LONDON
SAUNDERS AND OTLEY, CONDUIT STREET
1839.

W. BLATCH, PRINTER, GROVE PLACE, BROMPTON.

THE object of this little Work is to afford such a view of the Technical details of Printing and Publishing as shall enable Authors to form their own judgment on all subjects connected with the Publication of their Productions.

The want of such a little Manual has been repeatedly suggested to the Publishers by the frequent enquiries of Authors, and they trust that the information here given will prove satisfactory.

CONDUIT STREET, *March* 1, 1839.

THE AUTHOR'S PRINTING AND PUBLISHING ASSISTANT.

As it is very desirable that Authors, and those who may have to give directions to the Printer, should be acquainted with the manner in which Printing is performed, it may be proper, in commencing this little work, to give in the first place a brief outline of

THE PROCESS OF PRINTING.

The Printing Office is divided into two branches; the one entitled the *Composing*, the other the *Press* department.

The Composing-room is furnished with a number of what are called *Cases*,^{2-*} properly fitted up, which are placed before the Compositor. The Compositor then places the Manuscript^{2-†} before him, and taking a small iron frame, or measure, adapted to the purpose, fixes it by a screw to the width which the Page he is to set up is intended to be, and commences the putting it into Type, in the following manner. Supposing the first words of the Manuscript to be “The City of London,” he first selects the Capital Letter T, then the Lower-Case letter h, and then e, each from their respective compartments; after this he takes what is called a Space,^{2-‡} which is used to separate the words from each other; and thus proceeds until he comes to a Stop, which he selects in like manner, and places next to the last letter of the last word. When the frame he holds is filled, he removes the Type thus set into a larger, first to form Pages, and afterwards, when assembled together, to form Sheets.

The number of Pages in each Sheet is determined by the size in which the work is to be printed:—if in Folio, four pages; if in Quarto, eight pages; if in Octavo, sixteen; if in Duodecimo, twenty-four, &c.

When a sufficient number of Pages have been set to form a Sheet, they are what is called *Imposed*, [3-*](#) and the *Forme* is removed to the Press-room, where the first impression, technically called the first Proof, is taken off. This Proof is then transferred to the Reading room, where it is carefully compared with the original by two persons, one reading the Manuscript, and the other the Proof-sheet, marking as he goes on any errors which may have occurred in the Setting. This first Proof is then given back to the Compositor, who has the forme again laid on the stone, and having, as it is called, unlocked it, [4-*](#) proceeds to make such corrections as by the marks on the proof he is directed to.

When the Type has been made to correspond with the Manuscript, the first Corrected Proof is struck off, and transmitted to the Author. Should the Author not have occasion to make many alterations, he may not think it necessary to require a Second Proof; in that case he writes the word “Press” upon it, and having been again carefully read in the Office, it is then Printed off: but should it be otherwise, he writes the word “Revise” upon it, and it is again, when corrected, transmitted to him; and this as often as he may think necessary, until he adds the word “Press,” which is the order for Printing off the entire number of copies of which the Edition is to consist.

Thus, Sheet by Sheet, [5-*](#) the Printing is proceeded with: and as soon as one Sheet has been printed off, the Type used in that Sheet is distributed, [5-†](#) to be employed in setting up the subsequent parts of the work.

From what has been said, it will be seen that the principal expense in Printing a work is the setting of the Type, arising from the fact that the many thousand [5-‡](#) Letters, Spaces, Points, &c. of which it is composed have each to be selected, assembled, and again distributed *singly*; in doing which the greatest attention and accuracy are necessary.

For the information of Authors not accustomed to Printing, it may be proper to state that the printing of the body of a work is always first in order; the Title, Preface, Contents, &c. being uniformly deferred till the completion. [6-*](#)

The process of Printing off a work is thus conducted. The quantity of Paper for Printing the number of sheets required is first laid open. It is then in successive portions of six or eight sheets dipped into a cistern of clear water, and laid one upon the other; when the whole has been thus immersed, a board of the proper size is placed on the top, and some heavy weights are added; thus the whole becomes properly imbued with moisture, and is fit for working. Without this, the paper would neither sink into the interstices, nor receive the ink; besides which, it would be very liable to injure the Type. When therefore the Paper has been thus prepared, it is laid on a stand adjoining the Press, and the process of Printing commences. Over the surface of the Type a Roller^{7-*} charged with Printing Ink is passed; the Sheet is laid on a frame which falls exactly on the forme; it is then shut down, rolled under the bed of the Press, the screw is turned which causes the weight to descend, the impression is given, and another turn of the hand delivers the Sheet Printed.

It is not surprising that so powerful an engine as the Press should have attracted the combined attention of the learned and ingenious. Gentlemen have devoted much of their time to it. Among these may be mentioned Horace Walpole, who printed several of his favorite works at his seat, Strawberry Hill; Sir Egerton Brydges, at Lee Priory; and the late Earl Stanhope, at his family mansion, Chevening, Kent. To no one, probably, is the present advanced stage of Printing more indebted than to the last-named nobleman. With a natural talent for mechanical invention which no difficulty could subdue, he applied his enlightened mind with persevering ardour to a variety of useful objects, especially to the improvement of Printing. The result was not only the production of the most complete Printing Press then known, together with a variety of collateral improvements, but the increasing, if not originating, that impulse which has since carried this important branch of art so near to perfection.

To those who are accustomed to Printing, and who are aware how much its beauty depends on what is called the Press-work, to produce which long practice and great manual dexterity are necessary, it might have appeared impossible that any Machine could have been invented to perform such an operation with any degree of precision and success; yet this the continued labour of mechanical ingenuity has accomplished.

The Steam Printing Press is perhaps one of the most complete specimens of the perfection of mechanical contrivance ever afforded. To this the public are in a great degree indebted for that early and rapid communication of intelligence which is now brought down almost to the hour of the morning on which it is circulated. The Times Newspaper, which was the first to adopt this astonishing invention, is still printed by it with a rapidity which is scarcely conceivable.^{10-*} An inspection of it cannot fail to gratify every intelligent observer. Its use has now become very general.

The Steam Press, however, is chiefly applicable where large numbers, or great speed are required; for ordinary works, and fine Printing, the hand Press is still preferred, and probably ever will be.

In a work like the present, it may not perhaps be deemed uninteresting to take a brief view of the

ORIGIN AND PROGRESS OF PRINTING.

There appears to be no reason to doubt that, from a very remote period in the history of the world, devices were used for the purpose of transmitting to after times the records of important events, but these are for the most part more a matter of curiosity than of positive information. Of the Origin of Printing as now practised, the Rev. Archdeacon Coxe gives the following account in his History of the House of Austria:—"It took its rise about the middle of the fifteenth century, and in the course of a few years reached that height of improvement which is scarcely surpassed even in the present times. The Invention was at first rude and simple, consisting of whole pages carved on Blocks of Wood,^{12-*} and only impressed on one side of the leaf: the next step was the formation of moveable Types in Wood, and they were afterwards cut in Metal, and finally rendered more durable, regular, and elegant, by being Cast, or Founded.

"The consequence of this happy and simple discovery was a rapid series of improvements in every art and science, and a general diffusion of knowledge among all orders of society. Hitherto the tedious, uncertain, and expensive mode of multiplying books by the hand of the Copyist, had principally confined the treasures of learning to Monasteries,^{14-*} or to

persons of rank and fortune. Yet, even with all the advantages of wealth, Libraries were extremely scarce and scanty; and principally consisted of books of devotion and superstition, legends, or the sophistical disquisitions of the schoolmen. An acquaintance with the Latin classics was a rare qualification, and the Greek language was almost unknown in Europe; but the Art of Printing had scarcely become general before it gave a new impulse to genius and a new spirit to inquiry. A singular concurrence of circumstances contributed to multiply the beneficial effects derived from this invention, among which the most considerable were the protection afforded to literature and the arts by the States of Italy, and the diffusion of Greek learning by the literati who sought an asylum in Europe after the capture of Constantinople.

“A controversy has arisen concerning the first discoverer of the art of Printing, between the three towns of Haerlem, Mentz, and Strasburg, each, from a natural partiality, attributing it to their own countryman. The dispute, however, has turned rather on words than facts; and seems to have arisen from the different definitions of the word “Printing.” If we estimate the discovery from the invention of the principle, the honour is unquestionably due to Laurence Coster, a native of Haerlem, who first found out the method of impressing characters on paper, by means of carved blocks of wood. If moveable types be considered as a criterion, the merit of the discovery is due to John Gutenberg, of Mentz; and Schoeffer, in conjunction with Faust, was the first who founded Types of Metal.”—Coxe, vol. i. p. 421. 8vo.

Although some attempts have been made to support a different statement, it is pretty generally admitted that William Caxton, who had lived abroad and learned the art there, was the person who introduced Printing into England; in this Stowe, Leland, and others agree, that “in the almonry at Westminster, the Abbot of Westminster erected the first Press for Book-printing that ever was in England, about the year 1471; and where Wm. Caxton, Citizen and Mercer, who first brought it into England, first practised it.”

The first work printed in England was “The Recueil of The Historeys of Troye,” of which Caxton thus speaks:—“Thus end I this book, &c., and for as moche as in wrytyng of the same my penne is worn, myne hande wery,

and myne eyen dimmed, with overmoche lokyng on the whit paper—and that age crepeth on me dayly—and also because I have promised to dyverce gentilmen and to my frendes to adresse to them as hastely as I myght this said book, therefore I have practysed and learned at my grete charge and dispense to ordayne this sayd book in prynte after the manner and forme as ye may here see, and is not wreten with penne and ynke, as other bokes ben, to thende that every man may have them att ones; for all the books of this storye named the Recule of the Historyes of Troyes thus emprynted as ye here see were begonne in oon day and also finished in oon day,” &c. In another place he enumerates the works he had printed thus:—“When I had accomplished dyvers workys and historyes translated out of Frenshe into Englyshe, at the requeste of certayn lords, ladyes, and gentylmen, as the Recule of the Historyes of Troye, the Boke of Chesse, the Historye of Jason, the Historye of the Mirrour of the World, I have submysed myself to translate into English, the Legende of Sayntes, called Legenda Aurea in Latyn—and Wylyam Erle of Arondel desyred me—and promysed to take a resonyble quantyte of them—sente to me a worshipful gentylman—promising that my sayd lord should during my lyf give and grant to me a yearly fee, that is to note a bucke in sommer, and a doo in wynter,” &c.

It appears that Caxton continued his employment at Westminster, with considerable success, until his death, which occurred in 1491. He seems to have been extensively patronised, and to have been a person of great moral worth. He is supposed to have lived to beyond the age of eighty.

Wynkyn de Worde, who was an assistant, and afterwards succeeded Caxton, was a foreigner, born in the dukedom of Lorrain. He made great improvements, especially in the form of his types. Most of his books now remaining, were printed in Fleet Street, in St. Bride’s Parish, at the sign of the Sun. He died in 1534.

Richard Pynson, who had been brought up under Caxton, set up a Press at Temple Bar, and was the first who obtained the patent of King’s Printer; he died in 1529.

After this, Printing was practised very generally, not only in London, but in many other places, especially Oxford and Cambridge, both which Universities obtained the exclusive right, which they still retain, of Printing

all Bibles and Prayer Books; that is, with the exception of the person holding the patent of King's Printer, who also has this right.

The principle of moveable Types having been once introduced, little room was left for improvement, beyond the slight variations in the form of the Letters, which, as a matter of taste, would always be liable to fluctuate: a comparison of works, printed at different periods, will exemplify this.

An experiment was made some years since, in Logographic, or Word Printing; the Words of most frequent occurrence being cast together, instead of setting them up in single Letters; but it does not appear to have succeeded, or to have been generally adopted, though a Volume, at least, was printed on this plan, which the Publishers of this little work happen to have in their possession.

In the improvement of the Printing Press, and the manufacture of Printing Ink, a larger sphere was opened, inasmuch as to the advancement of these, Printing must be ever indebted for its degrees of excellence.

Printing Ink is a sort of Black Varnish, the making of which is still a secret in the hands of the manufacturers, so far as its finer qualities are concerned.

Its requisites are, that it should have a sufficient, and not too great a degree of tenacity; that it should produce a perfectly black impression, and that it should dry quickly: in proportion as the Ink is deficient in these qualities, it will be liable to injure the paper, or produce specks, to surround the printing with a yellow hue, from the too great preponderance of the oily ingredients; or to soil the paper during the subsequent processes. The excellence of the Printing of Baskerville was chiefly attributable to his discoveries in the art of Ink Making. The late Mr. Bulmer, also, who printed some of the most splendid works of the last half century, was very successful in his experiments. The manufacture is now in the hands of several persons, who are eminent in this art, and who have made it a distinct branch of business.

STEREOTYPE PRINTING,

which is a modern improvement, is a mode of rendering a work permanent in Type, in the following manner. When the Type has been accurately corrected, the Pages of Type are properly arranged for the purpose, when a cast is taken of them in a Plaster Cement, which becomes hard when dry: into this mould melted Type Metal is poured, and thus a perfect counterpart of the Type is produced of each Page, in one solid Plate. This mode was brought into notice by the late Lord Stanhope. The first attempt to render a work thus permanent, and which appears to have been adopted solely with the view of preventing error, was made by a Printer at Leyden, about a hundred years since. He produced a Quarto Bible, Printed from solid Pages, but these were rendered solid by soldering together the backs of the Types. The present mode is, of course, a great improvement on this; as instead of incurring the heavy expense of so large a quantity of moveable Type, the same result is produced, and the Type from which the cast is taken remains uninjured, to be used again and again, for the same, or any other purpose.

Stereotype Printing is thus a very valuable process, for works not liable to alteration, as Bibles, School Books, and other works of which large numbers are required, as it would be impossible to keep the moveable Types standing for such works, without a very great outlay of Capital. [22-*](#)

Another mode of Printing, is that called

LITHOGRAPHIC PRINTING,

or PRINTING FROM STONE. This is also a recent invention. It was brought into England about twenty years since. Invented by M. Senefelder, of Munich. It is founded on the principles of Chemical Affinity. A Writing or Drawing is made on Stone, with an Ink prepared with a sort of unctuous ingredient—to this is applied another Ink of a contrary quality; the Ink with which the Writing or Drawing is made, remains on the Stone, while that with which the Printing is performed, separates from it, and is thus transferred to the Paper. This method has been brought to very great perfection; so much so, as to produce Prints from Drawings possessing nearly all the beauty and delicacy of Copperplate or Steel Engravings. It is also very useful in multiplying Fac-similes, as it admits of Printing from the hand-writing itself, when written with Ink prepared for the purpose. At Munich, Paris,

and St. Petersburg, this mode of Printing has been adopted in the Government Offices. All Resolutions, Edicts, Orders, &c., agreed to at the Cabinet meetings, are written down on paper, by the Secretary, with Chemical Ink, and in the space of an hour, an ample supply of copies is obtained. For Circulars, and in general, all such orders of Government as must be rapidly distributed, an invention like this is of the utmost consequence, and it is probable that eventually it will be universally employed. In time of war it would prove of the greatest use for the general staff of the Army, completely supplying the want of a field Printing-Office, and especially as it admits of greater despatch and secrecy. The Commanding Officer might write his orders with his own hand, and in his presence a number of impressions might be taken by a person who could neither write nor read. In mercantile transactions, it is very generally employed where a quick and accurate multiplication of Price Lists, Letters, and Accounts, is of the utmost importance.

COPPER-PLATE PRINTING.

Copper, or Steel-plate Engravings, are Printed by a different process. The Copper, or Steel-plate Press, is formed of two Rollers, one placed over the other, with only a sufficient space between to allow a board to pass, when a strong force is applied. The Plate is then laid on a small fire adapted to the purpose, so as to heat it sufficiently to liquify the Ink, and cause it to diffuse itself over every part of the Engraving. It is then made perfectly clean, so as to leave no soil on the paper, except from the parts indented. It is then laid on the board, the Paper spread upon it, and a soft cloth being added, the Roller is turned by a Cross Lever, when the Print, with all its varied tints, is immediately produced.

ENGRAVINGS ON WOOD.

Engravings on Wood, are usually Printed with the Letter Press, for which they are peculiarly adapted.

The next subject which claims attention is the

PREPARATION OF THE MANUSCRIPT.

WHEN a Manuscript intended for the Press has been written hastily, has many erasures and interlineations, or is otherwise to any extent rendered partially, or perhaps in some cases wholly illegible, the consequence will be, that if given into the hands of the Printer in that state, the Printing will be retarded, the expense of Printing increased, and much additional trouble occasioned to the Author, in correcting those errors, (should he discover them,) which a clearly written Manuscript would have entirely prevented. In such cases it would be decidedly preferable, indeed it has been found a saving both in time and expense, to have the whole fairly copied. In so doing there would besides be this additional advantage,—that the Manuscript might be again finally revised by the author^{26-*} previously to its being put into the Printer's hands; every correction which can be made in the Manuscript being a measure strongly to be recommended in every view.^{27-*}

There is another point of which Authors are frequently not aware—the desirableness of their Manuscripts being written on one side only. The convenience of this is, that any Remarks, Notes, Interlineations or Directions to the Printer, may be inserted on the opposite Blank Pages; and also that in the process of Printing, it may, if needful for speed or otherwise, be divided at any given point, without danger of mistake or confusion.

In all cases it is desirable that Manuscripts intended for the press should be written as much as possible, with a tolerable degree of uniformity, each Page containing about the same number of Lines, and each Line about the same number of Words. This is certainly not essential, but it will generally be very convenient, as it will at once enable the Author to judge of the probable extent of his work, and the Printer or Publisher, when the Manuscript is completed, to decide on the quantity. To write on Ruled Paper is perhaps the most effectual mode of accomplishing this.

Another point to be attended to is, that Manuscripts should always be Paged. This will not only shew the quantity either in whole, or in part, without the trouble of counting, but will prevent mistake should any portion be misplaced.

When a Manuscript, therefore, is about to be written or copied for the Press, it would be desirable to have prepared, a Quarto Book, Ruled, with a narrow margin, and lines across, and to have it Paged beforehand, on the right hand page only, on which page only the Manuscript should be written.

It is not, however, essential that these points should be regarded, should circumstances not permit. In such cases, if legibility can be secured, other obstacles may be surmounted: there will always, however, be considerable difficulty in calculating an irregularly written Manuscript. Should a Manuscript be closely written, and insertions be necessary, it will be preferable not to interline them, but write them on a separate Paper, numbering each, and referring them to the Pages, and on the Pages to the Paper.

When a Manuscript is about to be sent to the Press, it should be finally and carefully read over by the Author, who should mark any directions he may wish attended to in the Printing, and with his pen make any words plain which may happen to be obscure, by doing which, he will frequently prevent those errors of the Press which often change the sense of a passage, and are liable to escape detection.

When the Manuscript has thus been prepared, the next step will be the

CHOICE OF PAPER,

that is, to determine on the Size of the Work. This is a question which will generally be decided by what is customary. If a work of Fiction, the size will be what is called Post 8vo. If Historical or Scientific, Demy 8vo. If Poetry, Foolscap, Post, or Demy 8vo. as may be preferred. There are, however, a variety of other sizes, regulated by the number of leaves into which the sheet may be folded, as well as by the size of the Paper adopted, which may be more readily seen than described. The size and qualities of Paper, are of every variety.

PAPER MAKING.

The Manufacture of Paper, as now used, is not an Art of very ancient date, probably not earlier than the thirteenth century; but of its origin nothing is certainly known.

Various substances were in ancient times employed for writing, as Skins, Ivory, Lead, &c. In Egypt, from a very remote period, the inner films pressed together of the Papyrus or Biblos, a sort of Flag, or Bulrush, growing in the marshes there. From whence the word Paper is derived.

Paper is made from Rags, the best from Linen Rags; thus rendering that which had become useless, an article of universal importance, and permanent value. Without this indispensable material, Printing would have been deprived of its chief auxiliary; but with it, and by the present improved system of Manufacture, the productions of the Press, and of the Paper Mill, can be carried to any extent.

The Process of Paper Making is thus conducted. The Rags are first washed; then ground in the Mill with water, so as to form a Pulp; this Pulp is then conveyed to a Vat, furnished with a Mould of fine wire cloth, which takes up a sufficient quantity to form the Sheet, which, when the water has drained from it, is laid on a pile, and pressed so as to discharge the remaining moisture: it is then hung up to dry, after which, unless it has been sized in the Vat, which is the case with some kinds, it is dipped into a tub of fine size; and when again dried and pressed, is fit for use.

One of the greatest modern improvements in Paper making, is Bleaching the Rags. This enables the Paper-maker to produce the finest Paper from any kind of Rags. He has only, therefore, to find such materials as will make a Paper of a strong texture, and a fine even surface, and by the Bleaching process he can produce whatever shade of Colour he may desire.

A good supply of clear water is of the greatest importance in Paper Making. On this account, Paper Mills are built on clear streams.

By the recent improvements in machinery, Paper can now be made with almost any required degree of rapidity.

The next consideration to the size of the Paper, will be

THE CHOICE OF TYPE.

Type is cast of almost every conceivable variety. The sizes most in use for Books, are English, Pica, Small Pica, Long Primer, Bourgeois, Brevier, Nonpareil. The following are specimens of these various sizes:—

(English.)

Speaking of the art of Printing, the late Earl Stanhope observed, “ I participate in the encomiums bestowed by all former eulogists on this transcendant art, which may justly be considered as the nurse and preserver of every species of knowledge; and while I look

(Pica.)

into history for an examination of the benefit which mankind has already derived from it, I feel equal, or even still more pleasure in anticipating that which it is yet capable of effecting, when by being perfectly unfettered all over the globe, it will give rise to, and promote a system of universal education, and

(Small Pica.)

when as a certain consequence of that education, all societies will direct their strenuous efforts towards bringing into complete operation, that divine morality which has for its basis this simple, but sublime maxim—Do unto another that which you would wish another should do unto you. Printing, from its commencement, has always had some opponents, actuated from selfish interest, who, in many

(Long Primer.)

cases, possessed such influence over their fellow-men, as to corrupt their judgments and decisions, whenever the question of its advantages or disadvantages to mankind, came to be agitated. The monks in particular, were its inveterate opposers; the great majority of them acting upon the spirit of an avowal made by the Vicar of Croydon, in a sermon preached by him at St. Paul's Cross, when he declared, "We must root out printing, or printing will root out us." Happily this superior art withstood their

(Bourgeois.)

hostility, and it became the main engine by which their artifices, invented to keep the people in ignorance and superstition, were detected and punished. Though much good has already resulted from the use of printing, yet much of what it is capable of still remains to be accomplished ; for its utmost utility is not to be looked for while there remains any restraint

(Brevier.)

upon its practice throughout the world. The real Philanthropist and Philosopher, cannot but view with regret the state of persecution under which Printing labours in most of the Catholic countries in Europe, wherein it still remains subject to the control of bigotted ecclesiastics, who feel, as being still applicable to themselves, all the force of the declaration of the Vicar of Croydon. If at the present day they are not so bold as to attempt to annihilate it entirely, yet they watch over the productions of the Press, with such a

(Nonpareil.)

scrutinizing eye, and impose such shackles upon it, as not to permit any thing to be printed, but what has a tendency to uphold the iniquitous system of continuing the people in ignorance: even in England it cannot be disavowed that Printing has many and powerful opponents, who attack it under various pretences; sometimes upon pretended allegations of danger to the State, sometimes upon general allegations of injuring Society by its licentiousness; and there are some persons, even, so unblushing as to declare their aversion to Printing, upon the ground that it is dangerous to give a too extended education to the lower classes of the people."

It will be well to familiarize the eye with these different Sizes of Type, which may easily be done by a little practice, as it will greatly facilitate the understanding of the various technical details connected with the Press.

Next to the Size of the Type, the Size of the Page will have to be decided upon. Though both these points are in a great degree regulated by custom, they are yet in practice sufficiently open to variation, to meet the case of each particular Work. Thus by the Size of the Type, and Number of Lines, a Work may be either expanded, or compressed, as may be desired.

Pica is the type usually employed in Printing works of History, Biography, Travels, &c., in the Demy octavo size; Small Pica, in Novels, Romances, &c., in the Post octavo size; and Long Primer, Poetry, in the Foolscap octavo size.

To take for an example, the Novel, or Romance size. The ordinary Page employed in Works of this kind, contains twenty-two Lines, each Line containing, on an average, eight Words. Three hundred such Pages are considered the proper quantity for an ordinary size Volume. If a Manuscript, therefore, should contain about two hundred Pages, each Page containing about thirty-three Lines of eight Words, it would occupy about three hundred Pages in Print. Should the Manuscript, however, contain but one hundred and eighty such Pages, then in order to form three hundred Printed Pages, each Page would have to consist of but twenty, instead of twenty-two Lines.

On the above principle, it will not be difficult for an Author to form a tolerably correct idea of the extent of a Work—that is, sufficiently so for all general purposes; and the comparison may be extended to any Work of any kind thus—having first selected a Work in Print, which it is desired that in Manuscript should resemble, the Number of Words in a Line, and of Lines in a Page of each, being ascertained, if the disparity between them shall be in any specific ratio, as in the instance above, a Page of Manuscript being equal to a Page and a half of Print, the result will be immediately apparent; but should it be otherwise, a different process may be necessary: should the Manuscript contain but twenty-five, instead of thirty Lines, then the most direct mode of Calculation would be to take the three Lines per Page, by which the Manuscript would exceed the Print, and multiply the Manuscript Pages by three—this would give six hundred; these six hundred lines divided by twenty-two, the number of Lines in the Printed Page, give twenty-seven and a fraction; the whole would therefore, on this supposition, make about two hundred and twenty-seven Printed Pages, of twenty-two

Lines each. There are, however, other circumstances which may affect such Calculations—as the Breaks in Chapters, Paragraphs, Conversations, &c., where the Work may have been written in Manuscript continuously. These points would, where desired, be best ascertained by having a number of Pages set up, and by then comparing them in the aggregate with the Manuscript.

The next point in order, will be

CORRECTING THE PRESS;

and this should invariably, when possible, be done by the Author; no one can so thoroughly enter into the train of thought and expression, and to no one could the disturbance of either prove so annoying: where this cannot be done, and the task must be deputed, the Manuscript should, in all cases, be considered the Authority, and no departure be made from it, except as may have been directed, or in extreme cases.

Corrections of the Press should be marked clearly; and this can never be done so satisfactorily, both to the Corrector and Printer, as by employing those Typographical Marks, which, from having been universally adopted, are, in consequence, understood by all persons connected with the Press.—The following Pages will exemplify these: First, the Proof corrected; Secondly, the Proof Revised.

Proof Corrected.

Diodorus assures us that by the ~~vast~~ ¹⁴ catacombs ^{stet}
of Egypt, the dismal mansions of the dead—were
the stream ³, temple ¹ and ² both called Cocytus, the ⁹ tr
foul canal of Acheron, and the Elysian plains; on ¹³ Ital. ay

¹⁵ H ¹⁶ ⊙ ¹⁵ ⊙

This page is a specimen of Lithographic Printing. The impression from the Type being first taken on Paper, in Lithographic Ink, the Corrections then added with the Pen, and the whole transferred to the Stone from which the Page is printed.

Proof Revised.

IN all the more celebrated nations of the ancient world, we find established those twin elements of belief, by which religion harmonizes and directs the social relations of life, viz. a faith in a future state, and in the providence of Superior Powers, who, surveying as Judges the affairs of earth, punish the wicked, and reward the good.

It has been plausibly conjectured, that the fables of Elysium, the slow Cocytus, and the gloomy Hades, were either invented or allegorized from the names of Egyptian places. Diodorus assures us that by the vast catacombs of Egypt, the dismal mansions of the dead—were the temple and stream, both called Cocytus, the *foul* canal of Acheron, and the Elysian plains; and according to the same equivocal authority, the body of the dead was wafted across the waters by a pilot, termed Charon in the Egyptian tongue. But previous to the embarkation, appointed judges on the MARGIN of the ACHERON listened to whatever accusations were preferred by the living against the deceased; and if convinced of his mis-deeds, deprived him of the rights of Sepulture.—*Athens, by Sir Lytton Bulwer*, vol. i. p. 52.

Explanation of the Typographical Marks.

No. 1, is used to correct a *wrong letter*, drawing a line down through it, and placing the right letter before a corresponding stroke in the margin; a *wrong word* is corrected by drawing a line across it, as in No. 2, and writing the proper word in the margin.

Where any thing has been omitted, or is wished to be inserted, a Caret is marked at the place where it is to come in, and the word or words written in the margin, putting underneath an answering Caret.

Where a space is wanting between two words or letters that are intended to be separated, a parallel line must be drawn where the separation ought to be, and the mark No. 4 placed opposite in the margin. Also where words or letters should join, but are separated, the circumflex No. 5, must be placed under the separation, and the same mark be made in the margin.

*When letters or words are set double, and are required to be taken out, a line is drawn through the superfluous word or letter, and the mark No. 6, which is the letter *d*, an abbreviation of *dele* (*expunge or erase*) must be placed in the margin.*

A turned letter, or one placed the wrong way upward, is noticed by making a dash under it, and placing the mark No. 7, in the margin.

Where a black mark is seen in any part of the line, which is occasioned by a space standing up, it is noticed by making a dash under it, and placing the mark, No. 8, in the margin.

*Where two words are transposed, the word placed wrong, should be encircled, and the mark 9, (*tr.* an abridgement of transpose,) be placed in the margin; but where several words are to be transposed, that which is intended to come first should have the figure 1 placed over it, that second 2, and so on, the mark (*tr.*) being also placed opposite in the margin.*

*Where a new paragraph is required, a crotchet should be made at the place where the new paragraph should begin, and a similar mark (No. 10.) be placed in the margin. Where a new paragraph should not have been made, a line should be drawn from the last word of the previous paragraph, and in the margin should be written, *No break*.*

Where several lines or words are to be introduced, they should be written at the bottom of the page, and at the place where they are to come in, a Caret should be made, from which a line should be drawn to the first word of the passage to be inserted.

If a word, or words, are required to be in Capitals, Small Capitals or Italic, such word or words should be underlined—for Capitals with three lines; for Small Capitals, with two; for Italic, with one; writing opposite in the margin, *Caps.*, *Small Caps.*, or *Ital.*

If they should be required to be altered back, a line should be drawn under the Italic, and the word *Roman*, and under the Capitals or Small Capitals, and the words *Lower-case*, written in the margin.

Where words have been erroneously struck out, or are otherwise wished to remain, dots should be placed under them, and the word *Stet* (*let it stand or remain*) written in the margin.

Where the Punctuation requires to be altered, the Semicolon, Colon, or Period, should be marked and encircled in the margin, a line being drawn at the word at which either is to be placed, as in No. 15.—16 describes the manner in which the hyphen and ellipsis line are marked; and 17, that in which the Apostrophe, Inverted Comma, the Star, and other References, and Superior Letters, and Figures, are marked for insertion. Notes, if added, should have the word *Note*, with a Star, and a corresponding Star at the word to which they are referred.

Where letters or lines are altered, they are noticed by drawing lines before and after them, as in No. 18.

A little practice will soon render the use of these Marks familiar.

It has been before observed, that Correcting the Press, so far as the Printers are concerned, is an extremely troublesome, and to them, the most unpleasant part of their business. It occupies much more time than could be supposed, and consequently occasions an Expense which the mere alteration of a few Words in a Page would perhaps scarcely be thought sufficient to justify. But when it is considered that every alteration disturbs the whole adjoining mass of Type, and may do so to the end of the Page, or several Pages, it will be less difficult to perceive the reason of the well ascertained fact, that Printers always greatly prefer being employed in the Setting, rather than in the Correcting department of their office.

It is not uncommon for Authors, unaware of these circumstances, to deliver their Manuscript for the Press, in a very unfinished state; and in

some instances, as if they actually considered that they could not satisfactorily Correct their Work, until they saw it in Print—an error which it would probably only require them to combat to overcome: it should, however, in all such cases, be distinctly understood, that the Expenses of Correcting will, if considerable, unavoidably enhance that of the Printing, and this in a ratio that would very naturally surprise those unacquainted with the subject.

All errors which are not in the Manuscript, are considered as errors of the Press; the correction of which devolves on the Printer. Indeed, no proof should be submitted to the Author, until these have been made: a careful Reader in the Printing Office will also sometimes draw the Author's attention to some Word or Sentence, which appears to be susceptible of improvement, and which might otherwise have passed unnoticed; this is, however, not always done, unless requested.

In Correcting a Proof, for the reasons already given, as few alterations as possible should be made; when these are, however, unavoidable, it would be advisable to observe this Rule, namely—always if possible, to insert in a Line or Page, as much as is taken out, or vice versâ; this is in a great majority of instances very practicable; and the advantage of it is, that it will avoid what is technically called *Overrunning*. This will, perhaps, be best explained by referring to the Corrected Proof (p. 40) in the 3rd line of which, it will be seen that the word *for* is marked out, and the word *of* inserted in its stead; which, it will be perceived by the opposite Revised Page, has occasioned no alteration beyond the line; but at line 17 there is an insertion marked without an omission; which would have rendered it necessary to carry as many lines as were inserted to the next Page, if the Page had been previously filled up in the usual way. This is called *Overrunning*, and often requires that each subsequent Page should be altered to the end of a Chapter, or if the work is continuous, to the end of all that has at that time been set in Type.

There is also another point to be observed; which is, that where Revises are considered necessary, as few as possible should be required, each Revise requiring the repetition of the process already described in striking off a Proof, and which will not only occasion additional Expense, but will also frequently cause considerable delay in the progress of the Work.

Generally speaking, if the Corrections are clearly marked, and not very numerous, the final Revision may be safely entrusted to the care of a skilful Printer. If any error should escape the notice of the Author, or Corrector, and be Printed off, it may be corrected by Re-printing the leaf in which it occurs, which is called a Cancel. This is, however, seldom necessary, when the error is clearly typographical.

It is frequently a convenience to the Author to have two proofs of each sheet, one to be returned corrected, the other to be retained for reference.

It is not, perhaps, generally known, that Works Printed in London may be corrected by Authors residing at any distance, the Proof Sheets passing and re-passing through the Post Office at Single Postage, provided they are not cut, and that the direction is Written *upon* the Sheet. An Envelope would occasion Double Postage. It is usual also to add the words “Proof Sheet” in the corner.

The various kinds of

ILLUSTRATIVE ENGRAVINGS

have already been slightly referred to. They are of three kinds: Engravings on Steel, [50-*](#) or Copper; Lithographic Drawings, or Prints from Stone; and Engravings on Wood. The first two are Printed independently of the Work; the latter in connection with it; either incorporated with the Text, or otherwise, as may be desired. Each of these modes may be employed with advantage, where Embellishment is intended, or information beyond that which description is adapted to convey. Coloured Engravings are also frequently employed in such cases.

Next to the Printing a Work, is the

CHOICE OF BINDING.

Until a very recent period, Binding was of two kinds only—that in Paper and that in Leather. The former, called Boarding, being used for Books

when first Published, or when purchased for use in that state; the latter for Books when read, or intended to form a permanent part of a Library. Binding in Leather has been carried to very great perfection; and, according to the skill employed, is susceptible of the most varied and tasteful embellishment. The Titles of Books in Boards are affixed by printed Labels—those of such as are bound in Leather in Letters worked in Gold. These latter are produced by laying a leaf of Gold on the Leather, and stamping each Letter singly, a process requiring great skill and labour.

Recently a new mode has been introduced, called Cloth Binding. This is done by covering the Book with Cloth; and, by means of a strong pressure, Stamping it with some Ornamental Device Engraved for the purpose, and which is called Embossing. There is in this new method also another improvement—that of Lettering the back in Gold at one operation, which is thus effected:—instead of the mode employed in Leather Binding, of impressing each Letter singly on the Gold, the whole of the Lettering is cut on a solid piece of brass, and in this form impressed on the back at once. This is not only a great saving in time and labour, but admits also of much tasteful ornament in emblematical and other fanciful devices, which produce a very pleasing effect at a comparatively trifling cost.

This latter process, now very generally adopted, and of which the Binding of this little Work, presents a Specimen, is applicable to almost all works of Science, History, Biography, Travels, &c., and not only gives to them a very superior appearance when first Published, but also, from their close imitation of Leather Binding, renders them fit to be placed at once in the Library. This mode of Binding does not, however, possess much durability, as it differs only in the exterior from the former Boarding—still, until a Book is Bound in Leather, it certainly forms a very agreeable substitute.

Cloth Binding, general as its use has become, has not, however, been adopted for Novels, which are still usually published in Boards. For Annuals, and other Embellished Works, as well as many of those of a smaller size, this mode has been justly and generally preferred.

PUBLISHING AND ADVERTISING.

Publishing, though the last step in order, is undoubtedly one of the first in importance to most Works issuing from the Press. There may perhaps be some few exceptions, but, generally, their success must in a great degree be influenced by the mode and means adopted for their Publication. Not that it can be supposed that all Works can alike succeed; but that many fail in obtaining that degree of attention which they might otherwise have received owing to some circumstances attending the means adopted in the final step of Publication.

London is undoubtedly the great emporium for Literary Works, as for almost every other species of Production. Even Printers in the country are so well aware of this, that they rarely fail to obtain the co-operation of a London Publisher in bringing out any Works in which they may venture to engage; though Works thus Published labour under the disadvantage naturally arising from their not being entirely under the management of the London Publisher.

There are other reasons which render London [54-*](#) the peculiar, and it might be said almost the exclusive channel for Publication. In it all the branches of the Periodical Press are conducted; Daily, Weekly, Monthly, and Quarterly, the various avenues to the public, not only in this vast city, but in every part of the empire, and of the world, are here open, and consequently all the vehicles for Announcements, Advertisements, and Criticisms, are here only accessible. Add to this that from London every species of literary production is constantly despatched to every part of the empire and of the world, and it will then be seen how small a probability there can be that any work not Published in London can obtain even the most moderate share of general attention.

London Publishers are of two classes: those who reside at the West End of the Town, and who confine their attention to Publishing only; and those who reside in the City, and who are also engaged in Wholesale Bookselling. Wholesale Booksellers generally devote their especial attention to the supply of the Retail Trade both in Town and Country. Some make no further arrangements for Publishing than simply to supply, when applied for, such Works as their Country Correspondents, who are Printers, may have transmitted to them for that purpose; while others are Publishers to a considerable extent of what are called Standard Works—Works on

Education, Science, &c., and such as are in regular and constant demand. To these, therefore, the attention of the City Booksellers is very generally directed; while that of the Publishers at the West End of the Town is almost entirely devoted to what may be called the Literature of the Day—Works of Amusement and light reading, Travels, Memoirs, Novels, Tales, Poems, and other productions of a similar character.

This distinction of the two Classes of Publishers arises therefore, in the first place, from the nature of their avocations, and in the second from their peculiar Locality; the one having their Establishments in the centre of resort, for those who are engaged in Trade and Business; the other in that of Fashion and Amusement; so that there is not only a convenience but propriety in the arrangement that custom has established, that works of what may be called Current Literature should be Published at the West End of the Town, while those more immediately connected with the Business of Life should appear in the City.

It is generally understood that the name of an Established Publisher operates not only as a Recommendation to those Works to which it is Prefixed, but also tends to make them known through Extensive Connexions already formed. It also tends to associate them with other Popular Works issuing from the same Establishment.

There are three modes of Publishing—that in which a Work is Published entirely for, and at the expense of the Author, who thus retains the Property of the Work; that in which the Publisher takes all or part of the risk, and divides the profit; and that in which the Publisher purchases the Copyright, and thus secures to himself the entire proceeds. The First of these is the basis on which many First Productions are Published; the Second, where a certain demand can be calculated upon; and the Third, where an Author has become so popular as to ensure an extensive circulation.

The first step that should be taken by an Author intending to produce a Work should be to take the opinion of an experienced Publisher, by doing which not only much unnecessary trouble may be spared, but frequently much unavailable labour and even expense. It is not at all uncommon for Authors, in the course of their reading, to become so impressed with some favourite subject as to conclude that it must prove of the same interest to

others, and under this impression proceed to bestow considerable labour upon it. Had they, however, taken the course here recommended, they would probably have learned either that there was already some very similar Work, or that the production proposed would not, from some cause known perhaps only to the Publisher, be at all likely to meet with the success anticipated. These are circumstances of constant occurrence, which the Publishers of this little Work have had frequent opportunities of knowing.

Generally speaking, Publishers are the most competent advisers on all subjects connected with their peculiar avocations, having constantly before them the best means of judging, and being naturally interested in the success of the Works in which they engage. Authors cannot therefore adopt a more judicious course than to commit the entire management of their Productions to their care.

Many Authors, after having written their Works, consign them to oblivion, from Publishers declining, often in consequence of their own peculiar engagements, to undertake their Publication. This may be avoided by the Plan now adopted of *Publishing for Authors*, and which is more particularly referred to in a subsequent page.

Advertising, as an essential part of Publication, should never be lost sight of; but it is a measure which should be judiciously regulated and cautiously pursued, or a large amount of expense may be incurred to very little purpose.

Another point to be attended to, is the placing in the proper channels Copies for Review. This is a very advisable measure, as without it many of the Works issuing from the Press would not be likely to meet the eye of those engaged in the announcement of New Works.

Where Authors may desire to Print only a limited number of Copies for the use of their friends, this may easily be accomplished without the least personal inconvenience, through the intervention of the Publishers.

Should further information on any of the foregoing subjects be desired, the Publishers will have great pleasure in affording it on application personally, or by letter.

2-* Shallow frames of wood, divided into as many compartments as there are Letters, Capital, Small Capital, and ordinary (called *Lower-Case*), together with Italic, and the different Stops, Marks, and other Points employed for reference, quotations, &c.

2-† Technically called Copy.

2-‡ A blank piece of Type metal, or one without a Letter, of which there are various kinds; used also to separate the lines from each other, according as the pages may be; whether *full*, having the lines close together, or *light*, with a greater distance between them.

3-* This is done by placing the several pages at proper distances on a large stone, fixed on a strongly constructed table; each Page being surrounded by blocks of wood prepared for the purpose, and when firmly wedged together in an iron frame are ready for the press, and are then called a *Forme*.

4-* Driven back the wedges by which the Type is compressed and held firmly together within the iron frame, in order to allow of his separating any part of the Pages which may be necessary.

5-* It is desirable to observe this, as it has sometimes been supposed that the Proof-sheets of an entire work may be furnished at once. This it will be seen could not be, in a work of any extent; as the quantity of Type required for each sheet renders it necessary that the type should be liberated as speedily as convenient, in order to facilitate the progress and completion of the Printing.

5-† Taken asunder, and every Letter, Space, Point, &c. restored to its allotted compartment in the Type Case.

5-‡ The cost of Setting the Type is regulated by the Thousand, which will explain why a full page or a smaller type is more expensive than a light or a larger.

6-* From the labour required in setting the Type, it will be easily conceived that Printing must necessarily be a rather slow process: it is so generally, three or four sheets per week being usually considered tolerably good speed, allowing for the unavoidable impediments occasioned by the transmitting and correcting of Proofs, &c. On urgent occasions, however, much greater progress may be made, which is accomplished by dividing the Manuscript among a greater number of hands. The publishers of this little work have had a volume printed in the astonishingly short space of three days. It was a work by Sir Lytton Bulwer, and the effort was rendered necessary in consequence of the arrangements made for the Foreign Editions. Nearly one hundred workmen were employed in effecting it.

7-* The Roller is a modern improvement. Formerly, the Inking process was performed with two large Balls, filled with wool, and covered with a sort of parchment. The Roller is a great improvement, diffusing the Ink more equally and producing a much greater uniformity of colour (as it is called) in the Printing.

10-* The Newspaper Press affords a remarkable instance of the surprising effect of combined and persevering effort. Few persons, perhaps, among those who are accustomed to receive the Daily Papers, are aware of the vast amount of cost and labour constantly employed in their production. To take for an instance the Times Newspaper. To accumulate the various articles of intelligence which are there collected, persons are constantly and assiduously employed in all directions, both at home and abroad. For the Foreign department, gentlemen, men of education and address, especially fitted for their office, resident in the various foreign capitals, and who regularly transmit (when necessary,

by express) the earliest accounts of important occurrences, so effectually indeed as sometimes even to precede the government couriers; so that during the late war, events of the highest importance were first promulgated through the columns of this paper.—For the daily occurrences of the metropolis and its environs, others, devoted to this particular office. For the political circles, the Courts of Law, Police Offices, Accidents, Offences, &c., others;—and for the two Houses of Parliament, expert and expeditious short-hand writers; all of whom are continually engaged in transmitting their various reports to the office with the most persevering activity, to be there arranged, condensed, and fitted to their respective columns, by the sub-editors and those employed in what is called making up the Paper; while the Editor's attention is more especially engaged in watching the progress of events, and in furnishing on the moment those remarks which are to be found in what is called the Leading Article. Thus the whole is in one day communicated, arranged, and printed; and by the same evening's post transmitted to the most distant parts of the Empire; a result which may well strike those who enter into the contemplation of the vast expenditure of effort and capital which are constantly employed for the purpose, with astonishment.

In the completion of their Steam Printing Press alone, the Proprietors are said to have expended upwards of sixty thousand pounds. The daily sale of the paper is understood to be about ten thousand copies; and these, by means of the Steam Press, are printed off in the almost incredibly short space of about two hours and a half.

12-* Something like this is the plan originally invented and still practised in China. The work intended to be printed is transcribed by a careful Writer upon thin transparent Paper. The Engraver glues this with its face downwards upon a smooth tablet of Pear or Apple tree, or some other hard wood; and then with Gravers and other instruments, he cuts the wood away in all those parts upon which he finds nothing traced, thus leaving the transcribed characters Embossed and ready for Printing. In this manner he prepares as many Blocks as there are written Pages. In printing they do not as in Europe use a Press; the delicate nature of their Paper would not admit of it; when once, however, their Blocks are engraved, the Paper is cut, and the Ink is ready, one man, says Du Halde, with his brush, can without fatigue print ten thousand sheets in a day. The Block is Inked with one Brush, and with another the Paper is rubbed down upon it so as to take the Impression. In this way the Printer can travel with his Ink and his Blocks, and from place to place take off as many copies as he may find occasion for. According to Chinese chronology, this art was discovered in China about fifty years before the Christian era. It seems to be especially adapted to their language, in which are employed such a vast variety of characters.

14-* “Before the invention of this divine art, mankind were absorbed in the grossest ignorance, and oppressed under the most abject despotism of tyranny. The clergy, who before this era held the key of all the learning in Europe, were themselves ignorant, proud, presumptuous, arrogant, and artful; their devices were soon detected through the invention of typography. Many of them, as it may naturally be imagined, were very averse to the progress of this invention, as well as the *brief-men*, or writers, who lived by their manuscripts for the laity. They went so far as to attribute this blessed invention to the devil, and some of them warned their hearers from using such diabolical books.”—*Lemoine*.

22-* Mr. Lodge's Peerage is perhaps the only instance in which a whole work, of that magnitude, has been kept standing in Type. This has been done for two reasons; first, because of the great expense of setting the Type afresh for each Edition; and secondly, that by being thus kept standing, it may be rendered constantly and uniformly correct, a point of the greatest importance in a work containing so large a mass of family history, the value of which so much depends on the accuracy of names and dates.

[26-*](#) The Rev. Dr. Macknight, who translated anew the Apostolic Epistles, is said to have copied over with his own hand that laborious and valuable work five times, previously to his committing it to the Press.

[27-*](#) The Publishers of this little work have frequently had Works committed to their care for Publication, on which the charge for Correcting has almost equalled that of the Setting of the Type, occasioned in a great degree by a want of attention to the points above referred to.

[50-*](#) Engraving on Steel is a modern and highly important improvement. Previously, elaborate Engravings on Copper would lose their delicate tints after Printing a few hundred copies, but from Steel many thousand impressions may be taken without the slightest perceptible difference between the first and the last. To this is chiefly attributable the present very moderate price of beautifully Embellished Works, the use of Steel instead of Copper rendering it no longer necessary to Re-Engrave the Plates.

[54-*](#) This is of course not to be understood as applying to Edinburgh and Dublin, both of which have their respective local circles, though for their English circulation they depend chiefly on London.

PUBLICATION OF WORKS FOR AUTHORS.

Having been for many years engaged in conducting an extensive Publishing Business comprising the productions of the most Popular Writers, the Publishers of this little Work beg leave respectfully to state that they have, in consequence of repeated applications, now devoted a branch of their Establishment to conducting the

PUBLICATION OF WORKS FOR AUTHORS,

securing to them the direction and controul, as well as the entire proceeds and property of their Publications.

Estimates of the Cost of large or small Editions, including Paper, Printing, &c., will be given on application personally, or by Letter addressed to Messrs. SAUNDERS and OTLEY, Publishers, Conduit Street, Hanover Square, London.

PUBLISHED BY
MESSRS. SAUNDERS AND OTLEY.
CONDUIT STREET, HANOVER SQUARE,
LONDON,
ON THE FIRST OF EVERY MONTH.

THE METROPOLITAN MAGAZINE,

A Monthly Journal
OF
LITERATURE, SCIENCE, & THE FINE ARTS.

THE METROPOLITAN was commenced in 1831, Edited by THOMAS CAMPBELL, Esq., Author of "The Pleasures of Hope;" afterwards assisted by THOMAS MOORE, Esq., Author of "Lalla Rookh," &c.; and subsequently by CAPTAIN MARRYAT, R.N., Author of "Newton Forster," "The King's Own," "Peter Simple," &c. In its pages have appeared all the Popular Novels of Captain Marryat, as well as many productions of the first writers of the day, among whom may be mentioned JAMES MONTGOMERY, Esq., Author of "The World before the Flood," whose valuable "Lectures on General Literature" are to be found in its pages only. Tales by CAPTAIN CHAMIER, Articles in Prose and Verse by THOMAS CAMPBELL, Esq., and THOMAS MOORE, Esq., Papers by Sir CHARLES and Lady MORGAN, UGO FOSCOLO, Lady CLARKE, the AUTHOR of the "Kuzzilbash," WILLIAM SOTHEY, Esq., and a great number of other distinguished writers, comprising a vast variety of ORIGINAL ARTICLES, CRITICAL NOTICES, REVIEWS, PAPERS on the FINE ARTS, LITERATURE, THE DRAMA, &c. &c.

The whole forming an interesting Miscellany, as well as a valuable permanent Record of the Progress of Literature and Science, throughout the entire period from its first publication, under the auspices of its distinguished Editor.

No effort is spared to perpetuate the high character which

THE METROPOLITAN

has attained, both at home and abroad, for its ORIGINAL PAPERS; while its Review Department will continue to receive that attention which has

hitherto rendered its Criticisms so impartial and satisfactory.

Orders for THE METROPOLITAN may be forwarded through any of the Booksellers or Newsmen of the United Kingdom, or for the Continent or Colonies through the Agents at the Post Office.

All communications are requested to be addressed (post free) to the Editor at the Publishers.

POPULAR WORKS,
BY DISTINGUISHED WRITERS.

PUBLISHED BY
MESSRS SAUNDERS AND OTLEY,
CONDUIT STREET, HANOVER SQUARE,
LONDON.

WORKS BY SIR LYTTON BULWER, BART., M.P.

I.

In One Vol. Royal 8vo.

THE PILGRIMS OF THE RHINE.

Beautifully illustrated with Engravings, by the first artists.

“This is in all respects a most superb book; the Literary contents, which are of the highest order, being fully equalled by the splendour of the pictorial embellishments.”—*News*.

II.

In Two Vols. Post 8vo.

THE STUDENT.

A Series of Essays.

“Great as is both the power and beauty of the Author’s former works, we know none that mark the creative thinker, more than the present production. Its pages are full of new lights and happy illustrations.”—*Literary Gazette*.

III.

In Three Vols. Post. 8vo.

RIENZI,
THE LAST OF THE TRIBUNES.

“It required a master genius to trace the career of such a spirit as Rienzi’s.”—*Athenæum*.

“It is the author’s as yet greatest work.”—*New Monthly*.

IV.

In 8vo.

LETTER TO A LATE CABINET MINISTER ON
THE PRESENT CRISIS.

To which is added A LETTER FROM LORD BROUGHAM TO THE AUTHOR.
Thirteenth Edition.

V.

In 8vo.

THE DUCHESS DE LA VALLIERE.
A DRAMA, in Five Acts.

VI.

In Two Vols. 8vo.

ATHENS—ITS RISE AND FALL.

With Views of the Arts, Literature, and Social Life of the Athenian People.

“Years of labor have not been mis-spent in the research and consideration of the subject, and the style is worthy of the best names in this elevated department of our National Literature.”—*Literary Gazette*.

VII.

In Three Vols. Post 8vo.
ERNEST MALTRAVERS.

“A splendid work, bearing the impress of genius stamped on every page.”—*Monthly Review*.

VIII.

In Three Vols. Post 8vo.
ALICE; OR THE MYSTERIES.

“The most popular of all the Author’s popular Novels.”—*Chronicle*.

IX.

In Octavo.
THE LADY OF LYONS, OR LOVE AND PRIDE.
A PLAY. In Five Acts. Eighth Edition.

WORKS BY CAPTAIN MARRYAT, R.N.

X.

In Three Vols. Post 8vo.
NEWTON FOSTER;
OR THE MERCHANT SERVICE.

XI.

In Three Vols. Post 8vo.
THE KING’S OWN.

XII.

In Three Vols. Post 8vo.
PETER SIMPLE.

XIII.

In Three Vols. Post 8vo.
JACOB FAITHFUL.

XIV.

In Three Vols. Post. 8vo.
THE PACHA OF MANY TALES.

XV.

In Three Vols. Post 8vo.
JAPHET IN SEARCH OF A FATHER.

XVI.

In Three Vols. Post 8vo.
MR. MIDSHIPMAN EASY.

* Most of the above Popular Works were first published in *The Metropolitan*, Edited by Captain Marryat. They have since passed through several Editions.

WORKS BY MRS. JAMESON.

XVII.

In Two vols. Post. 8vo.
MEMOIRS OF FEMALE SOVEREIGNS.

XVIII.

In Two Vols. Post. 8vo.
CHARACTERISTICS OF WOMEN.
With upwards of Fifty illustrative Etchings, by the Author. New and revised
Edition.

“A beautiful and touching commentary on the heart and mind of Woman.”—*Literary Gazette*.

“Two truly delightful volumes, the most charming of all the works of a charming writer.”—*Blackwood*.

XIX.

In Three Vols. Post 8vo.
VISITS AND SKETCHES AT HOME AND
ABROAD.

XX.

In Three Vols. Post 8vo.
WINTER STUDIES AND SUMMER RAMBLES IN
CANADA.

“We cordially recommend to all lovers of amusing anecdote these lively, elegant and most feminine volumes.”—*Post*.

WORKS BY MISS MARTINEAU.

XXI.

In Three Vols. Post 8vo.
SOCIETY IN AMERICA.

“This book will sustain the great reputation of Miss Martineau, both as a sound scientific observer on questions of moral and political philosophy, and as a writer of first-rate descriptive powers.”—*Examiner*.

XXII.

In Three Vols. Post 8vo.
RETROSPECT OF WESTERN TRAVELS.

“This work of Miss Martineau’s is even more interesting than her former admirable productions on America. Her descriptions are perfectly delightful.”—*London and Westminster Review*.

XXIII.

*** END OF THE PROJECT GUTENBERG EBOOK THE AUTHOR'S
PRINTING AND PUBLISHING ASSISTANT ***

Updated editions will replace the previous one—the old editions will be renamed.

Creating the works from print editions not protected by U.S. copyright law means that no one owns a United States copyright in these works, so the Foundation (and you!) can copy and distribute it in the United States without permission and without paying copyright royalties. Special rules, set forth in the General Terms of Use part of this license, apply to copying and distributing Project Gutenberg™ electronic works to protect the PROJECT GUTENBERG™ concept and trademark. Project Gutenberg is a registered trademark, and may not be used if you charge for an eBook, except by following the terms of the trademark license, including paying royalties for use of the Project Gutenberg trademark. If you do not charge anything for copies of this eBook, complying with the trademark license is very easy. You may use this eBook for nearly any purpose such as creation of derivative works, reports, performances and research. Project Gutenberg eBooks may be modified and printed and given away—you may do practically ANYTHING in the United States with eBooks not protected by U.S. copyright law. Redistribution is subject to the trademark license, especially commercial redistribution.

START: FULL LICENSE

THE FULL PROJECT GUTENBERG™ LICENSE

PLEASE READ THIS BEFORE YOU DISTRIBUTE OR USE THIS WORK

To protect the Project Gutenberg™ mission of promoting the free distribution of electronic works, by using or distributing this work (or any other work associated in any way with the phrase “Project Gutenberg”), you agree to comply with all the terms of the Full Project Gutenberg License available with this file or online at www.gutenberg.org/license.

Section 1. General Terms of Use and Redistributing Project Gutenberg electronic works

1.A. By reading or using any part of this Project Gutenberg electronic work, you indicate that you have read, understand, agree to and accept all the terms of this license and intellectual property (trademark/copyright) agreement. If you do not agree to abide by all the terms of this agreement, you must cease using and return or destroy all copies of Project Gutenberg electronic works in your possession. If you paid a fee for obtaining a copy of or access to a Project Gutenberg electronic work and you do not agree to be bound by the terms of this agreement, you may obtain a refund from the person or entity to whom you paid the fee as set forth in paragraph 1.E.8.

1.B. “Project Gutenberg” is a registered trademark. It may only be used on or associated in any way with an electronic work by people who agree to be bound by the terms of this agreement. There are a few things that you can do with most Project Gutenberg electronic works even without complying with the full terms of this agreement. See paragraph 1.C below. There are a lot of things you can do with Project Gutenberg electronic works if you follow the terms of this agreement and help preserve free future access to Project Gutenberg electronic works. See paragraph 1.E below.

1.C. The Project Gutenberg Literary Archive Foundation (“the Foundation” or PGLAF), owns a compilation copyright in the collection of Project Gutenberg electronic works. Nearly all the individual works in the collection are in the public domain in the United States. If an individual work is unprotected by copyright law in the United States and you are

located in the United States, we do not claim a right to prevent you from copying, distributing, performing, displaying or creating derivative works based on the work as long as all references to Project Gutenberg are removed. Of course, we hope that you will support the Project Gutenberg mission of promoting free access to electronic works by freely sharing Project Gutenberg works in compliance with the terms of this agreement for keeping the Project Gutenberg name associated with the work. You can easily comply with the terms of this agreement by keeping this work in the same format with its attached full Project Gutenberg License when you share it without charge with others.

1.D. The copyright laws of the place where you are located also govern what you can do with this work. Copyright laws in most countries are in a constant state of change. If you are outside the United States, check the laws of your country in addition to the terms of this agreement before downloading, copying, displaying, performing, distributing or creating derivative works based on this work or any other Project Gutenberg work. The Foundation makes no representations concerning the copyright status of any work in any country other than the United States.

1.E. Unless you have removed all references to Project Gutenberg:

1.E.1. The following sentence, with active links to, or other immediate access to, the full Project Gutenberg License must appear prominently whenever any copy of a Project Gutenberg work (any work on which the phrase “Project Gutenberg” appears, or with which the phrase “Project Gutenberg” is associated) is accessed, displayed, performed, viewed, copied or distributed:

This eBook is for the use of anyone anywhere in the United States and most other parts of the world at no cost and with almost no restrictions whatsoever. You may copy it, give it away or re-use it under the terms of the Project Gutenberg™ License included with this eBook or online at www.gutenberg.org. If you are not located in the United States, you will have to check the laws of the country where you are located before using this eBook.

1.E.2. If an individual Project Gutenberg electronic work is derived from texts not protected by U.S. copyright law (does not contain a notice indicating that it is posted with permission of the copyright holder), the work can be copied and distributed to anyone in the United States without paying any fees or charges. If you are redistributing or providing access to a work with the phrase “Project Gutenberg” associated with or appearing on the work, you must comply either with the requirements of paragraphs 1.E.1 through 1.E.7 or obtain permission for the use of the work and the Project Gutenberg trademark as set forth in paragraphs 1.E.8 or 1.E.9.

1.E.3. If an individual Project Gutenberg electronic work is posted with the permission of the copyright holder, your use and distribution must comply with both paragraphs 1.E.1 through 1.E.7 and any additional terms imposed by the copyright holder. Additional terms will be linked to the Project Gutenberg License for all works posted with the permission of the copyright holder found at the beginning of this work.

1.E.4. Do not unlink or detach or remove the full Project Gutenberg License terms from this work, or any files containing a part of this work or any other work associated with Project Gutenberg.

1.E.5. Do not copy, display, perform, distribute or redistribute this electronic work, or any part of this electronic work, without prominently displaying the sentence set forth in paragraph 1.E.1 with active links or immediate access to the full terms of the Project Gutenberg License.

1.E.6. You may convert to and distribute this work in any binary, compressed, marked up, nonproprietary or proprietary form, including any word processing or hypertext form. However, if you provide access to or distribute copies of a Project Gutenberg work in a format other than “Plain Vanilla ASCII” or other format used in the official version posted on the official Project Gutenberg website (www.gutenberg.org), you must, at no additional cost, fee or expense to the user, provide a copy, a means of exporting a copy, or a means of obtaining a copy upon request, of the work in its original “Plain Vanilla ASCII” or other form. Any alternate format must include the full Project Gutenberg License as specified in paragraph 1.E.1.

1.E.7. Do not charge a fee for access to, viewing, displaying, performing, copying or distributing any Project Gutenberg works unless you comply with paragraph 1.E.8 or 1.E.9.

1.E.8. You may charge a reasonable fee for copies of or providing access to or distributing Project Gutenberg electronic works provided that:

- You pay a royalty fee of 20% of the gross profits you derive from the use of Project Gutenberg works calculated using the method you already use to calculate your applicable taxes. The fee is owed to the owner of the Project Gutenberg trademark, but he has agreed to donate royalties under this paragraph to the Project Gutenberg Literary Archive Foundation. Royalty payments must be paid within 60 days following each date on which you prepare (or are legally required to prepare) your periodic tax returns. Royalty payments should be clearly marked as such and sent to the Project Gutenberg Literary Archive Foundation at the address specified in Section 4, "Information about donations to the Project Gutenberg Literary Archive Foundation."
- You provide a full refund of any money paid by a user who notifies you in writing (or by e-mail) within 30 days of receipt that s/he does not agree to the terms of the full Project Gutenberg™ License. You must require such a user to return or destroy all copies of the works possessed in a physical medium and discontinue all use of and all access to other copies of Project Gutenberg™ works.
- You provide, in accordance with paragraph 1.F.3, a full refund of any money paid for a work or a replacement copy, if a defect in the electronic work is discovered and reported to you within 90 days of receipt of the work.
- You comply with all other terms of this agreement for free distribution of Project Gutenberg™ works.

1.E.9. If you wish to charge a fee or distribute a Project Gutenberg™ electronic work or group of works on different terms than are set forth in this agreement, you must obtain permission in writing from the Project Gutenberg Literary Archive Foundation, the manager of the Project

Gutenberg™ trademark. Contact the Foundation as set forth in Section 3 below.

1.F.

1.F.1. Project Gutenberg volunteers and employees expend considerable effort to identify, do copyright research on, transcribe and proofread works not protected by U.S. copyright law in creating the Project Gutenberg™ collection. Despite these efforts, Project Gutenberg™ electronic works, and the medium on which they may be stored, may contain “Defects,” such as, but not limited to, incomplete, inaccurate or corrupt data, transcription errors, a copyright or other intellectual property infringement, a defective or damaged disk or other medium, a computer virus, or computer codes that damage or cannot be read by your equipment.

1.F.2. LIMITED WARRANTY, DISCLAIMER OF DAMAGES - Except for the “Right of Replacement or Refund” described in paragraph 1.F.3, the Project Gutenberg Literary Archive Foundation, the owner of the Project Gutenberg™ trademark, and any other party distributing a Project Gutenberg™ electronic work under this agreement, disclaim all liability to you for damages, costs and expenses, including legal fees. YOU AGREE THAT YOU HAVE NO REMEDIES FOR NEGLIGENCE, STRICT LIABILITY, BREACH OF WARRANTY OR BREACH OF CONTRACT EXCEPT THOSE PROVIDED IN PARAGRAPH 1.F.3. YOU AGREE THAT THE FOUNDATION, THE TRADEMARK OWNER, AND ANY DISTRIBUTOR UNDER THIS AGREEMENT WILL NOT BE LIABLE TO YOU FOR ACTUAL, DIRECT, INDIRECT, CONSEQUENTIAL, PUNITIVE OR INCIDENTAL DAMAGES EVEN IF YOU GIVE NOTICE OF THE POSSIBILITY OF SUCH DAMAGE.

1.F.3. LIMITED RIGHT OF REPLACEMENT OR REFUND - If you discover a defect in this electronic work within 90 days of receiving it, you can receive a refund of the money (if any) you paid for it by sending a written explanation to the person you received the work from. If you received the work on a physical medium, you must return the medium with your written explanation. The person or entity that provided you with the defective work may elect to provide a replacement copy in lieu of a refund. If you received the work electronically, the person or entity providing it to

you may choose to give you a second opportunity to receive the work electronically in lieu of a refund. If the second copy is also defective, you may demand a refund in writing without further opportunities to fix the problem.

1.F.4. Except for the limited right of replacement or refund set forth in paragraph 1.F.3, this work is provided to you 'AS-IS', WITH NO OTHER WARRANTIES OF ANY KIND, EXPRESS OR IMPLIED, INCLUDING BUT NOT LIMITED TO WARRANTIES OF MERCHANTABILITY OR FITNESS FOR ANY PURPOSE.

1.F.5. Some states do not allow disclaimers of certain implied warranties or the exclusion or limitation of certain types of damages. If any disclaimer or limitation set forth in this agreement violates the law of the state applicable to this agreement, the agreement shall be interpreted to make the maximum disclaimer or limitation permitted by the applicable state law. The invalidity or unenforceability of any provision of this agreement shall not void the remaining provisions.

1.F.6. INDEMNITY - You agree to indemnify and hold the Foundation, the trademark owner, any agent or employee of the Foundation, anyone providing copies of Project Gutenberg™ electronic works in accordance with this agreement, and any volunteers associated with the production, promotion and distribution of Project Gutenberg™ electronic works, harmless from all liability, costs and expenses, including legal fees, that arise directly or indirectly from any of the following which you do or cause to occur: (a) distribution of this or any Project Gutenberg work, (b) alteration, modification, or additions or deletions to any Project Gutenberg work, and (c) any Defect you cause.

Section 2. Information about the Mission of Project Gutenberg

Project Gutenberg is synonymous with the free distribution of electronic works in formats readable by the widest variety of computers including obsolete, old, middle-aged and new computers. It exists because of the

efforts of hundreds of volunteers and donations from people in all walks of life.

Volunteers and financial support to provide volunteers with the assistance they need are critical to reaching Project Gutenberg's goals and ensuring that the Project Gutenberg collection will remain freely available for generations to come. In 2001, the Project Gutenberg Literary Archive Foundation was created to provide a secure and permanent future for Project Gutenberg and future generations. To learn more about the Project Gutenberg Literary Archive Foundation and how your efforts and donations can help, see Sections 3 and 4 and the Foundation information page at www.gutenberg.org.

Section 3. Information about the Project Gutenberg Literary Archive Foundation

The Project Gutenberg Literary Archive Foundation is a non-profit 501(c)(3) educational corporation organized under the laws of the state of Mississippi and granted tax exempt status by the Internal Revenue Service. The Foundation's EIN or federal tax identification number is 64-6221541. Contributions to the Project Gutenberg Literary Archive Foundation are tax deductible to the full extent permitted by U.S. federal laws and your state's laws.

The Foundation's business office is located at 41 Watchung Plaza #516, Montclair NJ 07042, USA, +1 (862) 621-9288. Email contact links and up to date contact information can be found at the Foundation's website and official page at www.gutenberg.org/contact

Section 4. Information about Donations to the Project Gutenberg Literary Archive Foundation

Project Gutenberg™ depends upon and cannot survive without widespread public support and donations to carry out its mission of increasing the number of public domain and licensed works that can be freely distributed in machine-readable form accessible by the widest array of equipment

including outdated equipment. Many small donations (\$1 to \$5,000) are particularly important to maintaining tax exempt status with the IRS.

The Foundation is committed to complying with the laws regulating charities and charitable donations in all 50 states of the United States. Compliance requirements are not uniform and it takes a considerable effort, much paperwork and many fees to meet and keep up with these requirements. We do not solicit donations in locations where we have not received written confirmation of compliance. To SEND DONATIONS or determine the status of compliance for any particular state visit www.gutenberg.org/donate.

While we cannot and do not solicit contributions from states where we have not met the solicitation requirements, we know of no prohibition against accepting unsolicited donations from donors in such states who approach us with offers to donate.

International donations are gratefully accepted, but we cannot make any statements concerning tax treatment of donations received from outside the United States. U.S. laws alone swamp our small staff.

Please check the Project Gutenberg web pages for current donation methods and addresses. Donations are accepted in a number of other ways including checks, online payments and credit card donations. To donate, please visit: www.gutenberg.org/donate.

Section 5. General Information About Project Gutenberg electronic works

Professor Michael S. Hart was the originator of the Project Gutenberg concept of a library of electronic works that could be freely shared with anyone. For forty years, he produced and distributed Project Gutenberg eBooks with only a loose network of volunteer support.

Project Gutenberg eBooks are often created from several printed editions, all of which are confirmed as not protected by copyright in the U.S. unless a

copyright notice is included. Thus, we do not necessarily keep eBooks in compliance with any particular paper edition.

Most people start at our website which has the main PG search facility:
www.gutenberg.org.

This website includes information about Project Gutenberg, including how to make donations to the Project Gutenberg Literary Archive Foundation, how to help produce our new eBooks, and how to subscribe to our email newsletter to hear about new eBooks.
