, as stated in the transfer of 15th January, 1678. He further ceded to the Dutch the ports of *Torbáyá* and *Gumúlak*, on condition that the tolls continued to be collected for his own benefit, as at *Sámárang*. The Dutch, on the other hand, agreed to restore about fifty villages which belonged to *Demák* and *Kaligáwe*.

It was agreed that the tolls on goods imported into, or exported from, the *Susúnan's* dominions by the Dutch, should be levied according to the above-mentioned contract of 25th February, 1677, and that the *Susúnan* should in future require a duty of three instead of two per cent. from individuals trading with Dutch passes, it being left to his highness to fix the duties to be levied on goods belonging to persons who were not furnished with licences from the Dutch. 7th. The Dutch obtained liberty to establish factories in every part of the *Susúnan's* dominions, for which sufficient lots of vacant ground were to be given them, to answer every purpose of safety and convenience, and also to establish yards for building vessels. The Javan chiefs were bound to supply the Dutch at all times, payment being made for the same, with timber, labourers, &c. but they were to pay no capitation, and only to be considered as Company's subjects, as long as they should be employed by the Company. 8th. His highness promised to supply the Dutch with as much rice as should be required, at the market price, the Dutch being also at liberty to purchase that article from his highness's subjects, who were also allowed to export rice to Batavia, and all countries at peace with the Dutch. 9th. Pursuant to the contract of 1677, the *Susúnan* agreed to continue to shut his ports against *Makásars*, *Búgis*, *Maláyus*, *Bálians*, and other foreigners, except such as should obtain the permission of the Dutch. 10th. It was agreed that the Dutch, and all persons authorized by them, should continue to enjoy the exclusive privilege of importing and selling opium and clothes, as granted to them by *Susúnan Mangkúrat*, on the 20th October, 1677: that the native chiefs should carefully prevent all encroachments on this monopoly, and that all seizures of prohibited goods made by them and by the Company's servants, should be for the profit of his highness, to whose discretion it was left to remunerate the officers making the seizure. 11th. That all seizures made at sea by the Company's cruizers should be for the sole benefit of the captors, although afterwards

brought into his highness's ports. 12th. The *Susúnan*'s subjects were to be prohibited from trading otherwise than with Company's passes, and their trade eastward was restricted to *Bálí* and *Lómbok*, northward to Borneo and *Banjarmásin*, and westward to *Bantám*, *Lámpung*, *Jámbi*, *Indragíri*, *Johór* and *Malácca*. They were prohibited from visiting the eastern governments, or *Búton*, *Tímor*, *Bíma*, &c., on pain of confiscation of vessels, cargo, &c. It was declared, that whenever his highness should be desirous of sending vessels to these quarters on his own account, the Dutch should attend to his wishes, as far as might be consistent with their regulations. 13th. The balance remaining due to the Dutch of the debts of his highness, adverted to in the contracts of 25th February and 15th October, 1677, was remitted, together with the sum to be paid to Captain Jonker for the delivery of the rebel *Trúna Jáya*, and all other claims of the Dutch on his highness, for expenses incurred in re-establishing him on the throne, &c. on the express condition that this contract should be faithfully observed; otherwise the said claims and pretensions to retain their former validity. In consideration of this important remission, his highness promised to supply the Company during twenty-five years, commencing in 1706, with eight hundred lasts of good rice annually, deliverable at Batavia by his highness's own vessels. An article was afterwards added to this treaty, by which it was stipulated, that no other European nation than the Dutch should ever be permitted to trade or build factories on Java.

On the 11th October, 1705^[274], a further agreement was entered into by his highness, by which he promised to bear the expense of keeping a detachment of two hundred men of the Dutch troops at *Kérta-súra*, for his highness's protection and security, amounting to thirteen hundred Spanish dollars per month.

On the 12th July, 1706, a treaty for determining the boundaries between the territories of the *Susúnan* and those of the Dutch was entered into.

The deposed prince, *Susúnan Mangkúrat Mas*, after flying from his capital, proceeded to the eastern districts, and joining *Surapáti*, reduced the eastern provinces under their authority, and appeared confident of success, being possessed of immense treasures in specie and jewels, which he had carried off with him.

In 1706, however, the army of *Surapáti* was defeated by the allied Dutch and Javan forces, and *Kedíri* was taken. Subsequently, the large combined army of *Mangkúrat Mas* and *Surapáti* was put to the rout and dispersed. *Surapáti* shortly after died in the mountains of *Bángil*, according to some accounts, of the effect of his wounds. He was succeeded in office by his son, *Pangáting*, who took the name of *Adipáti Wíra Nagára*, and being allied by marriage to the chiefs of *Kedíri*, *Balambáng'an*, and *Grésik*, brought many of the eastern districts again to acknowledge the authority of *Mangkúrat Mas*. Additional forces were, in consequence, sent from Batavia by the Dutch, which arrived at *Semárang* in 1707, and immediately proceeded, first to *Kérta-súra*, and then to the eastward. Falling in with the enemy of *Mádion*, they put him to flight, and continued their march to *Surabáya*, where the disturbances which had broken out on the island of *Madúra* obliged them to halt.

On the death of the native chief of *Madúra* his eldest natural son, *Sástra Nagára*, had declared himself his successor, and placed troops round the island to oppose the landing of his uncle, *Ráden Súria Nagára*, who had been appointed to the succession by the Dutch. The Dutch, however, found means to satisfy both parties, by conferring the separate charge of *Sámpang* on *Sástra Nagára*.

At *Súmenap* they met with greater difficulty. The native chief, *Nága Sidérma*, had been stabbed by his secretary: the secretary was afterwards killed by the slave of the chief. A tumult was thus excited, and the Dutch commanding officer having given offence to the principal inhabitants they proceeded with a large proportion of the population to the northern part of the island. The Dutch at length succeeded in establishing the infant son of the deceased as chief of *Súmenap*, with the title of *Ráden Tumúng'gung Príng'ga Kasúma*, under the guardianship of his mother, *Rátu Sidáyu*. With these proceedings the campaign closed for that year^[275].

In the following year, 1708, the Dutch sent further reinforcements to the eastward, and preparations were making for opening the campaign, when the fugitive *Susúnan*, hearing of the arrival of the Dutch at *Surabáya*, sent ambassadors to their representative (Knol,) soliciting his pardon, and an assignment of some lands, independent of any other authority than that of the Dutch government. No sooner had he been promised this than he came to *Surabáya*, where he was received on the 17th July by Knol, who

delivered to him a letter of pardon written in the Dutch and Javan languages, promising to him the independent possession of a district as a principality, subordinate only to the Dutch government. But, alas! these concessions were soon found to be nothing more than a stratagem to get possession of the prince's person. The unfortunate *Susúnan*, unsuspecting of the treachery, was quietly embarked at *Surabáya* on the 24th August, and with his three sons, his wife, concubines, and attendants, conveyed to Batavia.

The Dutch accounts relate, that as soon as the prince arrived at Batavia, the commissioners, who had received him on board and accompanied him to the castle, demanded that he should deliver up his *kris* before being admitted to an audience, which he refused to do. When, however, introduced to the high regency, who had been especially assembled for his reception, he prostrated himself at the feet of the governor-general, surrendered his *kris*, and implored the fulfilment of the conditions on which he surrendered. The governor-general replied, that Mr. Knol had not been authorized either to grant him a pardon or to make promises, yet that government would take the matter into consideration: his *kris* was then returned to him. He was lodged in the castle as a prisoner of war, and soon afterwards transported to Ceylon.

The account of this transaction by the Javan writers is as follows:

"The *Susúnan Mangkúrat Mas* and the *Adipáti Wíra Nagára* (son of *Surapáti*) had not been long at *Málang* before they were attacked by *Pangéran Blítar*, and forced to seek safety in the forests with only a few followers. There they suffered severely from disease; and most of them dying, the rest removed to the land of *Blítar*, whence the *Susúnan* sent a letter to the chief Dutch authority at *Surabáya*, asking him why the Dutch had thus assisted the *Pangéran Púgar* against him, and deprived him of the sceptre which had descended to him from his ancestors, adding that he was himself equally the friend of the Dutch, that he had never harboured a thought injurious to them, and that if they still believed that he had been guilty of a fault against them, it would be well if they would point it out that he might exert his utmost to make amends: for this they might fully depend on him; 'therefore,' said he, 'let the Dutch place confidence in me, let them consider my youth, and that it is yet but a short time that I have been a sovereign.' To this the Dutch authority replied, 'If the *Susúnan* wishes to act

thus, and his intentions are good, let him come to *Surabáya*.' *Susúnan Mangkúrat* then requested, that if the Dutch would not again place him on the throne, they would assign him a province, in which he and his family might reside in peace. A promise being given to that effect he immediately proceeded to *Surabáya*, where he was received with all honours and the customary salutes, and afterwards entertained with the Dutch officers in the *Passangráhan* of the *Adipáti* of *Surabáya*. The Dutch authority at last said to him, with the utmost kindness and softness of speech, 'If the *Susúnan* has no objection, I am anxious that we should go to *Semárang* to see the commissary; from thence the *Susúnan* can at once proceed to *Kérta-súra*, and request the Dutch again to acknowledge him as sovereign of Java.' The *Susúnan* immediately assented to this arrangement. He was then, with his family and followers, embarked on board a ship; but instead of being conveyed to *Semárang*, he was taken to Batavia, and afterwards banished to Ceylon."

It appears, that after the arrival of *Mangkúrat Mas* at Ceylon he found means to dispatch letters of complaint to the prince of Orange and the Court of Directors in Holland. Two Mahomedan priests were charged with the mission, but the letters being intercepted, the messengers were subjected to severe punishment.

With *Mangkúrat Mas* was lost the celebrated *makóta*, or crown of *Majapáhit*. The regalia of the sovereigns of Java, with the exception of this important article, were duly delivered over, by order of the Dutch, to the acknowledged sovereign *Pakabúana*, but nothing more was ever heard of the crown, and since that time, the princes have worn a *cap*, as described in another place. As the Dutch were now become supreme on Java, a crown was perhaps but an empty pageant. It cannot, however, escape notice, that this proud ornament of state should first have been deprived of its brightest jewel, and afterwards, as there is too much room to suspect, filched by the Dutch, who probably stripped it of its remaining jewels, and melted down the gold for its value!

The removal of *Mangkúrat Mas* did not, however, extinguish the flame of internal discord which still blazed forth in the eastern provinces of Java, and which increased till the year 1712-13. The *Susúnan* sent several embassies to Batavia, requesting assistance against the chiefs of *Balambánga* and of the island of *Madúra*, as well as against the sons of *Surapáti*, who had their

hiding places in the mountains. On this occasion the Dutch sanctioned the nomination of the *Pangéran Mángku Nagára* as the hereditary prince, and promised the required succours against the rebels, but took care to point out the value which they put upon their assistance: a piece of policy which, on no occasion, they seem to have forgotten. They adverted to the immense sums they had at different times advanced, and the extent of the obligations which the *Susúnan* lay under to them, admonishing him to act with greater circumspection in future, and to adopt such measures as might put a stop to the civil wars and commotions which desolated the country.

It was not long, however, before various circumstances concurred to render the rebels still more formidable. The chiefs of *Surabáya*, *Probolíng'o*, and *Kédíri*, as well as those of *Madúra* and *Balambáng'an*, united at the instigation of the chief of *Wináng'un* (whose life had been unjustly attacked,) in a league to shake off the yoke of the *Susúnan*, and at the same time to rid themselves of the Dutch, whose aim they conceived to have been eventually to depose the *Susúnan*, and to render themselves sovereigns of the whole island.

A circumstance is related by the native writers, which is said to have contributed essentially to the distractions which at that time existed in the country.

"The Dutch requested that the *Susúnan* would immediately put the *Adipáti Jaíng Rána* of *Surabáya* to death, alleging that he was attached to the cause of the rebels, and that if an example were made of this chief, it would strike fear into the others. On this the *Susúnan* became excessively grieved at heart, for he was sincerely attached to the *Adipáti*; and now that the *Panambáhan* of *Madúra*, who had been as his right hand, was dead, if he were to lose the *Adipáti* of *Surabáya* also, who had been as his left hand, he would in truth find that he had lost both hands. He wished, therefore, to refuse compliance with this request; but at the same time feared, that if he disappointed the Dutch, there would be an end of his friendship with them. On these two accounts he gave the subject his deepest consideration. At length he wrote a letter to the *Adipáti*, informing him of the request made by the Dutch; and to the Dutch at Batavia he wrote in reply, that he wished to reflect upon the affair, until the time appointed for the chief to pay his usual visit to the capital should arrive.

"As soon as the *Adipáti* of *Surabáya* received these tidings he assembled his brothers and his *Páteh*, named *Wíra Tantáha*, and showed them the letter. His brothers immediately advised that they should unite and oppose any one, whoever it might be, who should attempt the life of the *Adipáti*; for, said they, 'Is it not better to die nobly 'in war, and to let one's enemies know how dearly the death of our brother is to be purchased, than to be quietly killed in one's bed? will only know of the death and not of its value.' But the *Páteh* replied to them, 'What you say is correct, and in the service of the state we are bound to act as you advise; but this is a request made by the general, that the *Adipáti* should be put to death. Is it not better that he should deliver himself up? for if he does not there will be a rupture between the general and the *Susúnan*, and then (which God forbid) the land of *Jáwa* will be destroyed, and universal misery will follow. You have now, for a long time, enjoyed happiness and a good name, and now that you have grown old in honour, it would not be fitting in you to do any thing that could bring sorrow or ruin on your sovereign, or that would disgrace your followers or descendants, which would be the case if you now got a bad name.' The *Adipáti* was well pleased with the advice of his *Páteh*, and after considering for a short time, then addressed him, 'What you say is true, oh *Páteh*! I am old, and have not long to live. It is indeed right that I should deliver up my life for the benefit of my sovereign and the character of my family.'"

This resolution being taken, the *Adipáti* shortly after set out for *Kértasúra*, accompanied by his brother and about two thousand followers. When he arrived, the *Susúnan* inquired how he wished to act; to which he replied, that he preferred to die rather than to be the cause of misfortune to his sovereign or to the people of Java; that he was now old; that if his life was spared on this occasion he could not expect to live many years, and that he was already satisfied with this world. The *Susúnan* then said, if such was his determination and wish, he must of course follow it, but urged him to speak his mind freely, adding that he would think of it, and do what would turn out best for him: but the *Adipáti* replied, that he had no other wish than what he had already expressed; that it was much better that he should die, than become the cause of misfortune to others. All he requested was, that after his death the *Susúnan* would not be forgetful of his family and children, and that until his son was of a proper age, his brother, *Ráden Jáya Puspíta*, might succeed him in his public administration. The *Susúnan* then

said, "It is well. If the Dutch again make the demand you must prepare for your fate; and I promise you that, in that case, your request shall be complied with." At the expiration of about a month, during which period the *Adipáti* clothed himself in white and gave himself up entirely to his devotions, another letter arrived from the Governor General, making a peremptory demand that the *Adipáti* should be immediately executed. The *Susúnan* then sent for the *Adipáti*, and directed that he should be brought into the *dálam*. Dressed in white, he immediately attended the summons. When he reached the entrance *sri meng'ánti*, he quitted his followers, who were not allowed to come further but remained without; and the people who guarded the entrance of the *kráton*, having received the orders of the *Susúnan* to that effect, seized him, and plunging their weapons into his body, immediately dispatched him. They then carried out the corpse and gave it to his followers, charging them to give it proper burial. They were all struck with deep grief at the sight, for the *Adipáti* was much beloved. They interred the body at *Lawéan*, but immediately afterwards the brother, with about two thousand followers, assembled in the *alun alun*, determined upon vengeance, and the disturbance was not quelled until the *Susunán* entered into an explanation. He then appointed *Jáya Puspíta* to succeed provisionally to the administration of his deceased brother, and otherwise conciliated the parties, who were at last induced quietly to return to *Surabáya*; not, however, without a determination of one day being revenged on the authors of this calamity. On receiving the appointment from the *Susúnan*, while *Jáyá Puspíta* returned their grateful acknowledgments for this mark of kindness, they as openly avowed that they would never rest in peace, until they had given a due return to whoever was the cause of their brother's death.

"In pursuance of this determination, *Jáya Puspíta* took an early occasion to league with other discontented chiefs, and soon became the most formidable enemy to the tranquillity of the country.

"The forces of the *Susúnan* were completely defeated in a pitched battle, and the rebels made themselves masters of several important provinces to the eastward of *Pasúruan*, which place they also besieged until the arrival of the Dutch auxiliaries. They were then driven beyond *Panarúkan*; but being reinforced from *Báli*, soon forced the combined Dutch and Javan troops to retreat again to *Pasúruan*."

The effect of this civil war was now severely felt at Batavia. The country was laid waste, cultivation was neglected, and a great scarcity of rice was felt at Batavia. This induced the Dutch to march a more considerable force in 1717, and again to take an active part in re-establishing the tranquillity of the country.

On the arrival of this force at *Madúra*, it was found that the chief of that island had made two unsuccessful attacks on the troops of *Pamakásan* and *Súmenap*, and been forced at last to leave his capital with his son, brother, wives, and relations, and seek safety with the Dutch.

"When *Pangéran Chákra Deníngnat*," say the Javan authors, "saw that nothing more was to be done against his enemies," he resolved to throw himself on the protection of the Dutch; and a Dutch ship arriving at *Madúra* he dispatched a letter, soliciting their assistance. This letter the captain forwarded to *Surabáya*, and received the instructions of the admiral to take the chief and his family on board, and convey them to that capital. The captain immediately sent a messenger on shore to the *Pangéran*, informing him of the wishes of the admiral, and inviting him to come on board with his family. *Pangéran Chákra Deníngnat*, who was unconscious of treachery or duplicity, and consequently void of suspicion, with a joyful heart accepted the invitation, and, accompanied by his family, immediately went off in a small fishing-boat. When arrived alongside of the ship, the followers who carried the *upachára* (emblems of state) were ordered to go on board: after them the *Pangéran* himself ascended, and then his wife, *Ráden Ayu Chákra Diníngnat*. When the *Pangéran* came upon deck, Captain Curtis took him by the hand, and delivered him over to one of his officers, who immediately led him into the cabin. The captain remained till the *Ráden Ayu* had ascended, and as soon as she came on deck he likewise took her by the hand, and after the European manner kissed her cheek. Not understanding the custom she became alarmed, and thinking that Captain Curtis was offering an insult to her, screamed out, and called aloud upon her husband, saying, "the Captain had evil intentions." The *Pangéran* hearing the cries of his wife became furious, and drawing his *kris* rushed out, and without further inquiry stabbed the Captain. The attendants of the chief, who had come on board with the state ornaments, following the example of their master, raised the cry of *amók* and immediately fell on the crew of the vessel. The latter, however, were too powerful for them, and in a short time

the whole of the Madurese party were killed, together with the chief and his wife.

When a question arises respecting the chastity of the Javan women, this story is usually referred to.

The rebels, both in the eastern provinces of Java and on *Madúra*, were joined by auxiliaries from *Báli*. Those, however, on *Madúra* were soon overmatched by the Dutch troops, and obliged to fly again to *Báli*. *Jáya Puspíta* was more successful. Moving from *Surabáya* through the central districts towards *Kérta-súra*, he subjected the provinces of *Jápan*, *Wírasába*, *Kedíri*, *Mádion Sukawáti* and the neighbouring districts. While his head quarters were at *Kedíri*, he was joined by *Pangéran Dípa Nagára* one of the sons of the *Susúnan*, who setting himself up as sovereign of Java, under the title of *Panambáhan Héru Chákra Senapáti Panatagáma* appointed *Jáya Púspita* to be his *Páteh*, with the title of *Ráden Adipáti Panatagáma*, and commenced the establishment of a government at *Mádion*.

An army was sent from *Kérta-súra* against *Mádion*, under the command of *Pangéran Blítar*, another son of the *Susúnan*; but before they reached that place the *Pangéran* was summoned to return, in consequence of the severe indisposition of his father. This prince died in the Javan year 1648, and was buried at *Megíri*. He had previously written to the Dutch authorities, requesting them to select one of his three sons *Pangéran Adipáti Amángkunagára*, *Pangéran Purbáyá*, or *Pangéran Blítar*, to succeed him in the government.

Thus ended the reign of a prince, which had been one constant scene of commotion and rebellion, directed perhaps not so much against the authority of the prince himself, as against the Dutch, who now took so active a part in the affairs of Java, that the power of the native sovereign was merely nominal.

The Javan writers, whether from a desire to exclude from the regal line a prince who thus became the mere puppet of the Europeans, or from a conviction of the truth of the circumstance, seem anxious to prove that he was not the real son of *Susúnan Tegál Arom*, as related, but a son of the *Pangéran Kajuran*, father-in-law of *Trúna Jáya*, and who afterwards, when he established himself in the southern hills, took the name of *Panambáhan*

Ráma. The story runs, that the *Rátu* of *Mangkúrat* being delivered of a deformed and imperfect offspring, the *Susúnan* secretly sent the child to *Kajúran*, who was supposed to deal in witchcraft, and that the *Pangéran* took the opportunity of destroying it, and substituted his own child in its place. This child, however, was born of a daughter of *Pangéran Purbaya*, the younger brother of Sultan *Agong*; so that on the mother's side it was of royal extraction. "But," say the Javan writers, "as the present princes of Java are descendants from *Pakubuána*, this story is not talked of in public; although in private societies there are many who put faith in it."

On the 13th of December, 1705, articles were agreed upon with the Sultan of Bantam, to ensure the weight and quality of the pepper to be delivered.

On the 9th of October, 1708, a further contract was entered into with the sultan, with the view principally of renewing and confirming the contracts, bonds, deeds of remission, &c., entered into and concluded with his predecessors.

In August, 1731, another contract was entered into with the sultan, of which the following were the most interesting articles.

That all Búgis, Maláyus, Javans, and other native traders, shall be allowed freely to dispose of their wares at Bantam, without any interference on the part of the Dutch Resident, provided they do not trade in articles which constitute the Company's monopoly. The subjects of Bantam shall be permitted to trade to Java on condition that they do not abuse the confidence thus placed in them by engaging in illicit commerce. The sultan promised to adopt immediate measures for increasing the annual deliveries of pepper to the Company, and engaged to hold out every possible inducement to the *Lámpung* people to extend the cultivation of the article, instead of depressing them by unnecessary acts of severity. A deed was also executed about this time ceding *Púlo Pánjang* to the Dutch, for the purpose of keeping an establishment on it for assisting vessels in distress.

On the 9th December, 1733, a further contract was entered into with the sultan of Bantam, by which many regulations were made respecting the pepper monopoly.

Being called upon to renew the bond for the sum of six hundred thousand Spanish dollars in favour of the Dutch, the sultan, after previously stating

whence this *lawful* debt originated, bound his kingdom and revenues for the same, and at the same time conferred on the Dutch the exclusive trade in pepper and other privileges. The deed of remission, bearing date 28th April, 1684, was further renewed, by which a conditional remission of the above-mentioned bond was granted. An act of donation from the price of ground, called *kámpung báli*, was at the same time granted.

Of the three sons of the deceased *Susúnan*, the Dutch government made choice of the *Pangéran Adipáti Amángku Nagára*, as his successor; he was accordingly publicly installed, under the title of *Susûhunan Prábu Senapáti Ingalága Abdul Ráchman Sahídin Panatagáma*.

The first and principal event in this reign was the rebellion of the younger brothers of the prince, *Pangéran Purbáya* and *Blítar*, occasioned principally by their being deprived of the lands and honours which they had enjoyed during the lifetime of their father. They first raised a party in the capital, and made an attempt, during the night, to enter the *kráton* and put the *Susúnan* to death, but being repulsed, they fled to *Matárem*, and collecting their followers, the youngest (*Blítar*) assumed the title of *Súltan Ibni Mustápha Pakubúana Senapáti Ingalága Abdul Ráchman Patagáma*. His brother, *Purbáya*, was satisfied with a secondary authority, under the title of *Panambáhan Senapáti Ingalága*.

In a short time the provinces of *Bányumas*, *Matárem*, and *Kedú*, submitted to these chiefs, and a union taking place with the party under *Panambáhan Héru Chákra*, the authority of the newly elected *Susúnan* became endangered.

Pangéran Aria Matárem, uncle of the *Susúnan*, at the same time quitted *Kérta Súra*, and reared the standard of rebellion in *Grobógan* and *Blóra*. This chief was, however, soon after decoyed into the hands of the Dutch in the following manner.

"The *Pangéran* was induced to go to *Páti*, and afterwards to *Japára*, on an understanding that the Dutch would raise him to the throne, where troops were immediately assembled, apparently for that object, but in reality to secure his person. On his arrival at the fort with his family, he was received with salutes of cannon and small arms, and separated from his followers, who were excluded. After he had been seated a short time, the gates of the fort were shut, and the *Pangéran* and his sons were disarmed, and placed in

close confinement. He died in a few days. When the gates of the forts were closed, the followers of the *Pangéran* suspecting the treachery, would not disperse, until many were destroyed and the rest fired upon."

The Dutch force uniting with those of the *Susúnan*, the rebels, who were now united under the sultan *Ibni Mustápha*, were defeated, and obliged to retreat to *Kedíri*. Here they were pursued, again beaten, and driven in disorder to *Málang*. The sultan fled to *Gúnung Dampúlan* with only a few followers, while *Panambáhan Senápáti* and *Panambáhan Héru Chákra* rallied their remaining forces at *Lamájang*. The Dutch army now returned to *Kérta Súra*, and the tranquillity of the country was once more for a short time restored.

Sultan Ibni Mustápha having returned to the village of *Káli Gángsa*, was seized with a violent illness and died, and his family and followers, worn out with fatigue, conveyed the body to *Kérta Súra*, and threw themselves on the mercy of the *Susúnan*. Notwithstanding this unconditional submission, their chief, *Jáya Bráta*, was immediately put to death, and his body thrown into the river: the body of the deceased sultan, however, received honourable interment.

The rebels established at *Lamájang* still held out, and it was not until the arrival of a considerable Dutch force at *Surabáya* that they were induced to submit. According to the native writers, "The Dutch commander wrote from *Surabáya* to the rebel chiefs at *Lamájang*, informing them that he had been ordered to the eastward with a formidable force purposely to destroy them, and that if they did not quietly submit, he would force them to do so, in which case no quarter should be given, adding at the same time, that if they were willing to submit quietly, they should be received with favour, treated with kindness, and want for nothing during their lives. The chiefs seeing no prospect of success from further opposition, were induced to close with these terms. Accordingly *Panambákan Senápáti* and *Héru Chákra*, with *Adipáti Náta Púra*, attended by only a few followers, surrendered themselves at *Surabáya*, where they were received with great honour, the firing of cannon and musketry, and by the sound of the *gámelan*, which struck up on their approach. It was not long, however, before their persons were placed in confinement, and they were embarked on board a ship from Batavia, from whence *Panambáhan Héru Chákra* and *Adipáti Náta Púra* were afterwards banished to the Cape."

The only circumstance from which the peace of the country appears to have been subsequently disturbed during the reign of this prince, was by a *kráman*, or rebel, named *Ráden Ibráhim*, who gave himself out as a descendant of *Surapáti*; but this movement was instantly suppressed, and all that arose out of it appears to have been an attempt on the life of the *Susúnan*, made by a woman, who with a small party endeavoured to force her way into the *kráton*, but with several of her followers was killed in the attempt. The authority of the prince was now fully established; and in return for the services rendered by the Dutch in the late war, he was required to enter into a new treaty with the Dutch, containing the following, among other less interesting stipulations.

In acknowledgment of the services lately rendered, and also to his highness's forefathers, and in consideration of the considerable quantity of rice still owing by him to the Dutch, on the deliveries stipulated by the contract of 1705, his highness now promised to deliver to the Company annually at Batavia, with his own vessels, for a period of fifty years, to commence from the year 1734, a quantity of one thousand *koyans* of good rice, or its equivalent in money, it being at the same time understood that the Dutch are not bound to take money for any proportion of the said annual delivery, except when it was sufficiently proved that a failure of the crop of rice rendered it impossible to supply the whole quantity.

That with the view to encourage the cultivation of pepper, the Dutch should, in future, pay five rix-dollars for each *píkul* of that article; while, on the other hand, the *Susúnan* engaged to issue an edict, directing the total annihilation of the coffee culture, with the exception of a few plantations near the houses of the regents, for their own amusement and consumption, but by no means for trade, on severe penalties. The *Susúnan* moreover authorized the Dutch to cause all plantations, without distinction, in the low countries, on the coast, or in the mountains, to be destroyed, and to confiscate, for their joint profit, any quantity of coffee which might be found, for purposes of trade, in the hands of any of his highness's subjects, at the expiration of six months from the date thereof. That his highness should direct the coast regents to deliver, in the year 1734, the annual quantity of timber for repairing and extending the forts of *Semárang* and *Japára*, the other materials being furnished by the Company. The seventh article stipulated for the delivering annually about ten thousand beams of

teak timber (specified) at *Japára*, *Demák*, *Walíri*, and *Brébes*, the same to be duly paid for on delivery; and the Dutch engaged to assure themselves that the regulation should be complied with, by causing the residents of the timber places to transmit the receipts and other vouchers relative thereto, while, on the other hand, the *Susúnan* promised to take care that the timber should be of good quality and of the stipulated dimensions.

The Dutch remitted to the *Susúnan* the arrears on account of the quantity of rice (the delivery of which was stipulated by the contract of October, 1705), consisting of no less than 6,537 *koyans*; and also the sums advanced by them in the wars and during his minority, on condition that, on the part of the *Susúnan*, all previous treaties, deeds, and charters, contracted and granted by his highness's predecessors, should be fulfilled by him; in default whereof the above pretensions were to regain their full force and value. It was further agreed that the Dutch should remain in possession of their former commercial privileges at Java, his highness promising to render the Dutch trade still more flourishing and considerable, and to increase the deliveries of cotton thread. His highness further bound himself to supply every day two hundred and forty *báturs*, or Javan labourers, for the service of the fort, free of expense to the Dutch.

The act which closed the reign of this prince, and which affords good evidence of the undisturbed state of public affairs at the period, was a visit to the burial-place at *Bútah*, where *Kiái Agong Bútuh*, and sultan *Pájang* had been interred. The Javans have such a superstitious veneration for this spot, that they declare it is never overflowed, notwithstanding the waters rise to a considerable height round it, and that it is lower than the adjoining ground. Here the prince was taken ill, and after a long confinement died, in the Javan year 1657.

He was succeeded by his son, under the title of *Susúnan Pakubuána Senapáti Ingalága Abdul Ráchman Sáhedin Panatagáma*, who ascended the throne when he was only about fourteen years old, and was yet unmarried.

The young prince was entirely under the superintendence of *Dánu Réja*, his father's prime minister, until, as he attained maturity, he by repeated acts shewed a disposition to shake off the controul of that chief. He was desirous of appointing *Chákra Níngnat* to be *Widána* of the eastern districts of *Pasúruan*, *Bángil*, and *Probolíng'o*; but that chief being on bad terms with

the minister *Dánu Réja*, the *Susúnan* privately, and without the knowledge of the minister, wrote to the Governor-general at Batavia, requesting his sanction to the measure. Shortly after this the *Susúnan* made a further application to the Dutch, that they would remove from Java the person of *Pangéran Ria Mángku Nagára*, on a plea that he had been discovered in an improper intimacy with one of his concubines. On this occasion the minister, *Dánu Réja*, was dispatched to Batavia; and the interview he had with the Governor-general is thus related by the native writers:—"The General was displeased with *Dánu Réja*, because he had not adjusted these two affairs; and afterwards, when he went to Batavia with presents from the *Susúnan*, the General asked him if he was willing that *Chákra Níngnat* should be *Widána* of the three districts? *Dánu Réja*, not aware of the application made by the *Susúnan*, replied, that if that chief was entrusted with so extensive an authority he should tremble, as the heart of *Chákra Níngnat* would thereupon become great; for he had already been married to the *Susúnan's* sister. The General observed, that it was easy to remove this uneasiness from his mind. 'Let,' said he, 'this chief be under the authority of the Dutch only. Let him pay the money tribute to the *Susúnan*, but in other respects let not the *Susúnan* trouble himself about him. Let him look to the Dutch only for keeping him under due restraint.' To this *Dánu Réja* replied, 'If such is the wish of the General, I cannot follow it, because I fear that hereafter the *Susúnan* would object to such an arrangement, and, repenting of having followed the General's advice, would be justly enraged against me and my successors, for having in any way consented that *Chákra Níngnat*, or these lands, should be placed under the immediate authority of the Dutch.' A pause then ensued. At length the General resumed, and in a peremptory and angry manner demanded of the minister, why he had not prevented the *Susúnan* from applying for the banishment of his brother, *Ria Mángku Nagára*, observing that it had not yet been proved, that he was guilty of any offence against the *Susúnan*. *Dánu Réja* replied, 'The offence of the *Pangéran* is clear and decided; it is known to many that he had an attachment for the *Susúnan's* concubine.' He therefore requested he might be banished the island, adding, that he would request the *Susúnan* to make a proper provision for his maintenance. The General conceiving that *Dánu Réja* was not inclined to follow his wishes, became enraged, and desired him not to trouble himself further about the *Pangéran*, saying that, whether he was banished or not, was not his business; it depended entirely on the

government. He then dismissed him to his *póndok*, where the minister was allowed to remain upwards of a year, until the death of the General, when, on the elevation of his successor, he was directed to return to *Kérta-súra*. While thus detained at Batavia, he was repeatedly visited by some of the counsellors, urging him to accede to the wish of the General respecting the lands; but he continued to use to them the same arguments he had before used to the General."

After the return of *Dánu Réja* to *Kérta-súra*, he is represented as having had an interview with *Wangsarána*, a celebrated devotee, who resided in the first *Kalángbrit*, and who foretold the misfortunes which were to ensue.

On demanding of this *tápa* what would be the future fate of *Kérta-súra*, he replied, "that it was destined to misfortune, destruction, and sorrow: *Ráden Más Sujána* and *Ráden Mas Sáyed* will however profit by it." This *Ráden Sujána* was a younger brother of the *Susúnan* by a concubine, and afterwards took the name of *Pangéran Mangkubúmi*. *Ráden Mas Sáyed* was a cousin to the *Susúnan*, son of his elder brother, *Pangéran Mangkunagára*, who had been sent to Batavia with a request that he might be banished. They were both at this time youngest children (*timur*).

This prophecy made a deep impression on the mind of the minister; and his uneasiness became still greater, when one day a woman, named *Niái Súka Wáti*, came to him from her mistress, *Rátu Agong*, the mother of the *Susúnan*, saying that the *Rátu* had just dreamt that she beheld the moon descend from the heavens and rest on the top of the large *dúku* tree in the *kráton*; and that this had no sooner occurred, than that *Ráden Mas Sujána* immediately came, and seizing hold of the moon swallowed one-half of it, the other half slipping from his grasp, and resuming its place on the top of the tree: the *Rátu* then awoke and found it daylight. These were the first signs of what was soon to befall *Kérta-súra*.

The fate of the minister was, however, to be first decided; for on the occasion of the *Susúnan* raising a chief, named *Súra-Diníngrat*, to be *Bopáti of Pakalúngan*, with a thousand *cháchas*, without the knowledge of the minister, the latter refused to acknowledge him in that capacity; in consequence of which the *Susúnan* requested the Dutch to arrest him, and banish him from the island. As soon as the Dutch had consented to do so, the unfortunate minister was dispatched to *Semárang* on a special embassy

from his master, where he was decoyed into the Dutch fort and confined. He was soon after embarked for Ceylon, in the same vessel which conveyed *Pangéran Ria Mángku Nagára*, at whose feet he fell, acknowledging the justice of his own punishment, for having assisted in the banishment of that chief, who had in fact committed no fault. The *Susúnan* then appointed *Nátu Kasúma* to be his minister.

Accounts were now received from Ceylon of the death of the ex-*Susúnan Mangkúrat Mas*, and at the request of the *Susúnan*, the family of the deceased were permitted to return to *Kérta-súra*. On these were conferred distinguished titles and considerable assignments of land. To *Mángku Nagára* the *Susúnan* gave the name of *Wíra Mengála*, with one thousand *cháchas* of land; to *Mángku Níngnat* he gave the name of *Pangéran Tépa Sána*, with nine hundred *cháchas*; and to *Ráden Jáya Kasúma* he gave the title of *Pangéran*, with three hundred *cháchas*. *Pangéran Purbáya*, who had assumed the title of *Panambáhan Senapáti Ingalága*, shortly after died at Batavia, and his body was conveyed to *Megíri*. The eldest son of this chief married a younger sister of the *Susúnan*, and received the title of *Pangéran Purbáya*, with an assignment of *sáwa*. The *Susúnan* became much attached to him, and at length followed his counsel in all things. "What was right was declared wrong, and what was wrong, right, just as he pleased, and the *Susúnan* believed it."

This increasing influence of the *Pangéran Purbáya* alarmed the minister, who secretly acquainted the Dutch with it, and by their interference the *Pangéran Purbáya* was removed from the councils of the prince, and obliged to fix his residence at a distance from the capital.

Various signs now foreboded approaching war and misfortune, and led the people to expect that *Pangéran Tépa Sána* would attempt to regain the throne of his ancestors. The *Susúnan* and his ministers entirely disregarded these signs; but *Pangéran Wíra Mengála* sought the friendship of the Dutch commandant, in the hope of obtaining his assistance.

At this time occurred the rebellion of the Chinese at Batavia; and as the Dutch accounts of the transaction are far from complete or satisfactory, I shall quote two Javan records without variation. One of them is as follows:

"The city of Batavia was now in the highest state of prosperity: traders came from all quarters, merchandize was in abundance, and the slaves were

numerous. The latter becoming arrogant, in consequence of the wealth and power of their masters, committed outrages on the Chinese, in the first instance by beating them, and afterwards by attempting their lives. At first there were but few who committed these outrages, but at last they formed themselves into parties and committed more public acts of hostility. The Chinese applied to the European officers in authority, to put a stop to these outrages, or to punish those who committed them: they could, however, obtain no redress, the slaves testifying with one accord that the Chinese were the aggressors. The Chinese finding they could not obtain justice from the great people, assembled near the sugar mills at *Gandária*^[276], to the number of more than a thousand, and chose a chief, with the determination to oppose the Dutch and the slaves; but as yet they thought it advisable not to do so openly, and therefore committed their depredations in small parties during the night. The Dutch, as soon as they heard of this, empowered several natives from *Sábrany* (of the opposite coasts and islands) to take up the Chinese who were at *Gandária*; these people succeeded in apprehending the Chinese one by one, and as soon as they gave them over to punishment they received a reward of six ducatoons for each. In this way they secured about two hundred. These were immediately embarked on a vessel to be banished to another country, but when they had got out to sea they were all thrown overboard. Many of them who could not swim perished; but a few having succeeded in reaching the shore, found their way to *Gandária*, and related to their companions how they had been treated. The Chinese, upon this, concluding that the Dutch had resolved to extirpate their race, now openly prepared their warlike instruments, gave notice to their countrymen at Batavia of the manner in which the Dutch had determined to destroy them, and requested that those who were willing to join them would immediately repair to *Gandária*. The Chinese in other quarters, equally harassed by the slaves, against whom they could gain no redress, became of one mind, when they received the intelligence of their countrymen having been thrown overboard by the Dutch, and when they reflected that the destruction of their race was determined; they therefore collected quietly at *Gandária*, until their numbers amounted to upwards of five thousand. Here the whole placed themselves under the orders of a chief, named *Sípanjang*."

The other account is as follows:

"It is related of Batavia, that General Valkenier was excessively liberal in his favours to the Chinese. The consequence of this was, that of all the races then resident at Batavia, with the exception of the Dutch, none were so wealthy as they. Whatever was profitable fell into their hands, while the other races, the natives of the country and the adjacent islands established there, found it difficult to discharge the duties and demands made upon them. On this account all these races became discontented with the Chinese; and as it is usual with the latter for their hearts to swell as they grow richer, quarrels ensued, and disputes continually took place between the parties. These increased, until complaints were carried before masters of slaves, where slaves were concerned, and before the regular courts, where free people were concerned. But the Chinese being always defeated in these suits, and fined for their conduct, they assembled in bands, for the purpose of revenging themselves, and began to plunder the villages in the neighbourhood of the town. This happened in the Javan year 1663 (*gúna-rása-móbah jalma*)^[277].

"It is related that at this time there was at Batavia a certain *Edel Heer*, the Baron Van Imhoff, who had arrived from Ceylon. On his arrival at *Jokarta*, he learned from General Valkenier the particulars of the conduct of the Chinese, who were thus committing depredations in the villages; he said there were too many Chinese at Batavia, and proposed that a proportion should be sent to Ceylon. This was accordingly agreed to by the high council, and a search was in consequence made to take up the poorest of these, that they might be transported to Ceylon. The expences, in the first instance, were to be advanced by the Dutch, who were afterwards to be reimbursed when the Chinese should have acquired the means at Ceylon. The Chinese captain was accordingly directed to beat the *gong*, and give public notice of this order; but there was not one Chinese inclined to follow it: and in order to carry the proposition of Van Imhoff into effect, it was agreed to arrest all the Poor Chinese. This order was given to the captain of the Chinese, but he declined to arrest his countrymen. Van Imhoff then inquired by what distinction of dress he might know the rich from the poor? The captain replied, "the clothing of the Chinese which may be considered a proof of their being poor, is black (blue)." Upon this the governor directed the *Baillieu* to arrest all Chinese so dressed; and the *Baillieu* again entrusting the execution of this order to his *Máta Máta*, who belonged to the races inimical to the Chinese, the latter, to gratify particular enmities,

arrested many who did not wear blue, some of them of the most respectable families. The Chinese, in general, were much offended, when shortly the whole of those who were arrested, were embarked on board ship apparently for Ceylon; but they had been only a few days at sea, when they were *amók'd*. Most of them were killed, and the rest were thrown overboard. Of these some escaped to land, and arriving secretly at Batavia, communicated to their countrymen the particulars of the cruel treatment of the Company towards them. On this all the chiefs of the Chinese entered into an agreement to raise the standard of rebellion against the Dutch, and to endeavour to carry the fort of Batavia. There were, however, one or two who did not chuse to become the enemies of the Dutch.

"A Chinese named *Liu Chu*, informed the government of what was going on among his countrymen, for which he received a reward of eighty ducats, and other valuable presents, with a promise of future patronage. This man went as a spy to the Chinese at *Gandária*, and endeavoured to persuade the chief to submit to the Dutch, promising him free pardon; but *Si-pánjang* suspecting that, however fair might be the promises of the Dutch in the first instance, they would not fail to revenge themselves upon him, by seeking out some offence of which to accuse him, would not listen to these overtures. The Dutch then ordered, that of the Chinese who were at Batavia, such as wished to join their countrymen at *Gandária* might do so, but that such as wished to follow the Dutch, must shave their mustaches as a sign, and deliver up all their sharp instruments of every description, even to the smallest knife, and neither burn a lamp nor make a fire at night. All the Chinese within the city were inclined rather to remain in their houses, and conform to the wish of the Dutch according to this order, than to quit their houses and join their companions at *Gandária*. The Dutch troops were now making preparations in the fort, and shut the gates of the city, hearing that the Chinese from *Gandária* were approaching. These came towards Batavia in three parties, burning and laying waste every thing in their way, until they arrived close under the walls, in numbers not less than ten thousand. Some of the guns being inefficient, the Chinese became bolder, and made a furious attack in which they were repulsed with great slaughter. In this affair the Chinese are estimated to have lost one thousand seven hundred and eighty-nine lives. They retreated in confusion, but assembled again at *Gáding Meláti*.

"The next morning the Dutch landed all the sailors from the shipping in the roads, and having confined the Chinese to their houses, according to the regulation, the Dutch government gave orders for their own people, the free black inhabitants, and the native Christians belonging to the fort, to slay all the male Chinese, old and young, who were within the city. Of these, amounting to nearly nine thousand souls, only one hundred and fifty escaped to join their countrymen at *Kámpung Meláti*. The property of all the Chinese was seized by those who committed the slaughter, not one of whom was killed, the Chinese having previously, as before related, delivered up their weapons to the Dutch.

"After this the Dutch troops, to the number of eight hundred Europeans and two thousand natives, under the orders of the Baron Van Imhoff, proceeded to *Kámpung Gáding Meláti*, where the Chinese under *Si-Panjang* had entrenched themselves in considerable numbers, and soon drove them from this position. The Chinese then retreated to *Paning'-gáran*, where also they were defeated. The loss of the latter affair was on the part of the Dutch four hundred and fifty, on that of the Chinese eight hundred."

While these transactions were going on at Batavia, many of the *Bopátis* of the coast provinces had arrived at *Kérta Súra*, to present themselves at court, according to custom, at the ensuing *múlud*. The *Bopáti* of *Demák* informed the minister, *Nála Kasúma*, that before he quitted his district, the Chinese, in considerable numbers, had assembled in arms and elected a chief of their own nation, named *Síngseh*. The *Bopáti* of *Grobógan* also reported, that the same thing had taken place in his district, in consequence of their having heard that the Dutch at Batavia were determined to destroy every Chinese on the island. On this the minister waited upon the *Susúnan*, and informed him of these commotions. The *Susúnan* replied, that he had already heard of what was going on at Batavia, and was much surprized that the general had not sent him any intimation of the insurrection. The *Ráden Adipáti* observed, that perhaps it would not come to any thing, and that very probably the disturbance would subside of itself. To this the *Susúnan* replied: "if so, it was well; but if the war was brought into his country, what was he to do? He feared this was to be apprehended, or why should the Chinese on his lands be thus preparing to defend themselves against the Dutch. It is proper at any rate," added the *Susúnan*, "that we should agree with all the *Bopátis* who were assembled, whether it would be most

advisable to assist the Dutch or the Chinese, for if the war is to be brought into my country, it appears to me that this point must soon be determined. In the mean time should this event happen, let them fight between themselves, don't let us interfere or assist: don't drive the Chinese away." On this the *Ráden Adipáti* observed, "that if the general requested their assistance, they were bound, according to treaty, to afford it." The *Susúnan* replied, "if the general requests assistance from me in men, it is an easy matter, and we can readily chuse the right course, but he must not force me to render assistance." The *Ráden Adipáti* then said, "as this was the wish of the prince, he would assemble the chiefs and be ready to give assistance to the Dutch, should they request it." The *Susúnan* replied, "very well, let them agree how to act."

The *Ráden Adipáti* then proceeded to his house, where, assembling the chiefs, the point was discussed as follows. The *Ráden Adipáti* having informed them of the desire of the *Susúnan*, that they should agree how to act, in the event of the war between the Chinese and Dutch being brought into the *Susúnan's* country, whether they should assist the Dutch or the Chinese. The *Adipáti* of *Pakalóng'an*, *Jáya Níngnat*, first delivered his sentiments. "I think it is best," said he, "that the *Susúnan* should assist the Dutch, but on condition they should release him from all the burthens which have been imposed upon his ancestors." The *Ráden Adipáti* said, "That is good; but I must remain of opinion, that the Chinese who are on Java do not concern our affairs as to the Dutch: they are not under my orders; they are only engaged in trade; they have done good, and brought profit to Java: why must we assist the Dutch, and destroy the Chinese?" *Depáti Jáya Níngnat* replied, "It is true the Chinese do not interfere with our business, and it is our own fault that we have any thing to do with the Dutch. Is it not better to take this opportunity of ridding the *Susúnan* of the exactions he is under to the Dutch? Let us assist them; they are strongest. The Dutch are as iron, the Chinese as tin: therefore it is better to assist the party most likely to be victorious." The *Ráden Adipáti* observed, "that it was on account of the Dutch being so strong that he thought it wrong to assist them; for," added he, "if we do they will only become more powerful and great, when perhaps we shall not be able to oppose them, and must remain entirely at their mercy. Is it not better, therefore, to destroy their strength while they are not too powerful for us?" The *Depáti Jáya Níngnat* then said, "If on this account we do not like to assist the Dutch, let us not assist the Chinese, but

remain neutral, and leave them to fight it out among themselves." The *Ráden Adipáti* said, "That would not be according to the will of the *Susúnan*: he wishes to take part with one or the other, and he only asks which." The other *Bopátis* inclined to the advice of *Jáya Níngnat*; but observing the desire of the *Ráden Adipáti* to assist the Chinese, were silent, concluding that the part he took was in conformity with the wish of the *Susúnan*. The *Tumúng'gung* of *Grobogán*, *Ráden Méрта Púra*, then said, "We are as the people who bear two burthens: the Dutch are on the right shoulder, the Chinese on the left; if we throw off one the other still remains. If we can accomplish it, why should we not get rid of both? In the first instance, let us assist the Chinese, and get rid of the Dutch; when that is done we can easily get rid of the Chinese also." *Depáti Jáya Ningrat* replied, "It is very well for you to wish this, but perhaps you are not sufficiently strong to effect it. In an affair of this importance we should consider the consequences. If we succeed, it is well; but if we destroy one party we commit an offence against the Almighty: what then if we destroy both parties, who have done us no harm? You must have read in history what has happened in the land of Java, and what occurred to those who injured others who did not offend them. Recollect, for instance, the case of *Jaing Rána* of *Surabáya*, who was put to death unjustly: was his death not avenged, and for this one innocent life was there not afterwards a retribution of sixteen lives?" *Mérta Púra* was embarrassed, and knew not what answer to make. The *Ráden Adipáti* laughed, and was followed by all the chiefs; he afterwards said, "This is the effect of experience. *Mérta Púra* is a young man, and not able to contend in argument with *Adipáti Jáya Níngnat*, his elder." However, *Ráden Méрта Púra*, taking a cup of tea, recollected himself, and prepared to reply. After drinking the tea, and replacing the cup, he immediately addressed *Adipáti Jáya Níngnat*: "How can you talk thus? Is it not better to finish the business at once, and not by halves? Of what use is it to talk of precedents? What was the case formerly is one thing; the present affair is altogether different: they cannot be compared together. We have now our own master, whose wishes we must follow. We must make a new example, and leave others to act up to it." The *Ráden Adipáti* then demanded of all the other *Bopátis* their opinion in this affair, to which they replied, "Let us advise the *Susúnan* to follow his own inclination, either to assist the Dutch according to treaty, on condition that they cancel all obligations, &c. on the part of the *Susúnan* to the Dutch, or

to assist the Chinese in destroying the Dutch, and after that to get rid of the Chinese altogether, or allow them to remain, as the *Susúnan* may think proper."

This opinion was on the next day carried to the *Susúnan* by the *Ráden Adipáti*, who further suggested, that it would be well to encourage the Chinese to act against the Dutch; that when the war took place it would be easy to perceive which was the best side to assist, and that the *Susúnan* should appear to remain neutral for the present. The *Susúnan* having listened to this advice approved of it. He in consequence directed that *Mérta Púra* should quietly return to his province, and should encourage the Chinese to act against the Dutch, and promise them, that in the event of their success the *Susúnan* would join them. He also directed that the other *Bopátis* should make preparations for collecting their forces.

In pursuance of these orders *Mérta Púra* secretly proceeded to *Grobógan*, and communicated with the chiefs who had been elected by the Chinese, named *Inchi Máchan* and *Múda Tik*. The Chinese of *Grobógan* immediately wrote to *Síngseh*, the chief at *Tánjung Welakan*, who was equally pleased with this promise of support. The Chinese from *Grobógan* then went and joined those at *Tánjung Walákan*, it being arranged that *Mérta Púra* should make a sham attack upon them, from which they should appear to fly.

Mérta Púra then wrote to the Dutch commander at *Semárang*, telling him that he had orders from the minister to attack the Chinese, and requesting to be supplied with ammunition, which was immediately sent. The Dutch were completely deceived. They furnished *Mérta Púra* with twenty muskets, eight carbines and eight pistols, and eight barrels of powder: they also sent thirty Dutch soldiers. *Mérta Púra* commenced the attack before they came, and thus secured the retreat of the Chinese. On this occasion he shot three horses with ball, and shewed them to the Dutch as having been wounded under him.

In the mean time the commandant at *Semárang*, deceived by the assurances of *Mérta Púra*, requested the officers at *Kérta Súra* to call upon the *Susúnan* for assistance. He directed that *Mérta Púra* should be reinforced, but that the chief who commanded the party should receive secret instructions not to annoy the Chinese in earnest, but to act as *Mérta Púra* had done. With respect to the Chinese at *Kérta Súra*, he directed that they should be informed that on the next morning the Javans would make a sham attack upon them, when they must retreat and join a party of Chinese assembled at the *Désa Sarója* in *Kedú*, to which place they would be

pursued, and from whence the Javan chief was to return, saying, that on account of their numbers he could advance no further.

Secret orders to this effect were immediately given to all the chiefs. The *Adipátis* of *Páti*, *Demák*, and *Kedú* were at the same time directed to go and make a false attack upon the Chinese at *Tánjung Waláhan*, and afterwards to retreat to *Semárang*, as if beaten, in order that the commander might believe that the *Susúnan* was determined to assist the Dutch.

The captain and lieutenant of the Chinese at *Semárang* having been put in confinement by the commandant, all the Chinese at that place joined their countrymen at *Tánjung Waláhan*. The Chinese then moved to *Kárang Anyer*, where they were attacked. The Javans retreated to *Semárang*, and were assisted by the Dutch. The chief, *Síngseh*, in concert with *Mérta Púra*, now laid siege to *Semárang*.

The commander at *Kérta Súra* requested assistance against the Chinese at *Ambaráwa*, which was granted, with the same instruction to the chiefs as in the former instances. These marched as far as *Salíatga*, where they held secret communication with the Chinese; but the chief, *Aria Pringaláya*, caused ten Chinese to be put to death while both parties were about to meet privately, and sent the ten heads to *Kérta Súra*, which were delivered to the commandant. This at first exasperated the Chinese leader at *Semárang*, but he was soon pacified.

At this time the *Susúnan* discovered that one of the sons of *Mangkúrat Mas*, *Tépa Sána*, was carrying on an intrigue with the commandant of the fort at *Kérta Súra*, and caused him to be bow-stringed. *Wíra Méja* and *Ráden Garendi*, the two sons of *Tépa Sána*, with his other relations, joined *Pangéran Wíra Meng'ala*, and quitted *Kérta Súra*: they were well received by the Chinese.

The Chinese, besides laying siege to *Semárang*, had also by this time taken and destroyed *Rémbang*. *Jawána* and *Demák* were abandoned by the Dutch troops, and a want of provisions was felt through the country.

Affairs had come to this pass, when the *Susúnan* resolved to massacre the Dutch garrison at *Kérta Súra*. The Javans were collected under the fort, as by order from the *Susúnan*, in readiness to march against the Chinese, when one of them who had entered within the walls fired a shot. The cry of *amók*

was given, and many lives were lost on both sides; but the plan did not succeed, and it was not till after he was reinforced by the Chinese that he could effect his object. On the renewal of the attack, the garrison was compelled to surrender. The commanding officer and some others were barbarously murdered in cold blood; the rest of the troops, with their wives and children, made prisoners, and distributed among the Javans: the greatest part of the men being circumcised and forced to adopt the Mahomedan religion.

The Dutch authorities, in endeavouring to account for this act, incline to an opinion that the *Susúnan* was (not without an appearance of probability) immediately impelled to it by many acts of oppression and injustice exercised against his subjects, by a total disregard of all his representations for redress, by an evident intention on the part of the Dutch to become masters of the whole island, and by the harsh and uncivil conduct of the Resident towards the first men of the court, which was the more obnoxious from his being the son of a Javan woman, and for that reason, and the illegitimacy of his birth, much despised by the natives.

When this intelligence reached *Semárang*, the Dutch began to open their eyes. The first step that was taken was to pass a decree, absolving the *Pangéran* of *Madúra* from his allegiance to the *Susúnan*. This decree was formally signed by the government of *Semárang*, and accepted by the *Pangéran*, who being married to a sister of the *Susúnan*, returned his wife back to her brother. No sooner had he declared himself the ally of the Dutch, than he ordered all the Chinese on the island of *Madúra* to be put to death, and embarking his forces immediately, took possession of *Sidáyu*, *Tuban*, *Jípang*, and *Lamúng'an*. At *Grésik* about four hundred Chinese were put to death.

The Chinese, in the meantime, finding themselves reinforced by the Javans, spread over the whole country without encountering opposition, and laid siege at the same time to nearly all the Company's settlements along the coast, from *Tégál* to *Pasúruan*.

After many feeble and unskilful attacks on the fort of *Semárang*, and the loss of many lives, the united forces of the Javans and Chinese were compelled to raise the siege.

A negociation was now brought about by means of the *Pangéran* of *Madúra*, who represented to the Dutch that the attack upon the fort, as well as the subsequent part taken by the Javans, was solely at the instigation of the minister, *Náta Kasúma*, and that the *Susúnan* himself was personally averse to these measures. The *Susúnan*, according to the Dutch accounts, regretted the precipitate steps he had taken, either as beginning to fear that the Dutch might again, as in former wars, obtain the ascendancy, and make him pay dear for his temerity; or, which appeared to him most likely, apprehending that the Chinese, who, though comparatively few and unused to arms, had hitherto taken the lead in every affair of consequence, and evinced their superiority to the Javans in ability and courage, should become too powerful, and might, in concert with some discontented chiefs, think fit to depose him. From one or other, or both of these motives, the *Susúnan* desired to renew his alliance with the Dutch.

The Dutch, on their part, considering the precarious state of the time and circumstances, found it advisable to enter into amicable relations, and accordingly concluded a peace, by which were ceded to them the island of *Madúra*, the sea-coast, and *Surabáya*, with all the districts to the eastward, as *Balambáng'an*, and *Rembáng*, *Japára*, and *Semárang*, with all their subordinate posts.

According to the Javan accounts, this treaty was concluded without the knowledge of the minister, *Náta Kasúma*, who with the Javan and Chinese forces still lay encamped not far from *Semárang*: and it was agreed upon by the *Susúnan*, at the request of the Dutch, that the Chinese should be kept in ignorance of what was passing, in order that they might be the more easily massacred by their supposed friends the Javans. *Náta Kasúma*, however, no sooner heard of the conditions on which the peace had been concluded, and of the intention to massacre the Chinese, than he took part with them, and revealed the whole plot. To preserve appearances, however, he made a sham attack on the Chinese, in which the sick alone were sacrificed. The rest moved off unmolested to the eastward, meditating vengeance against the *Susúnan*, by whom they had been thus deserted. Their principal force was now assembled in the districts of *Páti* and *Jawána*, where they were joined by many of the chiefs who had hitherto been attached to their cause. Here they proclaimed as *Susúnan Ráden Mas Garéndi*, son of *Pangéran Tépa Sána*, who had recently been put to death by the *Susúnan*, and grandson of

Susúnan Mangkurat Mas, who had died at Ceylon. He assumed the title of *Susúnan Mangkurat Mas Prábu Kúning*, but is usually distinguished by the name of *Susúnan Kúning*. This prince was about ten years of age, and therefore the transactions which ensued are to be attributed to his ministers, *Mangunónang* and *Mérta Púra*, and to the Chinese chiefs, *Síngsih* and *Pánjang*.

Náta Kasúma, the minister, still feigning allegiance, returned to *Kérta Súra*; but the part he had taken being discovered, he was sent to *Semárang* on a false mission, as was customary in such cases, and there entrapped by the Dutch and conveyed to Ceylon.

The Chinese, with their emperor, now marched with great expedition to *Kérta Súra*, in order to attack the *Susúnan*, and met with but little resistance. The troops of the *Susúnan*, under the command of *Ráden Prínga Láya*, were defeated, *Kérta Súra* was surprised, and the *Susúnan* was obliged to leave his court, and treasures to the enemy. His queen, sister, and children, on horseback, together with his mother, carried by two Europeans, under the conduct of two Dutch officers, through a back gate of the *dálam*, were pursued and overtaken. The *Susúnan* and the hereditary prince only were enabled to save themselves by flight.

It was not likely that an alliance between the Chinese and Javans, people so different and hostile to each other, could be of any long duration. While the Chinese became relaxed in their discipline, and indulged in every species of irregularity, the fugitive emperor, being now joined by the Dutch and *Madurese*, received the submission of many of the rebel chiefs, and pardoned them; but he refused to pay attention to the offers of submission made by the Chinese. The prince of *Madúra*, at length, succeeded in making himself master of *Kérta Súra*, from whence the *Susúnan Kuning* was obliged to fly, after a reign of four months.

The Chinese being afterwards defeated in a pitched battle at *Asém*, retreated to *Brambánan*, and the *Susúnan* again arrived in his capital. When, however, the prince of *Madúra*, who was by no means well inclined to the *Susúnan*, found himself in possession of *Kérta Súra*, he made an attempt to raise to the throne *Pangéran Angebai*, the *Susúnan's* brother. The *Susúnan* was once more obliged to quit his capital, and it was not until after much negotiation between the Dutch and the Javans, that he was re-established.

Whether this attempt on the part of the Madurese prince was serious, or only intended to render the sovereign more complying to the demands of his allies, is not known. The negociation, however, as was usual in similar cases, turned out highly advantageous to the Dutch interests, a treaty being dictated by them without the walls of the palace, and before the prince was permitted to enter it.

The Chinese, who had meanwhile remained at *Brambánan* unmolested for two whole months, were now joined by *Páku Nagára*, a man noted among the Javans for his eminent abilities, and distinguished afterwards for the conspicuous part he acted in what is called "the war of Java," and through his means the party were enabled still to make a stand: they were at length, however, defeated by the Dutch troops, and compelled to retreat over the southern hills. A general amnesty being proclaimed, and the Chinese having availed themselves of it, the ex-emperor at length surrendered to the Dutch at *Surabáya*, by whom he was banished to Ceylon, where he died. This event happened in the Javan year 1667, and terminated the Chinese war.

After a few months the *Susúnan*, in conformity with ancient custom, removed the seat of government from *Kérta Súra* to the village of *Solo*, about six miles distant, where a palace was built. The new capital was called *Súra Kérta*, and is the present residence of the emperors of Java.

On the subsequent accession of Mr. Imhoff to the post of governor-general, he was of opinion that, notwithstanding the favourable terms of the treaties granted by the *Susúnan*, sufficient atonement had not been made to the Dutch nation for the outrage committed against the Christian religion, and the barbarous treatment of the garrison of *Kérta Súra*. He therefore required that the two principal ringleaders should be delivered up and punished; and to ensure compliance, measures were taken for seizing upon the *Susúnan* and his son, and bestowing the throne on the eldest son of *Pangéran Mángku Nagára*. But the *Susúnan* thought it prudent to comply, and delivered over two priests to the Dutch; and a new treaty was on this occasion concluded with the *Susúnan*.

Fresh disturbances soon succeeded. The *Pangéran* of *Madúra*, *Chákra Deníngnat*, a man of a selfish and haughty character, considered himself, in consequence of the part he had taken, so far exalted above the other chiefs, that he neglected to make his annual appearance at court. Of this the

Susúnan complained to the Dutch, who interfered, but without effect. The *Pangéran*, who, as before stated, had taken possession of the provinces of *Sidáya*, *Túban*, *Jípang*, and *Lamúng'an*, now refused to restore them either to the *Susúnan* or the Dutch, to whom they had been ceded, claiming them, as well as all the plunder he had obtained at *Kérta Súra*, as conquered property. Determined to keep them by force, he engaged in his service a number of men from *Báli*, and fortified the island *Menári*, so as to command the harbour of *Surabáya*.

He now commenced open hostilities by attacking a Dutch vessel, and putting to death several European seamen. Two thousand Madúrese entered the district of *Surabáya*, burnt some villages, and laid the country waste; and five thousand *Bálians* were posted on the frontiers of *Pamakásan*. After having been twice or thrice defeated, the *Pangéran* made a sudden attack upon *Súmenap* and *Pamakásan*, and gained a complete victory over the natives fighting under a Dutch commander, who lost six thousand men on the occasion, the chief being obliged to fly the country.

It was not long before the Dutch regained possession of *Súmenap* and *Pamakásan*, on which occasion a brother-in-law of the *Pangéran*, with two chiefs, submitted to them; but the Dutch troops were no sooner withdrawn, than those provinces again fell under the authority of the *Pangéran*, who laid them waste with fire and sword. The Dutch tried in vain to dislodge him. *Rémbang* was now besieged by an army of five thousand Madúrese and Javans. *Lásém*, *Pájang-kungung*, and all the villages as far as *Paradésa*, were in possession of the *Pangéran*, who made himself master also of the fort of *Rémbang*, and of the building yard established there; but his fortune suddenly changed. The prince was, in his turn, defeated in several engagements, and at length compelled to fly from Java; and the Dutch forces landing on *Madúra*, took the capital *Sámpang*, by storm, and in a short time made themselves masters of the whole island.

In this extremity, the prince of *Madúra* still refused to come to terms, and went with his sons, *Sásra* and *Rána Deníngnat*, to *Banjermásin* on Borneo, where he engaged his passage on board an English ship bound to Bencoolen; to which place he had previously, on his affairs taking an unfavourable turn, sent his son, *Ráden Tumúng'gung Wíra Deníngnat*, to request assistance from the English, and procure men and warlike stores. His plan, however, of proceeding to Bencoolen was frustrated; for the sultan

of *Banjermásin*, on application from the Dutch, sent him, with his son *Sásra*, to Batavia, whence the father was banished to the Cape of Good Hope, and the son to Ceylon.

In effecting a settlement of the country, the Dutch were compelled to appoint another son of this prince, *Súra Diníngnat*, to succeed as chief of *Madúra*, under the name of *Sécha Deníngnat*. In the year 1758, this chief was also appointed *Widána*, or chief, of several of the eastern districts.

But, however these successes on the part of the Dutch might tend to the immediate tranquillity of the country, the authority of the *Susúnan* had been seriously shaken. The prince possessed neither the esteem nor attachment of his subjects. To his evil star it was attributed that the empire had not only lost much of its ancient grandeur, but was brought to the brink of ruin. The chiefs no longer placed any confidence in him; they despised the man who had granted such humiliating terms to the Dutch, and who, to obtain their temporary aid, had thus sacrificed the permanent integrity of the empire: they, therefore, were inclined to make an effort to regain what had been lost.

The principal character and prime mover in this rebellion was the *Pangéran Mungkubúmi*, a younger brother of the *Susúnan*. During the Chinese war he had obtained considerable experience, and was distinguished for boldness and enterprize of character. On the Chinese being driven from *Kérta Súra*, he had thrown himself on the protection of the Dutch, and was now residing with his brother at *Kérta Súra*. Next to *Mangkubúmi*, the most prominent character in the war of Java was *Páku Nagára*, who was also called *Mas Sáyed* but perhaps better known as the grandfather of *Práng Widóno*. After the defeat of the Chinese at *Brambánan*, this prince had also returned to court; but being coldly received, again reared the standard of revolt, and escaping into the southern mountains assumed the title of *Susúnan Adi Prakúsa*.

Mangunónang, the minister of *Susúnan Kúning*, and *Mérta Púra*, had established themselves in the province of *Sukawáti*, refusing to come into any terms. They invited *Mangkubúmi* to come over to them, and promised their assistance in raising him to the throne. *Mangkubúmi* accepted their invitation; but finding himself deceived by them, he, by his own exertions and those of the son of *Mérta Púra*, obtained possession of that province, and established himself under the title of *Pangéran Adipáti* of *Sukawáti*. He

was, however, afterwards induced to listen to terms offered him by the *Susúnan*, who again received him into favour, and conferred upon him the independent government of *Sukawáti*. But these terms were not granted by the emperor without exciting the jealousy and apprehensions of the minister *Prínga Láya*, who easily availed himself of an early opportunity, when the Governor-General, Van Imhoff, was on a visit to *Súra Kértá*, to represent the danger arising from any subject possessing so independent and extensive authority, as that recently granted by the *Susúnan* to *Mangkubúmi*.

It was accordingly determined to deprive *Mangkubúmi* of this tract of country, and the resolution was personally communicated to him in the hall of audience. The chief feigned obedience; but in the course of the night, secretly quitted the capital, and assembling his party proceeded to *Sukawáti*, where he again reared the standard of rebellion. From the flight of this prince is dated what is usually termed the war of Java, which took place in the Javan year 1671.

The Dutch now took an active part in the war, but found that they had enemies to contend with who possessed considerable ability and enterprize, and who in the past disturbances of the country had gained much experience. *Páku Nagára* was, in the first instance, defeated, and fled for protection to *Mangkubúmi*, who received him kindly, gave him his daughter, *Rátu Bandára*, in marriage, and appointed him his *Pateh*, or minister. The united forces of these two chiefs resisted the attacks of the Dutch for about twelve months, when *Mangkubúmi* assumed the title of *Susúnan Matárem*; but a dispute arising between him and *Páku Nagára*, who demanded his own nomination as presumptive successor, *Mangkubúmi* took back his daughter, and the chiefs parted in enmity.

While *Mangkubúmi* lay with his forces at *Bunáran*, a village on the south coast, and distant about ten miles from the present *Yúgya Kérta*, intelligence was received of the death of the *Susúnan*; and such was the extensive power of *Mangkubúmi* at the time, that the body of the deceased could not be removed to the consecrated burial place at *Megíri* in the southern hills, on account of his forces, and was in consequence interred near the tomb of *Jáka Tíngker*, sultan of *Pájang*, at *Lawian*, near *Súra Kérta*, whence this prince received the appellation of *Susúnan Séda Lawigan*.

Mangkubúmi had evinced a desire to come to terms, and gave assurances to the governor of his attachment to the Dutch, but demanded that his son should be proclaimed *Pangéran Adipáti Matárem* (heir apparent); a condition to which the Dutch would not listen.

The reduced state of the *Susúnan's* authority before his death, and the distracted condition of affairs, afforded an opportunity too favourable to be overlooked by the Dutch, of at once attaining the grand object of all their political interference, the sovereignty of the country. A weak prince on his death-bed was, under existing circumstances, easily brought to any terms, in the hope of continuing even the nominal succession in his family. He was compelled, by a formal official deed, "to abdicate for himself and his heirs, the sovereignty of the country, conferring the same on the Dutch East India Company, and leaving it to them to dispose of it, in future, to any person they might think competent to govern it for the benefit of the Company and of Java." After recommending his children, and especially the heir apparent, to the protection of the governor, the unfortunate monarch expired. This singular and important deed was dated on the 11th December, 1749. [\[278\]](#)

From this deed is derived the right by which the Dutch East India Company subsequently granted in *fee* to the native princes, the administration of those provinces which still continued under native government.

On the death of this unfortunate prince, *Mangkubúmi* caused himself to be formally proclaimed *Susúnan Pakubúana Senapáti Matárem*, in the presence of a more numerous assemblage of the princes and chiefs than attended the investiture of the new *Susúnan* raised by the Dutch. He sent ambassadors to the Dutch governor with many assurances of attachment and fidelity, requesting to be acknowledged as sovereign, and soliciting that the body of the deceased might be delivered to him, for the purpose of solemn interment.

The son of the deceased *Susúnan*, however, was preferred, and at the age of nine years was raised to the throne, under the title of *Pakubúana* the third.

The enmity of the rebellious chiefs to each other soon vented itself in open hostility, and a pitched battle ensued, in which *Mangkubúmi* was defeated and driven to the westward. Soon, however, recruiting his forces, he returned, and had two successful engagements with the Dutch, one at *Jánar*, a village in *Báglen*, the other at *Tídar*, a hill in *Kedú*. In the battle of *Jánár*

the Javan forces allowed the brunt of the action to fall upon the Dutch, who were completely routed: of those who had escaped the sword many were drowned in an adjoining marsh, and the rest were murdered in great numbers by the country people. The affair of *Tídar* was of less importance. The forces of *Mangkubúmi* were sometimes reduced to a few hundred, and at other times amounted to as many thousands, the chiefs and people deserting him in his distress, and flocking to him in his prosperity. After three victories obtained over the Dutch, he marched towards the northern coast, fell upon *Pakalóng'an*, and plundered the place.

Mangkubúmi now carried all before him, and was once at the gates of *Sólo*, which capital the Javans represent to have been saved from plunder by the superstitious veneration for the gun *niái stómi*, which the rebels no sooner descried on the *alun-alun* than they sounded a retreat. The Dutch, in the hope of allaying his displeasure, had given the *Susúnan* the choice of his officers of state, and prohibited the resident from taking his seat on the throne with him (an indelicate assumption which had previously given the greatest disgust to the Javans); but after nine years of harassing warfare it was still found impracticable to reduce the rebellious chiefs, or to restore the country to order. The Dutch, therefore, availing himself of the abdication in their favour executed by the deceased *Susúnan*, listened to the proposals of *Mangkubúmi*, who offered peace, on condition that one half of Java should be ceded to him. A meeting took place at *Gingánti*, a village not far distant from *Súra-kérta*, at which were present the *Susúnan*, *Mangkubúmi*, and the governor of the north-east coast of Java, when a treaty was signed.

One of the conditions of this treaty was, that *Mangkubúmi* should use his utmost exertions to subdue *Páku Nagára*. In conformity with this condition he immediately proceeded against him; but *Páku Nagára* making his appearance with his whole force, obliged him to retreat and conceal himself in a cavern, while his troops, flying in every direction, allowed his camp to be burned. *Mangkubúmi*, however, soon collected his forces again. The Dutch offered a reward for the head of *Páku Nagára*, who was obliged to proceed to the eastward, being pursued and his whole force finally overthrown. He still refused to submit, and the celebrity of his name and exploits was sufficient to recruit his ranks.

In the year A.D. 1755, *Mangkubúmi* was solemnly proclaimed by the Dutch Governor, under the title of *Súltan Amangkubuána Sénapáti Ingalága Abdul Ráchman Sahédin Panatagáma Kulifatólah*.

The united forces of the *Susúnan* and *Sultan* now resumed the attack upon *Páku Nagára*; several of his chiefs were forced to submit, and he himself, after having prolonged the war for upwards of two years, seeing no *favourable* chance or hope of ultimate success, at last sent his brother to the *Susúnan*, requesting that certain districts and the southern mountains might be granted to him for his support, promising on that condition to lead a quiet and peaceable life for the future. In reply to this he was informed, that the partition of the lands had already taken place; that part of these lands might, however, be granted, but that it was first necessary he should make his appearance at court. To this he assented; and it being stipulated that the *Susúnan* should pay him the compliment of receiving him at the distance of half an hour's walk from *Sura-kérta*, he came in, and throwing himself at the feet of the *Susúnan* was kindly raised again, desired to sit on the bench, and assured that he had nothing to apprehend.

Peace was then concluded, on the conditions that *Páku Nagára*, commonly called *Mas Sáyed*, should assume the rank and title of *Pangéran Adipáti Mangku Nágara*, with an assignment of land to the extent of four thousand *cháchas*, in the districts of *Kadwang*, *Malésa*, and the southern mountains.

Thus ended, in the year 1758, a war which had lasted twelve years, in which the finest provinces of the island were laid waste, thousands slain on both sides, and the independence of the empire finally annihilated. The expenses incurred by the Dutch on account of the war, from the year 1746 until the peace, amounted to 4,286,006. 12. 8. florins; but, in the result, they acquired, if not the acknowledged sovereignty of the whole island, at least an effectual control over its future administration.

The *Susúnan*, on his death, was succeeded, in the Javan year 1714, by his son, the present *Susúnan*, under the title of *Susúnan Pakubuána* the fourth.

The sultan established his capital a few miles distant from the ancient capital of *Matárem*, at *Yúgya-kérta* (*Djocjo Carta*) the present residence of his successors. He died, after a long reign, in the Javan year 1718, and was succeeded by his eldest surviving son, under the title of *Amangkubuána* the second. This prince was deposed by the British government in the year

1812, and succeeded by his son, *Amangkubuwána* the third, who dying, was again succeeded, in 1815, by his son, a child of nine years of age, the present sultan, *Amangkubuwána* the fourth.

Pangéran Prang Widóno, still residing at *Súra Kérta*, is the grandson of *Pangéran Adipáti Mángku Nagára*, and continues to enjoy the independent administration of the lands assigned to him at the settlement in 1758.

By the final settlement of the country in 1758 the Dutch reserved to themselves the direct administration of all the provinces lying on the northern sea-coast, from *Chéribon* to the eastern extremity of the island of *Madúra*; but the inland and southern provinces stretching from the islands of *Chéribon* to *Málang*, were restored to the native princes, between whom the lands were divided in nearly equal portions by *cháchas*, according to the population and the peculiar usage of the country, four thousand *cháchas* from the share of the *Susúnan* being set apart for *Mangku Nagára*.

The terms on which the successors of these princes were permitted to exercise the sovereignty, suffered no material alteration until the year 1808, when Marshal Daendels officially declared that the clauses of the existing treaties, by which those princes held their territory in fee from the Dutch, were void, and that in future he should consider them as independent princes, having no other relation to the European government than such as must of necessity exist between a weaker and stronger state in the immediate neighbourhood of each other. At this time the court of *Yúgya Kérta*, sensible of owing its establishment chiefly to the military success of its founder, and the weakness of the Dutch and the *Susúnan*, and that it never fully submitted to the terms of the treaty of 1755 (which it is even stated were imposed upon the sovereign by a false translation in the Javan language) evinced a desire of independence and an appearance of internal strength, which called for the immediate interference of the European authority. Marshal Daendels, therefore, marched to *Yúgya Kérta* with a considerable force, and a negotiation being opened, a treaty was entered into, by which the reigning sultan consented to resign the administration of the country into the hands of his son, who was appointed to exercise the same under the title of regent, and to cede certain provinces.

But the stipulations of this treaty, thus entered into, had not been carried into effect, when in the month of August, 1811, the British forces arrived in

Java. The sultan, it is true, had ostensibly resigned the administration to his son, but he still took his usual place on the throne, and not one of the districts ceded by treaty to the Dutch had then been actually transferred.

FOOTNOTES:

[272] A Dutch officer is accused of having purloined it.

[273] From the circumstance of this installation having taken place at *Semarang*, two *wóringen* trees are allowed to distinguish the *alun alun* of the regent.

[274] Contract with M. de Wilde.

[275] The native writers relate a strange proceeding of the Dutch commandant in this war.

"As soon as the Dutch commander arrived at *Pasúruan* he assembled the people, and offered a reward of one thousand dollars to any one who would bring him the body of the deceased chief *Sarapáti*. The body was accordingly brought in a perfect state of preservation, on which the commandant ordered it to be placed upright in a chair, as if still living. He then approached it, took it by the hand, and made his obeisance to it as to a living person: all the officers and men followed the example. After this they burnt the body, and having mixed the ashes with gunpowder, fired a salute with it in honour of the victory."

[276] A village in the vicinity of Batavia.

[277] Meaning, "ability was now inclined to move or shake mankind."

[278] During the reign of this prince, on the 9th of September 1738, a contract was entered into between the Dutch and the sultan of Bantam, of which the following were the chief articles.

1st. The Dutch having deemed it necessary to send a detachment to *Lampung Túlang Báwang*, in order to save that province from total ruin, the sultan promised to cause a fort, or *páger*, to be erected at his expense, on the spot which should be deemed most eligible for that purpose, either on the *Palembang* river, or any where else.

2d. That the sultan should keep this fort in constant repair at his own expense.

3d. That the sultan should repay to the Dutch the expense of maintaining a small establishment, consisting of a resident, a commandant, one sergeant, two corporals, twenty-four privates, one drummer, and three artillery men.

4th. That the ground on which the fort was to be built, should be ceded to the Dutch, with an extent of one hundred roods in every direction. This ground to revert back to the sultan, in the event of the Dutch establishment breaking up, in the same manner as had taken place in regard to *Lampung Samangka*.

6th. With a view to hold out due encouragement to the industry of the *Lampung* people, it was agreed that, previously to exporting their pepper to *Bantam*, they should state the quantity to the Company's resident, who should furnish them with a certificate, enabling them to obtain early payment, pursuant to the existing contracts.

7th. The Company's servants at *Bantam* and *Lampung Túlang Báwang*, were authorized to confiscate any quantity of pepper which was exported from the latter place, unprovided with a certificate from the resident.

**LINE OF THE MAHOMEDAN SOVEREIGNS OF JAVA,
Who have ruled subsequently to the Destruction of the Hindu
Government of Majapáhit down to the Javan Year 1742,
corresponding with the Christian Year 1815.**

**SEAT OF
GOVERNMENT.**

Began to Reign.

A.J. A.D.

*At Demák, from
A.J. 1400 to 1503.*

1403	1477	Ráden Pátah Adipáti Jimbun.
1455	1519	Pangérang Sábrang Lor.
1457	1533	Súltan Bintára, or Trang'gána, often called Sultan Demák.

*At Pájang, from
1503 to 1540.*

1503	1577	Jáka Tíngkir, Sultan Pajang.
1532	1606	Adipáti Demák.

*At Matárem, from
1540 to 1600.*

1540	1614	Panambáhan Senapáti.
1550	1624	Súltan Séda Krápiah.
1562	1636	Ráden Ránsang, also called Súltan Agung, or Súltan Kérta.
1585	1659	Mangkúrat, commonly called Séda Tegál-árum.

*At Kérta Súra,
from 1603 to
1675.*

1603	1677	Susúnan Mangkúrat the second.
1627	1701	Susúnan Mangkúrat Mas. Pangéran Púgar, usually called
1630	1704	Susúnan Pakubúana the first.
1643	1717	Susúnan Prabu Amangkúrat. Susúnan Séda Langkúnan, also
1672	1746	called Susúnan Pakubúana the second. Susúnan Pakubúana the second removed the seat of government to Sura Kerta in 1675.

*At Sura Kérta, in
1675.*

		Susúnan Pakubúana second (continued.) Susúnan Pakubúana third, in whose reign the empire was
1675	1742	divided into the two kingdoms of <i>Súra Kérta</i> and <i>Yúgya Kérta</i> .

	<i>At Súra Kérta.</i>	<i>At Yúgya Kérta.</i>
A.J.	A.D.	A.J. A.D.

Susúnan Pakúbuan third (continued.)	1612	Sultan Amangkubúana first.
	1756	Sultan Amangkubúana second.
Susúnan Pakubúana 1714 1788 the fourth and present Susúnan.	1741	Sultan Amangkubúana third.
	1815	Sultan Amangkubúana fourth, and present sultan.
Sovereigns of Demák 4		
of Pajang 2		
of Matárem 4		
of Kérta Súra 4		
of Súra Kérta 4		

The present Susúnan is consequently the eighteenth in succession from the first Mahomedan sovereign, and not perhaps less than the fortieth from the first Hindu prince. The average reign during the Mahomedan government is nineteen years. Taking the same average for the period of the Hindu government, its origin would be four hundred and eighteen years anterior to the destruction of *Majapáhit*, A. J. 1400, and may be referred to the close of the tenth century of the Javan era, or the middle of the eleventh century of the Christian era.

CHRONOLOGICAL TABLE OF EVENTS,
Which have occurred in Java (from the Traditions and Records
of the Javans.)

1 Arrival of *Aji Sáka* in Java.

10	The date of (or probable establishment at)	<i>Núsa</i>
—		<i>Bárong.</i>
—		<i>Núsa</i>
33		<i>Tambíni.</i>
39		<i>Bawéan.</i>
50		The mountain
—		<i>Múria.</i>
70		The great mountain of
—		<i>Tegat.</i>
94		The mountain
118		<i>Brómo.</i>
131		The mountain
152		<i>Semíru.</i>
		The mountain
		<i>Súmbing.</i>
		The mountain
		<i>Hála Húla.</i>
		The mountain
		<i>Láwu.</i>
		The mountain
		<i>Bénkok.</i>
		On the southern mountains.
		The mountain
		<i>Wílis.</i>

175		The mountain <i>Pendam</i> .
193		The mountain <i>Prawáta</i> .
—		The mountain <i>Arjúna</i> .
195		The mountain <i>Ingel</i> .
211	Building of <i>Chándi Máling</i> .	
297	The introduction of maize or Indian corn into Java.	
308	The date of (or probable establishment at)	The mountain <i>Merápi</i> .
343	The date of (or probable establishment at)	The mountain <i>Anyer</i> .
551	Building of <i>Singa-sári</i> .	
752	Death of <i>Niái Súka Wáti</i> .	
808	Burning of the temples at <i>Gúnung Wédi</i> .	
924	Construction of buildings in the western mountains.	

It is related, that in former times the islands of Sumatra, Java, *Báli* and *Sumbáwa*, were united, and afterwards separated into nine different parts; and it is also said, that when three thousand rainy seasons

have passed away, they
will be reunited.

- 1018 or 1188 Building of the *Chándi Séwú*, or
thousand temples, at *Brambánan*.
1055 Date of *Telága Páser* in *Banyumas*.
1067 *Randu Kuning* in ditto.
1114 Separation of the lands of
Palémbang and Java.
1124 In the island of *Báli*.
1164 Appearance of *Pulo Mengaré* (near
Surabáya) above the sea.
1204 Separation of the lands of *Báli* and
Balambáangan in Java.
1217 Date of (or probable establishment
at) *Pagunúngun*.
1218 Building of the temples at *Káli*
Bening near *Brambánan*.
1260 Separation of the lands of *Giling*
Trawárgan and *Báli*.
1273 The fall of stones from a mountain.
Separation of the island of *Séla*
1280 *Párang* (also called *Lumbok* or
Sasak) from *Sumbáwa*.
1300 Establishment of the court of
Pajajúran.
— Erection of a stone temple at
Salatíga.
1308 Construction of the tank at
Peng'ging near *Ambaráwa*.
1352 Date of *Telága Mengémbel*.
1360 Building of the temples at *Bóro*
Bódo in *Kedú*.
1400 Destruction of *Majapáhit*.
1403 Establishment of the court at
Demák.

- 1419 Establishment of *Gegélang*.
- 1421 Establishment of *Surabáya*.
- 1423 The fall of *Bányu píndah*.
- 1427 The burning of *Pálok* by women.
- 1432 Era of *Kaníten*.
- 1433 Era of the Prince of *Páti*.
- 1439 Destruction of *Pánjer* by fire.
- 1440 Death of *Kayubrálit*.
- 1441 *Kajóran* surrounded.
- 1443 Death of the three princes.
- 1448 Conquest of *Kedíri* by *Susúnan*
Ingalága.
- 1449 — of *Túban*.
- 1450 — of *Wirosári*.
- 1451 — of *Gegeláng*.
- 1452 — of *Mendáng kúngan*.
- 1454 The site of *Surabáya* changed.
- 1455 Conquest of *Pasúruan*.
- 1462 — of *Panarúkan*.
- 1464 Defeat of the sons of the chiefs of
Lamúng'an, *Blítar*, and *Wirasába*.
- 1465 Conquest of *Panangúngan*.
- 1466 — of *Pamenáng*.
- 1467 — of *Sing'ga*.
- 1468 — of *Balambáng'an* and
Banyuwáangi.
- 1469 Conquest and burning of *Sing'ara*, a
dependency of *Balambáng'an*.
- 1470 Conquest of *Jápan*.
- 1471 Arrival of the prince of *Gíri*, in the
district of *Kedíri*.
- Foundation of the gardens of
- 1494 *Pungkúran* at the foot of the
mountains.

Destruction by fire of *Dahá*, and the
1473 disappearance of the prince called
Prawáta, at that place.

1474 The elevation of another prince.

1475 War of *Surowári*.

——— *Kiai Wírasóma* proceeds to *Jípang*.

1476 The falling down of *Banyu píndah*.

1478 Conquest of the district of *Blóra*.

——— of *Baléga* in *Madúra*.

Disappearance of the *Adipáti* of
1499 *Kedíri* and his princess, after
embracing the Mahomedan religion.

1500 Conquest of *Katujan*, *Wírasába*,
and *Pranarága*.

1502 Swords and javelins first made use
of.

1503 The establishment of the court at
Pájang.

1506 Occurrence of a great earthquake.

1509 First destruction of *Pájang*.

Destruction of *Demák*, when the
chiefs and people betook
1510 themselves to their vessels, and put
to sea.

1512 *Dahá* conquered by *Senapáti*.

The people of *Jipáng* carried into
captivity after the battle of
1513 *Kalidádung*; actions in *Pasúruan*
and *Pranarága*.

Construction of *Kótah Batu Púteh*
1515 (or White-walled Castle) at
Matárem.

1517 Battles of *Jatasári*, &c. fought by
Senapáti.

- 1521 Death of *Panambáhan Senapáti*, at *Jenar (Matárem)*.
 The palace at *Kérta* being burnt, the
 ——— seat of government is removed to *Púra*.
 ——— The *Panambáhan* of *Chéribon* comes to *Matárem*.
 The *Adipáti* of *Pugar*, son of the *Senapáti*, removed to *Demák*,
 1522 where he ascended the throne. After remaining there a year, there happened an eclipse of the sun.
 1525 Sultan *Krápeak* surrounds and attacks *Demák*.
 While the war was carrying on at
 ——— *Grésik*, Sultan *Krápeak* died at *Matárem*.
 1526 Battle of *Kaliránan*.
 1532 Death of *Adipáti Mértá Láya*.
 1536 The people of *Matárem* attack *Málang*, under Sultan *Kérta*.
 1540 The election of *Panambáhan Senapáti* at *Matárem* as Sultan.
 1541 The age of *Sínga Pádu*.
 1545 The Madurese war.
 A great sickness at *Matárem*, and
 1547 the erection of the throne of *Matárem*.
 1552 The war of *Páti*, and the erection of the *Matárem* tower.
 1553 The first Batavian war.
 1555 The measuring of time, and the second Batavian war.
 The people of the eastern districts
 1560 assembled at *Matárem* to perform required services.

- 1561 Conquest of *Balambáangan*, and
submission of *Ráden Kámbar*.
The Sultan removes to *Tumbáyat*,
1562 and a great granary of corn is
destroyed by fire at *Gáding*.
The *Chéribon* war, and the first
1564 appearance of the *Prin'gí* people
(Europeans) at the court of
Matarem.
The anger of the prince towards the
1565 minister of *Palémbang*, and the
appearance of the *Bánjar* (Masin)
people at the court of *Matárem*.
The second great sickness appears
at *Matárem*, and the construction of
1566 the large gun, called *Kiaí Gúntur*
Agni. An artificial lake made at
Pléret.
1568 Death of Sultan *Kérta*, and
succession of his son.
The march of the *Matárem* people
1569 to *Báli* and *Balambáangan*, and the
submission of those people.
The construction of the mosque,
1571 and the marriage of the Sultan with
the princess *Kránon*. The *Kálang*
move to the east of the *Sólo* river.
The establishment of the court at
Pléret, and the *Susúnan*'s desire for
maidens. The chiefs of all ranks, the
1572 soldiers, the natives of the coast,
and the inhabitants of the country,
were each ordered to marry two
wives.
1573 The appearance of the *Chéribon*
minister with a present of an

elephant; also that of the minister of *Jámbi* (on Sumatra), bringing accounts of the death of the Sultan. The first embassy from the Hollanders arrived at *Matárem*, bringing a present of four pieces of artillery.

1574 The second embassy from the Hollanders, with various presents.

1575 Great inundation at *Matárem*, and the appearance of a comet.

1576 The subjection of the *Sukadána* people (on Borneo).

The subjection of the *Siam* people, and a present from the Company (the Dutch) of a horse of large size.

The marriage of the *Pangéran Adipáti* with the daughter of *Mángun Jáya*.

1580 The *Rámpok* of an elephant.

1581 Death of *Pangéran Purbáya*.

1582 The introduction of copper *píchis* (a small coin).

1584 Death of *Ráden Tápa Sána*.

Death of the *Chéribon* prince in *Matárem*, and the murder of *Mérta Náta*.

1586 The appearance of a comet.

The banishment of the *Pangéran Adipáti* to *Lipúra*, to convert himself and do penance.

1588 Death of the *Rátu*.

1592 Order of the *Susúnan* to *Aria Purbáya* to kill *Wíra Mang'gala*.

—— Explosion of the powder magazine, by which the sentries were killed in

a shocking manner.

— The period when Europeans came
— to *Matárem* with a present of two
horses.

1594 The *Susúnan*'s desire for maidens.

— An uncommon eruption from a
— volcano, throwing out a great
quantity of fire with sand and
stones.

1595 The arrival of the *Búgis* people at
Demóng and the march of the
Matárem forces joined with those of
Manchanagara and the sea-coast.

The return of them, with the
separation of *Madura*, *Sumenap*,
1596 and *Grésik* from the *Matárem*
obedience. They join the rebel
Truna Jaya.

They join together and attack
Matárem and destroy it, the
Susúnan leaving the court with the
1600 *Rátu* and family, after having burnt
the same; death of the *Susúnan* at
Tegál Wángi, and election of his son
Mangkúrat.

Mangkúrat marches over *Japára* to
1601 *Kediri*, to exterminate the rebel
Truna Jáya, with the assistance of
the Company.

1602 *Kedíri* taken and *Trúna Jáya*
surrenders.

Trúna Jáya killed. The *Susúnan*
goes to *Pájang* and establishes his
1603 court at *Kerta Sura*. *Pangéran*
Pugar rebels against him, but is
defeated and flies to *Baglen*.

- Insurrection of the rebel *Raju Námród* at *Salingo*, and the
1604 destruction of the *kráton* by fire.
The subjection of *Pangéran Púgar*
to the *Susúnan*.
The arrival of ambassadors from
1605 *Johór* and *Palémbang* at *Kérta Súra*
with a present of an elephant.
1606 Marriage of the *Susúnan* with a
princess of *Gíri*.
1607 Age of *Wána Kasúma*.
Circumcision of the *Pangéran*
1608 *Adipátí*, and preparations made for
a great chase at *Kérta Súra*.
Death of Captain Tak and other
Europeans, and the rebellion of the
1609 eastern people, who join *Surapátí*.
Several personal combats on the
Paseban to divert the *Susúnan*.
1612 The deplorable state of the court of
Kérta Súra.
1613 Fire in the mosque at *Kérta Súra*.
Excursion of the *Susúnan* to
1614 *Manchíngan*.
March of the *Balambángan* people
coming from the south across
1610 *Kedíri*, where they assassinate men
and women.
The *Balambángan* people march to
Pasúruan, but are attacked at
1620 *Pachatan* and repulsed, with a loss
of one thousand men.
—— The court at *Kérta Súra* surrounded
with a wall of stone.
1621 The conquest of *Pranarága*.

- 1622 Death of *Ráden Súkra* and the illness of the *Susúnan*.
- 1623 *Kamagetan* attacked by the people of *Báli*.
Personal combat between the
- 1624 Javans *Téka* and *Janála*, who were both killed.
March of the *Susúnan* to *Matárem*, and embassy sent by the *Susúnan* to
- 1625 *Mecca*, in order to obtain the rank of *Haji*.
- 1626 Death of *Susúnan Mangkúrat*.
His son succeeds, and *Ráden Súria Kasúma* usurps the rank and title.
The latter is defeated by the people
- 1628 of *Kérta Súra* and taken prisoner. *Pangéran Púgar* is arrested, and afterwards released. Being offended he proceeds to *Semárang*.
The people of the western sea-coast conquer *Kérta Súra* and expel the
- 1630 *Susúnan* from his *dálam*, who goes to the east, where he joins *Surapáti* with a thousand followers.
Arrival of the Europeans at *Kérta Súra*, who upon finding it deserted,
- 1630 appointed *Pangéran Púgar* as *Susúnan*.
- 1631 The court of the exiled *Susúnan* held at *Kedíri*.
- 1633 *Pangéran Purbáya* marches against the exiled *Susúnan* and conquers him. *Surapáti* is killed. He marches with the Admiral towards *Pasúruan*, where he is again victorious. The exiled *Susúnan*

- delivers himself up to the Admiral,
who sends him to *Surabáya*, from
whence he is sent with his *Rátu* and
minister, *Jaeng Rána*, to Batavia.
- 1634 Appointment of *Jáya Puspíta* as
Adipáti of *Surabáya*.
Appointment of *Tumúng'gung*
Chákra Jáya as minister, who is
- 1635 sent to Batavia in the following
year.
- 1637 Journey of the *Susúnan* to *Matárem*.
- 1641 Journey of the *Susúnan* to *Gáding*.
First expedition of the Commodore
to *Surabáya*. Conquest of
- 1642 *Surabáya*, in which the Admiral,
Van der Lee, is killed. Appointment
of Brinkman as Admiral.
Death of the *Susúnan Pakubuána*
- 1643 the first, and the succession of his
eldest son.
Rebellion of *Pangéran Blítar* in
Matárem, and the expedition of
- 1644 Admiral Brinkman against him,
wherein the Admiral gained a
complete victory.
Flight of *Pangéran Blítar* to
- 1645 *Kamagétan*. His death, and the
transport of his body to *Kérta Súra*.
Arrest of *Pangéran Purbáya Aría*,
Dípa Nagára, and *Surapáti*, who
- 1648 were all sent to Batavia, from
whence *Pangéran Aría* was
afterwards recalled.
Embassy of *Tumúny'gung Níti*
- 1651 *Nágara* to Batavia, and the death of
Pangéran Purbáya.

- Journey of the *Kiái Adipáti* to
1652 *Semárang*, to pay the debt of the
Susúnan to the Company.
Arrest of *Pangéran Aria Mángku*
1653 *Nagára*, and his being delivered up
to the Company.
Death of *Pangéran Mángkubúmi*,
1655 and the arrival of the Commodore at
Kérta Súra.
The *Kiái Adipáti* dispatched to
1656 *Semárang*.
An eruption from a volcanic
1657 mountain which emitted flame for
three days.
The *Kiái Adipáti* sent to *Semárang*,
1658 where he is arrested in the Dutch
fort. Arrival of the Commodore at
Kérta Súra.
1659 *Raden Adipáti Nata Kasúma* sent to
Batavia.
The *Raden Adipáti* sent to Batavia,
1662 and arrival of the Commodore at
Kérta Súra.
1664 Journey of the *Susúnan* to *Matárem*.
1667 Conquest of *Kérta Súra*.
1668 Conquest of *Prándu Láwang*.
Removal of the court of *Súra Kérta*
1670 to *Sólo*, which place is since called
Súra Kérta Diníngat.
1671 Arrival of General Imhoff at *Súra*
Kérta.
Death of *Súsunan Pakubúana* the
1675 second, and the time when
Pangéran Aria Mangkubmi
proclaimed himself *Susúnan*.

- 1676 Battle of *Mangkubumi* at *Jenar*.
Conquest of *Pakálongan* by him.
Interview between the *Susúnan* and
Pangéran Mangkubumi. Peace
1682 established. The lands divided, and
the *Pangéran* made Sultan of *Yúgya*
Kérta Adiníngnat.
Rebellion of *Pangéran Aria Mánku*
1685 *Nagára* at *Súra Kérta*. The *Susúnan*
occupies his new palace.
Arrival of *Pangéran Juru* at *Súra*
1686 *Kérta*, and flight of *Pangéran*
Anom.
Dissolution of the marriage of the
Susúnan with the *Rátu* of *Madúra*,
and the death of *Rátu Madúra*
1688 *Rétna* and *Ráden Radméja*. The
journey of the *Rátu* of *Madúra* to
Madúra. *Ráden Kúlon* made *Rátu*.
The *Susúnan* assists in the erection
1690 of the triumphal pillars of the
mosque.
1692 The *dálam* is surrounded by a stone
wall.

ACCOUNT OF THE SEVERAL PRINCIPAL DIVISIONS OF JAVA AND MADURA.

In several parts of this work, and in particular when treating of agriculture and revenue, reference has been made to the changes introduced by the British government in the internal management of the country, and to the information of a statistical nature which was collected with regard to its resources.

It may not be uninteresting to the reader to possess, in a compressed form, the result of the surveys and inquiries which were then set on foot, as far as the same were completed at the close of the British administration on Java. The Appendix L. contains a copy of the proclamation and of the general instructions issued by the government; the latter will sufficiently explain the principle on which the tables for the eastern districts were compiled.

BANTAM.

Bantam, once rich in its pepper plantations and the emporium of the Archipelago, had, in consequence of the restrictions of the Dutch company and the vicinity of Batavia, lost all its trade and importance, long before the arrival of the British.

The succession of the throne of Bantam was generally disposed of by the influence of the Dutch government: but the administration of the country and the collection of the port duties were till very lately entirely entrusted to him. This European influence, though strongly resisted in the first instance, had been long acquiesced in, till an attempt of the Dutch government, in the year 1808, to draw additional benefit from this province, gave occasion to an insurrection. The successive measures of introducing the cultivation of coffee into that part of the island, of opening the communication by means of new roads, and of constructing a new harbour, first at *Mew Bay*, and afterwards at *Merak Bay*, imposed new and unusual burthens on the people; and so many deserted from the public works that an order was issued to the Resident, requiring him to inform the sultan that his first minister should be held responsible for the due execution of the public task assigned to the sultan's subjects. The desertion still continuing, an order still more peremptory was issued to the Resident, requiring him to call upon the sultan to deliver up his first minister immediately. In carrying these orders into execution, the Resident having imprudently risked his person, was murdered. This fatal accident was the occasion of sending a considerable military force to Bantam, by which an immediate and thorough change in the native government was effected. The reigning sultan was removed from the throne and banished to Amboina, and a relative was raised to the sovereign power.

This prince was placed under regulations dictated by the Dutch; for so fallen had the sovereigns of this once flourishing and powerful kingdom now become, that the form and solemnity of a treaty was not deemed necessary. The sultan ceded part of his territories to the westward, adjacent to the environs of Batavia, the bad administration of which had frequently given occasion to disturbances in the Batavian districts. The new sultan was allowed to administer the rest of his dominions under the superior rule of the Dutch government.

The public works to be carried on in Bantam, and the unusual burthens they imposed on the people, continued however to excite, from time to time, disturbances and insurrections. On one occasion a detachment, consisting of a lieutenant and eighteen dragoons, were surprised and murdered by the inhabitants. Several native *Pangérans* and chiefs fell victims to the same spirit of discontent and revenge, and another change in the person of the sultan was thought advisable; the new sultan was in consequence allured on board a vessel, and conveyed to Batavia, and in his place another chief was installed sultan of the high lands of Bantam, the Dutch reserving to themselves the direct administration of the low lands.

The country, however, remaining still in a disturbed state, the *Pangéran Akmet* united under his banner the discontented people of all descriptions, in a more regular opposition to the European authority. From this time an extraordinary military force was constantly kept in Bantam: all attempts, however, to arrest the person of *Akmet* failed. His influence increased so much that proposals were made to him of a cession of part of the country: these,

however, not being listened to, it was determined to abandon the interior to his depredations, until the inhabitants themselves, wearied of his arbitrary proceedings, might seek refuge with the European government.

The Dutch force being withdrawn from Bantam, *Akmet* availed himself of the presence of the British cruisers, during the blockade in 1811, to strengthen his influence by an intercourse with them, which he easily effected by furnishing them with supplies plundered by him from the inhabitants. By the cruisers he was considered as an unfortunate prince, maintaining his independence against the Dutch; and when the British troops landed, the sultan was his prisoner, and all Bantam under his controul.

At the conquest of Java by the British forces the extensive tracts of this fertile province were thus in the hands of a lawless rebel, the inhabitants were in a state of revolt, and universal anarchy and distrust had prevailed for several years. All idea of raising a revenue on account of government had been abandoned; and the general settlement of the country under European controul, was the most that could be hoped for.

In the year 1813 the sultan voluntarily resigned the administration of the country into the hands of the British government, in consideration of an annual pension of ten thousand Spanish dollars. With the detailed system of land revenue introduced into this province, an accurate survey was made of all the northern divisions; and a settlement having been made with each individual cultivator, the extent of population stated in the annexed table, as far as these districts are concerned, may be considered as in general correct. The population of the southern districts is estimated; and it may be observed, that the total population rather exceeds than falls short of what is stated.

GENERAL ACCOUNT OF THE POPULATION OF BANTAM.

BATAVIA.

Of the splendour and magnificence which procured for this capital the title of the Queen of the East, little is now to be found. Streets have been pulled down, canals half filled up, forts demolished, and palaces levelled with the dust. The state-house, where the supreme court of justice and magistracy still assemble, remains; merchants transact their business in the town during the day, and its warehouses still contain the richest productions of the island, but few Europeans of respectability sleep within its limits.

The following table comprises all fixed residents within the city and its immediate suburbs, to the distance of about two miles. The municipal regulations of this part of the island having been continued in force, and the execution of them, for the most part, delegated to Dutch authorities, it is to be apprehended that the return of the population now given may be found deficient in accuracy. A poll-tax being levied on the Chinese, and other town duties rendering it the interest of the parties to withhold information as to the exact numbers, it is also probable that the total amount considerably exceeds that now given: certainly it does not fall short of it.

**ACCOUNT OF THE POPULATION OF THE CITY OF BATAVIA AND ITS
SUBURBS.**

ENVIRONS OF BATAVIA.

The lands comprehended under the denomination of the Batavian environs (*Ommelanden*), originally formed the principal part of the *Jakátra* dominions. The native chiefs were early deprived of the administration by the cautious policy of the Dutch, and the lands subsequently sold in property to Europeans and others. According to an official valuation in 1813, the amount of property in houses and lands, belonging to individuals, in the city of Batavia and its environs, including the private estates near *Buitenzorg*, exceeded eleven millions of rix-dollars silver, and the taxes were levied on that estimate. Various systems of government had been attempted in this district before the arrival of the British in 1811, but so inefficacious were they, that it was considered unsafe for Europeans to travel without arms. As a measure of police, a portion of this division, formerly comprized within the *Ommelanden*, was recently annexed to the regency of *Buitenzorg*, and formed into a separate administration. For the population of these two divisions, as they now stand, see General Table, Vol. I, page 62, Table II.

BATAVIAN OR PRIANGEN REGENCIES.

Each of these regencies was administered by a native chief, immediately dependent on government, and without any power beyond his district. The chiefs, however, were mostly allied by frequent intermarriages, and traced their descent from different chieftains of the ancient empire of *Pajajáran*. Separated, on the one hand, from the dominions of the *Susúnan* and sultan by the country of Chéribon, and on the other from Bantam by the Batavian environs, their power never became formidable to the European government. The coffee monopoly in the Western Districts having been maintained on its former principle during the period of the British administration, the inhabitants of these districts were precluded from feeling the effects of the system introduced into the more eastern districts; but as it was in contemplation, eventually, to render the change general throughout the island, preparatory measures were taken, and a survey of these districts being made, the annexed statistical table was framed. The produce stated in the table is estimated according to the native returns; these districts likewise furnish an annual quantity of about seventy-five thousand hundred-weight of coffee for the European market.

**GENERAL ACCOUNT OF THE POPULATION AND CULTIVATION OF THE PRIANGEN

CHÉRIBON.

Chéríbon fell under the European influence in the year 1666, and has now been subject to it one hundred and fifty years. It was among the first cessions made to the Dutch by the princes of *Matárem*.

This province had, like Bantam, been in a state of continued insurrection for many years preceding the arrival of the English. The importance of the town of *Chéríbon* has considerably declined, partly in consequence of these commotions, and partly of epidemic fevers which prevailed some years ago.

The extensive and fertile province of *Chéríbon* did not, under the administration of the Dutch Company, yield those profits which were expected from its great natural resources; especially of indigo, coffee, and teak timber. The Sultans of *Chéríbon*, descended from one of the founders of the Mahomedan religion on Java, and on that account objects of religious veneration among the more orthodox Mahomedans, were always left in the entire management of the native administration. The coffee and other produce exacted from the people, was delivered by the Sultan, and paid for to him. Under this system, the residents of *Chéríbon* enjoyed an annual income of from eighty to one hundred thousand dollars (£23,000), while the Sultans were every year more and more impoverished. At length an insurrection broke out in 1800, the ostensible reason of which was the unjust removal of Sultan *Kanóman*, who had been banished by the Dutch to Amboina, and the real cause probably the great oppression of the common inhabitants, occasioned by the distress of the Sultans, and the indiscriminate admission of too many Chinese in the interior of the country. The reinstallation of Sultan *Kanóman*, in 1808, by Marshal Daendals, did not appease the minds of the people; and the unwillingness or inability of that prince to restore the public tranquillity, led to an entirely new organization of the country.

When the island was conquered by the British troops, the rebel, *Bágus Rángen*, still maintained himself in the eastern parts of *Kráwang*, in perfect defiance of the power of government, sternly rejecting the offers of pardon and oblivion which were on that occasion offered to him, and eluding or defeating all attempts to destroy or ensnare him. Such was the veneration in which this man was regarded by the people of these districts, and such the dread in which he was held by the native chiefs (through whose means alone his apprehension was to be accomplished), that he remained in perfect quiet and security, maintained a correspondence with the disaffected throughout the province, secured his regular supplies of ammunition and provisions from all parts, and even from the town of *Chéríbon*, and tranquilly prepared for the ensuing rainy season, to appear again in arms and ravage the country.

In a few months after the establishment of a British resident in the district, the person of *Bágus Rángen* was secured, and the country reduced to a perfect state of tranquillity, in which it remained during the whole period of the British administration.

The following extracts from the report of the gentleman^[279] intrusted with the introduction of the land revenue system into Chéríbon, may serve to illustrate the state of this province:—

"There is, perhaps, with the exception of the environs of Batavia and Bantam, no part of the island of Java which has so severely felt the bad effects of mismanagement as the district of *Chéríbon*. These effects are visible in the character of the people, who, even among the Javans, are remarkable for a careless indifference to the pursuit of gain, for indolence, for want of energy, and for a credulity and ignorance, rendering them perpetually a prey to delusion. Within the last forty years, in particular, a series of mismanagement and oppression is said to have wrought a most unfavourable change in the character of the people, to have destroyed the habits of industry, and consequently to have changed even the aspect of the country, so that it is no longer to be recognized as the fruitful district which it is once represented to have been. Within the last seven years, famine, mortality, and civil commotion, have contributed to aggravate the evils of mismanagement, and in one or other form have desolated some of the finest parts of the district.

"The history of the civil commotions alluded to afford a striking illustration of the character of the inhabitants. It certainly gives no countenance to the representation of those observers who ascribe to the Javans in general a

character of the most invincible apathy, stupidity, and indolence, as if these qualities had been irrevocably engrafted upon their very natures. A better knowledge of their real character enables us to draw very different inferences, and to ascribe to them a much larger share of sensibility, than could from reasoning be expected to result from the apparently overwhelming causes which contribute to degrade their faculties and blunt their energies and exertions.

"It is an instructive fact, highly worthy of remark, that the successive commotions and insurrections which have for many years disturbed the peace of *Chérison*, have uniformly had their origin in the Javan districts, where the rights of private property in the soil were almost entirely overlooked, that they have only occasionally extended from the Javan to the *Súnda* districts, and have never reached the *Priang'en* lands, where property in the soil is fully acknowledged and respected.

"The taxes which fell upon agriculture were so various, and at the same time assumed such a variety of shapes, that it is impracticable to state in a word the actual portion which by law or custom fell to the share of the sovereign.

"The most material, however, are comprehended in the following catalogue, to which are added, others falling equally upon agricultural industry, though not constituting a direct source of revenue to government:

"1. The contingent, called in the language of the country, *gántang*. This is usually estimated at fifteen parts in one hundred of the rice crop; but it was, in truth, arbitrarily assessed, according to a rough conjecture of the capability of the country. In such of the *Priang'en* lands as continued to be directly administered by their own native chiefs, the amount paid to the latter was determined with some accuracy to be one tenth of the gross produce, embracing, as in the first case, the rice crop only.

"2. A poll tax, or rather a tax on families, called by the natives of this part of the country, *pagalántang*. Part was levied on account of government, and part on account of the chiefs.

"3. Market duties or tolls. These were literally levied on every article vended in the markets, embracing as well the whole produce of their agriculture, as that of their petty arts and manufactures.

"4. A tax on the slaughter of buffaloes, necessarily affecting the price of food, and discouraging the rearing of an animal indispensable to a successful prosecution of the labours of agriculture.

"5. The charge of lodging and feeding travellers, and transporting troops, baggage, and stores of all descriptions. This is termed in the native language, *súguh*, or the rites of hospitality.

"6. The obligation to construct and repair bridges, roads, and public buildings, throughout the country.

"7. The obligation to cultivate and deliver, at inadequate rates, certain foreign productions, which the actual condition of the country, the habits of the people, and still less their interests, could never have prompted them to undertake, if permitted freely to pursue their own interest. Coffee was the chief of these products.

"8. In speaking of the taxes which fall upon the husbandman and the land, the *Zakat* must not be forgotten. This is nominally a tithe, or tenth. The payment is indeed optional, but from religious motives seldom withheld. Every tenth sheaf of the rice crop is allotted to religious purposes, but every man measures its size according to his own piety. Its amount was of course very variable, but almost always materially smaller, and generally indeed not half the size, of the ordinary sheaf. This practice gives rise to a well known distinction between the ordinary sheaf and that allotted for the clergy, when the grain is brought to market."

The table annexed was framed on the introduction of the detailed system; but it not being practicable, on account of the extent of the province, for the European officer to visit every part of the district, many of the particulars are stated upon estimate; particularly the quantity of cultivated land and amount of produce, which, it is to be apprehended, are rather over-rated. The return, however, of the population may be considered more accurate.

EASTERN DISTRICTS.

The Dutch, in acquiring these extensive and valuable provinces on the sea coast, were considered to have acquired the same right as had previously been enjoyed by the native sovereigns, and deemed it advisable to continue the long-established principles and forms of native government. In the same manner, therefore, as the emperors of Java were looked upon as the ultimate proprietors of the land in their dominions, the Dutch Company were considered as possessing the same right with respect to the provinces under their immediate administration; and the princes of Java having been in the habit of entrusting the government, police, and revenue of the different provinces to inferior chiefs, the same system was adhered to under the Dutch. The native system of drawing again the revenues of government from these inferior chieftains, by means of contributions in kind, in money, and by occasional fees and presents, was also maintained; a portion of the common class of inhabitants under the native government being assigned to the performance of different sorts of public works, transports for government, the repair of the roads, the construction of public buildings, the guarding of public stores, the loading and unloading of government vessels, the cutting of grass, the cutting of fire-wood, the keeping a police guard, and other offices, the same principle was adopted under the management of the Dutch, and as under the native form of administration a reward for these feudal services was granted, by the use of an assignment of rice fields allotted either to individuals or to certain classes of workmen, but withdrawn from them as soon as the public duty ceased to be performed, the same mode of remuneration was also adopted by the Dutch.

These principles of administration being combined with the mercantile interests of the Dutch Company, gave rise to certain contracts, which the native chiefs of the different districts (termed by the Dutch *Regents*) were compelled to enter into on their appointment, for the annual delivery to the Company, either without payment, which was called *a contingent*, or for a price far below that of the market, which was termed *a forced delivery at a fixed price*, of such quantity of rice, pepper, cotton, indigo, and other articles, as the market and present state of trade and commerce made most desirable; while the planting of coffee and the cutting of teak timber was always considered as a feudal service, for which, besides the use of a certain portion of rice fields, allotted to the individuals or villagers employed, a certain payment was made, about equivalent to the expenses of transportation to the government yards or storehouses.

The administration of the Eastern Districts, including *Madúra*, was vested in a *governor and council for the north-east coast of Java*. The governor was, at the same time, director of the Company's trade, and resided at *Semárang*. Subordinate to this government was that called *Gezaghebber* and council, established at *Surabáya*, the chief place of the east point of Java; while in the other principal districts along the coast, as at *Tegal Pekalóngan*, *Japára*, *Jawána*, &c. residents were fixed: no direct correspondence from the eastern part of the island was maintained with the government of Batavia, except by the governor, usually termed the governor of Java, or by the governor and council. Even the residents at the native courts of *Súra Kérta* and *Yúgya Kérta*, only communicated with government through him. By him the succession to the throne of the *Susúnan* and of the sultan was generally determined; the appointments of native chiefs and regents were made on his proposal; the Company's farms and duties for the Eastern Districts were sold by him; and though he had literally no salary whatever from the treasury of government, he was supposed to draw from his situation a yearly revenue of between three and four hundred thousand dollars. At the same time the correspondence with the Eastern Districts was neither very regular nor very expeditious, and the management of the Company's affairs in those districts was as much a mystery to the chief government at Batavia, as the governor of *Semárang* chose to make it.

This system continued, without any essential alteration, until after the arrival of Marshal Daendals in 1808.

Some of the contingents, such as indigo, cotton yarn, pepper, &c. to which, however, the regents had not without great reluctance submitted for many years, were then indeed partially abolished; but, on the other hand, all the peculations of the Dutch servants residing along the coast, who had for their own private emolument raised the deliveries, chiefly of rice, at some places to double, and at others to more than double the quantity legally assessed on the regents, at the same time paying for them at some places two-thirds, and at others only half the price assigned by the government, were at once transferred and confirmed to government, by a single decree, ordering, without previous inquiry or reserve, that all the produce which had been usually delivered to the respective residents along the coast, under whatever denomination, should, in the same quantities and with their surplus weight, be for the future delivered to government, and that no higher prices should be granted for the same than that which the residents used to pay.

Equally inconsistent and oppressive in its consequences was a measure by which, on the one hand, the wages of private labour and services were raised to an unusual price, while on the other, the public works, the public transports, and the plantations of coffee, were carried on either gratuitously or at the former inadequate rate. This regulation raised the price of all the first necessities of life, and principally of rice, which the common classes of the inhabitants felt as a heavier grievance than any they had ever experienced from the former system. Till then, the colonial administration had always, as far as was consistent with their own monopoly and forced delivery of produce at fixed rates, taken particular care to keep down the price of rice and salt as much as possible.

But a measure, still more pernicious in its consequences, was that by which the native regents were each of them subjected to a contribution in hard cash, while at the same time the power of levying taxes on the inhabitants of these districts was left in their hands; a system which, in all cases, afforded them a pretext, and in many an apology, for the most vexatious oppression.

The commendation which is due to this administration is rather founded on those arrangements which had a tendency to prevent peculations in the inferior European servants in every department, and on the abolition of the subordinate governments of *Semarang* and *Surabaya*. Fixed salaries were allowed to the residents; they were prohibited from keeping private vessels, and from all trade in the products of their districts. The sale of the government farms and duties was made public, and in a great measure free from corruption, by which means they were immediately raised to more than three times the former amount: each branch of public expenditure and receipt was fixed and ascertained; new and practicable roads were established; the appointment of every native, from the first rank as low as a *Demang*, was reserved to the government alone; the Javan custom of pawning the person for a small sum of money was prohibited; fees and presents were abolished. By such measures, a much more regular, active, pure, and efficient administration was established on Java than ever existed at any former period of the Dutch Company.

JAVA.

The following tables are abstracted from the detailed reports furnished during the course of the survey made by the British government. In some particulars they may be deficient and inaccurate, as sufficient time had not been given to complete the detailed survey of the country directed by the Revenue Instructions; but the general results may, for the most part, be depended upon.

**GENERAL
REMARKS.**

The best *sawah* of *Japara* yields from twenty-six to twenty-one *amats* of *pari* per *jung*; but there being a quantity of *sawah* of a very poor soil, it has been found, that the average will not be to each *jung* more than sixteen, which this calculation is made on. The *tegals* are calculated at ten *amats* per *jung*. The best *sawahs* of *Kudus* produces from thirty-one to twenty-five *amats* per *jung* at the first crop, and should the farmer sow his seed early, it will produce a second crop in the course

of the year.

The cultivators In this district, generally speaking, plant their lands with other cultivation, after procuring a crop of *pari*, such as *jagon*, *katela*, *kapas*, and the indigo plant. The third of this division being lands of a very inferior quality, and situated high, it has been found that the average does not exceed more than twenty *amats* per *jung*. The *tegals* are also rated at ten *amats* per *jung*. The division of *Pati* is much larger than the others, and the best *sawah* produces from thirty to twenty

No.	Names of Divisions.	TOTAL Popu- lation.	Males.	Femal- es.	At- tach- ed to the Culti- va- tion of the Soil.	Em- ploy- ed in Oth- er Avo- ca- tions.	Buf- fa- loes.	Ho- rses.	Plo- ughs.	JAVANS.							CHINESE AND OTHER FOREIGNERS.

amats per
jung, and in
some few
places yields
a second
crop; but in
consequence
of there
being in this
division a
quantity of
land which
produces but
little, and the
sixth of the
crops being
often
destroyed by
the wild
hogs, the
average
cannot be
rated higher
than fourteen
amats per
jung
throughout.
The division
of *Jawana*
has a great
quantity of
sawah, and
the last may
be rated at
twenty-eight
to thirty
amats per
jung, but a
small part of
this being
poor, and
also being
subject to
continual
inundations
from the
river of
Jawana, it is

GENERAL REMARKS.

In the district
of
Probolingo
the
population is
but scanty,
when
compared to
the extent of
land; the
country is, in
general, well
watered, and
there is
abundance of
land fit for
cultivation,
could people
be procured
from a
neighbouring
country to
work it; in
the divisions
adjoining
Besuki
district there
are very
extensive
teak forests,
which run
inland.
Besuki.—
This district
is
indifferently
watered, and
has very little
land fit for

										TOTAL Jav- ans.	Mal- es.	Fe- mal- es.	Class of Culti- va- tors.	Em- ploy- ed in Oth- er Avo- ca- tions.	Buf- fa- loes.	Ho- rses.	Plo- ughs.	TO- TAL Chi- nese.	Ma- les.	Fe- mal- es.	Class of Culti- va- tors.	Em- ploy- ed in Oth- er Avo- ca- tions.	Buf- fa- loes.

culture, that is not now under cultivation; the population is more numerous for its size than any of the adjoining districts. It was supposed, that by the introduction of the tenement tax paid by householders, that the population would be induced to emigrate to the neighbouring district of Bandawasa, which has not answered the purpose so well as was at first expected. Penarukan.— This is an extensive district, with fine flat table land throughout, but it is badly watered; and towards that adjoining the Banyuwangi district, there

MADURA.

This island having been ceded to the Dutch, in the same manner as the other possessions on Java, the Sultan of *Madúra* and the chiefs of *Pamakásan* and *Súmenap* were always considered by them in nearly the same light as the other regents along the coast, with the exception only of a higher title and some more personal consideration granted especially to the Sultan of *Bankálan*, usually styled the Sultan of *Madúra*, both on account of his birth and of some important services rendered in the war of Java, from 1740 to 1748.

NATIVE PROVINCES.

This extensive portion of the island was divided, agreeably to the settlement of 1754, between the *Susuhúnan* and Sultan. It consists of a number of separate provinces or districts. Those still belonging to the *Susúnan* are:

In an Eastern Direction from the Capital:

1. *Sríngat* and *Blítar* (forming one province).
2. *Kedíri*.
3. *Pranarága*.
4. *Paché*.
5. *Charúban*.
6. *Kadúwang*, (in part).
7. *Jagarága*.
8. *Sukawáti*, (in part).

And the smaller Districts of

1. *Anju.*
2. *Lorog.*
3. *Pangol.*
4. *Sumbreng.*
5. *Rongkok.*

In the Western Direction from the Capital:

1. *Banyumas.*
2. *Dayu Lúhur.*
3. *Aya.*
4. *Matárem*, (in part).
5. *Pamarden.*
6. *Pasir.*
7. *Bag'len*, (in part).

Besides several smaller districts.

The ground on which the fort of *Súra Kérta* is built, with a small part of the adjoining territory, has been ceded to the European government, as has been also that portion of the immediate site of the forts of *Boyaláti* and *Klaten*, which was formerly the property of the *Susúnan*. These dominions are divided among,

1. The eight active *Tumúng'gungs*, or Regents, (the first of which is the *Raden Adipáti*, or prime minister), who constantly resides at court.
2. The *Tumung'gungs* residing in the distant or *Mancha Nagára* districts.
3. The princes of the blood.
4. The particular favourites of the *Susúnan*.
5. (Which only respects the smaller territories) a number of *Demangs* and *Mantris*.

A considerable portion of the provinces of *Matárem* and the adjoining districts, towards the southern part of the island, called by the Javans *Ardi Kidul*, or southern hills, of the province of *Kadúwang* and of the district of *Sukawáti* containing altogether four thousand *cháchas*, having been ceded by the predecessors of the present *Susúnan*, under the settlement of 1752, to the prince *Mangku Nagára*, are still held and exclusively enjoyed by his successors, the *Pangérang Aria Prábo Prang Wedóna*.

The eight active *Tumung'gungs*, who reside constantly at court, and belong to the state and household of the *Susúnan*, are *Tumung'gungs* of the exterior (*Tumung'gung Jawi*), and *Tumung'gungs* of the interior (*Tumung'gung lebat*). The four former are mostly charged with external commissions or orders, or those that do not immediately concern the household of the prince; the four latter, or internal *Tumung'gungs*, are mostly occupied near the person of the *Susúnan*, and have alternately the care of the watch of the *Kráton* at night.

The following tables exhibit the result of a census taken during the British government in Java; but as the information they convey rests principally upon native authority, the same reliance cannot be placed upon them as upon the tables for the provinces under the immediate direction of the European government. There is no reason, however, to believe they are essentially wrong, as they were framed with great care and every attention to accuracy, on the part of the native officers employed.

POPULATION OF THE TERRITORY OF THE SUSUHUNAN, 1815.

FOOTNOTES:

[279] Mr. Crawford.

APPENDICES.

APPENDIX.

APPENDIX, A.

The annexed documents, as far as they can be relied on, afford evidence of an extent of mortality in Batavia, as compared with the number of inhabitants, that was perhaps never exemplified, for the same space of time, in any other quarter of the world.

The Table No. I., incomplete as it is, was drawn out with as much exactness as the original lists and registers still in possession would admit of. In explanation of some inconsistencies which are exhibited in it, it is necessary to observe, that on the occasion of the capture of this island, part of the most valuable papers were lost or destroyed, and amongst them the register in which was stated the Chinese population, and the number of their deaths and marriages annually, which is the reason why no mention is made of them in this table.

The first and third columns contain only the numbers of *European* inhabitants.

The last column, which shews the deaths of the *Natives* and *Slaves*, is probably a list of the deceased slaves only; because there was a separate list kept of the natives who died annually in the Batavian jurisdiction, which, however, was for a long time incorrect, and at last destroyed in 1811.

It is also probable, that the column of *deaths* generally does not extend farther than in the town and immediate suburbs; and the other two columns of *baptisms* and *marriages* extend over the town, suburbs, and environs together.

The specific lists kept in the different hospitals were likewise lost. This is to be particularly lamented, because they would have shewn how many of the European deaths were inhabitants, military persons, strangers, or sailors or marines from the ships of the different nations in Batavia Roads, who all sent their sick men into the hospitals of Batavia, who, when dead, were comprehended in the number of European deaths. This circumstance explains the incorrectness which appears to exist in the two statements of the living and deceased Europeans.

The Table No. II. was discovered among the records of the Dutch government at Batavia, and in the absence of a more official document, may, perhaps, on that account, be entitled to some confidence.

TABLE, No. I.
LIST of the POPULATION, MARRIAGES, BAPTISMS, and DEATHS, in the Town and Suburbs of BATAVIA, from 1700 to 1813, as far as the same could be ascertained from the Registers, &c. after the Conquest of Java in 1811.

During twenty-two years and eight months,		
Grand Total	<u>1,119,375</u>	

The unhealthiness of the climate of Batavia is connected, in the minds of many, with the fabulous properties of the poison tree of Java, and many are so ignorant of the island as to consider the climate of Batavia as a fair example of that of Java in general. History attests that this city has been highly pernicious to the health both of Europeans and Natives, almost from its foundation, and recent experience concurs with the testimony of history. The mines of America, when they were first discovered, did not more strongly allure the Spaniards, nor urged them to sacrifice more relentlessly the lives of the unresisting natives to their burning thirst of gold, than the monopoly of Java and the Spice Islands led the Dutch Company, in the track of wealth, through danger, injustice and oppression. Though the unhealthiness of Batavia was at all times known and formidable, there were times when the mortality became extraordinary and alarming. Although not prone to any speculation, except that of merchants, or to any inquiry, except for a new market or a more lucrative channel of trade, the Company's Government in India was sometimes forced to institute inquiries into the cause of this insalubrity, and to speculate about the possibility and the means of removing it. Passing by other occasions, there exists on the records of the High Regency a reply to queries about the unhealthiness of Batavia, dated the 14th of October 1753. This paper states that between 1732 and 1738, the greatest number of casualties happened. It assigns, as a great cause of the insalubrity complained of, the situation of the town in a bay, confined on the west and east by projecting points of land, and inclosed in front by a cluster of small islands. The space between the town and the sea is chiefly mud, left by the retreating of the sea: a swamp surrounds the town. The mouths of the rivers are generally covered with underwood and a species of tree peculiar to swamps. The vegetation of these low grounds, it is added, cannot but retain impurities of the most noxious kind. The space which is formed at the mouths of the rivers *Táng'ran* and *Ang'ki* is an entire swamp, covered with shrubs which emit exhalations of an impure nature: these are interspersed with the burying grounds of the natives, and the effluvia of these places is felt at some distance. It was believed that the earthquake of 1699, by forcing mud from under the earth and blocking up the mouths of the rivers more than formerly, contributed to increase the previously existing unhealthiness. The lime kilns in the neighbourhood, the close plantations of trees that prevent a free circulation of air, the stagnation of the rivers from the bars of mud or sand which obstruct their out-course into the sea, the kind of water which the inhabitants are compelled to drink, the narrowness of their houses, and the dirt and filth accumulated in the numerous canals that intersect the town, have all their due share of pernicious efficiency assigned them in this report. The buildings, it is said, are admirably adapted to keep out the fresh air, and to retain that which is putrid or noxious. To remedy the evils felt, a new construction of houses is recommended, and a frequent pruning or entire extirpation of the trees.

The fever, which excited this inquiry, commenced in 1733 and lasted till 1738, and, during its continuance, two thousand of the Company's servants and free Christians annually died. In 1739 its violence abated; but it broke out again in 1744, and continued with little diminution or variation to the date of the report in 1753.

Without stopping to inquire whether it would be easier to remove disease from Batavia, or the inhabitants of Batavia from disease, I shall take the liberty of quoting an extract from a report on the climate of some parts of Java, drawn up by Mr. Robertson, the late Superintending Surgeon, which appears to me to afford a satisfactory account of the causes of the insalubrity of the capital. After giving a statement of the mortality that prevailed in an Indianman, a part of the crew of which landed at Batavia, he thus proceeds.

"Such is the melancholy instance of the noxious climate of Batavia, which came within my own observation. That it was not epidemic is clearly evinced, from its not extending its influence to those who attended the sick, nor to the rest of the crew, all of whom escaped its attack and remained healthy. Among the Dutch who remain in the town, fevers are, I understand, very prevalent at all seasons, notwithstanding their being, in a manner, inured to the climate, and most of them have a sallow sickly appearance. It is not uncommon, in riding through the streets, to meet three or four funerals daily.

"The Chinese, however, who are very numerous, suffer more than any class of the people; perhaps, from the worse situations of their houses, the manner in which these are crowded, the closeness of their apartments, and their gross manner of living. The number of casualties among them, I am told, is incredible, especially during the dry season; and if one may judge from the extent of their burial ground, and the number of their tumuli, it cannot admit of a doubt. The preceding facts are, I conclude, sufficient to establish the truth of the noxious character the climate of Batavia has so long obtained, and I shall now proceed to the causes which have been often investigated, and seem well ascertained, though the knowledge of them has led to little exertion for their removal.

"The baneful effects of marsh miasmata on the human system is well known, engendering intermittent and remittent fevers, dysenteries, and visceral obstructions. Batavia, built almost in a swamp, surrounded by marshes in all directions, trees and jungles, which prevent the exhalations being carried off by a free circulation of air, is peculiarly obnoxious from this cause. Opposite the mouth of the river, and extending a great way to the westward, is a mud-bank, which, in many parts at low water, is uncovered by the sea, and is daily accumulating from the quantities of mud and animal and vegetable matter carried down by the river during its reflux. Again the sea, often at spring tides, overflows the adjacent country, and, on its receding, leaves the soil covered with slime and mud, which, exposed to the action of the sun, soon suffers decomposition, and impregnates the atmosphere with its noxious exhalations, which are carried by the sea breeze over Batavia, where the trees and jungles surrounding the houses prevent their being dissipated. During the heat of the day these exhalations are more diffused and comparatively innoxious, but when the sun withdraws its influence they become more condensed, and amalgamating with the descending evening dews form a morbid atmosphere around the houses of the inhabitants. This hypothesis will readily account for a fact well known, that people whose commercial concerns require their presence in Batavia during the day, and who retire during the night into the country, escape this endemic, while scarcely any who sleep in the town, even for a night, unless those who, by a long residence, are inured to it, escape. In the ingenious and sensible work formerly alluded to (Mr. Johnson's), I find this hypothesis so clearly and perspicuously expounded, that I must take the liberty of quoting it.

"The cause why the stench emitted by marshes and vegetable matter in a state of decomposition is more perceptible immediately after sunset, is not that the vapours are disengaged in greater quantities than during the day, but the marshes retain their heat for some time after the sun's rays are withdrawn, and consequently continue to emit vapours through the atmosphere, as during the high temperature of the day by the sun. They therefore meet the descending dews, condensing and forming a thick fog, which hovers over the swamps, accompanied by a noxious and disagreeable odour. The miasmata exhaled during the day, in all probability, descend with the dews of the evening, which, meeting and combining with those that continue to be disengaged from their source, must form a concentration highly capable of affecting the constitution. Marsh effluvia become at a certain distance from their source innoxious. Dr. Hunter observes, 'a few feet in height gives a comparative security in the same buildings.' This will be accounted for by the supposition, that as the miasmata exhaled during the day descend in the evenings, they become more and more concentrated, till meeting the exhalations from the still reeking marshes, a dense stratum of highly impregnated atmosphere is found contiguous to the surface of the earth: hence the salubrity of sleeping in upper apartments. This leads to another practicable inference of considerable importance, that when necessity compels exposure to these marshes, we should select that point of time least likely to meet those miasmata, whether ascending or descending. This period seems to extend from three to six in the afternoon:^[282] that is, after the greatest heat of the earth and air, and consequently the greatest evaporation, and before the condensation and return of such exhalations as rose during the day, and which combine with those still issuing from the heated soil for some time after sunset.'

"A second, and, I think, an equally powerful cause, is the stagnant water of the canals, which, in all directions, intersect the city. In the first place, they are filled with filth of every description; there is scarcely at times any perceptible current in them to carry off that filth; and lastly, the sluices are frequently kept shut, for the purpose of swelling the waters above them to irrigate the fields, while those below, which intersect the town, become almost dry, leaving an extensive surface of mud, and every kind of putrified matter, to be acted upon by the sun, raising the most pestilential vapours, with which, as before observed, the atmosphere gets thoroughly impregnated.

"As a third cause, the state of the houses may be considered, and the mode of living of the Dutch. Houses that are untenanted are seldom opened, and thus collect much filth and foul, damp, pernicious vapours. Those that are inhabited are generally shut up in the day time, most of them being glazed, thus preventing a free circulation of air; and in the lower story of most of the houses, the walls are covered some feet from the ground with a greenish coat, and on entering the apartments a stranger experiences a kind of chilly feel, and a damp raw kind of smell. Although it cannot be enumerated among the causes, yet I cannot help thinking the Dutch mode of medical practice, in as far as it is inefficient to counteract the diseases of this climate, must tend to increase the number of fatal terminations.

"The Dutch practitioners, little in the habit of theorizing, continue the same practice in every form of disease, and they are particularly prejudiced against the use of mercury, opium, and other powerful medicines, in consequence relying solely on the most simple and inert remedies. Some few of them, of more enlarged understanding, adopt the English mode, and seem sensible of its superior efficacy.

"A fourth, and, I am convinced, a very general cause, especially of the diarrhœas and dysenteries, which seldom fail to attack new comers, is the water. This most essential article is taken either from the canals or wells, and it is equally bad when passed through a filtering stone. It retains a brackish, hard, unpleasant taste, and if allowed to remain some time in vessels without previous boiling, generates small animalculæ. Such, I conceive, are the most probable and principal causes of the insalubrity of Batavia; though there are, I doubt not, others contributing, which elude observation. It is generally received, though I think an erroneous opinion, that the rainy season is the most unhealthy. The most unhealthy appears to me to be that immediately after the cessation of the rains; and the older and more experienced Dutch residents have observed, that in years when there has been a long continued drought, disease has been more than usually prevalent, and they look forward with anxiety for the accession of the rains, as the means of resisting its baneful dissemination.

"Weltevreden, at a distance of not more than three miles, being less exposed to these causes, excepting the water, is exempt, in a great measure, from its prevailing endemic fever; though diarrhœas are common, especially among those newly arriving, but they are seldom of a serious or alarming nature.

"Among the troops stationed at Weltevreden and Cornelis, diseases are not more frequent than in the healthiest parts of India which I have visited; though for some months since the Bâli expedition, the casualties in the 78th regiment have been numerous. At *Chemangis*, about twenty-two miles from Batavia inland, a battalion of Sepoys is stationed, where, from the returns I have received, it appears they enjoy comparatively good health, and have very few casualties, though a much larger quantity of rain falls than in the vicinity of Weltevreden. It is on an elevated commanding situation, and open and clear of jungle for a considerable extent around."

In support of the opinion which has been given of the general salubrity of the climate of Java, the abstract returns of sick, &c. among the troops serving on Java and its dependencies, for the last two years, are annexed, together with a statement of casualties, in His Majesty's 78th regiment, while serving on the continent of India and in Java.

Of the above six died at Weltevreedon, one died in consequence of a fall.

NOTE by N. CURRIE, Esq. Surgeon of His Majesty's 78th Regiment, on the foregoing Table.

When the 78th regiment first arrived at Java, the men had been long confined on board ship, living on salt provisions, and were afterwards exposed, not only to the fatigues and privations incident to actual warfare, but also to the inclemency of the weather in a tropical climate. All these causes produced a tendency to disease, and when the regiment arrived at *Surabáya* the quarters were bad; and being in the middle of the town, free access could at all times be had to spirituous liquors. The number of diseases and of casualties was consequently great; but it diminished gradually, as the men were successively accommodated with good barracks at *De Noyo*. The whole were comfortably lodged in plastered barracks in March or April, 1813, and in May and the following month a very sensible reduction of deaths took place, as may be seen by the abstracts of those months. During the preceding months of January, February, March, and April, the deaths were numerous, but the greater proportion was among the men of a detachment of about two hundred men that joined in January, and continued to be very sickly during those four months. Almost all the men of this detachment had, when attacked, violent diseases.

A very remarkable instance of the bad effects of exposure to night air while asleep, occurred when part of the regiment was sent, in September, 1814, from *Weltevreedon* to *Chemangis*, where the barracks were built of wattled bamboos, and the men lying with their heads to the walls, received the current of air directly in their heads. Fifty were seized with a highly inflammatory fever in the course of three days. Delirium was always the first symptom in every case, and it was necessary to bleed several of them largely before they could be sent to the hospital. By referring to the returns it will be seen that almost every increase of sickness happened after a change of quarters, as in the detachment above-mentioned, and after the removal of the regiment from *Surabáya* to *Ung'arang* and *Sirondol* in October, 1813, after the expedition to *Bali* at *Weltevreedon* in June, 1814, and to *Chemangis* in September 1814. An increase of sickness always took place after the use of spirituous liquors on particular holidays, as Christmas, &c.; and on the contrary, the good effects of not exposing the men to morning dews or wet, and of regularity in diet, may be seen in the healthiness of the regiment after the men got settled in good barracks at *Surabáya* and *Weltevreedon*.

Java need no longer be held up as the grave of Europeans, for except in the immediate neighbourhood of salt marshes and forests, as in the city of *Batavia*, and two or three other places on the north coast, it may be safely affirmed that no tropical climate is superior to it in salubrity. By its insular situation, the temperature of the atmosphere is low and equable, and from its lofty mountains it possesses this great advantage, that in a few hours' travelling a climate of any degree of cold may be found.

FOOTNOTES:

[280] It appears, that subsequent to this year, no general list was kept, a list only of the number of children christened in the reformed churches being found among the registers.

[281] Since this year no specific list to be found.

[282] Mr. Robertson's observation and experience led him to give it a greater latitude, from eight or nine in the morning till twelve, and from three to six in the afternoon.

[283] Five days after our arrival in India.

APPENDIX B. JAPAN TRADE.

The empire of Japan has, for a long period, adopted and carried with effect all the exclusive maxims of Chinese policy, with a degree of rigour unknown even in China itself. Previously to the expulsion of the Portuguese and the extirpation of Christianity in the latter part of the seventeenth century, the Japanese trade was reckoned by far the most advantageous which could be pursued in the East, and very much superior to either the Indian or Chinese trade. After the expulsion of the Portuguese, a very extensive trade was for some permitted to be carried on by the Dutch, on account of the benefits which the Japanese imagined themselves to have received from that nation during the Portuguese war, and especially the detection of a formidable conspiracy of some of the Japanese princes to dethrone the emperor, the correspondence relative to which was intercepted at sea. It was for these services that the Dutch originally procured the imperial edict, by which they were permitted to trade to Japan, to the exclusion of all other European nations. This public act of their ancestors, the Japanese have repeatedly declared that they will not cancel; but they have done every thing but formally cancel it, for a more limited and less free trade never was carried on by one rich nation with another.^[284] For more than half a century, the Dutch trade has been limited to two yearly ships from Batavia, the cargoes of both of which scarcely ever exceeded the value of 300,000 dollars, and their only profitable returns are Japan copper, and a small quantity of camphor. To shew themselves impartial in their restrictions, the Japanese have limited the traffic of the Chinese, the only eastern nation whom they suffer to trade with them at all, in a similar manner to that of the Dutch, and they suffer no more than ten Chinese junks to visit *Nangasaki* in the year. The trade of those two favoured nations is also limited to the port of *Nangasaki*.

In pursuance of their exclusive maxims, and conformably to the terms of their agreement with the Dutch, the Japanese have, on every occasion, followed an uniform line of conduct, and rejected, in the most peremptory manner, the various overtures of different nations of Europe, refusing equally to have any intercourse, negotiation or commerce, with any of them. It must also be admitted, that the whole foreign trade of Japan, compared with the riches of the country, is absolutely trifling; nor is there any rich or powerful body of them, like the Hong merchants of China, at all interested in its continuance. The yearly presents, whether offered to the governor of *Nangasaki* or the emperor, are of no great value, and rigidly limited by law and usage; and as the government of Japan is much stronger and more vigilant than that of China, no such abuses can be ventured on at *Nangasaki* as those which exist at Canton.

The commercial intercourse of the Dutch at Japan was established by an imperial edict in their favour from the emperor *Gonging Soma*, in the year 1611.

The first Dutch factory was established at Firando, but in the year 1641 it was removed to *Nangasaki*. The number of the Dutch ships, and the kind of merchandize which they imported, were then left entirely to the discretion of the parties; the merchandize was disposed of to the best advantage, and the returns consisted of such articles as were expected to yield the greatest profit. They were subject only to the municipal regulations of the country, without any further restraint or incumbrance whatever. The trade remained in this state till the year 1671. In the Dutch records of this period, the only complaints made against Japanese authority relate to restrictions laid upon them in matters of religion.

In the beginning the returns from Japan consisted of silver and copper; and the former being coined, was received according to the current value in that country, where the coins and weights went by the same name as in China, viz. *katis*, *tahils*, *mas*, and *kandarins*. Ten *mas* were worth a *tahil*, sixteen *tahil* a *kati*, and one hundred *kati* weighed one hundred and twenty, or one hundred and twenty-one, pounds Dutch, equal to a mark.

There were two sorts of silver, of which the fine was called *zoma*, and coarser bar-silver, generally distinguished by the Dutch under the terms of *heavy* and *light* money. This was at first carried to account at the rate of sixty-two stivers and a half per *tahil*, no difference being made in the books of that time between the two kinds; but in the year 1635, the common or bar-silver, was fixed at fifty-seven stivers the *tahil*. Both kinds, according to this regulation, were considered by the Dutch as calculated too high for an article of merchandize, and consequently were not much in demand in the western parts of India, to which it was at first sent by the Company.

The attention of the Dutch being, however, afterwards attracted to the trade in gold from Japan, orders were issued to the factors in the year 1640, requiring gold as a return, to the amount of from ten to twelve hundred thousand florins. These orders were executed with the best success; and a wish seems, on this occasion, to have been expressed by the factory, that Japan might, as formerly, be permitted to supply from one hundred to one hundred and fifty chests of gold *kobangs*, *ubangs*, and *zebos*. Gold and silver were, at this time, the principal articles in the returns from Japan. Their copper was not much in demand, probably because it was so little known in India or Europe; yet the directors, in their requisition for the year 1655, state the price of Japan copper having risen from thirty-six to forty-six florins per hundred pounds weight, and an order having been sent to Japan for twenty thousand *pikuls* of that metal, the same rendered great profit.

In 1644, requisitions were made from Surat for two thousand *pikuls*, from Coromandel for one thousand *pikuls*, and from Batavia for four thousand *pikuls* of copper; and in reply it is stated, that it would not be difficult to furnish the quantity required; that the Japan copper consisted of both sheet and bar copper, of which the former was purchased at twenty *tahils* the *pikul*, or twelve stivers (inferior silver) per pound, being twenty per cent. cheaper than European copper.

The gold, after being coined, was found a very profitable article, being purchased at a favourable rate. In the beginning the *kobang* was purchased for six *tahil* eight *mas*, and for six *tahil* seven *mas*; and, as appears from the books of 1669, 1670, and 1671, was within those years even purchased as low as five *tahils* six *mas*, and five *tahils* eight *mas*, from the great men of the country, or from merchants, according to circumstances. During two of these years, more than one hundred thousand *kobangs* were obtained, which rendered a profit of one million of florins.

In 1671, an edict was issued by the Japanese government, prohibiting the further exportation of silver; but the profit on the gold being so considerable, the restriction on the exportation of silver was a matter of indifference to the Dutch, who still were enabled to obtain their returns in the more profitable articles of gold and copper.

The exchange of the *kobang* was now fixed by the Japanese government at sixty-eight *mas*; and the free and unrestricted trade which the Dutch had hitherto enjoyed, was subjected to an arbitrary valuation of the import cargoes, and limited first with respect to the articles of merchandize, and afterwards with respect to its extent.

The loss of the island of Formosa in 1661, is supposed to have given the first shock to the credit of the Dutch at Japan. Not long after that event they experienced many instances of opposition, and several prejudicial alterations in the trade.

"They (the Japanese) were consequently," observes Mr. Imhoff, in his Memoir on the Japan Trade, "no longer under any apprehension of being annoyed by us, while, if we had remained in possession of Formosa, we were and might have continued masters of the navigation and trade between China and Japan. In that opinion I am still further confirmed, when I consider, in the first instance, that the prejudicial change with respect to our situation at Japan, although it took place only several years after the loss of Formosa, had been already in agitation some time before; and, secondly, that notwithstanding the confidence of the Japanese in their own superiority, which they always evinced, that arrogance did not conceal altogether a certain fear of us, very evident from their great precautions. This fear has, however, since decreased, and if we may trust to the records, has frequently been succeeded by brutality.

[285] It is an undeniable truth, that if a nation renders itself respected and formidable it will flourish, and that otherwise it is but little esteemed."

The decline of the trade seems not at first to have been much attended to. "Whether the Japanese," says the same writer, "at that period obtained advice of the advantages we derived from the trade, or that the bad conduct of our servants gave occasion to further restrictions which succeeded each other, we do not know, yet it is undeniable, that first in the year 1685 our trade was limited to three hundred thousand *tahils*, of which two-thirds were to consist of piece goods and weighable articles, and the other third of silks. This was confirmed in 1689, and we were allowed to export only twenty-five thousand *pikuls* of copper, whereas our exports of that article formerly had been regulated according to our requisition. In the year 1700, the number of our ships was limited to four or five, in lieu of six or seven as were formerly sent, according to circumstances."

The profits of the trade at this period would yet have deserved attention had not a change in the current coin rendered the year 1700 still more disadvantageous. In 1692 and 1693 and afterwards, rich cargoes were sent to Japan which returned considerable profits, and the funds were again laid out in copper, as far as thirty thousand chests or *pikuls*. The new stipulation of twenty-five thousand chests was of little importance with the Dutch, who knew how, as they confess, to obtain by bribes from the governors and their servants a still further quantity. In the year 1685, the system of receiving the Dutch merchandize by valuation was discontinued; and although it was introduced again in the year 1698, it was once more abolished in the following year.

Various causes are assigned for the change in the current coin which took place about this period; but whether, as was supposed by the Dutch, the knowledge of the Dutch profits upon the *kobang* opened the eyes of the Japanese, or that their long intercourse with Europeans rendered them more attentive to their own interest, or that the Chinese, who are known to be very expert in the art of coining, proposed that measure to them, or that the easy compliance of the Dutch in all former instances, and while they issued the most injurious orders against their commerce, made them believe that they might purchase their friendship at a cheaper rate than hitherto, or, as seems most probable, it was principally occasioned by other and more weighty causes not yet discovered, it is certain that in the year 1696 appeared, for the first time, a new kind of *kobang*, of one-third less in value than the old, although tendered to and received by the Dutch at the same rate. Here then was said to commence the iron age.

The new *kobang* was assayed at thirteen carats six or seven grains, while the old *kobang* was twenty carats eight and a half, nine, or even ten grains; yet the Dutch were obliged to receive the former at the rate of sixty-eight *mas* like the old, which weighed thirty-one stivers, and making a difference upon one thousand of seventy-two marks. The old *kobang* rendered a profit of twenty-five per cent., but the new produced a loss of fifteen or sixteen per cent. on the coast of Coromandel, where it was recoined. Some of the old *kobangs* being however estimated at the same rate with the new, the Dutch still continued to derive some profits from the gold, until the introduction of a third kind of *kobang*, denominated the small *kobangs*, took place.

In 1710 the Japanese resorted to this further change in the coin, by reducing the weight of the *kobang* nearly one half, the value being twenty-five *kanderins*, while that of the former was no less than forty-seven *kanderins*. This caused a loss of from thirty-four to thirty-six per cent., the Dutch being obliged to receive the same at the rate of sixty-eight *mas*; the former *kobangs*, of inferior alloy only, were in consequence still preferable. From 1710 to 1720, both sorts were in circulation; but the repeated complaints of the Dutch were at last, in 1720, so far attended to, that the old *kobangs*, of the same alloy and weight, were again introduced. The latter, however, were called double *kobangs*, and they were charged in the Dutch accounts at thirteen *tahils* six *mas*, which was twice as much as in former times, so that they became still less profitable than the small *kobangs*, of which two thousand weighed seventy-six marks, while one thousand of the old coin only weighed seventy-two marks, and would

consequently, when received in lieu of two small *kobangs*, have produced a loss of thirty-seven seven-eighths per cent.

When an attempt was made, in 1714, to oblige the Dutch to receive the small *kobang* at the same rate as the old, the exportation of copper was limited to fifteen thousand chests, as was the number of ships to two or three, according to the quantity of copper in store.

A fourth kind of *kobang* was introduced in 1730, about five per cent. better than the third or small *kobang*, but the trade continued rapidly to decline until the year 1744.

The loss of many valuable ships and cargoes,^[286] a reduction in the selling price of the articles of merchandize which they imported, and an increase of charges attending the visits to the Imperial Court, and the maintenance of their establishment in Japan, contributed to render this period particularly disadvantageous to the Dutch trade. Their submissive conduct at the Emperor's Court was of no avail, nor did their presents of horses, dogs, and other curiosities, produce any better effect. There was no longer any possibility of exporting *kobangs*, as in former times, for the balance of their accounts. The quantity of copper which they were allowed to export annually had been fixed in 1721 at ten thousand chests, yet even that quantity they were unable to obtain in 1743, so that, together with the high exchange of the *tahils*, their establishment in Japan now actually subjected them to a loss, and it was accordingly proposed at this period that it should be abandoned, unless some favourable change could be effected.

The charges had considerably increased during the last year. The cargoes were of less value and of an inferior quality, so that their profits were reduced to less than one quarter of what they had been: their expences on account of the Japan trade were at the same time two hundred thousand florins annually. During the last thirty years their profits amounted to five hundred thousand, and for some years to six hundred thousand, but latterly not to two hundred thousand florins per annum.

Thus, to sum up the disasters of this trade, after having been allowed to remain free and unrestrained for a period of sixty years, the cargoes in the year 1672 were subjected to an arbitrary valuation, and about the same time the exchange of the *kobang* was altered. A tax was laid upon the cargoes in 1685, and further increased in 1689. In 1698 the new *kobang* was introduced: in 1700 they were limited to four ships annually: in 1710 an exchange still more disadvantageous was fixed: in 1714 their exportation was reduced to fifteen thousand *pikuls* of copper; in 1717 an order was issued, limiting the trade to two ships only: in 1710 the third, and in 1730 the fourth sort of *kobangs* were introduced: and in 1743 the Dutch were limited to one ship and to one-half of the cargo.

The Dutch, in deliberating upon the measure of abandoning the trade, in the year 1744, trace all their disasters in this commerce, to their having tamely submitted, in the first instance, to take the *kobang* of reduced value at the same rate as the old one. It then occurred to them, that if serious remonstrances had been made in the beginning, their firmness might have prevented the subsequent losses. "In the first instance," says Mr. Imhoff, "our commerce was carried on as by a people groping in the dark, neither knowing the actual price of purchase or sale; because the *kobang* being the standard coin of the country, that *kobang* ought to have been calculated in proportion to the value of the *tahil*, and it would have appeared that since 1710 for forty stivers inferior silver, thirty stivers superior silver were received, and all articles of trade not disposed of with a profit of sixty-three per cent. rendered a loss. And this being the case with most of the cargoes that were sent to Japan after the period above mentioned, we ought either to have relinquished that commerce, or had recourse to such means as might have tended to re-establish the affairs of the Company. Instead, however, of so doing, fruitless remonstrances and solicitations were employed, which finally produced this effect, that the Japanese, during the latter years, granted us, by way of *charity*, an additional sum of six thousand *tahils* upon the sale of our cargoes."

From the deliberations which took place at this period, it appears that the proposal then under consideration of relinquishing the trade, was rather intended as a provisional and political measure, to induce the Japanese to admit them to more favourable terms in future, than brought forward with the view of finally abandoning or relinquishing the trade altogether.

The public opinion of the time was, that the Japanese had recourse to these measures of restriction for no other purpose, but to oblige the Dutch to depart from the country; but it occurred to the Dutch government, that a nation which treated strangers in so despotic a manner, had no need to resort to such shifts to dislodge them. Another opinion was, that the restrictions laid on the trade proceeded from political motives, of which the first and most important was their hatred against all the different persuasions of the Christian religion without exception;^[287] but the government were inclined to consider these reasons as deserving of little notice. "There is no probability," observes Mr. Imhoff, "that, in the present enlightened age, it can be a consideration, even with the Japanese, of what persuasion merchants are, who neither attempt to propagate their religion with a view to promote their interest, nor to endanger the safety of the state, of neither of which they appear ever to have been suspected." The governor-general was further of opinion, that the Japanese could derive no advantage from the expulsion of the Dutch, as they would thus be cut off from all correspondence with Europeans, and thereby become subject to greater inconveniences than at present, being exposed to the visits of others, whose great increase in those regions was not unknown to them; for, as he states, it is notorious that the Japanese government took annual information of all that passed in the world, and that the Dutch servants had orders to answer their queries faithfully, in order that contrary reports might not injure their credit, by which the Japanese were well aware that if the Dutch withdrew, others would soon settle in the country.^[288] Instead, therefore, of attributing the conduct of the Japanese to either of these causes, the governor-general laid it entirely to the account of their interested desire to take every possible advantage of the weakness of the Dutch, who, by admitting the first imposition, laid themselves open to all that followed.

In his very able and interesting memoir "On the Trade of Japan and the Causes which occasioned its Decline,"—"It is by no means surprizing," says Mr. Imhoff, "that the Japanese, when they altered the *kobang*, likewise made a change in the delivery of the copper, observing that our exchange remained always the same, and the *prices of our merchandize unalterably fixed*. We cannot pass unnoticed, that this wrong calculation has been the cause that, on our part, many valuable articles of commerce, which were from time to time tendered to us by the Japanese, were declined. Among those articles was yellow copper or brass, Japan porcelain, of which musters were sent in 1736, and camphor, which we might have exported from thence, if our return cargoes had not been complete. Whether the sovereign right to regulate the trade of their country is not equally vested in the government of Japan with any other nation, I will leave undecided. Seeing us patiently submitting to all kinds of restrictions, inattentive in keeping our accounts in a regular order, they were encouraged to put us to the last shift. I am not inclined to dwell upon our surprising indifference, which was concealed at the same time under the cloak of mystery, from whence so many evil consequences resulted. I am of opinion, that it cannot be either the interest or inclination of the Japanese to oblige us to relinquish all intercourse with their country, provided our trade be carried on within narrow bounds, and they are not losing upon the articles delivered to us in payment for our cargoes. It is not possible that they can have any profit on the copper, if it is sold for less than one *kobang*. The mines certainly cannot be worked at a cheaper rate than formerly; and what profit do the venders of the copper derive from our merchandize, after it has fallen into the hands of the interpreters to government and others? Nothing is more natural, therefore, than that our exportation of copper from Japan should have become a burden to that class of people, and that their complaints contributed to the restrictions to which we are now subject. There is no doubt, that if the Japanese could keep up the communication without allowing us a single chest of copper, they would willingly grant us six thousand *tahils* as a gratification, over and above the stipulated price for our cargo."

In considering the reforms to be introduced into the management of the trade in future, the first point which attracted attention was a better calculation of the coin, with reference to the intrinsic value, and a calculation being made upon a new basis, allowed a higher price to be paid for the copper than before. It was estimated, that if the Dutch could annually procure twenty thousand *pikuls* of copper at twenty *tahils*, the Japan trade would still be lucrative, allowing the profits on the outward-bound cargoes to be merely sufficient for the support of the factory.

But in order to purchase and to pay for such a quantity of copper, the governor-general observes, "it is necessary that government should strictly comply with the requisitions from Japan, because our failures therein have brought us into such discredit with the Japanese, that they do not any longer place confidence in our promises. We have passed our word from year to year, that the quality and the quantity of our merchandize should be better assorted, without ever attending to it. Even at this moment, the supply differs so very much from the quantity required, that it will be extremely difficult to convince the Japanese that they shall be better served in future; and still it must be done, because if we wish to obtain the value of eight hundred or four hundred thousand *tahils* of copper annually, besides camphor and other articles, different measures must be resorted to. We are hardly able, at present, to supply one-third of that amount, and load the ships with coarse goods.

"We have no doubt but other productions of Japan might also be procured at a cheaper rate than at present. Camphor may be purchased in abundance at thirty *tahils* the *pikul*, and it is probable the same could still be obtained on more favourable terms, if we advert to what it cost formerly; in which case it would become a profitable remittance to Holland, and render one hundred per cent., or thereabouts.

"The white copper (tutenague) has been tendered to us at sixteen *tahils* per *pikul*, but has not been accepted, the price being considered too high. If, however, we can dispose of it merely at the same price as the yellow copper (brass), which yields according to the price current before us 41-43 f. per 100 lb., it will not only be acceptable, but even render a reasonable profit of fifty per cent.

"Iron was formerly imported here from Japan, and might perhaps be procured at a moderate price, which for the sake of the small distance between us and that country would be very desirable. ^[289]

"Sulphur was also declined in 1726, on account of its being charged too high; yet it might still become an article worth attention, especially if it were purified in Japan. And who knows how many other valuable productions might be drawn from that extensive country, besides those already mentioned, and which would be very acceptable, in an economical as well as a mercantile point of view?" ^[290]

The following facts are collected from the considerations at this time.

That in former times the commerce of foreign nations at Japan amounted to ten millions of florins, and since then for many years to 3,150,000 florins, of which the Chinese share was two-thirds, and the Dutch one-third; and it was consequently presumed, that in so extensive a country as Japan, merchandize might still be disposed of to the value of one million, especially if it was paid for in the productions of the country.

That one of the causes of the decline of the trade was the conduct of the Company's servants, and the extent to which the private trade of individuals was carried. The directors of the trade at Japan had been selected from a very inferior class of society, and the peculations on overweight of the copper, &c. formed the subject of a regular complaint made by the Japanese to the Dutch government.

That the trade of the Chinese to Japan had been reduced from eighty to twenty junks in the year, the number then allowed.

In concluding his valuable and interesting Memoir, the Baron Van Imhoff declares it to be his firm belief, that Japan was, in every respect, what it had been formerly; that the same quantity of merchandize might be disposed of there as in former times, and that returns of equal value might be obtained; that although the profits should be less at present, there could be no reason to relinquish that

trade; that the means of the Dutch were certainly inferior at that moment to what they had been, yet that if they adhered to the measures proposed (namely, clear accounts, correctness and honesty of conduct, and a good assortment of cargoes), which were easy, and could not expose them to any risk or danger, they might hope for a favourable issue.

In the course of all these deliberations, the Dutch seem to have concluded that the debasement of the coin was resorted to by the Japanese, solely with the view of affecting their trade, and never to have reflected that so important a change in the intrinsic value of the standard coin of the country, might have been occasioned by political causes, of far greater magnitude to the Japanese than the paltry gain to be obtained on the traffic of the Dutch cargoes. It is most probable that the empire of Japan, at the periods when these changes took place, wished to check the exportation of the precious metals of the country. In the first instance, we perceive a prohibition against the exportation of silver. The loss of this metal was first felt, because the principal exports were at first made in this coin; but it is never hinted that this prohibition was occasioned by any desire to take an undue advantage of the Dutch: on the contrary, this measure was not found to affect the Dutch trade at all. The same causes, however, which first led to a prohibition regarding silver, operated afterwards in an equal degree with respect to gold; and it is easy to account for the rise in the value of this metal, and the consequent changes in the coin, by the scarcity which ensued. Let us but reflect on the enormous exportation of the precious metals, which took place from Japan at the period when the trade was unlimited, and we shall find abundant cause for these changes in the coin, without accusing the Japanese of resorting to the measure as an imposition on the foreign merchant. "The exports at one period," says Mr. Imhoff, "amounted to ten millions of florins." These were principally made in the precious metals and in the coin of the country; and when the trade fell exclusively into the hands of the Dutch, it had been usual to export at first from one hundred to one hundred and fifty chests of silver, and subsequently the trade admitted of no less than two hundred chests of gold coin being exported instead of the silver. On a moderate calculation, therefore, the exports of the former period were about one million sterling, and those continued by the Dutch could not be less than from half a million to a million sterling in each year; so that, during a period of sixty years, the total export would have amounted to from thirty to sixty millions of pounds sterling, and this does not include what found its way to China and other neighbouring countries.

The discovery of the mines of America reduced, in the sixteenth century, the value of gold and silver in Europe to about one-third of what it had before been:^[291] and might not the extensive drain on Japan have produced in that country an opposite effect of the same magnitude? If the gold and silver annually imported into Spain and Portugal, which did not commonly exceed six millions pounds sterling, produced this effect on the circulating medium, and the price of the precious metals throughout all Europe, in one country of which alone the circulating gold and silver amounted, by some accounts to eighteen, and by others to thirty, millions.^[292] Is it not easy to conclude, that a directly contrary and equally extensive effect must have been felt in Japan? and that this effect must have been felt in a still higher degree, while operating on the confined circulating medium of one nation, than while operating on that of the numerous nations of Europe, who again found means to dispose of large quantities by remittances to the eastern world?

The extensive circulation of money throughout the populous and rich empire of Japan, and the facility with which the drains upon it could be supplied from the mines, was perhaps the cause that, in the first instance, the exportation of the precious metals was not sensibly felt; but afterwards, when probably the mint could not keep pace with the demand, and what is not unlikely, the demand was even too heavy for the mines, the intrinsic value of the coins increased in proportion to the scarcity; and it is not surprising that the Japanese should have entertained an apprehension lest the mines would become exhausted. Whether there were any immediate grounds for such an apprehension is uncertain; but it is generally believed that an edict was issued to discontinue working, first the silver, and afterwards the gold mines, but not until the nominal, and perhaps the real, value of both metals, and particularly of the latter, had

been nearly doubled, as in the instance of the *kobang* of the original value being offered to the Dutch for two *kobangs*.

That the Dutch perhaps owe the loss of this valuable trade, in a great measure, to the incapacity and worthlessness of their own servants, cannot but be admitted; for had they, on these continued reductions in the value of the current coins, adverted to the political cause, and calculated their commercial transactions according to the intrinsic, instead of the nominal, value, they would not have subjected themselves, unknowingly, to a loss of sixty per cent. upon the proceeds of all their exports: nor would they have shewn their weakness and ignorance to the Japanese, but they would immediately have devised the advantage of other returns from Japan, in articles, the exportation of which might, at the same time, have improved the industry and prosperity of that empire; and the Japanese, finding them equally intelligent and enterprising under all circumstances, while they felt an interest in the continuance of the trade, would have respected the nation by whom it was carried on. If, however, by these means, the European character and the value of foreign trade thus declined in the estimation of the Japanese, how much lower must that of the Dutch nation have fallen, when after once dictating the prices of all articles both bought and sold, we find them obtaining at last an advance on their proceeds of the outward cargo, by way of *charity*, and the Japanese themselves appealing against the speculations and corruptions that were carried on! When we see the Dutch, without power and without respect, dictating in the mighty empire of Japan an arbitrary and extravagant price for their commodities, in the same manner as they did at home, is it surprising that we should find the Japanese having recourse to a fixed valuation? When we observe the illicit trade to Japan carried on by private individuals, to such an extent, that Valentyn, a Dutch author of the highest authority, says it was so interwoven with the constitution of the Company, and so extensive, that it formed the principal part of the trade, and could never be prevented, and that the Dutch ships were frequently lost by being overladen with cargoes of this kind, we cannot be astonished at the decline of the prosperity of the Company, or the degradations which were imposed upon its agents. The Dutch factor was, and is, in fact, a sink of the most disgraceful corruption and speculation which ever existed. The factor to obtain his own ends, submits to every possible degradation, and the government of Batavia knows only just as much of what is going on at Japan, as it is his interest to tell them. In this work it has become a painful duty to advert occasionally to the shameful scenes of fraud and corruption carried on under the very eyes of the government of Batavia, and in the dependencies in the more immediate vicinity of that metropolis, where their residents enjoyed such extensive powers, and were so removed from controul and responsibility, that their interests constantly interfered with their duties, and the struggle between principle and opportunity generally ended in a resolution to make fortunes, to connive at each other's speculations, and keep their own secret. If this was the case on the island of Java, the seat of government, what must it not have been in a country so remote as Japan, where the connection and intercourse were so peculiar? It is not surprising, that in the accounts of such a factory, the government at home should find nothing but intricacy and obscurity. It was the interest of the factor to keep every thing involved in mystery, and no where was there a better opportunity for doing so.

But had the shameful and disgraceful conduct of these people been felt only in its effects upon the past, it would be trifling, compared to what they are calculated to produce on the future. The unmanly degradation to which these factors have submitted at the caprice, and often for the amusement of the Japanese, in order to gain their own ends, seem to have established an effectual bar against the future extension of the trade by the Dutch nation, who will find it difficult, if not impracticable, ever to be again respected in Japan. Unless, therefore, the Dutch have magnanimity enough to abandon this trade, when they find it of little comparative value to them, or when they see it must be conducted on principles derogatory to the dignity of the illustrious House of Orange, it is to be feared, that the day is far distant, when the opportunity will be afforded of opening a liberal and honourable communication between Europe and this interesting and important empire. Perhaps this will not happen until, according to Humboldt, the two great oceans shall be united by means of a channel across the Isthmus of Darien, when the productions of Nootka Sound and of China will be brought more than two thousand leagues

nearer to Europe and the United States, and when alone any great changes can be effected in the political state of Eastern Asia; "for this neck of land," observes that writer, "the barrier against the waves of the Atlantic Ocean, has been for many ages the bulwark of the independence of China and Japan."
[\[293\]](#)

From the year 1750 no essential alteration appears to have taken place in the trade: the utmost exertions of the Dutch were required to provide the cargoes, and whenever they succeeded, return cargoes were always provided, to the extent of two or three ships in the year. In order to afford a better view of the nature and extent of the restricted trade thus carried on, the accounts of two of these expeditions to Japan are annexed, from which it will appear, that in the voyage of 1804-5 the Company exported from Batavia to the Japan market commodities to the amount of 211,896 rix-dollars in value; that the charges attendant on the shipment and freight amounted to 167,500 rix-dollars (including 2,915 rix-dollars on account of customs), making the whole expenses of the voyage, with the prime cost of the articles, amount to 379,397 rix-dollars. These articles, when sold in Japan, brought 160,378 rix-dollars; but the expenses and disbursements at Japan in one year for the establishment, the loss on the weight of the sugar, and the expense of making the journey to Japan, reduced that sum to 92,426 rix-dollars. The return cargo brought to Batavia the sum of 886,554 rix-dollars, or a profit of 507,147 rix-dollars on the adventure. The cargo and return of 1806, and the expense of the establishment, cost the Company 393,582 rix-dollars, (including 2,846 for customs), and the sales and other receipts produced 569,089, leaving a balance of 175,505 rix-dollars in favour of the adventure.

A more correct judgment may perhaps be formed from the result of the adventures undertaken from Batavia during the provisional authority of the British government. The first of these was intimately connected with a political object, to which the mercantile adventure was made subservient, and both were undertaken without those previous arrangements which would have insured a better assorted and cheaper cargo. The articles were purchased on the spot and at the moment, and the vessels engaged at a very high rate of freight. In the first, in particular, the sugar being of inferior quality, there was a loss in the weight, and it was otherwise less profitable than it would have been, had the assortment been of the same quality which the Dutch company were in the habit of sending. The freight alone amounted to the enormous sum of 82,309 Spanish dollars. From the outward-bound cargoes it was necessary to pay the debts of the former government, amounting to 48,648 Spanish dollars; and this, with other disbursements and necessary provisions, rendering the proceeds of the outward-bound cargo insufficient to furnish the amount requisite for the payment of the copper; the Dutch factor availed himself of the opportunity to supply the deficiency of fourteen hundred *pikuls* at the rate of twenty-five dollars per 120½ pounds, amounting to 25,000 Spanish dollars; differing from the rate paid to the Japanese of 12.3.5 tahils, or ten rix-dollars per pikul, to an extent of fifteen rix-dollars against government. Besides this, the whole of the outward cargo was not sold: several articles of merchandize remained undisposed of at Japan, amounting to 19,688 Spanish dollars, to be accounted for in the ensuing year. All these operated essentially to reduce the profits of a voyage, which depended exclusively on the return cargo.

The results of these voyages, however limited as the profits were, appear fully sufficient to shew the importance of this trade to Batavia, even as it at present stands, considering that it affords a market for so large a quantity of the produce of the country, and that when the government seemed disinclined to send a further adventure on their own account, there were not wanting numerous individuals anxious to obtain a license to undertake the trade, and to run all the risks attached to it. [\[294\]](#)

In the year 1616, the English obtained a grant from the emperor, containing the privileges for a general trade with Japan, in consequence of which a commercial establishment was formed there by the Company.

In obtaining those privileges, one great object with the Company appears to have been to introduce themselves to a connection with the Chinese, and to carry on a general trade between India, China, and Japan; but finding themselves disappointed in their endeavours to form connections with China, and

sustaining heavy losses in consequence of their trade with Japan, they determined, in 1623, to abandon their establishment there.

From that time, until the year 1673, no attempt appears to have been made by the English Company to renew their intercourse with Japan. The attempt made at that period entirely failed of success, owing, it was stated, to the king of England having married a daughter of the king of Portugal. About the same time the Company, with a view to the same object, formed an establishment on the Island of Hounan; but after struggling with great difficulties, sustaining heavy losses, and being totally disappointed in their expectations of communicating with Japan, the factory was ordered to be withdrawn in the year 1682.

At a subsequent period (in the year 1699), the Company having established a regular communication with China, their supra-cargoes were instructed to use every endeavour in their power to promote an intercourse with Japan, for the purpose of introducing woollens, &c. into that country, but without any appearance of success.

A select committee of the East-India Company, appointed in 1792 to take into consideration the export trade of Great Britain to the East Indies, after detailing the cargo of a Dutch ship from Japan in the year 1664, which consisted principally of copper, camphor, silk-stuffs, and china-ware, conclude their report by observing, that, in their opinion, the trade with Japan never can become an object of attention for the manufactures and produce of Great Britain; for supposing, they observe, that woollens, lead, and curiosities for a cargo to Japan, could be made to £8,000, what is to be required in payment? About £30,000 or £32,000 value in copper, an article which is also the produce of Great Britain, and which must be disposed of in India, to the prejudice of their own mines. Thus Great Britain would gain, on the one hand, £8,000, whilst the loss, on the other, would be £32,000.

This opinion, however, would appear to have been formed on a very partial view of the subject, and with reference to the limited nature of the trade as it then existed; but it would be as unfair to judge of the value of the Japan trade to the British nation from this narrow view, as it would be to decide upon that subject merely from the result of the adventures to Japan undertaken during the recent provisional government of Batavia, which, besides other disadvantages, were, for political reasons, carried on with a scrupulous regard to the restrictions under which the trade of the Dutch had latterly laboured.

It is objected to a direct communication with Japan, and the consequent exportation of British merchandize by British ships, that, in all probability, it would entirely put a stop to the present exportation of woollens by the Chinese, and that, in proportion as the exports from Great Britain to Japan increased, those from Great Britain to China might be expected to diminish; the Japanese being, at present, almost exclusively supplied with British woollens by means of the Chinese: that, however, the demand for teas would continue the same, and therefore the defalcation in exports to China must be made up in bullion, or by drafts on Bengal.

It is admitted that the Bengal government might provide for this additional demand, by disposing of the copper brought from Japan in the Calcutta market; but this, it is stated, would prove a considerable check to the consumption of one of the most valuable articles of export from Great Britain, and therefore it has been inferred, that the final result of the trade with Japan would, in all probability, be the exchange of our woollens for copper, which we have already in abundance, instead of bartering them for teas, which, in the present state of Great Britain, will be always required.

But this argument seems evidently to have been grounded on a supposition that copper must always form the principal, if not only, article of commerce with Japan. An inference by no means borne out by the history of the Dutch trade; in the course of which, it is expressly stated by the Baron Van Imhoff, who appears to have given the subject the most mature and deliberate consideration, and to have been aided by much local information, that the Japanese would willingly pay a sum of money to be excused from the delivery of any copper at all.

But admitting that a connection between Great Britain and Japan might not be attended with all the commercial profits which might be expected from a consideration of the productions of the two countries, would it not, in a political point of view, be of the most essential importance to her interests in China, which are acknowledged by all to be so important? Might we not expect from the Chinese a more respectful and correct conduct than has been customary with them, if they knew that we were in some measure independent of our connection with them? and is it not important, that in case of our actual exclusion from China, there should still be a channel open for our obtaining commodities, with which we are at present supplied by that country?

FOOTNOTES:

[284] For the regulations by which the trade is limited, see Kempster's History of Japan. VOL II.

[285] "We were obliged to submit to many insults, and it frequently happened that the governors declined receiving our representations, hinting that we might leave Japan altogether and not return again. From the records also we perceive the despotic regulations resorted to by the Japanese respecting our nation, in consequence of our having at that time but little power in India."—*Imhoff*.

[286] It is remarkable, that when the Dutch were formerly in the habit of sending seven and eight ships to Japan, but few losses took place; whereas afterwards, when only two or three were sent and the navigation better known, many were lost. The cause assigned is their being latterly overladen with private trade.

[287] "It is no where evident," says Mr. Imhoff, "that the Dutch ever gave cause to the Japanese to hate them for being Christians: they seem rather to have been accused of indifference towards their religion, although I suppose that the writers on that subject are not altogether correct."

[288] "Our peaceable conduct at Japan, and the alarm given to that country by the Russians, plead greatly in our favour; and as it will be impossible for them to find other Europeans more tractable than ourselves, they can certainly have no reason to desire our departure from thence, although it may be undeniable that Japan stands in no need of foreigners."—*Imhoff*.

[289] "In 1637 the Japanese Iron was purchased at two Spanish dollars, and sold at Batavia for five and a half Spanish dollars the *pikul*. On account of the smallness of the profit, an annual requisition was made for one thousand *pikuls* only."

[290] "From Japan was formerly exported timber, wheat, rice, ambergris, raw-silk, cotton," &c.—*Imhoff*.

[291] Wealth of Nations.

[292] Ibid.

[293] Humboldt's Political Essay on New Spain, Vol. I. page 45.

[294] "Our commercial relations with Japan are of very peculiar nature. Every one knows ours is the only European nation admitted to it, what humiliations we are obliged to suffer for it, and what expenses we incur by our embassies to the court of *Jeddo*. This trade was once very lucrative, but in the latter years I think it has done little more than cover the expences incidental to it, and considering the loss of ships and people, is certainly not such as to justify an exposure to so many humiliations.

"Notwithstanding this, we have not been inclined to resign the trade; nor indeed is it either necessary or prudent to do so. But I am at a loss to know how the government of Batavia will be able to account for sending there, in the years 1797 and 1798, a strange ship bearing an American flag, by way of pretence, though really an English vessel, and commanded by Captain Stuart, a real Englishman, though possessed of an American pass, although he belonged to Madras or Bengal. To abandon this trade would be ridiculous, but as it is subject to such regulations in Japan as it will be hardly possible to get rid of, it may be impracticable to make it quite free and open. To pursue it on account of the state or of a company will never answer the purpose. I therefore venture to propose the sale by public auction, to the highest bidder, at Batavia, of a license or pass for one or two ships, of limited burthen, to trade there, either for one or more years, as may be preferred. The chief of Decima should be appointed and maintained by the government, and should act as a kind of consul, and proceed on the embassy to *Jeddo*, if it were required. But beyond this, the whole system and regulation of the trade should be left wholly to the owners of the ships, with the exception of such rules as the Japanese laws may render necessary with regard to our trade.

"The yearly embassies, which are so very expensive, are already dispensed with by the Japanese; and as they would be useful from time to time, it might be advisable to obtain permission, for the future, to perform them only once in every ten years, or to have it fixed for each new resident or consul to undertake it once during his stay.

APPENDIX C.

TRANSLATION OF A MODERN VERSION OF THE SÚRIA ÁLEM

There was a certain raja of the west, named *Sáng Prábu Súria Alem*, who, being duly qualified, did, in the establishment of divine justice, frame a code of judicial regulations, consisting of fifteen hundred and seven articles, which being afterwards digested and reduced to the number of one hundred and forty-four, were by him made known and explained to all the people of the countries under his authority, thereby diffusing knowledge and righteousness where ignorance and wickedness before prevailed.

These regulations were also firmly established, and were put into practice without any respect of persons, not excepting the relations and kindred of *Sáng Prábu* himself; so that, if the left hand offended, satisfaction was demanded by the right, and *vice versâ* for such is the law of God.

These judicial regulations originated in no ambitious views, nor was their author, when he framed them, influenced by feelings of either regard for his friends or hatred towards his enemies; neither was he actuated by any selfish considerations: his sole object was the establishment of true justice, founded on divine principles.

I.

Of the Duty of the Jáksa.

In the first place, he must possess a sufficient knowledge of the law, to know how to act in regard to cases which may come before him, which of the parties ought to be made to pay, what are and what are not proper subjects for a law-suit, deciding against the person who would bring forward any thing of the latter description. If the *Jáksa* is found ignorant of these matters, he shall have his tongue cut out.

In the second place, if the *Jejénang* (the next in order to the *Jáksa*) shall, in acting for the *Jáksa*, prove deficient in a knowledge of his duty, he too shall

either have his tongue cut out, lose both his ears, or have red-hot pincers applied to his lips.

In the third place, any incorrect statement in writing shall be punished by the loss of both hands.

Should neither of these sentences be carried into effect, the *Jákṣa* ought, at all events, to be banished the country.

This punishment, however, may be mitigated by the *Rája*, who, having compassion on the *Jákṣa*, may recal him after one year's exile.

Should the *Rája* suffer to pass unpunished such a total dereliction of duty on the part of the *Jákṣa*, as stated, difficulty and distress will necessarily arise in those times.

II.

The establishment fixed by *Sáng Prábu* for the *Jákṣa* consisted of twelve persons, viz. two *Jejénangs*, two writers, six *Máta Mátas*, and two men whose business is to be in constant attendance on the court.

The fees authorised to be taken by the *Jákṣa* from persons who have any business to settle, are forty-four for the *Jákṣa* himself, three thousand for the *Jejénangs*, eight thousand for the writers, one thousand for those in attendance in the court, and eight thousand for and on account of the state. That for the *Panghúlu* is left to the liberality of the party.

If the *Jákṣa* shall not conform in practice to what is here laid down, it is required that he be disgraced and branded in the common market-place.

If any one shall find fault with the conduct of the *Jákṣa*, without being able to substantiate his charges against him, and shall make the same public, that person shall be fined agreeably to the rank and quality of the accused, viz. fifteen thousand (*pichis*).^[295] The reason of so large a sum being awarded is, because the *Jákṣa* is the chief of the *Mántris*.

The *Bopáti* is, as it were, the door to the *Jákṣa*, the *Kabáyan* that to the *Bopáti*, and the *Panghúlu* that to the *Raja*. These four form a body, through which every thing is minutely investigated.

Let it be understood, that the Raja, who fills so exalted and conspicuous a situation, is not without something to do. What he says is the result of observation and deliberation. His disposition and way of thinking is that which he has received at the hands of the Almighty, who dwelleth where no one knoweth, at whose hands the wicked will meet with their deserts.

III.

The *Tri-rása-upáya*, as known among men, comprehend three things, which are intimately connected with each other, but which, nevertheless, must not be confounded, viz. 1. *Húkum*; 2. *P'rentah*; 3. *Kasúsahan*^[296].

Where a sentence is very severe, or of a nature which will not admit of its being fulfilled, a mitigation or commutation thereof can only take place, by a careful consultation of what is written in the book of laws.

IV.

Of the Dása Wigúna.

Dása signifies ten, and *wigúna*, very powerful, and under this name is comprehended: 1. Sentence of death; 2. Amputation; 3. Disgrace; 4. Confiscation of property; 5. Banishment; 6. Extorting evidence by inflicting bodily pain; 7. Getting at evidence by kind treatment and giving money; 8. Obtaining it by skilful management alone; 9. Compulsion; 10. Letting off from punishment, by receiving a consideration for the same.

There are degrees of those which are to be known and observed.

V.

Of the Gúntur G'ni.

Under this head is comprehended five things, viz. 1. The customs of the country; 2. The orders of the sovereign; 3. Loss by an enemy; 4. A change of the Raja and of his orders; 5. Difficult queries given by one country to another to solve.

Under the head *Mal* come three things, viz. Water, land, and people. The water is necessary to keep alive what has been planted in the land. Mankind

take all that comes, good as well as bad.

VI.

The term *mal* properly means cloth, money, and gold; which three articles, above all others, are the grand and most frequent subjects of law-suits, that arise out of the various transactions which take place among men.

VII.

In law-suits there are seven circumstances of material consequence, viz. 1. Where the cause being good can be taken up and supported; 2. When the articles can be minutely described; 3. When the articles, as well as the persons, can be pointed out; 4. When marks can be shewn; 5. When the party suing has been an eye-witness; 6. When all those things happen to take place; 7. When confession is made of what is the subject of the law-suit.

VIII.

Of the Precious Stone, and that in which it is set.

To these may be compared the Raja and his people. The former is in a dependant state. Those who surround him are the *Pandíta*, the *Bopáti*, and the *Jákṣa*: and those immediately entertained by himself are, 1. One who possesses his confidence; 2. A *Jérutúlis* skilled in writing; 3. An interpreter well versed in language; 4. A good messenger; 5. An intelligent doorkeeper; 6. A person who knows in what a want of manners consists; 7. An experienced general.—Then will the country flourish.

IX.

The *Jákṣa* is, according to his character, distinguished by the following appellations, viz. *Wíra pákṣa*, when he inclines to the side whence he receives most bribes; 2. *Pátra kiláṣa*, when he goes by what he is told, without duly weighing and considering the merits of the case himself; 3. *Ami jáya*, when he punishes the guilty with severity; 4. *Permána*, when he

awards the just sentence of the law as it is written, without lenity or severity.

X.

There are three things which ought not to be allowed to exist in a country, viz. 1. Witchcraft, particularly at critical junctures. The fine to be imposed in such cases is forty thousand; and if any thing is lost, it is to be laid to the charge of the persons who practise that art.

2. Should the *Adipáti* be the person, he shall be treated according to the *Sábda suwára*, i. e. he shall be dismissed from his office, and his officers and relatives will be considered as implicated in the crime.

3. Should the *Mántris* be found guilty of witchcraft, they shall be fined one hundred thousand.

XI.

Of the boundaries or Limits of Lands named Túgu.

By which is meant landmarks, such as stones, trees or fences, or whatever else serves to form an enclosure.

This may and does often become a subject of litigation, especially where any thing has been planted: 1. With respect to lands of inheritance; 2. With respect to such as have been given away; 3. With respect to those which have been purchased; 4. With respect to those in which something has been planted.

Disputes arising on any of those subjects are proper to be litigated; and in settling them, besides examining such witnesses as there may be, it will be necessary to consult the old men of the village, as well as the *Lúra* who collects the annual land revenue, before a decision can be given.

The true proprietor of a piece of land under dispute, will be he who can prove his having enclosed it; and the true proprietor of any crop will be he who can prove his having sown or planted it.

Proof is to be obtained by administering an oath, which is done by immersion in water, or by drinking it.

XII.

He in whose hands is vested the power of administering justice, must be well acquainted with the nature of the ten following things, and know how to proceed in regard to them, viz. 1. Informations; 2. Grounds for a law-suit; 3. The proper time for trial; 4. The occupation and condition of the parties; 5. The object sought by the parties; 6. The prosecution; 7. The defence; 8. Pleading not guilty; 9. Evidence; 10. Eye-witnesses.

XIII.

A sufficiency of evidence alone will obtain a favourable decision; and when the witnesses brought forward to prove any fact do not, upon examination do so, the party who summoned them ought to be cast and also fined.

XIV.

With regard to the *Páncha báka*, which is the case of a woman accused by four men of fornication; if, on examination, these four men do not agree in their testimony, they ought to be put to death, or else fined agreeably to the *Jána tréсна*, which leaves it to those who have charge of the woman to determine the extent of the fine.

XV.

There are two descriptions of orders, viz. 1. *Purúsa*, or those which come from the Raja or from an enemy; 3. *paparéntahan*, or those of the *Bopáti*.

If the *Bopáti* is more severe or more lenient than he ought to be, he shall be fined one hundred thousand, or else agreeably to the *Sábda suwára*, which is the arbitrary will of the Sovereign.

XVI.

The following are thirty different cases of law-suits, viz.

1. *Amra kádang*, where one who is accused of theft, points at either another person or the accuser himself.

2. *Kundáng chíri*, where a person presents a paper to the court, with something additional written under the signature and date of it.
3. *Meng'ámuk pung'gung*, where a person destroys his property while he has a law-suit pending.
4. *Mutúng památang*, where a person, during the course of a law-suit, leaves his master or chief and goes to another.
5. *Sána dénta*, where a person concerned in a law-suit either magnifies or lessens the state of the case.
6. *Ng'árika Pátra*, where a person denies his own hand-writing.
7. *Nídra permána*, where a person, intending to kill another, goes and lives on terms of intimacy with him.
8. *Dámar kitúdah*, where a person, on first making a complaint of his own accord, brings evidence in support of it.
9. *Ngaríka wárna*, where a person has a law-suit, which another than his own chief is acquainted with the merits of.
10. *Sírna ning jáya*, where a person objects to his own witnesses.
11. *Perlíga*, where a person finds a thing and does not take it to some proper person where he lives.
12. *Génti wátang*, i. e. the case of a person who is the first to bring evidence.
13. *Sudésit kemú*, i. e. a thing belonging to two persons and found by a third; the point forthwith litigated, and decided in favour of the former, each of whom hopes to get it: the thing, however, cannot be restored to either, or to any of their relations; it must be appropriated for the purpose of assisting in defraying the expenses of the state.
14. *Sáksi rumémbi*, where a person first of all calls upon only one person as a witness, and afterwards, when the cause is decided, wishes to adduce further evidence.
15. *Sasástra perálara*, where a person presents a written statement of his grievances without a date to it.

16. *Ang'ríka-rája*, where a person engaged in a law-suit speaks hesitatingly, and at the same time refers to some respectable person for the truth of what he would assert.
17. *Chini ropáti*, where a person acts in a compulsory manner towards the people or relations of another.
18. *Kápra-lága*, where a person, in reply to a question put to him, refers to one who is dead.
19. *Abíndu páya*, or the case of a breach of promise.
20. *Níleb lúra*, where the object of the law-suit is for the recovery of duties, or any thing else a long time due.
21. *Madót ráketan*, when of two witnesses in favour of any litigating party, one is not forthcoming at the time of trial.
22. *Sámbung wátan téper*, where a person prefers a complaint of a specific nature, and afterwards superadds other circumstances.
23. *Ting'gal pergán*, where a person concerned in a law-suit remains quiet and keeps himself back.
24. *Páncha perkása*, where those engaged in a law-suit display rage and cunning.
25. *Anára wichána*, where before a case is decided, a constant intercourse is held with the *Jáksa* by one of the parties.
26. *Percháya-rasi*, where a person prosecuted before the court points out the love and regard which some great man has for him.
27. *Katóya rasa*, where a person, while his case is pending, makes presents to the *Jáksa*.
28. *Kasúria chándra miráda wachána*, where a person refuses to abide by the sentence of the *Jáksa*.
29. *Katóya rása úpaya*, where a person, before his cause is decided, makes a present of something to the Raja, the *Bopáti*, and *Panghúlu*.
30. *Kasábda malícha permána*, where a person denies what he has once publicly declared.

With respect to the thirty foregoing cases, it will be for the *Jáksa* to consider and determine when a law-suit can, and when it cannot, be instituted.

XVII.

Here follow eight more cases, viz.

1. *Cupíta sábdá permána*, where one of four persons engaged in a law-suit, being deputed to act for the others, it appears, on examination of the witnesses, that the affair cannot be settled with this one person.
2. *Hanúk meng tan wíring wísa*, where a witness, on re-examination, gives a different account from that which he gave when previously examined by the *Jáksa*. In such case the *Jáksa* must endeavour to discover which is the most plausible account of the two.
3. *Kawílut tára*, where opposition takes place between the witnesses, or between those whose cause it is, and others who have been eye-witnesses of what is the subject of litigation.
4. *Bháning hanámpuh tóya*, where a person is assisted by one who is in the administration of justice.
5. *Ng'ádang tárka*, where, on a trial taking place, the deposition of a party differs from the account previously taken down by the *Jáksa*. In this case, such party should be cast.
6. *Ng'áling'ga pandáya*, when one takes for witnesses worthless persons who cannot be depended on or believed.
7. *Eluádi*, where a person changes, tears, or makes an erasure in any paper.
8. *Kahústi sábdá parláya*, where a person shamelessly makes free with what belongs to another, who is neither a friend nor relation.

XVIII.

Of cases where a Law-Suit cannot be instituted.

These are five in number, viz. 1. Where the evidence is not clear; 2. Where an article which has been lost by one person is found in the possession of

another, who cannot tell whence he got it; 3. Where the evidence of the witnesses produced by any party varies from that of the parties themselves; 4. Where no evidence exists. In this case, the party who can give the most plausible story will obtain a decision in his favour; 5. Where the agent of another in any law-suit is cast.

XIX.

A law-suit will be instituted with success under any of the five following circumstances, viz.

1. *Táta*, where the declarations of all those who support the suit are uniform and connected.
2. *Títi*, when the time of the deed or action is known.
3. *Kárta*, where the object of the suit is universally allowed to be good and just.
4. *Sang'ára*, where there is a readiness to swear to what is asserted.
5. *Dupára*, where probability and plausibility exist.

XX.

Of things sent by one person to another, and destroyed under circumstances which admit of no redress, called *Páncha Sedrása*, of which there are five cases, viz. 1. Where it is occasioned by lightning; 2. When by the attack of an enemy; 3. By being sunk; 4. In consequence of an order from the Raja; 5. By fire communicated from an adjoining house.

XXI.

There are three things which, from their baneful nature, are universally deprecated, and considered and treated as inimical to the welfare of man, viz. 1. Theft; 2. The injury which crops are liable to sustain from the depredations of noxious animals; 3. The mischief which is to be apprehended under water, from crocodiles or the like.

XXII.

In a law-suit, the successful party obtains damages of the one that is cast. As the agitation of the leaves marks the presence of the wind, so does the stir and noise of contending parties shew the existence of a law-suit.

XXIII.

There are two cases where it will go hard with any party, viz. 1. When a mark or proof can be given, as well as evidence produced; 2. Where in a violent dispute between two chiefs respecting the boundaries of their lands, one of them is the first to bring weapons with him: such a one must be found guilty, and will be cast. The fine to be levied, in such case, will, according to the rank of the parties, be one of the following: 1. *Utáma*, or that awarded to chiefs, viz. one hundred and forty thousand; 2. *Díada madén*, or that awarded to those of an inferior degree, viz. seventy thousand; 3. *Nésta*, or that awarded to the common people, viz. forty-five thousand.

XXIV.

Sentence of guilt will be awarded to any party under the three following circumstances.

1. *Cháya rásmi*, where advice has been received from the *Ják*sa.
2. *Príng'ga ráksa*, where the assistance of the officers of the court has been received.
3. *Andría ráksa*, where a case which has been decided is revived at the instance of the party that was cast, in consequence of other people's advice. In such case, if the party which formerly gained the suit fail to appear on the day appointed for a second trial, they shall be cast; and in like manner will it be with the other party, if they fail to attend. For such proceeding, however, the *Ják*sa shall be fined fifty thousand.

XXV.

1. *Wilút sábdá bíksa masábdá upáya*, where a person sues another who is connected with the business of the suit, but who is not the responsible person, and only from his being the more eligible person is attacked on account of his means. In such case the prosecutor will lose his cause.
2. *Sáka dípa*, where a person incurs the obligation of paying for any thing he has lost or destroyed, and refuses to do so according to a proper valuation which shall be fixed thereon. In such case he shall be cast.
3. *Gándia páti*, where the *Jáksi* is silenced in a discussion with one of the parties who dispute a point with him. The *Jáksa*, in such case, shall be found guilty, and fined forty thousand.
4. *Bháning máya permána*, i. e. if a thief, who is pursued, runs into certain premises, by a gap in what serves to enclose them, the proprietor thereof will be held responsible for one-third of the amount stolen.
5. *Ng'ámbága páti*, i. e. a person having pursued, without effect, a thief whom he had surprised in the act of stealing, and the tools of the thief, which in his hurry to escape are left behind, are in the meantime found in the house of any one, the owner of the house shall be held guilty.
6. *Lukíta búkti*, i. e. the person in whose possession thieves' tools shall be found, will be held guilty of any robbery which may, at the time, have been committed.
7. *Síma mamángsa táta upáya*, i. e. where a person pursues a thief into the premises of another, without acquainting him with the circumstance. In such case guilt will be attached to the former.
8. *Gána léna ámit mángsá tan wéring káma*, i. e. when a malicious combination is formed to accuse and prove guilty one who is an object of hatred. The persons who so conspire shall be held guilty.

XXVI.

Of cases where a cause will be lost, there are twenty-five in number, viz.

1. *Hína sáksi*, where the witnesses are worthless disreputable persons.
2. *Hína sábdá*, where a thing is lost, and the owner thereof does not give information thereof to his chief.

3. *Hína klína*, where a person finds a thing and does not make it known.
4. *Hína wang*, where a person whom another deposes to act for him, in any law-suit, is deficient in what is required of him.
5. *Kagúndang sáksi*, where a witness produced by one party is the declared enemy of the other.
6. *Hang'ímbu chína*, where a person who has been robbed gets hold of the thieves' tools without making it known that he has done so.
7. *Ng'edong sáksi*, when a person brings false witnesses whom he has suborned.
8. *Hakúto sáksi*, where the witnesses have been bribed.
9. *Hakádang sáksi*, i. e. where a person instructs his witnesses what to say previous to their examination.
10. *Sábda laksána*, i. e. where a thing is stolen within certain premises, and a person residing therein shall refuse to concern himself about the matter. Such person shall be made to make good one-third of the property lost.
11. *Hamátang bubúkan*, i. e. where a person makes one of his enemy's people his agent. Such person shall be cast.
12. *Sídam wárut*, i. e. where persons concert in concealing an unlawful pregnancy and in producing an abortion. Such persons shall incur a fine of one hundred and fifty thousand each; the whole of the people of the village where it took place shall each be fined fifty thousand; and every person of the village opposite to it shall be fined twenty-five thousand. All persons, too, who, though living at a distance, are still under the authority of the chief of the village when the thing happened, shall be each fined four thousand. A person of great means shall be fined one million.
13. *Tatarápan raja pepáti*, i. e. if a person is found dead without its being known how he came by his death, nothing can be done; and it will rest with the Raja to cause the body to be disposed of in any way he may deem proper. If a corrupted dead body, found in a certain village, is first discovered by people of another village, the whole of the persons belonging to the former shall be each fined fifty thousand. Should those persons have endeavoured to conceal the dead body, they shall each, in that case, be fined one hundred thousand. If it is in a field where the dead body is discovered,

and that by others than the proprietors of the land, the fine to be imposed upon the latter shall be one hundred thousand. If the dead body is first discovered by a person of the village, and he immediately, by sounding an alarm, summons all the people of that village to see and bear witness thereof; and if those persons afterwards, on examination, deny the fact, the whole of them shall be fined fifty thousand. The favourable testimony of thirteen women, however, will get them off from the said fine.

14. *Ngépi g'ni*, i. e. a person is wounded and sounds the alarm: many people quickly repair to the spot, but see no appearance of any one by whom the wound could have been inflicted; presently is heard the sound of another alarm, at a different place, by persons who declare they have just wounded a thief who has escaped from them, producing at the same time proof of the fact: in such case the person who first sounded the alarm shall be considered the thief. If there is found a person who has been wounded somewhere, but without its being known where or when, and without there being any thing to lead to a suspicion of his being a thief, nothing can be done to him.

15. *Ang'gús súra*, i. e. a wound having been proved to have been inflicted by any party who has been prosecuted for the same, if the skin only is broken, the fine to be imposed shall be four thousand. If it is a flesh wound, the fine shall be eight thousand; if a bone be broken or sinews cut, forty thousand: but if the injury done to the wounded party be of such a nature as to deprive him of the means of earning a livelihood, the offending party must, in that case, provide for him.

16. If a person wounds a thief, and can shew marks of his having done so (as a bloody weapon), and if it has been done in the presence of many people, and it has been plainly seen whither the thief betook himself, and an alarm is presently sounded in the place to which the thief fled, and a person then declares he has just received a wound, such person shall be accounted the thief.

17. *Wardáya chuménda*, i. e. if a person is observed to pass through a village with thieves' tools in his possession, although nothing be stolen, that person shall be accounted the thief.

18. *Artísi wádía dan dérma dénda*, i. e. the disputes of ministers with ministers, priests with priests, and *pundíta* with *pundíta*, must be decided

according to the *Wartárja sawung eng kerta*, i. e. by taking into consideration their different dispositions and natures, as well as their proneness to falsehood.

19. *Tríta chándrang guira raditia*, i. e. the law (in the inflexibility and unchangeableness of its nature) resembles the sun, moon, and water. Whoever acts in opposition to the law, must be found guilty and punished accordingly.

20. If any person be courageous enough to seize or kill a thief, he ought to receive a reward of four thousand. If the thief has a master, the latter ought to be fined twenty-four thousand.

21. If a person enter a village at an improper hour, and is thrice challenged without making any reply, he shall be considered as a thief. A person skulking behind a door or fence, under similar circumstances, shall be considered in the same light.

22. *Nóya résmi*, i. e. a respectable person who may endeavour to screen a thief, shall be fined agreeably to the *untára*, viz. one hundred thousand. If the delinquent is a person of the middle class, he shall be fined eighty thousand; if a person of the lower orders, forty thousand.

23. *Tri maláni nagára* comprehends three things, which are inimical to the welfare of a country, viz. 1. Corrupt judges; 2. Breach of promise or agreement; 3. *Wígu wigúna*, i. e. Where the Raja, or others who are in authority, inconsiderately decide or give hasty orders about any thing, whereby much mischief never fails to follow.

24. This section is the work of the Púndita, *Pagáwan Chínde Guána*, and contains seven articles, viz. 1. *Súria wíguna*, i. e. the Raja's court is like the sun, whose refulgent rays spread in all directions and penetrate through every thing. 2. *Anla súria kuntáka*, i. e. the displeasure of the Raja in his court is like the heat of the sun, which causes those who are exposed to it to faint away. 3. *Kasíla trésna perláya*, i. e. when sentence of death is passed on any one by the Raja in his court, it must be carried into effect, as in the case of *Kadúrگا sangúra*, where a person commits fornication or adultery with any of the Raja's household; or *Kásu síla antúka*, where a person forgets himself and wrangles in the court of the Raja; or *Kabérna antáka*, where a fight takes place, by which death or severe wounds are inflicted; or

Madáwang lúma, i. e. where a person endeavours to ruin another, by endeavouring to make him appear guilty; or *Ang'gu pála sábdá*, where a person, after receiving a distinct order from the Raja himself, incurs blame by executing it in a different manner from what he was told, in consequence of the advice of his chief; or *Jaladri kaperchánda láwat dípa*, i. e. the effects of the Raja's displeasure against any one cannot be transferred to another.

XXVII.

1. *Díndang karúban wáng*, i. e. the just and lawful revenues or duties, and no more, must be levied.
2. *Gegér kapála*, i. e. where a person disregards the prohibitions of the Raja.
3. *Gurníti gandarása*, i. e. several people are assembled together, and one of them happens to lose something: whoever is the first to quit the party, shall be considered guilty of having stolen it; and if there is incontestible evidence of this, he shall be made to pay two-fold.
4. *Góra gétiḥ ng'emúríris*, i. e. where an unqualified person decides cases from his own knowledge of the manner of proceeding.
5. *Waráksa tapula*, i. e. no case ought to be settled but by a proper and equitable decision.
6. *Yang'a ling'ga suria*, i. e. when a *Pundita* does not shew the accustomed respect to the Raja.
7. *Líman sangúra*, i. e. when a person mistakes the road he ought to be put right, and not chastised for any trespass he may have made unwittingly.
8. *Túnjung túmrap hing séla*, i. e. whoever shall give protection in his house to fornicators or adulterers shall forfeit his property.
9. *Tírta kasúrung píka*, i. e. where the wise or skilled assist, with their advice, those who live by fraud, when under a prosecution.
10. *Bermára máng'un líga*, i. e. where a person concerned in a law-suit which has been brought forward, is in the habit of absenting himself when his presence is required. Such person must be awarded guilty.

11. *Dándang tumráping káyon*, i. e. a person from one place comes and lays claim to another: the people of the latter all testify that the claimant has no right or title to that spot or place. In such case, the said claimant will be cast.

12. *Andáka katáwan wiása*, i. e. if a person engaged in a law-suit shall abscond, from an apprehension of being cast, it will be even so with him.

13. *Kídang lumáyu ating'gal suára*, i. e. every person must be held responsible for crimes committed, or wrong done, by any one in their service or employ.

14. *Hanio kána*, i. e. a servant or dependant of one person having committed a fault, runs for protection to another, who, when applied to, will not give him up. The person who affords such protection, if prosecuted, will be cast.

15. *Hang ling'ga praláya*, i. e. a person who does not himself appear before the court in his own behalf, but leaves his case to be managed by the officers of the court, shall be cast.

16. *Símbar tumráping séla*, i. e. where the witnesses produced in any case are persons unknown, and without any fixed place of residence, the party who brings them shall be found guilty, or cast, as the case may be.

XXVIII.

The situation and feelings of those in favour of whom sentence is pronounced is *Tírta prábu táru láta*. *Tírta* signifies water, the qualities of which are clearness, and a disposition to proceed straight forward, which nothing will check or overcome. Those who are thus like unto water, let them be ever so humble and poor, shall not fail to be successful in any cause in which they may be engaged. The lowly, who are thus successful, shall have as much cause to rejoice as the rich (*prábu*), who are the reverse, shall have to be depressed. The former resemble a stately tree (*táru*), whose base and roots are great and spreading, with fragrant blossoms and many creepers (*láta*) to entwine and support it.

XXIX.

1. *Chándra kalamókan búda*, i. e. the situation or state of one against whom sentence has been pronounced, however great he may be, is like the moon when obscured by clouds: like her, his countenance is overcast and gloomy.
2. *Anámon déria*, i. e. a person engaged in a law-suit, who shall change his outward appearance, shall be cast.
3. *Pencháng'ga angudána*, i. e. if one of the wise shall, for the purpose of invalidating the evidence of his adversaries, make any alteration in the disposition of his house or premises, he shall, on conviction thereof, be condemned.
4. *Andáka penjang'ga amóyong*, i. e. one of the wise who has instituted a suit, and becoming himself sick at the time appointed for trial, shall fail to make known whether he wishes the business to be settled or postponed, shall lose his suit.
5. *Andáka kitíran*, i. e. if such party shall fail to appear when summoned, he will be cast, even should he be otherwise in the right.
6. *Ambáli múka amigantáka*, i. e. a person who, taking the law into his own hands, shall seize the property of another, in payment of a debt due to him, shall be held responsible for the same.
7. *Síti tínab'la*, i. e. if a person, in search of any thing he has lost, shall enter a different village to that to which he belongs, without giving due notice to the chief thereof, he shall be held responsible for any misdeed which may at the time have been committed, and if any thing important, he shall be made to pay two-fold.
8. *Ang'rika máya*, i. e. a person who, being in company with a thief, receives a hurt or injury from persons while in the act of apprehending him, cannot obtain redress.
9. *Kabrána páti*, i. e. a person who accuses another, and is himself the more guilty of the two, shall be condemned.
10. *Pátra laksána amáng'un satmáta*, i. e. a person who, in order to get something which is not his own, shall alter what is written in any paper, must be condemned.
11. *Kabáli súra*, i. e. a person who superadds in court something which he urges with violence, shall be condemned.

12. *Kitíran múng'gen káyon*, i. e. one person sends another to demand payment of a debt which is disavowed, a law-suit ensuing, if he who sent the other to demand payment has no other evidence to produce but that person, he shall be cast.

13. *Mántra káchung táka*, i. e. if a person engaged in a law-suit produces, for the second time, before the court, a paper which, on examination, appears to be written in a different hand from what it was before, although the purport, in both cases, be exactly the same, the person who produced such paper shall be cast.

14. *Sangnága amamángsa tanpa taláwang áng'aleákan térka*, i. e. a person, such as a *Mántri* or *Bopáti*, deposes another to act for him in a law-suit: the person so deposed has no authority to produce of his having been so. If the cause is lost, the person who deposed the other cannot bring it forward again.

15. *Kaputung'an pikúlan*, i. e. if the witnesses of a person engaged in a law-suit shall leave him and go to his adversary, the former shall be cast.

16. *Prája kobáli múrda*, i. e. when the circumstances of a case which one person brings forward are contradicted by those who have an opportunity of knowing them, the former shall be condemned.

17. *Bermara amri sari*, i. e. if a person to whom another is indebted shall, on the supposition of inability to discharge the debt, proceed to seize the property of that other, without previously demanding payment of the debt, he shall be cast.

18. *Síma amot amamángsa tanwir ring báya*, i. e. a person in office, who exceeds his authority, ought to be condemned.

19. *Krúwang lindúng'an perwát*, i. e. if person whose cause is good, and whose evidence is complete and satisfactory, shall insist upon a severe punishment against his adversary, he shall be cast.

20. *Gabus boten ng'lem*, i. e. when stolen goods are discovered, the Raja ought to cause them to be restored to whom they belong.

21. *Guwáta Samirána*, i. e. those who conceal the wife or children of another, ought to be put to death by order of the Raja.

22. *Súlung alebu dían*, i. e. if the relations of one whose guilt is manifest, shall apply to have the punishment awarded transferred to a substitute, they shall be condemned.

23. *Apátra ina percháya*, i. e. a person obtains permission from the Raja to proceed against another, and afterwards, from some consideration, neglects to do so, while that other, in the meantime, appears before the Raja and declares his innocence of what is alleged against him, stating that, if he were guilty, his chief would not have failed to bring him forward: in such case, the former shall be condemned.

24. *Perwáta brámantára*, i. e. if a person is found guilty of circulating false reports, or of magnifying any piece of intelligence, so as to create a great alarm in the country, and put all the people in a ferment, he shall be fined four hundred and four thousand.

ABSTRACT of some of the LAWS which, according to the tradition of the Javans, were in force against the inhabitants, previous to the supposed arrival of Aji Saka.

(Collected by MR. MIDDLEKOOP.)

OATHS

Were administered by repeating certain words after the Priest, accompanied by a motion of the head and body, the hands being folded.

ORDINARY FINES

Were levied according to the following gradations:—

When a subordinate or petty chief, who had people under him, committed a crime, the fine was	5
The eldest son of a prince	5
The son of a chief	2½
A Prince or <i>Raden</i> without employment	1½
A <i>Menak</i> or <i>Rang'ga</i> holding a public office and transacting public duty	5
A <i>Menak</i> or <i>Rang'ga</i> restricted from the performance of public duty	1½
A <i>Menak</i> or <i>Rang'ga</i> who administered a small tract of country	1
Children of a chief <i>Rang'ga</i> or <i>Menak</i>	2½
An ambassador (ordinary) of a prince or principal chief	2½
An ambassador extraordinary	1½
Children of the above	1
A male subject	1½
A female subject	1

Persons having forfeited their right of liberty through misdemeanors, and thus become dependant upon another, pay fifty *pichis*.

All the above fines might be paid in money, goods, gold, silver, horses, buffaloes, and other necessary articles.

THEFT AND ROBBERY.

A free subject having committed a robbery, he was delivered up (on detection) to the chief or tribunal of the place to which he belonged; and if unwilling to restore the stolen goods, or unable to pay the value, he was to be delivered over to the person whom he had robbed, and made to serve him as a bondsman: but no claim whatever was enforced upon the wife or children, who did not, on this account, forfeit their liberty. It was, however, lawful to deprive a thief of his life when caught in the act.

When a robbery was committed by a person in a state of servitude, the proprietor of such person's services was bound to pay the value of the stolen property, or to deliver the person over to the injured party; but on being caught in the fact, and the thief being put to death, the proprietor was no further liable.

Robberies having been committed in the day time, were punished by a fine or by servitude.

If one or more stolen buffaloes were killed in or near a village, and sufficient proof thereof adduced by the owner, the village people were condemned to pay the value of such stolen cattle, unless they produced the thief or thieves.

HOMICIDE AND MURDER.

A free person who killed a male dependant, was punished by a fine of two and a half *tahils*: one who killed a female dependant was fined three and a half *tahils*.

If in an affray between two free persons the one killed the other, and the offender was seized in the act, he could be put to death by the relations or friends of the deceased; but if he succeeded in taking refuge with the head of a village, he was only liable to a fine of five *tahils* if the deceased was a male, and three and a half *tahils* if a female.

When a prince, chief, or petty chief, was murdered by one of his subjects, the party was punished by death, for having killed his superior.

But a prince or head chief had the right to deprive his subjects of their lives whenever he chose, though, when one of their sons, either a *Menak*, *Rang'ga*, or other chief, put to death a free person or dependant, he was bound to pay to the friends or master of the deceased two and a half *tahils*, besides a fine for a male person five, and for a female three and three quarters *tahils*. These persons were not liable to be put to death, although caught in the fact.

In case, however, that a prince or chief caused to be put to death a dependant who was not guilty of any offence for which he deserved such punishment, the prince or chief was bound to make good half of the estimated value of the deceased's property, beside being condemned to servitude, and a fine of ten *tahils*.

Amok being cried, it was lawful for every one to destroy such as ran *amok*; but in the event of its being a false alarm, and any one was killed by the crowd, the person that exclaimed *amok* was liable to be fined.

In a crowd or assemblage of people, if a dispute ran so high that one party was killed in the affray, and lay dead on the ground, the offending party was exempt from fine, but punished by the prince according to the circumstances of the case.

ADULTERY.

A man having received information that his wife had committed adultery, was restricted from believing it, even if he was told by credible persons, unless he found her in the act; he might then deprive her of life. If she escaped, however, and concealed herself among her friends and neighbours, it was not lawful to put her to death; but on complaint being made by her husband, she was prosecuted and punished according to the circumstances of the case.

A man found guilty of adultery was liable to a fine of ten *tahils*, and the woman to the same. Being unable to discharge the sum, they were transferred to the servitude of another, who was willing to pay the amount of the fine, which was then given to the husband of the adulteress.

An adulteress causing her husband to be put to death was also to suffer death.

A man having run away with the wife of another, on her being seized by her husband at their abode, both parties could be put to death; but if they were not discovered for a length of time, during which they kept themselves quiet and had begotten children, the adulterer was only liable to pay, as well for himself as for the woman, a fine of ten *tahils*. He was, however, bound to forfeit the half of the children so begotten for the benefit of the lawful husband, to whom they were transferred in servitude.

DIVORCE.

Lawfully married persons wishing to separate from each other, each retook the property brought at the marriage, and an equal division was made of what had been gained since the marriage. This included the children; the eldest was always to remain with the mother, the second with the father. After the separation on the decease of either, the whole effects were to be

taken possession of by those children who, at the separation, had come to the share of the deceased; but they were also obliged to pay the debts of the deceased, whatever the same might amount to. When the number of children was unequal, the odd one was to fall to the share of the wife; but such as were imperfect or deformed were excluded from the division, and maintained by both parties.

FOOTNOTES:

[295] *Pichis*, a small tin coin.

[296] 1. *Hukum*, the law of God; 2. *P'rentah*, the law of the sovereign; 3. *Susahan*, oppression (of the people from the law of the prince).

[297] The money here alluded to is the coin of *Palembang*, subsequently introduced by *Raden Patah*, in consequence of his connexion with *Palembang*. Rice appears to have been the principal medium of exchange previously to this period. The *pichis* is a small tin coin, of which two hundred make a *wang*, and twenty-eight *wangs* are equal in value to a Spanish dollar.

APPENDIX, D.

PROCLAMATION.

For the satisfaction of the inhabitants and people of Java, the following provisions are made public, in testimony of the sincere disposition of the British government to promote their prosperity and welfare. The refusal of their late government to treat for their interests, although disabled by the events of war from affording them any further protection, has rendered the consequent establishment of the British authority unconditional. But an English government does not require the articles of a capitulation to impose those duties which are prompted by a sense of justice and a beneficent disposition. The people of Java are exhorted to consider their new connection with England as founded on principles of mutual advantage, and to be conducted in a spirit of kindness and affection.

Providence has brought to them a protecting and benevolent government; they will cheerfully perform the reciprocal duties of allegiance and attachment.

1. His Majesty's subjects in Java will be entitled to the same general privileges as are enjoyed by the natural-born subjects of Great Britain in India, subject to such regulations as now exist, or may hereafter be provided, respecting residence in any of the Honourable Company's territories.
2. They will have the same privilege and freedom of trade to and with all countries to the east of the Cape of Good Hope, and also with His Majesty's European dominions, as are possessed by natural-born subjects of Great Britain.
3. Dutch gentlemen will be eligible to all offices of trust, and will enjoy the confidence of government, according to their respective characters, conduct, and talents, in common with British-born subjects.
4. The vexatious system of monopoly, which is understood to have heretofore prevailed, in some instances to an oppressive and inconvenient extent, will be revised, and a more beneficial and politic principle of

administration will be taken into consideration as soon, and to such extent, as full information on the subject can be obtained, as established usage and habit may admit, and as may be consistent with a due regard to the health and morals of the people.

5. The Dutch laws will remain provisionally in force, under the modifications which will be hereinafter expressed, until the pleasure of the supreme authorities in England shall be known; and it is conceived that no material alteration therein is to be apprehended.

The modifications to be now adopted are the following:

First. Neither torture nor mutilation shall make part of any sentence to be pronounced against criminals.

Secondly. When a British-born subject is convicted of any offence, no punishment shall be awarded against him, more severe than would be inflicted by the laws of England for the same crime. And in case of doubt concerning the penalty by English law, reference shall be made to the Honourable the Recorder of Prince of Wales' Island, whose report shall be a sufficient warrant for awarding the penalty stated by him to be agreeable to the laws of England. No sentence against any British-born subject, for any crime or misdemeanor, shall be carried into execution, until a report shall have been made to the lieutenant-governor.

Thirdly. No sentence of death against any person whatever shall be carried into execution, until report shall have been made to the lieutenant-governor.

Fourthly. The lieutenant-governor will have the power of remitting, moderating, or confirming, all penalties; excepting inconsiderable fines, short imprisonment, or slight corporal punishment.

Fifthly. British-born subjects shall be amenable to the jurisdiction of the Dutch tribunals, and to the Dutch laws in all cases of civil complaint or demands, whether they be plaintiffs or defendants.

Sixthly. All British-born subjects shall be subject to the regulations of police, and to the jurisdiction of the magistrates charged with the execution thereof, and with the maintenance of the peace and of public tranquillity and security.

Seventhly. All persons belonging to or attached to the army, who are by their condition subject to military law, shall, for the present, be tried for any crimes they may commit only by courts-martial, unless sent by the military authorities to civil courts.

Eighthly. It being necessary in all countries that a power should exist of forming regulations in the nature of legislative provisions, adapted to change of circumstances, or to meet any emergency that may arise, and the great distance of the British authorities in Europe rendering it expedient that the said power should, for the present, reside in some accessible quarter, it is declared, that the lieutenant-governor shall have full power and authority to pass such legislative regulations, as, on deliberation, and after due consultation and advice, may appear to him indispensably necessary, and that they shall have the full force of law. But the same shall be immediately reported to the governor-general in council in Bengal, together with the lieutenant-governor's reasons for passing the said regulation, and any representations that may have been submitted to him against the same; and the regulations so passed will be confirmed or disallowed by the governor-general in council with the shortest possible delay. The mode in which the lieutenant-governor shall be assisted with advice will hereafter be made known, and such regulations will hereafter be framed as may be thought more conducive to the prompt, pure, and impartial administration of justice, civil and criminal.

Regulations respecting the paper currency, as well as the relative value of coins circulating in Java, will be published in a separate paper of this date.

Done at Molenvliet, the 11th September, 1811.

By His Excellency the Governor-General of British India.

(Signed) MINTO.

**REGULATION, A.D. 1814, PASSED BY THE HON. THE
LIEUTENANT-GOVERNOR IN COUNCIL, *On the 11th of
February, 1814*, FOR THE MORE EFFECTUAL
ADMINISTRATION OF JUSTICE IN THE PROVINCIAL
COURTS OF JAVA.**

The Honourable the Lieutenant Governor in Council being deeply impressed with the necessity of framing one adequate, impartial, and consistent code, for the prompt and equitable administration of justice, in the provincial courts of this island, with a view to give to all ranks of people a due knowledge of their rights and duties, and to ensure to them an enjoyment of the most perfect security of person and property, has been pleased that the following regulation be enacted; which, by assuming as its basis, rather the ancient usages and institutions of the Javans, than any new innovations founded on European systems of internal government, may confidently be expected to be, at once the most pleasing to them, and the best adapted to the existing state of their society.

1. The Resident shall be the Chief Judge and Magistrate in his districts; but the administration of police and justice, in the towns of Batavia, *Semárang*, and *Surabáya*, shall, as heretofore, be entrusted to the particular Magistrates and other officers appointed by government for those places.

2. The *Bopátis*, or chiefs of districts, and all other public officers, who may be retained to carry on the duties of this department, are placed under the immediate authority and control of the Resident himself, or of his Deputy duly empowered by him. These various duties, whether relative or direct, will be clearly defined in the course of the following sections.

3. To render more easy the attainment of justice, and to carry on better the general police of the country, a subordinate jurisdiction shall be constituted in the following manner.

4. The Residency shall be divided into such number of districts, as extent of land, population, former custom, or other circumstances may render necessary. Each of these shall be consigned to the care of a *Bopáti*, or native chief, with such an establishment, as being deemed by the Resident adequate to the purpose, and by him submitted to government, shall have received their sanction.

5. These districts, again, shall be subdivided into divisions, the extent and limits of each of which will be clearly marked out and made known. Their size must, of course, entirely depend on the greater or less propinquity of the villages they contain, and on the more or less numerous population by which these are inhabited; but, generally speaking, no division shall be less than ten, or more than twenty, square miles in extent. It must also be

observed, that the limits of the division follow those of the villages; it being quite contrary to a system of good police, that inhabitants of the same place should be subject to different authorities.

6. In each division there shall be fixed a station of police, to which shall be appointed a competent officer, with such number of inferior *Mántris*, *Peons*, &c. as shall be deemed necessary for the execution of the various duties allotted to his office, and the due maintenance of the tranquillity of his division.

7. In each village there shall be a Head-man (whether recognized under the name of *Penting'gi*, *Bakal*, *Lurah*, *Kuwu*, *Mandor*, or otherwise, according to the custom of the country), to be freely elected by the inhabitants of the village itself from among themselves; the only requisites on the part of government being, that he actually reside and hold land in it. Should any of these be found unfit to carry on their respective duties, or other good objection arise to their being continued in the posts they hold, a representation to such effect will be made by the Resident to the villagers, who will accordingly proceed to the nomination of some other person, who, if approved of by the Resident, shall then receive his confirmation.

8. These Head-men shall, in every respect, be considered as the representatives of the villages, and shall be held responsible for all such acts committed within them, as fall justly under that controlling and preventive power vested in them by their fellow-inhabitants.

9. This mode of election and consequent power, it must be observed, are no new introductions, but subsist in immemorial usage, and their nature and limits are well understood by the Javans throughout the island.

10. The Heads of villages will receive and carry into execution all such orders as government, either directly by the Resident, or through the medium of the *Bopátis* and officers of divisions, may be pleased to issue to them; and they will furnish, at all times, such oral or written information as may be required from them.

11. The care of the police, in their respective villages, shall be entrusted to their charge; and for the due preservation of peace, the prevention of offences, and the discovery and arrest of offenders, they are required to be particularly careful that a sufficient night watch be regularly maintained.

For this purpose they are authorized to require each of the male inhabitants to take his turn in the performance of this duty; and, at any time, to call on all to aid in the pursuit and apprehension of offenders, or to execute generally any of the other duties that may occur.

12. The Heads of villages will also be held responsible for the amount of all property belonging to travellers, which may be lost within their villages, provided, however, that the same shall have been placed under their charge; and they are required to take charge of all travellers' property which may be brought to them for that purpose.

13. They are directed to keep a register of all persons under their authority, describing the name, age, country, occupation, size, and appearance of each individual, with any other remarks that may be deemed necessary. They will also, with the assistance of the village priest, form a register of the births, marriages, and deaths, which occur within their jurisdiction.

14. These will be drawn up every six months, according to forms to be furnished to them by the Resident. A copy of each will be retained in the village, and another will be forwarded to the police officer of the station, to be kept by him as records, and to furnish the grounds of such reports as he may be called on to give in.

15. Whenever a stranger arrives for the purpose of settling in a village, or any one of its former inhabitants absconds, the head of it is required to furnish immediately to the officer of the division a detailed account of the particulars relative to either circumstance, who will accordingly take such measures for the apprehension or pursuit of either, or forward such intelligence to his superiors, as the case may require.

16. Any person producing the express permission of the Resident, shall be allowed to settle in a village; but without this, or unless he can procure two respectable inhabitants to become securities for his good behaviour, he shall not be permitted to do so.

17. As well heads of villages as officers of divisions are required to keep a watchful eye upon all new settlers, to ascertain, if possible, their several characters, from their former places of abode; and to observe, most particularly, the conduct of such individuals as have no ostensible means of earning a livelihood. They will, too, follow vigilantly the motions of armed

persons, preventing them, as much as they can, from travelling together in large bodies; and, as far as may be practicable, they ought to hinder individuals of every description, but most especially such as are armed with spears, swords, &c. from travelling at all after eight o'clock at night.

18. After this hour they are authorised to stop, and detain in their custody till the next morning, all such persons as may, by having with them more than usual property, or in any other way, justly give grounds for suspicion. But on a summary examination, should nothing further appear against them, they must, on no account, keep them detained beyond eight o'clock the next morning; nor ought detention at all to take place, if the account they first give of themselves be deemed satisfactory.

19. Should any thing further appear against them by complaint or otherwise, they will then be proceeded with as with other accused persons, relative to whom directions will be given in a subsequent section.

20. In the above case only, it is competent to the officers of police to apprehend any person of their own authority, unless detected in the actual perpetration of crime; or to release any person once apprehended.

21. It having been represented, that though when the inhabitants are settled in one place, in habitations contiguous to each other, the duty of the head of a village becomes easy of execution, yet that it is extremely difficult for him to perform it adequately, when, from caprice or other cause, any of its members are allowed to leave the main part, or *désa*, to go and reside in lonely and remote spots, forming thereby small settlements of two or three cottages only together, termed *dukus*, which being necessarily, from their distance, without the guard of night watches, &c. must frequently become liable to be attacked and plundered, or more often, perhaps, from the absence of all controul, will themselves form the resort and shelter of robbers and other abandoned characters; and, on the other hand, it not being wished to repress too much this out-settling, as by the creation of new villages (which must owe their formation to such small beginnings), a great part of the land, at present waste, may be brought into cultivation; it is ordered, that the following be the line of conduct to be observed in these cases.

22. The head of a village shall, in every instance, report to the officer of division when such an out-settlement takes place; who shall then proceed to

the spot, and forming a committee of three heads of villages (not to include the one in which the circumstance occurred) shall judge whether or not it be expedient, for the benefit of agriculture, to permit its continuance, and measures shall be taken accordingly. If the new settlement be allowed to remain, a vigilant eye must be kept over its infant state, both by the officer of division and head of the neighbouring village; and when it shall have grown to a size that may admit of this, it ought to be separated from the authority of the mother village, and a similar constitution be bestowed on it.

23. It is the duty of heads of villages, generally, to preserve tranquillity, as far as their authority extends, to obey zealously the orders of their superiors, to furnish every useful information, and, in short, to contribute all in their power to the establishment and preservation of a good state of police.

24. Their rewards for this will be a certain portion of land in each village, and the favouring eye and protection of government.

25. The police officers of divisions are to be considered as immediately under the authority of the *Bopátis*. They will furnish to these all such accounts, reports, &c. as may be required, and will act always on the orders received from them, or, of course, directly from the Resident himself.

26. To the *Bopátis*, or chiefs of districts, they will forward every six months abstract accounts of births, marriages, and deaths which have occurred in their division, and of the general state of cultivation and population, with such remarks accompanying them as may seem requisite.

27. Of these and other papers forms will be furnished them, and they will prepare them from the general account obtained from heads of villages, whom they will, at any time, require to supply them with such further information as may be deemed necessary.

28. On every Saturday they will give in to the *Bopáti*, or chief of the district, a detailed statement of the occurrences of the preceding week, the crimes committed, offenders apprehended, number of new settlers, their employment, from whence arrived, what individuals have emigrated, causes of emigration, and, in short, whatever has happened out of the common track of occurrences.

29. The officers of divisions shall be held responsible for the due administration of the police within their respective jurisdictions; and to

enable them better to execute their assigned duties, the heads of villages are placed immediately under their authority. They shall accordingly be watchful that these vigilantly and zealously perform such services as may be allotted to their situation; and they shall report fully to the *Bopáti* of the district, on the conduct of any heads of villages who may prove neglectful of their charge, or in any way appear remiss in the execution of the duties entrusted to them.

30. They shall, on no account, exert their police authority in any undue interference with the collection of the revenues, that being considered a distinct department, to which they will only render their assistance when called upon under the distinct rules laid down in another Regulation for the guidance of their conduct in it; here only it is considered that they are to lend their aid at such times, and in such manner, as may be expressly pointed out to them in orders from their superiors. But they are at all times, on a regular application being made to them by the inferior officers of revenue, to take charge of, and give effectual escort to, treasure passing from or through their divisions; and after receipt of the same, they will be held responsible for it until such treasure shall have been by them delivered to the next constituted authority.

31. The *peons*, and other inferior servants attached to their offices, shall, of course, be employed in the serving summonses, apprehending offenders, giving escort, and in other regular duties; but when not in any way thus engaged, they shall, as leisure admits, be sent to make the rounds of the division; acquiring, by this means, not only competent information of all that is transacted within it, but serving also, by this occasional and uncertain visitation, materially to prevent the undertaking of nefarious acts.

32. As before observed, the officers of divisions, and those subordinate to them, shall only, of their own authority, apprehend such persons as are taken actually in the commission of crime. They are never empowered to seize others (with the exception of those mentioned in Section 18 of this Regulation) but when a written order for that purpose has been received from their superiors, or when a regular charge of an original nature has been given in against them by any respectable individual.

33. In these cases, they will take suitable measures for the apprehension and securing of the persons complained of; and when once apprehended, they

will, on no account of their own authority, again liberate them.

34. Should the persons have been so arrested in consequence of orders received to that effect, the officers of divisions will, in forwarding them to their destinations, be careful to observe such instructions as they may have received on the subject.

35. But should the prisoners have been apprehended on complaints, or other proceedings originating in the division itself, they will, on their arrival at the police station, cause to be written a clear and summary statement of the offence alleged, and of the facts in the case which have come under their observation, whether witnessed by themselves, or borne testimony to by any persons present.

36. They will then, with this statement accompanying, forward under a sufficient guard the prisoner or prisoners, together with the persons complaining or aggrieved, and the witnesses of the facts, towards the chief town of the district where the *Bopáti* resides.

37. Under no pretence whatsoever, shall any persons be detained at the police station longer than twenty-four hours after their arrest.

38. Should the division in which the arrest has taken place be not that in which the chief town of the district is situated, the officers of it shall make over the charge of persons and papers to the police officers of the division next in the way; and, in similar manner, they shall be forwarded on from station to station, to the chief town of the district, or from thence to the principal seat of the residency.

39. In this transmission, the officers of divisions will take particular care that as little delay as possible occur; any unnecessary infringement on the personal liberty of the subject, being that of which this government will ever be most jealous.

40. Whenever a human body is found dead, of which it is not certainly known that the death was natural, or even though such illness precede it as might be considered as possibly the cause, should any suspicious circumstances or appearances attend the death, it will become the duty of the head of the village in which this may occur, to take cognizance of the fact; and ordering it so that every thing remain in the state first found, he shall report the circumstances, without delay, to the officer of the division,

who will immediately appoint a commission of three heads of villages, assisted by himself or officers, to proceed to the actual spot where the body lies, and there make due inquiry into every particular that may serve to elucidate the affair. For this purpose, such evidence will be taken as may, in any way, be thought to bear on the subject.

41. When the investigation is completed, the persons appointed for the inquest shall deliver to the officer of division a statement of what they have done, seen, or heard, and annex to it the opinion they have finally formed of the manner of death, or degree of guilt any where attaching.

42. The officer of division shall forward this statement, without delay, to the superior authorities; from whom, in return, he will receive instructions.

43. But should any degree of guilt be imputed, in the opinion expressed by the commissioners acting on this inquest, the officer of division shall, without loss of time, proceed to apprehend the suspected person or persons, and take such other measures upon that opinion, as he would, had a complaint to the same effect been regularly lodged.

44. As it is most necessary that the cultivators of the soil, and other industrious inhabitants of a village, should not, on every frivolous or inconsiderable occasion, be taken away from their labours to attend a distant seat of justice, where, even though it be more equitably and impartially administered, the benefit of this is, in many cases, quite counterbalanced by the loss of time and expenses of the journey and suit,—it is ordered, that there be a subordinate jurisdiction constituted, by means of which the distribution of justice will be rendered far more easy to the governing power, and the acquisition of redress will be presented to every one aggrieved, with the greatest facility, and the least possible expense of money or time.

45. The heads of villages are required to look on themselves, and to act with regard to the persons under their controul, as fathers of families; to maintain, to the extent of their power, a spirit of harmony and tranquillity in the villages entrusted to them; to curb every approach to feud and litigation; and, with the aid of their officers, to interpose their authority in settling, with justice and impartiality, all such petty quarrels as may arise among the inhabitants.

46. Should, however, the dispute be of sufficient magnitude to entitle it to higher consideration, courts are regularly established to which it may be referred.

47. The officers of division shall, at least once a week, or oftener, attend in some open place at the station of police, with their *mantris*, or other subordinate servants, for the purpose of inquiring into and deciding on all such complaints as may be given in to them, for petty offences committed within their divisions, as abusive language and inconsiderable assaults or affrays.

48. These, if satisfactorily proved, they shall be authorized to punish, by fine not exceeding ten rupees, of which fine the one-half shall be given to the individual or individuals aggrieved, the other be carried to the account of government.

49. They shall also be empowered to hear and determine on all such petty civil cases as may be referred to them, provided the amount at issue exceed not the sum of twenty rupees.

50. And further, they shall investigate the trifling disputes that may be brought before them about trespass, nuisance, the irregular distribution of water, encroachment on boundaries, and other such minor grievances of usual occurrence in villages.

51. Whether civil or criminal, they shall not, in any case, be authorized to arrest or imprison.

52. But the complaint having been given in, the person complained of, if not present, shall be summoned to appear by the next day of sitting, when the cause shall be heard and decided on without delay. In failure of attendance on the part of the plaintiff, the case shall be dismissed; on the part of the defendant, the cause shall be proceeded with *ex parte*. The sentence, whatever it may be, shall be carried into execution, by means of the authority vested in the heads of villages.

53. Should any persons refuse to obey their award, they shall be committed for trial before the Resident, who will not only cause the original sentence to be carried into execution, but, at his discretion, order a punishment suited to their contumacy.

54. An appeal may be made in the usual manner, in civil cases, from the officer of the Division's Court to that of the *Bopáti* at the chief town of the district; and any complaint for unjust or arbitrary proceeding, on the part of the subordinate police officers, will likewise be received there.

55. Of every proceeding of this court a regular record shall be kept; one copy to remain at the police station, and another to be forwarded to the chief of the district.

56. A fee of half a rupee from each party shall be levied prior to hearing the cause, to be divided among the officers of police; and ten per cent. on the amount of the sentence in civil cases is, according to the custom of the country, to be taken from the loser of the suit, to be carried to the account of government.

57. The officers of divisions will be held fully responsible for a zealous and conscientious discharge of the important duties entrusted to them, and shall meet with exemplary punishment, in the case of any negligence or corruption being established against them.

58. To the *Bopátis*, or heads of districts, is consigned the general superintendence and care of their respective districts. But as these high officers must frequently be required to attend at the place where the Resident himself lives, that their districts may not suffer any inconvenience from their absence, they are empowered to delegate their full authority to their deputies, or *Pátehs*, who shall preside in their courts, and issue and receive orders, in every respect, like themselves.

59. They shall, every six months, furnish to the Resident abstract accounts of the state of cultivation and population within their districts, according to forms which will be given to them, and accompanied with such remarks as may suggest themselves.

60. On every Monday morning they shall deliver to the Resident a detailed statement of the proceedings of the foregoing week, containing an account of new settlers, persons emigrated, offences committed, offenders apprehended, and in short, of every thing remarkable.

61. The heads of districts shall receive all orders directly from the Resident, and take due measures for carrying them into immediate execution. The officers of divisions, heads of villages, and all other police servants within

the district, are placed immediately under their control; and they will most vigilantly watch over the conduct of them, reporting instantly to the Resident every instance of negligence or crime that may fall under their observation.

62. They will be open to receive complaints or petitions of every description; reporting and issuing the necessary orders on them without delay.

63. In forwarding persons apprehended within their districts to the seat of the residency, they will be particularly careful that the least practicable delay occur; no prisoner, on any account, being detained by them, of their own authority, for a longer space of time than twenty-four hours.

64. In forwarding persons, papers, or treasure, they will observe the mode prescribed in Section 38 of this Regulation.

65. On the receipt of an inquest report from the officers of divisions, it shall be submitted to the chief *Jáksa* and *Panghulu* of the district for their opinion, and on this opinion the necessary measures shall be taken.

66. At the chief town of each district a regular court shall be established, in which the *Bopáti* or, in his absence, the *Páteh*, shall preside, assisted by the *Jáksa*, *Panghulu*, and other law officers appointed.

67. This court shall be held in some open spot in the town, at least twice a week, or oftener, if necessary.

68. Its authority shall, however, be confined entirely to civil matters; all cognizance of criminal cases, beyond that already allotted to the officers of divisions, being vested solely in the court where the Resident himself presides.

69. In the *Bopáti's* court shall be received appeals from those of the officers of divisions, on institution of which the appellants shall pay a fee of one rupee.

70. Before deciding on these causes, the record of the former trial shall be read, and such new evidence taken as may be produced.

71. If the former sentence be reversed, the costs which shall have been kept in deposit shall be refunded to the appellant, and levied from the other party.

72. And in confirming it, an enhancement of these costs is left to the discretion of the court; provided, however, the whole never exceed fifteen per cent. on the sum originally sued for.

73. A second appeal to any other authority shall, in no instance, be permitted.

74. The *Bopáti's* court shall be competent to receive complaints in civil cases, where the amount at issue is not less than twenty, nor exceeds fifty, rupees.

75. This complaint being filed, a copy of it shall be sent to the person complained of, with an order to answer it at most within a week; and, on receipt of this answer, notice shall be given on what day (at farthest a week from the time of the receipt) the cause will be tried. Such witnesses as are necessary will be summoned; and, on the day prescribed, the complaint and answer being read, and evidence being taken, the court shall give its decision.

76. In failure of the complainant's appearance, the cause shall be dismissed; and on the part of the defendant, if he give not in his answer as required, or appear not when summoned, the case shall be proceeded with, and sentence given on *ex parte* evidence.

77. The *Bopáti*, or his deputy, shall require the *Jáksa* and *Panghulu* to assist him with their advice throughout the trial, and to expound the law where it is not sufficiently clear. Should their opinions concur with that of the president of the court, he shall pass his decision, and carry it into execution without further delay; but when their opinions are at variance with his, he shall, previously to pronouncing sentence, refer the case, with the several reasons detailed which have influenced each opinion, to the Resident, who shall consult with the chief *Jáksa* and *Panghulu* of the residency, and return his orders on the subject.

78. A fee of one rupee shall be taken from each party, on giving in the complaint and answer; and ten per cent. on the amount of the sentence shall be levied from the loser of the suit. The fees to be divided among the officers of the court, and the costs to be carried to the account of government.

79. All proceedings are to be carefully noted down, and preserved as records. One copy to be kept in the archives of the *Bopáti*, and another to be forwarded to the Resident.

80. An appeal, in causes originating in this court, shall lie to that of the Resident; provided notice of the appeal being intended to be made, be given in on the day of trial, and the appeal itself be made within a week after.

81. In this case the costs shall, nevertheless, be immediately levied, and held in deposit till the appeal be decided on. Sufficient security shall also be given for the amount of the sentence.

82. Moreover, on the first institution of all civil cases, in this and every other court, good security must be taken for the amount of possible costs, both from the complainant and person complained of.

83. The *Bopáti* will be held responsible for the faithful and just discharge of these his high duties. To him does government look, not only for the vigilant administration of police, and impartial distribution of justice throughout his district, but for the zealous execution of every measure that can at all conduce to the preserving that district in a flourishing and happy state.

84. The duties attached to the office of Resident itself are fully explained in the general instructions given to that officer on his first entering into his situation. In this regulation only such parts of the charge committed to him will be dwelled on, as belong properly to the judicial department of his service, to his deliberative and executive powers as chief judge and magistrate of the province.

85. As, however, the due exertion of these powers may require a much larger portion of time than can be possibly devoted to them by a single individual, and more particularly, as much of his attention must be directed to other objects, he is empowered to delegate their full participation to his deputy or assistant, whether in presiding in his court, or in issuing and receiving such orders and instructions as the government of his residency may render necessary.

86. The several Residents, and their deputies or assistants, previously to entering upon the execution of the duties of their office, shall take and subscribe the following oath before the Honourable the Lieutenant-

governor in Council, or such person as he may appoint to administer the same.

"I,—, solemnly swear that I will truly and faithfully execute the duties of my office; that I will administer justice to the best of my ability, knowledge, and judgment, without fear, favour, promise, or hope of reward; and that I will not receive, directly or indirectly, any present, either in money or in effects of any kind, from any party in any suit or prosecution, or from any person whomsoever, on account of any suit, prosecution, or other legal proceeding to be instituted, or which may be depending, or have been decided, in any court under my jurisdiction; nor will I, directly or indirectly, derive any profits from my station, except such as the orders of government do or may authorize me to receive.—So help me God."

87. The presidents of other subordinate courts shall take and subscribe before the Resident, oaths of a similar nature and form, to be administered by the priests, according to the custom of the country.

88. The *Jáksas* and *Panghulus* shall likewise be required to take and subscribe an oath in the following form:

"I, —, *Jákسا* (or *Panghulu*), do solemnly swear, that I will faithfully execute the office entrusted to me; I will answer truly to the questions put to me in writing, or by word of mouth, by any judge of the courts to which I belong, declaring or writing down freely, without fear or partiality, what is the written acknowledged law or local long established usage; and I will declare or give in writing nothing that is not warranted by the law or custom. And I promise and swear not to accept of any consideration, in money or otherwise, for any opinion or declaration of the law or custom I may deliver, as *Jákسا* (or *Panghulu*) of any court."

89. In the sixth clause of the Proclamation by government, dated 21st January, 1812, provision was made for the establishment of a Landrost's court; but, in the present state of circumstances, government deeming it advisable that a considerable extension of the powers vested in that court should be given, for the more prompt and effectual administration of justice, it is ordered, that the following sections be considered as an enlargement and modification of that clause, and that in lieu of the landraad therein appointed, there be constituted a court, to be in future called the Resident's.

90. This court shall be composed in the following manner. The Resident or his assistant shall sit in it as sole judge or magistrate. The *Bopátis* of the several districts, or their deputies, shall attend to assist the Resident, through every stage of the proceedings, with their advice, or with such information as he may require. The head *Jáksa* and *Panghulu* shall be in waiting to expound, where necessary, the law, to state the local usage, and to take down notes of the evidence. The *Jáksa* of that district in which any crime has been committed, shall be the public prosecutor, where no private one appears. The other native officers shall be such as have been used heretofore to compose courts of this nature.

91. This court shall be held at least twice in every week, or oftener if necessary, in the *Passerban*, or Residency public court-room, for the purpose of hearing complaints of every description that may be brought before it, of examining into all offences reported to have been committed, and trying all causes, whether civil or criminal, that occur in the Residency; with the exception only of those that will, in a subsequent section, be pointed out, as belonging to another and higher authority, the Court of Circuit.

92. The court shall be held open from the hour of ten in the fore to that of three in the afternoon.

93. For greater precision, the court days may be fixed to the Monday and Thursday of every week. It is, however, left to the Resident to alter these days of sitting, whenever he may deem that there is sufficient reason for so doing, observing, in such cases, to give public notice of the intended change at least one court day preceding it.

94. The chief *Jáksa*, who will have the custody of all persons apprehended and brought into the town until regularly committed to gaol, shall immediately, on opening the court, present to the Resident a list of such prisoners as have been confided to his care since the last court day, stating from whence they came, what the nature of the offence alleged against them, the names of the witnesses brought to prove it, and other necessary information connected with their apprehension.

95. The Resident shall then commence on the investigation of the cases, ordering in each that the report of the officer of division, and original

complaint, be first read, and proceeding afterwards to the examination of the witnesses.

96. Should it appear to the Resident that there is not sufficient evidence against the accused, and should the complainant not be able to adduce any further, the prisoner shall be immediately released out of custody.

97. But should the complainant state that he can produce more witnesses, he shall be required to enter into a penalty-bond for their appearance on a given day (that day to be as little distant as possible, nor, if practicable, to exceed a week from the time of this first examination), and the prisoner shall, in this case, be admitted to bail, provided the offence be of a bailable nature.

98. If the offence charged against him be one that does not admit of bail being taken, the Resident shall sign a warrant to the gaoler, to receive and hold him in safe custody until he shall be discharged by due course of law.

99. On the second examination, should the innocence of the prisoner appear sufficiently clear, he shall be forthwith released; but should, on either the first or second day of inquiry, such presumption of guilt be established, as to render necessary a regular trial, the prisoner shall stand fully committed for it, and be remanded to gaol, there to remain until that day of trial arrive.

100. If the crime imputed to him be murder, treason, gang-robbery, or any other for which the sentence may amount to death, the Resident shall not himself proceed further in the case, but commit him to prison, to take his trial before the Court of Circuit, of which more shall be said hereafter.

101. Should the offence with which he is charged be one of any less magnitude than capital, the Resident shall, in ordering him to jail, notify to the prisoner on what day his trial shall come on before himself. That day must not, without some good and sufficient reason, to be reported to government, exceed the distance of a week from the day of his commitment to prison.

102. On the day of trial, the prisoner being brought up, the former proceedings shall be read, and the witnesses again examined, and such further evidence, on the part of the prosecution, be taken as may be necessary. The prisoner shall then be called on for his defence, and the witnesses adduced by him be heard and examined.

103. The Resident shall finally sum up the evidence, and stating the reasons that have influenced his opinion, and the law of the case, pronounce sentence accordingly.

104. In these, and all other cases, whether civil or criminal, which come, before him, the Resident shall be guided in his decisions by the existing native laws, and ancient customs of the island; provided the same be not decidedly at variance with the universal and acknowledged principles of natural justice.

105. In every instance where the opinions of the *Panghulu* and *Jáksa* are in accord with the judgment of the Resident, and in which the punishment fixed to the crime does not amount to imprisonment or transportation for life, the sentence of the Resident shall be final, and be immediately carried into execution.

106. But whenever the opinions of the *Panghulu* and *Jáksa* shall be in opposition to that of the Resident, or in which the punishment of the crime shall amount to imprisonment or transportation for life, all the proceedings shall be immediately transmitted to government, with the Resident's statement of the reasons and regulations on which he has formed his opinion; but he shall delay the pronouncing sentence, until the approval of the Honourable the Lieutenant-Governor shall have been obtained.

107. In all cases whatever of trial before this court, the Resident shall transmit to government, in English, a statement of the offence charged against the prisoner, the substance of the evidence on the prosecution and defence, the law of the case as it exists in the regulations of government, or in the written or customary laws of the island, and the particular reason on which he has formed his own opinion. The *Jáksa* and *Panghulu* are required to take notes of the evidence, and to state their respective opinions on the case in the vernacular language; which document, signed by them, shall be transmitted to government by the Resident, together with his own statement of the case.

108. The civil jurisdiction of this court shall be constituted as follows:

109. It shall be competent to receive original complaints of every description, and to try such appeals as may be made to it from the decisions of the *Bopáti's* court.

110. On receipt of this complaint, if the amount at issue exceed not twenty rupees, the Resident, at his pleasure, may refer it to be inquired into and tried by the court of the officer of the division in which the matter complained of occurred; or should the amount be not above fifty rupees, he may make it over to the authority of the *Bopáti's* court of that district in which the subject at issue has originated. But all complaints which concern a sum of money exceeding this, must be tried only by the Resident's court.

111. It is also competent to this court alone to take cognizance of any suits, however trivial the amount at issue, which may be considered as involving in them any of the rights of government.

112. In trying appeals from the *Bopáti's* courts, after reading the proceedings on the former trial, and re-examining such old, or hearing such new evidence as may be adduced, the judgment which shall then be passed shall be considered as final.

113. In reversing the former decree, the appellant shall have refunded to him the costs which have been kept in deposit, and these shall be then levied from the other party; but if confirming the former judgment, it shall be left to the discretion of the Resident to enhance those costs as he may think fit; provided, however, that the whole sum do not exceed fifteen per cent. on the amount of the sentence.

114. The appellant, on the institution of the suit, shall pay such fees as are customary in the institution of original suits; but the other party shall not be charged with any fees whatever.

115. When an original complaint is given in, it shall be filed, on a fee of one rupee being paid, and sufficient security given for the possible amount of costs.

116. A copy of this shall then be sent to the person or persons complained of, who shall be required, within a certain given time, not to exceed a fortnight, to send in the answer; at which time they will also pay a fee of one rupee, and give good security for the amount of possible costs.

117. On receipt of this reply, a day shall be appointed for the trial of the cause, notice of which shall be given to each of the parties; and both they and such others, witnesses or accessaries, as may be necessary, shall be summoned to attend on that day. The cause shall then come to a regular

hearing, and be decided on, according to the mode already laid down for the inferior courts.

118. On the decision of the suit, a fee of two rupees from the gainer, and of one from the loser of it, shall be received; and costs, at the rate of ten per cent. on the amount of the sentence, being the custom of the country, shall be levied from the party against whom the decision has been given.

119. In all causes originating in the Resident's court, an appeal shall be permitted to the Honourable the Lieutenant-Governor; provided that notice of such intention be given on the day of trial, that the costs be lodged in court, and sufficient security offered for the amount of the sentence, or that amount be paid in, to be kept in deposit until the appeal shall have been determined on.

120. Appeals from the Resident's decisions are limited to the space of one month from the day of trial.

121. The Honourable the Lieutenant-governor will, of course, after due investigation, alter, reverse, or confirm the former sentence, with remission or enhancement of costs, as to him shall seem best.

122. Whenever the two parties in a civil suit, in any stage of it previous to the decree, shall give in to any of the courts an agreement signed by both, stating that they are willing that all further judicial proceedings in the case be dropped, as being satisfied with what has already passed, or mutually content to settle whatever further is requisite between themselves, or by the arbitration of friends, the court shall place this paper among their records, and cause the proceedings in such suit to be immediately closed.

123. In these cases, half costs, or five per cent, only on the amount of the suit, shall be levied. Of this the two parties shall pay an equal share, or two and a half per cent each, with a fee also of a rupee each to the court.

124. All fees will be divided among the officers of the court, and all costs be carried to the account of government, for the purpose of defraying the expenses to which they are put in the establishment of these courts.

125. The same attention shall be paid to the opinions of the *Jákṣa* and *Panghulu* in civil as in criminal cases; namely, that when at variance with that of the Resident, reference shall be made to the Honourable the Lieutenant-Governor, accompanied by the detailed statements, and the

decision only carried into execution when his instructions, in reply, shall have been received.

126. A record of each trial shall be kept in the archives of the court, consisting of the original complaint, the reply to it, a statement of the proceedings that ensued, and the judge's final decision.

127. Copies of any of these shall be given to any one who may apply for them, on the payment of half a rupee for each paper.

128. Registers shall be framed from these records, one in English and one in the vernacular language (of course separate ones for civil and criminal matters), stating the charges, names of parties, of witnesses, nature of evidence, sentence passed, &c. according to forms to be furnished to the Resident; and of these, one copy shall be kept in the court, and another shall be transmitted, before the 5th of every month, to the Honourable the Lieutenant-governor.

129. A register shall also be framed, and sent at the same time, of all persons apprehended, but afterwards released, stating their names, crimes imputed to them, nature of evidence for and against, and reasons for releasing them.

130. Quarterly reports shall likewise be furnished by the Resident of the general state of the districts entrusted to his care; and every six months abstract accounts must be forwarded of the increase or decrease of population, the general condition of the cultivation, number of new settlers and persons emigrated, and generally of whatever relates to the details of his administration, with such remarks and comments as he may deem necessary.

131. In summoning persons to attend his court, he shall have a certain regard to the loss or inconvenience those persons may sustain in being taken away from their usual employments or duties. The cultivator of the soil, in particular, is not unnecessarily to be brought from his fields; and, in many cases, a slight delay of trial may be better than causing the industrious inhabitant to lose the fruits of his labour by attendance at court, when harvest, or other rural duty, demands his presence and entire attention. This, however, is an evil that cannot always be guarded against; but it ought to be

so, to the extent of the Resident's power, and as far as the satisfying the more important ends of justice will admit of.

132. As an additional check to its occurrence, a discretionary power is vested in the Resident, of punishing by fine the complainant in such suits as may, in the opinion of the Resident, be satisfactorily established to have owed its origin to grounds merely vexatious, and this fine will of course be given to the person who has suffered by the process.

133. As it is most essential that access to justice and redress be rendered as easy and free as possible to the injured, the Residents are ordered to receive at all times, and to pay the utmost attention, to every petition that may be presented to them.

134. But as, in the ordinary course, the officers or servants of government, or others, may, from interested, partial, or resentful motives, find means to debar approach to the Resident in his house, he shall cause a box to be placed at the door of the court, into which petitions may be dropped; of this he shall himself keep the key, and, on going into court, open it with his own hand, and have the contents read to him. He shall, at the same time, in the open space before the court, invite the giving in to him any complaints from persons who may consider themselves as aggrieved.

135. It must be observed, that in all causes which come into the courts, the respective parties in them shall plead in their own behalf. It not having been heretofore usual to employ *Vakeels*, or native lawyers, for this purpose; no persons of this description shall be admitted. And it is trusted that litigation will be considerably reduced and discouraged by this measure, as the trouble of it will then fall heavily and entirely on the principals themselves; that class of people not being allowed to exist, who, as deriving from litigation their sole subsistence, may fairly, and without invidiousness, be considered as having some interest in increasing the business of the courts.

136. The Resident is particularly enjoined to pay the greatest attention to the state of the persons in confinement by his orders.

137. There shall be one gaol only in each Residency, and that at the place where the Resident himself resides. He shall visit it at least once a fortnight, and redress all complaints that may be preferred to him by the prisoners of ill treatment, punishing amply every instance that shall come to his

knowledge, of misconduct in the gaoler or other officers in charge of the prison.

138. He shall take, too, the necessary measures for the preservation of the health and cleanliness of the prisoners; requiring the Surgeon of the Residency to visit them at least once a day, and to administer to the sick. The Surgeon shall be further directed to deliver in a monthly report to the Resident on this subject, stating the number of sick, nature of disease, cause of it where assignable, and result of his medical operations in the several cases. To this may be added any suggestions that may be deemed beneficial.

139. The internal arrangements of the gaol ought to be so ordered, that the prisoners shall not be confined together promiscuously, but different apartments be allotted, not only for persons of different sexes, but also for those in confinement for different gradations of offence. For the following descriptions of prisoners, separate wards ought to be formed. Prisoners under sentence of death. Prisoners confined under sentence of the Court of Circuit or of the Resident. Prisoners committed to take their trial before the Court of Circuit. Prisoners committed to take their trial before the Resident. And one spacious and airy apartment should be reserved for such persons as are awaiting the preliminary examination in the court.

140. All prisoners or witnesses detained in criminal cases shall be maintained at the expense of government. But the subsistence of persons confined on civil accounts shall be furnished in the usual manner by the complainants in those suits.

141. The rate of maintenance must depend on the general price of food in the district where the confinement takes place. It ought to be sufficiently ample to secure the necessaries of life, but by no means any thing further; it ought not, in short, to be higher than the price for which the lowest description of labour could be obtained. On this principle the Residents will regulate the allowance for prisoners, and when settled and approved of by government, it shall be considered as fixed, and be publicly made known.

142. The Residents finally shall see that the prisoners receive all the comforts compatible with their respective situations, and that the allowance granted by government, or others, for their support, be properly applied.

143. With respect to the authority of the Resident's Court over Europeans, Chinese, or other foreigners, though it has not heretofore been ordered that they be amenable to any but the courts of justice in Batavia, *Semarang*, and *Surabáya*; yet as great inconvenience may be, and has been experienced, from their being under a separate jurisdiction from their fellow-inhabitants, and as it is the wish of government that they be allowed to partake of every benefit afforded to its other subjects, of which a prompt and easy access to justice must be considered as the chief, the following orders are issued respecting them.

144. No Europeans, Chinese, or other foreigners, at present settled, or who, in future, may wish to settle in the interior, shall be allowed to reside in any part of the country without the immediate limits of the towns of Batavia, *Semarang*, and *Surabáya*, unless they present themselves to the Resident, to be regularly enrolled in a register to be kept for that purpose, and obtain from him a license for remaining. This license shall not be granted, unless each individual enter into a penalty-bond of five hundred rupees, that he will abide by the civil decisions of the Resident's Court to that amount; but if this be agreed to, the license shall on no account be withheld, unless the Resident can, and does, give such reasons for withholding it as the government shall approve of. No fee whatsoever shall be given for these licenses.

145. Should it, at any time, happen that a cause, in which more than five hundred rupees is at issue, should come before the Resident, wherein a foreigner living in the interior is concerned, the Resident shall call on him to execute a further bond, which may cover the amount of the suit; and in case of refusal to do so, he shall not be permitted any longer to reside within his jurisdiction.

146. After taking out these licenses, foreigners shall, in every respect, be considered in the same light as other inhabitants, and sue and be sued precisely in the same manner as the natives.

147. Should any foreigner, after these precautions, refuse to abide by the decision of the Resident, a report on his conduct shall be forwarded to government, and he shall instantly be made to leave the interior, and be prosecuted for the amount of the penalty he has incurred, in the established manner, in the courts of justice at Batavia, *Semarang*, and *Surabáya*.

148. In criminal cases, where a foreigner is charged with any offence, the Resident shall execute the duties of a justice of the peace, issuing a warrant for his apprehension, examining into the evidence adduced, and, according to circumstances, releasing him forthwith, or committing him to take his trial before the Court of Circuit.

149. It must be understood, that the term here of "foreigners" is intended only to include Europeans, Chinese, Arabs, Mussulmen from the various parts of India, or, in short, the natives of any country that is without the limits of the Malayan Archipelago. But as there will resort to the coasts of Java, in small trading vessels, very many of the inhabitants of the neighbouring islands, to whom the entering into bonds, or being subject to other such legal forms, would prove a serious inconvenience, serving perhaps eventually to discourage them considerably from engaging in such commercial adventures, which it is rather the wish of this government in every way to promote; and as by the religion, laws, and usages of this and the various islands in the vicinity, being, both in form and substance, nearly identified (differing only in some few instances in shades slight and of little moment), it cannot be considered as repugnant to the principles of justice, that they be at once held amenable to the jurisdiction established for this island, during their continuance on it; and it is therefore ordered, that they be looked on and proceeded with in manner no way differing from that prescribed for the actual natives of Java.

150. In the event of the death of any British inhabitant or passenger within his district, it is the duty of the Resident to place the seals of office immediately on the effects of the deceased, after defraying the expense of interment; and to report the same immediately for the further orders of government; and, in the event of the death of Burghers, Chinese, Mussulmen, or others, he will be guided by the laws and regulations existing on that head. In all cases, he will be careful that no injustice be practised in this important subject, and that where arrears are due to government, no property be transferred or sold until the same have been satisfied, or until the pleasure of government is known.

151. The Court of Circuit has already been established by the fifth clause of the Proclamation by government, dated the 21st January, 1812. But as the taking away at once the president and one member from the courts of justice rendered those courts, in their absence, incompetent to carry on the

current business of their districts, and as a more particular definition of the duties attached to this department is deemed necessary, the following sections must be considered as an enlargement and modification of that clause.

152. In order to ensure the regular, certain, and impartial administration of justice throughout the different districts of the island, one member of the Supreme Court of justice at Batavia, and of the courts of justice at *Semarang* and *Surabaya*, shall four times in the year, at stated periods, or oftener if necessary, make a circuit through the districts, under the jurisdiction of their respective courts, for the purpose of hearing and trying all such offences and criminal cases within the same, as shall have been made over to them by the magistrates appointed for that purpose.

153. Previously to entering upon the execution of the duties of his office, each of these judges shall take and subscribe, before the Honourable the Lieutenant-governor in Council, or any person appointed by him to administer the same, an oath in the same form as already laid down for the Residents in section 86 of this Regulation.

154. Upon the arrival of the judge of circuit, the Resident or magistrate shall have in readiness to deliver to him a list of the persons committed to prison, or held to bail, for trial, together with the copies of the charges preferred against each, their confessions, if any have been made (but these, it must be observed, must always be received with circumspection and tenderness), or if they have pleaded not guilty, the depositions of the witnesses, and all other proceedings held by him in the respective cases, previously to their commitment to prison, or being held to bail.

155. He shall likewise submit to the judge of circuit, on his arrival at the station, a separate list of all such persons as he may, within the last three months, have apprehended and discharged for want of sufficient evidence against them; that is, of all such as would, had presumption of guilt been sufficiently established, have been made over to the court of circuit for trial.

156. The judge of circuit shall then proceed to hold his court. Such officers shall belong to it as he may have brought with him for that purpose, and he shall be attended by all such others belonging to the Resident's establishment, as he may deem necessary.

157. The court shall be held in the *Paserban*, or usual chief room of justice belonging to the station; and the Resident, in carrying on any judicial or magisterial proceedings, during the continuance of the judge of circuit at his station, shall use for that purpose some other convenient place.

158. On opening the court the head *Jákisa* shall present a list of persons summoned to act as jurymen; out of which five shall be taken in the usual manner, and be empanelled.

159. The persons composing this jury ought to be as near on an equality as to rank in life with the prisoner as possible. But no one under the rank of a head of a village shall be competent to act as a jurymen, as persons below that office, or in the very lower orders of life, cannot be supposed to possess either independence or knowledge sufficient to qualify them to execute justly the duties of the situation. The person senior in dignity among them shall be appointed to act as foreman; and, for this purpose, it may be as well that one of higher rank than the other four should be always selected in the first nomination of the jury.

160. A right of challenge shall belong, as in the English courts, to both the prosecutor and the prisoner.

161. The head of the village in which the offence is alleged to have been committed, shall not be permitted to act as jurymen in the trial.

162. No other prescribed disqualification exists against persons of that or higher rank; the right of challenge being deemed sufficient to secure the forming of a competent, unbiassed, and independent jury.

163. The cause shall then be proceeded with; and sentence being passed, it shall become the duty of the Resident to see that it be carried duly into execution, a warrant for that purpose being given to him, under the seal and signature of the judge of circuit.

164. The circuit judge, throughout the conduct of the cause, in his mode of proceeding, of summing up the evidence, receiving the verdict of the jury, and passing sentence on the prisoner, shall be guided entirely by the established rules of his court, the regulations of government, and the general instructions he will receive.

165. And with respect to the law which must guide him throughout, he must, in the first instance, take down the native law in the case as may be

expounded by the *Panghúlu* and *Jákisa*; and modify thereon his decision, according to the provisions of the colonial law, and the acknowledged principles of substantial justice.

166. He shall not only try such cases as may have been made over to his court, previously to entering the district, but also any such as the Resident may make over to him while there.

167. He shall, on closing his court at each station, forward to the Honourable the Lieutenant-governor, a clear and full report of all his proceedings, stating the names of the prisoners tried by him, the nature of the evidence adduced on behalf of both prosecution and defence, the verdict of the jury, and his consequent sentence thereon.

168. If, in any case, his opinion differ from that of the jury, he shall detail the reasons which have influenced him in that difference; and he shall always state any such circumstances as may warrant a mitigation, or even total remission of the punishment.

169. The approval of these proceedings, and the instructions on them from the Honourable the Lieutenant-governor, must be received prior to his issuing his warrants to the Resident.

170. But as this communication, and the reply to it, may induce too great a delay, the judge of circuit must, on shutting his court, remand the prisoner to gaol, and move on himself to the next district he has to visit; from whence he will be able to send back the warrants to the Resident, when an answer to his report shall have been received.

171. Accompanying this report, the judge of circuit shall forward to government a detailed opinion on the state of the Residency, with respect to its police, its general administration, and other circumstances connected with its actual condition; suggesting, at the same time, any such improvement as, in his opinion, would be conducive to its general prosperity.

172. It remains, finally, to be observed to the Residents, that as the police of different districts must be, in some measure, adapted to various circumstances and localities, they are authorized to enlarge upon these general regulations for the administration of that department within their respective jurisdictions, reporting their suggestions of improvement to

government. But it is recommended to those officers to become well acquainted with the ancient usages and institutions of the people placed under their authority; and in submitting their observations, they will be solicitous rather to improve upon the solid foundations of ancient regulations and customs, both acknowledged and understood by the people, than to invent new systems of administration, which for some time must, of necessity, be quite unintelligible to the inhabitants, and which, after the experience of a few years, may probably be found to be by no means congenial to their genius or habits.

173. Copies of this Regulation shall be forwarded to the various officers of government concerned in the carrying it into execution; and translations of it, in the Javan and Malayan languages, shall be furnished to the *Bopátis* and other native officers. It shall be the duty of these to explain and cause to be made known its purport throughout the country; and for the doing this the more effectually, copies shall always lie on the tables of the several courts, to be open for public reference and inspection.

APPENDIX E.—No. I.

A COMPARATIVE VOCABULARY OF THE MALAYU, JAVAN, MADURESE, BALI, AND LAMPUNG LANGUAGES.

ENGLISH.	MALÁYU.	JAVAN.			MADURESE.		BÁLI.	LAMPUNG.

Memorandum.

—The above
Comparative
Vocabulary
was formed in
the following
manner.—

Copies of the
Vocabulary, in
the Malayan
character,
arranged by
the late Dr.
Leyden, were
circulated in
different parts
of Java, and
completed in
the different
languages and
dialects by the
natives. After
collections of
these were
made, several
intelligent
natives were,
from time to
time,
assembled
from different
parts of the
island, and
also from
Báli,
Lampung,
Madura, and
Sumenap, and
the
Vocabulary in
each language

ENGLISH.	MALÁYU.	JAVAN.			MADURESE.		BÁLI.	LAMPUNG.
		Jáwa.	Bása kráma.	Súnda.	Madúra.	Sumenáp.		

was carefully
revised in
concert with
them, at the
same time that
it was re-
copied in the
native and
roman
characters.

EXTRACT FROM THE DASA NAMA. [\[298\]](#)

1. Madia ning mangsa from ordinary thought comes knowledge of time or season.
- j.b.* Mángsa season, time.
- j.b.* Kála time.
- k.* Dók the same.
- b.* Tak-kála the same.
- b.* Panjenáng'an the time, as applied to the reign of a sovereign or governor, a dynasty, a rule.
- j.b.* Jáman the same.
- k.* Titika, or kútika the same.
- b.* Dáweg or dáwak present time.
- j.b.* Láji future time.
- j.b.* Waktu time.
- j.b.* Usum the season of any thing, as the paddy season or fruit seasons, season for breed of cattle.
- j.b.* Mangsa ren-dang season or time of rain.
- j.b.* Ka-telu (3) commencement of the rain.
- j.b.* Ka-pat (4) rains.
- j.b.* Ka-lima (5) ditto.
- j.b.* Ka-nam (6) ditto, rivers full.
- j.b.* Ka-pitu (7) heavy rains.
- j.b.* Ka-wólu (8) rains commence falling off.
- j.b.* Ka-sáng'a (9) rains nearly over.
- Mangsa trang dry or clear seasons.
- b.* Kása-dása (10) commencement of dry season.
- j.b.* Dasta autumnal, or season of the falling of the leaves.

<i>j.b.</i> Sadá	season of heavy dews.
<i>j.b.</i> Kása	clear, dry, and cloudless season.
<i>j.b.</i> Káro	the season in which trees commence to throw out their leaves and flowers.
2. Mangsa ren-dang ing ardi	the rainy season comes from the hills or mountains.
<i>k.</i> Parwáka	mountains from which wind comes.
<i>k.</i> Gíri	stupendous, abrupt mountains, which create awe on looking on them.
<i>k.</i> Purwáta	original mountains, the first or primitive mountains.
<i>k.</i> Chála	mountain.
<i>k.</i> Mandála	the base or foot of a mountain.
<i>k.</i> Liwáwan, or himáwan.	distant mountains.
<i>b.</i> Ardi	stupendous mountains.
<i>j.b.</i> Gúnung.	mountains or hills.
<i>j.b.</i> Kendeng	low ranges of hills.
<i>j.b.</i> Sengkan	the acclivity of a hill.
<i>j.b.</i> Mádik	the same.
<i>j.b.</i> Jujúrang	the space between two hills above the valleys.
<i>k.</i> Sárung	the valley or bottom of the space between two hills.
<i>j.b.</i> Papéreng	the steep part of a hill which cannot be ascended.
<i>j.b.</i> Héring or iring	the same.
3. Ardi akátah séla	the hills have many stones.
<i>b.</i> Séla	stones, large stones.
<i>j.b.</i> Ka-rikil	small stones, pebbles.
<i>j.b.</i> Kamlása	small fine stones, gravel.
<i>j.b.</i> Wátu	stones.
<i>k.</i> Mánik.	a kind of hard black stone.
<i>j.b.</i> Párang	a sort of stone neither hard or soft.
<i>k.</i> Redjeng	the same.
<i>j.b.</i> Gamping	lime stone.
<i>j.b.</i> Wádas	a kind of stone.
<i>j.b.</i> Chúri	a particular kind of stone, rather harder than redjeng.
<i>k.</i> Cháni	a sort of stone which when taken from the quarry is soft and easily cut, but afterwards becomes hard on exposure to air.

APPENDIX E.—No. II.

COMPARATIVE VOCABULARY OF THE SANSKRIT, KAWI, AND PÁLI.

ENGLISH.	SÁNSKRIT.	KÁWI.	PÁLI.
----------	-----------	-------	-------

One	eka	eka	ek-ka.
Two	dui	dui	do.
Three	tri	tri	tri.
Four	chátur	chátor	chatwa.
Five	pancha	pancha	pancha.
Six	shash or shat	sat	cho.
Seven	sapta	sapta	sap.
Eight	ashta	asta	at-tha.
Nine	náva	náva	no-wa.
Ten	dása	dása	thotsa.
Man (homo)	manúshya or manúsha	manúsa	manut.
Man (vir)	jána, purúsha	jána, purúsia	burútsa.
Woman	strí, varángána	istri, waranggána	_____
Father	pita or pitri	pita	bida.
Mother	máta or mátri	máta	manda.
Head	mastáka	mastáka	két.
Eye	nétra, akshi, cháksu	sótia	nét.
Nose	nása, ghrána	grána	_____
Hair	késa	késa	késa.
Teeth	danta	dánti	thanta.
Belly	garbha, udára	gerba	úthon.
Hand	hasta	asta	hat-tha.
Foot	páda	páda	bát.
Blood	lohita, sonita, rudhira, &c.	rah, ludira	lóhit.
Day	dina, divása, &c.	dina, méra	_____
Night	rátri	rátri, kúlam	rátri.
Sleep	nidra	nindra	nitsa.
Dead	préta, párata, mrita	parátra	muai.
White	sita	séta	_____
Black	kála	kála, krísna	_____
Bad	dushkrita	dústa	_____
Fire	agni	agni, bráma, geni	ak-khi.
Water	jála, ápa, &c.	jalánidi	khongkha.
Stone	silā	séla	sinla.
Hog	varáha, sukára	wráhas, sukára	súkon.
Bird	paksha	paksi	paksa, paksi.
Egg	anda	endog	_____
Fish	mín, massya	mína, matsia	min.
Sun	súrya, prabáhkara, áditya	súria, prabang-kára, raditia	súria, áthit.
Moon	chandra, sitángsu	chandra; sitángsu	pera-chan.

Stars	tára	tára	dara.
God	iswára (Lord), déva (a god)	déwa (a god)	pra, pra-chao.
Eating	bhojanam	bója	swoi, chhan.

APPENDIX E.—No. III.

VOCABULARY OF KAWI WORDS, WITH THE MEANING ATTACHED TO THEM BY THE PANAMBAHAN OF SUMENAP.

ENGLISH.	KAWI.
God	sang yang-jágat-ke-rána, sang-yang-suksma, yang-wídi, murbeng buána, yang-táya, sang-yang-wisésa, sang-yang-jágat, ráya, sang-yang-mánon, yang'ing-jágat, mur-ba wi-sésa, hong.
Make, do; or work	ang'dé, andé, ayása, kirtia, panéron, amáng'un.
The work; what is made or done	wináng'un, inámer, iniket.
Pen	tanáser.
Paper	delánchang.
A vessel; pot; receiver	tapéla, pranji, gáta.
Heaven	súra láya, indra-kila, súra-lóka suréndra, kayáng'an.
Situation, place, office	sing'ng'angsána, pa-paláng-kan, patma-sána.
World	rat, buána, marcha-páda, jamánda, yatri.
Place	patmánda, kahánan, sána, láya, astána, lóka, panápa.
Hell	tambra-gomúka, ya-máni, tambra-múka, yáma, pápasána.
Sky	gagána, diu, baráka, antariksa, ambar-tála, marútoam, marutpála, margawútma, nasúnia, sam-bára, biuma, aksa, 'ngáh.
Atmosphere (between the sky and the earth.)	wiat, madia-gantang, táwang, láyang.
Light	prába, kúmut-deú-jiu, tesa, téja, máya.
Sun	baskára, raditia, pra tangga-páti, arúna, hári, karába, tála, súbandagni, angka, náku, kanúman, asúman, diankára, dáta-páti, niwása, súria, sasra-súman.
Moon	chándra, sadára, sas-ángka, idupáti, sú-ma, sasálan-chána, nisáka, sitángsu, si-tarasmí, sási, ráti, basánta, indung.
The first day of the month (moon)	sukla-paksa.
The sixteenth day of the moon	krisna-paksa.

Names of the months	tití-mása, púspita-war-si, kusúma-wichitra, puspa-darsina, dar-ma kusúma, anta warsi, rahúwandáni, warsan dáni, chakra kulána, sandáya kráma, dirga moriang, renji sári, rasmin-dran déni.
Neither east nor west	sunia darsári.
Day	mahira.
Sunday	riti or dite.
Monday	sóma.
Tuesday	ang'gára.
Wednesday	budha.
Thursday	raspáti.
Friday	sukra.
Saturday	sanischára.
Star	tranggána, úyut, turá-sa, tindra, úchu, tá-rang, manggárang.
Wind	marúta, sámi-rána, prábanchána, anila, báyu, lisus, indria, pancha, waráyang, sabda-gáti, aníla, ganda-wasta, nása-mira, sarsa, práli wawálar, sindung.
Clouds	widi-yúta, sadáli, da-wáta, ambúsun, am-báka, samíta, gána, toyáda, páyuwáha, trangga, ambu-mor-cha, ima-ima, jála-dára, jaláda, imang kamúra, imaláya.
Rain	warsa, jáwah, truh, trah, riris, wresti.
Dark	anda, taméra, áwuk.
Cold	mertia, sátis, átis.
Hot	usna, tiksna, landap.

APPENDIX E.—No. IV.

SPECIMEN of the MYSTICAL MEANING, attached to the Letters of the Alphabet, &c. according to the Interpretation of the PANAMBAHAN of SUMENAP.

LETTERS of the ALPHABET, &c.	MEANING ATTACHED IN	
	JAVAN.	ENGLISH.
Ha	áh	
Na	anáne	it is or it was.
Cha	etcha-nána	the test of.
Ra	wádon	woman.
Ka	iku	that.
Da	tatkála	when.
Ta	sira	thou or thee.
Sa	káya	alike or as a.
Wa or va	wong	man.
La	lanji	remove.
Pa	pasti	certainly.

LETTERS of the ALPHABET, &c.	MEANING ATTACHED IN	
	JAVAN.	ENGLISH.
Dha	ásor	low.
Ja	kárep	wish (to).
Ya	panedáne	request.
Nia	_____	
Ma	tanárep	do not want, or do not wish.
Ga	asmára	love, or to love.
Ba	káduk	cannot help.
Ta	ála	bad or badness.
Nga	sira	thee or thou.
Ha-na	wonten	it was, there was, or were a.
Cha-ra	satria	a nobleman.
Ka-da-ta	aráne Aji sáka	named Aji sáka, or his name was Aji sáka.
Sa-wa-la	wuskóchap jero túlis	was mentioned in the writing, or among the letters.
Pa-da-ja	sáking núsa jáwa	on the Island of Jáwa, or in the city of Jáwa (hi).
Ya-nia-ma.	dádi-bujángga	became a great writer.
Ga-ba	ing buána	in the world or of this world.
Ta-nga	kang kedep	who know, or whose eyes are open.
Hang	ápa	what.
Nang chang	tinálinan	to tie or make fast.
Rang kang	gódong'i Pandan	leaf of the Pandan.
Dang tang	kangginúba	which is made.
Wang	dening wong	by the people.
Lang	dadíne	it became.
Pang	ápang	branches.
Pang	muláne	because.
Sang	tudúhe	it is pointing.
Dang jang	kabángkit áne	his knowledge or art.
Yang	gusti	God or the Lord.
Yang	bágus	handsome or beautiful.
Niang	ing álap	taken up.
Mang	mangke	by and by, afterwards.
Mang	kaláyan	with or with the.
Gang	árum	sweet scent.
Bang	kambang	flowers.
Tang	sinéleh or sinálah	to lay upon.
Ngang	rambut	the hair.

LETTERS of the ALPHABET, &c.	MEANING ATTACHED IN	
	JAVAN.	ENGLISH.
Hi-ni	kaláwan	with or by.
Chi-ri	túlis pratánda	the mark or sign of writing.
Ki	iki	this.
Di-ti	áji-sáka	
Si	kang apásian	who have given.
Wi-li	wúruk	to teach or give instruction.
Pi-di-ji	máring rátu	to the rátu or king.
Yi-nyi	páda hestú-kena	every one might agree to it.
Mi-gi	niáta	clear, quite plain.
Bi-ti-ngi	úlih kagúng'an	to have property.
Hing	áng'ing	but.
Ning	ána	is, was, were.
Ching	ka-ting'al	appear.
Ring	lámun	if or if it.
King	lára-bránta	the pains of love.
Ding	dadálan	in the way.
Ting	sang'at	very much.
Sing	bárang	any thing.
Wing	kang wenang	suitable; proper.
Ling	pang'úchap	word or words.
Ping	ing'at	remember.
Ding	suára	sound or voice, noise.
Jing	jeng'er	see or look at.
Ying	bániu	water.
Nying	mánah	the mind or heart.
Ming	ewuh	don't know what to do.
Ging	bódo	foolish or stupid.
Bing	gáwok	astonished or surprised.
Ting	seng'it	hate or dislike.
Nging	sira	you or thou, thee.
Hu	ang'úndang	to call or bawl out.
Nu	ing teng'ah marga	on the way or at road.
Chu	pegel	quite tired.
Ru	ang'uláti	seeking for.
Ku	ingsun	me.
Du	kanching	buttons.
Tu	kalámbi	garment or jacket.
Su	lu-wih	more or much more.

LETTERS of the ALPHABET, &c.	MEANING ATTACHED IN	
	JAVAN.	ENGLISH.
Wu	ewuh	lost, confused.
Lu	sang'et	very much.
Pu	súsah	troublesome or tedious.
Du	srúne	crying, or the sound of crying.
Ju	iman or eman	pity.
Yu	áyu	beauty.
Niu	sira	thou or you.
Mu	tan-árep	do not wish.
Gu	meneng	be quiet or silent.
Bu	lemah	the earth or ground.
Tu	nguláti	behold or look at.
Ngu	ngupáya	seeking.
Hung	sembah	to make obeisance.
Nung	langgeng	eternal or for ever.
Chung	sánget	very.
Rung	mádep	to give up the mind to any thing.
Kung	asmára	thoughtful.
Dung	panebuti	the offering.
Tung	landep	sharp.
Sung	pápa-ring'e	his gift or present.
Wung	máliih	more.
Lung	lukta	always.
Pung	karépi	desire, or his desire.
Dung	páda	the same as, or equal to.
Jung	prau	a boat or vessel.
Yung	páyung	an umbrella.
Niung	sira	thou or you.
Mung	ang'éprih	wishes.
Gung	águng	great or large.
Bung	gamlan	music.
Tung	úng'ele	sound or voice.
Ngung	sira	thou or you.

FOOTNOTES:

[298] *j.* is intended to shew that the word is used in the common or Javan dialect.

b. — that it is used in the *Basa* or *Basa Krama*, the polite language.

k. — that it belongs to the *Kawi* language; where two initials occur it is used in both.

APPENDIX F.

ACCOUNT OF CELEBES.

Celebes is an island of which hitherto the public has had but very scanty accounts. The part of it best known to Europeans is *Makásar*, situated nearly at the southernmost extremity of the western side: it was here the first European settlement on the island was established. On the south part of Celebes there are not any ascertained volcanos, but some are said to exist in the northern division. Some of the mountains are very high. The Bontain mountain, called by the natives *Lámpo Bátan* (big belly), is the highest on the south part of the island, and being seen at the distance of one hundred and twenty miles, must be about eight thousand five hundred feet above the level of the sea.

The largest river on the southern limb is that called *Chinrána*, which formerly constituted the boundary between the kingdoms of *Bóni* and *Lúwu*. It rises on the north side of the Bontain mountain, and runs northward as far as *Mario*, whence, inclining towards the north-east, it passes through part of *Sóping*, and then, turning to the east, enters *Wáju*, after having received a navigable stream from the *Laut-Sála*, or Fresh-water Lake. After passing through *Wáju* it follows a south-east course, and falls into the bay of *Bóni*, a few miles below the town of *Chinrána*. This river is navigable for boats as far as *Mário*, and admits of the passage of *práhus* of five or six *kóyans* as far as the fresh-water lake. Along the whole of the coast, at no great distance from each other, smaller streams fall into the sea, some of them being so considerable as to admit of a navigation of five or six miles, and many of them at their mouths affording shelter to trading *práhus*. Among the most considerable are *Baróbo*, *Linjé*, and *Kájang*, to the east; *Duniáng*, *Lémbang*, *Halikóngkong*, *Pónre*, and *Jenepónto*, on the south; and *Chikoang*, *Tape Jára*, *Sándra bóni*, *Gúa*, *Télu*, *Máros*, *Benáng'a*, *Langkára*, and *Pontiána*, on the west.

It has not been ascertained by whom, or at what particular time, the name of Celebes was conferred on this island. It is generally attributed to the Portuguese, and certainly is of foreign origin: none of the natives, except those who have intercourse with Europeans, recognize either the whole island or any part of it under this appellation; even among those who make use of the word, it is applied to *Sumbáwa*, an island about two hundred and fifty miles to the south-west of it, as well as to what we call Celebes.

In the south-western limb of the island there are two principal languages, called by Europeans the *Makásar* and *Búgis*, and by the natives *Mengkása* or *Mengkasára*, and *Wági* or *Ugi*. The former, or some dialect of it, is spoken in all the districts extending from *Bálu kúmba* to *Segére*. The petty states included in this compass are *Bálu kúmba*, *Bontain*, *Tarabáya*, *Gúa*, *Máros*, and *Segére*. The *Búgis* is much more general beyond and over the whole tract extending from *Bóni* to *Lúwu*, comprehending the four great states of *Lúwu*, *Bóni*, *Wáju*, and *Sóping*, besides their numerous dependencies.

In *Mándhar* and its vicinity is spoken the *Mándhar* language. The centre and body of the island to the northward is distinguished by being inhabited by the *Turájas* or *Harafúras*, who speak a more simple dialect, and are considered the aborigines of the island; and on the north-east corner of the island at *Manádu* and *Gúnung télu*, the inhabitants are distinguished by some peculiarities.

The following observations must be understood as principally referring to the south-western limb, the part of the island which fell under the influence of *Makásar*.

It is impossible to ascertain, with any degree of precision, either the origin of the inhabitants or their present numbers. From the most correct accounts that could be obtained, it would appear that the southern limb contains a population of about half a million; but from the quantity of land now lying waste, which bears the appearance of having been once cultivated, from the number of decayed and half-choked water-cuts, evidently once used for the purpose of irrigation, and the multitude of spots where ranges of cocoa-nut trees mark out the sites of villages and cottages no longer in existence, we may infer that the number of inhabitants has greatly declined. At present there seem to be no serious checks to population, except the wars and the lawless violence of the people, and what often occasions, and always aggravates them, slavery and the slave trade. The people seem to procure a sufficient subsistence without much exertion. The climate is salubrious, and there is abundance of water. Marriages are early. In the history of the island the years of famine are particularly noticed. The women are held in more esteem than could be expected from the state of civilization in general, and undergo none of those severe hardships, privations, or labours, that restrict fecundity in other parts of the world. Polygamy prevails, the number of wives being limited

only by the means of the husband to purchase or support them. It is more difficult to procure a wife than a husband; a female slave bears a higher price in the market than a male; and the compensation fixed for the murder of a man is only thirty dollars, while that required for the life of a woman is forty.

It cannot be known with certainty, whence the aboriginal inhabitants of Celebes emigrated to this island. The countenances of the natives, particularly of the women, more nearly resemble the Tartar features than any other. There are no early or generally received traditions concerning the time when the island was first peopled, or the adventures of the first race. Each state, however, has its traditional tales, most of which relate to remote antiquity, or to a condition of society very different from that which at present exists. In the *Búgis* states, the earliest stories refer to a period subsequent to the *Galígas* of *Sawéra Gáding*, and in the *Makásar* states to the *Rupáma* of *Ma Beséang*, which will be mentioned hereafter. The *Galígas* contain an account of the peopling of *Lúwu* or *Láwat* from heaven.

The first of the two following accounts was given by the *Búgis* ambassador; the other is an extract.

"In the first place, there was a supernatural being of the female sex, who, being married to *Taja Rasupa*, a person sprung from under the earth, had issue a boy and a girl, who were named *Ladiwati* and *Chuli-puji*.

"*Chuli-puji* married *Lasikati*, and by her had a son, called *Léptau*, who had two or three other names besides, viz. *Matan-tika*, *Malati-saprang*, and *Pulu Datu Pamusu*.

"*Pamusu's* place of residence was in the country of *Teku*, afterwards known by the name of *Boni*. At this time *Pamusu* and all his children dying, the country of the *Bugis* was left without a raja, and remained so for about seven generations; at the end of which period a raja springing up among the *Bugis* themselves, government was again introduced into the country.

"On one occasion there came a storm of thunder and lightning, so violent as to rend the earth and cause it to rock like a boat tossed by the waves of the sea. On the thunder and lightning abating, and the earth ceasing to be longer agitated, there was observed in the middle of a plain, dressed in white, one of human shape, who was generally supposed to be a supernatural being, and to whom many people went up in a body, saying to it, 'remain then here and fly not about from place to place.' To them the being replied, 'what you say is well; but you cannot take me from your raja, as I am myself but a slave. If, however, you are really desirous of having a raja, there is my master at your service.' The *Boni* people then observed to the being, 'how can we make a raja of him, whom having never seen, we cannot tell what he is like?' 'If,' answered the being, 'you do really desire it, he shall be shewn to you.' They said, 'we do earnestly wish it, and request thou wilt be so kind as to carry us where we may see him of whom thou speakest.'

"When these people of *Boni*, together with the being who led them, had reached the open plain called *Matajam*, there came on a violent storm, accompanied with thunder and lightning, which rent and shook the earth. There arose, at the same time, a thick fog, which totally obscured every thing.

"As soon as the storm was over, and the earth no longer continued to be rent and shaken by the thunder and lightning, the clearness which immediately succeeded discovered to the view, seated on a stone, four supernatural beings, of whom three were separately employed in holding the umbrella, fan, and siri-box of the other, who was dressed in yellow. The being dressed in yellow then said to him in white, 'What would'st thou?' The being in white replied, 'I have conducted hither those people of *Boni* whom you now see before you;' and then said to the *Boni* people, 'Behold my master, of whom I spoke to you.' Those people went up to the supernatural being in yellow, and thus addressed him: 'We, the slaves of your mightiness, have come to present ourselves before you, to solicit that you will favour and oblige us, by remaining among us as our raja, and that you will not continue to wander about from place to place.'

"The being complied with the wishes of the people of *Boni* and settling at *Matajam* had issue five children, of whom the first was a son and the four succeeding ones daughters. One of the daughters was married to a man of *Palaka*. The son was married to a *Bóni* woman.

"After being forty years in *Bóni*, the supernatural being disappeared, and was succeeded by the son, who, in point of size and height, had not his equal in *Bóni*, neither could any one be compared to him for strength or valour, or for the adulation which was paid him. He was the first who introduced the manufacture of crises, which he could model out of pieces of iron, by means of his fingers alone."

"*Bitara Gúru* was the eldest son of *Déwata Pitutu* by *Déwi Paléng'i*, and inhabited the seventh heaven. *Déwata Pitutu* had a brother, called *Gúru Réslang*, who held the rule of the region under the earth. *Déwata Pitutu* had nine children in all.

"When *Bitara Gúru* was sent down upon earth by his father, *Déwata Pitutu*, he was provided with the following articles, viz. *Telatingpéba*, *Siri ataka*, *Telarasa*, *Wampung*, *Wanu*, *Chachu-bana*.

"From these, which were scattered about, every thing living and dead, in the animal, vegetable, and mineral kingdoms, which are to be found in the country of *Lawat*, originated. Preparatory to this, *Déwata Pitutu* having compounded a medicine, of which the juice of chewed betel was an ingredient, rubbed *Bitara Gúru* all over with it, which immediately occasioned him to swoon. *Déwata Pitutu* then put his son into a hollow bambu, and, having rolled this up in a piece of cloth, and caused the gates of the sky to be opened, he hurling sent down his son to earth, amidst a tremendous storm of thunder, lightning, wind, and rain, which arose on that occasion. Having reached about half way between the earth and sky, *Bitara Gúru* (dreadfully alarmed at the situation he was in) threw abroad all the articles which had been given to him, agreeably to the instructions of his sire. After his arrival on the earth, *Bitara Gúru* remained for three days and three nights shut up in the bambu, without food or drink. By his exertions, however, the bambu at last burst, when, getting out, he wandered through the woods till he came to the side of a river, where he met with a king of the gods dressed in yellow. One night there arose a violent storm of thunder, lightning, wind, and rain. On its clearing up there was seen a fine country, with a superb palace and fort, and houses, &c. &c. of the most beautiful structure. In this beautiful country *Bitara Gúru* sat himself down as sovereign, with a complete establishment, and gave it the name of *Lawat*."

No account can be procured of any intercourse having subsisted between this island and Western India or China, prior to the introduction of Mahomedanism. No inscriptions or other monuments, indicating the former prevalence of the Hindu worship over Celebes, have as yet been found. There not having been found, however, is no proof that they do not exist, for the wars that have lately prevailed have prevented Europeans from exploring in search of such objects in that part of the country where they are most likely to present themselves. The best informed natives call themselves descendants of Hindus, and the names of their divinities, *Batara Gúru*, *Baruna*, &c. seem to indicate either a common origin or a former intercourse. It is also remarkable, that some of the inhabitants of *Lúwu* and the neighbouring state of *Bontain* are said to dress in the same manner as the Hindus of Western India, and that Hindu temples are reported to exist in some parts of this state. *Brahma* and *Budha* have, however, never been heard of; and though *Déwas* are often mentioned, their attributes are equally unknown.

The intercourse of these islanders with the natives of Java seems to have been ancient and frequent. The earliest records of the *Búgis* and *Mákasar* states denote not only an early communication with Java, but render it highly probable that a colony from Java settled in the south-west limb of Celebes. In no other way can we account for the transfer of the names of places from the former to the latter island, such as those of *Majapáhit*, *Grésik*, *Japan*, and some others. In the genealogy, too, of the sovereigns of *Lúwu*, one of the first of their *Déwa* princes is said to have been married to a princess of *Majapáhit* on Java.

Though some of the *Búgis* states have a good deal of trade, they principally depend upon themselves for subsistence. The mode of husbandry is, of course, very rude, and feudal institutions stand in the way of their improvement; but private property in the soil is established, and lands are held in free tenure or by rent-hold. The amount of the rent, in the latter case, is generally one-third of the produce, paid in kind; the cultivator is entitled to one-third, and the owner of the buffaloes or bullocks which assist is entitled to the remaining third. Labourers employed to reap are paid a sixth of what they collect. No class is excluded from a proprietary right in the soil, and the proprietor can dispose of his land by sale whenever he chooses.

The people of Celebes are active and enterprising traders; the character of a merchant is held in esteem, and the sovereign princes reckon it no disgrace to enter into commercial speculations. Unfortunately, however, they are actuated by the narrow spirit of the trader, to the prejudice of the liberal policy of the monarch, and make their power subservient to their love of gain, by establishing in their own favour monopolies against their subjects. Monopolies are common in every state on the island, but most of them are only of a temporary nature. The sovereign of *Lúwu* monopolizes the trade in brass; the Raja of *Sóping* that of *siri* (betel leaf), which yields him three hundred dollars a month; and the Raja of *Sedendreng* that of salt and opium.

So strong is the spirit of commercial enterprise among the inhabitants of this island, that they frequently borrow sums for the purchase of commodities on which they expect profit, and stake their personal liberty, and that of their families, on the success of an adventure. In their trading voyages each person in the *práhu* has his own share of the cargo, and conducts business on his own account: each person likewise carries his own provisions; the latter

practice, especially, is never departed from. The owner of the vessel agrees to undertake the voyage with a number of people, great or small, in proportion to its size, and apportions the vessel among them in the following manner. The two *júru múdus*, or steersmen, receive one *pétah* (or division) before the *sanketan*, and the whole space abaft of it; the owner is entitled to two *pétahs* in the broadest part of the boat; and the two *júru bátus* to the whole space between the masts; the remaining *pétahs* are divided among the crew, from whom the owner, or *nakóda*, receives a freight of one-tenth or one-twentieth of the price of all the commodities they sell, according as they are bulky or small, in proportion to their value. The *júru múdis* and *júru bátus* only pay one-half of the proportion of freight paid by the rest of the crew. Sometimes the owner supplies the crew with an advance of money for an adventure, and receives at its termination not only re-payment of his loan, but a third of the profits of the speculation.

The principal articles of trade are cotton, which is imported from the surrounding islands, and re-exported after being manufactured into cloths, known by the name of *Búgis* cloths, which are in great demand throughout the Archipelago, and, in general, of a more delicate texture than those manufactured in Java; birds' nests, *trípang* (sea slug), shark's fins, tortoise-shell, *ágar ágar*, hides, and other articles calculated for the Chinese market, are collected in considerable quantities, and furnish return cargoes for the annual Chinese junks which visit Celebes. Gold is obtained on Celebes, but in much smaller quantities than on Borneo or Sumatra.

Although the *Búgis*, in general, are considered as great traders, the foreign commerce seems to be almost exclusively confined to the people of *Wáju*. These people are settled in considerable numbers in all the trading ports, from Acheen to Manilla, and it is they who form the crew of almost all the *Búgis práhus* that navigate the eastern seas.

Several *Búgis práhus* from *Mákasar* annually visit the northern coast of New Holland and the Gulf of Carpentaria in search of *trípang*, and sometimes a small party is left to collect the *trípang* in readiness for the arrival of the *práhus* in the following year.

The *Búgis*, indeed, is the great maritime and commercial state of the Archipelago. The cargoes of their vessels, particularly in opium, gold, and cloths, often amount to fifty or sixty thousand dollars each, and the people who navigate and are concerned in them are acknowledged to be fair and honourable traders.

The natives of the southern limb of Celebes are of a light active form of body, generally well made, and rather below the middle stature. They are said to be revengeful; but during the period of the British government at *Makásar*, few, if any, examples occurred to support such an assertion. Certain it is, that in no single instance, was the death of those who fell in a recent war between the two parties of the *Makásar* nation, avenged by their relations, although the persons by whose hands they had fallen were perfectly well known.

They attach themselves to their chiefs principally for their own convenience, but, in some cases, they have evinced a devoted fidelity. They often change their chief, but scarcely any thing can induce them to betray the chief they have left. In no instance has the *práhu* of a Dutchman or Chinese been carried off when navigated by *Makásar* or *Búgis* people. Agreements once entered into are invariably observed, and a *Búgis* is never known to swerve from his bargain. "That natural politeness which characterises the various nations distinguished by wearing what is termed the Malayan *kris*, is no where more forcibly exhibited than among the inhabitants of Celebes. Their minor associations are held together by all the attachment and warmth which distinguished the clans of North Britain:—the same bold spirit of independence and enterprize distinguishes the lower orders, whilst the pride of ancestry and the romance of chivalry are the delight of the higher classes. Attached to the chase as an amusement, rather than as the means of subsistence, the harvest is no sooner reaped, than each feudal lord, with his associates and followers, devotes himself to its pursuits. The population being equally at the command of the feudal lord, whether in time of peace or war, agricultural pursuits, beyond a bare subsistence, are but little attended to." On the other hand, they are throughout notorious thieves, and scarcely consider murder as a crime. Instances of cold-blooded barbarous murders frequently occurred within two miles of the European fort, previously to the arrival of the British and the abolition of the slave trade. The unfortunate people who had been kidnapped and brought down to *Makásar* for sale, were often murdered to prevent discovery where a ready sale was not found.

Many of their customs are also extremely savage. The head of an enemy of rank is invariably severed from the dead body, and instances have more than once occurred of the heart being cut out and eaten by the conquerors. They are fond of the blood and raw flesh of animals. *Láwar dára*, which is the liver and heart of a deer, cut into slices and mixed raw with the warm blood, is esteemed their favourite dish.

The present form of government in all the states, except *Wáju*, appears to be legal, fettered by a powerful aristocracy who elect the monarch: in *Lúwu*, particularly, the sovereign possesses a title, with more pomp and state

attached to it than any other on the island, but with scarcely a shadow of authority. In *Sedéndreng* he is the most despotic, which has enabled him to become the richest and best armed prince in the island. A species of feudal system prevails throughout, but it does not extend to property in the soil. Each individual of a state considers himself the liege subject of some petty chieftain, who is himself equally bound to a more powerful one, and so on, by a regular chain, to the sovereigns of *Góa*, (*Makásar*), *Bóni*, *Láwu*, *Sóping*, *Sedéndring*, or *Tanéte*, or to the aristocracy of *Wáju*.

In each sovereignty there are two classes of nobility, called *Paseajáng'an* and *Palélé*. *Paseajáng'an* are the barons of the state, and may be considered in every respect as subjects, being obliged to obey all orders they receive from the sovereign, whereas the *Palélé* are independent petty chieftains (who have probably again under them both *Paseajáng'an* and *Palélé*), who have attached themselves to a particular sovereign, but are only obliged to do fixed feudal services, such as to assist with their followers in case of war, to attend the public feasts given by the sovereign, and to assist in building and repairing the palace of state. In *Sóping* each *Palélé* is obliged to furnish and keep up at all times one effective soldier, called *jua*, for the immediate protection of the sovereign.

When the sovereign wishes to give orders to his *Palélé*, he summons him to his presence by a messenger who bears a *bila-bila*; the *bila-bila* is a leaf of the *löntar* with a number of knots on it, specifying the number of days at the expiration of which the vassal is required to attend. The *Palélé* receives it seated in the midst of his head people, with his right hand on the handle of his *kris*, and as soon as he has got it rises, draws his *kris*, and swears on it to be faithful to his sovereign. To neglect this summons is a breach of allegiance.

The provinces under European authority are purely feudal; the Dutch, as sovereign, considering themselves as sole proprietor of the soil, and the regents, or feudal lords, being at all times liable to immediate removal and dispossession, should they neglect to perform the feudal service required, of whatever nature it may be.

The sovereign is chosen from the royal stock by a certain number of counsellors, who also possess the right of subsequently removing him; and such is their influence, that the sovereign can neither go to war or adopt any public measure, except in concert with them. They have the charge of the public treasure, and also appoint the prime minister. The prince cannot himself take the personal command of the army; but the usage of the country admits of a temporary resignation of office for this purpose, in which case a regent succeeds provisionally to the rank of chief, and carries on the affairs of government in concert with the majority of the council. Women and minors may be elected to any office of the state; and when this takes place, an additional officer, having a title which literally means a support or prop, is appointed to assist.

In *Bóni* the prince is elected by the *Orang-pítu*, or seven hereditary counsellors. In *Gúa* (*Makásar*) the prince is chosen by ten counsellors, of whom the first minister, termed *Bechára Búta*, is one; this last officer is himself appointed by the council of nine, termed the nine standards of the country, but in the exercise of his office possesses very extraordinary powers: it is said he can remove the sovereign himself, and call upon the electors to make another choice. The inferior chiefs, or *Krains*, who administer the dependent provinces, are appointed by the government, and not elected by a council, although in the exercise of their office their power is in like manner limited; the number of the council varying in different states. When the prince in council has decided upon war, the assembled chiefs, after sprinkling their banners with blood, proceed to take a solemn oath, by dipping their *kris*es into a vessel of water, and afterwards dancing around the blood-stained banner, with frantic gesture, and a strange and savage contortion of the body and limbs, so as to give the extended *kris* a tremulous motion, each severally imprecating the vengeance of the deity against his person, if he violates his vow to exterminate the enemy, to conquer or die.

The proportion of the crop which falls to the share of the landlord has already been stated. In some districts a sixth, and in others a tenth, belongs to the sovereign; but in general the landlord, the capitalist, and the cultivator, may be considered to share between them the whole produce of the land. The monopolies which the chiefs assume to themselves have also been noticed. Besides these there are a few imposts in bazars, which, with some other pecuniary emoluments, accrue to the chiefs, but they are, for the most part, rather to meet their personal expenses than to defray those of the state, and consequently hardly deserve the name of public revenue.

The arms formerly used for offence by the inhabitants of Celebes were the *súmpit*, or tube through which the poisoned dart is blown, the *kris*, spear, *kléwang* (cutlass,) *bádi*, and *páraný*: to them may now be added muskets, musketoons, and small cannon. Those for defence were chain armour (*baju ránti*) and two kinds of shields, the one long the other round, made of very tough light wood, and bound together very strongly by pieces of split rattan.

The Mahomedan religion is professed in all those parts of Celebes which have any pretensions to civilization, and the *Koran*, of course, is the standard of law and worship, as far as it is known. According to the records of *Makásar*, the Mahomedan religion was introduced there about the year 1603, by *Khateb Tunggal Datu Bandang*, a native of *Menangkabau* on *Sumátra*. Nearly all the inhabitants of the south-west limb are Mahomedans, but of the centre and the other limbs of the island only a very small portion have been converted. There are Mahomedan schools in all parts of the south-west limb, but the Arabic language is only learnt by those designed for the priesthood. They do not consider themselves as belonging either to the sect of Omar or Ali, but as followers of the law of the prophet, without regard to either. Circumcision is performed on both sexes; on the males at ten or twelve years of age, on the females at six or seven.

It has been related, that the change of religion on Celebes happened just after the arrival of the Portuguese, who are said to have offered Christianity at the same time that the Maláys offered Mahomedanism. The king of *Makásar* is said to have been doubtful which of these systems he should adopt, till he consulted the wisest men in his dominions, who advised him to embrace the religion of the *Koran* in preference to that of the gospel, stating as an argument in its favour, that it had arrived first, and that God would never permit error to arrive before truth. But this does not appear on the records of *Makásar*.

The public feasts formerly held, sometimes for weeks together, appear to have been for political rather than religious purposes: at present the Mahomedan fasts and feasts are observed. Formerly the dead were generally buried, but in some instances burnt. There is still to be seen in *Lamúru* a burial-place belonging to the royal family, containing jars or urns with the ashes of their ancestors, which are held sacred, indeed almost worshipped, at the present day. The *Búgis* name for the places of burial used before they were converted to Islamism is *Patúnan*, or the place of burning. It is not known that any tribes of the *Turájas* burn their dead at present: they are said to deposit them in excavated rocks on the sides of hills, and to be so anxious to be buried among their relations, that if a man of rank dies in a distant part of the country, the body is salted to preserve it, and, in that state, carried back to his own residence. Very little is known of these people by the inhabitants of the south-western limb, but they are universally considered as the first inhabitants of the island. They are a very fine race of people: the women particularly so. It is said they will not suffer strangers or Mahomedans to reside among them, and that the custom of procuring a certain number of human heads previous to marriage is as prevalent among them as with the *Dáyas* of Borneo, and the *Harafúras* of the Eastern Archipelago in general.

Each state has its own system of laws, but they nearly concur in the following principles. Each sovereign generally possesses the right of putting to death any of his subjects, except the members of his own family. Should any one of these commit a crime and escape into another territory, he cannot be touched, but if taken in his own country he must be brought before the *bechára*, who alone are capable of passing sentence on him.

Each petty state has its *bechára*, composed of the principal people, both *Paseajáng'an* and *Palélé*. All disputes between its followers are decided by it: it also judges and passes sentence in cases of theft, murder, and adultery, and decides all causes respecting the legal right to property; but an appeal may be made to the court or *bechára* of the principal state, the members of which are called the *Kapála Bechára*. The decision of any *bechára* is subject to the approval of the sovereign, where he is not himself a party interested: indeed he may, in general, supersede the authority of this court by deciding promptly, but it behoves him to attend strictly to the *adat biása*, or ancient customs of the state, in his decision, for the *bechára* has the power to remove the sovereign and elect a new one. The same persons at all times decide on the fact and the law.

It is difficult to ascertain which of the dialects spoken on Celebes has most claim to antiquity. I have already stated, that the *Makásar* and *Búgis* are considered as the two principal languages of that part of the island known to Europeans. The *Makásar*, the *Búgis*, and *Mandharese*, which may be considered as dialects of the same language, use the same character with some trifling variations. The *Turájas* or *Harafúras* of Celebes have a fourth language, probably the most original, but it is not known whether they are at all acquainted with writing.

Each nation considers its own the most ancient character. The *Makásar* alphabet is less complete than the *Búgis*, which consists of twenty-two letters, varied by six vocal sounds. The form of the character is peculiar, and more nearly resembles that of the *Bátas* on Sumatra than any other we know of. It is difficult to decide whether the *Búgis* or *Makásar* language is the most ancient. Many words have the same meaning in both, and many others differ so little^[299] as to be evidently of the same origin; but the *Búgis* has often six or seven synonymes, whereas the *Makásar* has never more than two, and seldom more than one. Some of the *Búgis* words bear strong evidence of Hindu origin, as *sóda* from *sóna*, gold; *paráma* from *brahma*, fire; which is not at all the case with the *Makásar*.

La Galíga, the reputed son of *Sawíra Gáding*, is considered the author of the history of *Sawíra Gáding*, which is a kind of heroic poem, and is read in a chaunting voice, with a pause at the end of every fifth syllable. The measure consists of a dactyl followed by a trochee, as *Sāwīrā Gāding* to *Mālāmpōā*, (*Sawíra Gáding* the great). He is the only author whose name is commonly known; and all books, even the most modern, which are written in the same manner, are called after him *Galíga*, although, properly speaking, the term should only be applied to the history of the heroes who are supposed to have lived previous to the seven generations of anarchy which subsisted at *Bóni*. *Sultána Zaenab Zakeyat Udiu*, the seventeenth sovereign of *Bóni* subsequent to the anarchy, is said to have written an historical poem, containing the exploits of all the sovereigns of *Bóni*, from the reign of *Máta Se Sámpo*, the *menúron* of *Matájam*, down to her own time; but it is not to be procured on the western side of Celebes. It appears, however, that every *Búgis* family of high rank possesses a very authentic history of that period, collected from the records of the court of *Bóni*.

The author of the *Rupáma* is not known, nor indeed is the name of any *Makásar* author known. The *Rupáma* is considered by the *Búgis*, as well as the *Makásars*, to be of equal antiquity with the *Sawíra Gáding*. Copies of both these works have been obtained.

In the account given by Dr. Leyden, in his valuable paper on the Hindi-Chinese nations,^[300] upwards of fifty literary compositions in the language of this country are enumerated, most of which serve either to celebrate the deeds of their national heroes, or are of an amatory character. Besides these they possess codes of laws, or rather customs, said to be of considerable antiquity. The *Koran* has been translated into the *Búgis* language. The use of rhyme is much less frequent than among the *Maláyus*; and it has been observed by Dr. Leyden, that "the melody of the verse depends on the rhythm, and the measure of some of the historical poems has, in this respect, considerable similarity to some of the specimens of Sanscrit verse." The *Búgis* songs are very numerous, and in high estimation throughout the Archipelago.

They have no books on science, philosophy, or astronomy. The only stars they are acquainted with, are Jupiter (called *Pelás*), the Pleiades (called *Wórong Pórong*), Sirius and Orion (*Jáng'an Jáng'an*, or the Fowl), the Great Bear (*Jonga Jong'aya*), Navis (*Belikaipon*), and Antares (*Lambáro*). They navigate their *práhus* by these stars, some of which must always be in sight, if the weather be clear.

The *Makásars* use the Mahomedan names for the months. The *Búgis* divide their year of three hundred and sixty-five days into twelve months, beginning on our sixteenth of May. Whether this division of the year has taken place since the arrival of Europeans or not, is uncertain; but it is more than probable it has, as, with all this correctness, it does not appear they have any era; at least since the introduction of Mahomedanism, the Hegira seems to be used. The *Búgis* names of the months, and the number of days they contain, are as follow:—

<i>Sarowaná</i>	30 days.
<i>Padronwáne</i>	30
<i>Sujewi</i>	30
<i>Pachekae</i>	31
<i>Posáe</i>	31
<i>Mangaseram</i>	32
<i>Mangasutéwe</i>	30
<i>Mangalompae</i>	31
<i>Nayae</i>	30
<i>Palagunae</i>	30
<i>Besakai</i>	30
<i>Jetai</i>	30

Some division of time into months and years must have taken place at a much earlier date; as some of the earliest of the present line of kings, and the length of their reigns, are particularly mentioned.

I have before stated that slavery is practised on the island, and that the states not only supply slaves for domestic consumption (if I may use that phrase), but for export and commercial traffic. There are examples of whole villages becoming slaves, and there is scarcely a state or family of rank on the island that has not its assortment of these degraded beings, many of whom are reduced to this condition by the most cruel and insidious means.

Of the thousands exported annually from *Makásar*, the greatest portion consisted of persons who had been kidnapped by people acting under the authority of the European Residents, or the princes of the country.

The sale of their subjects constituted one chief source of the revenue of the Rajahs; and the factors at the different Dutch residencies traded in slaves. It is reported of one factor that he exported nine hundred in a year. The payment or contribution to be made to the Dutch, was either measured in gold, silver, or slaves. In a treaty made between the people of *Gúa* and Admiral Speelman, we find that they promised to pay so much of the precious metals, or one thousand slaves. Those slaves that were obtained by law or descent, were called *Díngen*; those kidnapped, *Páras*.

The respective prices for slaves at *Makásar* were as follow:—

For a grown lad, legitimately obtained	20 dollars.
For a young woman, ditto	40
For a grown lad, kidnapped	10
For a young woman, ditto	20

It appears from the report of a commission appointed to inquire into the abuses of the slave trade in Celebes, addressed to the council of policy, and dated *Makásar*, the 21st September, 1799, that the Dutch government of Batavia, from the year 1699 (the period of the first Dutch settlement at *Makásar*), had sent repeated orders for the prevention of abuses in the slave trade in Celebes; with what effect, the following extract from the same report will shew.

"The abuses which have successively crept in, and the intrigues which are now practiced to obtain slaves, are so manifold and perplexing, that it would be very difficult for us to enumerate or to trace them. In attempting such a detail with all the precision and attention possible, we should still ignorantly omit some things, and depict others in too faint and indulgent a light, the grounds of our information being often superficial and precarious; for, it is to be remembered, that the enormities which are committed in this trade conceal themselves in the dark, and it is only by accident that some traces of them can occasionally be discerned. For these reasons, the undersigned request that they may be excused for confining themselves to the most common and notorious abuses, which, being faithfully recorded, may still afford sufficient evidence of the dreadful and detestable crimes which spring from avarice, and of the frightful shapes in which she perpetually displays herself, instigating and exciting the vengeful and blood-thirsty passions of the natives, and creating a fertile source of trouble and mischief.

"The making of a slave transport, if properly viewed, consists in nothing more than this:—A person, calling himself an interpreter, repairs, at the desire of one who says that he has bought a slave, to the Secretary's office, and accompanied by any native, who, provided with a note from the purchaser, gives himself out as seller. For three rupees a certificate of sale, in the usual form, is immediately made out; three rupees are also paid to the notary, two rupees put into the hands of the interpreter, the whole transaction is concluded, and the purchaser has thus become the lawful owner of a free-born man, who very often is stolen with his (the purchaser's) concurrence and co-operation. He does not, however, trouble himself about that, because the stolen victim is already concealed where nobody can find him. The transaction also very seldom becomes public, because never were found more faithful receivers than the slave-traders. It is a maxim with them, never, as they call it, to betray their prison; a phrase which we shall presently have the honour more fully to explain. But what will be thought of the value of those public instruments, to which the name of Slave Transports is attached, when at times it is found that both purchaser and seller are fictitious, and that they are united in one league with the interpreter. By such means it is obvious, that the right of property upon a stolen man may be acquired with as much ease as if he were pinioned before the door or within the yard of the pretended purchaser, and with no greater cost than the small sum of one rupee, or something more, according to circumstances, which must be put into the hands of him who gave himself out for the seller. To find a person for this purpose does not require a long search, for it is a very easy trade to pursue, and there are numbers of the most profligate of the natives continually roving about who do nothing else, and maintain themselves exclusively upon such small profits; even the slaves of the inhabitants being bribed, suffer themselves, for a small fee, to be thus employed. The victim himself, who is stolen and sold, is never examined, nor do the Dutch or native interpreters at all concern themselves about the matter; they are not much afraid of the risk of their responsibility; so that, at any time, it were possible to prepare beforehand as many transports as might be required.

"Let us further represent to ourselves this, our town of *Makásar*, filled with prisons, the one more dismal than the other, which are stuffed up with hundreds of wretches, the victims of avarice and tyranny, who, chained in fetters, look forward with despair towards their future destiny, and taken away from their wives, their children, their parents, their friends and comforts, languish in slavery, helpless and miserable! We may picture to ourselves the condition of one (and how often do such instances occur) who perhaps saw his aged father lose his life by his side, in attempting to rescue the pride and comfort of his declining years, whilst the survivor, incapable of further resistance, is torn from him, robbed irrecoverably of what is most precious to every human being, and carried away, in a condition more dreadful than death itself, a condition of despair and uncertainty, in which that moment only shall produce a change, when he is resigned for a trifle to the arbitrary will of a master, who has paid the stipulated price, and acquired the right of placing him amongst the number of his domestic animals, treating him at times no better than he would do those creatures.

"If we would lift up another corner of the curtain, a scene no less afflicting presents itself. Here we discover wives lamenting the loss of their husbands, children missing their parents, parents missing their children, who, with hearts filled with rage and revenge, run frantic through the streets and before our doors, to do all that the filial love of children for their parents, the tenderness of parents for their offspring can inspire, in order, if possible, to discover where their dearest pledges are concealed. Often, very often, is all their labour and trouble in vain, being obliged to return back hopeless and comfortless to their afflicted friends and relations. Sometimes, indeed, the profoundest secrecy is not proof against their indefatigable scrutiny, and if they do by any chance learn where a father, mother, a son or daughter, a husband or a wife, is kept in concealment, hope revives within their bosoms, and absorbed in the prospect of becoming their deliverers and saviours, every sacrifice is considered trifling, by means of which they can regain possession of the objects of their anxious care. But, alas! these unhappy people have not as yet reached the end of their sufferings; an obdurate purchaser, deaf to all the pleadings of distress, will be prepared coolly to make his advantage of it, and proportionally to enhance the ransom of his victim, till, by extorting an exorbitant price, he may plunge the unhappy relative from a moderate property into indigence, or, which is still worse, burden him with debts, which, sooner or later, will reduce himself, and perhaps his whole family, to slavery!

"It must not be thought, that when these wretched people have thus carried their point, and when, to furnish the sum demanded, they have sold their houses and goods, or even pawned themselves^[301], that, after the payment of the ransom agreed on, the matter is finished. No! the trader will not deliver up the pretended slave until he departs for Batavia: and if we ask, why? it is, that his prison may not be betrayed; that is to say, that it may not become generally known throughout the country, what numbers of stolen people he keeps shut up within his prison, and that the cry of vengeance against many execrable acts that are concealed in the dark, may not everywhere be heard, by which many villains would become notorious. A son is therefore only exhibited to the afflicted father: he sees him in a pitiful condition linked with fetters, and it is frequently at such a moment that the ransom is agreed on. The grief wherewith a father's heart is pierced at such a sight, the rapid succession of his emotions from grief and despair to hope and longing, when contrasted with the deliberate calmness with which a covetous purchaser knows how to take advantage of the poor man's distress; the indifference, the obstinacy, with which he persists in his bloody demand of each rix-dollar, each stiver, nay almost of each penny; in a word, every thing that can have any relation to such a striking spectacle, can be more easily conceived than described, and we have said enough to exhibit the abomination of proceedings, which cannot fail to have a most pernicious influence upon society.

"But it may be said, the laws and regulations speak in favour of the oppressed. We have shown above, in what manner government have endeavoured, from time to time, to provide against such abuses, and to this we beg leave to refer; but where avarice is predominant, laws, reason, rights, humanity, all that is sacred, are too often compelled to yield. Besides, various obstacles conspire, which time and local circumstances have engendered, so that in spite of the most salutary statutes (which are indeed so far nominally in force) the evil cannot be effectually checked; and experience has taught us, that the most rigorous orders which government could devise, would be insufficient to make a due provision against the increase of these abuses.

"Those, whose fate we have now hastily drawn, are not always stolen by foreign nations at distant places. No: about and near the houses of our own inhabitants, in our *kampongs*, within our own town, it very often happens. A numerous gang of villains, known by the name of bondsmen (*verpandeling*), with a number of whom every slave-trader is careful to provide himself according to his means, are most useful instruments in procuring slaves in the easiest and cheapest way; and being instructed in all the arts of villainy, and eager for prey, they rove about in gangs during the night and at unseasonable hours, and if successful in overpowering some one, they carry the victim to their employer, or to any purchaser, and it is very seldom that any thing more is heard of it, than that such

a one has lost his slave, or that such a native is missing. The stolen man, woman, or child, is already chained and shut up within the prison of some slave-trader, which is never visited. The slaves for foreign markets are always carried on board at night; and if a stolen person were either free-born, or the slave of an inhabitant, he dares not make himself known as long as he is in his ravisher's hands, for, in that case, they would kill him immediately, even were it before the door of the person who wanted to buy him, whilst the robbers would have no difficulty in getting out of the way, and beyond the reach of justice.

"Those who are trained to this business, whether bondsmen or slaves (for even amongst this latter class of people thieves of men are often found), are very fertile in all kinds of intrigues to accomplish their ends; for except casual victims, who sometimes fall by accident into their clutches, a considerable time will often elapse before they succeed in securing the object they have marked out for their prey, because the devoted creature is frequently on his guard; and as it cannot be done openly without great precaution, for he would certainly sacrifice his own or their lives to preserve his liberty; they, therefore, lie in wait for him a long time, endeavouring by indirect means to make acquaintance with him, in order to gain his confidence, and then, we will not say always, to conduct or allure him into the house of the slave-trader, or otherwise, as is sometimes the case, to lead him to a remote spot, or at least to some distance from his house, when he immediately finds himself attacked by two or three of these ruffians, who have long previously agreed with his pretended friends, and before he has time to put himself into a posture of defence, or to take hold of his *krís*, it is already wrested from him, and his hands are tied behind his back. To cry for help would be immediately fatal to him, he is therefore compelled to be quiet, and to suffer himself to be sold as a slave by the ruffians who had previously arranged where to carry him.

"Why such violations are so seldom made public, and thieves of men are so rarely detected, many sufficient reasons may be assigned. For instance: the profound secrecy of the prisons; the clandestine manner in which slaves for traffic are carried on board in the dark of the night; the sinister manner in which the purchase is transacted and confirmed; the facility with which the villains are able to escape, when after some time the theft becomes notorious; the difficulty of making satisfactory inquiry about a crime, of which but a few of the perpetrators and their accomplices are generally within the reach of justice, whilst the stolen person is still more rarely present, so that it generally happens, in such a case, that the most guilty get off; the still greater uncommonness of offenders of this sort being caught in the very act, so as to fall at once into the hands of justice; and, finally, the secret protection which some native petty princes, living upon plunder, afford to their subjects. All these, and many other circumstances, combine to facilitate the practice of kidnapping, which thus goes on almost undisturbed, and generally unpunished!

"A rich citizen, who has a sufficient number of emissaries called bondsmen, carries on his trade much more easily than a poor one does. The latter is often obliged to go himself to the *Kámpong Búgis* or elsewhere, to take a view of the stolen victim and to carry him home; whilst the former quietly smokes his pipe, being sure that his thieves will, in every corner, find out for him sufficient game, without his exerting himself otherwise than indirectly. The thief, the seller, the interpreter, are all active in his service, because they are all paid by him. In some cases the purchaser unites himself with the seller, on purpose to deceive the interpreter; whilst, in other cases, the interpreter agrees with the thief and pretended seller, to put the stolen person into the hands of the purchaser! What precautions, what scrutiny, can then avail, when we reflect, that the profound secrecy of the prisons, and the strict precautions in carrying the slaves on board, are equalled only by the licentiousness with which the transports are fabricated?

"A distinction ought, however, to be made between such illegal and criminal practices, and a more moderate trade in slaves, many of whom, it is true, are stolen, but not in our vicinity, nor in the districts of the Company. The remainder are generally such as, according to the separate laws and customs of the native nations of Celebes, have in some way or other forfeited their liberty, either in war, or for some misdemeanour, or on account of debts. These are likewise higher in price, so that the trader cannot have so much gain upon them; they may also appear at broad daylight, an interpreter may with security answer for them. Such slaves can be brought on board very quietly in the day time; the frequency of murder, as in other cases, is not much to be dreaded, and our town has considerably less danger to apprehend from these than from the class before mentioned."

The report concludes by recommending specific measures, and expressing an opinion, that "it would not be inexpedient, if, but for one year, the exportation of slaves from hence were suspended."

In the following year, the residents received instructions from the high regency, in which several of their predecessors were accused of having "assumed a despotic sway over the natives, plundered those over whom they

had been placed to protect them, and of having even dared, with the assistance of the native chiefs, *whom they have found means to debauch*, to put the natives in irons, and to sell them as slaves."

Mr. Chassé, when governor of *Makásar*, much to his honour, attempted to put a stop to manstealing in the neighbourhood of his residency. He did not, however, succeed to any extent. When the British arrived, it appeared that numbers of plunderers were roaming about for the supply of the slave market, which was still open; so that the inhabitants of the villages adjacent to *Makásar*, never dared to approach, except in parties of at least five or six armed men. An equal caution prevailed throughout the country.

To enforce the British abolition laws, there was formed at Batavia, in the beginning of the year 1816, a society called the *Java Benevolent Institution*, and in the course of the year this society published an account of its proceedings, containing, among other interesting matter, "Remarks upon *Makásar*, &c. compiled from the information of Lieutenant Owen Phillips, assistant resident there." This paper concludes as follows:

"The laws recognized between the Dutch Company and the states of *Bóni* and *Gúa* may be considered a fair criterion of their general spirit and tendency. They were agreed to in an early period of the Dutch establishment, when Admiral Speelman concluded a treaty with those states, and they have not since undergone any material alterations. The penalties therein prescribed were required to be paid in money or property of any description, at the arbitrary rates fixed by the same laws, and which appear on the whole to be extremely favourable to the individual; debtors or convicted felons, in default of payment, becoming bondsmen. But the temptation to corruption afforded by an open market and an increased demand for slaves for traffic, introduced a practice of condemning, first to bondage, and then fabricating for three dollars a certificate of slavery; a practice which, although not recognized in the laws subsisting between the European and native powers, was yet generally known to prevail, and if not formally sanctioned, was openly tolerated under the former system.

"Whilst these laws are administered in the native states by their councils or *becháras*, the administration of justice in the Company's territories was vested in the Regent, under the superintendence of the *Drost*, but who has usurped the power of actually deciding, particularly in cases where he is interested in the condemnations, from the right which the judge enjoys, of a moiety of the property arising from the sale of persons condemned to slavery, or in the appropriation of a certain number of them to his own use! The abuses arising out of these unlawful usurpations appear to have attained a great height in 1799, when the commission was appointed to inquire into them; but (as in the case of restraints which had from time to time been imposed by law) that inquiry did little more than recognize the right of control over the actors and participators in such abuses; a right which could readily and profitably be compromised by men who, from habit, were actuated by little determined abhorrence of such crimes, and no steady resolution to eradicate them. To this cause alone must be attributed the difficulties stated by the commission to be opposed to the due execution of the laws, and to the suppression of the enormities that were generally practised; and although partial reforms were effected, according to the disposition and principles of the persons who presided successively in *Makásar*, the enormous gains to be derived from the toleration of corruption was a powerful obstacle to its removal: and it may be said of the abuses and enormities detailed by the commission in 1799, that although perpetuated with more or less aggravation, as the controuling authority was more or less conscientious and vigilant, no radical removal of them took place, nor were the suggestions of that commission carried into effect, except partially within the town of *Makásar*.

"On the establishment of the British government, the practice and mode of kidnapping within the town of *Makásar* had, in some degree, been restricted and ameliorated; but this did not extend to the country. Some limitations had therefore been imposed on the connivance and direct participation of the public functionaries; but bondsmen were still generally employed as man-stealers, and the practice of concealing in secret prisons, of assassinations to prevent detection, and of midnight embarkations, were but little controlled or inquired into, as may be sufficiently inferred from the laxity of the public tribunals, and the rare instances of any infractions of these laws being punished by them.

"The introduction of the prohibitory laws by the establishment of the British government, naturally operated to cause a sudden and complete suspension of the open traffic; and although individuals are still clandestinely carried from *Makásar*, the number is so small, that the utmost vigilance has hitherto been unable to convict the perpetrators, especially as the numerous gang of bondsmen and man-stealers, though compelled at present to resort to other avocations, are yet at the call of corrupt employers, and live in the hope that occasion may again offer of freely returning to their pursuits, without apprehension of any consequences. This truth will be more generally appreciated, if we explain the course through which these people are led to engage in the desperate trade of kidnapping. The bondsmen, who are thus employed by slave-traders, are generally dissolute adventurers from the

native states, who repair to *Makásar*, perhaps, with a little property which they lose by gambling; their next resource is to borrow from some one of the numerous Dutch or Chinese speculators (slave-traders) a sum of money, and which is only to be had at the exorbitant interest of fifty per cent, or, as expressed in the local terms, 'one *wang* per month on the Spanish dollar.' A debt thus dissolutely contracted is not likely to be retrieved by patient industry. But were such a disposition to prevail, the opportunity is scarcely afforded, and the obligation is generally allowed to accumulate until the debtor is about to pay the price in his captivity. To retrieve himself from this dire alternative, he has recourse to the trade of kidnapping, and the ready employment he meets with, added to the sudden gains which he hopes to acquire, stimulate him to repair his fortunes in this irregular and desperate pursuit. Such are the bondsmen who are the active agents of slave traders in *Makásar*; and while the abolition has had the two-fold effect of diminishing their numbers and of checking their depredations, it must be obvious that this salutary reform can only endure whilst the spirit which produced it is fostered. The commission in 1799 forcibly depicted the utter incompetency of the most rigid prohibitions, in restricting the barbarities which then prevailed: but there is yet a stronger fact, which bears equally upon the traffic, on whatever footing it might be re-admitted; it is, that the resources arising from what were considered legal condemnations to slavery, would be totally inadequate to supply the market under any probable limitations. As the demand increased, the more frequent condemnations on frivolous pretences would naturally ensue, if indeed such a practice in any degree could be considered legal: but the temptations to open violence arising from the numerous accessaries, and the direct or indirect participation of public functionaries, added to the comparative cheapness of stolen men, are such strong inducements to revive ancient abuses, under an actual demand, that no hope could be entertained of controuling them. On the other hand, the maintenance of the abolition laws, as they have hitherto tended to correct in a remarkable degree the monstrous practices which obtained, must, in their ultimate operation, effectually reform, not only the habits and dispositions of the inhabitants of *Makásar*, but check those frequent condemnations which, in the native states, may be chiefly imputed to the advantages that were generally made of them. To illustrate, in a familiar instance, the effect of this amelioration brought about by the silent operation of the prohibitory laws; on the first arrival of the English, the inhabitants of the adjacent villages did not dare to come to *Makásar* in parties of less than five or six men well armed. This was equally the case throughout the country, as there was an open sale for almost any number of people that could be stolen. The case, however, is now entirely altered, at least within the influence of the British authority. Men, women, and children, are now to be seen moving singly about the country in all directions, without fear and without arms. Formerly a man going on a hunting party, or a peasant to till his ground, went armed as if going to war; at the present day numbers of people may be seen in the paddy fields without a spear amongst them. I may add, that these effects are not confined to the Company's provinces, but are felt nearly throughout the states of *Gúa*, *Telu*, and *Turáta*, where there can be no doubt that a few years would be sufficient to realize, under the present system, a great increase to population, and the more important introduction of commerce and civilisation.

"The principal pirate settlements are *Káli* and *Túli Túli*, situated on the north-west coast. The depredations of these hordes are generally carried on between Java and the Straits of Saleyer; their haunts are the islands near Seleyer, also *Gúnuny Api*, and the isles at the entrance of the Bay of *Sembáwa*, and in general the small isles included between the coasts of Java to the west, Borneo to the north, and Celebes to the east."

FOOTNOTES:

[299] See Comparative Vocabulary annexed, including the dialects of the south-west limb of Celebes, and some of the islands in its vicinity, on which *Bugis* settlements have been formed.

[300] Asiatic Researches.

[301] Meaning their services for a stipulated period or for life.

APPENDIX G.

NUMERALS ACCORDING TO THE CHANDRA SANGKALA.

ONE.	
Rúpa	form, shape, appearance, face of any thing.
Chandra	moon at the 15th day, moon.
Sási	new moon, month of the year.
Nábi or nebe	the navel, completion of the month.
Búmí	the earth, or piece of land.
Búda	ancient; original.
Rón or Gódong	leaf of a tree.
Médi	abstraction, devotion.
Eku	tail of any thing.
Dára	large stars, planets.
Jalma or Janma	mankind.
Eka	one.
Wák	the body.
Súta	child.
Siti	black earth, earth.
Awáni	courageous, hair of the body.
Wúlan	the moon, at the 14th day, full moon.
Yáta	then, forthwith, thereupon.
Tung'gal	one.
TWO.	
Nitra	the eye lids, the eye.
Chaksu	the inner corner of the eye.
Nayána	sight.
Sikára	the palm of the hand.

Búja	the upper part of the arm near the shoulder.
Páksa	the jaw-bone.
Drésti or desti	the eye-brow.
Háma	the outer corner of the eyes.
Lochána	the lips.
Charána	the side of the cheek-bone.
Kerna	the ears.
Kerni	the inner part of the ear.
Anámha	the act of closing the hands in obeisance.
Talíng'an	the lobe of the ear, the ear.
Máta	the eye, the pupil of the eye.
Tang'an	the hands, the arms.
Súku	the feet, or soles of the feet.
Lár	wings.
Dúi	two.
Lóro	two.

THREE.

Bahning	fire (of a furnace).
Pawáka	fire (from a volcano).
Siking	fire (struck from a flint).
Guna	fire (from friction of wood).
Dahána	the fire which pervades every thing that has life, extensive fire, fire that has never been extinguished.
Tri-ningrána	fire (of the work-room).
Uta	a leech.
Buja-lána	alligator or crocodile.
Húti	worm of the earth.
Játa	flame of fire.
Wéda	fire or heat confined in a vessel, as in a cooking vessel.
Anála	the fire which giveth warmth to the heart, the fire of passion, the fire which giveth warmth to passion.
Gni	fire (to a match).
Utáwa	fire.

Kéa	great fire.
Léna	fire or flame of a lamp.
Puyíka	fire and ashes, mixed.
Tiga	three.
Uning'a	a torch.

FOUR.

Wédang	hot water.
Segára	the sea.
Kerti	well water.
Súchi	water after it is used.
Jaládri	water from a lake, or where fresh water mixes with the sea.
Hádi	mountain water, rare or pure water.
Warna	colour.
Wéh	water which descends from a mountain.
Samúdra	sea water.
Jaládi	tank or pond water.
Ernáwa	spring water.
Toyádi	dew water.
Wahána	flood or quantity of water.
Waudádi	juice from trees, as toddy,&c.
Sindu	milk.
Wári	cocoa nut-water, water.
Dik	glutinous sap taken from trees, as the Indian rubber, &c.
Tásik	sweat, applied to the sea on the coast.
Bányu	water.
Chatur	four.
Pápat	four.

FIVE.

Búta	a rasaksa or hobgoblin, also a lion.
Pandáwa	the five sons of Pandu.
Táta	breath issuing from the nostrils.
Gáti	ditto mouth.
Wisáya	air produced as in bellows, &c.
Indri	air which refreshes or revives.

Astra	the air created by the passing of a missile weapon, or by the wielding of a sword.
Sára	the same, created near the point or edge of the weapon.
Marúta	air which conveys scents of any kind.
Pawána	strong wind.
Bána	hurricane, violent wind.
Margána	favourable wind in one's course.
Sámi-rána	the wind that checks perspiration.
Waráyang	the point or edge of the wind which strikes any thing.
Pancha	five.
Báyu	wind that circulates in the human body.
Wisikan	whispering wind.
Gúling'an	air circulating in a room.
Lima	five.

SIX.

Mangsa	season, the seasons, prey of a wild beast.
Sadrása	the six tastes, (sweet, sour, salt, bitter, pungent or aromatic, hot, as pepper).
Wináyang	to range, following in order, (which is done according to the six notions of things).
Gána	silk worm, bee.
Ret-tu	the feeling or taste of any thing not pleasant, as pain in the leg, mixed good and bad.
Ang'gas	the trunk of a tree standing after its branches and leaves are decayed and fallen.
Sáyag	an inclining tree.
Karng'a	the sense of hearing.
Sanda	clear, light.
Sandi	plan, project, scheme, completed.
Búdia	disposition, inclination, ability.
Ka-nénam	six.
Rása	taste.

SEVEN.

Ardi	mountains near the sea, mountains.
------	------------------------------------

Parwáta	several mountains together.
Turángga	a steed, horse.
Giri	mountain or great hill.
Réksi or resi	a pandita, or holy or learned man.
Aksa	buffaloe.
Baksu	bull or cow.
Mandála	a mountain which is rent or split.
Chála	a mountain which shows its shape, &c. clearly.
Hemáwan	the summit of a mountain.
Gúra	cow, great noise.
Sapta	seven.
Pandita	a holy man.
Géngsiára	the buzzing noise of flying insects.
Yamúni	the sound of a lover courting his mistress.
Kúda	horse.
Wiku	an instructor.
Pitu	seven.

EIGHT.

Nága	serpent
Panágan	the dwelling of a snake, the skin which a snake has shed.
Sarira	guana.
Básu	tekké.
Tánu	camelion.
Múrti	lizard.
Kunjára	place of confinement, prison.
Gájah	elephant.
Dipángga	an elephant fully caparisoned.
Samádia	an elephant prepared for being mounted.
Hasta	elephant.
Mang'gála	an elephant with his tusks grown.
Diráda	an enraged or savage elephant.
Hesti	female elephant.
Matáng'ga	a large elephant.
Bramána	a pandita from Sabrang or opposite coast.

Liman	a tame elephant.
Kála	time.
Was, áwas	a scorpion.
Ula	a snake.

NINE.

Rudra	a muddy hole.
Trústra	the hollow of a tube, a hollow in any thing.
Trústi	the same.
Múka	the face, the mouth.
Gapúra	the gate or door-way of a palace.
Wiwára	a door-way, the opening of a case.
Diára	the gateway of a fort.
Drúna	door-way into a holy place, or place of misfortune.
Yútu	the eye of a needle, or the like.
Gátra	a small hole or cell in the earth, made by insects.
Gua	a cave.
Wadána	the front of a door.
Léng	all kinds of holes or hollow places.
Láwang	doors of every description.
Sóng	a long passage underground.
Babáhan	the hole made for the entrance of a thief.
Náwa	nine.

CYPHER.

Búma	decayed grass, dried grass, hay.
Súnya	solitude, quiet.
Gegána	endless space, as between the earth and the sky, indefinite space.
Ng'ambára	flight.
Widik widik	that which is seen or heard but not known, as thunder.
Malétik	to fly off, drop off, anything small which is knocked off from what is greater.
Sirna	gone, vanished.
Lang'it	that of which one has an idea but cannot see clearly, as the sky.

Kásia	the air, atmosphere.
Maláyewa	to run off.
Windu	the period of revolving, a cycle.
Sakáta	a carriage.
Ilang	gone, lost, past.

EXAMPLE.

Búma, netra, gni, bányu, marúta, sadrása, ardi, nága, láwang, lang'it.

Earth, eyes, fire, water, air, taste, hill, snake, doors, sky.

APPENDIX H.

TRANSLATION OF THE MÁNEK MÁYA.

CHAPTER I.

Before the heavens and earth were created, there existed *Sang yang Wisésa* (the all-powerful). This deity, remaining in the centre of the universe, inwardly and earnestly desired of the Almighty Ruler to grant a wish that he had. A dreadful conflict of the elements ensued, in the midst of which he heard a repetition of sounds, like the rapid striking of a bell. On looking up he saw a ball suspended over him, and on his laying hold of it, it separated into three parts: one part became the heavens and earth, another became the sun and moon, and the third was man, or *mánek máya*.

All having made obeisance to the *Sang yang Wisésa*, he addressed himself to *Mánek máya*, and said, "Hereafter thou shalt be called *Sang yang Gúru*; and placing entire confidence in thee, I give up the earth and all that is attached to it, to be used and disposed of according to thy will and pleasure." Having spoken thus, *Sang yang Wisésa* vanished.

The earth being in great distress, unfixed and liable to be driven to and fro by every gust of wind, anxiously petitioned of *Sang yang Wisésa* that its situation and condition in the universe might be fixed. The sun, moon, and sky, deeply affected with the distress in which the earth was, all came to lend their assistance; a violent hurricane at the same time arose, and, by their united influence, the earth became still and fixed, the contending waters then receiving their saltness and disposition to turbulence. The continual presence of the sun and moon occasioned perpetual day. *Sang yang Gúru*, empowered by the deity, then directed that those two luminaries should show themselves alternately, relieving each other by turns; the sun dispensing light and heat during the day, and at the close thereof entering into the bosom of fire; the moon continuing to light the earth by night, for fifteen days in a month, and descending in due season into the bosom of the waters.

At the request of *Sang yang Gúru*, the deity granted that he should have nine male and five female children born unto him, without the assistance of a mother.

One of the sons, called *Mahadéwa*, being furnished with one of the daughters, called *Mahadéwi*, as a wife, was sent to preside in the east. He was, moreover, provided with a fort and palace of silver, a sea of cocoa-nut milk, and a white *pári* bird. His letters were *ha*, *na*, *cha*, *ra*, and *ka*, (the five first letters of the Javan alphabet), and his day, *légi* (which signifies sweet).

The second son, *Sang yang Sámbu*, was sent to preside in the south: the daughter allotted to him for a consort was *Sangyána*. His *kráton* was of copper; his bird was a *bhramána* kite; his sea was of blood; his letters were *da*, *ta*, *sa*, *wa*, and *la*; his day *páhing*.

The third son, *Sang yang Kamajáya* (the most beautiful), was sent to preside in the west: the daughter allotted to him for a wife was *Dewi Ratéh* (which signifies the most beautiful female). His *kráton* was of gold; his sea was of honey; his bird was a *kapádong*, or yellow minor; his letters were *pa*, *da*, *ja*, *ya*, and *nia*; his day was *pon*.

The fourth son, *Sang yang Wísnu*, was sent to preside in the north: the daughter allotted to him for a wife was *Sri*. His day was *wágé*; his *kráton* was of iron; his sea was indigo; his bird was *gága*, or crow; his letters were *ma*, *ga*, *ba*, *ta*, and *nga*.

The fifth son, *Sang yang Báyu*, was appointed to preside over the centre of the earth: the daughter allotted for his wife was *Dewi Súmi*. His *kráton* was of bell-metal; his day was *klíwon*; his letters were *ga*, *lang*, *nia*, *ma*, *ma*, *la*, *pa*, *ya*, and *a*; his sea was of hot water; his bird was a *gogek*.

The four remaining sons were appointed to preside in the north-east, north-west, south-west, and south-east quarters, respectively.

The god of the north-east was *Sang yang Pretanjála*, and the letter attached to him was named *b'ya*.

The god of the south-east was *Sang yang Kwéra*, and the letter attached to him was named *narasúnya*.

The god of the south-west was *Sang yang Mahayákti*, and the letter attached to him was named *gandéa*.

The god of the north-west was *Sang yang Séwa*, and the letter attached to him was named *norwíti*.

These arrangements being made, *Sang yang Gúru* went under the earth to put things to rights there. The earth consisted of seven regions, one under the other, like so many folds. In the first region he appointed the goddess *Déwi Pratiwi* to preside; in the second region, a god named *Sang yang Kusíka*; in the third region, a god named *Sang yang Gáng'ga*; in the fourth region, a god named *Sang yang Sindúla*; in the fifth, *Sang yang Dasampálan*; in the sixth, a god named *Sang yang Manihára*; in the seventh region, a god named *Sang yang Anta Boga*, and who was head over all the others.

Then *Sang yang Gúru* returning from under the earth, and observing that it was depressed towards the west, and elevated towards the east, summoned all the deities to a consultation respecting what might be the cause of this inclination. The deity of the west said that it was in consequence of a large mountain that was towards the west, and whose weight bore down the earth in that quarter. *Sang yang Gúru* then directed that the mountain should be removed from the west and placed in the east, so as to preserve the earth in due balance. All the deities were accordingly forthwith dispatched to effect the same.

Sang yang Gúru, at the same time, got *Sang yang Wisésa* to create him a Vulcan or *Empu*, whose name was *Ramádi*. Of this Vulcan, his mouth served to supply fire, his right and left hands served respectively to hold and beat his work, while his knee answered the purpose of an anvil.

CHAPTER II.

Besides *Sang yang Gúru*, *Sang yang Wisésa* created another degree of mankind, viz.: *Sang yang Derma Jáka*, who, having humbled himself before *Wisésa*, petitioned him to bestow on him a son, which was granted, and his son's name was *Chátur Kanáka*.

Chátur Kanáka having previously done penance, petitioned *Wisésa* to grant him a son, which he did, and his son's name was *Sang yang Kanekapútra*.

This *Kanekapútra*, who was superior in abilities to all the other created beings, being grown up, was sent by his father to do penance in the ocean, who gave him at the same time a precious stone, called *rétna dumíla*, fraught with the wonderful power of rendering its possessor insensible to hunger, cold, thirst, &c. and which completely fortified him against the effects of water, fire, &c. *Chátur Kanáka* also instructed his son to remain quiet and silent during his penance.

CHAPTER III.

The deities who were sent to remove the heavy mountain which weighed down the west end of the earth, were so fatigued with the labour it cost them, that they were all very thirsty. In looking out for wherewithal to quench their thirst, they discovered issuing from the side of the mountain a clear stream, of which they all drank and died shortly after, the water being impregnated with poison.

Sang yang Gúru himself having come to the mountain, and being also very thirsty, drank from the poisonous stream: perceiving, however, in time that the water was not good, he immediately vomited it, and so saved his life. The only bad effects of it was a blackness which remained about his throat, and from which he received the appellation of *Níla Kánta*. The water was called *chála kúta*, which signifies the most potent poison.

On a further search, *Sang yang Gúru* discovered another stream issuing from the summit of the mountain, and of which the water was of an aromatic and excellent quality. The name of this water was *kamandálu*, and was so called from its having the property of bringing the dead to life.

Instructed by *Wisésa*, *Sang yang Gúru* drank of the life-giving water, and at the same time carried with him some of it, in order to give it to those deities who had died in consequence of their having drunk of the death-giving stream. On the water being applied to their lips they all immediately revived.

What remained of the mountain on removing it from the west to the east formed the hill called *Tempaka* (at *Chiríngin*, in Bantam).

In the course of the conveyance of the mountain towards the east, a piece of it dropt off, and became the large mountain in Bantam, called *Gúnung*

Kárang. Other pieces falling off became the mountains *Hala Húlu*, near *Pajajáran*, *Gúnung Géde*, the mountain called *Chermái* (which is in *Cheríbon*), and the *Gúnung Agung*, (which is in *Tegál*).

The fragments which continued to fall all the way along, on either side of the large mountain, during its conveyance from the west to the east, formed the two ranges of hills stretching along the south and north coasts, and known by the name of *Gúnung Kéndang*.

Two large pieces fell off and formed the Brothers, called *Sindóro* and *Sindári*, or *Súmbing*. The deities employed in transporting the mountain stopped to rest themselves in that part of the country afterwards known by the name of *Kedú*; and the perspiration which then ran off their bodies was the cause of that country being so well supplied with water.

These deities seeing *Ramádi* above in the clouds, at his ease compared with them who were working so hard, asked how he came to be there so much at his ease? He replied, that he was ordered by *Sang yang Gúru* to remain there and work for the gods. High words, and at last a battle, ensued, in which all the deities were defeated. So great was the power of *Ramádi*, whose mouth sent forth flame, and whose breath was fatal to those exposed to its baneful influence.

Sang yang Gúru interposed his authority, and having appeased the combatants, the deities returned to the work of carrying the mountain. More pieces of the mountain dropped, and formed the mountains *Merápi* and *Merbábu*, into which the volcanic fire they have ever since contained was then breathed from the nostrils of the fiery Vulcan *Ramádi*.

Ramádi then asked *Wisésa* to give him a son, which was granted, and his son's name was *Bráma Kadáli*. *Bráma Kadáli* resembled his father in every respect, and was equally powerful and formidable.

Other pieces of the mountain dropt, and formed the mountains *Láwu*, *Wílis*, *Antang*, and *Klut*, besides a number of small hills. What remained of the mountain when it had reached the east, was set down and formed the *Gúnung Semíru* (which is in the country now called *Proboling'go*), the height of which reached the sky.

Having removed the mountain from the west to the east end of the island, the several deities presented themselves before *Sang yang Gúru*, who then

ordered them to take *téja*-grained wood, earth, and stones, for the purpose of making him a heaven of the most transcendent beauty, it being his intention to vie with the Almighty himself; and in order that he might be on an equality with the Almighty, he gave orders for the construction of a *báli márchu kúnda*, which should resemble the *âras* of the most divine; and like unto the *Súrja Púrdos* he made the *Surga Loka*. To resemble the *Yamáni* he formed a *káwah*; corresponding to the *Wailul*, or hell of perishing cold, he made *Endut Blagdába*, or the place of filth; similar to the bridge *Seratal mastakim* he made the bridge *Ogalágil*. He at the same time made himself as many *jawátas* as the Almighty himself had *malaikat* (or male angels), also 100,001 *widadáris* (or female angels), the odd one being *Batárī Ráteh*. *Sang yang Gúru* further provided himself with a consort, whose name was *Batári Uma*.

All this having been accomplished, the *Jawátas* and *Widadáris* assembled under the *báli márchu kúndo*, and began to drink of the *térta komandálu*, or invigorating beverage, which soon made them quite happy.

While they were still quaffing, *Rémbu Chúlung*, one of the *Rasákṣa* (who are the dregs of creation) having observed them, descended from above and joined the party. When one of the *Jawátas*, called *Chándra*, perceived this, he made a motion to *Wísnu* to apprise him of it. Before therefore the beverage, which the *rasákṣa* had applied to his lips, had time to descend into his stomach, *Wísnu* shot an arrow into his throat and stopped his passage. The head only of the *Rasákṣa* (being all that experienced the effects of its immortalizing quality) re-ascended, and became the devourer of the sun and moon (observable at eclipses); the whole of the rest of the body perished. Hence originates the great noise and clamour which is always made on an eclipse of the sun or moon, the object of those who make it being to drive away the animal which on those occasions attacks the luminaries, and thereby produces what are termed eclipses. * * *

(The scene which follows is too indelicate to be inserted).

Sang yang Gúru immediately dispatched all the deities to destroy it, and to prevent its growing into any thing gross or unnatural.

The deities accordingly went forth and commenced their attack, darting all their missile weapons at it. Instead, however, of suffering from the effects of their weapons, it only increased in size, and forthwith began to assume a

shape, of which the weapons called *cháhra deksána* formed the head, those called *lampang mang'gala* formed the two shoulders, and those called *gáda* the rest of the body. The former being now complete, and of a very terrific appearance, all the deities were greatly afraid and ran away from *Sang yang Kála*, the name of the monster, as it continued to pursue them. The deities fled to *Sang yang Gúru* for protection and assistance, informing him of what had happened, and telling him, at the same time, that the *Sang yang Kála* was advancing in order to inquire and find out who was his father.

The *Rasáksha* immediately made his appearance, having eyes like the blazing sun, hair long, lank, and clotted with filth and dirt, his body covered all over with hair like a wild beast, and large tusks sticking out of his jaws.

Thus disfigured, he stood before *Sang yang Gúru*, and asked him who he was? The latter replied, that he was a powerful being and the ruler of many deities. "If that be the case," said *Sang yang Kála*, "then must thou be able to tell me who my father was?" *Gúru* then said, "I know thy father, and will inform thee who and where he is, provided you comply with what I shall require of thee."

Sang yang Kála assented, and then inquired what it was that *Gúru* wished him to do. "That," said *Gúru*, "I will point out to you, and if you fail to do it, I will instantly devour you. You must, in the first place, however, make obeisance to me." While the *Rasáksha* was in the act of prostrating himself before *Gúru*, the latter plucked two hairs from his head: upon which the former opening wide his mouth, *Gúru* thrust his hand into it, and wrenched out his tusks and the poison which was at their roots. The poison he deposited in a small vessel, and of the tusks he formed two weapons, called *limpung* and *neng'gála*, so heavy that it required seven hundred men to lift one of them.

Sang yang Gúru then confirmed to the *Rasáksha* the name of *Sang yang Kála*: after which, becoming greatly enraged with his consort, he seized and held her by the toe, upon which she began to bellow, and was immediately transformed into a female monster, receiving the name of *Dúrga*. He then gave her to *Sang yang Kála* for a consort, and allotted them for a place of

residence the island called *Núsa Kambáangan*, where they continued to live very happily.

Sang yang Gúru then ordered the deities, *Bráma* and *Wísnu*, to go and destroy the forty children of *Rémbu Chúlung*, the devourer of the sun and moon. They accordingly destroyed all the children except one, named *Putút Jantáka*, whose severe penance alone saved him.

After this *Gúru* saw in his sleep an appearance like a rainbow, and which seemed to be portentous of some great event. *Sang yang Támban* being sent by *Gúru* to make inquiries respecting the nature and meaning of this sign, which, from its being in the water, he termed *súba síta*, *Támban* went under the water, and saw there a devotee, who, notwithstanding his situation, was quite unwet from the water, and undergoing the penance of remaining perfectly still and quiet.

Gúru being informed of this, and feeling jealous of what the devotee might gain by his penance, became very desirous of causing him to break his vow: he accordingly sent a number of *Dewátas* and *Widadáris* to tempt the hermit. On their reaching the spot where the latter was, they were not asked to sit down, and were completely disregarded by the hermit. *Bráma*, who was one of those sent, then observed to the hermit, that such haughty and neglectful conduct was highly unbecoming, and that if it proceeded from ignorance, on his part, of the rank of the persons sent to him, he begged to inform him that they were the messengers of the Great Deity, and ought to be attended to.

These words making no kind of impression on the hermit, who continued obdurately silent, the deity, *Sang yang Séwa*, then advanced, and addressing himself to the hermit, spoke thus: "Holy hermit, be not offended with what *Bráma* has just said to thee. I come not to disturb or annoy you, but merely to apply to you for the means of curing the sickness of *Batári Uma*, who has been taken very ill." Neither this, nor any other of the devices which the rest of the deities successively had recourse to, succeeded in making the hermit break his silence. The deities, however, being determined to do all in their power to make the hermit break his vow of uninterrupted silence, *Sang yang Sámбу* took a vessel of water and emptied it upon him, while others, at the same time, began to belabour him with sticks. Notwithstanding all this, the hermit persevered unshaken in his resolution of maintaining a dead

silence. Seeing this, *Sang yang Báyu* came up and began to batter his head with stones, which, instead of doing any injury to that usually tender part, were only broken themselves into many pieces. *Bráma* had then recourse to fire, which he heaped about the hermit, so that he was, for a considerable time, entirely concealed from the view, by the vast flames thereof, and supposed to be completely destroyed. When the fire had done burning, however, the hermit was observed to continue in the same situation as before, uninjured by the destructive element, and, like gold, only the more pure and beautiful.

Astonished and exasperated at all this, the deities then began to assail the hermit with all their various weapons, viz. 1. *chákra*; 2. *kónta*; 3. *hardadáli*; 4. *neng'gála*; 5. *parátu*; 6. *límpung*; 7. *pasopáti*, and 8. *trisúla*. The body of the hermit proved invulnerable. The deities then, quite confounded and ashamed of their failure, returned to *Gúru*, and informed him of all that had been done.

Sang yang Gúru then went himself to the hermit, and asked him what it was he wished to obtain by his penance, telling him at the same time, that if he was desirous of having beautiful and accomplished virgins, he had plenty at his service. Receiving no reply, *Sang yang Gúru* then said to him, "I know what the object of this penance is, and I should possess very limited power if I did not know every wish of thy heart. Thou art ambitious of supplanting me in the power and rule which I hold in heaven; but thou deceivest thyself. Wert thou to do penance for one thousand years, while I should continue to enjoy myself in a series of uninterrupted pleasures, thou wouldst never be able to come near to me in power or glory; for after *Téja* or *Cháya* (which signifies light or brightness), *Búmi* (the earth), and *Lángit* (the sky), I stand the next eldest work of creation; and the power superior to these just mentioned is *Sang yang Wisésa*, who is the oldest and greatest of all." Upon this the hermit could contain himself no longer, but, bursting into laughter, said, "Thou art wrong, and what thou hast said of *Sang yang Wisésa*, is true of the Almighty himself only, whose displeasure thou hast consequently incurred by what thou hast just stated. Know that I am *Sang yang Kanekapútra*; and to prove to thee that I know better than to believe what thou hast said of *Sang yang Wisésa*, I would only ask thee who could have been the cause of those sounds which were heard by *Wisésa* before the

heavens and earth were. Without doubt they were occasioned by a power older and greater than him."

On this *Gúru* was silenced, and had not a word to say. He then entreated *Kanekapútra* to tell him who this eldest and most powerful being was, proposing, at the same time, that he should go with him, and become joint ruler over the deities in heaven. "These sounds," answered *Sang yang Kanekapútra*, "were the voice of the Almighty, signifying his will that there should be created things of an opposite nature to each other, as male and female, above and below, father and mother, beautiful and ugly, &c. &c.—every thing created having its opposite, except thee and me, who are one and the same."

Sang yang Kanekapútra and *Sang yang Gúru* then ascended to heaven, and seated themselves on the *Báli márchu kúnda*. After they had remained there for some time, *Sang yang Gúru* perceiving a case belonging to *Sang yang Kanekapútra*, to remain constantly shut, inquired of him the cause thereof, and was told by him that it contained the most precious of all precious stones, which had the wonderful power of making the possessor of it feel neither hunger, cold, nor thirst, &c. and which fortified him against the effects of water, fire, &c.

When *Sang yang Gúru* heard this, he requested to have the stone; but *Kanekapútra* told him it was of so subtile a nature, that it would pass through the hands of innumerable people, and would never remain with any one but him destined to be the possessor of it. *Sang yang Gúru* asked *Kanekapútra* to part with the stone, and give all the other deities an opportunity of getting it, provided it should not remain with him. *Kanekapútra* then threw up the precious stone, and *Gúru* caught hold of it. It not only passed through his hands, but also through the hands of all the deities who successively caught and attempted to retain it. The precious stone then falling down upon the first region of the earth, where presides the deity *Pratiwi*, dropped successively through all the others, without the presiding deities *Bagáwan Kusíka*, *Sang yang Gáng'ga*, *Sindúla*, *Drampólan*, and *Manik Kóga*, being able to retain hold of it, till, coming to the last region, *Anta Bógo*, the presiding deity, who was in shape like a dragon, opened his mouth and swallowed it.

Sang yang Gúru then asked *Sang yang Kanekapútra* what he should do to become possessed of the precious stone? *Kanekapútra* replied, he must go and search for it as far as even the seventh region of the earth. *Sang yang Gúru* approved of this, but at the same time wished that *Kanekapútra* should go himself, accompanied by all the deities. *Kanekapútra* accordingly set off, and on his arrival at the different regions, was successively told by the presiding deities, that the *retna dumíla* had slipped through their hands, and had passed down into the seventh and lowest region. When he came there, he and all the deities who accompanied him, were kindly received by *Anta Bógo*. *Kanekapútra* then told *Anta Bógo* that *Gúru* was desirous of having the precious stone, and would be greatly obliged by his giving it up to him. *Anta Bógo* declined compliance, and immediately his body became extended so as to encircle the whole of his region. It is further reported that he had ninety nostrils. *Kanekapútra* perceiving that *Anta Bógo* was making a display of the power he possessed, gave orders for all the deities to enter his body by his various nostrils, and to make search for the vessel called *chúpu mánek astagíni*, in which the *rétna dumíla* was deposited.

Wisésa seeing what had taken place, reprimanded the parties concerned for their folly and mistake, and at the same time ordered that they should all forthwith depart out of the body of *Anta Bógo*. He next desired that the body of *Anta Bógo* should be carried away by the deities, in the same manner in which they had formerly carried the mountain. On their way with it to *Sang yang Gúru*, the body decreased gradually in size, till it vanished entirely.

Kanekapútra was highly incensed against *Anta Bógo* for his provoking conduct, and was just going to complain of it to *Sang yang Gúru*, when, to his surprise, he perceived *Anta Bógo* himself under the seat of *Sang yang Gúru*.

Sang yang Gúru seeing *Kanekapútra's* displeasure increase, he requested he would not be offended with *Anta Bógo*, as his conduct was merely intended for a little merriment. *Sang yang Gúru* then desired *Anta Bógo* to deliver up the *chúpu mánek astagína*, which he accordingly did.

Sang yang Gúru not being able himself to open the *chúpu*, handed it over to *Kanekapútra*; but neither he nor any of the other deities, who successively attempted to open it, could succeed. *Anta Bógo* was then applied to: but he said, that so long as he had had the *chúpu*, it opened and shut of itself, without his knowing how. Holding up the *chúpu*, *Sang yang Gúru* then threw it down with great violence; upon which it broke in pieces, and vanished from the sight. The *chúpu* and the *rétna dumíla* which it contained then became, the former a *Báli simarakáta*, the latter a virgin, to whom *Sang yang Gúru* gave the name of *Tesna-Wáti*, and who continued to remain in the *Báli símarakáta* till she grew up. *Sang yang Gúru* afterwards taking a fancy to this virgin, wished to make her his wife. She consented, on condition of his giving her such proof as she required of his divinity and power, and that was by his supplying her with three things, viz.: 1. A suit of elegant apparel, which would last her for ever without being in the least tarnished; 2. A meal which would cause her never to feel hunger more; 3. A musical instrument called *gatóplak*, of the most melodious sound. All these *Sang yang Gúru* promised to get for her on her agreeing to prove faithful to him.

In furtherance of his intentions, he ordered the deity *Chíttra lága* to go to *Núsa Kambánga* and call *Sang yang Kála*. When *Sang yang Kála* came, *Sang yang Gúru* desired him to bring his son, called *Kála Gamarang*, in order that he might dispatch him in search of the three things required by the virgin, *Tesna Wáti*.

To induce *Kála Gamarang* to exert himself in procuring them, *Sang yang Gúru* told him, that if he should be successful, he would be rewarded by the privilege of coming to heaven whenever he chose, without molestation from the other deities.

Kála Gamarang then took leave, bellowing and making a great noise, so as to alarm and bring out all the deities, whom, as they stood in his way, he insulted and disgraced by striking some, and spitting in the faces of and treading upon others. Highly indignant at such base treatment, the deities, one and all, pronounced a curse upon him, that he should never be allowed to defile heaven with his presence, and that he should be transformed into a wild beast.

Kála Gamárang then proceeded to a place called *Táman Banjáran Sári*, where he saw *Déwi Sri* (the wife of *Wísnu*) bathing in the azure main, (or *Segádra Nila*). Enamoured by the enchanting display of the naked beauties of that lovely female, his whole soul was fired with such an irresistible desire, and so rivetted and attracted was he, that he unconsciously rushed forward towards her, when she, greatly terrified, and leaving all her clothes behind, ran off with all speed to her husband. *Kála Gamárang* pursued the lovely fugitive till she reached the abode of her husband *Wísnu*, and being informed on inquiry of him that she was his wife, *Kála Gamárang* demanded her of him. *Wísnu* consented to let him have her, provided she herself would consent. The question being put to her she refused to go to *Kála Gamárang*, who then said that her not liking to come to him was all a pretence, and nothing more than one of those tricks which the female sex are constantly in the habit of practising. On *Kála Gamárang's* attempting to carry her away by force, *Wísnu* whispered her to run off to *Mendang Kamúlan*, and enter and take refuge in the body of the king's wife, called *Dérma Nastíta*. *Wísnu* at the same time disappeared. *Kála Gamárang* followed, and continued to pursue her over hill and dale, and through jungle and forest, till becoming tired and exhausted, she was on the point of being overtaken, when *Wísnu*, causing his weapon to be changed into the root end of a rattan, it got entangled about the legs of *Kála Gamárang*, and threw him down. Notwithstanding that, however, *Kála Gamárang* still attempted to pursue her, when she, aware of the advantage she then had over him, cursed him, and pronounced him to be a hog, which he immediately became. *Kála* then attempted to stand upright, but he could not. Resolved, however, not to desist from the attempt to obtain the object of his desire, he said within himself, that he would follow and pursue her into whatever recess she might betake herself. Coming to a river, he saw the image of what he now was.

When *Sri* reached *Méndang Kamúlan* she entered the body of *Dérma Nastíti's* wife, who was most beautiful. *Wísnu* at the same time went into the body of the king himself, and assuming the title of *Prábu mang ngukúhan*, became the first king of Java. *Sang yang Gúru* being informed of the fate of his messenger, *Kála Gamárang*, sent again to the virgin, *Trésna-Wáti*, to entreat her to become his. This, however, she positively refused, on any other terms than those she had already made known to him. Upon this, *Sang yang Gúru* began to embrace her. The resistance she made, joined to

the rough and violent manner in which he proceeded, caused her to expire in his arms. He then sent for *Kanekapútra* to carry her body to *Méndang Kamúlan*, and there bury it in the wood, called *Kéntring Kendayána*, which he ordered to be previously put in order for its reception.

The body being buried there, from its head sprung up a cocoa-nut tree, * * *. From the hands grew up plantain trees, from the teeth Indian corn, from other parts *pari*, &c. &c. The *pari* was guarded by * * * and over these three was placed a head called *Ráden Jáka*.

Sang yang Pretanjála, the deity of the north-east, anxious to know where *Wísnu* was, ascended into the air, and having looked down and seen some fine rice growing, he immediately descended in the shape of a bird, and began to devour it. *Ráden Jáka* perceiving this, threw a stone at the bird and frightened it away.

Kála Gamárang (the hog) having ascertained where *Sri* was deposited, went to the wood *Kéntring Kendoyána*, and began to eat of what grew there. When *Wísnu* saw this, he changed his weapon from the root end of a bambu into that of pointed bambu stakes, which being trod upon by the hog, caused blood to issue. * * *

The birds which came to eat the *pari*, and which were frightened away by those who guarded it, flew up into a tree, which, from the retreat it afforded to the birds, received the name of *Arén* (*Lirénan*, signifying a place of refuge). *Ráden Jáka Púring* then ordered the protectors of the *pári* to make a flight of steps up the tree, and to lop off the branches. In doing this, the juice which issued from the tree being tasted, was found to be sweet and capable of making sugar, which was then first discovered.

Some of the juice of the tree being carried and presented to *Wísnu*, was ordered by him to be taken to *Sang yang Gúru* by *Kanekapútra*.

On *Kanekapútra*'s opening the hollow bambu in which it was contained, previously to presenting it to *Sang yang Gúru*, the fermented liquor flew up into his face, and caused him, when he tasted it, to put out and smack his lips with pleasure and satisfaction. *Sang yang Gúru* then ridiculed him for his simplicity, and pronouncing in ironical terms his opinion thereof, the words were irrevocable, and *Kanekapútra* then had his lips turned up, his hinder parts pointed and projected, a gruff voice and a pot-belly.

Of the children of *Pútut Jantáka*, the first was in form like a white rat and about the size of a dog, and was named *Tíkus Jenánda*: he had an innumerable host of followers. The second was in shape like a hog, and was named *Demálung*: he also had thousands of followers. The third was in shape like *Kutíla*, and had likewise many followers. The fourth was like a buffalo, and was called *Maisa Dánu*. The fifth and sixth were *Kála Sering'gi* and *Kála Músti*, and resembled the male and female *bánténg*, or wild bull and cow. The next was *Ujang*, and was in shape like a *kídang*, or small deer. The next, *Kirandé*, was like a stag. The next, were like sea and land tortoises.

All were greatly distressed for want of food, and annoyed their parent by constant craving for it. The father then told them to go to *Méndang Kamúlan*, where they would find all sorts of produce; enjoining them, however, to take nothing without first asking for it. The children, one and all, immediately answered in an assenting voice, and forthwith repaired to *Méndang Kamúlan*, where they arrived in the middle of the night, and being very hungry began to help themselves to what they saw before them, without leave or ceremony. The persons who guarded the *pari (júru sáwah)* heard the noise they made, and were at a loss to know what it was. At last one of them came out with a torch in one hand, and a large knife in the other. When the son that was like a hog saw him, he ran towards him to attack him, and received a cut in the head, which, as he was invulnerable did him no harm. When the *júru sáwah* found that he could not cut the hog, he immediately assembled all his fellows, who commenced an attack upon the hog, and whose numerous torches made the night as light as the day. Unable, however, to hurt him, they went with *Ráden Jáka Púring* to report to *Prábu Méndang Kamúlan* what had happened. The king then gave orders for all his people to go with whatever weapons they could muster, and use their utmost endeavours to kill the animals which had got amongst and were destroying the various plants. With the king at their head, all the people who could be assembled went forth to destroy the noxious animals. When the latter saw the host approaching, they made a vigorous charge and dispersed the enemy, who were unable to make any impression on their invulnerable bodies, but received themselves many wounds in various parts of the body. The king then recollecting something prophetic of the event, instantly

retreated with all his people, pursued by the victorious animals to a considerable distance.

The king then dispatched his younger brother, the *Júru Sáwah Ráden Jáka Púring*, to his old friend at *Méndang Agung*, who was called *Andong Dadápan*, and also to *Ké Gedé Pengúkir*, who was along with the former, to solicit their assistance in extirpating the wild animals, which had, as they must well know, overcome the king and all his people.

Andong Dadápan and *Ké Gedé Pengúkir* were found sitting. Another, named *Ráden Séngkan*, then came up, as also *Ráden Jáka Púring* himself, who kissed the feet of the two first mentioned, having his own feet kissed in turn by *Ráden Séngken*.

Ráden Jáka Púring then began to inform them of all that had taken place; but *Andong Dadápan* told him there was no occasion to proceed, as, from his divine power, he was perfectly acquainted with the circumstances.

Andong Dadápan and *Ké Gedé Pengúkir* signified to their respective sons, that they wished them to call their warriors, whose names were *Wáyu yang* and *Chándra Máwa*. The first, who belonged to *Andong Dadápan*, was black, short, stout, round-shouldered, pot-bellied, with a short neck, large ears, whence exuded a waxy substance, red eyes, a projecting forehead, a snub nose, with long hair hanging over his forehead. The second, who belonged to *Ké Gedé Pengúkir*, was short, of an awkward appearance, having a long neck and a small head.

When those two extraordinary persons made their appearance, their masters placed them under the orders of *Jáka Púring*, and at the same time furnished him with a short spear and a stick, instructing him, when he unsheathed the former, to keep it always pointed towards the ground. *Ráden Turúnan* and *Séngkan*, which were the names of the sons of the two warriors, also presented *Jáka Púring* with a bambu cane, with which they instructed him to beat violently, when he should be in need of their assistance, promising that they would immediately be with him.

Jáka Púring then returned to the king of *Méndang Kemúlan*, and presented to him the two warriors, &c. The king then ordered all his people to prepare for an attack upon the wild beasts, which was not attended with any better success than before.

The two warriors, who had remained behind drinking, the one cocoa-nut water, and the other rice water, being perceived by the queen (*Déwi Déрма Nastíti*), were reprimanded by her for skulking, while all the others were engaged in fight, and were accordingly recommended by her, in the event of their not choosing to bestir themselves, to return whence they came.

Ashamed of themselves, the two warriors began to weep, and having entreated her forgiveness, they repaired with the rapidity of lightning to the scene of action. When they reached it, *Wáyu yang* had himself washed with rice water, and the dirt which was scraped off his body was formed into a *black dog*, with a streak of white extending from the tip of his nose along the ridge of his back, to the extreme point of his tail. This dog was called *B'lang Wáyung yang*. *Chándra Máwa* having had his body cleaned with cocoa-nut water, the dirt which was got off it became a *white cat*, with a corresponding black streak from the tip of its nose to the end of its tail.

This wonderful dog and cat were then directed to go and attack these destructive animals. Commencing with the hog, the dog, after having dispatched him and all the more fierce and strong animals, killed the monkeys, and others which he could not follow up the trees they ascended, by the powerful sound of his voice alone; while the cat busied herself in putting an end to the rats, and such other animals as she was peculiarly calculated to destroy.

Kalamúkti and *Kála Seréng'gi*, distressed and enraged on account of the death of their brothers (the noxious animals), who had thus been exterminated, petitioned their father, *Pútut Jantáka*, to permit them to go and revenge themselves on the authors of such a dire calamity. This being granted, these powerful personages, whose bones were as hard as iron, their skin like copper, sinews like wire, hair like needles, eyes like balls of fire, feet like steel, &c. went forth, and in the strength of their rage made a road for themselves, by tearing up trees by the roots, and removing every other obstacle which stood in their way.

The two *Kálas* attacked them with such fury, that the warriors flew up into the air, and then darting down, carried off the almost dead dog and cat, which they then put down again in a place of safety at some distance, where they washed their bodies with cocoa-nut and rice water, and rubbed them with bambu leaves. In shaking themselves to dry their skins, a number of

hairs fell out of both dog and cat, and became respectively so many more animals of the same species.

All of the dogs and cats thus produced commenced an attack upon the *Kála*, but without being able to make any impression on them. Compared to them, they were only like so many ants by the side of the mountain *Merápi*.

Ráden Jáka Púring perceiving that the dogs and cats were no match for the *Kálas*, immediately began to beat with the *bámbu* which was given him to use in times of distress. *Ráden Séngkan* and *Turúnan* forthwith made their appearance. Being armed each with a rattan, seven cubits in length, and of a most exquisite polish, they beat the *Kálas* till they were nearly dead. *Wáyu yang* and *Chándra Máwa* then secured the two *Kálas* with ropes, and tied them to a tree.

On recovering from the miserable state into which they had been beaten, the two *Kálas* began to lament this unhappy fate. Their father, *Pútut Jantáka*, hearing their cries, determined to attack the enemy himself. Proceeding with *Ujong Randi*, he found on his way a large square stone, measuring ten fathoms: throwing this stone high up in the air, and placing himself under it, so as to receive it upon his head, the stone, instead of breaking his head, was itself broken into several pieces.

At this mighty deed he became transformed into a large and frightful monster. In this new shape he attacked the enemy, who being dreadfully alarmed at this horrid appearance, betook themselves for protection to their master the king.

Ráden Jáka Púring then coming out and pointing his unsheathed spear towards the ground, it immediately sent forth a huge snake, in size like a tall tree, and whose poisonous breath was like the smoke of a crater. This snake was a species of the *sáwah* kind.

On *Pútut Jentáka's* reaching the royal presence, he found that the king no longer appeared in his former and assumed character, but had returned to that of himself, viz. *Wísnu*. *Jentáka* was so much confounded and alarmed at this unexpected and wonderful event, that he was greatly terrified, and ran away to hide himself among the scarecrows in the rice fields. The king pursued him for a short distance, and then returned with all his people. On their way back one of the *jùru sáwahs*, called *Kiai Túeh*, began to boast of

Jentáka having run away from him, and the ludicrous manner in which he spoke of *Jentáka* occasioned great merriment among the party. While holding forth in his own praise, and in disparagement of *Jentáka*, he happened to come against the scarecrow where *Jentáka* was, upon which *Jentáka* immediately shewing himself, put on such a horrible look as quite petrified *Kiai Túeh*, and made him drop apparently dead with fear. The king being informed of this then came up, when *Kiai Túeh* seeing the king, and being no longer afraid of *Jentáka*, got up, and walked off. This circumstance occasioned all the people to laugh very heartily.

On the king's approaching *Jentáka*, the latter addressed him thus: "I beg your pardon for what has happened. I have no wish or intention to be your enemy: on the contrary, I am ready to become your humble slave, and to do whatever you command me." The king accepted his proffered friendship and services, and told *Jentáka* that he would dispose of him as follows, viz. that he should reside under *lúmbungs* (or granaries), and live upon such quantities of rice as should exceed that which the owner calculated upon having. That he, and all his family and posterity, should also inhabit the troughs in which rice is beaten out, and the fireplaces of kitchens, also the front courts of houses, of the highways, and dunghills, &c.

The king then commanded that all persons, after beating out rice, or after washing it in the river, or after boiling it, should leave a small quantity, as food for *Jentáka* and his family.

The snake of the *sáwah* species, above spoken of, having gone over all the cultivated grounds which had been destroyed by the wild and noxious animals, and caused them all to be restored to their former state, extended itself along the ridges of the rice fields and died. The king hearing this was greatly distressed, and on approaching to the place where the snake had expired, instead of its dead body he beheld a beautiful virgin, elegantly dressed out in maiden attire. The king was struck with her appearance, and going up to her spoke thus: "Lovely damsel, my only life, behold thy brother, who comes to carry you to the palace he has prepared for you, and in which he will be ever happy to guard and protect you; when there thou shall reign sovereign mistress."

The virgin, who was called the *Lúeh Endah* (or the most beautiful damsel), replied that she felt much honoured by his handsome compliments and kind

intentions, and that she would be most happy and willing to meet his wishes; but as a proof of the sincerity of his protestations of love and affection, she required of him that he should come every morning and evening to the rice fields, and that on his having done so she would consent to be his wife. Having spoken to this effect, the lovely virgin disappeared. The king was at first inconsolable for the loss of her, but recovering himself, he returned to his palace with all his retinue.

The country became very rich and productive, living and provisions of all kinds being very cheap and the people all good and happy.

APPENDIX I.

TRANSLATION of an INSCRIPTION in the ancient JAVAN, or KAWI Character, on a Stone found near SURABAYA, and sent from thence to Bengal, to the Right Honourable the EARL of MINTO. [\[302\]](#)

(Date) 506. Verily know all the world, that the *Pandítas* wrote on this object of veneration describing the greatness of the *Rátu*, and that the whole is inserted on a stone prepared for the purpose.

When first this large stone was considered a place of worship, people were accustomed to swear by it: it was held in great respect, and considered a repeller of impurity. To this is added, with truth and sincerity of heart, a relation of the perfection of the monarchy, the provinces of which are flourishing. His empire is renowned for the excellence of its laws, and his knowledge most evident and undoubted: the *Rátu's* name *Srí Wíjáyá*, and place of residence *Lorkóro*. Certainly he is firm who gives stability to virtue. His *Pepáti* is named *Bráta Wismára*, celebrated in the world: whose advice is constantly had recourse to by the *Rátu*, and necessary to him like the Beryl of the ring to the stone, because he assists him in the conduct of affairs, and is quickly heard by the *Déwas*. When at war he can increase the arms an hundred-fold to annoy the foe. And that *Páti* is admired by the women; but this does not withdraw him from attention to the country, and the *Rátu* confides in the conduct of the *Páti*, and the *Ratu* gave orders to make images. No other than *archas* were made, fifty in number, all erect; and they are deified, being placed to that end in order, on consecrated ground.

The *Rátu* is not sparing of his own property, and continues seeking the comfort of his chiefs. He arranges all kinds of pictures agreeable to their respective stations in the apartment of his queen. It is related of that *kadáton*, that figures of rhinoceroses are carved on the walls, which are

railed with iron and barred across; its floor most clean and shining, a stream of water running along the foot of the wall, with a flood-gate to open or shut exactly where it should be; and the chief of the watchmen distributes the guard to their respective posts.

Be watchful of such knowledge as is real. The virtue of good men is like gold which is hoarded up; apparently they possess nothing, but in reality what they develop is sharpened by addition: they are spoken of throughout their career as blameless until their death, their ashes are then adorned and embellished, as well as held in veneration, and the virtues these possess are very great and without fail. If difficulty should arise, do you ask assistance with a heart pure and undefiled; and if you have any urgent petition to make, do it with submission. Clothe yourself entirely clean, throw off what is not so, and what you have to bring forward let it be with propriety. When it is known to the deity what your wishes are, they will be quickly complied with openly to your satisfaction, and made to correspond with the devotion manifested. And the knowledge of what is requisite in sincere supplication is this: to punish yourself; to divest yourself of hearing; to reject evil-doing of all kinds; to have your eye fixed on one; to seek the road to the bestower of benefits; to desire without delay, and not to trifle. Yea, the formed stone which is revered, is to be considered only a veil between you and the real divinity. Continue to supplicate for whatever are your desires that they may be known: when the blood will have stopped three times your object will be gained; verily, it will be added to, there will be no obstacle to its full completion. By one saying your solicitation is directly expressed, and correctness of life is obtained. And what you say is like the sun and moon: in proportion as reverence is paid to the deity, men know that their supplication will be listened to, and the *Batára* become familiar and much attached. Your existence will be as bright as the sun and its splendour, which is evident, truly beautiful. When you die you will be guarded and aggrandized, and not without companions. Such will be his lot who seeks the good of the country, for he furthers the happiness of the people.

Do you observe this course until you excel in it. Make figures of stone like human beings, which may be supplicated; persons who reject them will suffer sickness and ruin until their death, which will be most bitter: on that account it is necessary to entreat and pray for the favour of the *Déwas*. Stones situated in places of worship are ornamented with many articles of state; they are feared by those who wish to ask forgiveness, and cannot be destroyed.

It is related, that only persons who are stedfast in the acquirement of letters, cause such as the following to be made (here follow fifteen cabalistic characters, which are totally unintelligible): those will certainly serve the purpose of your forefathers, who have been the medium of existence; they are the veil which separates you from that which is exalted, and also written on the stone. Give credit to them in a moderate degree.

First, let all pray to and seek the favour of the deity in this and the next world, and each require an interpreter who will obtain his pardon: but he must reject fickleness to arrive at a discriminating heart. Speak with reverence to your parents, their existence is replaced by those who are named after them. In the place of worship, when the ornament of good works is shewn, it is mentioned in the same manner as delight, as established gratification. It is difficult to cause advantage to the workings of the heart; your faith, which you received from *Sang yang Sudriya* and *Sang yang Táya* is acknowledged by the extent of your ability, and is different from other feelings.

Different are the rewards of those who come to heaven; happiness is bestowed on them; delightful their state; verily they have arrived in the land of silver. Whatever your reward at your death may be fixed at, when obtained it cannot be lost: all is settled, the whole is distributed, as well as the certainty of death. Truly you are directed to a place which is exalted, pointed out by *Déwas*, who preside at death and become your guide;

because the dead are mixed in a land which is wide and level, are given occupations and quickly go, each flying to the first place until they arrive at the seventh. Verily they at length come to the extremity with those who accompany: there are none among them who have been terrified: the existence of the body is dissolved and lost. There are none acquainted with books who are terrified.

*TRANSLATION of another INSCRIPTION in the ancient JAVAN, or KAWI,
Character, on a Stone found in the interior of the District of
SURABAYA.*

On the Face of the Stone.

The year of this inscription being made on a solid stone was 467, in the season *Katíga*. It was made by a *Pandíta* skilful, and who performed wonders; to relate, explain, and make known the greatness and excellence of the *Rátu* (prince), in order that your actions too may speedily become clear and manifest; yes, that will be your *kadáton*. That *Sri Rája*, ever surrounded by majesty and his family, observes a correctness of conduct grateful to the pure *Déwas*, and by *Mántris* exalted by the *Rátu Bráma Wijáya*, celebrated in the universe for his eminence, whose empire is firm and not to be shaken. Such is the *Rátu*; yes, he who caused to be inscribed on a stone all these his actions, observant to the utmost of the forms of worship, moderate in his complaints of distress, whose appeals are correct and most true and without guile, and have enabled the slave to associate with the divinity, without there being a difference between them. He is my father, who is implored and who caused my existence: do not trifle; there is no one greater than he. What remains to you to solicit, mention it with humility; yes, that too is what mankind must observe. Do you watch and observe the duties of mankind, and you will certainly profit; reject entirely sayings which are improper and untrue, and avoid theft, robbery, anger, boasting of prowess and false promises, for they are despicable, and their effect, like the atmosphere, giving heavy rain which overflows, to the accomplishment of wishes, improving the cultivation, making all fresh and

equally bright and sparkling; but the wind of which is presently strong and cuts off the buds. If you ever wish to fortify your soul, go to the summit of a mountain, which is the place for earnest supplication in silence, awaken your firm and sincere heart, let there not be any dregs of your nature; but let the soul assume non-existence and pray. Be aware of the disorders of the demon of bad actions, who inimically annoys and misleads; undoubtedly, if you conduct yourself with firmness, you will approach to perfection, and seclusion will truly be there. Let there not be a mixture of discontent of mind. Cast away the veil however delicate it may be; truly it is better conversing with letters which have been written; what they convey to you will be most painful to the body, but your hopes will be accomplished. Do not give place to the evil thoughts which have occupied the minds of men and are most vexatious; fortify yourself so that you recede not; remember well the three established powers of mankind. Commune with the wise in words which are seen proceeding from the mouth; truly faith is different from what is heard of your corrupt body, which is the ornament of human life. Let the actions of superior men who seek stability be examples to you like the *krangrang* ant; the indication which you make cannot be disapproved, those persons certainly may be accounted near to the wishes of the country. Sometimes clear, sometimes obscure, yes, such indeed let your situation be, so that the train of your actions may become most direct and manifest, as by day the sun lights all places, so their benefit be not thrown away, and you may cast off care and sorrow. Truly the departure of life is most uncertain. Human nature, when it will not receive advice, is like a stony plain without grass, animals will not approach, all remain at a distance from it. I will teach you: pay attention and fail not to receive instruction, so that you approach most nearly; but first purify your heart which pays reverence, not reverence which is heard by the ear. Yes, that is indeed true devotion which I have taught you, and without which there is no purity, for a perfect heart is derived from the Deity. Words proceeding from the mouth are vain to the utmost, their effect not to be depended on. The devotion of a pure heart is like moonshine, not hot but cool and delightful; the beauties you see in which the stars are scattered over as though in attendance on the moon, adding to the grandeur of the scene. And also a person becoming a *Rátu* commands his subjects and distinguishes good people from bad, for the limits of this country are all under his orders. The *Rátu* selects from his subjects such as are eligible to be his associates, and

they are four, who become the pillars of the state, and cause its happiness and welfare; he thereby shews a pattern for future *Rátus*. Further, too, as you have been given life, do not reject the precepts of the *Sástra*, which have been diffused through the world by the virtuous, but weigh them in your mind, for that is the duty of a slave; bad and good are from your Lord. So the wisdom of man is extended like the firmament, immeasurable even by the bird *garúda*, which knows how to fly in the heavens, though he should arrive at the extremity of space; such is human wisdom. Do not be surprised at people's conversation, though it correspond not with the dictates of the *Sastra*; yes, that is most injurious to morals. Even should one become a *Rátu*, if he knows not this he certainly will not succeed, he will not arrive at the height of his wishes; because the action of a vicious heart is different from the inclination of a pure one, which is in attendance on its Lord. And a living man should know the advantages of these places, which are, the earth, the sky, and the space between; for to-morrow, when dead, your body and soul will be there; before it knows the road it will change its habitation into a living being; there, if you find enjoyment, you may search for a place, because you have discernment from the heart. But a man who is so while he lives, effects it by abstinence and moderation in eating and drinking. Yes, in the time of *Rátu Dérma Wangsa*, when he began to benefit the country, that *Rátu*, it is related in history of former times, would not depart from his word, and all his subjects were devoted to him. And when the *Rátu* sat in his *kadáton*, his conversation with his wives was very sweet, as well as his playfulness with them. His wives were therefore much attached to him, and by the *Rátu's* wisdom being so great, he was sought after by women, and was very watchful in his attentions to them: of that there is no doubt, and thus too the wisdom of the *Pandíta* is like that of the bird *garúda*, in obtaining food without trouble from the very great power and sagacity which it possesses; the same arises from the *Pandíta*. Yes, the reason of letters having been formed by the point of a knife is that you should recollect the way which is correct, and that is no other than reverence to the *Batára*; yea, devoting yourself to the *Batára* is the height of human excellence. While a man lives, he should day and night ask pardon from the *Batára*. For what was first written in letters, and they are a cause of eminence to him, was by the *Pandíta Pangéran Aji Saka*; yes, he who has left his mark to the *Rátus* of Java, for those *Rátus* made places of worship, named *Sangga Pamalungan*, and placed in them drawings of their

forefathers: but when they prayed they petitioned the *Batára* only for their existence, that when they died they should inhabit their places, quickly changing their bodies, because their former bodies had returned to the pristine state, that is to say, earth, water, fire, air. So says the *Sástra*.

On the Left Side.

And the powers of letters, which are forty-seven, keep those in your mind, so that they be within you all of them. I will establish them in such a manner that they can be brought forth by your three fingers; those who are skilful may make good letters. Do not neglect the application of letters, give each its proper place, for those letters are most useful in the transactions of the people of this world during their continuance in it. Thus the use of letters to the nations of the world is to open the hearts of ignorant men, and to put in mind persons who forget; for I give directions to men who can write, in order that the whole of the knowledge I have in my breast may be known: and this I have taught you, because that knowledge is the essence of the body and illuminates it. And you who have wives and children to look after, do not make light of it, for a woman, if she truly do her duty to her husband, is invaluable; she is a printer of clothes, a spinner, weaver, sempstress, and embroiderer; a woman such as this do you cherish, for it will be creditable to you. If a married couple love each other, whatever they wish they can effect, that is the way by which you can attain your wishes. So too a woman towards her husband, even to death; yes, she follows to the *pasétran* (place of depositing the corpse) or the place of self-sacrifice; this is taught in letters which have been written on tablets; truly those writings are like histories, which explain every kind of science. But the fate of man cannot be learned or known by letters; such as a person's being able to acquire profit, knowledge, poverty or distress: of these there is no certainty. However, do not you reject the sayings of letters. It is your evil inclinations that destroy your bodies; for he who first made war, his magic was very great, because he could throw off the passions of mankind, like *Arjuna*, whose power in war and in mounting his chariot was celebrated, for he was guarded by all the *Dewas*; yes, he could become a *tapa* (a devotee, released from the wants, &c. incident to mankind) and pray fervently. *Arjuna*, when he became a *tapa*, annulled his body, his heart did not stray from his duty to the *Dewas*; his wishes were therefore complied with until his death; yes,

Arjuna was indeed favoured by his *Dewas*. And on any one of your forefathers dying and ascending to heaven, do you immediately make a picture to personify that forefather; and do you adorn and provide it with all sorts of eatables, and respect it as your forefather who has descended to you, and will administer to all your wants: such will be the case with a person who pays respect to his forefathers. At night burn incense and many lamps: truly *Sang yang Jagat* (the omnipotent) and *Sang yang Suria* (the sun) will be favourable to you; for *Sang yang Suria* is the enlightener of the world, and every day gives light to darkness. A man who has arrived at the half of his term of life conceives well the separation of his soul from its covering; your existence is like that of the moon, that is to say, from the new to the full, and from that to its extreme wane on the twenty-ninth day of its age. When the moon is thus lost from the east, it will then certainly appear in the west, and recommence the first day of its age. While you live ask from those who know the setting of the soul; a person who knows that is certainly discovered by his actions. But it is best losing that covering by four causes, water, fire, air, earth; if it is lost by means of those four, the body will certainly quickly be removed, in the same manner as gold which is purified, verily, its colour will become like that which is old. Thus the *Pandita* makes preparations for prayer. The best mode of praying is by familiarizing ourselves with seclusion, which is by excessively torturing the body; but if you should have been much reduced, your soul will not arrive at those three places. Should a man become a *Rátu*, his soul is one selected by the *Dewas* which has been introduced into a covering, and that covering is not a covering which has not been favoured by the *Dewas*, truly a covering which has been elevated by the *Dewas*, for its good fortune has been very great. The descending of that good fortune from heaven is not like clouds dropping rain, which, if it fall, does so equally on all vegetations. Look at mankind; if you contemplate its state when living, its existence is no more than that of a herb which shoots up on the face of the earth. Concerning your soul, it is like dew, which hangs on the points of grass: such is its state.

On the Back of the Stone.

It is further related of the three particulars of his state, which it is requisite should be the ornament of a man, as well as of a man becoming a *Rátu*.

Those three things are a handsome woman, arms, and a house; the first, because a woman is the dispeller of grief from a heart which is sad; the second, because arms are the shield of life; the third, because a house is medicine to a fatigued body. Let not a man be at a distance from the above-mentioned, for they are the ornament of a living man. This stone is the means of facilitating the access to the *Dewas* of your supplications, for human nature is feeble and very faulty towards the Supreme. And moreover, if you have formed any wish in the world, then ask assistance from that stone, and adorn that stone with all kinds of perfumes and eatables which are most grateful. If you do so, certainly the *Batára* will be ashamed not to grant you whatever you desire, because the life and death of man are the same; but his body, to appearance, is worthless when deserted by the soul, and remains of no further use in the earth: it is better, therefore, that it should be lost, so that it return to its original. It is different when the soul is there during life. If you wish to seek for food there are many modes to adopt, so that you gain a subsistence, such as becoming a blacksmith. There are some who are goldsmiths; others who draw figures of different kinds; some practice cookery; those who understand no trade gamble; some thieve; some plunder. Yes, such as these are influenced by the passions, which are violent in their action and make the faculties morbid. Of the things forbidden by the *Sástra*, the first is deceit; the second, pride; the third, hypocrisy: cast these away from you. If you are a good man, do not make a habit of mixing with the bad; for those bad persons have been marked by the *Dewas*, because they cannot do good. You do well in associating with learned people, who have followed the sayings of the *Sástra*; make those your inseparable companions and attach yourself to them. But do you not despise the poor and the timorous, and do not be ashamed before the bold and the rich; do not very much elevate yourself, better you be humble amongst men: curb your passions, for your passions are an enemy within you. So, too, it is with pleasure and pain; they are like the *mayang* flower without fruit, truly as yet uncertain. It is the same with a living person who has not yet arrived at the end of life, he will be very much misled by his riches: there are poor who become rich. Like the state of a fool who is unconscious of his real situation, that fool suffers pain from himself, because his actions are of his own dictating. In his own mind he asks, Who is there like me? I have a *gada* (a warlike instrument), who dares cope with me? Such a person is like a mountain which thinks, "I am large! I

am high!" Afterwards it is trodden under foot and defiled by all kinds of animals, but is unconscious; so too says the fool, but no one cares for him. As to the sign by which to know such a fool, you have it from his harsh speaking and obstinate heart; he is without politeness and has confidence only in his own powers. And that fool, if he become great, uses an umbrella on a moonlight night: surely, one who does so, has no shame, no sense; a white ant seeking its food does not act in that manner. Let the wise man observe the conduct of the white ant, its caution in searching for food; even a large tree, an embrace in size, becomes consumed. So can men do who are united, whose wishes are similar, for there is no performance of living men so well executed as by unanimity. All great actions are owing to the union of many men, not to violence; for if your conduct be true and sincere, your heart, in whatever your wishes may be, will be enlightened by the Supreme. And besides, if in like manner you pray to and adore the *Dewas*, certainly the *Batára* and all the *Dewas* will bestow favours on you. Such as I have mentioned are the precepts held out by virtuous men of former times: different from the subject of animals being brought up by men.

In case a man in the service of a *Rátu* be at length advanced to dignity by that *Rátu*, and is given a village, if he fail to weigh how much he should with propriety be in attendance on that *Rátu*, and this arise from being engaged in his own pleasures, he must certainly lose his situation. It is the same with a man being a *Rátu* who is not provided with scales, and investigates matters too superficially to benefit his subjects; he is, in truth, like a pond without water, which of course is entirely void of fish: account him one who has received favour. And again, do you evermore obey the commands of the *Pandítas*, and do not deceive your *guru* (spiritual guide), or you will surely go to hell eternally. Better you obey your *guru*: your excellence will descend to your sons and grandsons, who will profit by your goodness. Oh! living man, do not fancy your life permanent, although you are great, little, rich, or poor. When you have arrived at the end of life your body will be corrupt, it cannot be otherwise: yes, all are earth. When alive, people gather together wherewithal to bury their body, so that it mix not with the earth, and that is only by paying reverence to the *Batára*. All that live in the world are not like mankind, who have been given wisdom and excellence by the *Batára*. Although the *rátu* (king) lion is said to be the chief of animals, yet he is held captive by man: the same with the *garuda*, the king of birds, which resides in the air, it is likewise subject to the

commands of man. It is different with the sun, the moon, the earth, the sea, the air, the firmament, the stars; they certainly are not under the orders of man, but they are subject to be accounted good or evil in their course; like clouds which discharge rain, and that in the rainy season are delightful to the husbandman. But be it known to the cultivator, that he who superintends the implements of tillage is the son of a *Dewata*, named *Sang yang Kalamerta*; he is very good, for he protects all the cultivation in the country. It is that *Sang yang Kalamerta* who, from the first, has caused terror to all such subjects as do not obey the commands *Batára Guru*: because that *Sang yang Kalamerta* has been empowered by *Batára Guru* to destroy first all vicious persons; secondly, evil speakers; and thirdly, liars. These three vices do you reject; and you will do well in asking forgiveness from the *Batára*, so that you avoid the fury of the *Sang yang Kalamerta*.

On the Right Side.

And such is the case with merchants, who understand circulating money, and can calculate on the return it makes for five times; such as the profits of money laid out, and how much that will amount to which has been laid out, and how much the loss on that money will be, and how much the profit thereon, so that, by that means, they may be satisfied during life. Concerning those men who seek wealth: before they commence gaining all persons laugh at them; but when they profit, those who before laughed approach and ask their favour. Persons who profit are compared by *Pandítas* to flowers after a shower of rain, in appearance very beautiful, but in existence not permanent. And let not a living man discontinue supplicating his *Déwa*, so that the favours bestowed on him by the *Déwa* may not leave him during life: but whether that living man be a poor man or a *Rátu*, let every one seek to acquire what is permanent, that by so doing there may be no other knowledge than that which is perceived within the heart. A great man and rich man who is wise, must commence with the road to knowledge, which is undeviating. Concerning real knowledge, with all its excellencies and utilities, it is respected by the virtuous: that real knowledge is certainly sent by the *Déwa* to favoured men. And do you not indulge your passions, as is forbidden by the *Sastra*; better had you preserve your heart pure, for that pure heart will for ever be your companion. And do you not associate and communicate with bad men, but remove to a distance from

them. It is best as much as possible, to curb pleasure and ill-timed laughter; putting a check to them is far removed from a bad heart: the fault of a person fond of ill-timed laughter is that he suffers pain. It is unfortunate that man forgets such information as is worthy of being remembered, and recollects such as is not worth remembering. In like manner, you eat food which should not be eaten, and do not eat that which is wholesome. A person acting thus is void of sense, and similar to a porter; although the viands are very agreeable to you, if you load yourself with them immoderately, the weight you carry will certainly distress your body. Moreover, if you meet with any thing of such estimation as to be worth imitating, do you immediately write it down, so that you thereby acquire a good name, and men may look up to you, and to the end that the *Rátu* may have confidence in you, because that *Rátu* can act well and ill; but let the *Rátu* not neglect the commencement, middle, and end, for there is nothing in the world of greater excellence than mankind; different from the existence of a *Rasaksa*, whose actions cannot be spoken of; like those of a fish in the sea, which no one knows except the Omnipotent, who alone is acquainted with the truth thereof.

**TRANSLATION of another JAVAN INSCRIPTION of the same
description.**

Truly the reckoning of the year when this was composed was 1216, named *Milir*, written on a tablet the fifth of the moon on its wane, the mind tallying with the season, precisely in the *Wukun Manda Kung'an*. It is a description of the *kraton* and its arrangements, put into writing in the country of *Mauspati*, of which the chief is exalted, merciful, wise, and discerning; at this period, the greatest in the world, and adapted to the situation he fills and its duties; on that account, women say they are fond of him: powerful, skilful, a sovereign whose commands to his subjects are undisputed, unequalled in politeness, guarded by genii, and having a large army, all-skilful in their profession when at war: the arrangements of his troops superior, and they and their arms excellent; his army, too celebrated. At that time those troops guarded well his country, and the orders issued by his relations were correct. That *Rátu* never punished his children: he was good, and did not inflict punishment on them.

It is related of the *Sri Maharaja* that he intended going to the high mountains: leaving his country and arriving at the declivity, the boundary of *Gedung Peluk*, his army soon met the enemy, and engaged. So it is related in history.

That army of the *Sri Jaya* being established, the *Ratú* formerly considered beneficial to the country, giving firmness to the country of *Kedíri*. What the *Sri Jaya* says is certain; all the people are glad; a large and faithful army is established there.

Be cautious but firm; the *Sri Maharaja* cannot injure the descendants of *Prabu*; great their wisdom, impatient their sway, extensive their power. Young men fearless and bold; the army followed, and were taken by the enemy, because the *Sri Nara Nata* so intended. *Sri Kerta Najura*, when he died, died like a *Buda* man. Formerly, *Sri Jaya Katong* came from *Gegelang*, and entered like a man in desperation; sent to *Kerta Niaka* requesting assistance of foreigners, and desired them to advance in front. *Sri Kerto Najara* went into that country, and assembled the arms of the *Sri Jaya Katong*, with the son-in-law and brother-in-law of *Ng'uda Raja* and the *Sri Nara Nata*. Of *Sri Nara Najura* and *Ng'uda Raja* they were seated in the centre, their brightness shining in the halting place; their symmetry like *Sura Denawa*, majestic as well as awfully powerful, and their hearts at rest. Such was the truth. They were prevented by the magic of fire; supremely powerful the *Sri Maharaja*; the enemy's army was destroyed by fire. The *Yewang Derma* advanced and assisted in the labours of the *Rátu*. *Kerta Jaya* was beaten and fled, his power destroyed, afterwards the whole army fled, and met the army of the insurgents. A *Mantri* rallied the good army, that the *Mantri* might be able to fight; the battle was commenced in *Sela Sringing*. The *Sri Maharaja* coming to his ground, was firm at the foot of the mountains, and he came to *Yewang Derma* to request food for his people and chiefs: he got as much as he wished with an open heart. Thus may that

army continue until the end of time, until death, in the fulfilment of their wishes.

FOOTNOTES:

[\[302\]](#) "I am very grateful for the great stone from the interior of your island, which you tell me, in your letter of the 5th May, was put on board the Matilda. The Matilda is not yet arrived, so that I have not received Colonel Mackenzie's account of this curiosity, which, in weight, at least, seems to rival the base of Peter the Great's statue at Petersburg. I shall be very much tempted to mount this Javan rock upon our Minto Craigs, that it may tell eastern tales of us, long after our heads are under smoother stones."

Letter from the late Earl of Minto, 23d June, 1813.

APPENDIX K.

ACCOUNT OF BÁLI.

To the east of Java lies the island of *Báli*. This interesting spot exhibits the same mineralogical structure as Java, and probably at one period composed a part of the same island. Possessing the same climate and a similar soil, having mountains of a proportionate height, and streams equally fitted for the purpose of irrigation, it enjoys the same degree of fertility; but having an iron-bound coast, without harbours or good anchorage, it has been in a great measure shut out from external commerce, particularly with traders in large vessels.

Like *Madúra*, it seems naturally situated for being a tributary to Java. But the most striking features in the character and institutions of its inhabitants are owing to that long independence on the greater island and its fortunes, which has preserved to them many traces of their original condition, many of their distinctive laws and religious rites.

The natives of *Báli*, although of the same original stock with the Javans, exhibit several striking differences, not only in their manners and the degrees of civilization they have attained, but in their features and bodily appearance. They are above the middle size of Asiatics, and exceed, both in stature and muscular power, either the Javan or the *Maláyu*. Though professing a religion which in western India moulds the character of the Hindu into the most tame and implicit subserviency to rule and authority, and though living under the rod of despotism which they have put into the hands of their chiefs, they still possess much of the original boldness and self-willed hardihood of the savage state.

Their general indifference to the oppression which they endure, their good humour and apparent satisfaction, together with their superior animation and energy, give to their countenances, naturally fairer and more expressive than those of the Javans, a higher cast of spirit, independence, and manliness, than belongs to any of their neighbours. They are active and enterprising, and free from that listlessness and indolence which are observable in the inhabitants of Java. To a stranger their manners appear

abrupt, unceremonious, coarse, and repulsive; but upon further acquaintance this becomes less perceptible, and their undisguised frankness commands reciprocal confidence and respect. Their women, in particular, who are here on a perfect equality with the men, and not required to perform many of the severe and degrading labours imposed upon them in Java, are frank and unreserved. In their domestic relations their manners are amiable, respectful, and decorous. The female character, indeed, seems to have acquired among them more relative dignity and esteem than it could have been expected to have attained where polygamy has been long established.

The conduct of parents to their children is mild and gentle, and it is required by unreserved docility and obedience. To their chiefs they show a respectful deference: among themselves they stand on a footing of equality, and feeling no dependence pay little homage. The abject servitude of Asia has not proceeded further with them than necessary obedience to indispensable authority. Their prince is sacred in their eyes, and meets with unreserved obedience; but their minds are not broken down by numerous demands on their submission, nor are their manners polished by the habit of being frequently with superiors. An European or a native, therefore, who has been accustomed to the polite and elegant manners of the Javans, or with the general courtesy of the Malayus, is struck with the unceremonious, rude, and uncivilized habits of the people of *Báli*.

In the arts they are considerably behind the Javans, though they seem capable of advancing rapidly. They are happily not subjected to a frame of government so calculated to repress their energies, or to waste their resources. They are now a rising people. Neither degraded by despotism nor enervated by habits of indolence or luxury, they perhaps promise fairer for a progress in civilization and good government than any of their neighbours.

They are strangers to the vices of drunkenness, libertinism, and conjugal infidelity: their predominant passions are gaming and cock fighting. In these amusements, when at peace with the neighbouring states, all the vehemence and energy of their character and spirit is called forth and exhausted. Their energy, their modes of life, and their love of independence, render them formidable to the weaker states in their neighbourhood, and secure them against all attacks from any native power in the Indian

Archipelago. What they now are it is probable that the Javans once were, in national independence, as well as in religious and political institutions.

The island of *Báli* appears to be divided at present into seven different states, each independent of the other, and subject to its own chief.

The population of these states is estimated to amount in all to above eight hundred thousand souls. This estimate is formed from the numbers of males whose teeth have been filed, which in the different states stood in round numbers as follows:

<i>Klongkong</i>	30,000
<i>Karang Asem</i>	50,000
<i>Badung</i>	20,000
<i>Bliling</i>	30,000
<i>Tabanan</i>	40,000
<i>Mengui</i>	20,000
<i>Giangar</i>	15,000
<i>Taman Bali</i>	10,000
	215,000

As the operation of filing the teeth immediately precedes puberty, this list of course excludes all males who have not arrived at that period, as well as all females whatever. From the early age at which marriages are contracted, those who have undergone the operation may for the most part be considered as having entered into family connections^[303], and a calculation of four to a family will give the same result. This great population has doubtless increased since the abolition of the slave trade.

Of this heptarchy, *Klóngkong* is admitted to be the most ancient sovereignty. Its princes are said to have originally emigrated from Java, and a period is recorded when the whole island of *Báli* acknowledged their authority. Even still they retain evidences of their former dignity, and traces of their former influence. Among the regalia are still preserved a *kris*, and other articles that belonged to *Majapáhit*, and the other princes of the island recognize them as the stock from whence they sprung, though they limit

their fealty to general respect, and jealously maintain their own independence.

Báli is generally supposed to have been originally peopled from different parts of Celebes. The first person who is said to have established the religion and government which still exist, was *Déwa Agung Kátut*, son of *Rátu Browijáya* of *Majapáhit* in Java. The cause of his quitting Java is related by the Balian as follows.

"The father of *Browijáya* was informed by his head *Bramána*, that it was written in a sacred book that after the expiration of forty days the title of *Rája* of *Majapáhit* should be extinct: to which the Raja gave such implicit credit, that at the expiration of that time he caused himself to be burnt alive. His son, not daring to disobey the sentence of the book, removed to *Báli* with a number of followers, and established his authority at *Klóngkong*, taking the title of supreme sovereign, which title still continues hereditary in the Rajas of *Klóngkong*."

The inhabitants of *Báli*, like those of Java, are principally employed in agriculture. The fertility of the island may be inferred from the number of people maintained on so limited a spot. Rice is the chief produce of the soil, and of course the chief article of subsistence.

From the mountainous nature of the country, advantage cannot so easily be taken of the periodical rains for the purpose of the rice irrigation, but the lands are irrigated by an abundant supply of water from streams and rivers. In some places, as in *Kárang Asem*, two crops of rice are obtained in one year; but over the greatest part of the island only one. In the dry season the *sáwahs* yield a crop of maize. The natives reckon from fifty to sixty fold of increase in the rice cultivation no extraordinary produce. The women are not employed, as in Java, to plant the *pári*: their assistance in the field is only required to reap it. The implements of husbandry are of the same simple construction as those on Java, and nearly similar in form.

Bullocks of the *Bánteng*, or wild breed, and of very fine quality, are almost invariably used in husbandry. The price of a pair of oxen of this kind, fit for the plough, is generally about six Spanish dollars, and seldom exceeds eight. The ordinary price of a *pikul* (133¼ pounds English) of rice, is about three-fourths of a Spanish dollar.

The tenure by which land is held differs widely from that which exists at present in the native provinces of Java. The sovereign is not here considered the universal landlord; on the contrary, the soil is almost invariably considered as the private property of the subject, in whatever manner it is cultivated or divided. It may be sold, let, pledged, devised, or otherwise disposed of, at the option of the proprietor, and without any reference to the will of the superior. The divisions of this property are generally very minute, and the mode of measurement not very defined, and there are instances of great irregularity, even in the application of the same mode of measurement.

The measure of land is expressed by the quantity of seed required to sow it, and said to be so many *tánas*. Some proprietors possess fifty *tánas*, while others hold not more than one or two. The private estate of the elder Raja of *Bliling* did not exceed a few hundred *tánas*, nor did that of the younger much surpass it.

But though the prince is not considered as actual proprietor of the land of his dominions, he receives a certain share of the produce in the way of tax. This tax is either paid in a small Chinese coin, called *képeng*, or in kind, at the rate of about five *tánas* of produce for every *tána* of seed sown.

Though in the lower districts the food of the people is universally rice, in the higher and more mountainous parts they subsist principally on sweet potatoes and Indian corn. The principal animal food that they use is swine flesh, which is found in great abundance. The price of a grown hog seldom exceeds a dollar, and scarcely ever amounts to a dollar and a half.

The habitations of the Bálians differ from those of the Javans, in being generally constructed of mud walls and surrounded by walls of baked or unbaked bricks; in consequence of which, and the peculiar formation of the entrances and doorways, the principal towns are said to resemble the Hindu towns on the continent of India.

The arts are little practised. Though the island produces cotton of the most excellent quality, and in great abundance, the natives have not generally learned the art of painting or printing the cloth, which they manufacture from it. The women here, as on Java, are the manufacturers of all the cloth used by their husbands or families. Their principal manufacture is in *kríses*

and warlike instruments; they make fire-arms, and ornament the barrels, but purchase European locks.

The principal exports are rice, birds'-nests, coarse cloths, cotton yarn, salted eggs, *dínding*, *gámbir*, and oil: the principal imports are opium (which the inhabitants are unfortunately much addicted to), *káyu pélet*, betel-nut, ivory, gold, and silver. The Bálians dislike a seafaring life, and hold the profession of a merchant in disrepute. Their fairs and markets are few and little frequented. The trade that was at one time carried on with the greatest success was the traffic in slaves. The usual price of a male slave was from ten to thirty dollars, of a female from fifty to one hundred. This disgraceful traffic, it may be hoped, will soon be entirely annihilated. While it existed in its full vigour, all prisoners taken in war, all who attempted to evade the laws by emigration, all insolvent debtors, and a certain class of thieves, were subjected to the sad condition of slavery. These laws still subsist, and are enforced, as formerly, for the purpose of procuring the home supply; but the diminution of the foreign demand must limit exceedingly their exercise, and in a short time ameliorate the state of the unhappy individuals who had suffered by them^[304].

But the most interesting character of the Bálians arises out of the frame of their government, the code of their laws, and the system of their religion. I have, in one part of this work, particularly described, and in others repeatedly alluded to, the traces of Hinduism on Java; and if these traces had not been decided and manifest in themselves, their interpretation would have been rendered manifest by what occurs in Báli.

In Báli not more than one in two hundred, if so many, are Mahomedans, and the great body of the people profess the creed and observe the institutions of a religion which has become extinct in the rest of the Archipelago. On Java we find Hinduism only amid the ruins of temples, images, and inscriptions; on *Báli*, in the laws, ideas, and worship of the people. On Java this singular and interesting system of religion is classed among the antiquities of the island. Here it is a living source of action, and a universal rule of conduct. The present state of *Báli* may be considered, therefore, as a kind of commentary on the ancient condition of the natives of Java. Hinduism has here severed society into casts; it has introduced its divinities; it has extended its ceremonies into most of the transactions of life; it has enjoined or recommended some of its severest sacrifices, such as the burning of a

widow on the funeral pile of her husband: but yet the individual retains all the native manliness of his character and all the fire of the savage state.

By this system the Bálians are divided into four casts: 1. The *Bramána*, 2. *Rusi* or *Satria*, 3. *Wisia*, and 4. *Sudra*. The princes of the island are generally, but not always, of the *Bramána* cast: the present Raja of *Bliling* is of the second class. The government is despotic, there being no check on the will of the chief nor any sharer of his power^[305]. He is assisted in his internal administration by a head *Parbákal*; and in the general affairs of his government, the management of foreign correspondence, and the superintendence of his foreign relations, by an officer called *Ráden Tumúng'gung*.

The system of village government is established here as on Java. The constitution of each village is the same. The head, or chief, is termed *Parbákal*, and the assistant *Kalían Témpek*: these officers are invariably selected from among the people of the village which they are appointed to govern. The office of *Parbákal* is considered hereditary, if the successor is competent; and on a vacancy occurring, the *Parbákal* recommends the successor of a *Kalían Témpek*.

Under the head *Parbákal*, who is termed *Parbákal Rája*, are several inferior *Parbákals*, as assistants to that officer in conveying his orders to the heads of villages; and under the *Ráden Tumúng'gung* is placed a similar establishment, consisting of about a hundred persons, with the rank and title of *Kalían Témpek*.

Many of the *Parbákals* of villages in *Bliling* have the title of *Gústi*, which descends in their families, and which serves to distinguish them as nobles. These probably originated in their conduct in war. The command of the military is at present vested in a chief of the *Bramána* cast, styled *Rája Bángen Senapáti*; *Bángen* being the district which contains the principal Braminical establishment. He seems to receive honours and respect next to the Rajah himself.

The heads of *kampongs* in which foreigners reside are termed *Pang'gáwa*; and in speaking collectively of the heads of villages, the Raja uses the term *Papang'gáwa*.

The administration of justice is generally conducted by a court, composed of one *Jákṣa* and two assistants: in addition to whom, in the determination of any cause of importance, several *Bramáṇas* are called in. Their decisions are guided by written laws. The civil code is called *Degáma*, the criminal code *Agáma*. Before these courts three or four witnesses are required to substantiate any criminal charge. Their witnesses are examined on oath, and people of any cast are competent to take such oath and to be so examined. The form of administering the oath requires of the person who takes it to hold a bason of water in his hand, and after repeating, "may I and my whole generation perish, if what I allege is not true," to drink the water.

The form of procedure requires the prosecutor or plaintiff to be heard first on oath: his witnesses are next examined, then the prisoner or defendant and his witnesses, after which the court decides on a general view of the whole of the evidence submitted to its consideration. No torture is employed to procure evidence: mutilation is unknown. The usual punishments are death, confinement, and servitude. The laws, in some instances, are severe, in others lenient. In the execution of the punishment awarded by the court there is this peculiarity, that the aggrieved party or his friends, are appointed to inflict it: for though the judge steps in between the prosecutor and person whom he pursues, so as to restrain the indiscriminate animosity of the one and to determine the criminality of the other, the Bálíans have not advanced so far in the refinement of criminal justice, as to consider criminal offences in the nature of offences perpetrated against the state, and punishable by its officers.

Theft and robbery are punished by death inflicted by a *krís*; murder and treason are punished in some cases by breaking the limbs of the convict with a hatchet, and leaving him to linger some days in agony till death ensues. Adultery is punished with death in the man and perpetual servitude to the prince in the woman. This severity restrains the crime; but in the small state of *Bliling* there occur sometimes several trials for it during the year.

The Raja must confirm every criminal sentence before it is executed, and every civil decision that involves the servitude of the party. Confiscation of the culprit's property follows capital punishment only, the amount of which is divided between the prince and judges. In other cases there is no confiscation.

The laws of *Báli* differ from those of Java with respect to marriages and divorces. In the former island, divorces are permitted under no circumstances whatever; in the latter, almost every caprice is sufficient to procure one. In *Báli* the husband generally buys his wife by paying a sum of money to her parents: thirty dollars is the common price. If unable to pay this sum, he becomes, as in the patriarchal times of scripture, the servant of the party to whom he thus becomes indebted, and resides along with his wife in the house of his father-in-law. His services are received in diminution of the dowry; and if he acts so as to please the family of his wife, the exaction of it is either in part or in whole remitted.

Without entering into any theory concerning the history of the religious system of *Báli*, or any detailed comparison of it with systems in India, the following notices may be thought interesting.

The inhabitants, as before stated, are divided into casts, named *Bramána*, *Sátria*, *Wísia*, and *Súdra*. The *Bramánas* are of two descriptions, *Bramána Séwa* and *Bramána Búda*. The former are most respected, and refrain from eating all animal food, except that of ducks, goats, and buffaloes: hogs' flesh and that of the cow are forbidden. The *Bramána Búda* eat indiscriminately of animal food.

The *Bramána Séwa* are said not to perform worship in the temples: this is left to the lowest orders, generally the *Súdras*. The worship of the lower orders, as performed in the temples, cannot be called Hindu. In these temples, which are very numerous, mud figures are placed, representing the tutelar deities of each particular country.

The *Bramánas* of all descriptions are held in great respect, and never condescend to pay compliments to any person whatever. The respect in which they are relatively held, seems to be in proportion to the age of the person, and his supposed learning and accomplishments. A *Bramána* may eat from the hands of another of a similar age, but not from those of a junior.

The *Bramána* are said not to worship idols, nor do they perform public worship in the temples, but in their private houses only.

A *Bramána* may marry a woman of an inferior order, but the offspring of such a marriage is called *Bujángá*, which forms a distinct class.

There is in *Báli* a class of outcasts, called *Chandálas*, who are not permitted to reside in villages; are generally potters, dyers, dealers in leather, distillers, and retailers of ardent spirits. The dancing women are of the *Wisia* and *Sudra* castes.

A *Bramána* cannot be in any servile occupation. He cannot sit on the ground, nor perform obeisance to any other class.

The religion of *Báli* has been considered as of two descriptions, that of *Budh* and that of *Bráma*. The Budhists are said to have come first to the country. Of the *Bramánas* of *Séwa* nine generations are said to have passed over since their arrival. The name of the principal *Bramána* of the caste of *Séwa*, who first settled on *Báli*, is said to have been *Wútu Ráhu*: he came from *Telingána*, and on his way is said to have touched at *Majapáhit*.

The Rajas of *Báli* are generally of the *Satria* caste; but this does not always hold.

From information obtained at *Bliling*, it would appear that the greater part of the population of *Báli* follow the worship of *Séwa*. The Budhists are said to be rare, and the names of three districts only could be stated, where the Buddhist religion is supposed to prevail.

The sacrifice of the widow on the funeral pile of her husband is frequent. All classes may perform this sacrifice, but it is most common with the *Satría*. Force is said never to be had recourse to on these occasions. The number of women who sacrifice themselves is extraordinary:—the father of the present Raja of *Bliling* was followed by no less than seventy-four women. The dead body is usually preserved in these cases for many months, and even for a year. The corpse is preserved by daily fumigations with *benzoin*.

The bodies of the dead are burnt, except in the case of children before they have shed their teeth, and of all persons dying of the small pox: as in the latter case the body cannot be preserved, and it is usual, even with the lower orders, to keep the body for two months. Among some, however, it is said to be usual to throw the dead bodies into the sea.

The flesh of the cow is eaten by all except the *Bramánas* who have led a life of austerity: these refrain from eating even rice, and live wholly upon roots and fruit.

The Budhists are said to be so little scrupulous in their diet, as to eat not only the flesh of the cow, but even that of dogs and all other animals. Milk is never used as an article of food.

These particulars respecting the religious observances of the Bálians were obligingly communicated to me by Mr. Crawford, who visited the island in 1814. In the following year I visited *Bliling* myself; but my stay was too short to obtain any very detailed information on this interesting particular, further than a collection of their different manuscripts, which have been brought to this country, and already adverted to under the head of Javan literature.

On inquiring into the rank of their deities, they replied at once:

The first is *Batára Gúru*.

The second *Batára Bráma*, emblematical of fire.

The third *Batára Wísnu*, emblematical of water.

The fourth *Batára Séwa*, emblematical of air.

Besides these they have several other deities, not however termed *Batára*, as:

Déwa Géde Segara, the deity of the sea.

Déwa Géde Dálam, emblematical of death.

Déwa Géde Báli Agung, the deity in whose temple (which is near the *kadaton* of the Raja), the common people on particular days pay worship.

Déwa Géde Gúnung Agung, a deity still more generally worshipped, and to whom all the Rajas and people of *Báli* pay adoration.

The deity *Mahadéwa* is known and mentioned in the religious books, but is not an object of worship.

Batára Gúru is considered as the highest object of worship below the divinity. *Sang yang Túng'gal* (the Lord who is one).

I shall close this account of the religion of *Báli* with the following literal translation of an account of the Hindu religion, furnished to me by an intelligent Mahomedan, a native of the island.

"The religion of *Búdh*, as it exists on *Báli*, is divided into *Sakálan* and *Niskálan*. The first regards all worldly concerns, such as the orders of the prince, the laws of the land, &c., including the common affairs and transactions of life; the second comprehends all the duties and ceremonies of religion, the conducting of which is in the hands of the *Maperwíta*, or learned Brahmins called *Padénda*.

"The different kinds of worship attached to this division of the religion, are those of *Batára Permisti Gúru*, *Batara Naráda*, *Batara Sang yang Túng'gal*, and all his descendants; of all of whom images are made, some of gold, some of silver, some of bell-metal, and some in iron; and to whom are dedicated temples and places for the reception of their images on *Gúnung Agung*, *Gúnug Batu*, *Gúnung Baturkahu*, and *Gúnung Predung*; but it is *Gúnung Agung* that is the famous place for them; and those figures are the objects of worship to all the princes of *Báli*.

"When there happens to be a *mabántan*, which signifies a festival on some grand occasion, all the Rajas, with their families, descendants, and subjects, repair to *Gúnung Agung* and invoke all the deities, the *Maperwíta Bramána* being summoned to attend and conduct the ceremonies.

"On occasions of less importance, those images only of the deities which are behind their houses are worshipped, a *Maperwíta Bramána* being called to attend and officiate.

"At the *Pembákaran*, or place where the bodies of the princes are burned, there are also figures of the different deities, in places made for their reception.

"Marriages (*mabandárgan*) are sanctified by their being borne witness to by the *Maperwíta Bramánas*, as well as all the deities who are invoked on the occasion.

"On the new moon, and on the eighth and twenty-third of the month all the deities are worshipped, every one joining in the ceremonies. Should any of the Rajas attend on those days, he of the greatest rank, and power orders the attendance of the *Maperwíta Bramánas*. Great offerings being made to the

deities, thousands of people are afterwards fed with their consecrated fragments. On these occasions the *Maperwíta Bramána*, called *Padénda*, administers to the people holy water, which they both drink and perform ablutions with.

"On the day of the new year, the deities are worshipped, ablutions performed, and offerings made. Cloths and money, &c. are offered twice a year, *Bramána Padénda* attending and invoking the deities.

"On the day *támpak klíwon*, the *Bramána Padénda* performs prayers, using holy water.

"When it is *támpak wáyang*, which means the new year *wáyangs*, offerings are made and placed at all the outer doors, but no worshipping takes place.

"At the annual festivals of *támpuk kándang*, there are offerings made on account of all the different animals.

"There is also the fast of *Nyualátu*, which lasts a day and a night, during which time food and sleep must be abstained from. This fast must be held on the first or the fifteenth of the month."

FOOTNOTES:

[303] In the estimate is probably included the population of those districts on the island of *Sasak* or *Lombok*, which are subject to the chiefs of *Bali*.

[304] Having repeatedly had occasion, in the course of this work, to advert to the slave trade, and the sources whence the supplies of slaves were obtained, it may not be uninteresting to introduce to the reader a native of *Papua*, or New Guinea^[306], stolen from his country in the course of this traffic. The lad represented in the plate came into my service at *Bali* under very peculiar circumstances, and has accompanied me to England. Since his arrival he has excited some curiosity, as being the first individual of the woolly haired race of Eastern Asia who has been brought to this country. It is known, that on the Malayan Peninsula, in *Luconia*, *Borneo*, and most of the larger islands of the Eastern Seas, there are occasionally found in the mountainous tracts a scattered race of blacks entirely distinct from the rest of the population. Some have conceived them to be the aborigines of these countries; others considering them as of the African race, adduce them in proof of an early and extensive intercourse between Africa and these islands. I shall content myself with observing, that they appear at the present day to form the bulk of the population of *Papua* or New Guinea. The following remarks upon the individual now in England, whom we sometimes call *Papua*, and sometimes (more to his satisfaction) *Dick*, were obligingly communicated to me by Sir Everard Home, Bart.

"The Papuan differs from the African negro in the following particulars. His skin is of a lighter colour, the woolly hair grows in small tufts, and each hair has a spiral twist. The forehead rises higher, and the hind head is not so much cut off. The nose projects more from the face. The upper lip

is longer and more prominent. The lower lip projects forward from the lower jaw to such an extent that the chin forms no part of the face, the lower part of which is formed by the mouth. The buttocks are so much lower than in the negro as to form a striking mark of distinction, but the calf of the leg is as high as in the negro."

[305] This description is taken from *Bliling*, one of the independent states, and with slight variations may be considered as applicable to all.

[306] Couto, on the 3d chapter of the 3d book of the 4th Decada, gives an account of the discovery of Papua by Don Jorge de Meneges (about the year 1528 or 1533) who, in a calm was hurried by a strong current with extraordinary rapidity to the eastward, until he arrived at a country inhabited by a race as black as negroes, or the natives of the southern coast of Africa, from the Cape of Good Hope to Mosambique; they visited the king on shore, who was as black as the others.

The monsoon detained Meneges here some months, during which time he had a friendly intercourse with the natives, who became very familiar, supplying him in barter with what he wanted; but they informed him that in the interior there were men who eat human flesh.

"Here," says he, "our people saw both men and women as white and as fair as Germans, and on asking how those people were called, they answered 'Papuas,' and on account of the little knowledge which we had at that time of the country, we concluded that they were islands. But from what we afterwards understood, this must be the country which Marco Polo, the Venetian, calls Lechac, and which he says is very rich in gold."

APPENDIX L.
PROCLAMATION, declaring the PRINCIPLES of the
INTENDED CHANGE of SYSTEM.

The Right Honourable Lord Minto, previous to his departure from Java, having adverted to the general system of the administration, and of the internal management established under the former government of this island, was pleased to suggest and recommend such improvements, as upon correct information, and an adequate knowledge of the state of society amongst the native inhabitants, might be deemed conducive to the advancement of individual happiness and of public prosperity.

With a view to promote so desirable an event, the Honourable the Lieutenant-Governor in Council nominated a Committee, of which Lieutenant-Colonel Colin Mackenzie was president, who, with the zeal, talent, and industrious research which characterize that officer, obtained, with the aid of the members of the Committee, authentic statistical accounts of this island; while the fund of valuable information, thus acquired, has been increased from other respectable channels of communication.

The Honourable the Lieutenant-Governor in Council has, therefore, after the most mature consideration, deemed it advisable to establish an improved system of political economy throughout this island, with the intention of ameliorating the condition of all its inhabitants, by affording that protection to individual industry, which will insure to every class of society the equitable and undisturbed enjoyment of the fruits of labour; and while it is confidently expected that private happiness and public prosperity will be advanced under this change of system, such alterations and amendments will be hereafter adopted, as experience may suggest, or the improving habits and manners of the body of the people may seem to require.

The following principles form the basis of the new arrangements, and are made public for general information.

1. The undue influence and authority of the native chiefs have been restricted: but government will avail themselves of their services in the important department of the native police, which will be arranged upon fixed principles, adapted to the habits and original institutions of the people. A competent provision in lands and in money has been allotted to such chiefs, and it therefore naturally becomes both their duty and their interest, to encourage industry and to protect the inhabitants.

2. The government lands will be let generally to the heads of villages, who will be held responsible for the proper management of such portions of the country as may be placed under their superintendence and authority. They will re-let these lands to the cultivators, under certain restrictions, at such a rate as shall not be found oppressive; and all tenants under government will be protected in their just rights, so long as they shall continue to perform their correspondent engagements faithfully; for it is intended to promote extensive industry and consequent improvement, by giving the people an interest in the soil, and by instituting amongst them an acknowledged claim to the possession of the lands, that they may be thus induced to labour for their own profit and advantage.

3. The system of vassalage and forced deliveries has been abolished generally throughout the island: but in the Batavian and Preangen Regencies such a modification of the former arrangements has been carried into execution, as it was found practicable, under existing circumstances, to introduce; and provisionally the Blandong system will be continued to a certain extent in the central Forest Districts.

4. To encourage the cultivation of so important an article of export as coffee may become, when the trade of Europe and America may be thrown open to free competition, government have stipulated to receive any surplus quantity of that commodity from the cultivators, at a reasonable and fixed rate, when a higher price for it cannot be obtained in the market.

5. To extend free trade and commerce, and to promote a spirit of enterprise and speculation amongst the inhabitants, the Bhoom farms have been abolished, the duties upon the principal articles of export have been taken off, and it is intended to modify and amend the custom-house regulations before the 1st January next. The toll-gates and transport duties of the

interior have been diminished as much as possible, and in the gradual progression of improvement they will be finally abolished.

6. Every facility will be afforded towards obtaining teak timber for the construction of small craft, and of such additional tonnage as, upon the improved system, will be undoubtedly required.

7. Government have taken upon themselves the exclusive management of the salt department. It appears, that the inhabitants in most parts of the island paid a very irregular and exorbitant price for this necessary article of consumption; while the system adopted by the farmers was radically vicious, and equally oppressive and vexatious to the people, as it was detrimental to the immediate interests of government.

Such an improved system for the supply of salt will be immediately adopted, as may appear advisable; and in this and every other arrangement, the government propose the advancement of the interests and the happiness of the people at large, and the promotion of the public prosperity of this colony.

Given at Batavia, this 15th day of October, 1813.

By me, the Lieutenant-Governor of the Island of Java and its Dependencies,
T. S. RAFFLES.

By order of the Honourable the
Lieutenant-Governor in Council,

C. ASSEY,
Secretary to Government.

COUNCIL CHAMBER,
Oct. 15, 1813.

APPENDIX L. No. II. REVENUE INSTRUCTIONS.

The Honourable the Lieutenant-Governor in Council having taken into mature consideration the state of the Land Revenue of this Island, and being impressed with the necessity of establishing one uniform, equitable, and adequate system for its assessment and realization, has been pleased to

direct that the following instructions be sent to the Residents, Collectors, and other officers, to whom are consigned the charge of the several provinces under his authority.

1. It is the object of government to separate, in a great measure, the revenue from the judicial branches of the internal administration, it being deemed that a more lucid and simple arrangement of the public business will be formed thereby; and that the relieving the residents from a part of their at present too extensive and complicated duties, will ensure so much easier and better execution of the remainder, as fully to counterbalance any additional expense that may be incurred by the adoption of the measure.

2. For this purpose it has been resolved, that collectors shall be appointed immediately to the various districts, whose office shall consist in the sole and entire superintendence of the land revenue, and to whom therefore shall be made over by the Residents the complete charge of that department, with all such papers, documents, &c. as are in any way connected with it.

3. In some instances, however, from strong local, political, or other reasons, it is considered advisable, that several branches of the public duty remain still vested for a time in the Resident alone. As this necessity shall cease, care will be taken, by the introduction of separate collectors, to attain uniformity. But, in the mean time, it is particularly enjoined to such Residents as are continued in this double capacity of revenue and judicial superintendants, to take due care that these several branches be not blended in the execution, but that each part of their duty be discharged according to the department to which it belongs, and that their several proceedings be recorded in their proper departments only, distinct from all others.

4. A similar line of conduct will be observed in the maintenance of the establishments necessary for carrying on the business of these several departments; these establishments being kept as much apart, and as much confined to their distinct details, when the duties of collector and judge and magistrate are exercised by the same person, as when there are different officers appointed for the superintendence of each.

5. Those Residents, therefore, to whom will still be entrusted the collection of the land revenue, will consider the following instructions to collectors as addressed to themselves in that capacity. Each collector shall forward to government a list of such establishment (with the salaries to each individual

that he would recommend) as he deems adequate to carrying on the business in his head office, where the general papers, accounts, &c. will be prepared, and which will be conducted under his own immediate inspection.

6. This establishment may consist of one native assistant and such number of writers (Javans and English) opasses, and other servants, as may be necessary. This native assistant ought to be a man of rank, respectability, and information, that he may be at once competent, by his knowledge of the manners, characters, and habits of the native inhabitants, to assist the collector in advising measures best suited to each occasion, and by the estimation in which he is held by the people, to lend a considerable aid in carrying those measures duly into execution.

7. His salary may amount to from one to two hundred rupees per month, or a quantity of land equal to such sum may be allowed him rent free.

8. It may be advisable to employ for this situation some of the Bopatis, Patehs, or Tumunggungs, who have been, but are not now, in the actual service of government. This, as salaries or pensions are, in many instances, already allowed in the manner of sinecures, may prove a considerable saving to government; and, at the same time, the having a duty annexed to their present receipts, which will carry with it a considerable degree of authority and consequence, may be more pleasing to many, than the idle enjoyment of a sum of money, for which they must feel that they are at present making no adequate return.

9. For the outer establishments, those necessary for carrying on the details in each village or division, it is not intended to create any new officers; those at present entertained, and who have as yet very well executed the double duties of police and revenue, being deemed the most competent and best fitted for continuing to manage the business of these several departments.

10. It is not the additional expense which would arise from the appointing a new description of revenue officers, that is alone considered in this arrangement. The formation of a distinct revenue establishment throughout the interior is, on many other accounts, deemed an innovation that would be attended with considerable trouble, that would prove less pleasing to the inhabitants themselves, and that would not be nearly so adequate to the

management of the collections, as the collection of the combined establishment at present existing.

11. The head inhabitant of a Javan village has, from immemorial usage, been considered to have vested in him the general superintendence of the affairs relating to that village, whether in attending to the police, settling the minor disputes that occur within its limits, or of collecting its revenues, or more often its services. For this purpose, his office has been elective, and the powers he exercises entrusted to him by his fellow inhabitants.

12. A writer, priest, and other subordinate officers and servants, completed its regular establishment. From harassing wars, long oppression, feudal tyranny, and European innovation, it is true that, in many parts of the country, scarcely a vestige remains of that species of constitution; but it is universally acknowledged that such was once its pure form throughout the island, and such is it still existing in many places.

13. This simple mode of village administration Government cannot but admire and entirely approve of; and deeming it at once the best suited to the genius of the people, and as promising to be the most conducive to the interest of the ruling power, they have resolved that such system shall be acknowledged and encouraged, by every means in their power, throughout the provinces under their authority.

14. The head inhabitant therefore (whether recognized under the name of the Petingi, Bukul, Lura, Kuwu, Mandor, or otherwise), according to the custom of the country, shall have entrusted to him the management of the revenue concerns of his village; a duty which his personal influence, and minutely intimate acquaintance with the situations and concerns of the several inhabitants of it, will render him better than any other qualified to discharge. He shall furnish such accounts and statements as he may from time to time be required to do; and shall obey such orders as he may receive directly from the collector or his assistant, or from the officer of the division in which his village is situated.

15. These officers of division shall likewise be continued in the double capacity of superintending both the judicial and the revenue proceedings within the limits of their official range. This practice, indeed, is consonant with the immemorial customs of the country, and deemed most calculated to render benefit in the conduct of either department.

16. By the judicial regulation lately enacted, the officer of division has been empowered to settle such minor disputes as may be considered as belonging to the revenue branch, such as the determining contested boundaries, trespass, irregularity in the dispositions for irrigation, &c. and by extending this authority so as to empower him to take regular cognizance of all transactions respecting revenue collections, and to inspect whenever he pleases the several village accounts, it is deemed that his office will become one of very great utility; serving, in future, by its records, to refer to on every occasion, when it may be wished to ascertain the precise nature of any permanent property or local usage within the division.

17. To them, therefore, shall be considered in every way subordinate the heads of villages; and it is trusted that they will prove a most useful check on them.

18. The officers of division shall furnish to the collector all such papers as may be required, and shall diligently execute any orders that they may receive, either from him or from his native assistant.

19. Respecting the salaries for these inferior servants of government, they have already been in most instances fixed; certain allotments of land, rent free, or sums of money monthly, being given to them.

20. The money salaries of those servants who are connected with the Resident, shall be continued to be paid by him as they are at present.

21. The allotments of land shall fall under the collector's superintendence, and he shall set down among the charges of collection, sums of money equal to what would be the monied rent of those lands were they not free. For this purpose, they shall be assessed, and regularly entered among the other lands in the general lease of the village: but the collection of this assessed rent shall not be actually made; it shall only appear in the accounts, as that it had been realized, and paid to the several officers.

22. For the other officers attached to the collector, namely, those in his head office, some it is concluded will be paid by portions of land being made over to them, others by monthly sums of money. The accounts of the former will be settled as already mentioned. The salaries of the latter will be drawn for by bills on the Resident, who will continue to be the sole treasurer of the district.

23. The collector will accordingly forward to him the several sums of money he may receive in his collections, whenever they amount to five hundred rupees.

24. It is trusted that the placing the heads of villages and officers of divisions, in some measure, under two authorities, to whom they must separately report, will not be attended with any eventual evil or confusion. When these arrangements become well matured, and the exact limits of their several duties clearly defined, the subordinate officers will not find any difficulty in their execution. For the attainment of this desirable end, however, much must depend upon the conduct of the Resident and collector. They are placed in these districts, not as persons who are to serve in any way as checks upon each other, but who are required to act together for the general good; mutually to assist each other to the extent of their power, and by preserving between themselves a good understanding, to carry on better their respective duties.

25. Should, in any case, a disagreement of opinion arise on any subject between them, a reference will be immediately made to the Honourable the Lieutenant-Governor, who will without delay pass on it his decision.

26. It need hardly be observed, that the collectors will possess no magisterial authority whatsoever: application will be regularly made by him to the Resident, as judge and magistrate, whenever it becomes necessary to call on that officer for aid in either capacity, whether to punish the misconduct of servants, or to realize by civil suit any part of the dues of government. The process to be observed, in either case, will be precisely similar to what is prescribed where the two parties in the suit are private individuals: government by no means wishing to enjoy themselves any better security of right, than that which they would ensure to the meanest of their subjects, nor to possess a greater facility of redress than is provided by their regulations to be offered to any individual who shall consider himself as aggrieved.

27. As the first step towards the introduction of an adequate system of internal administration, it becomes positively necessary that government should be furnished with the fullest and completest view of the actual resources of the country.

28. The minutest details must be collected, arranged, and considered, before any system can be properly reduced to practice, or any assessment can be justly made.

29. But when once this body of information is obtained, the business of the revenue settlement will become comparatively light, and will be able to be proceeded with on the clearest and most equitable principles. It will serve too, on all future occasions, as a complete collection of the most valuable data to which to refer back for any purpose, or on which to ground any measures that may, in future, be deemed advisable. The obtaining this, government are fully aware, must be a work the most laborious: but placing the fullest reliance on the zeal, industry, and talents of those officers through whom they expect to derive such information, they look forward with confidence to its accomplishment in a manner as complete, and in a period as short as is possible, where inquiries are to be made at once so minute and so extensive.

30. It must be considered too, that however heavy, at first, this compilation may prove, it will ultimately most materially save both the time and trouble of the collectors. Daily occurrences will constantly require that information which it is now desired should be at once obtained; and by possessing such a standard for conducting the business, a simple reference to it will very often be sufficient, when otherwise there would arise a necessity for instituting inquiries of the same nature, numberless and troublesome, on every new, however trivial, occasion. Every collector, in short, who is anxious to perform well the duties entrusted to him, must wish to be in possession of such a mass of information as is now proposed to be collected.

31. The best mode to be adopted will be as follows:

The collector, attended by his native assistant, and such servants as are necessary, must himself proceed to the chief station in each division, where he will cause to be assembled the head inhabitants of the several villages contained in it. To these he must clearly explain the nature of the information desired; and through their means it is expected that it will be obtained without difficulty.

32. Whenever it may be necessary, the collector will visit the village itself, and on the spot cause such inquiries to be made as are requisite.

33. The officers of survey, lately attached to the Residents, will accompany the collectors through this tour, and give such professional aid as may be desired.

34. They will make one general survey of the whole collectorship, forming therefrom a map, on an uniform scale of one English inch to an English mile: in this the limits of each village and of each division will be accurately defined, and the direction and situation of forests, rivers, roads, mountains, &c. will also be correctly delineated.

35. By this general plan, the collector will know exactly the amount of land to be accounted for by each village; and the several lesser sums, as they will be thus brought together, will serve to prove the truth of the aggregate statement.

36. These surveyors will further take any such lesser surveys or measurements as they may be directed to do by the collectors.

37. The papers to be furnished by each village are three; forms for which are the enclosures marked A, B, and C. Some observations are necessary in explanation of these.

38. From the detailed papers of cultivators, and householders not cultivators, will be framed the general account of the village. The reason for separating the inhabitants into these two classes is obvious. It is wished that the exact resources of the country may be seen at one view, to know what part of the population are actually employed in the cultivation of the soil, and to learn in what way the remainder are disposed of. It is also considered but just, that to equalize in some measure the payments from all ranks of people, a tenement tax (or more properly a small rent for the ground on which their houses stand) should be levied from those who contribute nothing to the land rents.

39. But as the extension of this through all the petty villages might be deemed vexatious, and as, in reality, in those very small communities the payment by any party is virtually a payment by the whole of the inhabitants, it is resolved that such tax shall not be levied there. But there is no reason for including in this indulgence the inhabitants of towns; these, as in some places already ordered, should by means of such tax contribute their just share of the payments to government.

40. The assessment and collection of this shall form part of the collector's duty. The principle on which it must proceed will be to divide the houses into three classes, according to their size and the general circumstances of their owners.

41. These will be assessed according to the class, at three, two, or one Javan rupee per annum; and where, in any instance, from the indigence of the householder, even this small payment could become a hardship, the collector shall not include him at all in the assessment. This measure will secure a considerable revenue to government, and by experience in some districts already, it is known that it will not be considered as vexatious or unjust by the inhabitants: they will deem it no hardship to pay so small a sum annually, to be secured in the unmolested possession of the ground and enclosure in which their houses stand: more especially now that they are freed from all forced deliveries and services, without adequate payment either to government or to the native chiefs, and are left at liberty to enjoy the fruit of their labour.

42. The paper C. requires few observations: it explains itself. Every householder shall have a number given to him; for in registering names alone, very great confusion may arise, not only by the same being possessed by numerous individuals, but by the singular practice which frequently occurs among the Javans, of persons, from the most capricious motives, assuming new appellations. The number being once fixed on each, there will be no difficulty in always identifying them.

43. In the paper B., for the same reason above given, a number will be added to each individual cultivator's name; that is, to each who will, in the detailed system to be carried into effect, become an actual renter of land from government.

44. With respect to the quantity of land, of produce, or of money, as it is most desirable that there should be one uniform standard for the whole island, to which every other measurement, weight, or currency may be reduced, a circular letter has been written, dated 11th February, 1814, on the subject of currency, weights, and measures, and the collectors will be in future strictly guided by that, keeping their accounts only in the terms therein authorized.

45. In estimating the produce, the average of several former years will be the surest criterion. All sawah lands will be considered solely as to what quantity of paddy they might produce. Where other species of cultivation occurs, it shall nevertheless be estimated only with reference to this standard, or what might have been the value of the crop had the land been sown with rice.

46. In similar manner, the tegal lands (under which description are comprehended all lands not subject to irrigation) shall be estimated, in their produce, at what would be the quantity of maize from them were that the sole crop.

47. These two kinds of cultivation are the most usual throughout the island for these descriptions of land, and will be easy to form an assessment where these two are only considered. The profit or loss, in substituting other crops, must be the sole concern of the individual cultivators.

48. In the value of the produce, the prices for both the paddy and the maize must be taken as they exist in the cheapest season of the year, and actually procurable on the spot.

49. By assuming other rates than these, as for instance, the prices the articles may bear in periods of the year when a greater scarcity prevails, or at what they would sell were they disposed of in large towns, a false estimate will be taken; and depending on such contingencies, a failure in the realization of the assessed revenues might frequently occur.

50. In the remarks that may be made opposite to each cultivator, if necessary, any circumstance may be entered that may be deemed by the collector deserving of mention;—but principally will fall under this column the statement of such reasons as entitle the individual to a remission of rent, such as the being an officer of government, a pensioner, &c. The general account A. will throw into one view the whole resources and actual state of the village.

51. Each of these villages must have a number given to it by the officer of division.

52. On the principles of complete survey, even the smallest quantity of land must be accounted for; and the general division into such as are or are not in use, naturally suggests itself. These are again subdivided into other classes.

The "cultivated land" will be formed by bringing together the totals of the paper B.; "free land" will include generally all such as are at present enjoyed by the village inhabitant, free of assessment, as the area of the village itself, with its gardens, commons, &c. The "coffee grounds" still remaining in the possession of government will be next entered; but it will be the duty of the collectors to let these out, where they can, like other lands, to be converted to whatever purpose the tenants may please.

53. The extent of the "teak forests" must likewise be given; and to this will follow what are termed "government lands," that is, generally, whatever is held by them for their own or the public benefit, exclusive of the two foregoing classes. In the "general remarks" it will be necessary to advert to the particular nature of this entry, specifying what lands have formed it.

54. Of "lands not in use," the most important part is that which specifies what are capable of being cultivated. The several qualities of these cannot in every instance be quite correctly defined; but as far as practicable, it is desirous to arrange them in the manner pointed out, that is, into the two general descriptions of *Sawah* and *Tegal*. Next will follow lands decidedly "unfit;"—and finally, what are termed "jungle lands;" these are such as do not produce teak. "In the general remarks," it will be necessary to take notice of this latter class, specifying, as far as possible, to what kind of land they belong, whether by clearing they might be susceptible of cultivation, or are naturally unfit for it. The remaining heads in the paper need no observation: they explain themselves, and will be at once filled up from the accounts B, and C.

55. Each officer of division shall, from these village accounts, frame one general one of the district under his authority. The form is shewn in the paper D. The only additional information to be furnished by him in it, is the quantity of lands lying waste and uninhabited, which have not been portioned out into villages; and in the "general remarks" subjoined, it will be necessary to advert to these, pointing out their nature, and the reasons for their being in such desert state.

56. Each division shall be regularly numbered.

57. The account marked E. is intended to give to government one general view of the whole collectorship; at once showing into how many divisions it is portioned out, and in each of those how many villages there are, the

general population under its several descriptions, the total amount of land, what quantity of it is cultivated, how much is capable of being so, the estimated value of the entire produce, the riches of its inhabitants, which are chiefly comprised in the number of buffaloes and horses possessed by them, &c. &c. And attached to these, any such observations may be made as may suggest themselves to the collectors.

58. The collection of papers thus framed, will, it is deemed, put government fully in possession of all the information they require.

59. On the first attempt by the British power to introduce an amended system of land revenue through this island, from our paucity of information on the subject, and the extreme caution with which it was necessary to proceed, it was thought requisite to have recourse to an intermediate class of persons between the actual sovereign and the cultivator of the soil, or to let out the whole lands of each village to its principal inhabitant.

60. But by this mere grant of lease, it was not by any means understood that any acknowledgment was made of proprietary right to the soil existing in those heads of villages. It was simply a step, arising from the necessity of the occasion, from the impracticability of at once entering upon a more detailed plan, and which at the moment of its adoption was meant to be considered as temporary, to be no longer adhered to, if, on the acquisition of further knowledge, a more particular system of management should be deemed advisable.

61. The nature of landed tenure throughout the island is now thoroughly understood. Generally speaking, no proprietary right in the soil is vested in any between the actual cultivator and the sovereign; the intermediate classes, who may at any time have enjoyed the revenues of villages or districts, being deemed merely the executive officers of government, who received those revenues only from the gift of their lord, and who depended on his will alone for their tenure. Of this actual proprietary right, there can be no doubt that it originally vested solely in the sovereign; but it is equally certain, that the first clearers of the land entitled themselves, as their just reward, to such a real property in the ground they thus in a manner created, that whilst a due tribute of a certain share of its produce for the benefit of being well governed was paid to the sovereign power, that in return was equally bound not to disturb them or their heirs in its possession. The

disposal of this government share was, therefore, all that could justly depend on the will of the ruling authority, and consequently the numerous gifts of lands made at various periods by the several sovereigns, have in no way affected the right of the actual cultivator:—all that any government could alienate was merely its own revenue or share of the produce. This subject has come under full discussion; and the above result, as regarding this island, has been quite satisfactorily established.

62. The continuance, therefore, of the village system becomes only a matter of consideration, on the grounds of whether it is more beneficial than any other to government, or most likely to be conducive to the general prosperity and welfare of the mass of the population.

63. No doubt, however, remains on the mind of government on this question. The agency of the intermediate renters is considered as quite unnecessary to be adopted in future. It is deemed, that such a plan of settlement will leave the interest of the bulk of the people entirely at the mercy of a set of numerous petty chiefs, who, however well they may have hitherto conducted themselves, would certainly, in such case, possess an ability of injury and oppression, against which the ruling power would have left itself no adequate means of prevention or redress, and which cannot therefore be permitted, consistently with the principles of good government.

64. It has, therefore, been resolved, that this intermediate system be entirely done away, the government determining to act, in future, through its immediate officers, directly with each individual cultivator, and to stand forward, in short, the sole collector and enjoyer of its own revenues. On every view, indeed, of the subject, the *tiang-halit* (or as it is termed in Western India, where it is understood to have been advantageously introduced, the *ryot-war* settlement) is considered as that which will at once prove most satisfactory to the people, and most beneficial to the government.

65. In the period that has elapsed since the first settlement, a sufficient knowledge has been obtained, by the most scrupulous investigation into the whole minutiae of the revenue affairs of the country, to render government now fully competent to carry into execution that more detailed plan, which it was always in their contemplation to introduce, as early as might be practicable.

66. The several collectors will therefore take suitable measures for carrying into effect the desired change, as soon as this may, from local or other circumstances, be possible.

67. Of course, the expiration of the former leases must, in every instance, be awaited; but the several preliminary steps may be proceeded in without further delay. On no account must such leases be renewed.

68. As the term of the greater part of them will be closed by the ensuing *puasa*, and as the business of the assessment and survey, as above ordered, may with great advantage be carried on together, the principles on which that settlement will proceed will be briefly laid down here. Much however must be necessarily left to the discretion and judgment of the officers to whom its conduct will be entrusted, and on whose zeal, industry, and ability, this government fully relies.

69. As a general rule for the guidance of the collector, he shall continue in possession all such persons as he finds actually holding and cultivating land, and shall receive them as the renters from government in the new settlement. Even though such cultivators shall not be able to adduce proofs of any real property in the land, yet long occupancy, improving culture, and general good conduct while in its possession, are deemed to be claims of no weak nature, and certainly constitute a right, in equity and sound policy, of being considered preferably to any others, who have no such claims; and this right government is determined to respect.

70. It must, however, be clearly understood, that no positive rights of any nature will be infringed by this settlement. Every claim to property in land must be freely heard, and fully inquired into, by the collectors; and it is necessary, in doubtful cases, to submit the claim for the decision of the Honourable the Lieutenant-Governor.

71. There have been, it is known, in many parts of the country, grants from the sovereign of lands in perpetuity, which are regularly inheritable, and relative to which the original documents still exist. Of these some have been made for religious purposes, others as rewards or provision for relatives or the higher nobility. These alienations, as far as it was justly in the power of the sovereign to make them, will certainly not be set aside. Equity and good faith forbid it; but they equally enjoin, that the extent of these alienations be clearly defined, and that the rights of others be not compromised by them.

The government share, where granted away, will not be claimed, for this affects the government alone. But there are certain other rights, those of the cultivators, which cannot be admitted to have been in the slightest degree affected by such grants; and in the enjoyment of them, therefore, they must be duly protected by the government. Such proprietors of revenue, as they may be termed, shall in short be allowed to act, with regard to the cultivators, only as government themselves act toward theirs; that is, receiving a fixed share of the produce: but whilst that is delivered, neither exacting more, nor removing any individual from his land.

72. On these subjects it will become the duty of the collector to be particularly careful and circumspect; to hear all claims, but to admit none lightly, giving to each the fullest investigation prior to acknowledging their validity.

73. When the collector shall have thoroughly acquainted himself with the actual state and resource of each village, he shall proceed, as quickly as he can, to the assessment of the land revenue, to be realized, not from the village generally, but from each individual cultivator inhabiting it.

74. The head of the village shall be considered as the officer of government to be employed in the collection of the revenue; for which a certain portion of land shall be allowed to him. In consideration of this, and possessing, as he will, due powers for its realization, he shall be considered as responsible for its whole amount. By this means, every advantage of the general village settlement will be obtained, without any of its evils.

75. It must be observed, that all allotments of land, whether as pensions or salaries, are to be made only provisionally; and in such grants the government share will be all that is to be affected by them.

76. One lease shall be made for the whole village, according to the form laid down in the enclosure F.

77. This will give to each individual a full knowledge of his rights, and of what are the only dues to be expected from him by government. No extortion or injustice can then exist, without being liable to instant detection and punishment. To attain still further this end, it is ordered, that a copy of this lease be lodged with the officer of division, and another be kept for public inspection in the village office.

78. The head of the village shall also give to each renter an exact account, according to the form in enclosure G.

79. By this the renter will know exactly the state of his affairs, and the examination of these lesser papers will at once discover any fraud on the part of the village officer; for he must, on each receipt of money or kind, mark it in their accounts.

80. The officer of division will, in like manner, acknowledge on the back of the general lease the several sums received by him from the head of any village. The receipt of kind collections will, in the same way, be acknowledged at the collector's office, when they are delivered in.

81. The manner of assessing the government share will proceed, as far as practicable, as follows:

82. As the inferior descriptions of land require greater labour in their cultivation, and as the actual quantity of produce left from each for the use of the renter, is wished to be nearly the same, a different rate in assessing must be observed for each.

83. The following is considered as the fairest scale for fixing the government share from each species of land, and ought to be referred to, as much as possible, as the general standard:

For Sawah Lands.

1st sort,	one-half	of the estimated produce.
2d,	two-fifths	ditto.
3d,	one-third	ditto.

For Tegal Lands.

1st sort,	two-fifths	of the estimated produce.
2d,	one-third	ditto.
3d,	one-fourth	ditto.

84. It must be expected, that less than this will be levied in many places for some time to come. Various reasons will induce a low rental being established at first, as the energies of many impoverished and long oppressed districts are to be brought forth by every encouragement that government can give; but when cultivation has reached what may be

considered as its state of perfection, and the settlement is completely matured, the above must form the general rates of assessment.

85. Government think it necessary also explicitly to declare, that they will be satisfied when the land revenue shall be productive to them in these proportions, determining, at no future time, to raise that scale; that the inhabitants, being thus exactly acquainted with what will form the utmost demand on them, and resting in full confidence that government will not exact any thing further, may, in that security, enjoy their possessions in undisturbed happiness, and apply their utmost industry to the improvement of their lands, assured that, while they conduct themselves well, that land will never be taken from them, and that the more productive they may be able to render it, the more beneficial will it be to themselves.

86. The head of the village will deliver his money collections to the officer of division, in such instances as may be directed by the collector; but all payments in kind must be made actually into the collector's office at the head station, the expenses of bringing it falling entirely on the renters. This is done chiefly with a view to discourage such species of payments, government wishing to receive, as far as practicable, their revenues in money alone. In ordering this, regard has also been had to former custom, the contingent under the Dutch administration having always been thus delivered in.

87. The option of kind payment is still left to the renter on many accounts; in consideration, partly, of the present scarcity of specie throughout the country, partly as being agreeable to their ancient usages, which will always be paid the greatest attention to; but chiefly, as by leaving this double mode of payment open, the assessment, both in this and future settlements, will be able to be proceeded with on the justest and best principles. Enhancement or remissions will be equitably regulated by it; and, in short, by keeping the actual produce always in view, the shares of the government and of the cultivator must always preserve their due relation towards each other.

88. *Pari* or rice, however, are the only two articles to be received. Maize is considered, in estimating the produce of the tegal lands, to produce the justest assessment; but this must be invariably commuted for a money rent on fair principles. To sawah landholders only will the option of *pari* or rice

deliveries be given. As cultivators, in most cases, hold some of each description of land, this distinction will not be felt as a hardship.

89. To guard against any failure in the estimated revenues, the value of the produce will be calculated at the sum which it commonly sells for in the village itself, immediately after the gathering in of the harvest; and the money commutation will proceed on this principle. The renters, therefore, will obviously be encouraged to pay money preferable to kind; but should they nevertheless give in the latter, the head of the village must, if he can, turn it into specie, so that the estimated value be obtained. Should, in spite of these precautions, any quantity of *pari* or rice arrive at the head station, the collector will deposit it in the storehouses, and report in what manner he is of opinion it can be most advantageously disposed of. Generally speaking, government wish to derive no extra profit from this branch of their revenues, and will approve of immediate sale, in every instance where the assessed price can be obtained.

90. As arrears are to be as much guarded against as possible, remissions of rent must sometimes be made. The mode of regulating these will be as follows. When such calamity of season or other cause, occurs, as may be supposed to entitle the cultivator to indulgent consideration in some deduction of rent, a report must be made by the head of the village before gathering the harvest, and the collector will then order the officer of division, or send some trusty servant from his own office, to survey the crop, and inquire into the causes of its falling short of the estimate. Such orders will afterwards be issued, whether remitting any part or the whole of the dues of government, or enforcing their strict collection, as may be deemed necessary. Whenever a real, unavoidable suffering has been sustained, a remission of rent must be granted, government deeming it far preferable to conciliate their subjects by every reasonable favour, and even to submit to a slight loss, than to disaffect them by the continual harassing which the strict exaction of heavy arrears must occasion. Nor will, indeed, any real gain accrue from being thus always unrelenting; for, in most cases, the liquidation of the debts they may have incurred will only be effected by the sale of buffaloes, horses, and other property, on the possession of which must entirely depend the good performance of their future engagements; so that, in fine, by resorting to this measure, the debt may be discharged, but very frequently the cultivator will be lost.

91. As the first settlement, according to this amended system, cannot be expected to attain as accurate an assessment as is desirable, it is not deemed advisable that the leases to be granted should exceed the period of one year.

92. From the nature of the foregoing instructions, the collectors cannot fail to observe the importance and extent of the obligations imposed on them by the office intrusted to their charge. It is not enough that the government lay down the principles of a benevolent system intended to introduce the practical freedom which has been bestowed on all the nations subject to the honourable Company's dominions; it is with them that the application of these principles is entrusted, and to their temper, assiduity, judgment, and integrity, that the people have to look for the enjoyment of the blessings which it is intended to bestow upon them. They have, in short, the national character, as well of their own personal reputation, to support; and while the Lieutenant Governor in Council feels it unnecessary to rouse that spirit of public virtue in which it is the pride of a Briton to excel, or to advert to the shame that must follow a neglect of these important duties, he deems it proper to remark, that his most vigilant attention will be given to the progress of the great work which has been commenced, and that it will always afford him the highest gratification to bring to public notice, and reward the examples of industry, honour, and integrity, which he constantly expects to meet with.

(Signed) T. S. RAFFLES.

Buitenzorg, Feb. 11, 1814.

APPENDIX M.

MEMORANDUM respecting WEIGHTS, MEASURES, &c.

The weights and measures not only differ, both nominally and essentially, in the several districts of Java, but are often subject to such varieties, even within the same district, that the greatest confusion in accounts, and endless speculations, are almost inevitable. The native denominations and divisions are blended with the Chinese and European, and even the latter have been made to vary so much, that it is difficult to refer them to one common standard. The uncertainty of the native measures has, however, been considerably removed, by the reference constantly had by the Chinese to the weight of the article, instead of the bulk, which is the usual measure of the Javans.

The measure of weight which may be considered as the most general standard throughout the country, is the Chinese *kati*, equal to about 1¼ lb., or about 20 ounces avoirdupois; 100 *katis* make a *pikul* of 125 lbs. Dutch, or 133⅓ English, 30 *pikuls* or 3,000 *katis*, being 3,750 lbs. Dutch. The Dutch standard *koyan*, however, is only 3,400 lbs., and in general is considered equal to a last, or two tons; but this weight, by which the rude produce of the country is generally calculated, is subject to innumerable varieties. In order to cover the wastage, it was the rule of the government that there should be one rate for receipt of goods, and another for their delivery. This varied according as the article was perishable or otherwise, or to the degree of speculation established by usage. This applied to all measures and weights by which goods were received and issued at the government stores, and the rates were different in different districts. A *koyan* among private individuals at Batavia is generally considered as 27 *pikuls*, equal to 253 *gantons*, or 2,700 *katis*; at *Semarang* as 28 *pikuls*, but by the natives generally as 30 *pikuls*. The *koyan*, however, by which the contingent was formerly delivered to government, at *Demak* was no less than 4,250 lbs. Dutch.

Pári, or rice in the husk, is generally calculated by the *amat*, and in some districts by the *sáng'ga*. When the *pári* is reaped, which is invariably done

by snapping or cutting each separate straw a few inches below the husk, the sheaf or bundle as it accumulates is laid in the left hand, between the thumb and middle finger: the quantity which can be thus held is termed *sa agem*, which is therefore equivalent to a handful. Three of these make a *pochong*, a quantity which can be clasped between the two hands. The sheaf is then bound. Afterwards, when the grain and straw are dry, two of these *pochongs* are bound together in one larger bundle, which is termed *gedeng*. Four *gedengs* make one *bawon*, and five *gedengs* one *sang'ga*: three *bawon* make one *wuwa*, and two *wuwa* one *amat*; the *gedeng* is sometimes four, five, and even sometimes nine *katis*.

In the *Semarang* districts alone, the *amat* varied from 200 to 600 *katis* in weight. In the western and *Sunda* districts *pari* is measured by the *chain*, of which there are the common and the mountain *chain*, the one being equal to 4,000 lbs. Dutch, the other about 1,000 *katis*. The *kati*, however, is the usual measure.

Land measure is by the natives regulated in general by the *bawat*, a measure of length, formed of the staff stick of the *payong*, or umbrella, which the *Bópati*, or native chief of a province, receives on his investiture. The length of this stick, when drawn from the umbrella, is termed a *changkal*, and is from nine to twelve feet. The principal divisions of land are into the *bahu* and *jung*. Four of the former make a *jung*; but these not only differ in size according to the length of *changkal*, but the situation of the land and the nature of the soil; the *jungs* of rich land, and in the vicinity of the principal towns, being much smaller than the poor lands situated at a distance. The endless varieties of these measurements it would be tedious to detail. One *jung* in the *Semarang* districts is equal to three others, to five, to six, seven, and even so many as ten, in other parts. From this perplexing inequality of measurement arose formerly, in many instances, the comparative disproportion of the cultivator's contributions to the state, as each *jung* of every size was assessed with the payment of a fixed contingent. In many instances the *jung* was rather to be considered the measure, not so much of the land as of its produce.

The advantage of reducing these vague and uncertain measures to some fixed standard, had in some degree attracted the attention of the Dutch government, during the administration of Marshal Daendels, who directed that the lands in several districts should be measured according to an

average *jung* of two thousand square rods or *changkals* of twelve feet Dutch. This measurement being generally known as the government *jung*, although it had only been very partially introduced in one or two districts, was made the standard in the recent agricultural survey of the country; and although it was not deemed advisable to introduce at the moment an entire change in the local usages of each district, the public officers were directed to refer to it on all occasions; and in the statistical and other returns, the local measurement of the place has accordingly been invariably reduced to this standard. The government *jung* of two thousand square *changkals* of twelve feet English, is equal to $6\frac{74}{121}$ English acres; and the government *amat*, by which the produce is weighed, being fixed at two thousand *katís*, is equal to two *pikuls*, or $266\frac{2}{3}$ lbs. English.

In reducing the coins circulating in Java into English money, in the course of this work, the Spanish dollar has been considered as equal to five shillings English, and the *rupee* to half a crown. In the local currency of Java, ten copper doits make one *wang* (a small silver coin), and twelve *wangs* one *rupee*.

The following Table shews the current value of the different Coins circulating in Java:

4doits	make	8stiver.
doits or 2		
10stivers and a half		1 dubbeltje.
ditto or 7		
30stivers and a half		1 schelling.
60 ditto or 15 stivers	Half a Batavian, Surat, or Arcot rupee.	
63 ditto or 15 stivers and three quarters	Half a sicca rupee.	

120	ditto or 30 stivers		Batavian, 1 Surat, or Arcot rupee.
126	ditto or 31 stivers and a half		1 sicca rupee.
132	ditto or 33 ditto	Half a Spanish dollar.	
160	ditto or 40 ditto	Half a ducatoon.	
190	ditto or 48 ditto		1 rix dollar.
240	ditto or 60 ditto		American or 1 Austrian dollar.
264	ditto or 66 ditto		1 Spanish dollar.
312	ditto or 78 ditto		1 old ducatoon.
320	ditto or 80 ditto		1 new ducatoon.
528	ditto or 132 ditto, equal to $2\frac{3}{4}$ rix dollars		1 gold ducat.
960	ditto or 240 ditto, equal to 5 rix dollars	Half a gold rupee.	
1920	ditto or 480 ditto		1 gold rupee.
10	Spanish dollars		1 American gold eagle.
16	ditto ditto		1 doubloon.

N. B. The Java gold rupee is
equal to sixteen Java silver
rupees; the gold ducat
fluctuates in value, but
circulates in general for
silver rupees.

THE END.

Supplied missing PREFACE heading for Vol. I p. vii.

Missing English stanzas in Vol. I: # 593 on p. [513](#), # 609 on p. [520](#), and # 615 & # 616 on p. [521](#).

Missing item in Vol. II: J in list on p. [vi](#).

Out of sequence dates in Vol. II: 1494 on p. [258](#) and 1610 on p. [261](#).

Many tables have uncorrected addition errors. Silently only corrected totals with independent verification, e.g. horizontal total correct but vertical total incorrect.

Silently corrected simple spelling, grammar, and typographical errors.

Retained anachronistic and non-standard spellings as printed.

*** END OF THE PROJECT GUTENBERG EBOOK THE HISTORY OF
JAVA, V. 1-2 ***

Updated editions will replace the previous one—the old editions will be renamed.

Creating the works from print editions not protected by U.S. copyright law means that no one owns a United States copyright in these works, so the Foundation (and you!) can copy and distribute it in the United States without permission and without paying copyright royalties. Special rules, set forth in the General Terms of Use part of this license, apply to copying and distributing Project Gutenberg™ electronic works to protect the PROJECT GUTENBERG™ concept and trademark. Project Gutenberg is a registered trademark, and may not be used if you charge for an eBook, except by following the terms of the trademark license, including paying royalties for use of the Project Gutenberg trademark. If you do not charge anything for copies of this eBook, complying with the trademark license is very easy. You may use this eBook for nearly any purpose such as creation of derivative works, reports, performances and research. Project Gutenberg eBooks may be modified and printed and given away—you may do practically ANYTHING in the United States with eBooks not protected by U.S. copyright law. Redistribution is subject to the trademark license, especially commercial redistribution.

START: FULL LICENSE

THE FULL PROJECT GUTENBERG™ LICENSE

PLEASE READ THIS BEFORE YOU DISTRIBUTE OR USE THIS WORK

To protect the Project Gutenberg™ mission of promoting the free distribution of electronic works, by using or distributing this work (or any other work associated in any way with the phrase “Project Gutenberg”), you agree to comply with all the terms of the Full Project Gutenberg License available with this file or online at www.gutenberg.org/license.

Section 1. General Terms of Use and Redistributing Project Gutenberg electronic works

1.A. By reading or using any part of this Project Gutenberg electronic work, you indicate that you have read, understand, agree to and accept all the terms of this license and intellectual property (trademark/copyright) agreement. If you do not agree to abide by all the terms of this agreement, you must cease using and return or destroy all copies of Project Gutenberg electronic works in your possession. If you paid a fee for obtaining a copy of or access to a Project Gutenberg electronic work and you do not agree to be bound by the terms of this agreement, you may obtain a refund from the person or entity to whom you paid the fee as set forth in paragraph 1.E.8.

1.B. “Project Gutenberg” is a registered trademark. It may only be used on or associated in any way with an electronic work by people who agree to be bound by the terms of this agreement. There are a few things that you can do with most Project Gutenberg electronic works even without complying with the full terms of this agreement. See paragraph 1.C below. There are a lot of things you can do with Project Gutenberg electronic works if you follow the terms of this agreement and help preserve free future access to Project Gutenberg electronic works. See paragraph 1.E below.

1.C. The Project Gutenberg Literary Archive Foundation (“the Foundation” or PGLAF), owns a compilation copyright in the

collection of Project Gutenberg electronic works. Nearly all the individual works in the collection are in the public domain in the United States. If an individual work is unprotected by copyright law in the United States and you are located in the United States, we do not claim a right to prevent you from copying, distributing, performing, displaying or creating derivative works based on the work as long as all references to Project Gutenberg are removed. Of course, we hope that you will support the Project Gutenberg mission of promoting free access to electronic works by freely sharing Project Gutenberg works in compliance with the terms of this agreement for keeping the Project Gutenberg name associated with the work. You can easily comply with the terms of this agreement by keeping this work in the same format with its attached full Project Gutenberg License when you share it without charge with others.

1.D. The copyright laws of the place where you are located also govern what you can do with this work. Copyright laws in most countries are in a constant state of change. If you are outside the United States, check the laws of your country in addition to the terms of this agreement before downloading, copying, displaying, performing, distributing or creating derivative works based on this work or any other Project Gutenberg work. The Foundation makes no representations concerning the copyright status of any work in any country other than the United States.

1.E. Unless you have removed all references to Project Gutenberg:

1.E.1. The following sentence, with active links to, or other immediate access to, the full Project Gutenberg License must appear prominently whenever any copy of a Project Gutenberg work (any work on which the phrase “Project Gutenberg” appears, or with which the phrase “Project Gutenberg” is associated) is accessed, displayed, performed, viewed, copied or distributed:

This eBook is for the use of anyone anywhere in the United States and most other parts of the world at no cost and with almost no restrictions whatsoever. You may copy it, give it away or re-use it under the terms of the Project Gutenberg™ License included with

this eBook or online at www.gutenberg.org. If you are not located in the United States, you will have to check the laws of the country where you are located before using this eBook.

1.E.2. If an individual Project Gutenberg electronic work is derived from texts not protected by U.S. copyright law (does not contain a notice indicating that it is posted with permission of the copyright holder), the work can be copied and distributed to anyone in the United States without paying any fees or charges. If you are redistributing or providing access to a work with the phrase “Project Gutenberg” associated with or appearing on the work, you must comply either with the requirements of paragraphs 1.E.1 through 1.E.7 or obtain permission for the use of the work and the Project Gutenberg trademark as set forth in paragraphs 1.E.8 or 1.E.9.

1.E.3. If an individual Project Gutenberg electronic work is posted with the permission of the copyright holder, your use and distribution must comply with both paragraphs 1.E.1 through 1.E.7 and any additional terms imposed by the copyright holder. Additional terms will be linked to the Project Gutenberg License for all works posted with the permission of the copyright holder found at the beginning of this work.

1.E.4. Do not unlink or detach or remove the full Project Gutenberg License terms from this work, or any files containing a part of this work or any other work associated with Project Gutenberg.

1.E.5. Do not copy, display, perform, distribute or redistribute this electronic work, or any part of this electronic work, without prominently displaying the sentence set forth in paragraph 1.E.1 with active links or immediate access to the full terms of the Project Gutenberg License.

1.E.6. You may convert to and distribute this work in any binary, compressed, marked up, nonproprietary or proprietary form, including any word processing or hypertext form. However, if you provide access to or distribute copies of a Project Gutenberg work in a format other than “Plain Vanilla ASCII” or other format used in the official

version posted on the official Project Gutenberg website (www.gutenberg.org), you must, at no additional cost, fee or expense to the user, provide a copy, a means of exporting a copy, or a means of obtaining a copy upon request, of the work in its original “Plain Vanilla ASCII” or other form. Any alternate format must include the full Project Gutenberg License as specified in paragraph 1.E.1.

1.E.7. Do not charge a fee for access to, viewing, displaying, performing, copying or distributing any Project Gutenberg works unless you comply with paragraph 1.E.8 or 1.E.9.

1.E.8. You may charge a reasonable fee for copies of or providing access to or distributing Project Gutenberg electronic works provided that:

- You pay a royalty fee of 20% of the gross profits you derive from the use of Project Gutenberg works calculated using the method you already use to calculate your applicable taxes. The fee is owed to the owner of the Project Gutenberg trademark, but he has agreed to donate royalties under this paragraph to the Project Gutenberg Literary Archive Foundation. Royalty payments must be paid within 60 days following each date on which you prepare (or are legally required to prepare) your periodic tax returns. Royalty payments should be clearly marked as such and sent to the Project Gutenberg Literary Archive Foundation at the address specified in Section 4, “Information about donations to the Project Gutenberg Literary Archive Foundation.”
- You provide a full refund of any money paid by a user who notifies you in writing (or by e-mail) within 30 days of receipt that s/he does not agree to the terms of the full Project Gutenberg™ License. You must require such a user to return or destroy all copies of the works possessed in a physical medium and discontinue all use of and all access to other copies of Project Gutenberg™ works.
- You provide, in accordance with paragraph 1.F.3, a full refund of any money paid for a work or a replacement copy, if a defect in the electronic work is discovered and reported to you within 90 days of receipt of the work.
- You comply with all other terms of this agreement for free distribution of Project Gutenberg™ works.

1.E.9. If you wish to charge a fee or distribute a Project Gutenberg™ electronic work or group of works on different terms than are set forth in this agreement, you must obtain permission in writing from the Project Gutenberg Literary Archive Foundation, the manager of the Project Gutenberg™ trademark. Contact the Foundation as set forth in Section 3 below.

1.F.

1.F.1. Project Gutenberg volunteers and employees expend considerable effort to identify, do copyright research on, transcribe and proofread works not protected by U.S. copyright law in creating the Project Gutenberg™ collection. Despite these efforts, Project Gutenberg™ electronic works, and the medium on which they may be stored, may contain “Defects,” such as, but not limited to, incomplete, inaccurate or corrupt data, transcription errors, a copyright or other intellectual property infringement, a defective or damaged disk or other medium, a computer virus, or computer codes that damage or cannot be read by your equipment.

1.F.2. LIMITED WARRANTY, DISCLAIMER OF DAMAGES - Except for the “Right of Replacement or Refund” described in paragraph 1.F.3, the Project Gutenberg Literary Archive Foundation, the owner of the Project Gutenberg™ trademark, and any other party distributing a Project Gutenberg™ electronic work under this agreement, disclaim all liability to you for damages, costs and expenses, including legal fees. YOU AGREE THAT YOU HAVE NO REMEDIES FOR NEGLIGENCE, STRICT LIABILITY, BREACH OF WARRANTY OR BREACH OF CONTRACT EXCEPT THOSE PROVIDED IN PARAGRAPH 1.F.3. YOU AGREE THAT THE FOUNDATION, THE TRADEMARK OWNER, AND ANY DISTRIBUTOR UNDER THIS AGREEMENT WILL NOT BE LIABLE TO YOU FOR ACTUAL, DIRECT, INDIRECT, CONSEQUENTIAL, PUNITIVE OR INCIDENTAL DAMAGES EVEN IF YOU GIVE NOTICE OF THE POSSIBILITY OF SUCH DAMAGE.

1.F.3. LIMITED RIGHT OF REPLACEMENT OR REFUND - If you discover a defect in this electronic work within 90 days of receiving it, you can receive a refund of the money (if any) you paid for it by sending a written explanation to the person you received the work from. If you received the work on a physical medium, you must return the medium with your written explanation. The person or entity that provided you with the defective work may elect to provide a

replacement copy in lieu of a refund. If you received the work electronically, the person or entity providing it to you may choose to give you a second opportunity to receive the work electronically in lieu of a refund. If the second copy is also defective, you may demand a refund in writing without further opportunities to fix the problem.

1.F.4. Except for the limited right of replacement or refund set forth in paragraph 1.F.3, this work is provided to you ‘AS-IS’, WITH NO OTHER WARRANTIES OF ANY KIND, EXPRESS OR IMPLIED, INCLUDING BUT NOT LIMITED TO WARRANTIES OF MERCHANTABILITY OR FITNESS FOR ANY PURPOSE.

1.F.5. Some states do not allow disclaimers of certain implied warranties or the exclusion or limitation of certain types of damages. If any disclaimer or limitation set forth in this agreement violates the law of the state applicable to this agreement, the agreement shall be interpreted to make the maximum disclaimer or limitation permitted by the applicable state law. The invalidity or unenforceability of any provision of this agreement shall not void the remaining provisions.

1.F.6. INDEMNITY - You agree to indemnify and hold the Foundation, the trademark owner, any agent or employee of the Foundation, anyone providing copies of Project Gutenberg™ electronic works in accordance with this agreement, and any volunteers associated with the production, promotion and distribution of Project Gutenberg™ electronic works, harmless from all liability, costs and expenses, including legal fees, that arise directly or indirectly from any of the following which you do or cause to occur: (a) distribution of this or any Project Gutenberg work, (b) alteration, modification, or additions or deletions to any Project Gutenberg work, and (c) any Defect you cause.

Section 2. Information about the Mission of Project Gutenberg

Project Gutenberg is synonymous with the free distribution of electronic works in formats readable by the widest variety of

computers including obsolete, old, middle-aged and new computers. It exists because of the efforts of hundreds of volunteers and donations from people in all walks of life.

Volunteers and financial support to provide volunteers with the assistance they need are critical to reaching Project Gutenberg's goals and ensuring that the Project Gutenberg collection will remain freely available for generations to come. In 2001, the Project Gutenberg Literary Archive Foundation was created to provide a secure and permanent future for Project Gutenberg and future generations. To learn more about the Project Gutenberg Literary Archive Foundation and how your efforts and donations can help, see Sections 3 and 4 and the Foundation information page at www.gutenberg.org.

Section 3. Information about the Project Gutenberg Literary Archive Foundation

The Project Gutenberg Literary Archive Foundation is a non-profit 501(c)(3) educational corporation organized under the laws of the state of Mississippi and granted tax exempt status by the Internal Revenue Service. The Foundation's EIN or federal tax identification number is 64-6221541. Contributions to the Project Gutenberg Literary Archive Foundation are tax deductible to the full extent permitted by U.S. federal laws and your state's laws.

The Foundation's business office is located at 41 Watchung Plaza #516, Montclair NJ 07042, USA, +1 (862) 621-9288. Email contact links and up to date contact information can be found at the Foundation's website and official page at www.gutenberg.org/contact

Section 4. Information about Donations to the Project Gutenberg Literary Archive Foundation

Project Gutenberg™ depends upon and cannot survive without widespread public support and donations to carry out its mission of increasing the number of public domain and licensed works that can be freely distributed in machine-readable form accessible by the widest

array of equipment including outdated equipment. Many small donations (\$1 to \$5,000) are particularly important to maintaining tax exempt status with the IRS.

The Foundation is committed to complying with the laws regulating charities and charitable donations in all 50 states of the United States. Compliance requirements are not uniform and it takes a considerable effort, much paperwork and many fees to meet and keep up with these requirements. We do not solicit donations in locations where we have not received written confirmation of compliance. To SEND DONATIONS or determine the status of compliance for any particular state visit www.gutenberg.org/donate.

While we cannot and do not solicit contributions from states where we have not met the solicitation requirements, we know of no prohibition against accepting unsolicited donations from donors in such states who approach us with offers to donate.

International donations are gratefully accepted, but we cannot make any statements concerning tax treatment of donations received from outside the United States. U.S. laws alone swamp our small staff.

Please check the Project Gutenberg web pages for current donation methods and addresses. Donations are accepted in a number of other ways including checks, online payments and credit card donations. To donate, please visit: www.gutenberg.org/donate.

Section 5. General Information About Project Gutenberg electronic works

Professor Michael S. Hart was the originator of the Project Gutenberg concept of a library of electronic works that could be freely shared with anyone. For forty years, he produced and distributed Project Gutenberg eBooks with only a loose network of volunteer support.

Project Gutenberg eBooks are often created from several printed editions, all of which are confirmed as not protected by copyright in

the U.S. unless a copyright notice is included. Thus, we do not necessarily keep eBooks in compliance with any particular paper edition.

Most people start at our website which has the main PG search facility:
www.gutenberg.org.

This website includes information about Project Gutenberg, including how to make donations to the Project Gutenberg Literary Archive Foundation, how to help produce our new eBooks, and how to subscribe to our email newsletter to hear about new eBooks.
