

IMAGINATION

A woman with dark hair, wearing a long, flowing red dress with a gold sash, stands in the foreground. She is holding a large, translucent blue cloth that she is pulling back to reveal a futuristic, metallic space vehicle behind her. The vehicle has a large, glowing orange and yellow circular light on its side. The background is a dark, starry space.

THE ULTIMATE QUEST

By Hal Annas

**Man has evolved slowly, always
striving toward a nebulous goal
somewhere in his future. Will
he attain it—to regret it?...**

**[Transcriber's Note: This etext was produced from

December 1950**

**Extensive research did not uncover any evidence that
the U.S. copyright on this publication was renewed.]**

Striding down the corridor on long thin legs, Art Fillmore mentally glanced over the news and his wide brow puckered. "Scientists to awaken twentieth century man," the mental beam proclaimed. "Dark age to yield untold volumes of ignorance."

Fillmore paused before the twelve-foot door, closed his eyes and concentrated until he had achieved the proper attenuation, then entered the office without opening the door. The bald man in the reclining chair dropped his feet from the five-foot-high desk and sat up with a start.

"I wish you wouldn't do that, Art," he said nervously. "You know I've got the itch."

"Sorry," Fillmore apologized. "Wasn't thinking. Had my mind on my forthcoming wedding."

"Wedding?" The bald man's narrow mouth dropped open, revealing small fragile teeth. "Why didn't you tell me? What does she look like?"

"Haven't seen her yet," Fillmore grinned. "Just mental images, and you know how girls are when they project their own images. But she's a mental pippin: seven feet eight or nine with a shape you dream about. Must weigh about eighty-two or three pounds."

"Too fat," the bald man grunted. "I never liked the short and fat type. Have you paid for her yet?"

"Not yet, but I've got the cash and I'll get a discount."

"How much?"

"Dollar sixty-nine less three per cent."

"Good Lord!" The bald man leaned forward, aghast. "For that price she must be a pippin. Why, you can buy two hundred average women for that and the market's glutted with them. How old is she?"

"Hundred and nine."

"Oh! That explains it. You're practically getting her right out of the cradle and can teach her whatever you want her to know and see that she doesn't learn anything else. Has she got any mental quirks?"

Fillmore sighed. "She's almost perfect in that respect. Doesn't have to have her mind erased but once every six weeks. Nine power intelligence but she holds it back. That way she doesn't come anywhere near a nervous breakdown oftener than once in six weeks."

"Domestic type?"

"Definitely. Regular homebody. Never been out of the solar system. She's the kind that likes a quiet picnic on Mars and will settle for the moon when Mars is crowded. Besides, she's interested largely in warts and mice. Studies them all the time. Knows how to grow warts on anybody."

"You're a lucky man, Art. Planned the honeymoon yet?"

"Sure. She's going to Venus while I go in the opposite direction. Haven't decided yet where I'll spend that happy time. On one of the planets of the nearer stars, I suppose."

"That's perfect," the bald man said approvingly. "My wife made me stay on earth while she went to the moon. That's too close for comfort. After all, you don't have but one real honeymoon, and in my opinion every man and woman should strive to make it as nearly perfect as possible. I think the government ought to subsidize that sort of thing. Then the happy couple could put more distance between them. Think what bliss could be achieved if the man could afford to go the maximum distance in one direction and send his wife twice that far in the other direction. I mean to say, happiness is next to the ultimate, and if they could be separated so far that no trace of one ever got back to the other—well, just think of it! We would never hear of divorce again."

Fillmore's thin angular features darkened. "It is sad to think of the divorces. There's been a dozen in the past half a century. But isn't it because the couples were immature? Some of them married at under eighty years of age, and they insisted on living on the same side of the earth with each other."

"You're pretty young yourself," the bald man put in.

"I'm ninety-six," Fillmore said defensively. "That's plenty old for a man. All of my people matured early."

"And probably died early."

"Yes." Fillmore nodded. "A few of them lived to be nearly five hundred, but they were mostly females. The males usually check out between two and three hundred. Their fourteen power intelligence burns them up."

"Had your mind erased recently?"

"Yesterday. Did it so I could accept Cynthia's proposal without any reservation."

"Cynthia?"

"That's what I call her. Her real name is Xylosh. She found the name Cynthia in one of those books of ignorance unearthed from the ruins of that ancient farm called New York. She asked me to call her by that name. You know how girls are!"

"Sure. They are all very romantic. She may even expect you to be present at the wedding."

Fillmore shook his head and grinned. "She knows better than to spoil things. And I love her too much to let anything like that happen. The ceremony will take place near the earth at the hour when the north pole and the south pole swap places. I'll be somewhere beyond the sun at that time."

"Figuring on any children?"

"Of course. She wants three. We'll have them just before the ceremony."

"That's fine. Gets the dirty work out of the way before marriage and then there's nothing to spoil it. But how are you figuring—"

"That's what I came to see you about. I want to borrow your secretary."

"For what?"

"Well, it's like this. I'm old fashioned. I believe there ought to be some personal contact between a man and his wife before they have children. These laboratory things are so cold-blooded. Mental projections are much better. But there ought to be some personal contact."

"So?"

"So I want to shake hands with your secretary, then she'll shake hands with you and you shake hands with one of your men who's going east and he shakes hands with somebody on the east coast who knows Cynthia's father and that man shakes hands with her father and her father shakes hands with one of his men who shakes hands with his secretary who passes it along until it finally comes to Cynthia. That will give the matter a sort of warmth and personal touch, and then, just before the ceremony, Cynthia and I will mentally project the three children."

"Very touching," the bald man said almost tearfully. "I doubted at first that you and Cynthia actually loved each other, but I see now that any two people so affectionate can't help but love one another. You'll love the children, too."

"Of course. We're going to materialize them fully developed in the government nursery. It will take two or three minutes longer, but we intend to give them a well-rounded education at the beginning. I want the boys to understand the simpler mathematics, such as the theory of relativity and why it is possible to add numerals until you get an answer of zero square. Of course, not everyone can square zero, and it may take ten or fifteen seconds just to teach them that, but I don't want them to grow up to be two or three hours old and still be ignorant. Then, after they've learned those little unimportant things, I'll get down to the business of teaching them everything there is to know. It will take over two minutes and possibly three. Then we'll erase their minds."

"Very ambitious. But what about the girl?"

"Cynthia thinks she ought to learn about warts and I agree. If she learns to grow warts she'll have a first-class female education. I can't think of anything finer in our society. And Cynthia even plans to teach her all about mice."

"It's beautiful," the bald man said. "I'll have my secretary in whenever you're ready."

"Thanks. But not just yet. Chloroform her first. It makes me nervous to be around conscious females. They talk too much."

"Naturally. I don't expect to allow her to speak in your presence. Think I'm a fool without morals? We've got to preserve the conventions. If she saw those three strands of hair on your head she'd swoon. You're the only man in the nation with more than twelve power intelligence who isn't bald. If I didn't know you well I'd think you were effeminate. My wife got a mental glimpse of you once and said you were the handsomest man extant. It's those three strands of blond hair. Even the most beautiful woman in the world doesn't have more than six or seven. I'll bet you really projected those in a big way for Cynthia."

Fillmore felt the blood rising to his pale cheeks. "I didn't make any special effort," he denied. "Anyway, I'm very presentable. Just under nine feet tall and weigh close to a hundred. My forehead is twelve inches across and eight inches high from the root of the nose. That's better than average. Few men measure more than eleven inches across the forehead."

"True," the bald man admitted "And some persons are troubled with a chin. Fortunately you don't have one. I've got to admit that you are typical of the finer specimens of masculine beauty. Do you ever have a headache?"

"Not since I had my skull cracked. Finest Ducktor in the realm did it with a hammer. Said I needed more room to let my brain expand."

"Of course. I've got a two-inch brain expansion myself. Had to soak my skull in oil until it became malleable enough to allow for the normal brain growth. I've heard of some men having their brain taken out."

"Yeah. Some people are better off without it. But then they have to install an antennae. I wouldn't like that. Which reminds me of something: Got a news flash that scientists were going to awaken a twentieth century man. I don't approve of that sort of thing, but I'm going along to watch. Last time they awakened something from the past it took us quite a while to recover from the mental shock. Had to have my mind erased six times in as many days. Couldn't we do something to stop it?"

"There might be something," said the bald man. "Corson was working on something that would eliminate the past and make everything the present."

Only trouble seemed to be that the future got mixed up in it. No. We don't have much chance in that direction—unless—"

"I know what you're thinking," Fillmore said. "I've been working on it myself. Gave it nine seconds solid thought yesterday. If I hadn't been interrupted I might have got it. You're thinking about pure reasoning before the fact."

"Exactly. What are your conclusions?"

"It's possible. The square of nothing equals nothing. When you put nothing times nothing on paper it comes out minus infinity or infinity minus. Thus you have something. Take a mind without a fact and let it confront nothing. Almost at once it will raise nothing to the power of six. It will still have nothing, and so it will head in the other direction until it gets down to infinity minus. That in itself is reasoning *a priori*. Now it has a foundation and from that it can arrive at any conclusion extant, and quite a few that don't exist. Is that what you had in mind?"

"No. I want a conclusion without troubling to confront the mind with even nothing. That is the only way to get pure reasoning."

"If you can give me ten seconds more I'll work it out for you."

"You've already been here thirteen seconds and I'm getting bored. I only get three thousand dollars a day for sitting here, and at slave wages like that I can't put up with too much."

Fillmore nodded. "And prices are away out of reach too. Only the other day I spent six cents for twelve barrels of thousand-year-old whiskey. The world has been aiming at high wages and low prices for the past ten thousand years and we're still slaving and starving. You never told me exactly what you do."

"I work pretty hard. You see, this chair has coils in it that convert heat into Zeta Rays by shortening the wave-length. I sit here for twenty-nine minutes each day, two days a month, and concentrate all my heat through the seat of my pants. It goes through the converter and comes out Zeta Rays in China. Zeta Rays are no good for anything except to convert ordinary rock into gold, so the Chinese pipe it to Russia. Gold, being soft, is good for nothing except to burn ceremoniously in accordance with the ancient religious rites, and so a lot of it is stolen and sold on the gray market to be converted into

uranium. Uranium, being useless except for fissionable purposes, is used for fertilizer in the mineral laboratories where iron is grown. Iron is no good for anything except food, and you can't put very much of it in ordinary food, and so it is dissolved into an iron vapor and freed in the atmosphere. Iron vapor gets heavier as it cools, and so it settles on top of the clouds and holds them close to the earth and keeps the warmth of the world from escaping. So, as I sit here and warm this chair, I'm keeping the world warm."

"And getting only three thousand dollars for twenty-nine minutes of that sort of slave labor! Scandalous! I'll bet you can't afford more than a hundred vacations a year. We might as well be back in the dark age of the twentieth century. I've been advocating a one-minute work-day for the past decade, one day a month, two months a year. What good is civilization if it doesn't provide something for the poor working man? And people call me a visionary, with Utopian ideas! Bah! If I'm not mistaken, you're the man with the seat of his intelligence in the back of his lap! Right? You're being exploited!"

The bald man shook his head. "No. It's Corson who's got his intelligence in his back side. Mine is in the soles of my feet, according to Meyer who knows about such things. But Konwell claims the intelligence flows through the bloodstream in all persons."

"Not all," Fillmore contradicted. "But Konwell is right. The brain is merely the antennae. The more blood it gets the more it can express. For instance, in order to concentrate to the full power of fourteen I have to stand on my head. But I can't hang around here all day. Get your secretary in and let me shake hands with her."

"All right. But as a precaution you'd better close your eyes and bring your thoughts down to a six power level. She isn't too bright. It takes her nearly half a second to calculate the distance in inches from here to Andromeda and return via Pegasus—that is, unless you give her a clue to the problem. She's a plain dumbbell but fantastically beautiful. Tall as you are and weighs less than sixty pounds. What a shape! She turned down a billion-dollar contract to dance three minutes in a spot on one of the planets in the

Milky Way. Plain dumb! But looks! And the clothes she wears! Dazzling! Imported from Eureka. Must have cost her two-bits or more for one dress with upward of sixty yards of material in it. Made my wife gape. Nearly bankrupted me, my wife did, buying clothes after that. Spent four dollars on her in less than six years. Ten thousand separate items. But, of course, she never found anything like that imported by my secretary. I doubt if there's another in the solar system, and I know there isn't another woman able to afford twenty-five cents for a single dress. I wonder where she gets her money! Her salary here is only seven hundred dollars a day, two days a month. I'll bet she hasn't got a million dollars to her name saved up. Spends every last cent she earns, probably. Ninety cents a quarter she pays for that seventeen room apartment of hers. My wife and I have only eighteen rooms between us, her twelve rooms in China and my six rooms here. Not large either. My six rooms cover only two acres of ground and extend a mere hundred feet in the air. Cramped! I can't afford anything better, not and save anything. I've got less than a billion put aside right now, hardly enough to invest in an enterprise outside the solar system. Poverty! How that secretary of mine lives so high on her pittance, I don't know. I wouldn't be surprised if she isn't consorting mentally with somebody on some planet on the edge of space. Not that I'm narrow-minded. A woman with looks like hers deserves the best, but allowing a man on the edge of space to think about her is going pretty far, and I'm a stickler for the convention.

"Hells bells. I didn't mean to run on like this. But it upsets me to think about her loose morals when I have to work the seat of my pants to the bone over a hot chair in order to earn a bare living. And my wife throwing money around for clothes, and both my boys getting ready to enter college and not in a position to earn anything."

"I can see you're upset. Better have your mind erased."

"I would, but there isn't a good Ducktor closer than Venus. Could find a doctor, of course, but they're unreliable. They style themselves doctors because it sounds like Ducktor. Plain disgrace. Ducktor comes from the word *Quack*. Ages old. Even in the dark ages there were plenty of quacks. They had all sorts of diseases then. Yes, sir. Diseases! Little crawley things working around in their blood and flesh. And these quacks would feed these diseases all sorts of medicine! Finally the diseases up and died. Not having any intelligence to burn them out, the people of those days could live as

long as they wished. Or at least that's the way it's figured. Once in a while, about every two or three weeks, just as we erase our minds so we won't burn up too quick, those people would get together and begin killing one another. Think of it! We try to live, but they tried to die. Seems they couldn't die fast enough, so they used a lot of fissionable material and burned up everybody that way. Even that didn't satisfy them, so they used fusing material, which was more deadly, and finally completed everything to their total satisfaction. At least they left very little trace of themselves. Man had to begin all over again from the sea, beginning with the amoeba. I wonder if we're going to wind up like that a million years hence."

"Not likely," Fillmore said. "Besides, you're wrong. Man didn't begin all over again. The amoeba would have worked in another direction, seeing what a mess man made of things. What actually happened was that quite a few people were left after the hydrogen chain was set off. They lived on one of the nearer planets and returned after earth had cooled again. Then they set up things, or so they claimed, very much like they were before, with the exception that they changed their philosophy. Developed their minds first and everything else naturally followed."

"I think it's a mistake," the bald man persisted, "to develop the mind too early. As I mentioned, my two boys are just now entering college. Of course they knew a few things before, such as how to fuel themselves when in the presence of food, and how to walk, and the older one could even speak a few words, and even the younger one could change his own diaper—had been doing it since he was forty-nine—but my wife and I saw to it that they didn't learn too much too fast. That's the reason my people live so long. Don't burn ourselves up in infancy thinking. But that doesn't mean you may not be right in teaching your children, when you have them tomorrow, everything right at the start. With a fourteen power intelligence, your people are by nature compelled to do a lot of thinking, and it's your duty, as a citizen, to begin early. Had any startling thoughts lately?"

Fillmore sighed. "Just the normal ones. Figured out a simple method, just before dozing off to sleep last night, to transfer this planet to an orbit about another sun. Not that it will be of much use. A sun is a sun and it would take

thirty seconds solid thought to improve on it, and I don't know anybody capable of that much sustained thought, and there's not much point in transferring this planet, now that we know how to renew the sun whenever it cools too much."

"But it's interesting," the bald man pointed out. "It gets sort of dull staying in the same old orbit. I'm in favor of moving to another universe. Why don't you bring the matter before the Council?"

"They wouldn't listen. They don't like change. Most of them are aged, and they still think in terms of light and energy. Imagine that in a modern world! Men content to travel at the mere speed of light! Can't get over the idea that breaking through the energy barrier was just like breaking through the sound barrier."

"Was it?"

"Not exactly. But the theory that at the speed of light matter will change to pure energy was just as ridiculous as the theory that matter would disintegrate into sound waves at the speed of sound. They figure light travels at 186,000 miles per second. Perhaps it does in a straight line. I never thought it was worth the trouble of figuring out. But light waves are always at right angle, different from sound waves, and we must come to the conclusion that light does not travel in a straight line, but in a series of curves. While its theoretical speed is 186,000 miles per second, its actual speed is many times that. Thus we have a constant and a variable. If there were only a constant, it would prove out that matter would become pure energy at the speed of the constant. But it does not, for it must achieve the speed of the variable, and that cannot be achieved without traveling at a million different speeds. And even if matter changed to pure energy it must necessarily change again when it breaks through the energy barrier. But those old slow pokes in the council insist that we go on traveling at less than the speed of light. They do not know that a billion miles per second is considered slow in some laboratories. They may know it but they ignore it. Backward! Stupid! Even the ancients were better informed. They conceived varying dimensions, which is a step in the right direction. Actually we know that there is only one dimension and that is the mental dimension with diverse corridors. But in order to learn that, we had to discover, some fifty thousand years ago, upward of two thousand different dimensions. Then we

integrated them and found that they all emanated from the mind. It was merely a matter of mathematics and comprehension. And now everything is accomplished by the mind, and in another hundred thousand years we can dispense with our bodies."

"Is that good or bad?"

"Definitely good! We have the itch every few weeks and have to have our minds erased. Nerves! Without bodies we'd be without nerves. That, my friend, is the ultimate quest."

The bald man shook his head. "No. The ultimate quest is the elimination of both the body and the mind. Then we wouldn't have any troublesome thoughts."

"What would be left?"

"Us."

"How do you figure that?"

"I don't know. But you've got a fourteen power intelligence. Get the answer to it and you'll be famous."

"I'll do that. I'll do it right now."

"Not in here. Don't do any concentrating in here. I know how you are when you start thinking. Lightning crackling all around and furniture getting scorched and the building vibrating, and possibly even an earthquake. No, sir. You take your thinking home with you and get inside a thought-proofed vault. You know it's against the law to think above the seven power level out in public where you might start a hurricane or cause snow in the middle of summer."

"Yes. I can see you're right. We've got to get rid of our minds. They are troublesome. I'll go home and figure the whole thing out. And if it's safe I'll pass it along to the council. Good-bye."

"Wait! You want to shake hands with my secretary. I'm going to have her come in."

"That's right. I'd almost forgotten about Cynthia."

"That's another good thing about the elimination of the mind. We won't have to remember anything."

"Well, get her in."

"Right now." The bald man turned his head slightly, glanced at a row of tubes in a panel, selected one and looked at it for a fraction of a second. Instantly the tube glowed brightly and the door of an adjoining office vanished and a woman appeared. Seven strands of jetblack hair on her massive chinless head gave her an ultra feminine appearance, and her eyes, behind their rimless radar equipment were almost as large as a pencil eraser, lending an innocent baby-like air to her lovely features.

She advanced in mincing four-foot strides, parted her tissue-thick lips, and spoke out of a ripe mouth that was fully half an inch wide. The tone of her voice was two octaves above high C, and it so stirred Fillmore with its rich depth that he was compelled to glance at her without opening his eyes. The mental effort was immediately felt by the others, as the temperature of the room increased, and the woman blushed prettily, swaying her lovely nine feet and sixty pounds of pulchritude. She looked at Fillmore, taking in the three strands of blonde hair on his waterbucket head, and swooned. She recovered before she struck the floor, however, and looked to see whether anyone had projected a mental couch for her to fall on. No one had, so she righted herself, readjusted her dress over her twelve-inch bust, patted her seven strands of hair into place, sat down, drew one sixteen-inch foot under her and waited expectantly.

Fillmore was almost on the point of opening his eyes. But he determined to stick to the conventions, because if he gave her any encouragement she might, he knew, try to get chummy with his mind, and that would lead to complications.

"Mr. Fillmore wants to shake hands with you," the bald man explained. "Then you pass it along to me."

"But why doesn't he shake hands with you?" she asked in high C.

The bald man shook his head. "You wouldn't understand about that. But it has something to do with the voltage. Men's voltage multiply, whereas a man and a woman's voltage merely add. If we shook hands we'd burn our

brains out. But if you and he shake hands it will merely stimulate you two physically. Nothing dangerous about it."

"It seems immoral," she said.

"I hadn't thought of it that way," the bald man admitted. "But history reveals that men and women even went further than that centuries ago, and never thought anything about it."

The woman coyly lowered her eyes. "If he shakes hands with me," she said softly, "he really should marry me."

"Why?"

"Because I'd probably have a dozen children before tomorrow night."

"Good Lord!" the bald man exclaimed. "That's right. Have you thought about that, Fillmore?"

"No," Fillmore said. "My mind has been turned off for some time. But the hypothesis is reasonable. I'll have to figure out something."

"Not here."

"I've got to. Hold on to your chairs for a moment. I'm going to turn my mind on. Get ready for the shock."

"Not the fourteen power. Don't go over eight or nine."

"Think I'm a fool? I'll keep it down to seven power. Brace yourself, young lady. This is going to be a shock."

There was a moment of still silence, then the heat in the room began gradually to rise. In another moment the three blonde hairs were sticking straight up on Fillmore's head and waves of thought were washing about the room in an endless rising tide. The walls creaked and strained and the ceiling sighed upward elastically, giving as it was intended, and a thin gray haze obscured the natural light which was reflected from outside by means of a force field. Fillmore put a cigarette into his mouth, concentrated on the tip of it until it flared into flame, then resumed thinking for a total of two seconds.

"I have it," he said at last. "I'll pull out a strand of my hair, seal it in a ten-ton safe and ship it to Cynthia by armored tube. That is the greatest expression of love any man can possibly make."

"But," the woman broke in, "that is too much. I'm sure she would be satisfied with less."

"No." Fillmore shook his head. "The people of my clan are noted for their courage and chivalry. Should I choose to make the supreme sacrifice for my beloved, who is there to stop me? Call in the reporters. We'll make the announcement right now. My Cynthia shall be honored above women."

"It's beautiful," the woman sighed. "To be loved like that is something every woman dreams of."

"It may cause trouble," the bald man put in. "There was a case once in which a man came within speaking distance of his wife, and the women went wild about it. Some women even insisted on living near their husbands after that, and then the divorces began. You shouldn't do it, Fillmore. Take my word for it, you'll start something that will be hard to stop."

"Maybe you're right," Fillmore admitted. "Men have killed themselves for their wives, but that's nothing. They have given them planets, but that is nothing; they have showered them with stars, and that is very little because there are so many stars. But no man has ever given a woman, up until this time, a strand of his hair, largely because no man had any hair to give. Yes, it would cause trouble. You'd have to grow hair then, and that would cause the race to slip right back into the dark age. This is a problem that calls for fourteen power thought."

"Not here," the bald man shouted.

"Right here," Fillmore insisted. "I'll project a thought-proofed wall about me so that you won't get hurt."

"Well, don't take all day. You've been in this room nearly thirty seconds and haven't accomplished anything yet. Get to work and finish the task. But remember, don't shake this place down or burn it up."

"Relax," Fillmore said.

The bald man and the woman watched the wall grow and then become a sphere. They could easily tell that it was more than six feet thick and harder than a diamond, for it would take every bit of that to restrain Fillmore's full voltage. Besides, he sometimes became radio-active when he turned on full power.

The full matter required one point three seconds. Then the thought-proofed sphere was complete. Then began the dreary wait. Every second seemed like a light year. Five seconds passed, then ten, and still they waited. Then the woman sat bolt upright and uttered an exclamation.

"The sphere is bulging out," she screamed. "It's going to explode."

It was then that the bald man caught the thought beam that came through the sphere: "I've got it! Thinking about hair reminded me of the twentieth century man—he destroyed himself and the world with fissionable hydrogen—only he didn't really destroy himself! Do you get it? He only changed things.

"That's the answer. To eliminate the mind and body we don't destroy, we merely change. Change is the only definite thing anyway. Besides, it will be an interesting thing to cogitate on—the change."

The thought ended on an excited note. Then the sphere shimmered through the spectrum and with a pyrotechnic display burst outward.

Red, white, blue, purple, and finally black heat shot ten thousand miles through the earth below. The planet shuddered in protest, then disrupted into a gaseous nova. The ultimate quest had succeeded.

Just as in the dark age....

THE FULL PROJECT GUTENBERG™ LICENSE

PLEASE READ THIS BEFORE YOU DISTRIBUTE OR USE THIS WORK

To protect the Project Gutenberg™ mission of promoting the free distribution of electronic works, by using or distributing this work (or any other work associated in any way with the phrase “Project Gutenberg”), you agree to comply with all the terms of the Full Project Gutenberg License available with this file or online at www.gutenberg.org/license.

Section 1. General Terms of Use and Redistributing Project Gutenberg electronic works

1.A. By reading or using any part of this Project Gutenberg electronic work, you indicate that you have read, understand, agree to and accept all the terms of this license and intellectual property (trademark/copyright) agreement. If you do not agree to abide by all the terms of this agreement, you must cease using and return or destroy all copies of Project Gutenberg electronic works in your possession. If you paid a fee for obtaining a copy of or access to a Project Gutenberg electronic work and you do not agree to be bound by the terms of this agreement, you may obtain a refund from the person or entity to whom you paid the fee as set forth in paragraph 1.E.8.

1.B. “Project Gutenberg” is a registered trademark. It may only be used on or associated in any way with an electronic work by people who agree to be bound by the terms of this agreement. There are a few things that you can do with most Project Gutenberg electronic works even without complying with the full terms of this agreement. See paragraph 1.C below. There are a lot of things you can do with Project Gutenberg electronic works if you follow the terms of this agreement and help preserve free future access to Project Gutenberg electronic works. See paragraph 1.E below.

1.C. The Project Gutenberg Literary Archive Foundation (“the Foundation” or PGLAF), owns a compilation copyright in the collection of Project Gutenberg electronic works. Nearly all the individual works in the collection are in the public domain in the United States. If an individual work is unprotected by copyright law in the United States and you are

located in the United States, we do not claim a right to prevent you from copying, distributing, performing, displaying or creating derivative works based on the work as long as all references to Project Gutenberg are removed. Of course, we hope that you will support the Project Gutenberg mission of promoting free access to electronic works by freely sharing Project Gutenberg works in compliance with the terms of this agreement for keeping the Project Gutenberg name associated with the work. You can easily comply with the terms of this agreement by keeping this work in the same format with its attached full Project Gutenberg License when you share it without charge with others.

1.D. The copyright laws of the place where you are located also govern what you can do with this work. Copyright laws in most countries are in a constant state of change. If you are outside the United States, check the laws of your country in addition to the terms of this agreement before downloading, copying, displaying, performing, distributing or creating derivative works based on this work or any other Project Gutenberg work. The Foundation makes no representations concerning the copyright status of any work in any country other than the United States.

1.E. Unless you have removed all references to Project Gutenberg:

1.E.1. The following sentence, with active links to, or other immediate access to, the full Project Gutenberg License must appear prominently whenever any copy of a Project Gutenberg work (any work on which the phrase “Project Gutenberg” appears, or with which the phrase “Project Gutenberg” is associated) is accessed, displayed, performed, viewed, copied or distributed:

This eBook is for the use of anyone anywhere in the United States and most other parts of the world at no cost and with almost no restrictions whatsoever. You may copy it, give it away or re-use it under the terms of the Project Gutenberg™ License included with this eBook or online at www.gutenberg.org. If you are not located in the United States, you will have to check the laws of the country where you are located before using this eBook.

1.E.2. If an individual Project Gutenberg electronic work is derived from texts not protected by U.S. copyright law (does not contain a notice indicating that it is posted with permission of the copyright holder), the work can be copied and distributed to anyone in the United States without paying any fees or charges. If you are redistributing or providing access to a work with the phrase “Project Gutenberg” associated with or appearing on the work, you must comply either with the requirements of paragraphs 1.E.1 through 1.E.7 or obtain permission for the use of the work and the Project Gutenberg trademark as set forth in paragraphs 1.E.8 or 1.E.9.

1.E.3. If an individual Project Gutenberg electronic work is posted with the permission of the copyright holder, your use and distribution must comply with both paragraphs 1.E.1 through 1.E.7 and any additional terms imposed by the copyright holder. Additional terms will be linked to the Project Gutenberg License for all works posted with the permission of the copyright holder found at the beginning of this work.

1.E.4. Do not unlink or detach or remove the full Project Gutenberg License terms from this work, or any files containing a part of this work or any other work associated with Project Gutenberg.

1.E.5. Do not copy, display, perform, distribute or redistribute this electronic work, or any part of this electronic work, without prominently displaying the sentence set forth in paragraph 1.E.1 with active links or immediate access to the full terms of the Project Gutenberg License.

1.E.6. You may convert to and distribute this work in any binary, compressed, marked up, nonproprietary or proprietary form, including any word processing or hypertext form. However, if you provide access to or distribute copies of a Project Gutenberg work in a format other than “Plain Vanilla ASCII” or other format used in the official version posted on the official Project Gutenberg website (www.gutenberg.org), you must, at no additional cost, fee or expense to the user, provide a copy, a means of exporting a copy, or a means of obtaining a copy upon request, of the work in its original “Plain Vanilla ASCII” or other form. Any alternate format must include the full Project Gutenberg License as specified in paragraph 1.E.1.

1.E.7. Do not charge a fee for access to, viewing, displaying, performing, copying or distributing any Project Gutenberg works unless you comply with paragraph 1.E.8 or 1.E.9.

1.E.8. You may charge a reasonable fee for copies of or providing access to or distributing Project Gutenberg electronic works provided that:

- You pay a royalty fee of 20% of the gross profits you derive from the use of Project Gutenberg works calculated using the method you already use to calculate your applicable taxes. The fee is owed to the owner of the Project Gutenberg trademark, but he has agreed to donate royalties under this paragraph to the Project Gutenberg Literary Archive Foundation. Royalty payments must be paid within 60 days following each date on which you prepare (or are legally required to prepare) your periodic tax returns. Royalty payments should be clearly marked as such and sent to the Project Gutenberg Literary Archive Foundation at the address specified in Section 4, "Information about donations to the Project Gutenberg Literary Archive Foundation."
- You provide a full refund of any money paid by a user who notifies you in writing (or by e-mail) within 30 days of receipt that s/he does not agree to the terms of the full Project Gutenberg™ License. You must require such a user to return or destroy all copies of the works possessed in a physical medium and discontinue all use of and all access to other copies of Project Gutenberg™ works.
- You provide, in accordance with paragraph 1.F.3, a full refund of any money paid for a work or a replacement copy, if a defect in the electronic work is discovered and reported to you within 90 days of receipt of the work.
- You comply with all other terms of this agreement for free distribution of Project Gutenberg™ works.

1.E.9. If you wish to charge a fee or distribute a Project Gutenberg™ electronic work or group of works on different terms than are set forth in this agreement, you must obtain permission in writing from the Project Gutenberg Literary Archive Foundation, the manager of the Project

Gutenberg™ trademark. Contact the Foundation as set forth in Section 3 below.

1.F.

1.F.1. Project Gutenberg volunteers and employees expend considerable effort to identify, do copyright research on, transcribe and proofread works not protected by U.S. copyright law in creating the Project Gutenberg™ collection. Despite these efforts, Project Gutenberg™ electronic works, and the medium on which they may be stored, may contain “Defects,” such as, but not limited to, incomplete, inaccurate or corrupt data, transcription errors, a copyright or other intellectual property infringement, a defective or damaged disk or other medium, a computer virus, or computer codes that damage or cannot be read by your equipment.

1.F.2. LIMITED WARRANTY, DISCLAIMER OF DAMAGES - Except for the “Right of Replacement or Refund” described in paragraph 1.F.3, the Project Gutenberg Literary Archive Foundation, the owner of the Project Gutenberg™ trademark, and any other party distributing a Project Gutenberg™ electronic work under this agreement, disclaim all liability to you for damages, costs and expenses, including legal fees. YOU AGREE THAT YOU HAVE NO REMEDIES FOR NEGLIGENCE, STRICT LIABILITY, BREACH OF WARRANTY OR BREACH OF CONTRACT EXCEPT THOSE PROVIDED IN PARAGRAPH 1.F.3. YOU AGREE THAT THE FOUNDATION, THE TRADEMARK OWNER, AND ANY DISTRIBUTOR UNDER THIS AGREEMENT WILL NOT BE LIABLE TO YOU FOR ACTUAL, DIRECT, INDIRECT, CONSEQUENTIAL, PUNITIVE OR INCIDENTAL DAMAGES EVEN IF YOU GIVE NOTICE OF THE POSSIBILITY OF SUCH DAMAGE.

1.F.3. LIMITED RIGHT OF REPLACEMENT OR REFUND - If you discover a defect in this electronic work within 90 days of receiving it, you can receive a refund of the money (if any) you paid for it by sending a written explanation to the person you received the work from. If you received the work on a physical medium, you must return the medium with your written explanation. The person or entity that provided you with the defective work may elect to provide a replacement copy in lieu of a refund. If you received the work electronically, the person or entity providing it to

you may choose to give you a second opportunity to receive the work electronically in lieu of a refund. If the second copy is also defective, you may demand a refund in writing without further opportunities to fix the problem.

1.F.4. Except for the limited right of replacement or refund set forth in paragraph 1.F.3, this work is provided to you 'AS-IS', WITH NO OTHER WARRANTIES OF ANY KIND, EXPRESS OR IMPLIED, INCLUDING BUT NOT LIMITED TO WARRANTIES OF MERCHANTABILITY OR FITNESS FOR ANY PURPOSE.

1.F.5. Some states do not allow disclaimers of certain implied warranties or the exclusion or limitation of certain types of damages. If any disclaimer or limitation set forth in this agreement violates the law of the state applicable to this agreement, the agreement shall be interpreted to make the maximum disclaimer or limitation permitted by the applicable state law. The invalidity or unenforceability of any provision of this agreement shall not void the remaining provisions.

1.F.6. INDEMNITY - You agree to indemnify and hold the Foundation, the trademark owner, any agent or employee of the Foundation, anyone providing copies of Project Gutenberg™ electronic works in accordance with this agreement, and any volunteers associated with the production, promotion and distribution of Project Gutenberg™ electronic works, harmless from all liability, costs and expenses, including legal fees, that arise directly or indirectly from any of the following which you do or cause to occur: (a) distribution of this or any Project Gutenberg work, (b) alteration, modification, or additions or deletions to any Project Gutenberg work, and (c) any Defect you cause.

Section 2. Information about the Mission of Project Gutenberg

Project Gutenberg is synonymous with the free distribution of electronic works in formats readable by the widest variety of computers including obsolete, old, middle-aged and new computers. It exists because of the

efforts of hundreds of volunteers and donations from people in all walks of life.

Volunteers and financial support to provide volunteers with the assistance they need are critical to reaching Project Gutenberg's goals and ensuring that the Project Gutenberg collection will remain freely available for generations to come. In 2001, the Project Gutenberg Literary Archive Foundation was created to provide a secure and permanent future for Project Gutenberg and future generations. To learn more about the Project Gutenberg Literary Archive Foundation and how your efforts and donations can help, see Sections 3 and 4 and the Foundation information page at www.gutenberg.org.

Section 3. Information about the Project Gutenberg Literary Archive Foundation

The Project Gutenberg Literary Archive Foundation is a non-profit 501(c)(3) educational corporation organized under the laws of the state of Mississippi and granted tax exempt status by the Internal Revenue Service. The Foundation's EIN or federal tax identification number is 64-6221541. Contributions to the Project Gutenberg Literary Archive Foundation are tax deductible to the full extent permitted by U.S. federal laws and your state's laws.

The Foundation's business office is located at 41 Watchung Plaza #516, Montclair NJ 07042, USA, +1 (862) 621-9288. Email contact links and up to date contact information can be found at the Foundation's website and official page at www.gutenberg.org/contact

Section 4. Information about Donations to the Project Gutenberg Literary Archive Foundation

Project Gutenberg™ depends upon and cannot survive without widespread public support and donations to carry out its mission of increasing the number of public domain and licensed works that can be freely distributed in machine-readable form accessible by the widest array of equipment

including outdated equipment. Many small donations (\$1 to \$5,000) are particularly important to maintaining tax exempt status with the IRS.

The Foundation is committed to complying with the laws regulating charities and charitable donations in all 50 states of the United States. Compliance requirements are not uniform and it takes a considerable effort, much paperwork and many fees to meet and keep up with these requirements. We do not solicit donations in locations where we have not received written confirmation of compliance. To SEND DONATIONS or determine the status of compliance for any particular state visit www.gutenberg.org/donate.

While we cannot and do not solicit contributions from states where we have not met the solicitation requirements, we know of no prohibition against accepting unsolicited donations from donors in such states who approach us with offers to donate.

International donations are gratefully accepted, but we cannot make any statements concerning tax treatment of donations received from outside the United States. U.S. laws alone swamp our small staff.

Please check the Project Gutenberg web pages for current donation methods and addresses. Donations are accepted in a number of other ways including checks, online payments and credit card donations. To donate, please visit: www.gutenberg.org/donate.

Section 5. General Information About Project Gutenberg electronic works

Professor Michael S. Hart was the originator of the Project Gutenberg concept of a library of electronic works that could be freely shared with anyone. For forty years, he produced and distributed Project Gutenberg eBooks with only a loose network of volunteer support.

Project Gutenberg eBooks are often created from several printed editions, all of which are confirmed as not protected by copyright in the U.S. unless a

copyright notice is included. Thus, we do not necessarily keep eBooks in compliance with any particular paper edition.

Most people start at our website which has the main PG search facility:
www.gutenberg.org.

This website includes information about Project Gutenberg, including how to make donations to the Project Gutenberg Literary Archive Foundation, how to help produce our new eBooks, and how to subscribe to our email newsletter to hear about new eBooks.
