“Familiar in their Mouths as HOUSEHOLD WORDS.”—SHAKESPEARE.

HOUSEHOLD WORDS.

A WEEKLY JOURNAL.

CONDUCTED BY CHARLES DICKENS.

N^o. 7.] SATURDAY, MAY 11, 1850. [PRICE 2*d*.

THE FIRE BRIGADE OF LONDON.

Earth, Air, and Water are necessary conditions of human life; but Fire is the first great element of civilisation. Fire, the first medium between the 'cooking animal' and the wild root and raw-flesh-devouring savage; fire, the best, because the most useful of servants, and, according to the old proverb, the worst, because the most tyrannical of masters; fire, the chief friend of man in creations of nature and of industrial art, yet the most potent of all enemies in destruction; fire, the most brilliant and magnificent object on the earth, yet the most frightful and appalling when once it obtains dominion over man and man's abodes;—to subdue, and render docile to all needs, this devouring dragon, and bend his splendid crests, not only to 'boil the pot' but to lick the dust before the feet of Science, this is one of the greatest triumphs of mankind, the results of which are every year more and more stupendous.

But, amidst all our mastery, we are never permitted to forget that this illustrious slave has neither abandoned nor abated one jot of his original nature. Of this we are but too constantly reminded. Not to speak of lightning and volcanic eruptions, the weekly record of colliery and other mine explosions, of steamboat explosions, the burning of ships, and the dismal transformation to a heap of ashes of valuable warehouses, costly public edifices, or private houses, with 'dreadful loss of life,' need but the slightest mention to excite a thrill of alarm, or some passing thought of caution in the mind of every person holding the smallest stake in the social community.

To meet this sudden emergency, therefore, and to restore the balance of power, or, rather, to put down the mutiny of this powerful slave, and reduce him to his habitual subserviency, we have the Fire Brigade, divided into

four sections, and having nineteen stations in the most central quarters of the metropolis. This includes two ‘mighty engines’ floating on the Thames.

‘Of all the rallying words,’ says a writer in Charles Knight’s “London,” ‘whereby multitudes are gathered together, and their energies impelled forcibly to one point, that of “*Fire!*” is, perhaps, the most startling and the most irresistible. It levels all distinctions; it sets at nought sleep, and meals, and occupations, and amusements; it turns night into day, and Sunday into a “working-day;” it gives double strength to those who are blessed with any energy, and paralyses those who have none; it brings into prominent notice, and converts into objects of sympathy, those who were before little thought of, or who were, perhaps, despised; it gives to the dwellers in a whole huge neighbourhood the unity of one family.’

But even while we are trimming our midnight lamp to write this paper, the cry of ‘Fire!’ suddenly resounds from a distant street. The heavy boots of a policeman clatter along beneath our window. The cry is repeated by several voices, and more feet are heard hurrying along. The fire is in a squalid court, leading into a mews which runs close to the backs of the houses of one side of a great square. We hastily struggle into an overcoat, snatch up a hat, and issue forth to follow the alarming cry.

The tumult sounds in the court; the cry of ‘Fire!’ is wildly repeated in a woman’s voice from one of the windows of the mews; now from another window!—now from several. ‘Fire! fire!’ cry voices of many passengers in streets, and away scamper the policemen to the nearest stations of the Fire Brigade, passing the word to other policemen as they run, till all the police force in the neighbourhood are clattering along the pavement, some towards the scene of the fire, but most of them either towards an engine-station, to one of the Fire-escapes of the Royal Society, or to pass the word to the policeman whose duty it will be to run to the engine-station next beyond. By this means of passing the word, somebody arrives at the gates of the Chief Office of the Fire Brigade, in Watling Street, and, seizing the handle of the night-bell, pulls away at it with the vigour which such events always call forth.

The fireman on duty for the night, immediately opens the gate, and receives the intelligence, cutting short all loquacity as much as possible, and eliciting the spot where the fire has broken out, and the extent to which it was raging when the person left. The fireman then runs to a bell-handle, which he pulls; and applying his ear to the mouth-piece of a pipe, hears a voice ask, ‘What is it?’ (The fireman hears his own voice sound as if at a great distance; while the voice actually remote sounds close in the mouth-piece, with a strange preternatural effect.) The bell-wire reaches up to the

Superintendent's bedside; and the bell being rung, Mr. Braidwood raises himself on one elbow, and applying his mouth to the other end of the tube, answers, and gives orders. A few words of dialogue conducted in this way, suffice. Up jumps Mr. Braidwood—crosses the passage to his dressing-room (armoury, we ought rather to call it), and in three minutes is attired in the thick cloth frock-coat, boots, and helmet of the Fire Brigade, fixing buttons and straps as he descends the stairs.

Meanwhile all the men have been equally active below. No sooner has the fireman aroused Mr. Braidwood, than he rings the bell of the foreman, the engineer, and the 'singlemen's bell'—which means the bell of the division where the four unmarried men sleep. He then runs out to the stables, calling the 'charioteer' by the way, and two other firemen lodging close by; after which he returns to assist in harnessing the horses.

Owing to this simultaneous action, each according to his special and general duties, by the time Mr. Braidwood reaches the bottom of the stairs, the engine has been got out, and put in working order. All its usual furniture, implements, and tools are placed within, or packed about it. Short scaling-ladders, made to fit into each other, are attached to the sides; six lengths of hose; branch-pipes, director-pipes, spare nozzle, suction-pipes, goose-neck, dogs'-tails (the first to deliver water into the engine; the second are iron wrenches), canvas sheet, with rope handles round the edge (to catch people who will boldly jump out of window), dam-board (to prevent water from plug flowing madly away), portable cistern, strips of sheep-skin (to mend bursting hose), balls of cord, flat hose, escape-chain, escape-ropes, mattock, saw, shovel, pole-axe, boat-hook, crow-bar (*such* a fellow!) to burst through doors or walls, or break up pavement; instruments for opening fire-plugs, and keys for turning stop-cocks of water-mains, &c.

All being ready, the Superintendent mounts the engine to the right of the driver, and the engineer, foreman, and firemen mount also, and range themselves on each side of the long red chest at the top, which contains the multifarious articles just enumerated. Off they start—brisk trot—canter—gallop! A bright red gleam overspreads the sky to the westward. The Superintendent knows that the fire in the court has reached the mews, and the stables are in flames. Full gallop!

Along the midnight streets, which are now all alive with excited people—some having left the theatres, others wending homeward from supper at a

friend's, from dances, or perhaps late hours of business in various trades,—all are running in the direction of the fire! As the engine thunders by them, the gas-lamps gleaming on the helmets of the firemen and the eager heads of the horses, the people send up a loud shout of 'Fi-ire!' and follow pell-mell in its wake.

Arriving at the mews, the Superintendent sees exactly all that has happened—all that must happen—all that may happen—and all that may be prevented. The court is doomed to utter ruin and ashes; so is the mews. Two of the larger stables are on fire, and the flames are now devouring a loft full of hay and straw. But in doing this, their luminous tongues stretch far beyond, seeking fresh food when this is gone. The wind too!—the fatal wind, sets in the direction of the square! The flames are struggling, and leaping, and striving with all their might to reach the back premises of the houses on this side of the square; and reach it they will, if this wind continues!

Meanwhile, two of the Fire Brigade engines from stations nearer at hand than that of the Chief Office, are already here, and hard at work. A fourth engine arrives from the Chief Office close upon the wheels of the first—and now a fifth comes thundering up the mews. The Superintendent taking command of the whole, and having ascertained that all the inmates of the court and mews have been got out, gives orders for three of the engines to continue their efforts to overcome the fire, and at any rate to prevent it spreading to the houses in the square on each side of the one which is now so imminently threatened. He then directs his own engine and one other to be driven round to the front of the house in the square, so as to attack the enemy both in front and rear at the same time. The flames have just reached it—not a moment is to be lost! As he drives off, innumerable cries and exhortations seek to arrest his progress, and to make him alter his intentions. Several voices, louder and more excited than all the rest,—vociferating something about 'saving her life'—cause him to pause, and prepare to turn, till, amidst the confusion, he contrives to elicit the fact that a stable cat has been unable to escape, and has darted out upon the burning roof of a loft—and, also, that Mrs. Jessikin's laundry—but he listens no further, and gallops his engine round to the front of the house in the square, followed by shouts of excitement and several yells.

The Fire-escape ladders of the Royal Society have already arrived here in front. All the inmates have been got out by the door—at least it is *said* that all are out, by those white figures with faces as white, who, looking round them, really see nothing distinctly and know nothing as it is—having been awoken by the cries of ‘Fire,’ and not being quite sure if all this mad hubbub of people, flames, voices, and water-spouts, may not be some horrible nightmare vision.

The water-plugs have been drawn, and the gutters are all flooded. The gully-hole is covered—a dam-board arrests the stream and gives depth—the portable cistern is quickly filled—the suction-pipes of the engines, being placed in it, both of them are got into position. The flames have reached the back of the house; their points are just seen rising above the roof! A rush of people seize on the long pump-levers, all mad to work the engines. The foreman rapidly selects ten for each side—sets them to work—and then, one at a time, takes down their names in a book for the purpose, so that they may be paid a shilling an hour—those who choose to accept it. But a hundred volunteer to work—they don’t want the shilling—they want to pump. ‘Let *me* pump!’ ‘*I’m* the one to pump!’ ‘Do you want any more to pump?’ resound on all sides from men of all classes, while the crowd press forward, and can scarcely be got to leave room enough for the engines to be worked—and they would not, but for the man with the director-pipe, who soon makes a watery circle around him. The fortunate volunteers at the levers now begin to pump away with a fury that seems perfectly frantic. The Superintendent, who has had many a fine-engine disabled during the first five minutes of this popular furor, insists upon their ardour being restrained; and with no little difficulty succeeds in getting his pumping done a degree less madly. Who, that did not know them, would believe that these outrageous pumpers were the very same people who stood with lack-lustre eyes at some tedious operation in trade or workshop, all day long; or, who sat stolidly opposite each other in an omnibus, without a word to say, and seeming too dull for either thought or action? Look at them now!

The wind still blows strongly from the blazing stables—the flames are rapidly eating their way through the house from the back! The two upper stories are already on fire. A figure appears at one of the windows, and makes signs. All the inmates had NOT been got out! An aged woman—a very old and faithful servant of the family—had lingered behind, vainly endeavouring to pack up some of her dear young mistress’s clothes and

trinkets. A prolonged cry bursts from the crowd, followed with innumerable pieces of advice—bawled, hoarsely shouted, or rapidly screamed to the Superintendent, and the firemen directing the nozzle of the hose.

‘Point the nozzle up to the *window*!’

‘Up to the *roof* of that room!’

‘*Smash* the windows!’

‘The *Fire-escape*, Mr. Braidwood!’

‘Bring the ropes for her!—*throw up* the ropes to her!’

‘Don’t smash the windows; you’ll *cut* her!’

‘She’s gone to *jump out* at the back!’

‘She is lying on the *floor*!’

‘She’s *suffocated*, Mr. Braidwood!’

‘Send up the *water*, to bring her to her senses!’

‘She’s burnt to *ashes*, Mr. Braidwood—I see her lying *all of a red tinder*!’

Amidst these vociferations, the Superintendent, having a well-practised deaf ear for such pieces of advice, has despatched two firemen to ascend the stairs (no fireman is allowed to enter a burning house alone) while two others enter below, and a lengthened hose is handed up to them with a boat-hook through the front drawing-room window, in order to combat the fire at close quarters, each one being accompanied by another fireman, in case of one fainting from heat or smoke, and meantime to assist in getting out furniture from the rooms not yet touched by the flames.

The two foremost firemen have now ascended the stairs. One remains on the second-floor landing, to watch, and give notice if their retreat is likely to be cut off, while the other ascends to the upper room where the poor old servant had been last seen. The room is quite full of smoke. He therefore drops down directly with his face almost touching the floor (because, as the smoke ascends, he thus gets ten or twelve inches of clear space and air), and in this way creeps and drags himself along till he sees a bundle of something struggling about, which he at once recognises, seizes, and drags off as quickly as possible. Almost exhausted, he meets his comrade on the stairs, who instantly giving aid, they bring down a little white, smutty, huddled-up bundle, with a nightcap and arms to it; and as they emerge from

the door, are greeted with shouts of applause, and roars and screams of 'Bravo! Bravo! God bless 'em! Bravo!' from voices of men, and women, and boys.

The old woman presently comes to herself. She holds something in one hand, which she had never loosed throughout, though she really does not know what it is. 'At all events,' says she, 'I've saved *this*!'

It is a hearth-broom.

The two firemen, each bearing a hose, have now got a position inside the house—one standing on the landing-place of the second-floor within ten or twelve feet of the flames, the other planted in the back drawing-room. The first directs his nozzle so that the water strikes with the utmost force upon the fire, almost in a straight line, dashing it out into black spots, and flaws, and steam, as much by the violence of the concussion as the antagonistic element. The other fireman directs his jet of water to oppose the advances of the flames from the rafters of the stables behind, and the wood-work of the back premises. Both the men are enveloped in a cloud of hot steam, so hot as scarcely to be endurable, and causing the perspiration to pour down their faces as fast as the water runs down the walls from the vigorous 'playing of their pipes.'

But next door—to the right—what a long succession of drawing-room and dining-room chairs issue forth, varied now and then with a dripping hamper of choice wine, and the sound of cracking bottles; now, with a flattened cradle, now a tea-tray of richly-bound books; now, a turbot-kettle, and then more chairs!

In the door-way of the house on the left, there is a dreadful jam. An abominable, huge mahogany table has fixed one of its corners into the wall, on one side, and the brass castor of one leg into a broken plank of the flooring, on the other, just as a Broadwood horizontal-grand was coming down the stairs in the most massive manner (like a piano conscious of Beethoven), with its five bearers. These five men with the piano-forte, receiving a check in the passage from three men bearing boxes and a large clothes-horse, who had themselves received a check by the jam of the huge mahogany and its eight or nine excited blockheads, the stoppage became perfect, and the confusion sheer madness. Some of the inmates of this house, who had been wildly helping and handing down all sorts of things, observing that a stoppage had occurred below, and believing they had no

more time to spare before the flames would penetrate their walls, brought baskets to the window, and with great energy threw out a quantity of beautiful china, glass, and choice chimney ornaments down upon the stones below, to be taken care of; also an empty hat-box.

Above all the tumult, and adding in no small degree to the wildness and abrupt energies of the scene, a violent knocking at doors in the square is frequently heard, sometimes by policemen, at other times by excited relations suddenly arriving, desperate to give their advice, and see it attended to. The bedroom windows, in rows on either side, are alive with heads, many of them in night-caps, while the upper windows of several, apparently 'the nurseries,' are crowded with white dolls, whose round white nobs are eagerly thrust forth. In the windows of the houses, lights are seen to move about rapidly from room to room, and windows are continually thrown up; a figure looks out wildly—then suddenly disappears.

The two firemen who had gained positions inside the house, each with his long hose supplied from the engine below, had hitherto maintained their posts; the one on the second-floor landing having very successfully repelled the advance of the fire, the other in the back drawing-room having fairly obtained a mastery. But a strong gust of wind rising again, sets all their previous success at nought. The flames again advance; and all their work has to be done over again.

By this time the two men are nearly exhausted; two other firemen are, however, close at hand to relieve them. They take their places. As the flames advance, the engines below are worked with redoubled energy by the people, who also relieve each other; but no one will relinquish his place at the pump-lever, so long as he is able to stand, or have one heave up, or one bang down, more. Still the flames advance!—they enter the house!—the front drawing-room is suddenly illuminated!—a glare of light is reflected from a great looking-glass on one of the walls! A loud shout of excitement resounds from the crowd—while bang! bang! go the engine-pumps.

The fireman, who is surrounded by so strong a glare of light that he appears all on fire, is seen to retreat a few paces towards the door. He is presently joined by another fireman, who runs to the front drawing-room window, out of which he suspends an iron chain to secure their escape, in case of need, and then returns to his comrade. They rally, and each with his

brass director-pipe advances again within half-a-dozen paces of the blazing walls. They are, foot by foot, driven back into the front drawing-room. The flames follow them, and soon are very close to the or molu frame-work of the great looking-glass.

Bang! bang! go the engines.

‘Save the glass!’ shout numbers of voices.

‘The ceiling! the ceiling’s bursting down!’ cry others.

Bang! bang! go the engines.

‘Save the pieces!’

‘The door-post’s on fire!’

‘Look behind you!’

‘The glass!—the glass!’

‘Save yourselves!’

Bang! bang! go the engines.

The Superintendent has sent orders to the firemen to give no more attention to the interior of this house, except with a view to prevent the fire spreading to the adjoining houses. Consequently, the streams of water are now directed to drenching the walls, and beating back the flames on either side. The great looking-glass, no longer an object of special protection, is presently reached by the flames; they coil and cluster round the frame-work, which, breaking out into jets of coloured fire, gives a splendid magnificence to the design of the carving. The crowd jump up and down to see, and also from excitement. The flames flap about, and point their long luminous tongues across the broad plate of the glass, which for a moment reflects every object in the room,—the falling ceiling—the firemen in their helmets—the blazing ruin around;—and then, crack!—clash! clash!—the whole falls, a wreck of sharp angles.

Again a loud shout from the crowd below!—not so much of regret as a kind of wild purposeless joy, which causes them again to leap up and down, expecting and (without knowing it) hoping the same thing will happen to some other glass in the room. Melted lead from the roof now runs gleaming down—spurting upon the helmet of one of the firemen, and then running in straggling lines down his thick coat; while a slate falling, as usual, edgeways, sticks across the centre-piece of his comrade’s helmet. Now,

with a rattling and loud rumble, falls the partition between the front and back drawing-rooms, and with it a great part of the ceiling! A terrific shout of alarm bursts from the crowd. The two firemen are buried in the ruins. The whole space is filled with the dense smoke and with piles of lath and plaster, and brick and blazing wood.

But see!—a helmet, white with mortar, rises from the floor near the window-sill—and now another! One after the other, the exhausted firemen descend the iron chain, and are caught in the arms of the Superintendent and two of their comrades below, while loud shouts and vociferations of applause burst from the crowd.

The stable cat, too, from the mews! See! she has crossed between the burning rafters, and leaped into the balcony of the next house, with smoking tail and ears.

The flames have been smothered for a time by this fall of the ceiling and partition-wall; the Superintendent has now got seven engines round to the front; he takes advantage of the fortunate accident; the wind, too, has shifted; the seven engines pour torrents of water upon the smoking mass and against the walls, and thus continue till the most frightful of all enemies is thoroughly subdued and reduced to blackness and quietude. Most dismal is the scene of devastation; but the enemy is at all events laid prostrate and rendered incapable of further mischief.

Drenched to the skin with cold water, and reeking at the same time with perspiration, the gallant men of the Fire Brigade return to their several quarters. Two of them, however, remain on watch with an engine all night, a change of clothes and ‘a dram’ being sent them from the station.

The present efficient condition of fire-engines, as may easily be supposed, has only been the result of many years of skilful experiment and practical experience. Our ancestors (notwithstanding their wisdom) were by no means furnished with such means of extinguishing fire, although, from the great number of wooden buildings, and greater quantity of wooden materials employed, to say nothing of thatch, they had greater need of them. On the other hand, they had not so many scientific combustibles among them. Still, the want of a proper engine is manifest from what we know of their attempts in that way. They used squirts,—actually nothing but squirts. Every alderman was obliged to provide one. It will be understood that the squirt was not of schoolboy dimensions, but so large as to require two men,

holding it in their arms between them, like a sort of mummy, to dip its nose into a bucket, and then, raising it to the proper angle, discharge the contents at the building on fire.

The first construction of the fire engine, properly so called, is attributable to a German named Hautsch, in 1657, which was afterwards improved by the brothers Van der Heyden, in 1672. But, though the merit of the invention confers all due honour on the engineering mind of Germans, it may be questioned whether the character of the people was ever of a kind to induce the working of them with promptitude or efficiency. So recently as a few years ago, when the writer was staying in the town of Bonn, intelligence was brought of a fire at Popplesdorf, a village about a mile and a quarter distant. The town engine was got out by a couple of men, with pipes in their mouths, and the horse—one horse—being put to, it was trotted off in the most deliberate manner. Outside the town gates we overtook a number of students and other gentlemen, all leisurely sauntering with their pipes towards Popplesdorf, never doubting but they would be in ample time before the engine had extinguished the fire. And so they were, for it was burning nearly half the day. Nevertheless, the Prussian Government have been the first to purchase the invention of the Steam Fire Engine. Their theories in the matter seem perfect; but to put out a fire with promptitude cannot be done even by a Steam Fire Engine without a little human activity.

The contrast of our vivacity in these matters is very striking, and in no case more so than when some mischievous idiot gives a false alarm (an atrocity which we believe is not often committed), or when some extraordinary meteorological phenomenon induces the mistake. We find two extraordinary instances of this recorded in Knight's 'London.'

'On the first of these, *twelve* engines and *seventy-four* brigade men were kept in constant motion from *eleven in the evening till six the next morning*, in endeavouring to search out what appeared to be a large conflagration; some of the engines reached Hampstead, and others Kilburn, before it was found that the glare was the effect of the "northern lights." On the other occasion, a crimson glare of light arose at the north-east part of the horizon, at about eight o'clock in the evening, seemingly caused by a fierce conflagration; and the resemblance was increased by what appeared to be clouds of smoke rising up after the glare, and breaking and rolling away beneath it. *Thirteen* engines and a large body of men went in search of the supposed fire, and did not detect their error till they had proceeded far to the north-east.'

The statistics of London fires are very interesting, and much may be learned from them, not only as matter of anxious information, but of salutary warning.

The total number of fires in London in the past year, was 838. Of these, 28 were utterly destructive fires; the number of lives lost being 26. Seriously damaged, 228; slightly damaged, 582.

Of chimneys on fire there were 89; and there were 76 false alarms—not mischievous, but from error or panic.

The number of calls on the fire-office and other aids amounted to 1003.

In the above 838 fires, the number of insurances (ascertained) were 368; those which insured on the building only, were 163; those which insured on the contents only, were 72; and the number of uninsured was 235.

Of the 26 lives lost, 13 were from the ignition of bed-furniture or wearing apparel; explosion of fire-works, 5; and 8 from inability to escape out of burning houses.

An examination of the statistics of fires in the Metropolis during sixteen years, *i.e.* from 1833 to 1848 (which document was obligingly laid before us by Mr. Braidwood), has put us in possession of a great mass of very curious and instructive information, from which we extract the following:

Apothecaries and dealers in drugs	36
Bakers	244
Booksellers, binders, and stationers	137

Of these latter, 96 burnt gas; and the fires caused by gas amounted to 28.

Cabinet-makers	156
Carpenters and workers in wood	434
Churches	33

Of these last-named, 3 were totally destroyed, and 10 much damaged; the rest slightly, or mere alarms. Of the cause of the fires, 8 were from the stoves, flues, &c., and 2 from lightning.

Drapers, woollen and linen	254
----------------------------	-----

Of these, 105 were much damaged; 239 burnt gas; and the cause of 140 of these fires was carelessness or accident with the gas.

The cause of this was an experiment with some 'fire-proof plaster,' which ignited in a most unexpected and insubordinate manner, and caused great damage.

The cause of these fires, all of which did great damage, was from the nature of the trade; from the smoking of tobacco; from boys playing with fire; and from the reckless trick of a lighted squib or cracker being thrown into the shop-window.

From the great care taken, and ready means of prevention, only 9 of these were much injured, and none totally destroyed.

Of these, 109 burnt gas; and 26 of the fires are attributable to carelessness or accident with the gas.

Notice the result of a full consciousness of the danger, and proportionate care. Only one fire!

Of the above number, 368 were found to have been caused by the taking fire of curtains, linen airing, &c. Some of the rest were caused by hunting fleas, &c.

Lucifer-match-makers	101
Lunatic asylums	2

Observe the great care in these asylums. All the asylums for lunatics furnishing only two fires in sixteen years!

Printers and Engravers	72
Private houses	3352

Of the above, the immense number of 1302 were discovered to have been caused by the taking fire of curtains, dresses, airing linen, &c.

Sale-shops and offices	526
------------------------	-----

Of these, 379 burnt gas; and the fires caused by gas were 129.

Ships	82
-------	----

Caused by stores, flues, cooking, igniting of cargo, smoking tobacco, &c.

Stables	192
---------	-----

Caused by candles, lucifers, smoking tobacco, intoxication, &c.

Tailors	81
---------	----

Seventeen of the above were caused by gas; 13 by candles; and some by smoking tobacco.

Theatres	20
----------	----

Of the above number, 8 were caused by gas; some others by smoking tobacco, and the taking fire of curtains, dresses, &c.

Tobacconists	43
--------------	----

Of the above, 6 were caused by gas; 6 by lucifer-matches; others by curtains, smoking tobacco, by a *cat*, and by *rats*. A word more of these incendiaries presently.

Of the above, there were 21 totally destroyed; 167 much damaged, and 354 slightly. Of the causes, 83 were from the flues; 73, curtains, dresses, &c.; 65, gas; 36, smoking tobacco; 35, a candle. The remainder comes under the various heads of lucifers, hot cinders, intoxication, children playing with fire, a spark, and a monkey.

Besides this 'monkey,' we have had occasion to mention several other 'sparks,' concerning whom some passing explanation may be needed. Having noticed the word 'cat,' occurring several times in the list of annual causes of fire,—'Yes,' replied Mr. Braidwood, 'we often have a cat.' It appears that the cat sometimes upsets the clothes-horse with things airing; or, perhaps, in creeping under the clothes to get inside the fender, drags some of them with her on her back. The fire caused by the monkey was attributable to some prank of his—meaning no harm, perhaps, but not much caring about that. The incendiarism of the rats was undoubtedly effected innocently by their investigation of a box of lucifers, which included a trial if the matches were good to eat. Their teeth exploded them—a feat very easily performed.

Of carelessness with gas in shops and warehouses, or with candles near bedroom curtains, muslin dresses, or linen airing before the fire, we need not speak, as the dangers are too obvious by the results; nor of carelessness with lucifer-matches; nor the very common practice of raking out the fire at night from the grate (where it would be safe) down upon the hearth, and leaving the hot embers, which perhaps ignite by the air of the closing door, as the careful person retires to bed. Carelessness with a cigar or pipe is also an obvious cause. Working men often put their pipes, half-extinguished, or alive at the bottom of the bowl, into their jacket-pocket at night; and then hang up the jacket, and go to bed. Children, also, being left alone, near a fire, may generally be expected to play with fire, either because it is beautiful, or because the play is interdicted.

With respect to ‘sparks,’ that a house should take fire, had always been regarded by us with no small degree of scepticism. A gentleman of our acquaintance carried his disbelief much further. Sitting with a party of sporting friends round a winter’s fire, and these dangers being the subject of conversation, he offered to empty the whole contents of the grate on the carpet in the middle of the room—he to pay all expenses if the house took fire; his opponent simply to pay for the carpet and the charred floor. They were all to sit round, and watch the result. It was agreed. ‘Now,’ said a friend, ‘I will bet you *ten* to one this house will take fire, provided we all go out of the room, lock the door, and leave the house.’ The other would not venture on this.

Mr. Braidwood’s speculation on the question of sparks, in reply to our doubts, is very curious and practical. He estimated the number of houses in London at 300,000. Allowing two *domestic* fires to each house, we have 600,000 in the day; and these multiplied by 7, give 4,200,000 in a week. That one spark, therefore, from 4,200,000 fires should fly out upon some materials easy to ignite, once in a week, is far from difficult to credit; and this would fully bear out the number on the list that are declared to have occurred from this cause.

The number of fires and alarms of fire that occurred in London during the fifteen years ending in 1847, present a continual *increase*. In 1833 they amounted to 458; in 1834, to 482; and so on, down to 1847, when they amounted to 836. This gives a total of 9662 fires during the fifteen years. The average of this is 644. We next find that in 1848 the number of fires amounted to 805; showing an *increase* beyond the previous year of 161. In 1849 the number amounted to 838, being an increase of 33 beyond the previous year.

How are we to reconcile this increase with the extraordinary efficiency of the Fire Brigade, and the improvements in measures of precaution? Partly by the regular increase in the numbers of houses. But Mr. Braidwood frankly declares that this does not meet the increase of fires and alarms of fire that reach the Office. We can only account for it, therefore, by the great increase of scientific combustibles, not merely in our shops, but in our domestic arrangements—especially gas, and lucifer-matches—and yet more to the fact that, in former years, many slight fires caused no alarm to be given, while now the arrangements are so complete, that probably almost

every slight alarm of fire that occurs is carried to the Office, and duly recorded.

With respect to Fire-Escapes; precautions against fire, that should be adopted in houses; arrangements to meet the accident; and the best means of extinguishing fires (particularly with reference to Mr. Phillips' Fire-Annihilator, which possesses an undoubted power over *flames*), we cannot now afford the space their importance merits; but we shall bear them in mind for a future number.

POETRY IN THE BYE-WAYS.

Every book-hunter, whose connection with paper and print has more of individuality than of fashion in it—must in his time have met with scores of small volumes of rhyme forced out with a care and pains of which the heart aches to think, prefaced with the bad taste of immoderate deprecation on the part of the author,—or with the worse appeal of extravagant commendation on the part of the patron—none of which shall merit a place on the shelf by the side of Crabbe, or Wordsworth, or Burns—none of which can be denied the possession of some sparks and breathings of true poetry.

Sometimes, however, it must be owned, that the difficulties under which the rhymester has laboured, are the best—nay the sole—evidences of his genius. In the verses of Phillis Wheatly, the negro girl, for instance, there is not a line that is not the stalest of the stale—not an image that is not the most second-hand of the second-hand. Yet, that sixty years since, a woman of her condemned colour and oppressed race—in America, too,—should find spirits to sing, and power to attract an audience,—in that fact was a poem of no common order.

Years ago, there passed through the writer's hand a small collection of verse—if verse it might be called—in quality, the most dreary and antipathetic, possible—sectarian hymns, full of phrases, the intimate sense of which can never have pierced to the mind of their maker. This was a poor creature in a hospital, who had been found on a harsh January night, frozen into the kennel where she had fallen, and who paid for that night's lodging with a lingering death of cruelly long duration. Her vital powers gradually retired one by one. For many years she was unable to move a limb; latterly could scarcely speak audibly, or take barely sufficient food to keep life in the half-dead body. But these dismal hymns were her receipt for occupation and cheerfulness. 'When I cannot sleep,' she would say, in a dialect of her

own peculiar pattern, 'I *mew*.'—There was poetry in the origin of these '*mewings*,' though none in the dark and narrow stanzas themselves.

From the above illustrations it may be gathered that much of the bye-way poetry with which we shall deal, has never been promoted to the honours and heartaches of paper and print—nor even taken the manuscript forms of 'longs and shorts' as decidedly as did the imaginative instincts of Black Phillis, or the long-tried patience of the sufferer in the —— Ward. We may—and shall—have to do with authorship in humble life,—but less, perchance, than those will expect, who have considered our subject merely from the outside of the bookseller's window, or from the sum total of a rhymester's subscription list—drawing thence the charming inference that A., B. or C. is a poet, because he has found a publisher and extorted a public!—Too seldom has a Capel Lofft, or a Southey, or a More, while trying to bring forward a Bloomfield, or a Mary Colling, or an ungrateful Bristol Milkwoman, whose facility in versifying has arrested them,—considered how wide is the distance betwixt what may be called the unconscious Poetry of the People—and that meagre and second-hand manufacture, produced with a desire for fame, or under hopes of gain, which challenges competition with the efforts of men more favourably circumstanced, and which goes forth as virtually a solicitation for alms.—On the one side (to take the first instance which occurs) we shall find something like the Gondolier songs of Venice, patched up—St. Mark and the Moon know how!—out of bits of plays and bits of verses and bits of opera-tunes, by old men and girls and boys, while a sprightly people ply their picturesque trade under an Italian sky, with every image round them to inspire and encourage a sense of tune,—and which, after a while, get so rubbed into shape—so rounded and changed,—so decked with canal-wit,—so filled with local names and local words,—that a College of Anatomists should be puzzled to 'resolve them into their primary elements.'—On the other side, we may cite as example any of the myriad verses anxiously strung together by the hectic and over-wrought operative, by the light of his candle, whose very burning would be reprehensible as an extravagance, could not the ware fabricated at midnight find an immediate market. The first is an utterance—the second a manufacture. The first speaks with the breath of a peculiar life, and wears the colour of a peculiar scenery—the second is an exercise produced under circumstances, which, however stimulating to energy, are but discouraging to Fancy. We may be told, it is

true, that many of our dearest ‘household words’ have been wrung from our greatest men, by the pressure of the cruellest exigency. One poet, to pay for his mother’s funeral, must needs write a ‘Rasselas’—another, under constraint less instant, but perhaps not less harassing, shall gladden England for ever, by calling up *Olivia* and *Sophia* in the hayfield, and *Farmer Flamborough’s* Christmas party, and the Vicar slyly making an end of ‘the wash for the face,’ which his innocently-worldly daughters were brewing. But evidence like this does nothing to contradict our wisdom. Had Johnson been compelled to compose his superb style, at a moment’s warning by the coffin-side; had Goldsmith possessed no treasury of adventure and experience to draw upon, no power to handle the pen already learned—neither *Imlac* nor *Mrs. Primrose* would have been alive at this day. Without preparation, training, craftsmanship, there is little literature—there is no art. Ballads may grow up—but not epics be produced, nor five-act plays be constructed, nor tales be woven, nor even a complete lyric be finished. It has fallen to the lot of every one of us too often and again, to see hearts fevered, hopes wrecked, life embittered, and Death (or Madness) courted, because men cannot—and their friends *will not*—sufficiently fix their minds on this plain truth; because inclinations are perpetually mistaken for powers; because, bewildered by some faëry dream that the world in which a Scott is king or a Siddons is queen, is paved with gold—every boy who can cut paragraphs into lengths fancies that he is a Scott—and every girl with a strong voice who loves playgoing, that she is a *Lady Macbeth*, a *Cleopatra*, a *Queen Constance*, who can shake ‘the playhouse down.’

At all events, in such mistakes as the above, followed by their sure consequence of misery, lives not the Poetry which we are seeking. In its place we too often encounter a dismal wax-work show—a creature with glassy eyes and hot red cheeks, and a stiff arm, in a noble attitude perhaps, but always beckoning in one and the same direction,—not the living, breathing, hoping, fearing being, human like ourselves, yet better than ourselves, with whom we can sit down at meat, and kneel down at prayer—not the fragment of Heaven upon Earth to encounter and make acquaintance with, which redeems us from utter heartlessness or discomfort. The Poetry of appreciation when creation is impossible—the Poetry of daily life, as sung in deeds of unselfishness, delicacy, triumph over temptations—consideration of the weak (let the brute-force theorists ‘sound their trumpets and beat their drums’ as loudly as if upon themselves devolved the whole

orchestral and choral noise of ‘Judas Maccabeus’) and companionship with the humble—the Poetry of a healthy, not a maudlin love for Nature—these are to be sought out and gathered up. In turn we may sit on the bleak hill-sides of Scotland with the shepherd-rhymesters of the north—or wander down the alleys of English manufacturing towns, to see what fairly-patterned verse may have been woven there. Or in a green lane we may open such a book as good Mr. Barnes has published in the Dorsetshire dialect, to show how ingeniously music may be got out of a corrupt local English phraseology. Or we may cross the Channel to hear Jasmin, the Provençal hairdresser, recite; or to see Reboul, the Nismes baker, bring out an ode hot from his oven.—But our business will be more with deeds than with words, more with genuine thoughts and impulses in action, than with second-hand fancies, faded as the coarse artificial flowers of a milliner’s shop in Leicester Square, when the season is over, which no passer-by, ‘gentle or simple,’ can think of taking home.

We may have to do, moreover, with the poetry of association as conveyed in those festivals of joy or of sorrow which mark the progress of life and the peculiarity of manners. The nasal, droning burial psalm that may still be heard in remote places of England, winding up a hollow lane or across the corner of a moor,—as some little congregation of friends or neighbours bears a dead body home,—the twilight vesper service (intrinsically tuneless and unmusical) of the Sisters of Charity, who come back to their *Beguine* after a long day of hard work, hard prayers, hard consolation, and hard gossip among the poor;—do these things say nothing to us? Is nothing told us by the cry of sailors as they warp the ship into dock at the close of a wild and wintry voyage? by the serenade-music with which the impulsive people of a German town welcome some favourite poet or artist?—Are these not all, more or less, poems conveying to us something of feeling, and life, and youth, be we ever so soured, ever so seared by perpetual contact with coarser and harsher contemplations and employments? May we not call up such pictures,—may we not soothe ourselves with such harmonies,—may we not lay them to our souls as evidences? We must not use them by way of unction flattering us into the sentimental Waiting Gentlewoman’s notion that crime is to disappear like a scene in a pantomime, and thieves all of a sudden to grow as orderly as beadles; but we may apply them as alteratives when we are in danger of being wearied into doggedness, by the man who enacts fits at the street corner—or by the begging-letter Impostor who

wrings crowns out of kind-hearted and economical souls, who must for their credulity's sake forego their holiday—or by the Pole with his anti-Russian pamphlet, who makes his way in, to abase himself by fawning and genteel mendicity, under pretext of being a friend's friend—or by the sight of such a pillar of stone as the woman who went into the confectioner's shop to buy gingerbread, 'because they were going to see our Sally hanged, and should be hungry!'

Yes: if sights and provocations and discouragements like these—of the earth, earthy—force themselves into our highways, all the more need is it that all celestial appearances and sounds in our bye-ways, be they ever so few, faint, and far, should be collected, and set down. Be they ever so rich, they will not be rich enough to justify an over-complacent or supine spirit—still less to tempt the healthily-minded to confound dross with pure gold: be they ever so meagre, they ought to keep alive in us the faith, that no portion of the earth is so barren, that Truth or Beauty, and Love, and Patience, and Honour, cannot grow therein.

**THE MINER'S DAUGHTERS.—A TALE OF
THE PEAK.**

IN THREE CHAPTERS.

CHAPTER II.—MILL LIFE.

We must pass over the painful and dreadful particulars of that night, and of a long time to come; the maniacal rage of the father, the shattered heart and feelings of the mother, the dreadful state of the two remaining children, to whom their brother was one of the most precious objects in a world which, like theirs, contained so few. One moment to have seen him full of life, and fun, and bravado, and almost the next a lifeless and battered corpse, was something too strange and terrible to be soon surmounted. But this was wofully aggravated by the cruel anger of their father, who continued to regard them as guilty of the death of his favourite boy. He seemed to take no pleasure in them. He never spoke to them but to scold them. He drank more deeply than ever, and came home later; and when there, was sullen and morose. When their mother, who suffered severely, but still plodded on with all her duties, said, 'David, they are thy children too;' he would reply savagely, 'Hod thy tongue! What's a pack o' wenches to my lad?'

What tended to render the miner more hard towards the two girls was a circumstance which would have awakened a better feeling in a softer father's heart. Nancy, the younger girl, since the dreadful catastrophe, had seemed to grow gradually dull and defective in her intellect, she had a slow and somewhat idiotic air and manner. Her mother perceived it, and was struck with consternation by it. She tried to rouse her, but in vain. She could not perform her ordinary reading and spelling lessons. She seemed to have forgotten what was already learned. She appeared to have a difficulty in moving her legs, and carried her hands as if she had suffered a partial paralysis. Jane, her sister, was dreadfully distressed at it, and she and her mother wept many bitter tears over her. One day, in the following spring, they took her with them to Ashford, and consulted the doctor there. On examining her, and hearing fully what had taken place at the time of the brother's death—the fact of which he well knew, for it, of course, was known to the whole country round—he shook his head, and said he was afraid they must make up their minds to a sad case; that the terrors of that night had affected her brain, and that, through it, the whole nervous system had suffered, and was continuing to suffer the most melancholy effects. The

only thing, he thought, in her favour was her youth; and added, that it might have a good effect if they could leave the place where she had undergone such a terrible shock. But whether they did or not, kindness and soothing attentions to her would do more than anything else.

Mrs. Dunster and little Jane returned home with heavy hearts. The doctor's opinion had only confirmed their fears; for Jane, though but a child, had quickness and affection for her sister enough to make her comprehend the awful nature of poor Nancy's condition. Mrs. Dunster told her husband the doctor's words, for she thought they would awaken some tenderness in him towards the unfortunate child. But he said, 'That's just what I expected. Hou'll grow soft, and then who's to maintain her? Hou mun goo to th' workhouse.'

With that he took his maundrel and went off to his work. Instead of softening his nature, this intelligence seemed only to harden and brutalise it. He drank now more and more. But all that summer the mother and Jane did all that they could think of to restore the health and mind of poor Nancy. Every morning, when the father was gone to work, Jane went to a spring up in the opposite wood, famed for the coldness and sweetness of its waters. On this account the proprietors of the mills at Cressbrook had put down a large trough there under the spreading trees, and the people fetched the water even from the village. Hence Jane brought, at many journeys, this cold, delicious water to bathe her sister in; they then rubbed her warm with cloths, and gave her new milk for her breakfast. Her lessons were not left off, lest the mind should sink into fatuity, but were made as easy as possible. Jane continued to talk to her, and laugh with her, as if nothing was amiss, though she did it with a heavy heart, and she engaged her to weed and hoe with her in their little garden. She did not dare to lead her far out into the valley, lest it might excite her memory of the past fearful time, but she gathered her flowers, and continued to play with her at all their accustomed sports, of building houses with pieces of pots and stones, and imagining gardens and parks. The anxious mother, when some weeks were gone by, fancied that there was really some improvement. The cold-bathing seemed to have strengthened the system: the poor child walked, and bore herself with more freedom and firmness. She became ardently fond of being with her sister, and attentive to her directions. But there was a dull cloud over her intellect, and a vacancy in her eyes and features. She was quiet, easily pleased, but seemed to have little volition of her own. Mrs. Dunster

thought if they could but get her away from that spot, it might rouse her mind from its sleep. But perhaps the sleep was better than the awaking might be; however, the removal came, though in a more awful way than was looked for. The miner, who had continued to drink more and more, and seemed to have almost estranged himself from his home, staying away in his drinking bouts for a week or more together, was one day blasting a rock in the mine, and being half-stupified with beer, did not take care to get out of the way of the explosion, was struck with a piece of the flying stone, and killed on the spot.

The poor widow and her children were now obliged to remove from under Wardlow-Cop. The place had been a sad one to her: the death of her husband, though he had been latterly far from a good one, and had left her with the children in deep poverty, was a fresh source of severe grief to her. Her religious mind was struck down with a weight of melancholy by the reflection of the life he had led, and the sudden way in which he had been summoned into eternity. When she looked forward, what a prospect was there for her children! it was impossible for her to maintain them from her small earnings, and as to Nancy, would she ever be able to earn her own bread, and protect herself in the world?

It was amid such reflections that Mrs. Dunster quitted this deep, solitary, and, to her, fatal valley, and took up her abode in the village of Cressbrook. Here she had one small room, and by her own labours, and some aid from the parish, she managed to support herself and the children. For seven years she continued her laborious life, assisted by the labour of the two daughters, who also seamed stockings, and in the evenings were instructed by her. Her girls were now thirteen and fifteen years of age: Jane was a tall and very pretty girl of her years; she was active, industrious, and sweet-tempered: her constant affection for poor Nancy was something as admirable as it was singular. Nancy had now confirmed good health, but it had affected her mother to perceive that, since the catastrophe of her brother's death, and the cruel treatment of her father at that time, she had never grown in any degree as she ought; she was short, stout, and of a pale and very plain countenance. It could not be now said that she was deficient in mind, but she was slow in its operations. She displayed, indeed, a more than ordinary depth of reflection, and a shrewdness of observation, but the evidences of this came forth in a very quiet way, and were observable only to her mother and sister. To all besides she was extremely reserved: she was timid to excess, and

shrunk from public notice into the society of her mother and sister. There was a feeling abroad in the neighbourhood that she was 'not quite right,' but the few who were more discerning, shook their heads, and observed, 'Right she was not, poor thing, but it was not want of sense; she had more of that than most.'

And such was the opinion of her mother and sister. They perceived that Nancy had received a shock of which she must bear the effects through life. Circumstances might bring her feeble but sensitive nerves much misery. She required to be guarded and sheltered from the rudenesses of the world, and the mother trembled to think how much she might be exposed to them. But in everything that related to sound judgment, they knew that she surpassed not only them, but any of their acquaintance. If any difficulty had to be decided, it was Nancy who pondered on it, and perhaps at some moment when least expected, pronounced an opinion that might be taken as confidently as an oracle.

The affection of the two sisters was something beyond the ties of this world. Jane had watched and attended to her from the time of her constitutional injury with a love that never seemed to know a moment's weariness or change; and the affection which Nancy evinced for her was equally intense and affecting. She seemed to hang on her society for her very life. Jane felt this, and vowed that they would never quit one another. The mother sighed. How many things, she thought, might tear asunder that beautiful resolve.

But now they were of an age to obtain work in the mill. Indeed, Jane could have had employment there long before, but she would not quit her sister till she could go with her,—and now there they went. The proprietor, who knew the case familiarly, so ordered it that the two sisters should work near each other; and that poor Nancy should be as little exposed to the rudeness of the workpeople as possible. But at first so slow and awkward were Nancy's endeavours, and such an effect had it on her frame, that it was feared she must give it up. This would have been a terrible calamity; and the tears of the two sisters, and the benevolence of the employer enabled Nancy to pass through this severe ordeal. In a while she acquired sufficient dexterity, and thenceforward went through her work with great accuracy and perseverance. As far as any intercourse with the workpeople was concerned, she might be said to be dumb. Scarcely ever did she exchange a

word with any one, but she returned kind nods and smiles; and every morning and evening, and at dinner-time, the two sisters might be seen going to and fro, side by side,—Jane often talking with some of them; the little, odd-looking sister walking silent and listening.

Five more years and Jane was a young woman. Amid her companions, who were few of them above the middle size, she had a tall and striking appearance. Her father had been a remarkably tall and strong man, and she possessed something of his stature, though none of his irritable disposition. She was extremely pretty, of a blooming fresh complexion, and graceful form. She was remarkable for the sweetness of her expression, which was the index of her disposition. By her side still went that odd, broad-built, but still pale and little sister. Jane was extremely admired by the young men of the neighbourhood, and had already many offers, but she listened to none. ‘Where I go must Nancy go,’ she said to herself, ‘and of whom can I be sure?’

Of Nancy no one took notice. Her pale, somewhat large features, her thoughtful silent look, and her short, stout figure, gave you an idea of a dwarf, though she could not strictly be called one. No one would think of Nancy as a wife,—where Jane went she must go; the two clung together with one heart and soul. The blow which deprived them of their brother seemed to bind them inseparably together.

Mrs. Dunster, besides her seaming, at which, in truth, she earned a miserable sum, had now for some years been the post-woman from the village to the Bull’s Head, where the mail, going on to Tideswell, left the letter-bag. Thither and back, wet or dry, summer or winter, she went every day, the year round. With her earnings, and those of the girls’, she went well with them, as the world kept a neat, small cottage; and the world goes on the average with the poor. Cramps and rheumatisms she began to feel sensibly from so much exposure to rain and cold; but the never-varying and firm affection of her two children was a balm in her cup which made her contented with everything else.

When Jane was about two-and-twenty, poor Mrs. Dunster, seized with rheumatic fever, died. On her death-bed she said to Jane, ‘Thou wilt never desert poor Nancy; and that’s my comfort. God has been good to me. After all my trouble, he has given me this faith, that come weal come woe, so long as thou has a home, Nancy will never want one. God bless thee for it!

God bless you both; and he will bless you!’ So saying, Betty Dunster breathed her last.

The events immediately following her death did not seem to bear out her dying faith; for the two poor girls were obliged to give up their cottage. There was a want of cottages. Not half of the workpeople could be entertained in this village; they went to and fro for many miles. Jane and Nancy were now obliged to do the same. Their cottage was wanted for an overlooker,—and they removed to Tideswell, three miles off. They had thus six miles a-day to walk, besides standing at their work; but they were young, and had companions. In Tideswell they were more cheerful. They had a snug little cottage; were near a Meeting; and found friends. They did not complain. Here, again, Jane Dunster attracted great attention, and a young, thriving grocer paid his addresses to her. It was an offer that made Jane take time to reflect. Every one said it was an opportunity not to be neglected: but Jane weighed in her mind, ‘Will he keep faith in my compact with Nancy?’ Though her admirer made every vow on the subject, Jane paused and determined to take the opinion of Nancy. Nancy thought for a day, and then said, ‘Dearest sister, I don’t feel easy; I fear that from some cause it would not do in the end.’

Jane from that moment gave up the idea of the connection. There might be those who would suspect Nancy of a selfish bias in the advice she gave; but Jane knew that no such feeling influenced her pure soul. For one long year the two sisters traversed the hills between Cressbrook and Tideswell. But they had companions, and it was pleasant in the summer months. But winter came, and then it was a severe trial. To rise in the dark, and traverse those wild and bleak hills; to go through snow and drizzle, and face the sharpest winds in winter, was no trifling matter. Before winter was over, the two young women began seriously to revolve the chances of a nearer residence, or a change of employ. There were no few who blamed Jane excessively for the folly of refusing the last good offer. There were even more than one who, in the hearing of Nancy, blamed her. Nancy was thoughtful, agitated, and wept. ‘If I can, dear sister,’ she said, ‘have advised you to your injury, how shall I forgive myself? What *shall* become of me?’

But Jane clasped her sister to her heart, and said, ‘No! no! dearest sister, you are not to blame. I feel you are right; let us wait, and we shall see!’

THE USES OF SORROW.

Oh, grieve not for the early dead,
Whom God himself hath taken;
But deck with flowers each holy bed—
Nor deem thyself forsaken,
When, one by one, they fall away,
Who were to thee as summer day.

Weep for the babes of guilt, who sleep
With scanty rags stretch'd o'er them,
On the dark road, the downward steep
Of misery; while before them
Looms out afar the dreadful tree,
And solemn, sad Eternity!

Nor weep alone; but when to Heaven
The cords of sorrow bind thee,
Let kindest help to such be given,
As God shall teach to find thee;
And, for the sake of those above,
Do deeds of Wisdom, Mercy, Love.

The child that sicken'd on thy knee,
Thou weeping Christian mother,
Had learn'd in this world, lispingly,
Words suited for another.
Oh, dost thou think, with pitying mind,
On untaught infants left behind?

FROM THE RAVEN IN THE HAPPY FAMILY.

I won't bear it, and I don't see why I should.

Having begun to commit my grievances to writing, I have made up my mind to go on. You men have a saying, 'I may as well be hung for a sheep as a lamb.' Very good. *I* may as well get into a false position with our proprietor for a ream of manuscript as a quire. Here goes!

I want to know who BUFFON was. I'll take my oath he wasn't a bird. Then what did *he* know about birds—especially about Ravens? He pretends to know all about Ravens. Who told him? Was his authority a Raven? I should think not. There never was a Raven yet, who committed himself, you'll find, if you look into the precedents.

There's a schoolmaster in dusty black knee-breeches and stockings, who comes and stares at our establishment every Saturday, and brings a lot of boys with him. He is always bothering the boys about BUFFON. That's the way I know what BUFFON says. He is a nice man, BUFFON; and you're all nice men together, ain't you?

What do you mean by saying that I am inquisitive and impudent, that I go everywhere, that I affront and drive off the dogs, that I play pranks on the poultry, and that I am particularly assiduous in cultivating the good-will of the cook? That's what your friend BUFFON says, and you adopt him it appears. And what do you mean by calling me 'a glutton by nature, and a thief by habit?' Why, the identical boy who was being told this, on the strength of BUFFON, as he looked through our wires last Saturday, was almost out of his mind with pudding, and had got another boy's top in his pocket!

I tell you what. I like the idea of you men, writing histories of *us*, and settling what we are, and what we are not, and calling us any names you like best. What colors do you think you would show in, yourselves, if some

of us were to take it into our heads to write histories of *you*? I know something of Astley's Theatre, I hope; I was about the stables there, a few years. Ecod! if you heard the observations of the Horses after the performance, you'd have some of the conceit taken out of you!

I don't mean to say that I admire the Cat. I *don't* admire her. On the whole, I have a personal animosity towards her. But, being obliged to lead this life, I condescend to hold communication with her, and I have asked her what *her* opinion is. She lived with an old lady of property before she came here, who had a number of nephews and nieces. She says she could show you up to that extent, after her experience in that situation, that even you would be hardly brazen enough to talk of cats being sly and selfish any more.

I am particularly assiduous in cultivating the good-will of the cook, am I? Oh! I suppose you never do anything of this sort, yourselves? No politician among you was ever particularly assiduous in cultivating the good-will of a minister, eh? No clergyman in cultivating the good-will of a bishop, humph? No fortune-seeker in cultivating the good-will of a patron, hah? You have no toad-eating, no time-serving, no place-hunting, no lacqueyship of gold and silver sticks, or anything of that sort, I suppose? You haven't too many cooks, in short, whom you are all assiduously cultivating, till you spoil the general broth? Not you. You leave that to the Ravens.

Your friend BUFFON, and some more of you, are mighty ready, it seems, to give *us* characters. Would you like to hear about your own temper and forbearance? Ask the Dog. About your never overloading or ill-using a willing creature? Ask my brother-in-law's friend, the Camel, up in the Zoological. About your gratitude to, and your provision for, old servants? I wish I could refer you to the last Horse I dined off (he was very tough), up at a knacker's yard in Battle Bridge. About your mildness, and your abstinence from blows and cudgels? Wait till the Donkey's book comes out!

You are very fond of laughing at the parrot, I observe. Now, I don't care for the parrot. I don't admire the parrot's voice—it wants hoarseness. And I despise the parrot's livery—considering black the only true wear. I would as soon stick my bill into the parrot's breast as look at him. Sooner. But if you come to that, and you laugh at the parrot because the parrot says the same thing over and over again, don't you think you could get up a laugh at yourselves? Did you ever know a Cabinet Minister say of a flagrant job or

great abuse, perfectly notorious to the whole country, that he had never heard a word of it himself, but could assure the honourable gentleman that every enquiry should be made? Did you ever hear a Justice remark, of any extreme example of ignorance, that it was a most extraordinary case, and he couldn't have believed in the possibility of such a case—when there had been, all through his life, ten thousand such within sight of his chimneys? Did you ever hear, among yourselves, anything approaching to a parrot repetition of the words, Constitution, Country, Public Service, Self-Government, Centralisation, Un-English, Capital, Balance of Power, Vested Interests, Corn, Rights of Labor, Wages, or so forth? *Did* you ever? No! Of course, you never!

But to come back to that fellow BUFFON. He finds us Ravens to be most extraordinary creatures. We have properties so remarkable, that you'd hardly believe it. 'A piece of money, a teaspoon, or a ring,' he says, 'are always tempting baits to our avarice. These we will slyly seize upon; and, if not watched, carry to our favorite hole.' How odd!

Did you ever hear of a place called California? *I* have. I understand there are a number of animals over there, from all parts of the world, turning up the ground with their bills, grubbing under the water, sickening, moulting, living in want and fear, starving, dying, tumbling over on their backs, murdering one another, and all for what? Pieces of money that they want to carry to their favourite holes. Ravens every one of 'em! Not a man among 'em, bless you!

Did you ever hear of Railway Scrip? *I* have. We made a pretty exhibition of ourselves about that, we feathered creatures! Lord, how we went on about that Railway Scrip! How we fell down, to a bird, from the Eagle to the Sparrow, before a scarecrow, and worshipped it for the love of the bits of rag and paper fluttering from its dirty pockets! If it hadn't tumbled down in its rottenness, we should have clapped a title on it within ten years, I'll be sworn!—Go along with you, and your BUFFON, and don't talk to me!

'The Raven don't confine himself to petty depredations on the pantry or the larder'—here you are with your BUFFON again—'but he soars at more magnificent plunder, that he can neither exhibit nor enjoy.' This must be very strange to you men—more than it is to the Cat who lived with that old lady, though!

Now, I am not going to stand this. You shall not have it all your own way. I am resolved that I won't have Ravens written about by men, without having men written about by Ravens—at all events by one Raven, and that's me. I shall put down my opinions about you. As leisure and opportunity serve, I shall collect a natural history of you. You are a good deal given to talk about *your* missions. That's my mission. How do you like it?

I am open to contributions from any animal except one of your set; bird, beast, or fish, may assist me in my mission, if he will. I have mentioned it to the Cat, intimated it to the Mouse, and proposed it to the Dog. The Owl shakes his head when I confide it to him, and says he doubts. He always did shake his head, and doubt. Whenever he brings himself before the public, he never does anything except shake his head and doubt. I should have thought he had got himself into a sufficient mess by doing that, when he roosted for a long time in the Court of Chancery. But he can't leave off. He's always at it.

Talking of missions, here's our Proprietor's Wife with a mission now! She has found out that she ought to go and vote at elections; ought to be competent to sit in Parliament; ought to be able to enter the learned professions—the army and navy, too, I believe. She has made the discovery that she has no business to be the comfort of our Proprietor's life, and to have the hold upon him of not being mixed up in all the janglings and wranglings of men, but is quite ill-used in being the solace of his home, and wants to go out speechifying. That's our Proprietor's Wife's new mission. Why, you never heard the Dove go on in that ridiculous way. She knows her true strength better.

You are mighty proud about your language; but it seems to me that you don't deserve to have words, if you can't make a better use of 'em. You know you are always fighting about 'em. Do you never mean to leave that off, and come to things a little? I thought you had high authority for *not* tearing each other's eyes out, about words. You respect it, don't you?

I declare I am stunned with words, on my perch in the Happy Family. I used to think the cry of a Peacock bad enough, when I was on sale in a menagerie, but I had rather live in the midst of twenty peacocks, than one Gorham and a Privy Council. In the midst of your wordy squabbling, you don't think of the lookers-on. But if you heard what *I* hear in my public

thoroughfare, you'd stop a little of that noise, and leave the great bulk of the people something to believe in peace. You are overdoing it, I assure you.

I don't wonder at the Parrot picking words up and occupying herself with them. She has nothing else to do. There are no destitute parrots, no uneducated parrots, no foreign parrots in a contagious state of distraction, no parrots in danger of pestilence, no festering heaps of miserable parrots, no parrots crying to be sent away beyond the sea for dear life. But among you!—

Well! I repeat, I am not going to stand it. Tame submission to injustice is unworthy of a Raven. I croak the croak of revolt, and call upon the Happy Family to rally round me. You men have had it all your own way for a long time. *Now*, you shall hear a sentiment or two about yourselves.

I find my last communication gone from the corner where I hid it. I rather suspect the magpie, but he says, 'Upon his honor.' If Mr. Rowland Hill has got it, he will do me justice—more justice than you have done him lately, or I am mistaken in my man.

ILLUSTRATIONS OF CHEAPNESS.

EGGS.

There is a curious illustration of the mode in which kings and legislators thought to make things cheap, in an Ordinance of Edward the Second, of the year 1314, in which it is set forth that there is ‘an intolerable dearth, in these days, of oxen, cows, sheep, hogs, geese, capons, hens, chickens, pigeons, and eggs;’ and therefore, amongst other regulations, it is prescribed that twenty eggs shall be sold for a penny, and that the eggs should be forfeited if the salesman would not take that price. Some years before (1274), the Lord Mayor of London, in a similar proclamation, shows us how the commerce of food was conducted, by ordaining that no huckster of fowl should go out of the city to meet the country people coming in with their commodities, but buy in the city after three o’clock, when the great men and citizens had supplied themselves at the first hand. Of course, these regulations did produce ‘an intolerable dearth;’ and Edward the Second had the candour to acknowledge this by a proclamation of 1315, in which he says, ‘we have understood that such a proclamation, which at that time we believed would be for the profit of the people of our realm, redounds to their greater damage than profit.’ Nevertheless, two centuries and a half later, the civic wisdom discovered that ‘through the grievous covetousness of poulterers, the prices of all poultry wares are grown to be excessive and unreasonable;’ and therefore the Lord Mayor decrees the prices of geese and chickens, and commands that eggs shall be five a penny. (Stow.) In 1597 we learn, that even an attorney-general could not have the benefit of such an enforced cheapness; for the household book of Sir Edward Coke shows us that his steward expended 4s. 8*d.* in one week of May, for his master’s family in Holborn, by daily purchases of eggs at ten for a groat;

while at his country house at Godwicke, in Norfolk, in the same year, he daily bought eggs at twenty a groat in July.

The fact that in 1597 eggs were double the price in Holborn as compared with the eggs of Godwicke, is one of the incidental proofs of an almost self-evident principle, that commercial intercourse, produced by facilities of communication, is one of the great causes of cheapness arising out of equalisation of prices. But such facilities further lower prices, by stimulating production. It is to be noted, that while the Attorney-General, when in the country, killed his own bullocks and sheep, and had green geese, capons, and chickens in profusion out of his own poultry-yard, he bought his eggs. We have no doubt that his occasional presence at Godwicke encouraged the cottagers in the provision of eggs for the great man's use. He did not produce them himself, for the carriage to London would have been most costly. But his purchases were irregular. When the family went to Holborn, the eggs had to seek an inferior market. If no one was at hand, the production declined. They did not go to London, to lower the price there, by increasing the supply.

Eggs at ten a groat, even, sound cheap. But while Coke bought his eggs at ten a groat, he only paid two shillings a stone for his beef. Ten eggs were, therefore, equivalent to about two pounds of beef. In this month of April, 1850, good eggs may be bought in London at sixteen for a shilling, which shilling would purchase two pounds of beef. Eggs are, therefore, more than one half cheaper in London now than two centuries and a half ago, by comparison with meat. They are far cheaper when we regard the altered value of money. In the days of Queen Elizabeth eggs were a common article of food. We learn from no less an authority than the Chamberlain of a renowned inn in Kent, that the company who travelled with the carriers used eggs plentifully and luxuriously. 'They are up already, and call for eggs and butter.' (Henry IV. pt. 1.) But if we infer that the population of London, in those days of supposed cheapness, could obtain eggs with the facility with which we now obtain them, and that the estimated two hundred thousand of that population could call for them as freely as the pack-horse travellers at Rochester,—the inference may be corrected by the knowledge of a few facts, which will show by what means, then undiscovered, a perishable article is now supplied with unfailing regularity, and without any limit but that enforced by the demand, to a population of two millions and a quarter. That such a population can be so supplied without a continuing

increase, or a perpetual variation of price, is an Illustration of Cheapness, which involves a view of some remarkable peculiarities of our age, and some important characteristics of our social condition.

In the days of Edward II., the villagers who dwelt within a few miles of London daily surrounded its walls with their poultry and eggs. The poulterers were forbidden to become their factors; but unquestionably it was for the interest of both parties that some one should stand between the producer and the consumer. Without this, there would have been no regular production. Perhaps the production was very irregular, the price very fluctuating, the dearth often intolerable. This huckstering had to go on for centuries before it became commerce. It would have been difficult, even fifty years ago, to imagine that eggs, a frail commodity, and quickly perishable, should become a great article of import. Extravagant would have been the assertion that a kingdom should be supplied with sea-borne eggs, with as much speed, with more regularity, and at a more equalised price, than a country market-town of the days of George III. It has been stated, that, before the Peace of 1815, Berwick-upon-Tweed shipped annually as many eggs to London as were valued at 30,000*l*. Before the Peace, there were no steam-vessels; and it is difficult to conceive how the cargoes from Berwick, with a passage that often lasted a month, could find their way to the London consumer in marketable condition. Perhaps the eaters of those eggs, collected in the Border districts, were not so fastidious in their tastes as those who now despise a French egg which has been a week travelling from the Pas de Calais. But the Berwick eggs were, at any rate, the commencement of a real commerce in eggs.

In 1820, five years after the Peace, thirty-one millions of foreign eggs found their way into England, paying a duty of 11,077*l*., at the rate of a penny for each dozen. They principally came from France, from that coast which had a ready communication with Kent and Sussex, and with the Thames. These eggs, liable as they were to a duty, came to the consumer so much cheaper than the Berwick eggs, or the Welsh eggs, or the eggs even that were produced in Middlesex or Surrey, that the trade in eggs was slowly but surely revolutionised. Large heaps of eggs made their appearance in the London markets, or stood in great boxes at the door of the buttermilk man, with tempting labels of '24 a shilling,' or '20 a shilling.' They were approached with great suspicion, and not unjustly so; for the triumphs of steam were yet far from complete. But it was discovered that there was

an egg-producing country in close proximity to London, in which the production of eggs for the metropolitan market might be stimulated by systematic intercourse, and become a mutual advantage to a population of two millions, closely packed in forty square miles of street, and a population of six hundred thousand spread over two thousand five hundred square miles of arable, meadow, and forest land, with six or eight large towns. This population of the Pas de Calais is chiefly composed of small proprietors. Though the farms are larger there than in some other parts of France, some of the peculiarities of what is called the small culture are there observable. Poultry, especially, is most abundant. Every large and every small farmhouse has its troops of fowls and turkeys. The pullets are carefully fed and housed; the eggs are duly collected; the good-wife carries them to the markets of Arras, or Bethune, or St. Omer, or Aire, or Boulogne, or Calais: perhaps the egg-collector traverses the district with his cart and his runners. The egg-trade with England gradually went on increasing. In 1835, France consigned to us seventy-six millions of eggs, paying a duty of tenpence for 120. In 1849, we received ninety-eight millions of foreign eggs, paying a duty of tenpence-halfpenny per 120, amounting to 35,694*l*. These are known in the egg-market as eggs of Caen, Honfleur, Cherbourg, Calais, and Belgium.

In 1825 the commercial intercourse between Great Britain and Ireland was put upon the same footing as the coasting trade of the ports of England. Steam navigation between the two islands also had received an enormous impulse. The small farmers and cottiers of Ireland were poultry-keepers. Too often the poor oppressed tenants were wont to think—‘The hen lays eggs, they go into the lord’s frying-pan.’ Steam navigation gave a new impulse to Irish industry. Before steam-vessels entered the Cove of Cork, an egg, at certain seasons, could scarcely be found in the market of that city. England wanted eggs; steam-boats would convey them rapidly to Bristol; the small farmers applied themselves to the production of eggs; Cork itself then obtained a constant and cheap supply. In 1835 Ireland exported as many eggs to England as were valued at 156,000*l*., being in number nearly a hundred millions. In 1847 it was stated by Mr. Richardson, in a work on Domestic Fowls, published in Dublin, that the export of eggs from Ireland to England was ‘bordering on a million sterling.’ The eggs are valued at 5*s*. 6*d*. for 124, which would indicate an export of about four hundred and fifty millions of eggs. We come to more precise results when we learn, on the

authority of the secretary of the Dublin Steam-Packet Company, that in the year 1844–5 there were shipped from Dublin alone, to London and Liverpool, forty-eight millions of eggs, valued at 122,500*l*. In the census of 1841, the poultry of Ireland was valued at 202,000*l*., taking each fowl at 6*d*. per head. The return was below the reality; for the peasantry were naturally afraid of some fiscal imposition, worse even than the old tax of ‘duty fowls,’ when they had to account for their Dame Partletts. Eight millions of poultry, which this return indicates, is, however, a large number. The gross number of holdings in Ireland, as shown by the agricultural returns of 1847, was 935,000; and this would give above eight fowls to every cottage and farm,—a number sufficient to produce four hundred and fifty millions of eggs for exportation, if all could be collected and all carried to a port. One hundred and twenty eggs yearly is the produce of a good hen. It would be safe to take the Irish export of eggs at half the number,—an enormous quantity, when we consider what a trifling matter an egg appears when we talk of large culture and extensive commerce. Out of such trifles communities have grown into industrious and frugal habits and consequent prosperity. There was a time when the English farmer’s wife would keep her household out of the profits of her butter, her poultry, and her eggs; when she duly rose at five o’clock on the market-day morning, rode with her wares some seven miles in a jolting cart, and stood for six hours at a stall till she had turned all her commodity into the ready penny. The old thrift and the old simplicity may return, when English farmers learn not to despise small gains, and understand how many other things are to be done with the broad acres, besides growing wheat at a monopoly price.

The coast-trade brings English eggs in large numbers into the London markets. Scotch eggs are also an article of import. The English eggs, according to the ‘Price Current,’ fetch 25 per cent. more than the Scotch or Irish. The average price of all eggs at the present time, in the wholesale London market, is five shillings for 120—exactly a halfpenny each.

In the counties by which London is surrounded, the production of fresh eggs is far below the metropolitan demand. Poultry, indeed, is produced in considerable quantities, but there is little systematic attention to the profitable article of eggs. Where is the agricultural labourer who has his half-dozen young hens, from which number, with good management, nine hundred, and even a thousand eggs may be annually produced, that will obtain a high price—three times as high as foreign eggs? These six hens

would yield the cottager a pleasant addition to his scanty wages, provided the egg-collection were systematised, as it is in Ireland. Mr. Weld, in his 'Statistical Survey of the County of Roscommon,' says, 'The eggs are collected from the cottages for several miles round, by runners, commonly boys from nine years old and upwards, each of whom has a regular beat, which he goes over daily, bearing back the produce of his toil carefully stowed in a small hand-basket. I have frequently met with these boys on their rounds, and the caution necessary for bringing in their brittle ware with safety seemed to have communicated an air of business and steadiness to their manner, unusual to the ordinary volatile habits of children in Ireland.'

Making a reasonable estimate of the number of foreign eggs, and of Irish and Scotch eggs that come into the port of London—and putting them together at a hundred and fifty millions, every individual of the London population consumes sixty eggs, brought to his own door from sources of supply which did not exist thirty years ago. Nor will such a number appear extravagant when we consider how accurately the egg-consumption is regulated by the means and the wants of this great community. Rapid as the transit of these eggs has become, there are necessarily various stages of freshness in which they reach the London market. The retail dealer purchases accordingly of the egg-merchant; and has a commodity for sale adapted to the peculiar classes of his customers. The dairyman or poulterer in the fashionable districts permits, or affects to permit, no cheap sea-borne eggs to come upon his premises. He has his eggs of a snowy whiteness at four or six a shilling, 'warranted new-laid;' and his eggs from Devonshire, cheap at eight a shilling, for all purposes of polite cookery. In Whitechapel, or Tottenham Court Road, the bacon-seller 'warrants' even his twenty-four a shilling. In truth, the cheapest eggs from France and Ireland are as good, if not better, than the eggs which were brought to London in the days of bad roads and slow conveyance—the days of road-waggon and pack-horses. And a great benefit it is, and a real boast of that civilisation which is a consequence of free and rapid commercial intercourse. Under the existing agricultural condition of England, London could not, by any possibility, be supplied with eggs to the extent of a hundred and fifty millions annually, beyond the existing supply from the neighbouring counties. The cheapness of eggs through the imported supply has raised up a new class of egg-consumers. Eggs are no longer a luxury which the poor of London cannot

touch. France and Ireland send them cheap eggs. But France and Ireland produce eggs for London, that the poultry-keepers may supply themselves with other things which they require more than eggs. Each is a gainer by the exchange. The industry of each population is stimulated; the wants of each supplied.

MUSIC IN HUMBLE LIFE.

Music—that is, classical music—has of late years been gradually descending from the higher to the humbler classes. The Muse is changing her associates; she is taking up with the humble and needy, and leaves nothing better to her aristocratic friends than their much-loved Italian Opera. It is to the masses that she awards some of her choicest scientific gifts. She has of late years permeated and softened the hard existence of the artisan and the labourer.

It was not always thus. There was an ‘olden time’ in England when Music was more assiduously cultivated among the higher and educated classes than it has been in more modern days. In the sixteenth century, knowledge of music, and skill in its performance were deemed indispensable to persons of condition. Queen Elizabeth, among her other vanities, was proud of her musical powers, and not a little jealous of her unhappy rival, the Queen of Scots, on account of her proficiency in this accomplishment. The favourite vocal music of that day consisted of the madrigals of the great Italian and English masters—those wonderful works of art, which, like the productions of ancient Grecian sculpture, have baffled all attempts at modern imitation. Yet every well-educated lady or gentleman was expected to take a part in those profound and complicated harmonies; and at a social meeting, to decline doing so, on the score of inability, was regarded as a proof of rudeness and low-breeding. In Morley’s very curious book, the *‘Introduction to Practical Music,’* a gentleman is represented as seeking musical instruction in consequence of a mortification of this kind. ‘Supper being ended,’ says he, ‘and musicke books, according to the custom, being brought to the table, the mistress of the house presented me with a part, earnestly requesting me to sing; but when, after many excuses, I

protested unfainedly that I could not, every one began to wonder, yea, some whispered to others, demanding how I was brought up.'

Music declined in England along with manners. In the middle of the last century, a period rivalling the days of Charles the Second in moral profligacy, Lord Chesterfield, who of course expressed the fashionable feeling of the time, advised his son to eschew the practice of music as unbecoming a gentleman. This feeling, we need scarcely say, has long passed away; some of our most accomplished amateurs of both sexes being found in the highest circles of society.

Traces, however, of the ancient and extensive cultivation of music were never entirely obliterated; and, as might be expected, they existed, along with more primitive manners, in the more remote districts of the country. In some of the northern counties, particularly Lancashire and Yorkshire, the inhabitants have from time immemorial been remarkable for skill in vocal harmony, and for their knowledge of the old part-music of the English school. As these districts have gradually become the seats of manufactures, the same musical habits have been kept up among the growing population; and so salutary have these habits been found—so conducive to order, temperance, and industry—that many great manufacturers have encouraged them by furnishing to their workpeople the means of musical instruction.

The Messrs. Strutt, of Derby, trained some of their brawny workmen into a band, and many of them could step from the forge into the orchestra, and perform some of the most complicated pieces, by English and foreign composers, in a creditable style.

Another set of harmonious blacksmiths awaken the echoes of the remotest Welsh mountains. The correspondent of a London paper, while visiting Merthyr, was exceedingly puzzled by hearing boys in the Cyfarthfa works whistling airs rarely heard except in the fashionable ball-room, opera-house, or drawing-room. He afterwards discovered that the proprietor of the works, Mr. Robert Crawshay, had established among his men a brass band, which practises once a week throughout the year. They have the good fortune to be led by a man (one of the 'roll-turners') who must have had somewhere a superior musical education. 'I had the pleasure of hearing them play, and was astonished at their proficiency. They number sixteen instruments. I heard them perform the Overtures to Zampa, The Caliph of Bagdad, and Fra Diavolo, *Vivi tu*, some concerted music from Roberto,

Don Giovanni, and Lucia, with a quantity of Waltzes, Polkas, and dance music. The bandmaster had them under excellent control; he everywhere took the time well, and the instruments preserved it, each taking up his lead with spirit and accuracy; in short, I have seldom heard a regimental band more perfect than this handful of workmen, located (far from any place where they might command the benefit of hearing other bands) in the mountains of Wales. The great body of men at these works are extremely proud of their musical performances, and like to boast of them. I have been told it cost Mr. Crawshay great pains and expense to bring this band to its present excellent condition. If so, he now has his reward. Besides this, he has shown what the intellectual capacity of the workman is equal to, and, above all, he has provided a rational and refined amusement for classes whose leisure time would otherwise probably have been less creditably spent than in learning or listening to music.'

The habits and manners of these men appear to have been decidedly improved by these softening influences. They are peaceful and simple. 'During a stay of several weeks in the town,' says the same authority, 'I neither saw nor heard of altercations or fighting. The man, on his return from labour, usually washes (the colliers and miners invariably wash every day from head to foot), puts on another coat, and sits down to his meal of potatoes, meat, and tea, or broth, and bread and cheese, as the case may be. His wife and children, comfortably clothed and cheerful, sit down with him. Afterwards he goes to a neighbour's house, or receives some friends of his own, when they discuss the news and light gossip affecting their class, or talk over the success or difficulties attending their work and their prospects as regards the future. Visiting many of their houses at night, I saw numbers of such groups; in one instance only I saw them drinking beer, and that was at a kind of house warming, one of the body having that night taken possession of the neatly furnished house where I found them assembled.'

These are, indeed, only insulated good effects wrought by private individuals; but their beneficial effects have led to and helped on the systematic cultivation of music as a branch of popular education under the direct sanction and authority of the Government; and the labours of Mr. Hullah, who was chosen as the agent in this good work, have been attended with a degree of success far beyond anything that could have been anticipated.

Mr. Hullah had turned his attention to the subject of popular instruction in Music, before the matter was taken up by the Government, and had examined the methods of tuition adopted in various parts of the Continent. An investigation of the system of Wilhem, which had been formally sanctioned by the French Government, induced him to attempt its introduction in a modified form, into this country; and he had an opportunity of doing so by being appointed to instruct in vocal music the pupils of the training-school at Battersea, then recently opened under the direction of the National Society. In February 1840, he gave his first lesson to a class of about twenty boys, and from this small beginning sprang the great movement which speedily extended over the kingdom. The success of these lessons attracted the notice of the Committee of the Privy Council, who undertook the publication of the work containing the adaptation of the Wilhem system to English use; and under the sanction of the Committee, three classes were opened in Exeter Hall for schoolmasters or teachers in elementary schools, each class limited to one hundred persons; and a fourth class, of the same number, for female teachers. These classes were opened in February and March 1841. Their expenses were defrayed partly from small payments made by the pupils themselves, and partly by a subscription raised among a few distinguished friends of education. It is worthy of particular notice (as an erroneous impression has existed on the subject) that the Government has never contributed a shilling to the support of any of Mr. Hullah's classes; though the official countenance and encouragement of the Committee of Council certainly contributed much to Mr. Hullah's success.

Many applications for similar instructions having been made by persons *not* engaged in teaching, the elementary classes were thrown open to the public; and in the spring of 1841 these applications became so numerous, that it was found necessary to engage the Great Room at Exeter Hall and several of the smaller rooms.

These first courses of elementary lessons being ended, an Upper School was opened, in December 1841, for the practice of choral music, to enable those pupils who might desire it to keep up and increase the knowledge they had acquired. This class was joined by about 250 persons.

The first great choral meeting of Mr. Hullah's classes was held in April 1842. About 1500 persons sang, of whom the majority were adults, who, a

year before, had possessed no knowledge of music. During the year following, 861 persons joined the elementary classes, and 1465 became members of the Upper Schools, which were increased in number from one to three.

Of these Upper Schools, Mr. Hullah himself says—^[1]

^{1.} *The Duty and Advantage of Learning to Sing.* A Lecture delivered at the Leeds Church Institution, 1846.

‘They consist of persons of both sexes, of nearly all ages, and nearly all ranks; for I think it would be difficult to name a class or calling, of which they do not include some representative. We have clergymen, lawyers, doctors, tradesmen, clerks, mechanics, soldiers, and, of course, many schoolmasters and schoolmistresses. The large number of females, besides distinguishing us broadly from those musical societies called Social Harmonists and Glorious Apollos and the like—relics of an age when men were not at all times fit company for women—besides producing that courteous and scrupulous tone which female influence must produce wherever it has fair play, removes the only objection which can reasonably be made to this kind of social recreation, that it carries individuals away from their homes, and breaks up family circles; for our meetings include many a family circle entire—husbands and wives, brothers and sisters, parents and children; and these, in many instances, taught by one another.’

When the singing classes were opened in Exeter Hall, other classes were also opened, also under the sanction of the Committee of Council, for totally different objects;—instruction in Model Drawing, Writing, Arithmetic, and Chemistry. The receipts from the singing classes, during 1841, 1842, and 1843, realised a net surplus above expenditure, of 1122£: but nearly the whole of this sum was employed in meeting the losses on the other classes, in every one of which there was a deficit. From the very heavy rent, too, demanded for Exeter Hall, it was thought advisable to quit that place, and transfer the singing classes to the Apollonicon Rooms in St. Martin’s Lane, till the plan then formed, for the erection of a building at once less expensive and better fitted for the accommodation of the classes than Exeter Hall, could be carried into effect.

This plan has been accomplished by the erection of the edifice in Long Acre, called St. Martin’s Hall. The funds for this purpose were raised by the persevering exertions of Mr. Hullah, aided by liberal advances made by

private individuals, subscriptions, and contributions of the pupils, in testimony of their sense of the advantage they derived from the schools, and the profits of a series of great Choral Concerts given, for several seasons, in Exeter Hall. The first stone of the building was laid by the Earl of Carlisle on the 26th of June, 1847; and the first public meeting in the Great Hall was held on the 11th of February last. The edifice, though rendered fit for present use, is not yet fully completed, in consequence of a portion of the ground forming its site being still under an unexpired lease. When finished, the great concert-hall will be 120 feet long, 55 wide, and 40 high; and will afford accommodation for three thousand persons. There are also a lecture-room which can hold five hundred persons, three spacious class-rooms, and a large room intended as a library of music and musical literature.

At St. Martin's Hall there are now about 1400 persons in various stages of instruction; about 450 in the first upper school, about 250 in the second, and the remainder in the elementary classes. The pupils belong to every class and calling; the highest ranks of the aristocracy, the members of almost every trade and profession, the industrious mechanic and workman; and they all mingle in one common pursuit, without regard to station or degree, and with the utmost harmony of feeling. There is a due admixture of the softer sex; and the meetings of the classes are characterised by such uniform propriety and decorum, that the most scrupulous parents allow their children, without hesitation, to attend them.

There are several other places in the Metropolis where Mr. Hullah's system of teaching is in operation. He has been appointed Professor of Vocal Music in King's College, in which seminary music forms a regular part of the Theological Course; a knowledge of this art being regarded as so conducive to the usefulness of a clergyman, that its acquirement, to a certain extent, is rendered imperative on the students of divinity. At the Charterhouse, a succession of singing classes has been maintained for these five or six years.

The National Society for the Education of the Poor has four Normal Schools, in all of which the musical instruction is under Mr. Hullah's direction. These are:—1st, St. Mark's College, Chelsea; in which, there are always sixty students, who remain there three years. *All* learn to sing, and the majority to write in four-part harmony, before they leave. They have a daily choral service, in which they sing (without accompaniment) the

services of Tallis, Gibbons, and other (chiefly old) English masters, and the motets and hymns of the old Italian and Flemish schools. They are at this time getting up, in their leisure hours, *The Messiah*, with not only the vocal but the instrumental parts. Attached to the College is a boys' school, where the boys (upwards of 200) are taught to sing by the students. The boys of the first class are all able to sing the treble parts of *The Messiah*. 2nd, Battersea College, in which there are about 80 students, who remain about a year. 3rd, Westminster Training Institution, in which there are about 45 masters and 60 mistresses, who remain about six months. There are also, in the school attached, about 200 boys and 150 girls taught to sing. The whole body forms at once the choir and greater part of the congregation at Christ Church, Westminster. The children at this school are of the humblest class. 4th, Whitelands; where there are about 75 young women training for schoolmistresses. They remain about three years, and attain some knowledge of Harmony.

Besides the above, under Mr. Hullah's personal direction, there are various other training institutions in London, in which his plans have been adopted, and are carried out by pupils of his own. The most important of these are, the Borough Road Schools and the Home and Colonial Infant School Society.

There are Normal Schools at York, Exeter, Oxford, Chester, Warrington, Durham, and other provincial towns, in all of which music is taught systematically, according to the methods which the masters have acquired in the Normal Schools of the metropolis. In Ireland, the National Board of Education some years ago formally adopted Mr. Hullah's books, and have introduced his methods into a variety of seminaries. In Scotland less seems to have been done. But the authorities of the Free Church sent a young teacher to study under Mr. Hullah, who returned to Edinburgh about a year ago, and, we learn, is giving instructions with success. Mr. Hullah's 'Manual' has been translated into Welsh, and introduced into some schools in the Principality. Many copies of his books have been sent to different parts of India, Australia, Van Diemen's Land, and New Zealand, for the use of persons teaching in those remote regions.

It thus appears that Music is becoming a regular branch of popular education, and for the most part according to an uniform and well-tried method, in every part of the British empire. The system is of too recent

growth to have brought its fruits to maturity. It may, indeed, be regarded as in its infancy when compared with the magnitude which it cannot fail to attain. But already its effects are striking and encouraging. Music—well, badly, or indifferently taught—forms a part of the business of the great majority of schools, national, public, and private, throughout the country. In hundreds of quiet, out-of-the-way country churches, an approximation is made to a choral service often purely vocal. Hundreds of country clergymen are now qualified, by musical attainment, to superintend the singing of their choirs and congregations, and exert themselves to render it consistent with taste, propriety, and devotion. And it is a certain fact, that whereas ten years ago, nobody, in the engagement of a schoolmaster, ever thought of inquiring about his musical capacity, men defective in this point, but otherwise of unexceptionable character and attainments, find it next to impossible to obtain employment.

A PARIS NEWSPAPER.

Within the precincts of that resort for foreigners and provincials in Paris the Palais Royal, is situate the Rue du 24 Fevrier. This revolutionary name, given after the last outbreak, is still pronounced with difficulty by those who, of old, were wont to call it the Rue de Valois. People are becoming accustomed to call the royally named street by its revolutionary title, although it is probable that no one will ever succeed in calling the Palais Royal, Palais National; the force of habit being in this instance too great to efface old recollections. Few foreigners have ever penetrated into the Rue du 24 Fevrier, though it forms one of the external galleries of the Palais Royal, and one may see there the smoky kitchens, dirty cooks,—the nightside, in fact, of the splendid restaurants whose gilt fronts attract attention inside. Rubicund apples, splendid game, truffles, and ortolans, deck the one side; smoke, dirty plates, rags, and smutty saucepans may be seen on the other.

It is from an office in the Rue du 24 Fevrier, almost opposite the dark side of a gorgeous Palais Royal restaurant, that issue 40,000 copies of a daily print, entitled the ‘Constitutionnel.’

Newspaper offices, be it remarked, are always to be found in odd holes and corners. To the mass in London, Printing-house Square, or Lombard Street, Whitefriars, are mystical localities; yet they are the daily birthplaces of that fourth estate which fulminates anathemas on all the follies and weaknesses of governments, and, without which, no one can feel free or independent. The ‘Constitutionnel’ office is about as little known to the mass of its subscribers as either Printing-house Square or Whitefriars.

There is always an old and respectable look about the interior of newspaper establishments, in whatever country you may find them. For rusty dinginess, perhaps there is nothing to equal a London office, with its

floors strewn with newspapers from all parts of the world, parliamentary reports, and its shelves creaking under books of all sorts thumbed to the last extremity. Notwithstanding these appearances, however, there is discipline,—there is real order in the apparent disorder of things. Those newspapers that are lying in heaps have to be accurately filed; those books of reference can be pounced upon when wanted on the instant; and as to reports, the place of each is as well known as if all labelled and ticketed with the elaborate accuracy of a public library.

Not less rusty and not less disorderly is the appearance of a French newspaper office; but how different the aspect of things from what you see in England!

Over the office of the ‘Constitutionnel’ is a dingy tricolor flag. A few broken steps lead to a pair of folding-doors. Inside is the sanctuary of the office, guarded by that flag as if by the honour of the country; for the tricolor represents all Frenchmen, be he prince or proletarian.

You enter through a narrow passage flanked with wire cages, in which are confined for the day the clerks who take account of advertisements and subscriptions. Melancholy objects seem these caged birds; whose hands alone emerge at intervals through the pigeon-holes made for the purpose of taking in money and advertisements. The universal beard and moustachios that ornament their chins, look, however, more unbusiness-like than are the men really. They are shrewd and knowing birds that are enclosed in these wire cages.

At publishing time, boys rushing in for papers, as in London offices, are not here to be seen. The reason of this is simple: French newspaper proprietors prefer doing their work themselves,—they will have no middlemen. They serve all their customers by quarterly, yearly, or half-yearly subscriptions. In every town in France there are subscription offices for this journal, as well, indeed, as for all great organs of the press generally. There are regular forms set up like registers at the Post-office, and all of these are gathered at the periodical renewal of subscriptions to the central office. The period of renewal is every fortnight.

Passing still further up the narrow and dim passage, one sees a pigeon-hole, over which is written the word ‘Advertisements.’ This superscription is now supererogatory, for there no advertisements are received; that branch of the journal having been farmed out to a Company at 350,000fr. a-year.

This is a system which evidently saves a vast deal of trouble. The Advertising Company of Paris has secured almost a monopoly of announcements and puffs. It has bought up the last page of nearly every Paris journal which owns the patronage and confidence of the advertising public of the French Capital. At the end of the same dark passages, are the rooms specially used for the editors and writers. In France, journals are bought for their polemics, and not for their news: many of them have fallen considerably, however, from the high estate which they held in public opinion previous to the last revolution. There are men who wrote in them to advocate and enforce principles; but in the chopping and changing times that France lives in, it is not unusual to find the same men with different principles, interest or gain being the object of each change. This result of revolution might have been expected; and though it would be unfair to involve the whole press in a sweeping accusation, cases in point have been sufficiently numerous to cause a want of confidence in many quarters against the entire press.

The doings of newspaper editors are not catalogued in print at Paris, as in America; but their influence being more occult is not the less powerful, and it is this feeling that leads people to pay more attention to this or that leading article than to mere news. The announcement of a treaty having been concluded between certain powers of Europe, may not lower the funds; but if an influential journal expresses an opinion that certain dangers are to be apprehended from the treaty in question, the exchanges will be instantly affected. This is an instance amongst many that the French people are to be led in masses. Singly they have generally no ideas, either politically or commercially.

The importance of a journal being chiefly centered in that portion specially devoted to politics, the writers of which are supposed right or wrong to possess certain influences, it is not astonishing the editorial offices have few occupants. The editorial department of the 'Constitutionnel' wears a homely appearance, but borrows importance from the influence that is wielded in it—writers decorated with the red ribbon are not unfrequently seen at work in it. In others, and especially in the editorial offices of some journals, may be seen, besides the pen, more offensive weapons, such as swords and pistols. This is another result of the personal system of journalism. As in America, the editor may find himself in the necessity of defending his arguments by arms. He is too notorious to be able to resort to

the stratagem of a well-known wit, who kept a noted boxer in his front office to represent the editor in hostile encounters. He goes out, therefore, to fight a duel, on which sometimes depends not only his own fate, but that of his journal.

With regard to the personal power of a newspaper name, it is only necessary in order to show how frequently it still exists, to state that the Provisional Government of February, 1848, was concocted in a newspaper office, and the revolution of 1830 was carried on by the editors of a popular journal—that amongst the lower orders in France, at the present time, the names that are looked up to as those of chiefs, belong to newspaper editors, whose leading articles are read and listened to in cheap newspaper clubs, and whose “orders” are followed as punctually and as certainly as those of a general by his troops. A certain class of French politicians may be likened to sheep:—they follow their “leaders.”

The smallness of the number of officials in a French newspaper office is to be accounted for from the fact that Parliamentary Debates are transcribed on the spot where the speeches are made; and the reporting staff never stirs from the legislative assembly. The divers corps of reporters for Paris journals form a corporation, with its aldermen or syndici, and other minor officers. Each reporter is relieved every two minutes; and whilst his colleagues are succeeding each other with the same rapidity, he transcribes the notes taken during his two minutes’ ‘turn.’ The result of this revolving system is collated and arranged by a gentleman selected for the purpose. This mode of proceeding ensures, if necessary, the most verbatim transmission of an important speech, and more equably divides the work, than does the English system, where each reporter takes notes for half or three-quarters of an hour, and spends two or three hours—and sometimes four or five—to transcribe his notes. The French Parliamentary reporter is not the dispassionate auditor, which the English one is. He applauds or condemns the orators, cheers or hoots with all the vehemence of an excited partizan.

‘Penny-a-liners’ are unknown in Paris; the foreign and home intelligence being elaborated in general news’ offices, independent of the newspapers. It is there that all the provincial journals are received, the news of the day gathered up, digested, and multiplied by means of lithography; which is found more efficacious than the stylet and oiled ‘flimsy’ paper of our

Penny-a-liners. It is from these latter places too, that the country journals, as well as many of the foreign press, the German, the Belgium, and the Spanish, are supplied with Paris news. England is a good market, as most of our newspapers are wealthy enough to have correspondents of their own.

My first visit to the 'Constitutionnel' was in the day-time, and I caught the editor as he was looking over some of his proofs. Their curious appearance led me to ask how they were struck off, and, in order to satisfy me, he led the way up a dark stair, from which we entered upon the composing-rooms of the premises. These, in appearance, were like all other composing-rooms that I had seen; the forms, and cases for the type, were similar to those in London; the men themselves had that worn and pale look which characterises the class to which they belong, and their pallor was not diminished by their wearing of the long beard and moustache. Their unbuttoned shirts and bare breasts, the short clay pipe, reminded me of the heroes of the barricades; indeed, I have every reason to know that these very compositors are generally foremost in revolutions; and though they often print ministerial articles, they are not sharers in the opinions which they help to spread. The head printer contracts for the printing, and chooses his men where he can find them best. As a body, these men were provident, I was told, and all subscribed to a fund for their poor, their orphans and widows; they form a sort of trade union, and have very strict regulations.

I found a most remarkable want of convenience in the working of the types. For instance, there were no galleys, or longitudinal trays, on which to place the type when it was set up; but when a small quantity had been put together in column on a broad copper table, a string was passed round it to keep it together. Nor was there any hand-press for taking proofs; and here I found the explanation of the extraordinary appearance of the proofs I had seen below. For when I asked to have one struck off, the head printer placed a sheet of paper over the type, and with a great brush beat it in, giving the proof a sunken and embossed appearance, which it seemed to me would render correction exceedingly difficult. The French, it seems, care not for improvement in this respect, any more than the Chinese, whom the brush has served in place of a printing-press for some three thousand years.

This Journal has, as I have said, from 40,000 to 50,000 subscribers, in order to serve whom it was necessary that the presses should be at work as early as eleven o'clock at night. But there is no difficulty in doing this,

where news not being the *sine quâ non* of journalism, provincial and foreign intelligence is given as fresh, which in England would be considered much behind in time. But even when commencing business at the early hour above mentioned, I found that it had been necessary for the paper to be composed twice over, in order to save time; and thus two printers' establishments were required to bring out each number of the journal in sufficient time for the country circulation by early morning trains. The necessity for this double composition is still existing in most of the French newspaper offices, but had been obviated here lately, by the erection of a new printing-machine, which sufficed by the speed of its working to print the given number of copies necessary for satisfying the wants of each day.

Having seen through the premises, and witnessed all that was interesting in the day-time, I was politely requested to return in the evening, and see the remaining process of printing the paper and getting it ready to send out from the office.

Punctually at eleven o'clock I was in the Rue du 24 Fevrier. Passing through the offices which I had seen in the morning, I was led by a sort of guide down some passages dimly lighted with lamps. To the right and to the left we turned, descending stone steps into the bowels of the earth as it seemed to me; the walls oozing with slimy damp in some parts; dry and saltpetry in others. A bundle of keys, which were jingling in my guide's hand, made noises which reminded me of the description of prisoners going down into the Bastille or Tower. At another moment a sound of voices in the distance, reminded me of a scene of desperate coiners in a cellar.

These sounds grew louder, as we soon entered a vast stone cellar, in which rudely dressed men, half-naked as to their breasts and arms, were to be seen flitting to and fro at the command of a superior; their long beards and grimy faces, their short pipes and dirty appearance, made them look more like devils than men, and I bethought me that here, at last, I had found that real animal—the printer's devil. There were two or three printing-presses in the room, only one of which was going. Its rolling sound was like thunder in the cave in which we stood. As paper after paper flew out from the sides of this creaking press, they were carried to a long table and piled up in heaps.

Presently some of the stoutest men shouldered a mass of these, and my conductor and myself following them, we entered a passage which led to another cellar, contiguous to that in which the papers were printed. There, sitting round a number of tables, were several young women. These women seized upon a portion of the papers brought in, and with an amazing rapidity folded them into a small compass. In a few minutes all the papers I had seen printed were folded and numbered off by dozens. Then comes another operation: a man came round and deposited before each woman a bundle of little paper slips, which I found to be the addresses of the subscribers. The women placed the labels and the paste on one side, and commenced operations. A bundle of papers, folded, was placed before each; the forefinger, dipped in the paste, immediately touched the paper and the label simultaneously, and the 'Constitutionnel' flew out with a speed perfectly astonishing from the hands of these women, ready to be distributed in town or country. They were then finishing the labelling of the papers for Paris circulation; 20,000 copies scarcely sufficing for the supply.

This was the concluding sight in my visit to a Paris Newspaper Office.

LINES BY ROBERT SOUTHEY.

[From an Unpublished Autograph.]

The days of Infancy are all a dream,
How fair, but oh! how short they seem—
 'Tis Life's sweet opening SPRING!

The days of Youth advance:
The bounding limb, the ardent glance,
 The kindling soul they bring—
It is Life's burning SUMMER time.

Manhood—matured with wisdom's fruit,
Reward of Learning's deep pursuit—
Succeeds, as AUTUMN follows Summer's prime.

And that, and that, alas! goes by;
And what ensues? The languid eye,
The failing frame, the soul o'ercast;
 'Tis WINTER'S sickening, withering blast,
Life's blessed season—for it is the last.

SHORT CUTS ACROSS THE GLOBE.

THE ISTHMUS OF SUEZ.

That little neck of land which lies between the head of the Red Sea and the Gulph of Gaza, in the Mediterranean, is the cause of merchandise circumnavigating the two longest sides of the triangular continent of Africa on its way to the East; instead of making the short cut which is available for passengers by what is called the 'overland route.' If a water-way were opened across the Isthmus, the highway for the goods traffic as well as for the passenger traffic of Europe, India, China, and Australia, will be along the Mediterranean and Red Seas and the Indian Ocean. And that highway will be so thronged, that the expense of travelling by it will be reduced to a *minimum*, and the accommodations for travellers at intermediate stations raised to a *maximum* of comfort.

This state of affairs—analogous to that which occurs in the intercourse of two towns where there is a round-about road for carts and carriages, and a footpath across the meadows for foot-passengers only—is attended by great inconveniences. Letters relating to mercantile transactions are forwarded by the short cut; the merchandise to which they relate follows tardily by the round-about road. The advantageous bargain concluded now may have a very different aspect when the goods come to be delivered three or four months hence. The seven-league-boot expedition of letters, and the tardy progress of goods, convert all transactions between England and India into a game of chance. This fosters that spirit of gambling speculation already too rife among us.

Again, so long as the route for passengers continues to be something different and apart from the route for merchandise, the travelling charges will be kept higher, and the accommodations for travellers less comfortable

than they would otherwise be. Railways, in arranging their tariff of fares, venture to reduce the charge for passengers (in the hope of augmenting their number) when they can rely upon the returns from the goods traffic to make up deficiencies. If merchandise, as well as travellers and letters, could be carried by what is called the overland route (of which scarcely two hundred miles are travelled by land), the passengers' fares would admit of great reduction; and as that route would thus become the great highway, frequented by greater crowds, the accommodation of travellers could be better cared for. Travellers in carriages rarely reflect how much the amount of charges at inns depends upon the landlords having a profitable run of business among less distinguished guests.

As we remarked, when descanting on the Panama route, physical obstacles to the opening of short cuts are of much less consequence than those which originate in financial difficulties. Almost any physical obstacles may be overcome, if money can be profitably invested in the undertaking, and if money can be got for such investment.

Were we projectors of companies, and engaged in preparing an attractive prospectus, we might boldly declare that the obstacles in the construction of a ship canal at Suez are trifling, and that the work would prove amply remunerative. But being only impartial spectators, we are obliged to confess that our information respecting the nature of the country is lamentably defective, and that what we do know does not warrant any sanguine expectation. Public attention has been industriously directed from the true line of a ship canal across the Isthmus of Suez. The late Mehemet Ali—peace to his ashes!—was a humbug of the first water, and he knew how to avail himself of the services of kindred spirits. He understood enough of European whims and sentiments to know what tone of language he must adopt in order to persuade Europeans he was subserving their views, while he was, in reality, promoting his own. He talked, therefore, of facilitating the intercourse between India and Europe, but he thought of making that intercourse pass through his dominions by the longest route, and in the way which would oblige travellers to leave the greatest possible amount of money behind them; and to attain his ends he retained in his service a motley group of Europeans—the vain, the ignorant, and the jobbing, who did his spiriting after a fashion that bears conclusive testimony to his judgment and tact in selecting them.

What is really wanted for the commerce of Europe and India, is a ship canal across the Isthmus of Suez, by the shortest and least difficult route. What Mehemet Ali conceded was a land passage through his dominions by the longest possible route. The natural course of a ship canal is, in a straight line, from Suez to the eastern extremity of Lake Menzaleh: the line of transit conceded by Mehemet Ali is from Alexandria by Cairo to Suez, nearly three times as long. The former line passes across a low and well-watered region: the latter renders necessary an interchange of canal and river navigation, and dry land passage across the desert. The former might be passed in a day without halting: the latter occupies several days, and includes necessary stoppages in the inns of Alexandria and Cairo. But Mehemet Ali and his tools directed attention from the former, and gabbled about railways and other impracticabilities, and the European public was gulled. Egypt can be reached any day by a fortnight's easy and luxurious travel, and yet the country between the eastern extremity of Lake Menzaleh and Suez is less accurately known than the Isthmus of Panama.

What we do know, with any degree of certainty about this transit, is briefly as follows:—The navigation of the Red Sea in the vicinity of Suez is rather intricate, abounding in shoals, but there is secure anchorage, and sufficient draft of water for merchant ships of considerable burden. The Mediterranean off the eastern extremity of Lake Menzaleh is rather shallow, tolerably sheltered from the west wind, which prevails for a part of the year, but exposed to the north wind. Between Suez and the site of the ruins of Pelusium at the eastern end of the lake, the land is low and level, apparently for a part of the way between the level of both seas. The low land receives in the wet season the drainings of the high land on the east, which is a northern continuation of the mountains between the gulfs of Suez and Akaba. In addition to this, the land to the westward (northward of the Mokattam mountains which terminate near Cairo) has a twofold slope,—the principal northward to the Mediterranean, the secondary eastward to the line of country we are now describing. Originally, there appears to have been a branch of the Nile entering the Mediterranean near where the ruins of Pelusium now are, and those intermediate branches between that and the Damietta branch.

The first mentioned is now closed, the other two very much obstructed; but their waters still find a way to the coast, though diminished by artificial works, and appear to be the cause of the collection of shallow water called

Lake Menzaleh. Here, then, we have sixty geographical miles of a low country, with no considerable undulations, towards which the waters of Arabia Petræa flow in their season, and towards which a considerable portion of the waters of the Nile would flow if left to fall on the natural declivity of the country. There is an abundant supply of water for a ship canal. The surface of the ground is in some places covered with drift sand, but not uniformly nor even for the most part. The subsoil is hard, clayey or pebbly. The bent-grasses might be cultivated, as they have been in Holland, to give firmness to the drift sand where it occurs; and this superficial obstacle removed, the subsoil is favourable to the construction of a permanent water-channel. The great difficulty would be the construction of works by which access to the canal is to be obtained from the Mediterranean. Apparently they would require to be carried far out into the sea; and apparently it would be difficult to prevent their being sanded up by the waves which the north winds drive upon the coast for a great part of the year.

These difficulties, though great, are not insuperable. The advanced state of marine architecture and engineering ought surely to be able to cope with them. By re-opening the Pelusiæ branch of the Nile, and throwing into it the waters which would naturally find their way into the Tanitic and Mendesian branches, a sufficient stream of water might be thrown into the Mediterranean at Pelusium to keep a passage open by its *scour*. We must speak with diffidence about a locality which has yet been so imperfectly surveyed; but so far as the present state of our knowledge respecting it enables us to judge, there are no serious impediments to the construction of a ship canal from Pelusium to Suez, which would be perfectly accessible and practicable for vessels of from 300 to 350 tons burden; and there is a growing impression among merchants and skippers that this class of vessels is the best for trading purposes.

But the great difficulty remains yet to be noticed; the condition of government and civil security in that country. The isthmus is close on the borders of civilised Europe, and ample supplies of effective labourers could be procured from Malta, and the Syrian and African coasts. But so long as the country is subject to a Turkish dynasty, could the undertakers count upon fair play and sufficient protection from the local authorities? And are the jealous powers of Europe likely to combine in good faith to afford them

a guarantee that they should be enabled to prosecute their enterprise in security?

CURIOUS EPITAPH.

The following curious Inscription appears in the Churchyard, Pewsey, Dorsetshire:—

HERE LIES THE BODY
OF
LADY O'LOONEY,
GREAT NIECE OF BURKE,
COMMONLY CALLED THE SUBLIME.
SHE WAS
BLAND, PASSIONATE, AND DEEPLY RELIGIOUS;
ALSO, SHE PAINTED
IN WATER-COLOURS,
AND SENT SEVERAL PICTURES
TO THE EXHIBITION.
SHE WAS FIRST COUSIN
TO LADY JONES;
AND OF SUCH
IS THE KINGDOM OF HEAVEN.

*** END OF THE PROJECT GUTENBERG EBOOK HOUSEHOLD
WORDS, NO. 7, MAY 11, 1850 ***

Updated editions will replace the previous one—the old editions will be renamed.

Creating the works from print editions not protected by U.S. copyright law means that no one owns a United States copyright in these works, so the Foundation (and you!) can copy and distribute it in the United States without permission and without paying copyright royalties. Special rules, set forth in the General Terms of Use part of this license, apply to copying and distributing Project Gutenberg™ electronic works to protect the PROJECT GUTENBERG™ concept and trademark. Project Gutenberg is a registered trademark, and may not be used if you charge for an eBook, except by following the terms of the trademark license, including paying royalties for use of the Project Gutenberg trademark. If you do not charge anything for copies of this eBook, complying with the trademark license is very easy. You may use this eBook for nearly any purpose such as creation of derivative works, reports, performances and research. Project Gutenberg eBooks may be modified and printed and given away—you may do practically ANYTHING in the United States with eBooks not protected by U.S. copyright law. Redistribution is subject to the trademark license, especially commercial redistribution.

START: FULL LICENSE

THE FULL PROJECT GUTENBERG™ LICENSE

PLEASE READ THIS BEFORE YOU DISTRIBUTE OR USE THIS WORK

To protect the Project Gutenberg™ mission of promoting the free distribution of electronic works, by using or distributing this work (or any other work associated in any way with the phrase “Project Gutenberg”), you agree to comply with all the terms of the Full Project Gutenberg License available with this file or online at www.gutenberg.org/license.

Section 1. General Terms of Use and Redistributing Project Gutenberg electronic works

1.A. By reading or using any part of this Project Gutenberg electronic work, you indicate that you have read, understand, agree to and accept all the terms of this license and intellectual property (trademark/copyright) agreement. If you do not agree to abide by all the terms of this agreement, you must cease using and return or destroy all copies of Project Gutenberg electronic works in your possession. If you paid a fee for obtaining a copy of or access to a Project Gutenberg electronic work and you do not agree to be bound by the terms of this agreement, you may obtain a refund from the person or entity to whom you paid the fee as set forth in paragraph 1.E.8.

1.B. “Project Gutenberg” is a registered trademark. It may only be used on or associated in any way with an electronic work by people who agree to be bound by the terms of this agreement. There are a few things that you can do with most Project Gutenberg electronic works even without complying with the full terms of this agreement. See paragraph 1.C below. There are a lot of things you can do with Project Gutenberg electronic works if you follow the terms of this agreement and help preserve free future access to Project Gutenberg electronic works. See paragraph 1.E below.

1.C. The Project Gutenberg Literary Archive Foundation (“the Foundation” or PGLAF), owns a compilation copyright in the

collection of Project Gutenberg electronic works. Nearly all the individual works in the collection are in the public domain in the United States. If an individual work is unprotected by copyright law in the United States and you are located in the United States, we do not claim a right to prevent you from copying, distributing, performing, displaying or creating derivative works based on the work as long as all references to Project Gutenberg are removed. Of course, we hope that you will support the Project Gutenberg mission of promoting free access to electronic works by freely sharing Project Gutenberg works in compliance with the terms of this agreement for keeping the Project Gutenberg name associated with the work. You can easily comply with the terms of this agreement by keeping this work in the same format with its attached full Project Gutenberg License when you share it without charge with others.

1.D. The copyright laws of the place where you are located also govern what you can do with this work. Copyright laws in most countries are in a constant state of change. If you are outside the United States, check the laws of your country in addition to the terms of this agreement before downloading, copying, displaying, performing, distributing or creating derivative works based on this work or any other Project Gutenberg work. The Foundation makes no representations concerning the copyright status of any work in any country other than the United States.

1.E. Unless you have removed all references to Project Gutenberg:

1.E.1. The following sentence, with active links to, or other immediate access to, the full Project Gutenberg License must appear prominently whenever any copy of a Project Gutenberg work (any work on which the phrase “Project Gutenberg” appears, or with which the phrase “Project Gutenberg” is associated) is accessed, displayed, performed, viewed, copied or distributed:

This eBook is for the use of anyone anywhere in the United States and most other parts of the world at no cost and with almost no restrictions whatsoever. You may copy it, give it away or re-use it under the terms of the Project Gutenberg™ License included with

this eBook or online at www.gutenberg.org. If you are not located in the United States, you will have to check the laws of the country where you are located before using this eBook.

1.E.2. If an individual Project Gutenberg electronic work is derived from texts not protected by U.S. copyright law (does not contain a notice indicating that it is posted with permission of the copyright holder), the work can be copied and distributed to anyone in the United States without paying any fees or charges. If you are redistributing or providing access to a work with the phrase “Project Gutenberg” associated with or appearing on the work, you must comply either with the requirements of paragraphs 1.E.1 through 1.E.7 or obtain permission for the use of the work and the Project Gutenberg trademark as set forth in paragraphs 1.E.8 or 1.E.9.

1.E.3. If an individual Project Gutenberg electronic work is posted with the permission of the copyright holder, your use and distribution must comply with both paragraphs 1.E.1 through 1.E.7 and any additional terms imposed by the copyright holder. Additional terms will be linked to the Project Gutenberg License for all works posted with the permission of the copyright holder found at the beginning of this work.

1.E.4. Do not unlink or detach or remove the full Project Gutenberg License terms from this work, or any files containing a part of this work or any other work associated with Project Gutenberg.

1.E.5. Do not copy, display, perform, distribute or redistribute this electronic work, or any part of this electronic work, without prominently displaying the sentence set forth in paragraph 1.E.1 with active links or immediate access to the full terms of the Project Gutenberg License.

1.E.6. You may convert to and distribute this work in any binary, compressed, marked up, nonproprietary or proprietary form, including any word processing or hypertext form. However, if you provide access to or distribute copies of a Project Gutenberg work in a format other than “Plain Vanilla ASCII” or other format used in the official

version posted on the official Project Gutenberg website (www.gutenberg.org), you must, at no additional cost, fee or expense to the user, provide a copy, a means of exporting a copy, or a means of obtaining a copy upon request, of the work in its original “Plain Vanilla ASCII” or other form. Any alternate format must include the full Project Gutenberg License as specified in paragraph 1.E.1.

1.E.7. Do not charge a fee for access to, viewing, displaying, performing, copying or distributing any Project Gutenberg works unless you comply with paragraph 1.E.8 or 1.E.9.

1.E.8. You may charge a reasonable fee for copies of or providing access to or distributing Project Gutenberg electronic works provided that:

- You pay a royalty fee of 20% of the gross profits you derive from the use of Project Gutenberg works calculated using the method you already use to calculate your applicable taxes. The fee is owed to the owner of the Project Gutenberg trademark, but he has agreed to donate royalties under this paragraph to the Project Gutenberg Literary Archive Foundation. Royalty payments must be paid within 60 days following each date on which you prepare (or are legally required to prepare) your periodic tax returns. Royalty payments should be clearly marked as such and sent to the Project Gutenberg Literary Archive Foundation at the address specified in Section 4, “Information about donations to the Project Gutenberg Literary Archive Foundation.”
- You provide a full refund of any money paid by a user who notifies you in writing (or by e-mail) within 30 days of receipt that s/he does not agree to the terms of the full Project Gutenberg™ License. You must require such a user to return or destroy all copies of the works possessed in a physical medium and discontinue all use of and all access to other copies of Project Gutenberg™ works.
- You provide, in accordance with paragraph 1.F.3, a full refund of any money paid for a work or a replacement copy, if a defect in the electronic work is discovered and reported to you within 90 days of receipt of the work.

- You comply with all other terms of this agreement for free distribution of Project Gutenberg™ works.

1.E.9. If you wish to charge a fee or distribute a Project Gutenberg™ electronic work or group of works on different terms than are set forth in this agreement, you must obtain permission in writing from the Project Gutenberg Literary Archive Foundation, the manager of the Project Gutenberg™ trademark. Contact the Foundation as set forth in Section 3 below.

1.F.

1.F.1. Project Gutenberg volunteers and employees expend considerable effort to identify, do copyright research on, transcribe and proofread works not protected by U.S. copyright law in creating the Project Gutenberg™ collection. Despite these efforts, Project Gutenberg™ electronic works, and the medium on which they may be stored, may contain “Defects,” such as, but not limited to, incomplete, inaccurate or corrupt data, transcription errors, a copyright or other intellectual property infringement, a defective or damaged disk or other medium, a computer virus, or computer codes that damage or cannot be read by your equipment.

1.F.2. LIMITED WARRANTY, DISCLAIMER OF DAMAGES - Except for the “Right of Replacement or Refund” described in paragraph 1.F.3, the Project Gutenberg Literary Archive Foundation, the owner of the Project Gutenberg™ trademark, and any other party distributing a Project Gutenberg™ electronic work under this agreement, disclaim all liability to you for damages, costs and expenses, including legal fees. YOU AGREE THAT YOU HAVE NO REMEDIES FOR NEGLIGENCE, STRICT LIABILITY, BREACH OF WARRANTY OR BREACH OF CONTRACT EXCEPT THOSE PROVIDED IN PARAGRAPH 1.F.3. YOU AGREE THAT THE FOUNDATION, THE TRADEMARK OWNER, AND ANY DISTRIBUTOR UNDER THIS AGREEMENT WILL NOT BE LIABLE TO YOU FOR ACTUAL, DIRECT, INDIRECT, CONSEQUENTIAL, PUNITIVE OR INCIDENTAL DAMAGES

EVEN IF YOU GIVE NOTICE OF THE POSSIBILITY OF SUCH DAMAGE.

1.F.3. LIMITED RIGHT OF REPLACEMENT OR REFUND - If you discover a defect in this electronic work within 90 days of receiving it, you can receive a refund of the money (if any) you paid for it by sending a written explanation to the person you received the work from. If you received the work on a physical medium, you must return the medium with your written explanation. The person or entity that provided you with the defective work may elect to provide a replacement copy in lieu of a refund. If you received the work electronically, the person or entity providing it to you may choose to give you a second opportunity to receive the work electronically in lieu of a refund. If the second copy is also defective, you may demand a refund in writing without further opportunities to fix the problem.

1.F.4. Except for the limited right of replacement or refund set forth in paragraph 1.F.3, this work is provided to you 'AS-IS', WITH NO OTHER WARRANTIES OF ANY KIND, EXPRESS OR IMPLIED, INCLUDING BUT NOT LIMITED TO WARRANTIES OF MERCHANTABILITY OR FITNESS FOR ANY PURPOSE.

1.F.5. Some states do not allow disclaimers of certain implied warranties or the exclusion or limitation of certain types of damages. If any disclaimer or limitation set forth in this agreement violates the law of the state applicable to this agreement, the agreement shall be interpreted to make the maximum disclaimer or limitation permitted by the applicable state law. The invalidity or unenforceability of any provision of this agreement shall not void the remaining provisions.

1.F.6. INDEMNITY - You agree to indemnify and hold the Foundation, the trademark owner, any agent or employee of the Foundation, anyone providing copies of Project Gutenberg™ electronic works in accordance with this agreement, and any volunteers associated with the production, promotion and distribution of Project Gutenberg™ electronic works, harmless from all liability, costs and expenses, including legal fees, that arise directly or indirectly from any of the following which you do or cause to occur: (a)

distribution of this or any Project Gutenberg work, (b) alteration, modification, or additions or deletions to any Project Gutenberg work, and (c) any Defect you cause.

Section 2. Information about the Mission of Project Gutenberg

Project Gutenberg is synonymous with the free distribution of electronic works in formats readable by the widest variety of computers including obsolete, old, middle-aged and new computers. It exists because of the efforts of hundreds of volunteers and donations from people in all walks of life.

Volunteers and financial support to provide volunteers with the assistance they need are critical to reaching Project Gutenberg's goals and ensuring that the Project Gutenberg collection will remain freely available for generations to come. In 2001, the Project Gutenberg Literary Archive Foundation was created to provide a secure and permanent future for Project Gutenberg and future generations. To learn more about the Project Gutenberg Literary Archive Foundation and how your efforts and donations can help, see Sections 3 and 4 and the Foundation information page at www.gutenberg.org.

Section 3. Information about the Project Gutenberg Literary Archive Foundation

The Project Gutenberg Literary Archive Foundation is a non-profit 501(c)(3) educational corporation organized under the laws of the state of Mississippi and granted tax exempt status by the Internal Revenue Service. The Foundation's EIN or federal tax identification number is 64-6221541. Contributions to the Project Gutenberg Literary Archive Foundation are tax deductible to the full extent permitted by U.S. federal laws and your state's laws.

The Foundation's business office is located at 41 Watchung Plaza #516, Montclair NJ 07042, USA, +1 (862) 621-9288. Email contact

links and up to date contact information can be found at the Foundation's website and official page at www.gutenberg.org/contact

Section 4. Information about Donations to the Project Gutenberg Literary Archive Foundation

Project Gutenberg™ depends upon and cannot survive without widespread public support and donations to carry out its mission of increasing the number of public domain and licensed works that can be freely distributed in machine-readable form accessible by the widest array of equipment including outdated equipment. Many small donations (\$1 to \$5,000) are particularly important to maintaining tax exempt status with the IRS.

The Foundation is committed to complying with the laws regulating charities and charitable donations in all 50 states of the United States. Compliance requirements are not uniform and it takes a considerable effort, much paperwork and many fees to meet and keep up with these requirements. We do not solicit donations in locations where we have not received written confirmation of compliance. To SEND DONATIONS or determine the status of compliance for any particular state visit www.gutenberg.org/donate.

While we cannot and do not solicit contributions from states where we have not met the solicitation requirements, we know of no prohibition against accepting unsolicited donations from donors in such states who approach us with offers to donate.

International donations are gratefully accepted, but we cannot make any statements concerning tax treatment of donations received from outside the United States. U.S. laws alone swamp our small staff.

Please check the Project Gutenberg web pages for current donation methods and addresses. Donations are accepted in a number of other ways including checks, online payments and credit card donations. To donate, please visit: www.gutenberg.org/donate.

Section 5. General Information About Project Gutenberg electronic works

Professor Michael S. Hart was the originator of the Project Gutenberg concept of a library of electronic works that could be freely shared with anyone. For forty years, he produced and distributed Project Gutenberg eBooks with only a loose network of volunteer support.

Project Gutenberg eBooks are often created from several printed editions, all of which are confirmed as not protected by copyright in the U.S. unless a copyright notice is included. Thus, we do not necessarily keep eBooks in compliance with any particular paper edition.

Most people start at our website which has the main PG search facility: www.gutenberg.org.

This website includes information about Project Gutenberg, including how to make donations to the Project Gutenberg Literary Archive Foundation, how to help produce our new eBooks, and how to subscribe to our email newsletter to hear about new eBooks.
