PREFACE

In this and the succeeding volume, we present various documents (notably the *Relation* of Antonio Pigafetta) which could not be obtained in season for publication in regular chronological order, and which it has seemed advisable to insert as addenda at this point.

With the present volume is begun the publication of Antonio Pigafetta's relation of the first circumnavigation of the world—the greatest single achievement in all the history of sea exploration and discovery. Written by a participant of the expedition, Pigafetta's relation has a greater value than any other narrative of the voyage. Its great value and the fact that it has never been adequately presented to the English-speaking public have induced the editors to insert this relation in the present series both in the original Italian (rigidly adhering to and preserving all the peculiarities of the original manuscript) and in English translation. This relation is especially valuable for its descriptions of the various peoples, countries, and products, of Oriental seas, and for its vocabularies, as well as for its account of the first circumnavigation. From its very nature, the relation has called for an unusual amount of annotation, which has been drawn freely from various sources: chiefly Mosto's annotations in his publication of Pigafetta's relation in Part V, volume iii, of the *Raccolta di documenti e studi*, published by the Royal Columbian Commission of the fourth centenary of the discovery of America under the auspices of the Minister of Public Instruction (Roma, 1894); Navarrete's *Col. de viages*, iv (Madrid, 1837); various publications of the Hakluyt Society; and F. H. H. Guillemard's *Life of Ferdinand Magellan* (New York, 1891). The publication of the original Italian and the English, page for page, renders it necessary to place the annotations at the end of the volume instead of in footnote as hitherto. The various charts of the Italian manuscript are all presented in facsimile in the course of the work. In order that the various peculiarities of the manuscript

might be preserved, it has been necessary to specially design and cast certain characters that appear in Pigafetta's narrative. None of these characters have been reproduced by Mosto, who also writes out all abbreviations. Throughout we have aimed to present the document as it exists in the Biblioteca Ambrosiana (even to the spacing of words) with the exception that paragraphs in the manuscript begin with a hanging indention and usually end with a series of dots and dashes. A brief synopsis of the relation follows.

After a brief dedication to the grand master of the Hospitaler knights of Rhodes or Malta, as they were called later, and of which order he is a member, Pigafetta relates that, being at Barcelona in 1519 with the papal legate, he first hears of the expedition about to set out under Magalhães. Being desirous of seeing the world, he gains permission to accompany the expedition, and soon joins the fleet at Seville, whence it is to depart. Magalhães, as a wise commander, issues his instructions to the various commanders of the vessels ere port is left, so that they may keep together in the unknown seas before them, and that they may act in harmony.

Setting sail from Seville on August 10, 1519, the fleet of five small vessels starts on its long journey amid salvos of artillery. At the mouth of the Guadalquivir, San Lucar de Barrameda, they anchor until September 20, when setting sail once more, they make for the Canaries, which are reached September 26. There they reprovision and taking their departure on October 3, coast southward along Africa amid alternating calms and violent storms (cheered however by the welcome apparition of St. Elmo's fire, which promises them safety), until they cross the line. Thereupon taking a general westerly course, the cape of St. Augustine on the Brazilian coast is soon sighted. The fresh provisions, so essential to sea voyages, are procured on the coast of Brazil, where occurs the first communication with the natives, with whom wonderful bargains are made. Those Indians, cannibals though they be, and whom Pigafetta describes briefly (not failing to inscribe some of their language) receive the mariners hospitably, and thinking that the latter are come to remain among them, build them a house. But after a stay of eighteen days, the sails are again trimmed toward the south, and descending the coast, Magalhães anchors next at the Rio de la Plata which

had formerly proved so disastrous to Juan de Solis and his men. Unable here to hold converse with the anthropophagous natives, who flee at their approach, the fleet retakes its course, anchoring at two islands where many sea-wolves and penguins are taken, and thus fresh food obtained. The next anchorage is at the famous Bay of St. Julian along the desolate Patagonian coast, where for five months they winter. For two months not an individual is seen, but one day they gain their first sight of the Patagonians, whose huge bulk strikes all with surprise, and who are held as giants. Amicable relations are entered into with various of these wandering Indians, and finally Magalhães, with the taste for the wonderful that characterized his period, as strongly, or more strongly than our own, determines to capture two of them to take back to Spain as novelties. His ruse is successful, but an attempt to induce the wife of one of the Indians to go to the ship fails. Very interesting are these giants to the curious Pigafetta, and to him is due the earliest description of their manners and customs and the earliest specimens of their language. The two captured giants are placed in separate vessels, but unfortunately both die ere reaching the end of the journey, one in the deserting ship “San Antonio,” and the other in Magalhães’s own ship, the “Trinidad.”

During the five months at that port “many things happened there.” Shortly after entering the port, the most critical moment of all Magalhães’s life comes, and one which he has perhaps, dreaded from the beginning of the expedition. This is the mutiny headed by Juan de Cartagena, captain of one of the vessels, and other malcontents, who hate Magalhães because he is a Portuguese. The latter, however, proves equal to the emergency, and by his prompt action and the punishments tempered by mercy that he inflicts, quiets the trouble. João Serrão, captain of the “Santiago” is sent to explore the coast, but is shipwrecked, although all the crew are saved. Their rescue (not well told by Pigafetta) is a thrilling and arduous matter, and calls into play the endurance of men already tried by misfortune and buffetings with Nature.

With the fleet reduced to four vessels, the mariners leave port St. Julian and proceeding along the coast, anchor at the river of Sardines, where stormy weather threatens a disastrous end to the expedition. A stay of two months

is made, during which the ships are enabled to lay in a good supply of provisions, wood, and water. Before leaving that river, the crews (for Magalhães looks after the spiritual welfare of his men) confess and take communion. Then resuming the voyage, the great object of the first half of the expedition is attained, namely, the discovery of the strait, which occurs October 21, 1520. "That strait is one hundred and ten leguas ... long, and it is one-half legua broad, more or less." Its discovery is due to the indomitable energy and endurance of Magalhães, and his certain knowledge (probably overstated by Pigafetta) of its existence. Continuing, Pigafetta briefly narrates the passage through the strait, and the desertion of the "San Antonio," which returns to Spain, after putting the captain, Alvaro de Mesquita, a relative of Magalhães, in irons; for the pilot, a Portuguese named Esteban Gomez, is jealous of Magalhães, as the latter's expedition has destroyed ambitious plans of his own. The other three ships, leaving letters and signals in the strait, in case the "San Antonio" tries to regain them, proceeds on its way, debouching from the strait November 28. Then begins a long voyage over the trackless Pacific "in truth ... very pacific;" and the three ships sail on steadily for three and two-thirds months without being able to reprovision. To the horrors of famine are added the sufferings of the dread scurvy. Pigafetta, whose curiosity is always alert and active, and who remains well, diverts himself with talking to the Patagonian, who is finally baptized, but who is one of those to die. In the vast stretch from the strait to the Ladrones (first seen by them of all Europeans), only two islands, both desert, are sighted, and those, since they are unable to find anchorage there, are called the "Unfortunate Isles." Pigafetta mentions the southern constellation *Crux* and the star clouds since called after Magalhães. His geographical information, as one might expect, is not always accurate, for he places Cipangu (Japan) in the open Pacific. Thoughts of relief that come upon sighting various islands (which they called the Ladrones because of the thievishness of the inhabitants) are quickly dissipated by the hostility there encountered. So bold are these natives (whose appearance, life, and customs, Pigafetta describes briefly), that they even steal the ship's boat from the stern of the "Trinidad," thus necessitating a raid into one of the islands, where some of the natives are killed, and some houses burned, but the boat recovered.

On March 16, 1521, the first of the Philippines (by them called the archipelago of San Lazaro) to be seen by Europeans, is sighted. Anchor is cast at a small desert island called Humunu, (but which the mariners call “The watering-place of good signs” because the first traces of gold are found there), near Samar, where two tents are quickly set up for the sick, whom Magalhães himself tends with solicitude. March 18, they gain their first acquaintance with the natives, who prove hospitable, and promise fresh provisions. These are brought on the twenty-second of March, and the Europeans have their first sight of a tattooed Visayan chief, who, as well as his men, is decked out in gold ornaments. After a week’s stay, the ships again set sail, Pigafetta almost coming to an untimely end by slipping over the side of the vessel while fishing, but happily saved by the aid of “that fount of mercy,” the Virgin.

March 28, anchor is cast at the island of Limasaua (Mazava), where Enrique, the Malaccan slave of Magalhães, serves as interpreter. Amicable relations are speedily entered into and confirmed by the Malayan rite of blood brotherhood. The king of Limasaua, and his brother, the king of certain districts in Mindanao, prove most helpful, and are completely won over by a judicious presentation of gifts. Greatly are the natives impressed by the power of the new comers, as seen in the artillery and armor, and their astonishment is increased when Magalhães relates his course to their islands and the discovery of the strait.

On Good Friday, Pigafetta and a companion visit the natives ashore, where they spend the night in the king’s palace, a typical Visayan house raised aloft on supports and thatched with nipa. Here the various ceremonies that he witnesses impress Pigafetta, and his companion, cast in coarser mould than he, becomes intoxicated. Pigafetta, always interested in the language of the new peoples whom he meets, writes down certain of their words, whereat they are greatly astonished. He records that he “ate meat on Holy Friday, for I could not help myself.” On Easter Sunday, the natives are deeply impressed by the mass that is celebrated ashore, and the cross which is planted in the highest part of the island, and which they promise to adore.

The limited amount of food in Limasaua, which is used only as a place of recreation by the two kings, who go there to visit one another and hunt, leads Magalhães to seek a more abundant harbor. Among the places pointed out where food is abundant is the island of Cebú, and there Magalhães determines to go, “for so did his unhappy fate will.” After a seven days’ stay at Limasaua, the course is laid to Cebú under the pilotage of the king of Limasaua, who is finally taken aboard the “Trinidad” as his vessel is unable to keep up with the swifter-moving European vessels. Entering the port of Cebú on April 7, amid the thunder of their guns, the settlement is thrown into consternation, but the Malaccan being sent ashore reassures them of his master’s good intentions, whom he proclaims to be a “captain of the greatest king and prince in the world,” who “was going to discover Malucho,” but hearing of the great fame of the king of Cebú, wishes trade with him. The king of Cebú is willing to accord friendship to the Europeans, but asks a tribute, as it is the custom for all visitors to pay it to him. But no tribute will be paid him, asserts Enrique, and the king, at the advice of a Moro merchant who has heard of the deeds of the Portuguese along Malacca and the Indian coast, and confuses the strangers with them, until undeceived by Enrique (who declares them to be much greater than the Portuguese), expresses his willingness to make friendship with Magalhães. With the help of the friendly king of Limasaua, peace is made according to Malay rites, and gifts exchanged. Magalhães, deeply religious, in common with many of his age, early seeks to lure the natives of Cebú to holy baptism, by presenting to them its most attractive side, and promising the king if he becomes a Christian, a suit of armor; but they must become willing converts, and not for the hope of gain or for fear. The peace is more firmly cemented by the visit of Pigafetta and a companion to the king, where they witness ceremonies similar to those of Limasaua, and where gifts are bestowed upon the king and some others. They also visit the house of the prince apparent, where they hear their first concert of Visayan music and see a native dance. On the following Wednesday two of the crew are buried ashore on consecrated ground with as much pomp as possible.

Trading is instituted by carrying a quantity of merchandise ashore, the safety of which is assured by the king. Those people are found to have weights and measures for their trading; and besides their gongs, a flute-like

instrument. Their houses are entered by ladders. On Friday begins the trading, gold being given for metals and large articles, and food for the smaller wares. The good bargains obtained by the Europeans, would have been materially less and the trade spoiled forever had it not been for Magalhães's watchfulness, for so eager are the men at the sight of the gold, that they would have given almost anything for it. On the following Sunday, the king and his chief men, and the queen and many women, are baptized and given European names, and ere the week closes all the Cebuans have become Christians, as well as some from neighboring islands. The queen at her earnest request, is given a small image of the Christ child, the same afterward recovered by Legazpi, and still held in the greatest of reverence at Cebú. The opposition of certain chiefs to the king of Cebú is satisfactorily ended by the inducements and threats of Magalhães. The latter swears to be faithful in his friendship with the natives, who likewise swear allegiance to the king of Spain. However, the natives are loath to destroy their idols, according to their promise, and Magalhães finds them still sacrificing to them for the cure of sickness. Substituting therefore the assurance that the new faith will work a cure, in lieu of which he offers his head, the sick man (who is the prince's brother and the bravest and wisest man in the island) is miraculously cured. Thereupon many idols are burned amid great demonstrations. Vivid descriptions are given of the people and their customs and ceremonies, especially those of sacrifice and mourning.

April 20, a chief from the neighboring island of Mactan sends a small present to Magalhães, with the request to aid him with a boat load of men against the chief Cilapulapu, who refuses allegiance to Spain. Magalhães in his ardor, and notwithstanding the remonstrances of his friends, leads three boat loads of men (sixty in all) to the island, where having ordered the king of Cebú to be a witness of the battle only, he engages the natives. Disastrous indeed does that day prove, for beset by multitudes of foes, the Europeans are compelled to retreat, and the retreat becomes a rout, the personal bravery of Magalhães and a few of his closest friends only saving the men from almost complete massacre. Recognizing the leader, the natives make their greatest efforts against him, and finally he is killed while knee deep in the water, but after all the others are saved. Pigafetta's lament is tragic and sorrowful; they "killed our mirror, our light, our comfort, and

our true guide.” Insolent in their victory, the natives refuse to give up the body of the slain leader at the request of the king of Cebú. The Europeans stunned by the loss of their leader, withdraw their merchandise and guards to the ship, and make preparations for departure. Duarte Barbosa and João de Serrão are chosen leaders. The second act in the drama follows speedily. The slave Enrique, enraged at a severe reprimand and threats by Barbosa, conspires with the king of Cebú; with the result that twenty-six men, including both of the leaders, are murdered at a banquet on May 1, to which the king invites them. João Carvalho, deaf to the entreaties of João Serrão, his comrade, and anxious to become leader, sails away leaving him to his death. Pigafetta names the products of Cebú, and gives a valuable vocabulary of Visayan words, most of which are still in use by those people.

By mutual consent, the three vessels proceed to Bohol, where the “Concepcion” is burned, as there are too few men left to work all three ships; although its supplies and all else possible are transferred to the “Victoria” and “Trinidad.” Then, cruising along, they put in at Mindanao where Pigafetta goes ashore alone, after the king has made blood friendship at the ships. There they hear of Luzón, where the Chinese trade annually. Departing from Mindanao, they anchor at Cagayan Sulu, a penal settlement for Borneo, where the blowpipe and poisoned arrows are used, and the daggers adorned with gold. The next anchorage is at Paragua, although before reaching that island, the men have been tempted to abandon the ships because of hunger. There the rice is cooked under the fire in bamboos and is better than that cooked in earthen pots. Those people raise fighting cocks and bet on their favorite birds. Ten leagues from Paragua is the great island of Borneo, whither the ships next go, and anchor at the city of Brunei, which is built over the water, and contains twenty-five thousand fires. Hospitably received by eight chiefs who visit the ships, they enter into relations with the Borneans. Seven men go as ambassadors to visit the king, and bear presents to him and the chief men. Here some of the grandeurs of an oriental court are spread before their eyes, which Pigafetta briefly describes. The strangers are graciously given permission to take on fresh supplies of food, water, and wood, and to trade at pleasure. Later actions of the Borneans cause the men of the ships to fear treachery, and forestalling any action by that people, they attack a number of junks near them, and

capture four. Among the captives is the son of the king of Luzón, who is the chief captain in Borneo, and whom Carvalho allows to escape, without consulting the others, for a large sum of gold. His action in so doing reacts on himself, for the king refuses to allow two men who were ashore and Carvalho's own son (born of a native woman in Brazil) to return to the ships, and they are left behind. The Borneans and their junks are described. They use porcelain dishes which are made from a fine white clay that is buried under ground for fifty years in order to refine it, and inherited from father to son. Camphor is obtained there, and the island is so large that it can be circumnavigated by a prau only in three months' time.

On leaving Borneo, a number of prisoners from the captured junks are kept, among them three women whom Carvalho ostensibly retains as presents for the queen of Spain, but in reality for himself. Happily escaping from the point on which one of the ships has become grounded, and the fear of explosion from a candle which is snuffed into a barrel of powder, the ships anchor at a point of Borneo, where for forty-two days, the men are busied in repairing, calking, and furnishing the vessels. The journey is resumed back toward Paragua, the governor of a district of that island being captured on the way; with whom, however, they enter into friendly relations. Thence the ships cruise along between Cagayan, Joló, and Mindanao, capturing a native boat from Maingdanao of the latter island, from the captive occupants of which they learn news of the Moluccas. Pushing on amid stormy weather, they anchor at the island of Sarangani, just south of Mindanao; and thence proceed in a generally southerly direction amid many islands until the Moluccas are reached, and they enter the harbor of Tidore on Friday, November 8, 1521, after twenty-seven months, less two days, since their departure from Spain.

At Tidore a warm welcome awaits them from the king, who is a powerful astrologer and has been expecting their arrival. He promises them as many cloves as they wish, even offering to go outside his island, contrary to the practice of kings, to provide them the sooner; in return for his services hoping for their aid in his designs for power in the Moluccas, especially against the king of Ternate. There they learn that Francisco Serrão, the great friend of Magalhães, has perished some eight months previously from

poison administered by the king of Tidore, whom he had visited, because he had aided the king of Ternate against Tidore. This Serrão, says Pigafetta, was the cause of Magalhães undertaking his expedition, and he had been in the Moluccas for ten years, for so long ago had Portugal discovered those islands. The efforts of the Ternatans to gain the new strangers fail, for they are already pledged to the king of Tidore. On November 12, a house is built ashore and on the thirteenth the merchandise is carried there, among it being that captured with the various junks at and near Borneo. The sailors are somewhat careless of their bargains for they are in haste to return to Spain. The king continues his kindness, and to humor him, as he is a Mahometan, all the swine in the boats are killed. This relation will be concluded in VOL. XXXIV.

great praise, I set out from the city
of Barsalonna, where his Majesty
was then residing, bearing many
letters in my favor. I went by ship as
far as Malega, where, taking the
highroad, I went overland to
Siviglia. Having been there about
three full months, waiting for the
said fleet to be set in order for the
departure,¹¹ finally, as your most
excellent Lordship will learn below,
we commenced our voyage under
most happy auspices. And inasmuch
as when I was in Ytalia and going to
see his Holiness, Pope Clement,¹²
you by your grace showed yourself
very kind and good to me at
Monteroso, and told me that you
would be greatly pleased if I would
write down for you all those things
which I had seen and suffered
during my voyage; and although I
have had little opportunity, yet I
have tried to satisfy your desire
according to my poor ability;
therefore, I offer you, in this little
book of mine, all my vigils,
hardships, and wanderings, begging
you, although you are busied with
continual Rhodian cares, to deign to
skim through it, by which I shall be
enabled to receive a not slight
remuneration from your most
illustrious Lordship, to whose good

The captain-general having resolved
to make so long a voyage through
the Ocean Sea, where furious winds
and great storms are always
reigning, but not desiring to make
known to any of his men the voyage
that he was about to make, so that
they might not be cast down at the
thought of doing so great and
extraordinary a deed, as he did
accomplish with the aid of God (the
captains who accompanied him,
hated him exceedingly, I know not
why, unless because he was a
Portuguese, and they Spaniards),
with the desire to conclude what he
promised under oath to the emperor,
Don Carlo, king of Spagnia,
prescribed the following orders and
gave them to all the pilots and
masters of his ships, so that the
ships might not become separated
from one another during the storms
and night.¹⁴ These were [to the
effect] that he would always precede
the other ships at night, and they
were to follow his ship which would
have a large torch of wood, which
they call *farol*.¹⁵ He always carried
that *farol* set at the poop of his ship
as a signal so that they might always

follow him. Another light was made
by means of a lantern or by means
of a piece of wicking made from a
rush and called *sparto* rope¹⁶ which
is well beaten in the water, and then
dried in the sun or in the smoke—a
most excellent material for such use.
They were to answer him so that he
might know by that signal whether
all of the ships were coming
together. If he showed two lights
besides that of the *farol*, they were
to veer or take another tack, [doing
this] when the wind was not
favorable or suitable for us to
continue on our way, or when he
wished to sail slowly. If he showed
three lights, they were to lower
away the bonnet-sail, which is a part
of the sail that is fastened below the
mainsail, when the weather is
suitable for making better time. It is
lowered so that it may be easier to
furl the mainsail when it is struck
hastily during a sudden squall.¹⁷ If
he showed four lights, they were to
strike all the sails;¹⁸ after which he
showed a signal by one light, [which
meant] that he was standing still. If
he showed a greater number of
lights, or fired a mortar, it was a
signal of land or of shoals.¹⁹ Then
he showed four lights when he
wished to have the sails set full, so
that they might always sail in his

When he desired to set the bonnet-
sail, he showed three lights.²⁰ When
he desired to alter his course, he
showed two;²¹ and then if he wished
to ascertain whether all the ships
were following and whether they
were coming together, he showed
one light, so that each one of the
ships might do the same and reply to
him. Three watches were set
nightly: the first at the beginning of
the night; the second, which is
called the midnight,²² and the third
at the end [of the night]. All of the
men in the ships were divided into
three parts: the first was the division
of the captain or boatswain, those
two alternating nightly; the second,
of either the pilot or boatswain's
mate; and the third, of the master.²³
Thus did the captain-general order
that all the ships observe the above
signals and watches, so that their
voyage might be more propitious.²⁴

On Monday morning, August x, St.
Lawrence's day, in the year
abovesaid, the fleet, having been
supplied with all the things
necessary for the sea,²⁵ (and
counting those of every nationality,
we were two hundred and thirty-
seven men), made ready to leave the

harbor of Siviglia.²⁶ Discharging
many pieces of artillery, the ships
held their forestaysails to the wind,
and descended the river Betis, at
present called Gadalquivir, passing
by a village called Gioan dal Farax,
once a large Moorish settlement. In
the midst of it was once a bridge
that crossed the said river, and led to
Siviglia. Two columns of that bridge
have remained even to this day at
the bottom of the water, and when
ships sail by there, they need men
who know the location of the
columns thoroughly, so that the
ships may not strike against them.
They must also be passed when the
river is highest with the tide; as
must also many other villages along
the river, which has not sufficient
depth [of itself] for ships that are
laden and which are not very large
to pass. Then the ships reached
another village called Coria, and
passed by many other villages along
the river, until they came to a castle
of the duke of Medina Cidonia,
called San Lucar, which is a port by
which to enter the Ocean Sea.²⁷ It is
in an east and west direction with
the cape of Sanct Vincent, which
lies in 37 degrees of latitude, and x
leguas from the said port.²⁸ From
Siviglia to this point [*i.e.*, San
Lucar], it is 17 or 20 leguas by

river.²⁹ Some days after, the captain-
general, with his other captains,
descended the river in the small
boats belonging to their ships. We
remained there for a considerable
number of days in order to finish³⁰
[providing] the fleet with some
things that it needed. Every day we
went ashore to hear mass in a
village called Nostra Dona de
Baremeda [our Lady of Barrameda],
near San Lucar. Before the
departure, the captain-general
wished all the men to confess, and
would not allow any³¹ woman to
sail in the fleet for the best of
considerations.

We left that village, by name San
Luchar, on Tuesday, September xx
of the same year, and took a
southwest course.³² On the 26th³³ of
the said month, we reached an
island of the Great Canaria, called
Teneriphe, which lies in a latitude of
28 degrees, [landing there] in order
to get flesh, water, and wood.³⁴ We
stayed there for three and one-half
days in order to furnish the fleet
with the said supplies. Then we
went to a port of the same island
called Monte Rosso³⁵ to get pitch,³⁶
staying [there] two days. Your most
illustrious Lordship must know that

there is a particular one of the
islands of the Great Canaria, where
one can not find a single drop of
water which gushes up [from a
spring];³⁷ but that at noontide a
cloud descends from the sky and
encircles a large tree which grows in
the said island, the leaves and
branches of which distil a quantity
of water. At the foot of the said tree
runs a trench which resembles a
spring, where all the water falls, and
from which the people living there,
and the animals, both domestic and
wild, fully satisfy themselves daily
with this water and no other.³⁸

At midnight of Monday, October
three, the sails were trimmed toward
the south,³⁹ and we took to the open
Ocean Sea, passing between Cape
Verde and its islands in 14 and one-
half degrees. Thus for many days
did we sail along the coast of
Ghinea, or Ethiopia, where there is a
mountain called Siera Leona, which
lies in 8 degrees of latitude, with
contrary winds, calms, and rains
without wind, until we reached the
equinoctial line, having sixty days
of continual rain.⁴⁰ Contrary to the
opinion of the ancients,⁴¹ before we
reached the line many furious
squalls of wind, and currents of

water struck us head on in 14
degrees. As we could not advance,
and in order that the ships might not
be wrecked,⁴² all the sails were
struck; and in this manner did we
wander hither and yon on the sea,
waiting for the tempest to cease, for
it was very furious.⁴³ When it rained
there was no wind. When the sun
shone, it was calm. Certain large
fishes called *tiburoni* [*i.e.*, sharks]
came to the side of the ships. They
have terrible teeth, and whenever
they find men in the sea they devour
them. We caught many of them with
iron hooks,⁴⁴ although they are not
good to eat unless they are small,
and even then they are not very
good. During those storms the holy
body, that is to say St. Elmo,
appeared to us many times, in light
—among other times on an
exceedingly dark night,⁴⁵ with the
brightness of a blazing torch, on the
maintop, where he stayed for about
two hours or more, to our
consolation, for we were weeping.
When that blessed light was about
to leave us, so dazzling was the
brightness that it cast into our eyes,
that we all remained for more than
an eighth of an hour⁴⁶ blinded and
calling for mercy. And truly when
we thought that we were dead men,
the sea suddenly grew calm.⁴⁷

I saw many kinds of birds, among
them one that had no anus; and
another, [which] when the female
wishes to lay its eggs, it does so on
the back of the male and there they
are hatched. The latter bird has no
feet, and always lives in the sea.
[There is] another kind which live
on the ordure of the other birds, and
in no other manner; for I often saw
this bird, which is called Cagassela,
fly behind the other birds, until they
are constrained to drop their ordure,
which the former seizes
immediately and abandons the latter
bird. I also saw many flying fish,
and many others collected together,
so that they resembled an island.⁴⁸

After we had passed the equinoctial
line going south, we lost the north
star, and hence we sailed south
south-west⁴⁹ until [we reached] a
land called the land of Verzin⁵⁰
which lies in 23½ degrees of the
Antarctic Pole [*i.e.*, south latitude].
It is the land extending from the
cape of Santo Augustino, which lies
in 8 degrees of the same pole. There
we got a plentiful refreshment of
fowls, potatoes [*batate*], many
sweet pine-apples—in truth the
most delicious fruit that can be

found—the flesh of the *anta*,⁵¹
which resembles beef, sugarcane,
and innumerable other things, which
I shall not mention in order not to be
prolix. For one fishhook or one
knife, those people gave 5 or 6
chickens; for one comb, a brace of
geese; for one mirror or one pair of
scissors, as many fish as would be
sufficient for x men; for a bell or
one leather lace, one basketful of
potatoes [*batate*]. These potatoes
resemble chestnuts in taste, and are
as long as turnips.⁵² For a king of
diamonds [*danari*],⁵³ which is a
playing card, they gave me 6⁵⁴
fowls and thought that they had
even cheated me. We entered that
port on St. Lucy’s day, and on that
day had the sun on the zenith;⁵⁵ and
we were subjected to greater heat on
that day and on the other days when
we had the sun on the zenith, than
when we were under the equinoctial
line.⁵⁶

That land of Verzin is wealthier and
larger than Spagnia, Fransa, and
Italia,⁵⁷ put together, and belongs to
the king of Portugalo. The people of
that land are not Christians, and
have no manner of worship. They
live according to the dictates of
nature,⁵⁸ and reach an age of one

hundred and twenty-five and one hundred and forty years.⁵⁹ They go naked, both men and women. They live in certain long houses which they call *boii*⁶⁰ and sleep in cotton hammocks called *amache*, which are fastened in those houses by each end to large beams. A fire is built on the ground under those hammocks. In each one of those *boii*, there are one hundred men with their wives and children,⁶¹ and they make a great racket. They have boats called canoes made of one single huge tree,⁶² hollowed out by the use of stone hatchets. Those people employ stones as we do iron, as they have no iron. Thirty or forty men occupy one of those boats. They paddle with blades like the shovels of a furnace, and thus, black, naked, and shaven, they resemble, when paddling, the inhabitants of the Stygian marsh.⁶³ Men and women are as well proportioned as we. They eat the human flesh of their enemies, not because it is good, but because it is a certain established custom. That custom, which is mutual, was begun by an old woman,⁶⁴ who had but one son who was killed by his enemies. In return some days later, that old woman's friends captured one of the company who had killed her son, and brought

him to the place of her abode. She
seeing him, and remembering her
son, ran upon him like an infuriated
bitch, and bit him on one shoulder.
Shortly afterward he escaped to his
own people, whom he told that they
had tried to eat him, showing them
[in proof] the marks on his shoulder.
Whoever the latter captured
afterward at any time from the
former they ate, and the former did
the same to the latter, so that such a
custom has sprung up in this way.
They do not eat the bodies all at
once, but every one cuts off a piece,
and carries it to his house, where he
smokes it. Then every week,⁶⁵ he
cuts off a small bit, which he eats
thus smoked with his other food to
remind him of his enemies. The
above was told me by the pilot,
Johane Carnagio,⁶⁶ who came with
us, and who had lived in that land
for four years. Those people paint
the whole body and the face in a
wonderful manner with fire in
various fashions, as do the women
also. The men are [are: *doublet in
original manuscript*] smooth shaven
and have no beard, for they pull it
out. They clothe themselves in a
dress made of parrot feathers, with
large round arrangements at their
buttocks made from the largest
feathers, and it is a ridiculous sight.

Almost all the people, except the
women and children,⁶⁷ have three
holes pierced in the lower lip, where
they carry round stones, one finger
or thereabouts in length and hanging
down outside. Those people are not
entirely black, but of a dark brown
color. They keep the privies
uncovered, and the body is without
hair,⁶⁸ while both men and women
always go naked. Their king is
called cacich [*i.e.*, cacique]. They
have an infinite number of parrots,
and gave us 8 or 10 for one mirror:
and little monkeys that look like
lions, only [they are] yellow, and
very beautiful.⁶⁹ They make round
white [loaves of] bread from the
marrowy substance of trees, which
is not very good, and is found
between the wood and the bark and
resembles buttermilk curds.⁷⁰ They
have swine which have their navels
[*lombelico*] on their backs,⁷¹ and
large birds with beaks like spoons
and no tongues.⁷² The men gave us
one or two of their young daughters
as slaves for one hatchet or one
large knife, but they would not give
us their wives in exchange for
anything at all. The women will not
shame their husbands under any
considerations whatever, and as was
told us, refuse to consent to their
husbands by day, but only by

night.⁷³ The women cultivate the
fields, and carry all their food from
the mountains in panniers or baskets
on the head or fastened to the
head.⁷⁴ But they are always
accompanied by their husbands,
who are armed only with a bow of
brazil-wood or of black palm-wood,
and a bundle of cane arrows, doing
this because they are jealous [of
their wives]. The women carry their
children hanging in a cotton net
from their necks. I omit other
particulars, in order not to be
tedious. Mass was said twice on
shore, during which those people
remained on their knees with so
great contrition and with clasped
hands raised aloft, that it was an
exceeding great pleasure⁷⁵ to behold
them. They built us a house as they
thought that we were going to stay
with them for some time, and at our
departure they cut a great quantity
of brazil-wood [*verzin*] to give us.⁷⁶
It had been about two months since
it had rained in that land, and when
we reached that port, it happened to
rain, whereupon they said that we
came from the sky and that we had
brought the rain with us.⁷⁷ Those
people could be converted easily to
the faith of Jesus Christ.

At firſt thoſe people thought that the
 ſmall boats were the children of the
 ſhips, and that the latter gave birth
 to them when they were lowered
 into the ſea from the ſhips, and
 when they were lying ſo alongſide
 the ſhips (as is the cuſtom), they
 believed that the ſhips were nursing
 them.⁷⁸ One day a beautiful young
 woman came to the flagship, where
 I was, for no other purpoſe than to
 ſeek what chance might offer. While
 there and waiting, ſhe caſt her eyes
 upon the maſter's room, and ſaw a
 nail longer than one's finger.
 Picking it up very delightedly and
 neatly, ſhe thruſt it through the lips
 of her vagina [*natura*], and bending
 down low immediately departed, the
 captain-general and I having ſeen
 that action.⁷⁹

Good, better tum maragathum

We remained in that land for 13
days. Then proceeding, on our way,
we went as far as 34 and one-third
degrees⁸¹ toward the Antarctic Pole,
where we found people at a
freshwater river, called Canibali
[i.e., cannibals], who eat human
flesh. One of them, in stature almost
a giant, came to the flagship in order
to assure [the safety of] the others
his friends.⁸² He had a voice like a
bull. While he was in the ship, the
others carried away their
possessions from the place where
they were living into the interior, for
fear of us. Seeing that, we landed
one hundred men in order to have
speech and converse with them, or
to capture one of them by force.
They fled, and in fleeing they took
so large a step that we although
running could not gain on their
steps. There are seven islands in that
river, in the largest of which
precious gems are found. That place
is called the cape of Santa Maria,
and it was formerly thought that one
passed thence to the sea of Sur, that
is to say the South Sea, but nothing
further was ever discovered. Now
the name is not [given to] a cape,
but [to] a river, with a mouth 17

captain, called Johan de Solis and
sixty men, who were going to
discover lands like us, were
formerly eaten at that river by those
cannibals because of too great
confidence.⁸⁴

Then proceeding on the same course
toward the Antarctic Pole, coasting
along the land, we came to anchor at
two islands full of geese and sea-
wolves.⁸⁵ Truly, the great number of
those geese cannot be reckoned; in
one hour we loaded the five ships
[with them]. Those geese are black
and have all their feathers alike both
on body and wings. They do not fly,
and live on fish. They were so fat
that it was not necessary to pluck
them but to skin them. Their beak is
like that of a crow. Those sea-
wolves are of various colors, and as
large as a calf, with a head like that
of a calf, ears small and round, and
large teeth. They have no legs but
only feet with small nails attached
to the body, which resemble our
hands, and between their fingers the
same kind of skin as the geese. They
would be very fierce if they could
run. They swim, and live on fish. At
that place the ships suffered a very
great storm, during which the three

holy bodies appeared to us many
times, that is to say, St. Elmo, St.
Nicholas, and St. Clara, whereupon
the storm quickly ceased.

Leaving that place, we finally
reached 49 and one-half degrees
toward the Antarctic Pole. As it was
winter, the ships entered a safe port
to winter.⁸⁶ We passed two months
in that place without seeing anyone.
One day we suddenly saw a naked
man of giant stature on the shore of
the port, dancing,⁸⁷ singing, and
throwing dust on his head. The
captain-general sent one of our men
to the giant so that he might perform
the same, actions as a sign of peace.
Having done that, the man led the
giant to an islet into the presence of
the captain-general. When the giant
was in the captain-general's and our
presence, he marveled greatly,⁸⁸ and
made signs with one finger raised
upward, believing that we had come
from the sky. He was so tall that we
reached only to his waist, and he
was well proportioned. His face was
large and painted red all over while
about his eyes he was painted
yellow; and he had two hearts
painted on the middle of his cheeks.
His scanty hair was painted white.⁸⁹
He was dressed in the skins of

animals skilfully sewn together.
That animal has a head and ears as
large as those of a mule, a neck and
body like those of a camel, the legs
of a deer, and the tail of a horse, like
which it neighs, and that land has
very many of them.⁹⁰ His feet were
shod with the same kind of skins
which covered his feet in the
manner of shoes.⁹¹ In his hand he
carried a short, heavy bow, with a
cord somewhat thicker than those of
the lute,⁹² and made from the
intestines of the same animal, and a
bundle of rather short cane arrows
feathered like ours, and with points
of white and black flint stones in the
manner of Turkish arrows, instead
of iron. Those points were fashioned
by means of another stone.⁹³ The
captain-general had the giant given
something to eat and drink, and
among other things which were
shown to him was a large steel
mirror. When he saw his face, he
was greatly terrified, and jumped
back throwing three or four⁹⁴ of our
men to the ground. After that he was
given some bells, a mirror, a comb,
and certain Pater Nosters. The
captain-general sent him ashore
with 4 armed men. When one of his
companions, who would never come
to the ships, saw him coming with
our men, he ran to the place where

the others were, who came [down to
the ſhore] all naked one after the
other. When our men reached them,
they began to dance and to ſing,
lifting one finger to the ſky. They
showed our men ſome white powder
made from the roots of an herb,
which they kept in earthen pots, and
which they ate becauſe they had
nothing elſe. Our men made ſigns
inviting them to the ſhips, and that
they would help them carry their
poſſeſſions. Thereupon, thoſe men
quickly took only their bows, while
their women laden like aſſes carried
everything. The latter are not ſo tall
as the men but are very much fatter.
When we ſaw them we were greatly
ſurprised. Their breasts are one-half
brazo long, and they are painted and
clothed like their husbands, except
that before their privies [*natura*]
they have a ſmall ſkin which covers
them. They led four of thoſe young
animals, faſtened with thongs like a
halter. When thoſe people wiſh to
catch ſome of thoſe animals, they
tie one of theſe young ones to a
thornbush. Thereupon, the large
ones come to play with the little
ones; and thoſe people kill them
with their arrows from their place of
concealment. Our men led eighteen
of thoſe people, counting men and
women, to the ſhips, and they were
distributed on the two ſides of the

port so that they might catch some of the said animals.

Six days after the above, a giant painted⁹⁵ and clothed in the same manner was seen by some [of our men] who were cutting wood. He had a bow and arrows in his hand. When our men approached him, he first touched his head, face,⁹⁶ and body, and then did the same to our men, afterward lifting his hands toward the sky. When the captain-general was informed of it, he ordered him to be brought in the small boat. He was taken to that island in the port where our men had built a house for the smiths⁹⁷ and for the storage of some things from the ships. That man was even taller and better built than the others and as tractable and amiable. Jumping up and down, he danced, and when he danced, at every leap, his feet sank a palmo into the earth. He remained with us for a considerable number of days, so long that we baptized him, calling him Johanni. He uttered [the words] “*Jesu*,” “*Pater Noster*,” “*Ave Maria*” and “*Jovani*” [i.e., John⁹⁷ as distinctly as we, but with an exceedingly loud voice. Then the captain-general gave him a shirt, a woolen jerkin

[*camisota de panno*], cloth
breeches, a cap, a mirror, a comb,
bells, and other things, and sent him
away like his companions. He left
us very joyous and happy. The
following day he brought one of
those large animals to the captain-
general, in return for which many
things were given to him, so that he
might bring some more to us; but
we did not see him again. We
thought that his companions had
killed him because he had conversed
with us.

A fortnight later we saw four of
those giants without their arms for
they had hidden them in certain
bushes as the two whom we
captured showed us. Each one was
painted differently. The captain-
general kept two of them—the
youngest and best proportioned—by
means of a very cunning trick, in
order to take them to Spagnia.⁹⁸
Had he used any other means [than
those he employed], they could
easily have killed some of us.⁹⁹ The
trick that he employed in keeping
them was as follows. He gave them
many knives, scissors, mirrors,
bells, and glass beads; and those two
having their hands filled with the
said articles, the captain-general had
two pairs of iron manacles brought,

such as are fastened on the feet.¹⁰⁰
He made motions that he would
give them to the giants, whereat
they were very pleased since those
manacles were of iron, but they did
not know how to carry them. They
were grieved at leaving them
behind, but they had no place to put
those gifts; for they had to hold the
skin wrapped about them with their
hands.¹⁰¹ The other two giants
wished to help them, but the captain
refused. Seeing that they were loth
to leave those manacles behind, the
captain made them a sign that he
would put them on their feet, and
that they could carry them away.
They nodded assent with the head.
Immediately, the captain had the
manacles put on both of them at the
same time. When our men were
driving home the cross bolt, the
giants began to suspect something,
but the captain assuring them,
however, they stood still. When they
saw later that they were tricked,
they raged like bulls, calling loudly
for *Setebos*¹⁰² to aid them. With
difficulty could we bind the hands
of the other two, whom we sent
ashore with nine of our men, in
order that the giants might guide
them to the place where the wife of
one of the two whom we had
captured¹⁰³ was; for the latter

expressed his great grief at leaving her by signs so that we understood [that he meant] her. While they were on their way, one of the giants freed his hands, and took to his heels with such swiftness that our men lost sight of him. He went to the place where his associates were, but he did not find [there] one of his companions, who had remained behind with the women, and who had gone hunting. He immediately went in search of the latter, and told him all that had happened.¹⁰⁴ The other giant endeavored so hard to free himself from his bonds, that our men struck him, wounding him slightly on the head, whereat he raging led them to where the women were. Gioan Cavagio, the pilot and commander of those men, refused to bring back the woman¹⁰⁵ that night, but determined to sleep there, for night was approaching. The other two giants came, and seeing their companion wounded, hesitated,¹⁰⁶ but said nothing then. But with the dawn, they spoke¹⁰⁷ to the women, [whereupon] they immediately ran away (and the smaller ones ran faster than the taller), leaving all their possessions behind them. Two of them turned aside to shoot their arrows at our men. The other was leading away those small animals of

Quando questa gente se sente malle

theirs in order to hunt.¹⁰⁸ Thus
fighting, one of them pierced the
thigh of one of our men with an
arrow, and the latter died
immediately. When the giants saw
that, they ran away quickly. Our
men had muskets and crossbows,
but they could never hit any of the
giants, [for] when the latter fought,
they never stood still, but leaped
hither and thither. Our men buried
their dead companion, and burned
all the possessions left behind by the
giants. Of a truth those giants run
swifter than horses and are
exceedingly jealous of their wives.

When those people feel sick at the
stomach, instead of purging
themselves,¹⁰⁹ they thrust an arrow
down their throat for two palmos or
more¹¹⁰ and vomit [substance of a]
green color mixed with blood, for
they eat a certain kind of thistle.
When they have a headache, they
cut themselves across the forehead;
and they do the same on the arms or
on the legs and in any part of the
body, letting a quantity of blood.
One of those whom we had
captured, and whom we kept in our
ship, said that the blood refused to
stay there [*i.e.*, in the place of the
pain], and consequently causes them

suffering. They wear their hair cut
with the tonsure, like friars, but it is
left longer;¹¹¹ and they have a
cotton cord wrapped about the head,
to which they fasten their arrows
when they go hunting. They bind
their privies close to their bodies
because of the exceeding great
cold.¹¹² When one of those people
die, x or twelve demons all painted
appear to them and dance very
joyfully about the corpse. They
notice that one of those demons is
much taller than the others, and he
cries out and rejoices more.¹¹³ They
paint themselves exactly in the same
manner as the demon appears to
them painted. They call the larger
demon Setebos,¹¹⁴ and the others
Cheleulle. That giant also told us by
signs that he had seen the demons
with two horns on their heads, and
long hair which hung to the feet
belching forth fire from mouth and
buttocks. The captain-general called
those people Patagoni.¹¹⁵ They all
clothe themselves in the skins of
that animal above mentioned; and
they have no houses except those
made from the skin of the same
animal, and they wander hither and
thither with those houses just as the
Cingani¹¹⁶ do. They live on raw
flesh and on a sweet root which they
call chapae.¹¹⁷ Each of the two

whom we captured ate a basketful of biscuit, and drank one-half pailful of water at a gulp. They also ate rats without skinning them.

In that port which we called the port of Santo Julianno, we remained about five months.¹¹⁸ Many things happened there. In order that your most illustrious Lordship may know some of them, it happened that as soon as we had entered the port, the captains of the other four ships plotted treason in order that they might kill the captain-general. Those conspirators consisted of the overseer of the fleet, one Johan de Cartagena, the treasurer, Alouise de Mendosa, the accountant, Anthonio Cocha, and Gaspar de Cazada. The overseer of the men having been quartered, the treasurer was killed by dagger blows, for the treason was discovered. Some days after that, Gaspar de Casada, was banished with a priest in that land of Patagonia. The captain-general did not wish to have him killed, because the emperor, Don Carlo, had appointed him captain.¹¹⁹ A ship called “Sancto Jacobo” was wrecked in an expedition made to explore the coast. All the men were saved as by a miracle, not even getting wet. Two of them came to

the ships after suffering great
hardships, and reported the whole
occurrence to us. Consequently, the
captain-general sent some men with
bags full of biscuits [sufficient to
last] for two months. It was
necessary for us to carry them the
food, for daily pieces of the ship
[that was wrecked] were found. The
way thither was long, [being] 24
leguas, ¹²⁰ or one hundred millas,
and the path was very rough and full
of thorns. The men were 4 days on
the road, sleeping at night in the
bushes. They found no drinking
water, but only ice, which caused
them the greatest hardship. ¹²¹ There
were very many long shellfish
which are called *missiglioni* ¹²² in
that port [of Santo Julianno]. They
have pearls, although small ones in
the middle, but could not be eaten.
Incense, ostriches, ¹²³ foxes,
sparrows, and rabbits much smaller
than ours were also found. We
erected a cross on the top of the
highest summit there, as a sign in
that land that it belonged to the king
of Spagna; and we called that
summit Monte de Christo [*i.e.*,
Mount of Christ].

Leaving that place, we found, in 51
degrees less one-third ¹²⁴ degree,

toward the Antarctic Pole, a river of
fresh water. There the ships almost
perished because of the furious
winds; but God and the holy
bodies¹²⁵ aided them. We stayed
about two months in that river in
order to supply the ships with water,
wood, and fish, [the latter being]
one braccio in length and more, and
covered with scales. They were very
good although small.¹²⁶ Before
leaving that river, the captain-
general and all of us confessed and
received communion as true
Christians.¹²⁷

Then going to fifty-two degrees
toward the same pole,¹²⁸ we found a
strait on the day of the [feast of
the]¹²⁹ eleven thousand virgins [i.e.
October 21], whose head is called
Capo de le Undici Millia Vergine
[i.e., cape of the Eleven Thousand
Virgins] because of that very great
miracle. That strait is one hundred
and ten leguas or 440 millas long,
and it is one-half legua broad, more
or less.¹³⁰ It leads to another sea
called the Pacific Sea, and is
surrounded by very lofty mountains
laden with snow. There it was
impossible to find bottom [for
anchoring], but [it was necessary to
fasten] the moorings¹³¹ on land 25

or 30 brazas away. Had it not been
for the captain-general, we would
not have found that strait, for we all
thought and said that it was closed
on all sides. But the captain-general
who knew where to sail to find a
well-hidden strait, which he saw
depicted on a map in the treasury of
the king of Portugal, which was
made by that excellent man, Martin
de Boemia, sent two ships, the
“Santo Anthonio” and the
“Conceptione” (for thus they were
called), to discover what was inside
the cape de la Baia [*i.e.*, of the
Bay].¹³² We, with the other two
ships, [namely], the flagship, called
“Trinitade,” and the other the
“Victoria,” stayed inside the bay to
await them.¹³³ A great storm struck
us that night, which lasted until the
middle of next day, which
necessitated our lifting anchor, and
letting ourselves drift hither and
thither about the bay. The other two
ships suffered a headwind and could
not double a cape¹³⁴ formed by the
bay almost at its end, as they were
trying to return to join us; so that
they thought that they would have to
run aground. But on approaching
the end of the bay, and thinking that
they were lost, they saw a small
opening which did not [*exceed:
crossed out in original MS.*] appear

to be an opening, but a sharp turn
[*cantone*].¹³⁵ Like desperate men
they hauled into it, and thus they
discovered the strait by chance.
Seeing that it was not a sharp turn,
but a strait with land, they
proceeded farther, and found a
bay.¹³⁶ And then farther on they
found another strait and another bay
larger than the first two.¹³⁷ Very
joyful they immediately turned back
to inform the captain-general. We
thought that they had been wrecked,
first, by reason of the violent storm,
and second, because two days had
passed and they had not appeared,
and also because of certain [signals
with] smoke made by two of their
men who had been sent ashore to
advise us.¹³⁸ And so, while in
suspense, we saw the two ships with
sails full and banners flying to the
wind, coming toward us. When they
neared us in this manner, they
suddenly discharged a number of
mortars, and burst into cheers.¹³⁹
Then all together thanking God and
the Virgin Mary, we went to seek
[the strait] farther on.

After entering that strait, we found
two openings, one to the southeast,
and the other to the southwest.¹⁴⁰
The captain-general sent the ship

“Sancto Anthonio” together with the
 “Concitione” to ascertain whether
 that opening which was toward the
 southeast had an exit into the Pacific
 Sea. The ship “Sancto Anthonio”
 would not await the “Conceptione,”
 because it intended to flee and
 return to Spagnia—which it did.
 The pilot of that ship was one Stefan
 Gomes,¹⁴¹ and he hated the captain-
 general exceedingly, because before
 that fleet was fitted out, the emperor
 had ordered that he be given some
 caravels with which to discover
 lands, but his Majesty did not give
 them to him because of the coming
 of the captain-general. On that
 account he conspired with certain
 Spaniards, and next night they
 captured the captain of their ship, a
 cousin¹⁴² of the captain-general, one
 Alvaro de Meschita, whom they
 wounded and put in irons, and in
 this condition took to Spagnia. The
 other giant whom we had captured
 was in that ship, but he died when
 the heat came on. The
 “Conceptione,” as it could not
 follow that ship, waited for it,
 sailing about hither and thither. The
 “Sancto Anthonio” turned back at
 night and fled along the same [port:
crossed out in original MS.]
 strait.¹⁴³ We had gone to explore the
 other opening toward the southwest.

Finding, however, the same [port:
crossed out in original MS.] strait
continuously, we came upon a river
which we called the river of Sardine
[i.e., Sardines], because there were
many sardines near it.¹⁴⁴ So we
stayed there for four days in order to
await the two ships. During that
period we sent a well-equipped boat
to explore the cape of the other sea.
The men returned within three days,
and reported that they had seen the
cape and the open sea. The captain-
general wept for joy, and called that
cape, Cape Dezeado [i.e.,
Desire],¹⁴⁵ for we had been desiring
it for a long time. We turned back to
look for the two ships,¹⁴⁶ but we
found only the “Conceptione.”
Upon asking them where the other
one was, Johan Seranno,¹⁴⁷ who
was captain and pilot of the former
ship (and also of that ship that had
been wrecked) replied that he did
not know, and that he had never
seen it after it had entered the
opening. We sought it in all parts of
the strait, as far as that opening
whence it had fled, and the captain-
general sent the ship “Victoria” back
to the entrance of the strait to
ascertain whether the ship was
there. Orders were given them, if
they did not find it, to plant a banner
on the summit of some small hill

with a letter in an earthen pot buried
in the earth near the banner, so that
if the banner were seen the letter
might be found, and the ship might
learn the course that we were
sailing. For this was the
arrangement made between us in
case that we went astray one from
the other.¹⁴⁸ Two banners were
planted with their letters—one on a
little eminence in the first bay, and
the other in an islet in the third
bay¹⁴⁹ where there were many sea-
wolves and large birds. The captain-
general waited for the ship with his
other ship near the river of Isleo,¹⁵⁰
and he had a cross set up in an islet
near that river, which flowed
between high mountains covered
with snow and emptied into the sea
near the river of Sardine. Had we
not discovered that strait, the
captain-general had determined to
go as far as seventy-five degrees
toward the Antarctic Pole. There in
that latitude, during the summer
season, there is no night, or if there
is any night it is but short, and so in
the winter with the day. In order that
your most illustrious Lordship may
believe it, when we were in that
strait, the nights were only three
hours long, and it was then the
month of October.¹⁵¹ The land on
the left-hand side of that strait

turned toward the southeast¹⁵² and
was low. We called that strait the
strait of Patagonia. One finds the
safest of ports every half legua in
it,¹⁵³ water, the finest of wood (but
not of cedar), fish, sardines, and
missiglioni, while smallage,¹⁵⁴ a
sweet herb (although there is also
some that is bitter) grows around the
springs. We ate of it for many days
as we had nothing else. I believe
that there is not a more beautiful or
better strait in the world than that
one.¹⁵⁵ In that Ocean Sea one sees a
very amusing fish hunt. The fish
[that hunt] are of three sorts, and are
one braza and more in length, and
are called dorado, albacore, and
bonito.¹⁵⁶ Those fish follow the
flying fish called colondrini,¹⁵⁷
which are one palmo and more¹⁵⁸ in
length and very good to eat. When
the above three kinds [of fish] find
any of those flying fish, the latter
immediately leap from the water
and fly as long as their wings are
wet—more than a crossbow's flight.
While they are flying, the others run
along back of them under the water
following the shadow of the flying
fish. The latter have no sooner fallen
into the water than the others
immediately seize and eat them. It is
in fine a very amusing thing to
watch.

Wednesday, November 28, 1520, we
debouched from that strait,
engulfing ourselves in the Pacific
Sea.^{[164](#)} We were three months and
twenty days without getting any
kind of fresh food. We ate biscuit,
which was no longer biscuit, but
powder of biscuits swarming with
worms, for they had eaten the good.
It stank strongly of the urine of
rats.^{[165](#)} We drank yellow water that
had been putrid for many days. We
also ate some ox hides that covered
the top of the mainyard to prevent
the yard from chafing the shrouds,
and which had become exceedingly
hard because of the sun, rain, and
wind.^{[166](#)} We left them in the sea for
four or five days, and then placed
them for a few moments on top of
the embers, and so ate them; and
often we ate sawdust from boards.
Rats were sold for one-half ducado
apiece, and even then we could not

get them.¹⁶⁷ But above all the other
 misfortunes the following was the
 worst. The gums of both the lower
 and upper teeth of some of our men
 swelled, so that they could not eat
 under any circumstances and
 therefore died.¹⁶⁸ Nineteen men
 died from that sickness, and the
 giant together with an Indian from
 the country of Verzin. Twenty-five
 or thirty men fell sick [during that
 time], in the arms, legs, or in
 another place, so that but few
 remained well. However, I, by the
 grace of God, suffered no sickness.
 We sailed about four thousand
 leguas during those three months
 and twenty days through an open
 stretch in that Pacific Sea.¹⁶⁹ In
 truth it is very pacific,¹⁷⁰ for during
 that time we did not suffer any
 storm. We saw no land except two
 desert islets, where we found
 nothing but birds and trees, for
 which we called them the Ysolle
 Infortunate [*i.e.*, the Unfortunate
 Isles]. They are two hundred leguas
 apart. We found no anchorage, [but]
 near them saw many sharks.¹⁷¹ The
 first islet lies in fifteen degrees of
 south latitude, and the other in nine.
 Daily we made runs of fifty, sixty,
 or seventy leguas at the catena or at
 the stern.¹⁷² Had not God and His
 blessed mother given us so good

weather we would all have died of
hunger in that exceeding vast sea.
Of a verity I believe no such voyage
will ever be made [again].

When we left that strait, if we had
sailed continuously westward we
would have circumnavigated the
world without finding other land
than the cape of the xi thousand
Virgins.¹⁷³ The latter is a cape of
that strait at the Ocean Sea, straight
east and west with Cape Deseado of
the Pacific Sea. Both of those capes
lie in a latitude of exactly fifty-two
degrees toward the Antarctic Pole.

The Antarctic Pole is not so starry as
the Arctic. Many small stars
clustered together are seen, which
have the appearance of two clouds
of mist. There is but little distance
between them, and they are
somewhat dim. In the midst of them
are two large and not very luminous
stars, which move only slightly.
Those two stars are the Antarctic
Pole. Our loadstone, although it
moved hither and thither, always
pointed toward its own Arctic Pole,
although it did not have so much
strength as on its own side. And on
that account when we were in that
open expanse, the captain-general,

fempre a la vela ꝑ q^aL Camino nauigando pontasemo nele carte rispofero tucti ꝑ la Sua via puntaLmête datta li rispofi q̃ pontauano falso cosi como era et che conueniua agiutare la guchia deL nauegare ꝑ che nō receueua tanta forza da la parte sua. asking all the pilots whether they were always sailing forward in the course which we had laid down on the maps, all replied: “By your course exactly as laid down.” He answered them that they were pointing wrongly—which was a fact—and that it would be fitting to adjust the needle of navigation, for it was not receiving so much force from its side. When we were in the midst of that open expanse, we saw a cross with five extremely bright stars straight toward the west, those stars being exactly placed with regard to one another.¹⁷⁴

During those days¹⁷⁵ we sailed west northwest, northwest by west, and northwest, until we reached the equinoctial line at the distance of one hundred and twenty-two degrees from the line of demarcation. The line of demarcation is thirty degrees from the meridian, and the meridian is three degrees eastward from Capo Verde.¹⁷⁶ We passed while on that course, a short distance from two exceedingly rich islands, one in twenty degrees of the latitude of the Antarctic Pole, by name Cipangu, and the other in fifteen degrees, by name Sumbdit Pradit.¹⁷⁷ After we

had passed the equinoctial line we
sailed west northwest, and west by
north, and then for two hundred
leguas toward the west, changing
our course to west by south until we
reached thirteen degrees toward the
Arctic Pole in order that we might
approach nearer to the land of cape
Gaticara. That cape (with the pardon
of cosmographers, for they have not
seen it), is not found where it is
imagined to be, but to the north in
twelve degrees or thereabouts. [178](#)

About seventy [179](#) leguas on the
above course, and lying in twelve
degrees of latitude and 146 in
longitude, we discovered on
Wednesday, March 6, a small island
to the northwest, and two others
toward the southwest, one of which
was higher and larger than the other
two. The captain-general wished to
stop at the large island and get some
fresh food, but he was unable to do
so because the inhabitants of that
island entered the ships and stole
whatever they could lay their hands
on, so that we could not protect
ourselves. The men were about to
strike the sails so that we could go
ashore, but the natives very deftly
stole from us the small boat [180](#) that
was fastened to the poop of the

flagship. Thereupon, the captain-
general in wrath went ashore with
forty armed men, who burned some
forty or fifty houses together with
many boats, and killed seven
men.¹⁸¹ He recovered the small
boat, and we departed immediately
pursuing the same course. Before
we landed, some of our sick men
begged us if we should kill any man
or woman to bring the entrails to
them, as they would recover
immediately.¹⁸²

When we wounded any of those
people with our crossbow-shafts,
which passed completely through
their loins from one side to the
other, they, looking at it, pulled on
the shaft now on this and now on
that side,¹⁸³ and then drew it out,
with great astonishment, and so
died. Others who were wounded in
the breast did the same, which
moved us to great compassion.
Those people seeing us departing
followed us with more than one
hundred¹⁸⁴ boats for more than one
legua. They approached the ships
showing us fish, feigning that they
would give them to us; but then
threw stones at us and fled. And
although the ships were under full
sail, they passed between them and
the small boats [fastened astern],
very adroitly in those small boats of
theirs. We saw some women in their
boats who were crying out and
tearing their hair, for love, I believe,
of those whom we had killed.¹⁸⁵

Each one of those people lives
according to his own will, for they
have no seignior.¹⁸⁶ They go naked,
and some are bearded and have
black hair that reaches to the waist.
They wear small palmleaf hats, as

do the Albanians. They are as tall as
 we, and well built. They have no
 worship. They are tawny, but are
 born white. Their teeth are red and
 black, for they think that is most
 beautiful. The women go naked
 except that they wear a narrow strip
 of bark as thin as paper, which
 grows between the tree and the bark
 of the palm, before their privies.
 They are goodlooking and delicately
 formed, and lighter complexioned
 than the men; and wear their hair
 which is exceedingly black, loose
 and hanging quite down to the
 ground. The women do not work in
 the fields but stay in the house,
 weaving mats,¹⁸⁷ baskets [casse:
 literally boxes], and other things
 needed in their houses, from palm
 leaves. They eat cocoanuts, camotes
 [batate],¹⁸⁸ birds, figs one palmo in
 length [*i.e.*, bananas], sugarcane,
 and flying fish, besides other things.
 They¹⁸⁹ anoint the body and the hair
 with coconut and beneseed oil.
 Their houses are all built of wood
 covered with planks and thatched
 with leaves of the fig-tree [*i.e.*,
 banana-tree] two brazas long; and
 they have floors and windows. The
 rooms and the beds are all furnished
 with the most beautiful palmleaf
 mats.¹⁹⁰ They sleep on palm straw
 which is very soft and fine. They

use no weapons, except a kind of a
spear pointed with a fishbone at the
end. Those people are poor, but
ingenious and very thievish, on
account of which we called those
three islands the islands of Ladroni
[i.e., of thieves].¹⁹¹ Their
amusement, men and women, is to
plough the seas with those small
boats of theirs.¹⁹² Those boats
resemble *fucelere*,¹⁹³ but are
narrower, and some are black,
[some] white, and others red. At the
side opposite the sail, they have a
large piece of wood pointed at the
top, with poles laid across it and
resting on the water, in order that
the boats may sail more safely. The
sail is made from palmleaves sewn
together and is shaped like a lateen
sail. For rudders they use a certain
blade resembling a hearth shovel
which have a piece of wood at the
end. They can change stern and bow
at will [literally: they make the
stern, bow, and the bow, stern],¹⁹⁴
and those boats resemble the
dolphins which leap in the water
from wave to wave. Those Ladroni
[i.e., robbers] thought, according to
the signs which they made, that
there were no other people in the
world but themselves.¹⁹⁵

At dawn on Saturday, March
sixteen,¹⁹⁶ 1521, we came upon a
high land at a distance of three
hundred leguas from the islands of
Latroni—an island named Zamal
[i.e., Samar]. The following day, the
captain-general desired to land on
another island which was
uninhabited and lay to the right of
the abovementioned island, in order
to be more secure, and to get water
and have some rest. He had two
tents set up on the shore for the sick
and had a sow killed for them. On
Monday afternoon, March 18, we
saw a boat coming toward us with
nine men in it. Therefore, the
captain-general ordered that no one
should move or say a word without
his permission. When those men
reached the shore, their chief went
immediately to the captain-general,
giving signs of joy because of our
arrival. Five of the most ornately
adorned of them remained with us,
while the rest went to get some
others who were fishing, and so they
all came. The captain-general seeing
that they were reasonable men,
ordered food to be set before them,
and gave them red caps, mirrors,
combs, bells, ivory, bocasine,¹⁹⁷ and
other things. When they saw the
captain's courtesy, they presented

fish, a jar of palm wine, which they
call *uraca* [*i.e.*, arrack], figs more
than one palmo long [*i.e.*,
bananas],¹⁹⁸ and others which were
smaller and more delicate, and two
cocoanuts. They had nothing else
then, but made us signs with their
hands that they would bring *umay* or
rice,¹⁹⁹ and cocoanuts and many
other articles of food within four
days.

Cocoanuts are the fruit of the
palmtree.²⁰⁰ Just as we have bread,
wine, oil, and milk, so those people
get everything from that tree. They
get wine in the following manner.
They bore a hole into the heart of
the said palm at the top called
palmito [*i.e.*, stalk], from which
distils a liquor²⁰¹ which resembles
white must. That liquor is sweet but
somewhat tart, and [is gathered] in
canes [of bamboo] as thick as the
leg and thicker. They fasten the
bamboo to the tree at evening for
the morning, and in the morning for
the evening. That palm bears a fruit,
namely, the cocoanut, which is as
large as the head or thereabouts. Its
outside husk is green and thicker
than two fingers. Certain filaments
are found in that husk, whence is
made cord for binding together their

boats. Under that husk there is a
hard shell, much thicker than the
shell of the walnut, which they burn
and make therefrom a powder that is
useful to them.²⁰² Under that shell
there is a white marrowy substance
one finger in thickness, which they
eat fresh with meat and fish as we
do bread; and it has a taste
resembling the almond. It could be
dried and made into bread. There is
a clear, sweet water in the middle of
that marrowy substance which is
very refreshing. When that water
stands for a while after having been
collected, it congeals and becomes
like an apple. When the natives wish
to make oil, they take that cocconut,
and allow the marrowy substance
and the water to putrefy. Then they
boil it and it becomes oil like butter.
When they wish to make vinegar,
they allow only the water to putrefy,
and then place it in the sun, and a
vinegar results like [that made from]
white wine. Milk can also be made
from it for we made some. We
scraped that marrowy substance and
then mixed the scrapings with its
own water which we strained
through a cloth, and so obtained
milk like goat's milk. Those palms
resemble date-palms, but although
not smooth they are less knotty than
the latter. A family of x persons can

be supported on two trees, by
utilizing them week about for the
wine; for if they did otherwise, the
trees would dry up. They last a
century.²⁰³

Those people became very familiar
with us. They told us many things,
their names and those of some of the
islands that could be seen from that
place. Their own island was called
Zuluan and it is not very large.²⁰⁴
We took great pleasure with them,
for they were very pleasant and
conversable. In order to show them
greater honor, the captain-general²⁰⁵
took them to his ship and showed
them all his merchandise—cloves,
cinnamon, pepper, ginger, nutmeg,
mace, gold, and all the things in the
ship. He had some mortars fired for
them, whereat they exhibited great
fear, and tried to jump out of the
ship.²⁰⁶ They made signs to us that
the abovesaid articles grew in that
place where we were going. When
they were about to retire they took
their leave very gracefully and
neatly, saying that they would return
according to their promise. The
island where we were is called
Humunu; but inasmuch as we found
two springs there of the clearest
water, we called it Acquada da li

buoni Segniali [i.e., “the Watering-
place of good Signs”], for there
were the first signs of gold which
we found in those districts.²⁰⁷ We
found a great quantity of white coral
there, and large trees with fruit a
trifle smaller than the almond and
resembling pine seeds. There are
also many palms, some of them
good and others bad. There are
many islands in that district, and
therefore we called them the
archipelago of San Lazaro, as they
were discovered on the Sabbath of
St. Lazurus.²⁰⁸ They lie in x degrees
of latitude toward the Arctic Pole,
and in a longitude of one hundred
and sixty-one degrees from the line
of demarcation.

At noon on Friday, March 22, those
men came as they had promised us
in two boats with cocoanuts, sweet
oranges, a jar of palm-wine, and a
cock,²⁰⁹ in order to show us that
there were fowls in that district.
They exhibited great signs of
pleasure at seeing us.²¹⁰ We
purchased all those articles from
them. Their seignior was an old man
who was painted [i.e., tattooed]. He
wore two gold earrings [*schione*] in
his ears,²¹¹ and the others many
gold armlets on their arms and

kerchiefs about their heads. We
stayed there one week, and during
that time our captain went ashore
daily to visit the sick, and²¹² every
morning gave them cocoanut water
from his own hand, which
comforted them greatly. There are
people living near that island²¹³
who have holes in their ears so large
that they can pass their arms
through them. Those people are
caphri,²¹⁴ that is to say, heathen.
They go naked, with a cloth woven
from the bark of a tree about their
privies, except some of the chiefs
who wear cotton cloth embroidered
with silk at the ends by means of a
needle. They are dark, fat, and
painted. They anoint themselves
with cocoanut and with beneseed
oil, as a protection against sun and
wind. They have very black hair that
falls to the waist, and use daggers,
knives, and spears²¹⁵ ornamented
with gold, large shields, fascines,²¹⁶
javelins, and fishing nets that
resemble rizali;²¹⁷ and their boats
are like ours.

On the afternoon of holy Monday,

feet upon a yard leading down into
the storeroom, they slipped, for it
was rainy, and consequently I fell
into the sea, so that no one saw me.
When I was all but under, my left
hand happened to catch hold of the
clew-garnet of the mainsail, which
was dangling [*ascosa*] in the water. I
held on tightly, and began to cry out
so lustily that I was rescued by the
small boat. I was aided, not, I
believe, indeed, through my merits,
but through the mercy of that font of
charity [*i.e.*, of the Virgin]. That
same day we shaped our course
toward the west southwest between
four small islands, namely, Cenalo,
Hiunanghan,²¹⁸ Ibusson, and
Abarien.

On Thursday morning, March
twenty-eight, as we had seen a fire
on an island the night before, we
anchored near it.²¹⁹ We saw a small
boat which the natives call *boloto*
with eight men in it, approaching
the flagship. A slave belonging to
the captain-general, who was a
native of Zamatra [*i.e.*, Sumatra],
which was formerly called
Traprobana, spoke to them. They
immediately understood him, came
alongside the ship, unwilling to
enter but taking a position at some

little distance.²²⁰ The captain ſeeing
that they would not truſt us, threw
them out a red cap and other things
tied to a bit of wood. They received
them very gladly, and went away
quickly to adviſe their king. About
two hours later we ſaw two
balanghai coming. They are large
boats and are ſo called [by thoſe
people]. They were full of men, and
their king was in the larger of them,
being ſeated under an awning of
mats. When the king came near the
flagſhip, the ſlave ſpoke to him.
The king underſtood him, for in
thoſe diſtricts the kings know more
languages than the other people. He
ordered ſome of his men to enter the
ſhips, but he always remained in his
balanghai, at ſome little diſtance
from the ſhip until his own men
returned; and as ſoon as they
returned he departed. The captain-
general ſhewed great honor to the
men who entered the ſhip, and gave
them ſome preſents, for which the
king wiſhed before his departure to
give the captain a large bar²²¹ of
gold and a basketful of ginger. The
latter, however, thanked the king
heartily but would not accept it. In
the afternoon we went in the ſhips
[and anchored] near the dwellings of
the king.

Next day, holy Friday, the captain-
 general sent his slave, who acted as
 our interpreter, ashore in a small
 boat to ask the king if he had any
 food to have it carried to the
 ships;²²² and to say that they would
 be well satisfied with us, for he [and
 his men] had come to the island as
 friends and not as enemies. The king
 came with six or eight men²²³ in the
 same boat and entered the ship. He
 embraced the captain-general to
 whom he gave three porcelain jars
 covered with leaves and full of raw
 rice, two very large *orade*,²²⁴ and
 other things. The captain-general
 gave the king a garment of red and
 yellow cloth made in the Turkish
 fashion, and a fine red cap; and to
 the others (the king's men), to some
 knives and to others mirrors. Then
 the captain-general had a collation
 spread for them, and had the king
 told through the slave that he
 desired to be *casi casi*²²⁵ with him,
 that is to say, brother. The king
 replied that he also wished to enter
 the same relations with the captain-
 general. Then the captain showed
 him cloth of various colors, linen,
 coral [ornaments], and many other
 articles of merchandise, and all the
 artillery, some of which he had
 discharged for him, whereat the

natives were greatly frightened.
Then the captain-general had a man
armed as a soldier,²²⁶ and placed
him in the midst of three men armed
with swords and daggers, who
struck him on all parts of the body.
Thereby was the king rendered
almost speechless. The captain-
general told him through the slave
that one of those armed men was
worth one hundred of his own men.
The king answered that that was a
fact. The captain-general said that
he had two hundred men in each
ship who were armed in that
manner.²²⁷ He showed the king
cuirasses, swords, and bucklers, and
had a review made for him.²²⁸ Then
he led the king to the deck of the
ship, that is located above at the
stern; and had his sea-chart and
compass brought.²²⁹ He told the
king through the interpreter how he
had found the strait in order to
voyage thither, and how many
moons he had been without seeing
land, whereat the king was
astonished. Lastly, he told the king
that he would like, if it were
pleasing to him, to send two of his
men with him so that he might show
them some of his things. The king
replied that he was agreeable, and I
went in company with one of the
other men.²³⁰

When I reached shore, the king
raised his hands toward the sky and
then turned toward us two. We did
the same toward him²³¹ as did all
the others. The king took me by the
hand; one of his chiefs took my
companion; and thus they led us
under a bamboo covering, where
there was a balanghai,²³² as long as
eighty of my palm lengths, and
resembling a fusta. We sat down
upon the stern of that balanghai,
constantly conversing with signs.
The king's men stood about us in a
circle with swords, daggers, spears,
and bucklers.²³³ The king had a
plate of pork brought in and a large
jar filled with wine. At every
mouthful, we drank a cup of wine.
The wine that was left [in the cup]
at any time, although that happened
but rarely, was put into a jar by
itself. The king's cup was always
kept covered and no one else drank
from it but he and I. Before the king
took the cup to drink, he raised his
clasped hands toward the sky, and
then toward me; and when he was
about to drink, he extended the fist
of his left hand toward me (at first I
thought that he was about to strike
me) and then drank. I did the same
toward the king. They all make
those signs one toward another

when they drink. We ate with such
ceremonies and with other signs of
friendship. I ate meat on holy
Friday, for I could not help myself.
Before the supper hour I gave the
king many things which I had
brought. I wrote down the names of
many things in their language.
When the king and the others saw
me writing, and when I told them
their words, they were all
astonished.²³⁴ While engaged in that
the supper hour was announced.
Two large porcelain dishes were
brought in, one full of rice and the
other of pork with its gravy. We ate
with the same signs and ceremonies,
after which we went to the palace of
the king which was built like a
hayloft and was thatched with fig
[i.e., banana] and palm leaves. It
was built up high from the ground
on huge posts of wood and it was
necessary to ascend to it by means
of ladders.²³⁵ The king made us sit
down there on a bamboo mat with
our feet drawn up like tailors. After
a half-hour a platter of roast fish cut
in pieces was brought in, and ginger
freshly gathered, and wine. The
king's eldest son, who was the
prince, came over to us, whereupon
the king told him to sit down near
us, and he accordingly did so. Then
two platters were brought in (one

with fish and its sauce, and the other
with rice), so that we might eat with
the prince. My companion became
intoxicated as a consequence of so
much drinking and eating. They
used the gum of a tree called *anime*
wrapped in palm or fig [*i.e.*, banana]
leaves for lights. The king made us
a sign that he was going to go to
sleep. He left the prince with us, and
we slept with the latter on a bamboo
mat with pillows made of leaves.
When day dawned the king came
and took me by the hand, and in that
manner we went to where we had
had supper, in order to partake of
refreshments, but the boat came to
get us. Before we left, the king
kissed our hands with great joy, and
we his. One of his brothers, the king
of another island, and three men
came with us. The captain-general
kept him to dine with us, and gave
him many things. [236](#)

Pieces of gold, of the size of
walnuts and eggs are found by
sifting the earth in the island of that
king who came to our ships. All the
dishes of that king are of gold and
also some portion of his house, as
we were told by that king himself.
According to their customs he was
very grandly decked out [*molto in*
ordine], [237](#) and the finest looking

man that we saw among those people. His hair was exceedingly black, and hung to his shoulders. He had a covering of silk oh his head, and wore two large golden earrings fastened in his ears. He wore a cotton cloth all embroidered with silk, which covered him from the waist to the knees. At his side hung a dagger, the haft of which was somewhat long and all of gold, and its scabbard of carved wood. He had three spots of gold on every tooth, and his teeth appeared as if bound with gold.²³⁸ He was perfumed with storax and benzoin. He was tawny and painted [*i.e.*, tattooed] all over. That island of his was called Butuan and Calagan.²³⁹ When those kings wished to see one another, they both went to hunt in that island where we were. The name of the first king is Raia Colambu, and the second Raia Siaui.²⁴⁰

Early on the morning of Sunday, the last of March, and Easter-day, the captain-general sent the priest with some men to prepare the place where mass was to be said;²⁴¹ together with the interpreter to tell the king that we were not going to land in order to dine with him, but to say mass. Therefore the king sent

us two swine that he had had killed.
When the hour for mass arrived, we
landed with about fifty men, without
our body armor, but carrying our
other arms, and dressed in our best
clothes.²⁴² Before we reached the
shore with our boats, six pieces
were discharged as a sign of peace.
We landed; the two kings embraced
the captain-general, and placed him
between them. We went in marching
order to the place consecrated,
which was not far from the shore.
Before the commencement of mass,
the captain sprinkled the entire
bodies of the two kings with musk
water.”²⁴³ The mass was offered up.
The kings went forward to kiss the
cross as we did, but they did not
offer the sacrifice.²⁴⁴ When the
body of our Lord was elevated, they
remained on their knees and
worshiped Him with clasped hands.
The ships fired all their artillery at
once when the body of Christ was
elevated, the signal having been
given from the shore with muskets.
After the conclusion of mass, some
of our men took communion.²⁴⁵ The
captain-general arranged a fencing
tournament,²⁴⁶ at which the kings
were greatly pleased. Then he had a
cross carried in and the nails and a
crown, to which immediate
reverence was made.²⁴⁷ He told the

kings through the interpreter that
they were the standards given to
him by the emperor his sovereign,
so that wherever he might go he
might set up those his tokens. [He
said] that he wished to set it up in
that place for their benefit, for
whenever any of our ships came,²⁴⁸
they would know that we had been
there by that cross, and would do
nothing to displease them or harm
their property [property: *doublet in*
original MS.]. If any of their men
were captured, they would be set
free immediately on that sign being
shown. It was necessary to set that
cross on the summit of the highest
mountain, so that on seeing it every
morning, they might adore it; and if
they did that, neither thunder,
lightning, nor storms would harm
them in the least. They thanked him
heartily and [said] that they would
do everything willingly. The
captain-general also had them asked
whether they were Moros or
heathen, or what was their belief.
They replied that they worshiped
nothing, but that they raised their
clasped hands and their face to the
sky; and that they called their god
“Abba.”²⁴⁹ Thereat the captain was
very glad, and seeing that, the first
king raised his hands to the sky, and
said that he wished that it were

possible for him to make the captain see his love for him. The interpreter asked the king why there was so little to eat there. The latter replied that he did not live in that place except when he went hunting and to see his brother, but that he lived in another island where all his family were. The captain-general had him asked to declare whether he had any enemies, so that he might go with his ships to destroy them and to render them obedient to him.²⁵⁰ The king thanked him and said that he did indeed have two islands hostile to him, but that it was not then the season to go there. The captain told him that if God would again allow him to return to those districts, he would bring so many men that he would make the king's enemies subject to him by force. He said that he was about to go to dinner, and that he would return afterward to have the cross set up on the summit of the mountain. They replied that they were satisfied, and then forming in battalion and firing the muskets, and the captain having embraced the two kings, we took our leave.

After dinner we all returned clad in our doublets, and that afternoon²⁵¹ went together with the two kings to

the summit of the highest mountain
there. When we reached the summit,
the captain-general told them that he
esteemed highly having sweated for
them, for since the cross was there,
it could not but be of great use to
them. On asking them which port
was the best to get food, they
replied that there were three,
namely, Ceylon, Zubu, and
Calaghann, but that Zubu was the
largest and the one with most trade.
They offered of their own accord to
give us pilots to show us the way.
The captain-general thanked them,
and determined to go there, for so
did his unhappy fate will. After the
cross was erected in position, each
of us repeated a *Pater Noster* and an
Ave Maria, and adored the cross;
and the kings did the same. Then we
descended through their cultivated
fields, and went to the place where
the balanghai was. ²⁵² The kings had
some cocoanuts brought in so that
we might refresh ourselves. The
captain asked the kings for the pilots
for he intended to depart the
following morning, and [said] that
he would treat them as if they were
the kings themselves, and would
leave one of us as hostage. The
kings replied that every hour he
wished the pilots were at his
command, but that night the first

king changed his mind, and in the
morning when we were about to
depart, ſent word to the captain-
general, asking him for love of him
to wait two days until he ſhould
have his rice harveſted, and other
trifles attended to. He asked the
captain-general to ſend him ſome
men to help him, ſo that it might be
done ſooner; and ſaid that he
intended to act as our pilot himſelf.
The captain ſent him ſome men, but
the kings ate and drank ſo much that
they ſlept all the day. Some ſaid to
excuse them that they were ſlightly
ſick. Our men did nothing on that
day, but they worked the next two
days. [253](#)

One of thoſe people brought us
about a porringer full of rice and
also eight or ten figs [*i.e.*, bananas]
faſtened together to barter them for
a knife which at the moſt was worth
three catrini. [254](#) The captain ſeeing
that that native cared for nothing but
a knife, called him to look at other
things. He put his hand in his purſe
and wiſhed to give him one real for
thoſe things, but the native reſused
it. The captain ſhowed him a ducado
but he would not accept that either.
Finally the captain tried to give him
a doppione [255](#) worth two ducados,

but he would take nothing but a
knife; and accordingly the captain
had one given to him. When one of
our men went ashore for water, one
of those people wanted to give him
a pointed crown of massy gold, of
the size of a colona²⁵⁶ for six strings
of glass beads, but the captain
refused to let him barter, so that the
natives should learn at the very
beginning that we prized our
merchandise more than their
gold.²⁵⁷

Those people are heathens,²⁵⁸ and
go naked and painted. They wear a
piece of cloth woven from a tree
about their privies.²⁵⁹ They are very
heavy drinkers.²⁶⁰ Their women are
clad in tree cloth from their waist
down, and their hair is black and
reaches to the ground. They have
holes pierced in their ears which are
filled with gold. Those people are
constantly chewing a fruit which
they call *areca*, and which
resembles a pear. They cut that fruit
into four parts, and then wrap it in
the leaves of their tree which they
call *betre* [*i.e.*, betel]. Those leaves
resemble the leaves of the mulberry.
They mix it with a little lime, and
when they have chewed it
thoroughly, they spit it out.²⁶¹ It

makes the mouth exceedingly red.
All the people in those parts of the
world use it, for it is very cooling to
the heart, and if they ceased to use it
they would die. There are dogs, cats,
swine, fowls, goats, rice, ginger,
cocoanuts, figs [*i.e.*, bananas],
oranges, lemons, millet, panicum,
sorgo, ²⁶² wax, and a quantity of
gold in that island. It lies in a
latitude of nine and two-thirds
degrees toward the Arctic Pole, and
in a longitude of one hundred and
sixty-two degrees from the line of
demarcation. It is twenty-five from
the Acquada, and is called
Mazaua. ²⁶³

We remained there seven days, after
which we laid our course toward the
northwest, passing among ²⁶⁴ five
islands, namely, Ceylon, Bohol,
Canighan, Baybai, and Gatighan. ²⁶⁵
In the last-named island of Gatigan,
there are bats as large as eagles. As
it was late we killed one of them, ²⁶⁶
which resembled chicken in taste.
There are doves, turtledoves, ²⁶⁷
parrots, and certain black birds as
large as domestic chickens, which
have a long tail. The last mentioned
birds lay eggs as large as the goose,
and bury them under the sand,
through the great heat of which they

hatch out. When the chicks are born,
they push up the ſand, and come
out. Thoſe eggs are good to eat.
There is a diſtance of twenty leguas
from Mazaua to Gatighan. We ſet
out weſtward from Gatighan, but
the king of Mazaua could not follow
us [cloſely], and conſequentially, we
awaited him near three iſlands,
namely, Polo, Ticobon, and
Pozon.²⁶⁸ When he caught up with
us he was greatly aſtoniſhed at the
rapidity with which we ſailed. The
captain-general had him come into
his ſhip with ſeveral of his chiefs at
which they were pleaſed. Thus did
we go to Zubu from Gatighan, the
diſtance to Zubu being fifteen
leguas.²⁶⁹

At noon on Sunday, April ſeven, we
entered the port of Zubu, paſſing by
many villages, where we ſaw many
houſes built upon logs. On
approaching the city, the captain-
general ordered the ſhips to fling
their banners. The ſails were
lowered and arranged as if for
battle, and all the artillery was fired,
an action which cauſed great fear to
 thoſe people. The captain ſent a
foſter-ſon of his as ambaffador to
the king of Zubo with the
interpreter. When they reached the
city, they found a vaſt crowd of

people together with the king, all of
whom had been frightened by the
mortars. The interpreter told them²⁷⁰
that that was our custom when
entering into ſuch places, as a ſign
of peace and friendship, and that we
had diřcharged all our mortars to
honor the king of the village. The
king and all of his men were
reaffured, and the king had us asked
by his governor what we wanted.
The interpreter replied that his
mařter was a captain of the greateř
king and prince in the world, and
that he was going to diřcover
Malucho;²⁷¹ but that he had come
ſolely to viřit the king becauē of
the good report which he had heard
of him from the king of Mazaua,
and to buy food with his
merchandise. The king told him that
he was welcome [*literally*: he had
come at a good time], but that it was
their custom for all ſhips that
entered their ports to pay tribute,
and that it was but four days ſince a
junk from Ciama [*i.e.*, Siam] laden
with gold and ſlaves had paid him
tribute. As proof of his ſtatement the
king pointed out to the interpreter a
merchant from Ciama, who had
remained to trade the gold and
ſlaves. The interpreter told the king
that, ſince his mařter was the
captain of ſo great a king, he did not

pay tribute to any seignior in the
world, and that if the king wished
peace he would have peace, but if
war instead, war. Thereupon, the
Moro merchant said to the king
Cata raia chita that is to say,²⁷²
“Look well, sire.” “These men are
the same who have conquered
Calicut, Malaca, and all India
Magiore [*i.e.*, India Major].²⁷³ If
they are treated well, they will give
good treatment, but if they are
treated evil, evil and worse
treatment, as they have done to
Calicut and Malaca.” The interpreter
understood it all and told the king
that his master’s king was more
powerful in men and ships than the
king of Portogalo, that he was the
king of Spagnia and emperor of all
the Christians, and that if the king
did not care to be his friend²⁷⁴ he
would next time send so many men
that they would destroy him. The
Moro related everything to the
king,²⁷⁵ who said thereupon that he
would deliberate with his men, and
would answer the captain on the
following day. Then he had
refreshments of many dishes, all
made from meat and contained in
porcelain platters, besides many jars
of wine brought in. After our men
had refreshed themselves, they
returned and told us everything. The

king of Mazaua,²⁷⁶ who was the most influential after that king and the seignior of a number of islands, went ashore to speak to the king of the great courtesy of our captain-general.

Monday morning, our notary, together with the interpreter, went to Zubu. The king, accompanied by his chiefs, came to the open square where he had our men sit down near him. He asked the notary whether there were more than one captain in that company, and whether that captain wished him to pay tribute to the emperor his master. The notary replied in the negative, but that the captain wished only to trade with him and with no others. The king said that he was satisfied, and that if the captain wished to become his friend, he should send him a drop of blood from his right arm, and he himself would do the same [to him] as a sign of the most sincere friendship.²⁷⁷ The notary answered that the captain would do it. Thereupon, the king told him that all the captains who came to that place, were wont to give presents one to the other [*i.e.*, mutual presents between the king and the captain], and asked whether our captain or he

ought to commence.²⁷⁸ The interpreter told the king that since he desired to maintain the custom, he should commence, and so he did.²⁷⁹

Tuesday morning the king of Mazaua came to the ships with the Moro. He saluted the captain-general in behalf of the king [of Zubu], and said that the king of Zubu was collecting as much food as possible to give to him, and that after dinner he would send one of his nephews and two others of his chief men to make peace. The captain-general had one of his men armed with his own arms, and had the Moro told that we all fought in that manner. The Moro was greatly frightened, but the captain told him not to be frightened for our arms were soft toward our friends and harsh toward our enemies; and as handkerchiefs wipe off the sweat so did our arms overthrow and destroy all our adversaries, and those who hate our faith.²⁸⁰ The captain did that so that the Moro who seemed more intelligent than the others, might tell it to the king.

After dinner the king's nephew, who was the prince, came to the ships

with the king of Mazaua, the Moro,
the governor, the chief constable,
and eight chiefs, to make peace with
us. The captain-general was seated
in a red velvet chair, the principal
men²⁸¹ on leather chairs, and the
others on mats upon the floor. The
captain-general asked them through
the interpreter whether it were their
custom to speak in secret or in
public, and whether that prince and
the king of Mazaua had authority to
make peace.²⁸² They answered that
they spoke in public, and that they
were empowered to make peace.
The captain-general said many
things concerning peace, and that he
prayed God to confirm it in heaven.
They said that they had never heard
any one speak such words, but that
they took great pleasure in hearing
them. The captain seeing that they
listened and answered willingly,
began to advance arguments to
induce them to accept the faith.
Asking them who would succeed to
the signiory after the death of the
king, he was answered that the king
had no sons but only daughters, the
eldest of whom was the wife of that
nephew of his, who therefore was
the prince. [They said that] when the
fathers and mothers grew old, they
received no further honor, but their
children commanded them. The

captain told them that God made the
sky, the earth, the ſea, and
everything elſe, and that He had
commanded us to honor our fathers
and mothers, and that whoever did
otherwiſe was condemned to eternal
fire; that we are all descended from
Adam and Eva, our firſt parents;
that we have an immortal ſpirit;²⁸³
and many other things pertaining to
the faith. All joyfully entreated the
captain to leave them two men, or at
leaſt one,²⁸⁴ to inſtruct them in the
faith, and [ſaid] that they would
ſhow them great honor. The captain
replied to them that he could not
leave them any men then, but that if
they wiſhed to become Chriſtians,
our prieſt would baptize them, and
that he would next time bring prieſts
and friars who would inſtruct them
in our faith. They answered that
they would firſt ſpeak to their king,
and that then they would become
Chriſtians, [whereat] we all wept
with great joy. The captain-general
told them that they ſhould not
become Chriſtians for fear or to
pleaſe us, but of their own free
wills;²⁸⁵ and that he would not
cauſe any diſpleaſure to thoſe who
wiſhed to live according to their
own law, but that the Chriſtians
would be better regarded and treated
than the others. All cried out with

one voice that they were not
becoming Christians through fear or
to please us, but of their own free
will. Then the captain told them that
if they became Christians, he would
leave a suit of armor,²⁸⁶ for so had
his king commanded him; that we
could not have intercourse with their
women without committing a very
great, sin, since they were pagans;
and that he assured them that if they
became Christians, the devil would
no longer appear to them except in
the last moment at their death.²⁸⁷
They said that they could not
answer the beautiful words of the
captain, but that they placed
themselves in his hands, and that he
should treat them as his most
faithful servants. The captain
embraced them weeping, and
clasping one of the prince's hands
and one of the king's between his
own, said to them that, by his faith
in God and to his sovereign, the
emperor, and by the habit which he
wore,²⁸⁸ he promised them that he
would give them perpetual peace
with the king of Spagnia. They
answered that they promised the
same. After the conclusion of the
peace, the captain had refreshments
served to them. Then the prince and
the king [of Mazaua] presented
some baskets of rice, swine, goats,

and fowls to the captain-general on behalf of their king, and asked him to pardon them, for such things were but little [to give] to one such as he. The captain gave the prince a white cloth of the finest linen, a red cap, some strings of glass beads, and a gilded glass drinking cup. Those glasses are greatly appreciated in those districts. He did not give any present to the king of Mazaua, for he had already given him a robe of Cambaya, besides other articles.²⁸⁹ To the others he gave now one thing and now another. Then he sent to the king of Zubu through me and one other a yellow and violet silk robe, made in Turkish style, a fine red cap, some strings of glass beads, all in a silver dish, and two gilt drinking cups in our hands.²⁹⁰ When we reached the city we found the king in his palace surrounded by many people. He was seated on a palm mat on the ground, with only a cotton cloth before his privies, and a scarf embroidered with the needle about his head, a necklace of great value hanging from his neck, and two large gold earrings fastened in his ears set round with precious gems. He was fat and short, and tattooed with fire²⁹¹ in various designs. From another mat on the ground he was eating turtle eggs

which were in two porcelain dishes,
and he had four jars full of palm
wine in front of him covered with
sweet-smelling herbs and arranged
with four small reeds in each jar by
means of which he drank.²⁹² Having
duly made reverence to him, the
interpreter told the king that his
master thanked him very warmly for
his present, and that he sent this
present not in return for his present
but for the intrinsic love which he
bore him.²⁹³ We dressed him in the
robe, placed the cap on his head,
and gave him the other things; then
kissing the beads and putting them
upon his head, I presented them to
him. He doing the same [*i.e.*, kissing
them] accepted them. Then the king
had us eat some of those eggs and
drink through those slender reeds.
The others, his men, told him in that
place, the words of the captain
concerning peace and his
exhortation to them to become
Christians. The king wished to have
us stay to supper with him, but we
told him that we could not stay then.
Having taken our leave of him, the
prince took us with him to his
house, where four young girls were
playing [instruments]—one, on a
drum like ours, but resting on the
ground; the second was striking two
suspended gongs alternately with a

Mercore matina ꝑ effere morto vno
deli noftⁱ nella nocte paffata
linterprete et yo andaffemo

stick wrapped somewhat thickly at the end with palm cloth; the third, one large gong in the same manner; and the last, two small gongs held in her hand, by striking one against the other, which gave forth a sweet sound. They played so harmoniously that one would believe they possessed good musical sense. Those girls were very beautiful and almost as white as our girls and as large. They were naked except for tree cloth hanging from the waist and reaching to the knees. Some were quite naked and had large holes in their ears with a small round piece of wood in the hole, which keeps the hole round and large. They have long black hair, and wear a short cloth about the head, and are always barefoot. The prince had three quite naked girls dance for us. We took refreshments and then went to the ships. Those gongs are made of brass [*metalo*] and are manufactured in the regions about the Signio Magno²⁹⁴ which is called China. They are used in those regions as we use bells and are called *aghon*.²⁹⁵

On Wednesday morning, as one of our men had died during the previous night, the interpreter and

I²⁹⁶ went to ask the king where we
could bury him. We found the king
surrounded by many men, of whom,
after the due reverence was made, I
asked it.²⁹⁷ He replied, "If I and my
vassals all belong to your sovereign,
how much more ought the land." I
told the king that we would like to
consecrate the place,²⁹⁸ and to set
up a cross there. He replied that he
was quite satisfied, and that he
wished to adore the cross as did we.
The deceased was buried in the
square with as much pomp as
possible, in order to furnish a good
example. Then we consecrated the
place, and in the evening buried
another man. We carried a quantity
of merchandise ashore which we
stored in a house. The king took it
under his care as well as four men
who were left to trade the goods by
wholesale.²⁹⁹ Those people live in
accordance with justice, and have
weights and measures. They love
peace, ease, and quiet. They have
wooden balances, the bar of which
has a cord in the middle by which it
is held. At one end is a bit of lead,
and at the other marks like quarter-
libras, third-libras, and libras. When
they wish to weigh they take the
scales which has three wires like
ours, and place it above the marks,
and so weigh accurately.³⁰⁰ They

have very large measures without
any bottom.³⁰¹ The youth play on
pipes made like ours which they call
subin. Their houses are constructed
of wood, and are built of planks and
bamboo, raised high from the
ground on large logs, and one must
enter them by means of ladders.
They have rooms like ours; and
under the house they keep their
swine, goats, and fowls. Large sea
snails [*cornioli*], beautiful to the
sight, are found there which kill
whales. For the whale swallows
them alive, and when they are in the
whale's body, they come out of their
shells and eat the whale's heart.
Those people afterward find them
alive near the dead whale's heart.
Those creatures have black teeth
and skin and a white shell, and the
flesh is good to eat. They are called
laghan.³⁰²

On Friday we showed those people
a shop full of our merchandise,³⁰³ at
which they were very much
surprised. For metals, iron, and
other large merchandise they gave
us gold. For the other smaller
articles they gave us rice, swine,
goats, and other food. Those people
gave us x pieces of gold for xiii
libras of iron³⁰⁴ (one piece being

worth about one and one-half
ducados). The captain-general did
not wish to take too much gold, for
there would have been some sailors
who would have given all that they
owned for a small amount of gold,
and would have spoiled the trade for
ever.³⁰⁵ On Saturday, as the captain
had promised the king to make him
a Christian on Sunday, a platform
was built in the consecrated square,
which was adorned with hangings
and palm branches for his baptism.
The captain-general sent men to tell
the king not to be afraid of the
pieces that would be discharged in
the morning, for it was our custom
to discharge them at our greatest
feasts without loading with
stones.³⁰⁶

On Sunday morning, April fourteen,
forty men of us went ashore, two of
whom were completely armed and
preceded the royal banner.³⁰⁷ When
we reached land all the artillery was
fired.³⁰⁸ Those people followed us
hither and thither. The captain and
the king embraced. The captain told
the king that the royal banner was
not taken ashore except with fifty
men armed as were those two, and
with fifty musketeers; but so great
was his love for him that he had

thus brought the banner.³⁰⁹ Then we
all approached the platform joyfully.
The captain and the king sat down
in chairs of red and violet velvet,³¹⁰
the chiefs on cushions, and the
others on mats.³¹¹ The captain told
the king through the interpreter that
he thanked God for inspiring him to
became a Christian; and that [now]
he would more easily conquer his
enemies than before. The king
replied that he wished to become a
Christian, but that some of his chiefs
did not wish to obey, because they
said that they were as good men as
he. Then our captain had all the
chiefs of the king called, and told
them that, unless they obeyed the
king as their king, he would have
them killed, and would give their
possessions to the king. They
replied that they would obey him.
The captain told the king that he
was going to Spagna, but that he
would return again with so many
forces that he would make him the
greatest king of those regions, as he
had been the first to express a
determination to become a
Christian. The king, lifting his hands
to the sky, thanked the captain, and
requested him to let some of his
men remain [with him], so that he
and his people might be better
instructed in the faith. The captain

replied that he would leave two men
to satisfy him, but that he would like
to take two of the children of the
chiefs with him, so that they might
learn our language, who afterward
on their return would be able to tell
the others the wonders [cose] of
Spagnia. A large cross was set up in
the middle of the square. The
captain told them that if they wished
to become Christians as they had
declared on the previous days, that
they must burn all their idols and set
up a cross in their place. They were
to adore that cross daily with
clasped hands, and every morning
after their [i.e., the Spaniards']
custom, they were to make the sign
of the cross (which the captain
showed them how to make); and
they ought to come hourly, at least
in the morning, to that cross, and
adore it kneeling. The intention that
they had already declared, they were
to confirm with good works. The
king and all the others wished to
confirm it thoroughly. The captain-
general told the king that he was
clad all in white to demonstrate his
sincere love toward them. They
replied that they could not respond
to his sweet words. The captain led
the king by the hand to the platform
while speaking these good words in
order to baptize him. He told the
king that he would call him Don

Carlo, after his sovereign the emperor; the prince, Don Fernando, after the emperor's brother; the king of Mazaua, Johanni; a chief, Fernando, after our chief, that is to say, the captain; the Moro, Christoforo; and then the others, now one name, and now another. Five hundred men were baptized before mass. After the conclusion of mass, the captain invited the king and some of the other chiefs to dinner, but they refused, accompanying us, however, to the shore. The ships discharged all the mortars; and embracing, the king and chiefs and the captain took leave of one another.³¹²

After dinner the priest and some of the others went ashore to baptize the queen, who came with forty women. We conducted her to the platform, and she was made to sit down upon a cushion, and the other women near her, until the priest should be ready. She was shown an image of our Lady, a very beautiful wooden child Jesus, and a cross. Thereupon, she was overcome with contrition, and asked for baptism amid her tears.³¹³ We named her Johanna, after the emperor's mother; her daughter, the wife of the prince, Catherina; the queen of Mazaua, Lisabeta; and the

others, each their [distinctive] name.
Counting men, women, and
children, we baptized eight hundred
souls.³¹⁴ The queen was young and
beautiful, and was entirely covered
with a white and black cloth. Her
mouth and nails were very red,
while on her head she wore a large
hat of palm leaves in the manner of
a parasol,³¹⁵ with a crown about it
of the same leaves, like the tiara of
the pope; and she never goes any
place without such a one.³¹⁶ She
asked us to give her the little child
Jesus to keep in place of her
idols;³¹⁷ and then she went away. In
the afternoon,³¹⁸ the king and
queen, accompanied by numerous
persons, came to the shore.
Thereupon, the captain had many
trombs of fire and large mortars
discharged, by which they were
most highly delighted.³¹⁹ The
captain and the king called one
another brothers. That king's name
was Raia Humabon. Before that
week had gone, all the persons of
that island, and some from the other
island, were baptized. We burned
one hamlet which was located in a
neighboring island, because it
refused to obey the king or us. We
set up the cross there for those
people were heathen. Had they been
Moros, we would have erected a

column there as a token of greater hardness, for the Moros are much harder to convert than the heathen.

The captain-general went ashore daily during those days to hear mass, and told the king many things regarding the faith.³²⁰ One day the queen came with great pomp to hear mass. Three girls preceded her with three of her hats in their hands.³²¹ She was dressed in black and white with a large silk scarf, crossed with gold stripes thrown over her head, which covered her shoulders; and she had on her hat. A great number of women accompanied her, who were all naked and barefoot, except that they had a small covering of palm-tree cloth before their privies, and a small scarf upon the head, and all with hair flowing free. The queen, having made the due reverence to the altar, seated herself on a silk embroidered cushion. Before the commencement of the mass, the captain sprayed her and some of her women with musk rosewater, for they delighted exceedingly in such perfumes. The captain knowing that the queen was very much pleased with the child Jesus, gave it to her, telling her to keep it in place of her idols, for it

God. Thanking him heartily she
accepted it.

Before mass one day, the captain-
general had the king come clad in
his silk robe, and the chief men of
the city, [to wit], the king's brother
and prince's father, whose name was
Bendara; another of the king's
brothers, Cadaio; and certain ones
called Simiut, Sibuaia, Sisacai,
Maghalibe, and many others whom
I shall not name in order not to be
tedious.³²³ The captain made them
all swear to be obedient to their
king, and they kissed the latter's
hand. Then the captain had the king
declare that he would always be
obedient and faithful to the king of
Spagna, and the king so swore.³²⁴
Thereupon, the captain drew his
Sword before the image of our
Lady, and told the king that when
anyone so swore, he should prefer to
die rather than to break such an
oath,³²⁵ if he swore by that image,
by the life of the emperor his
sovereign, and by his habit to be
ever faithful. After the conclusion of
that the captain gave the king a red
velvet chair, telling him that
wherever he went he should always
have it carried before him by one of

his nearest relatives; and he showed
him how it ought to be carried. The
king responded that he would do
that willingly for love of him, and
he told the captain that he was
making a jewel to give to him,
namely, two large earrings of gold
to fasten³²⁶ in his ears, two armlets
to put on his arms, above the
elbows, and two other rings for the
feet above the ankles, besides other
precious gems to adorn³²⁷ the ears.
Those are the most beautiful
ornaments which the kings of those
districts can wear. They always go
barefoot, and wear a cloth garment
that hangs from the waist to the
knees.

One day the captain-general asked
the king and the other people why
they did not burn their idols as they
had promised when they became
Christians; and why they sacrificed
so much flesh to them. They replied
that what they were doing was not
for themselves, but for a sick man
who had not spoken now for four
days, so that the idols might give
him health. He was the prince's
brother, and the bravest and wisest
man in the island. The captain told
them to burn their idols and to
believe in Christ, and that if the sick
man were baptized, he would

quickly recover; and if that did not
so happen they could behead him
[i.e., the captain] then and there.
Thereupon, the king replied that he
would do it, for he truly believed in
Christ. We made a procession from
the square to the house of the sick
man with as much pomp as possible.
There we found him in such
condition that he could neither
speak nor move. We baptized him
and his two wives, and x girls. Then
the captain had him asked how he
felt. He spoke immediately and said
that by the grace of our Lord he felt
very well. That was a most manifest
miracle [that happened] in our
times. When the captain heard him
speak, he thanked God fervently.
Then he made the sick man drink
some almond milk, which he had
already had made for him.
Afterward he sent him a mattress, a
pair of sheets, a coverlet of yellow
cloth, and a pillow. Until he
recovered his health, the captain
sent him almond milk, rosewater, oil
of roses, and some sweet preserves.
Before five days the sick man began
to walk. He had an idol that certain
old women had concealed in his
house burned in the presence of the
king and all the people. He had
many shrines along the seashore
destroyed, [328](#) in which the

parti de drieto anno Ly brazi aperti
et li piedi voltati in fufo con le
gambe aperte et Lo volto grande cõ
quat^o denti grandiffimj como porci
cingiari et fonno tucti depintj

consecrated meat was eaten. The
people themselves cried out
“Castiglia! Castiglia!” and
destroyed³²⁹ those shrines. They
said that if God would lend them
life, they would burn all the idols
that they could find, even if they
were in the king’s house. Those
idols are made of wood, and are
hollow, and lack the back parts.
Their arms are open and their feet
turned up under them with the legs
open. They have a large face with
four huge tusks like those of the
wild boar; and are painted all over.

There are many villages in that
island. Their names, those of their
inhabitants, and of their chiefs are as
follows: Cinghapola, and its chiefs,
Cilaton, Ciguibucan, Cimaningha,
Cimatichat, and Cicanbul; one,
Mandauì, and its chief, Apanoan;
one Lalan, and its chief, Theteu;
one, Lalutan, and its chief, Tapan;
one Cilumai; and one, Lubucun.³³⁰
All those villages rendered
obedience to us, and gave us food
and tribute. Near that island of Zubu
was an island called Matan, which
formed the port where we were
anchored. The name of its village
was Matan, and its chiefs were Zula
and Cilapulapu. That city which we
burned was in that island and was
called Bulaia.

In order that your most illustrious
Lordship may know the ceremonies
that those people use in consecrating
the swine, they first sound those
large gongs.³³¹ Then three large
dishes are brought in; two with
roses and with cakes of rice and
millet, baked and wrapped in leaves,
and roast fish; the other with cloth
of Cambaia³³² and two standards
made of palm-tree cloth. One bit of
cloth of Cambaia is spread on the
ground. Then two very old women

come, each of whom has a bamboo
trumpet in her hand. When they
have stepped upon the cloth they
make obeisance to the sun. Then
they wrap the cloths about
themselves. One of them puts a
kerchief with two horns on her
forehead, and takes another kerchief
in her hands, and dancing and
blowing upon her trumpet, she
thereby calls out to the sun. The
other takes one of the standards and
dances and blows on her trumpet.
They dance and call out thus for a
little space, saying many things
between themselves to the sun. She
with the kerchief takes the other
standard, and lets the kerchief drop,
and both blowing on their trumpets
for a long time, dance about the
bound hog. She with the horns
always speaks covertly to the sun,
and the other answers her. A cup of
wine is presented to her of the
horns, and she dancing and
repeating certain words, while the
other answers her, and making
pretense four or five times of
drinking the wine, sprinkles it upon
the heart of the hog. Then she
immediately begins to dance again.
A lance is given to the same woman.
She shaking it and repeating certain
words, while both of them continue
to dance, and making motions four
or five times of thrusting the lance

through the heart of the hog, with a
sudden and quick stroke, thrusts it
through from one side to the other.
The wound is quickly stopped³³³
with grass. The one who has killed
the hog, taking in her mouth a
lighted torch, which has been
lighted throughout that ceremony,
extinguishes it.³³⁴ The other one
dipping the end of her trumpet in the
blood of the hog, goes around
marking with blood with her finger
first the foreheads of their husbands,
and then the others; but they never
came to us. Then they divest
themselves and go to eat the
contents of those dishes, and they
invite only women [to eat with
them]. The hair is removed from the
hog by means of fire. Thus no one
but old women consecrate the flesh
of the hog, and they do not eat it
unless it is killed in this way.³³⁵

Those people go naked, wearing but
one piece of palm-tree cloth
about³³⁶ their privies. The males,
large and small, have their penis
pierced from one side to the other
near the head, with a gold or tin bolt
as large as a goose quill. In both
ends of the same bolt, some have
what resembles a spur, with points
upon the ends; others are like the

head of a cart nail. I very often
asked many, both old and young, to
see their penis, because I could not
credit it. In the middle of the bolt is
a hole, through which they urinate.
The bolt and the spurs always hold
firm. They say that their women
wish it so, and that if they did
otherwise they would not have
communication with them. When
the men wish to have
communication with their women,
the latter themselves take the penis
not in the regular way and
commence very gently to introduce
it [into their vagina], with the spur
on top first, and then the other part.
When it is inside it takes its regular
position; and thus the penis always
stays inside until it gets soft, for
otherwise they could not pull it out.
Those people make use of that
device because they are of a weak
nature. They have as many wives as
they wish, but one of them is the
principal wife.³³⁷ Whenever any of
our men went ashore, both by day
and by night, every one invited him
to eat and to drink. Their viands are
half cooked and very salty. They
drink frequently and copiously from
the jars³³⁸ through those small
reeds, and one of their meals lasts
for five or six hours. The women

own men. All of the women from the age of six years and upward, have their vaginas [*natura*] gradually opened because of the men's penises.³³⁹

They practice the following ceremonies when one of their chiefs dies. First all the chief³⁴⁰ women of the place go to the house of the deceased. The deceased is placed in the middle of the house in a box. Ropes are placed about the box in the manner of a palisade, to which many branches of trees are attached. In the middle of each branch hangs a cotton cloth like a curtained canopy. The most principal women sit under those hangings, and are all covered with white cotton cloth, each one by a girl who fans her with a palm-leaf fan. The other women sit about the room sadly.³⁴¹ Then there is one woman who cuts off the hair of the deceased very slowly with a knife. Another who was the principal wife of the deceased, lies down upon him, and places her mouth, her hands, and her feet upon those of the deceased. When the former is cutting off the hair, the latter weeps; and when the former finishes the cutting, the latter sings. There are many porcelain jars

containing fire about the room, and
myrrh, storax, and bezoin, which
make a strong odor through the
house, are put on the fire. They keep
the body in the house for five or six
days during those ceremonies. I
believe that the body is anointed
with camphor. Then they bury the
body and the same box which is
shut in a log by means of wooden
nails and covered and enclosed by
logs of wood.³⁴² Every night about
midnight in that city, a jet black bird
as large as a crow was wont to
come, and no sooner had it thus
reached the houses than it began to
screech, so that all the dogs began to
howl; and that screeching and
howling would last for four or five
hours,³⁴³ but those people would
never tell us the reason of it.

On Friday, April twenty-six, Zula, a
chief of the island of Matan,³⁴⁴ sent
one of his sons to present two goats
to the captain-general, and to say
that he would send him all that he
had promised, but that he had not
been able to send it to him because
of the other chief Cilapulapu, who
refused to obey the king of Spagnia.
He requested the captain to send
him only one boatload of men on
the next night, so that they might

help him and fight against the other
chief. The captain-general decided
to go thither with three boatloads.
We begged him repeatedly not to
go, but he, like a good shepherd,
refused to abandon his flock. At
midnight, sixty men of us set out
armed with corselets and helmets,
together with the Christian king, the
prince, some of the chief men, and
twenty or thirty balanguais. We
reached Matan three hours before
dawn. The captain did not wish to
fight then, but sent a message to the
natives by the Moro to the effect
that if they would obey the king of
Spagnia, recognize the Christian
king as their sovereign, and pay us
our tribute, he would be their friend;
but that if they wished otherwise,
they should wait to see how our
lances wounded.³⁴⁵ They replied
that if we had lances they had lances
of bamboo and stakes hardened with
fire. [They asked us] not to proceed
to attack them at once, but to wait
until morning, so that they might
have more men. They said that in
order to induce us to go in search of
them; for they had dug certain
pitholes between the houses in order
that we might fall into them. When
morning came forty-nine of us
leaped into the water up to our
thighs, and walked through water

for more than two crossbow flights before we could reach the shore. The boats could not approach nearer because of certain rocks in the water. The other eleven men remained behind to guard the boats. When we reached land, those men had formed in three divisions to the number of more than one thousand five hundred persons. When they saw us, they charged down upon us with exceeding loud cries, two divisions on our flanks and the other on our front. When the captain saw that, he formed us into two divisions, and thus did we begin to fight. The musketeers and crossbowmen shot from a distance for about a half-hour, but uselessly; for the shots only passed through the shields which were made of thin wood and the arms [of the bearers]. The captain cried to them, “Cease firing! cease firing!” but his order was not at all heeded. When the natives saw that we were shooting our muskets to no purpose, crying out they determined to stand firm, but they redoubled their shouts. When our muskets were discharged, the natives would never stand still, but leaped hither and thither, covering themselves with their shields. They shot so many arrows at us and hurled so many bamboo spears (some of them tipped with

iron) at the captain-general, besides pointed stakes hardened with fire, stones, and mud, that we could scarcely defend ourselves. Seeing that the captain-general sent some men to burn their houses in order to terrify them. When they saw their houses burning, they were roused to greater fury. Two of our men were killed near the houses, while we burned twenty or thirty houses. So many of them charged down upon us that they shot the captain through the right leg with a poisoned arrow. On that account, he ordered us to retire slowly, but the men took to flight, except six or eight of us who remained with the captain. The natives shot only at our legs, for the latter were bare; and so many were the spears and stones that they hurled at us, that we could offer no resistance. The mortars in the boats could not aid us as they were too far away. So we continued to retire for more than a good crossbow flight from the shore always fighting up to our knees in the water. The natives continued to pursue us, and picking up the same spear four or six times, hurled it at us again and again. Recognizing the captain, so many turned upon him that they knocked his helmet off his head twice, but he always stood firmly like a good knight, together with some others.

Thus did we fight for more than one
hour, refusing to retire farther. An
Indian hurled a bamboo spear into
the captain's face, but the latter
immediately killed him with his
lance, which he left in the Indian's
body. Then, trying to lay hand on
sword, he could draw it out but
halfway, because he had been
wounded in the arm with a bamboo
spear. When the natives saw that,
they all hurled themselves upon
him. One of them wounded him on
the left leg with a large cutlass,³⁴⁶
which resembles a scimitar, only
being larger. That caused the captain
to fall face downward, when
immediately they rushed upon him
with iron and bamboo spears and
with their cutlasses, until they killed
our mirror, our light, our comfort,
and our true guide. When they
wounded him, he turned back many
times to see whether we were all in
the boats. Thereupon, beholding
him dead, we, wounded, retreated,
as best we could, to the boats, which
were already pulling off. The
Christian king would have aided us,
but the captain charged him before
we landed, not to leave his
balanghai, but to stay to see how we
fought. When the king learned that
the captain was dead, he wept. Had
it not been for that unfortunate

feriti.

captain, not a single one of us would have been saved in the boats, for while he was fighting the others retired to the boats. I hope through [the efforts of] your most illustrious Lordship that the fame of so noble a captain will not become effaced in our times. Among the other virtues which he possessed, he was more constant than ever any one else in the greatest of adversity. He endured hunger better than all the others, and more accurately than any man in the world did he understand sea charts³⁴⁷ and navigation. And that this was the truth was seen openly, for no other had had so much natural talent nor the boldness to learn how to circumnavigate the world, as he had almost done. That battle was fought on Saturday, April twenty-seven, 1521.³⁴⁸ The captain desired to fight on Saturday, because it was the day especially holy to him. Eight of our men were killed with him in that battle,³⁴⁹ and four Indians, who had become Christians and who had come afterward to aid us were killed by the mortars of the boats. Of the enemy, only fifteen were killed, while many of us were wounded.

In the afternoon the Christian king
sent a message with our consent to
the people of Matan, to the effect
that if they would give us the
captain and the other men who had
been killed, we would give them as
much merchandise as they wished.
They answered that they would not
give up such a man, as we imagined
[they would do], and that they
would not give him for all the riches
in the world, but that they intended
to keep him as a memorial. [350](#)

On Saturday, the day on which the
captain was killed, the four men
who had remained in the city to
trade, had our merchandise carried
to the ships. Then we chose two
commanders, namely, Duarte
Barboza, [351](#) a Portuguese and a
relative of the captain, and Johan
Seranno, a Spaniard. [352](#) As our
interpreter, Henrich by name, was
wounded slightly, he would not go
ashore any more to attend to our
necessary affairs, but always kept
his bed. On that account, Duarte
Barboza, the commander of the
flagship, cried out to him and told
him, that although his master, the
captain, was dead, he was not
therefore free; on the contrary he
[i.e., Barboza] would see to it that

when we ſhould reach Eſpagnia, he
ſhould ſtill be the ſlave of Doña
Beatrice, the wife of the captain-
general.³⁵³ And threatening the
ſlave that if he did go aſhore, he
would be flogged, the latter aroſe,
and, feigning to take no heed to
 thoſe words, went aſhore to tell the
Christian king³⁵⁴ that we were about
to leave very ſoon, but that if he
would follow his advice, he could
gain the ſhips and all our
merchandise. Accordingly they
arranged a plot, and the ſlave
returned to the ſhip, where he
ſhowed that he was more
cunning³⁵⁵ than before.

On Wednesday morning, the firſt of
May, the Christian king ſent word to
the commanders that the jewels³⁵⁶
which he had promiſed to ſend to
the king of Spagnia were ready, and
that he begged them and their other
companions to come to dine with
him that morning, when he would
give them the jewels. Twenty-four
men went aſhore, among whom was
our aſtrologer, San Martín de
Sivilla. I could not go becauſe I was
all ſwollen up by a wound from a
poiſoned arrow which I had
received in my face. Jovan Carvaio
and the conſtable³⁵⁷ returned, and

told us that they ſaw the man who
had been cured by a miracle take the
priest to his houſe.³⁵⁸ Conſequentially,
they had left that place, becauſe
they ſuſpected ſome evil. Scarcely
had they ſpoken thoſe words when
we heard loud cries and
lamentations. We immediately
weighed anchor and diſcharging
many mortars into the houſes, drew
in nearer to the ſhore. While thus
diſcharging [our pieces] we ſaw
Johan Seranno in his ſhirt bound
and wounded, crying to us not to
fire any more, for the natives would
kill him.³⁵⁹ We aſked him whether
all the others and the interpreter
were dead. He ſaid that they were
all dead except the interpreter. He
begged us earneſtly to redeem him
with ſome of the merchandise; but
Johan Carvaio, his boon companion,
[and others] would not allow the
boat to go aſhore ſo that they might
remain maſters of the ſhips.³⁶⁰ But
although Johan Serrano weeping
aſked us not to ſet ſail ſo quickly,
for they would kill him, and ſaid
that he prayed God to aſk his ſoul of
Johan Carvaio, his comrade, in the
day of judgment, we immediately
departed. I do not know whether he
is dead or alive.³⁶¹

In that island are found dogs, cats,
 rice, millet, panicum, sorgo, ginger,
 figs [*i.e.*, bananas], oranges, lemons,
 sugarcane, garlic, honey, cocoanuts,
 nangcas,³⁶² gourds, flesh of many
 kinds, palm wine, and gold.³⁶³ It is a
 large island, and has a good port
 with two entrances—one to the west
 and the other to the east
 northeast.³⁶⁴ It lies in x degrees³⁶⁵
 of latitude toward the Arctic Pole,
 and in a longitude of one hundred
 and sixty-four³⁶⁶ degrees from the
 line of demarcation. Its name is
 Zubu. We heard of Malucho there
 before the death of the captain-
 general. Those people play a violin
 with copper strings.

In the midst of that archipelago,³⁷⁷
at a distance of eighteen leguas from
that island of Zzubu, at the head of
the other island called Bohol, we
burned the ship “Conceptione,” for
too few men of us were left [to work
it].³⁷⁸ We stowed the best of its
contents in the other two ships, and
the laid our course toward the south
southwest, coasting along the island
called Panilongon,³⁷⁹ where black
men like those in Etiopia live. Then
we came to a large island
[Mindanao], whose king in order to
make peace with us, drew blood
from his left hand marking his body,
face, and the tip of his tongue with it
as a token of the closest friendship,
and we did the same. I went ashore
alone with the king in order to see
that island. We had no sooner
entered a river than many fishermen
offered fish to the king. Then the
king removed the cloths which
covered his privies, as did some of
his chiefs; and began to row while
singing past many dwellings which
were upon the river. Two hours after
nightfall we reached the king’s
house. The distance from the
beginning of the river where our
ships were to the king’s house, was
two leguas. When we entered the
house, we came upon many torches

of cane and palm leaves,³⁸⁰ which
were of the *anime*, of which
mention was made above. Until the
supper was brought in, the king with
two of his chiefs and two of his
beautiful women drank the contents
of a large jar of palm wine without
eating anything. I, excusing myself
as I had supped, would only drink
but once. In drinking they observed
all the same ceremonies that the
king of Mazaua did. Then the
supper, which consisted of rice and
very salt³⁸¹ fish, and was contained
in porcelain dishes, was brought in.
They ate their rice as if it were
bread, and cook it after the
following manner. They first put in
an earthen jar like our jars, a large
leaf which lines all of the jar. Then
they add the water and the rice, and
after covering it allow it to boil until
the rice becomes as hard as bread,
when it is taken out in pieces. Rice
is cooked in the same way
throughout those districts.³⁸² When
we had eaten, the king had a reed
mat and another of palm leaves, and
a leaf pillow brought in so that I
might sleep on them. The king and
his two women went to sleep in a
separate place, while I slept with
one of his chiefs.³⁸³ When day came
and until the dinner was brought in,
I walked about that island. I saw

many articles of gold in those
houses³⁸⁴ but little food. After that
we dined on rice and fish, and at the
conclusion of dinner, I asked the
king by signs whether I could see
the queen. He replied that he was
willing, and we went together to the
summit of a lofty hill, where the
queen's house was located. When I
entered the house, I made a bow to
the queen, and she did the same to
me, whereupon I sat down beside
her. She was making a sleeping mat
of palm leaves. In the house there
was hanging a number of porcelain
jars and four metal gongs—one of
which was larger than the second,
while the other two were still
smaller—for playing upon. There
were many male and female slaves
who served her. Those houses are
constructed like those already
mentioned. Having taken our leave,
we returned to the king's house,
where the king had us immediately
served with refreshments of
sugarcane. The most abundant
product of that island is gold. They
showed me certain large valleys,³⁸⁵
making me a sign that the gold there
was as abundant as the hairs of their
heads, but they have no iron with
which to dig it, and they do not dare
to go to the trouble [to get it].³⁸⁶
That part of the island belongs to the

same land as Butuan and Calaghan,
and lies toward Bohol, and is
bounded by Mazaua. As we shall
return to that island again, I shall
say nothing further [now]. The
afternoon having waned, I desired to
return to the ships. The king and the
other chief men wished to
accompany me, and therefore we
went in the same balanghai.³⁸⁷ As
we were returning along the river, I
saw, on the summit of a hill at the
right, three men suspended from one
tree, the branches of which had been
cut away. I asked the king what was
the reason for that, and he replied
that they were malefactors and
robbers. Those people go naked as
do the others above mentioned. The
king's name is Raia Calanao.³⁸⁸ The
harbor is an excellent one. Rice,
ginger, swine, goats, fowls, and
other things are to be found there.
That port lies in a latitude of eight
degrees toward the Arctic Pole, and
in a longitude of one hundred and
sixty-seven degrees³⁸⁹ from the line
of demarcation. It is fifty leguas
from Zubu, and is called Chipit.³⁹⁰
Two days' journey thence to the
northwest is found a large island
called Lozon,³⁹¹ where six or eight
junks belonging to the Lequian
people go yearly.³⁹²

Partendone de q^l ala meza partita de ponente et garbin deffemo in vna yfola non molto grande et cali defhabitata La gente de questa fonno mori et eranno banditi duna yfola deta burne vano nudi Como li altⁱ anno za robotane con li carcasseti alato pienni de freze con erba venenata anno pugnialli con li mani ornati de oro et de pietre preciose lancia rodelle et corazine de corno de bufalo ne chiamauão corpi sancti In questa yfola se trouaua pocha victuaglia ma arborj grandiffimj Ita de Latitudine aL polo articho in sette gradi et mezo et longi da chippit Quaranta tre league et chiamasse caghaian.

Leaving there and laying our course west southwest, we cast anchor at an island not very large and almost uninhabited. The people of that island are Moros and were banished from an island called Burne. They go naked as do the others. They have blowpipes and small quivers at their side, full of arrows and a poisonous herb. They have daggers whose hafts are adorned with gold and precious gems, spears, bucklers, and small cuirasses of buffalo horn.³⁹³ They called us holy beings. Little food was to be found in that island, but [there were] immense trees. It lies in a latitude of seven and one-half degrees toward the Arctic Pole, and is forty-three leguas³⁹⁴ from Chippit. Its name is Caghaian.³⁹⁵

About twenty-five leguas to the west northwest from the above island we found a large island, where rice, ginger, swine, goats, fowls, figs one-half braza long and as thick as the arm [*i.e.*, bananas] (they are excellent; and certain others are one palmo and less in length, and are much better than all the others), cocoanuts, camotes [*batate*], sugarcane, and roots resembling turnips in taste, are

found. Rice is cooked there under
the fire in bamboos or in wood; and
it lasts better than that cooked in
earthen pots. We called that land the
land of promise, because we
suffered great hunger before we
found it. We were often on the point
of abandoning the ships and going
ashore in order that we might not
die of hunger.³⁹⁶ The king made
peace with us by gashing himself
slightly in the breast with one of our
knives, and upon bleeding, touching
the tip of his tongue and his
forehead in token of the truest
peace, and we did the same. That
island lies in a latitude of nine and
one-third degrees toward the Arctic
Pole, and a longitude of one
hundred and seventy-one and one-
third³⁹⁷ degrees from the line of
demarcation. [It is called]
Pulaoan.³⁹⁸

Those people of Polaoan go naked
as do the others. Almost all³⁹⁹ of
them cultivate their fields. They
have blowpipes with thick wooden
arrows more than one palmo long,
with harpoon points, and others
tipped with fishbones, and poisoned
with an herb; while others are tipped
with points of bamboo like harpoons
and are poisoned.⁴⁰⁰ At the end of

the arrow they attach a little piece of
soft wood, instead of feathers. At
the end of their blowpipes they
fasten a bit of iron like a spear
head;⁴⁰¹ and when they have shot all
their arrows they fight with that.
They place a value on brass rings
and chains, bells, knives, and still
more on copper wire for binding
their fishhooks. They have large and
very tame cocks, which they do not
eat because of a certain veneration
that they have for them. Sometimes
they make them fight with one
another, and each one puts up a
certain amount on his cock, and the
prize goes to him whose cock is the
victor. They have distilled rice wine
which is stronger and better than
that made from the palm.⁴⁰²

Ten leguas southwest of that island,
we came to an island, which, as we
coasted by, seemed to us to be going
upward. After entering the port, the
holy body [*i.e.*, St. Elmo's fire]
appeared to us through the pitchy
darkness. There is a distance of fifty
leguas⁴⁰³ from the beginning of that
island to the port. On the following
day, July nine, the king of that
island sent a very beautiful prao to
us, whose bow and stern were
worked in gold. At the bow flew a

Then we immediately departed [for
 the land].

When we reached the city, we
 remained about two hours in the
 prau, until the arrival of two
 elephants with silk trappings, and
 twelve men each of whom carried a
 porcelain jar covered with silk in
 which to carry our presents.
 Thereupon, we mounted the
 elephants while those twelve men
 preceded us afoot with the presents
 in the jars. In this way we went to
 the house of the governor, where we
 were given a supper of many kinds
 of food. During the night we slept
 on cotton mattresses,⁴⁰⁸ whose
 lining was of taffeta, and the sheets
 of Cambaia. Next day we stayed in
 the house until noon. Then we went
 to the king's palace upon elephants,
 with our presents in front as on the
 preceding day. All the streets from
 the governor's to the king's house
 were full of men with swords,
 spears, and shields, for such were
 the king's orders. We entered the
 courtyard of the palace mounted on
 the elephants. We went up a ladder
 accompanied by the governor and
 other chiefs, and entered a large hall
 full of many nobles,⁴⁰⁹ where we sat
 down upon a carpet with the
 presents in the jars near us. At the

end of that hall there is another hall higher but somewhat smaller. It was all adorned with silk hangings, and two windows, through which light entered the hall and hung with two brocade curtains, opened from it. There were three hundred footsoldiers with naked rapiers at their thighs in that hall to guard the king.⁴¹⁰ At the end of the small hall was a large window from which a brocade curtain was drawn aside so that we could see within it the king seated at a table with one of his young sons chewing betel.⁴¹¹ No one but women were behind him. Then a chief told us that we could not speak to the king, and that if we wished anything, we were to tell it to him, so that he could communicate it to one of higher rank. The latter would communicate it to a brother of the governor who was stationed in the smaller hall, and this man would communicate it by means of a speaking-tube through a hole in the wall to one who was inside with the king. The chief taught us the manner of making three obeisances to the king with our hands clasped above the head, raising first one foot and then the other and then kissing the hands toward him, and we did so, that being the method of the royal

obeisance. We told the king that we
came from the king of Spagnia, and
that the latter desired to make peace
with him and asked only for
permission to trade. The king had us
told that since the king of Spagnia
desired to be his friend, he was very
willing to be his, and said that we
could take water and wood, and
trade at our pleasure. Then we gave
him the presents, on receiving each
of which he nodded slightly. To
each one of us was given some
brocaded and gold cloth and silk,
which were placed upon our left
shoulders, where they were left but
a moment.⁴¹² They presented us
with refreshments of cloves and
cinnamon, after which the curtains
were drawn to and the windows
closed. The men in the palace were
all attired in cloth of gold and silk
which covered their privies, and
carried daggers with gold hafts
adorned with pearls and precious
gems, and they had many rings on
their hands. We returned upon the
elephants to the governor's house,
seven men carrying the king's
presents to us and always preceding
us. When we reached the house,
they gave each one of us his present,
placing them upon our left
shoulders. We gave each of those
men a couple of knives for his

trouble. Nine men came to the
governor's house with a like number
of large wooden trays from the king.
Each tray contained ten or twelve
porcelain dishes full of veal, capons,
chickens, peacocks, and other
animals, and fish. We supped on the
ground upon a palm mat from thirty
or thirty-two different kinds of meat
besides the fish and other things. At
each mouthful of food we drank a
small cupful of their distilled wine
from a porcelain cup the size of an
egg. We ate rice and other sweet
food with gold spoons like ours. In
our sleeping quarters there during
those two nights, two torches of
white wax were kept constantly
alight in two rather tall silver
candlesticks, and two large lamps
full of oil with four wicks apiece
and two men to snuff them
continually. We went elephant-back
to the seashore, where we found two
praus which took us back to the
ships. That city⁴¹³ is entirely built in
salt water, except the houses of the
king and certain chiefs. It contains
twenty-five thousand fires [*i.e.*,
families].⁴¹⁴ The houses are all
constructed of wood and built up
from the ground on tall pillars.
When the tide is high the women go
in boats through the settlement
[*tera*] selling the articles necessary

to maintain life. There is a large
brick wall in front of the king's
house with towers like a fort, in
which were mounted fifty-six
bronze [*metal*o] pieces, and six of
iron. During the two days of our
stay there, many pieces were
discharged. That king is a Moro and
his name is Raia Siripada. He was
forty years old and corpulent. No
one serves him except women who
are the daughters⁴¹⁵ of chiefs. He
never goes outside of his palace,
unless when he goes hunting, and no
one is allowed to talk with him
except through the speaking tube.
He has x scribes, called Xiritoles,⁴¹⁶
who write down his deeds on very
thin tree bark.

On Monday morning, July twenty-
nine, we saw more than one hundred
praus divided into three squadrons
and a like number of tunguli ⁴¹⁷
(which are their small boats) coming
toward us. Upon catching sight of
them, imagining that there was
some trickery afoot, we hoisted our
sails as quickly as possible,
abandoning an anchor in our haste.
We expected especially that we
were to be captured in between
certain junks which had anchored
behind us on the preceding day. We

immediately turned upon the latter,
capturing four of them and killing
many persons. Three or four of the
junks sought flight by beaching. In
one of the junks which we captured
was the son of the king of the island
of Lozon. He was the captain-
general of the king of Burne, and
came with those junks from a large
city named Laoe,⁴¹⁸ which is
located at the end of that island [*i.e.*,
Borneo] toward Java Major. He had
destroyed and sacked that city
because it refused to obey the king
[of Burne], but the king of Java
Major instead. Giovan Carvaio, our
pilot, allowed that captain and the
junks to go without our consent, for
a certain sum of gold, as we learned
afterward. Had the pilot not given
up the captain to the king, the latter
would have given us whatever we
had asked, for that captain was
exceedingly feared throughout those
regions, especially by the heathens,
as the latter are very hostile to that
Moro king. In that same port there is
another city inhabited by heathens,
which is larger than that of the
Moros, and built like the latter in
salt water. On that account the two
peoples have daily combats together
in that same harbor. The heathen
king is as powerful as the Moro
king, but is not so haughty, and

could be converted easily to the
Christian faith. When the Moro king
heard how we had treated the junks,
he sent us a message by one of our
men who was ashore to the effect
that the praus were not coming to do
us any harm, but that they were
going to attack the heathens. As a
proof of that statement, the Moros
showed him some heads of men
who had been killed, which they
declared to be the heads of heathens.
We sent a message to the king,
asking him to please allow two of
our men who were in the city for
purposes of trade and the son of
Johan Carvaio, who had been born
in the country of Verzin, to come to
us, but the king refused. That was
the consequences of Johan Carvaio
letting the above captain go. We
kept sixteen of the chiefest men [of
the captured junks] to take them to
Spagnia, and three women in the
queen's name, but Johan Carvaio
usurped the latter for himself. [419](#)

Junks are their ships and are made
in the following manner. The
bottom part is built about two
palmos above the water and is of
planks fastened with wooden pegs,
which are very well made; above
that they are entirely made of very
large bamboos. They have a bamboo

as a counterweight. One of those
 junks carries as much cargo as a
 ſhip. Their maſts are of bamboo,
 and the ſails of the bark of trees.⁴²⁰
 Their porcelain is a ſort of
 exceedingly white earth which is
 left for fifty years under the earth
 before it is worked, for otherwiſe it
 would not be fine. The father buries
 it for the ſon. If [poison] is placed in
 a diſh made of fine porcelain, the
 diſh immediately breaks.⁴²¹ The
 money made by the Moros in thoſe
 regions is of bronze [*metal*]
 pierced in the middle in order that it
 may be ſtrung. On only one ſide of
 it are four characters, which are
 letters of the great king of Chiina.
 We call that money *picis*.⁴²² They
 gave us ſix porcelain diſhes for one
*cathil*⁴²³ (which is equivalent to two
 of our libras) of quickſilver; one
 hundred *picis* for one book of
 writing paper; one ſmall porcelain
 vaſe for one hundred and ſixty
 cathils of bronze [*metal*]; one
 porcelain vaſe for three knives; one
 bahar (which is equivalent to two
 hundred and three cathils), of wax
 for 160 cathils of bronze [*metal*];
 one bahar of ſalt for eighty cathils
 of bronze [*metal*]; one bahar of
anime to calk the ſhips (for no pitch
 is found in thoſe regions) for forty
 cathils of bronze [*metal*].⁴²⁴

Twenty tahils make one cathil. At
that place the people highly esteem
bronze [*metal*o], quicksilver, glass,
cinnabar,⁴²⁵ wool cloth, linens, and
all our other merchandise, although
iron and spectacles⁴²⁶ more than all
the rest. Those Moros go naked as
do the other peoples [of those
regions]. They drink quicksilver—
the sick man drinks it to cleanse
himself, and the well man to
preserve his health.

The king of Burne has two pearls as
large as two hen's eggs. They are so
round that they will not stand still
on a table. I know that for a fact, for
when we carried the king's presents
to him, signs were made for him to
show them to us, but he said that he
would show them next day.
Afterward some chiefs said that they
had seen them.

Those Moros worship Mahomet.
The latter's law orders them not to
eat pork; as they wash the buttocks
with the left hand, not to use that
hand in eating;⁴²⁷ not to cut
anything with the right hand; to sit
down to urinate; not to kill fowls or
goats without first addressing the
sun; to cut off the tops of the wings
with the little bits of skin that stick

They are circumciſed like the Jews.

Camphor, a kind of baſam, is
produced in that iſland. It exudes
between the wood and the bark, and
the drops are as ſmall as [grains of]
wheat bran.⁴²⁹ If it is expoſed it
gradually evaporates [*literally*:
becomes nothing]. Thoſe people call
it *capor*. Cinamon, ginger,
mirabolans, oranges, lemons,
nangcas, watermelons, cucumbers,
gourds, turnips, cabbages, ſcallions,
cows, buffaloes, ſwine, goats,
chickens, geese, deer, elephants,
horses, and other things are found
there.⁴³⁰ That iſland is ſo large that
it takes three months to ſail round it
in a prau. It lies in a latitude of five
and one-fourth degrees toward the
Arctic Pole, and in a longitude of
one hundred and ſeventy-fix and
two-thirds degrees from the line of
demarcation, and its name is
Burne.⁴³¹

Leaving that iſland, we turned back
in order to find a ſuitable place to

calk the ships, for they were leaking. One ship ran on to some shoals of an island called Bibalon,⁴³² because of the carelessness of its pilot, but by the help of God we freed it. A sailor of that ship incautiously snuffed a candle into a barrel full of gunpowder, but he quickly snatched it out without any harm.⁴³³ Then pursuing our course, we captured a prau laden with cocoanuts on its way to Burne. Its crew sought refuge on an islet, until we captured it.⁴³⁴ Three other praus escaped behind certain islets.

At the head of Burne between it and an island called Cimbonbon, which lies in [a latitude of] eight degrees and seven minutes,⁴³⁵ is a perfect port for repairing ships. Consequently, we entered it; but as we lacked many things for repairing the ships, we delayed there for forty-two days. During that time, each one of us labored hard, one at one thing and one at another. Our greatest fatigue however was to go barefoot to the woods for wood. In that island there are wild boars, of which we killed one which was going by water from one island to another [by pursuing it] with the

small boat. Its head was two and
one-half palmos long,⁴³⁶ and its
teeth were large. There are found
large crocodiles, both on land and
sea, oysters and shellfish of various
kinds. Among the last named we
found two, the flesh of one of which
weighed twenty-six libras, and the
other forty-four.⁴³⁷ We caught a
fish, which had a head like that of a
hog and two horns. Its body
consisted entirely of one bone, and
on its back it resembled a saddle;
and it was small.⁴³⁸ Trees are also
found there which produce leaves
which are alive when they fall, and
walk. Those leaves are quite like
those of the mulberry, but are not so
long. On both sides near the stem,
which is short and pointed, they
have two feet. They have no blood,
but if one touches⁴³⁹ them they run
away. I kept one of them for nine
days in a box. When I opened the
box, that leaf went round and round
it.⁴⁴⁰ I believe those leaves live on
nothing but air.

Having left that island,⁴⁴¹ that is, the
port, we met at the head of the
island of Pulaoan a junk which was
coming from Burne, on which was
the governor of Pulaoan. We made
them a signal to haul in their sails,

and as they refused to haul them in,
we captured the junk by force, and
sacked it. [We told] the governor
[that] if [he] wished his freedom, he
was to give us, inside of seven days,
four hundred measures of rice,
twenty swine, twenty goats, and one
hundred and fifty fowls. After that
he presented us with cocoanuts, figs
[i.e., bananas], sugarcanes, jars full
of palm wine, and other things.
Seeing his liberality, we returned
some of his daggers and arquebuses
to him, giving him in addition, a
flag, a yellow damask robe, and xv
brazas of cloth; to his son, a cloak of
blue cloth; to a brother of the
governor, a robe of green cloth and
other things; and we parted from
them as friends. We turned our
course back between the island of
Cagaian and the port of Cippit, and
laid our course east by south in
order that we might find the islands
of Malucho. We passed by certain
reefs [*literally*: small elevations]
near which we found the sea to be
full of grass, although the depth was
very great. When we passed through
them, it seemed as though we were
entering another sea. Leaving Chipit
to the east, we found two island,
Zolo and Taghima,⁴⁴² which lie
toward the west, and near which
pearls are found.⁴⁴³ The two pearls

of the king of Burne were found
there, and the king got them, as was
told us, in the following manner.
That king took to wife a daughter of
the king of Zolo, who told him that
her father had those two pearls. The
king determined to get possession of
them by hook or by crook. Going
one night with five hundred
praus,⁴⁴⁴ he captured the king and
two of his sons, and took them to
Burne with him. [He told] the king
of Zolo that if he wished freedom,
he must surrender the two pearls to
him.

Then we laid our course east by
north between two settlements
called Cavit and Subanin, and an
inhabited island called Monoripa,
located x leguas from the reefs.⁴⁴⁵
The people of that island make their
dwellings in boats and do not live
otherwise. In those two settlements
of Cavit and Subanin, which are
located in the island of Butuan and
Calaghan, is found the best
cinnamon that grows. Had we
stayed there two days, those people
would have laden our ships for us,
but as we had a wind favorable for
passing a point and certain islets
which were near that island, we did
not wish to delay. While under sail
we bartered two large knives which

we had taken from the governor of
Pulaoan for seventeen libras [of
cinnamon]. The cinnamon tree
grows to a height of three or four
cubits, and as thick as the fingers of
the hand. It has but three or four
small branches and its leaves
resemble those of the laurel. Its bark
is the cinnamon, and it is gathered
twice per year. The wood and leaves
are as strong as the cinnamon when
they are green. Those people call it
caiu mana. *Caiu* means wood, and
mana, sweet, hence, “sweet
wood.”⁴⁴⁶

Laying our course toward the
northeast, and going to a large city
called Maingdanao, which is located
in the island of Butuan and
Calaghan, so that we might gather
information concerning Maluco, we
captured by force a *bigniday*,⁴⁴⁷ a
vessel resembling a prau, and killed
seven men. It contained only
eighteen men, and they were as well
built as any whom we had seen in
those regions.⁴⁴⁸ All were chiefs of
Maingdanao, among them being one
who told us that he was a brother of
the king of Maingdanao, and that he
knew the location of Malucho.
Through his directions we
discontinued our course toward the

northeast, and took that toward the
southeast. At a cape of that island of
Butuan and Caleghan, and near a
river, are found shaggy men who are
exceedingly great fighters and
archers. They use swords one palmo
in length, and eat only raw human
hearts with the juice of oranges or
lemons.⁴⁴⁹ Those shaggy people are
called Benaian. When we took our
course toward the southeast, we lay
in a latitude of six degrees and
seven minutes toward the Arctic
Pole, and thirty⁴⁵⁰ leguas from
Cavit.⁴⁵¹

Sailing toward the southeast, we
found four islands, [namely],
Ciboco, Biraham Batolach,⁴⁵²
Sarangani, and Candighar.⁴⁵³ One
Saturday night, October twenty-six,
while coasting by Birahan Batolach,
we encountered a most furious
storm. Thereupon, praying God, we
lowered all the sails. Immediately
our three saints appeared to us and
dissipated all the darkness.⁴⁵⁴ St.
Elmo remained for more than two
hours on the maintop, like a torch;
St. Nicholas on the mizzentop; and
St. Clara on the foretop. We
promised a slave to St. Elmo, St.
Nicholas, and St. Clara, and gave
alms to each one. Then continuing

our voyage, we entered a harbor
between the two islands of
Saranghani and Candighar, and
anchored to the eastward near a
settlement of Sarangani, where gold
and pearls are found. Those people
are heathens and go naked as do the
others. That harbor lies in a latitude
of five degrees nine minutes, and is
fifty leguas from Cavit.

Remaining one day in that harbor,
we captured two pilots by force, in
order that they might show us where
Malucho lay.⁴⁵⁵ Then laying our
course south southwest, we passed
among eight inhabited and desert
islands, which were situated in the
manner of a street. Their names are
Cheaua, Cauiao, Cabiao, Camanuca,
Cabaluzao, Cheai, Lipan, and
Nuza.⁴⁵⁶ Finally we came to an
island at their end, which was very
beautiful to look at. As we had a
contrary wind, so that we could not
double a point of that island, we
sailed hither and thither near it.
Consequently, one of the men whom
we had captured at Saranghai, and
the brother of the king of
Maingdano who took with him his
small son, escaped during the night
by swimming to that island. But the
boy was drowned, for he was unable
to hold tightly to his father's

shoulder. Being unable to double the
said point, we passed below the
island where there were many islets.
That island has four kings,
[namely], Raia Matandatu, Raia
Lalagha, Raia Bapti, and Raia
Parabu. The people are heathens.
The island lies in a latitude of three
and one-half degrees toward the
Arctic Pole and is 27 leguas from
Saranghany. Its name is Sanghir.⁴⁵⁷

Continuing the same course, we
passed near six islands, [namely],
Cheama, Carachita, Para,
Zanghalura, Ciau (which is ten
leguas from Sanghir, and has a high
but not large mountain, and whose
king is called Raia Ponto), and
Paghinzara.⁴⁵⁸ The latter is located
eight leguas from Ciau, and has
three high mountains. The name of
its king is Raia Babintan.⁴⁵⁹ [Then
we found the island] Talaut; and we
found twelve leguas to the east of
Paghinzara two islands, not very
large, but inhabited, called Zoar and
Meau.⁴⁶⁰ After passing those two
islands, on Wednesday, the sixth of
November, we discovered four lofty
islands fourteen leguas east of the
two [abovementioned islands]. The
pilot who still remained with us told
us that those four islands were

Maluco. Therefore, we thanked God
and as an expression of our joy
discharged all our artillery. It was no
wonder that we were so glad, for we
had passed twenty-seven months
less two days in our search for
Maluco.⁴⁶¹ Among all those
islands [among all those islands:
doublet in original MS.], even to
Maluco, the shallowest bottom that
we found was at a depth of one or
two hundred brazas,
notwithstanding the assertion of the
Portuguese that that region could
not be navigated because of the
numerous shoals and the dark sky as
they have imagined.⁴⁶²

Three hours before sunset on Friday,
November eight, 1521,⁴⁶³ we
entered into a harbor of an island
called Tadore, and anchoring near
the shore in twenty brazas we fired
all our artillery. Next day the king
came to the ships in a prau, and
circled about them once. We
immediately went to meet him with
the small boat, in order to show him
honor. He made us enter his prau
and seat ourselves near him. He was
seated under a silk awning which
sheltered him on all sides. In front
of him was one of his sons with the
royal scepter, and two persons with

two gold jars to pour water on his
hands, and two others with two
gilded caskets filled with their betel.
The king told us that we were
welcome there, and that he had
dreamt some time ago that some
ships were coming to Malucho from
remote parts; and that for more
assurance he had determined to
consult the moon,⁴⁶⁴ whereupon he
had seen the ships were coming, and
that we were they. Upon the king
entering our ships all kissed his
hand and then we led him to the
stern. When he entered inside there,
he would not stoop, but entered
from above.⁴⁶⁵ Causing him to sit
down in a red velvet chair, we
clothed him in a yellow velvet robe
made in the Turkish fashion. In
order to show him greater honor, we
sat down on the ground near him.
Then when all were seated, the king
began to speak and said that he and
all his people desired ever to be the
most loyal friends and vassals to our
king of Spagnia. He received us as
his children, and we could go ashore
as if in our own houses, for from
that time thenceforth, his island was
to be called no more Tadore but
Castiglia, because of the great love
which he bore to our king, his
sovereign. We made him a present
which consisted of the robe, the

chair, a piece of delicate linen, four
brazas of scarlet cloth, a piece of
brocaded silk, a piece of yellow
damask, some Indian cloth
embroidered with gold and silk, a
piece of *berania* (the white linen of
Cambaia), two caps, six strings of
glass beads, twelve knives, three
large mirrors, six pairs of scissors,
six combs, some gilded drinking-
cups, [466](#) and other articles. To his
son we gave an Indian cloth of gold
and silk, a large mirror, a cap, and
two knives; [467](#) and to each of nine
others—all of them his chiefs—a
silk cloth, caps, and two knives; and
to many others caps or knives. We
kept giving presents until the king
bade us desist. After that he declared
to us that he had nothing else except
his own life to send to the king his
sovereign. We were to approach
nearer to the city, and whoever came
to the ships at night, we were to kill
with our muskets. In leaving the
stern, the king would never bend his
head. [468](#) When he took his leave we
discharged all the guns. That king is
a Moro and about forty-five years
old. He is well built and has a royal
presence, [469](#) and is an excellent
astrologer. At that time he was clad
in a shirt of the most delicate white
stuff with the ends of the sleeves
embroidered in gold, and in a cloth

that reached from his waist to the
ground. He was barefoot, and had a
silk scarf wrapped about his head
[his head, *doublet in original MS.*],
and above it a garland of flowers.
His name is Raia Sultan Manzor.⁴⁷⁰

On Sunday, November x, that king
desired us to tell him how long it
was since we had left Spagnia, and
what pay and quintalada⁴⁷¹ the king
gave to each of us. He requested us
to give him a signature of the king
and a royal banner, for then and
thenceforth, he would cause it that
his island and another called
Tarenate (provided that he were able
to crown one of his [sons: *crossed
out in original MS.*] grandsons,⁴⁷²
named Calonaghapi) would both
belong to the king of Spagnia; and
for the honor of his king he was
ready to fight to the death, and when
he could no longer resist, he would
go to Spagnia with all his family in
a junk⁴⁷³ which he was having built
new, carrying the royal signature
and banner; and therefore he was
the king's servant for a long time.
He begged us to leave him some
men so that he might constantly be
reminded of the king of Spagnia. He
did not ask for merchandise because
the latter would not remain with

him.⁴⁷⁴ He told us that he would go
to an island called Bachian, in order
sooner to furnish the ships with
cloves, for there were not enough
dry cloves in his island to load the
two ships. As that day was Sunday,
it was decided not to trade The
festive day of those people is our
Friday.

In order that your most illustrious
Lordship may know the islands
where cloves grow, they are five,
[namely], Tarenatte, Tadore, Mutir,
Machian, and Bachian. Tarenate is
the chief one, and when its king was
alive, he ruled nearly all the others.
Tadore, the one where we were, has
a king. Mutir and Machian have no
king but are ruled by the people, and
when the two kings of Tarenate and
of Tadore engage in war, those two
islands furnish them with men. The
last island is Bachian, and it has a
king. That entire province where
cloves grow is called Malucho.⁴⁷⁵
At that time it was not eight months
since one Francesco Seranno⁴⁷⁶ had
died in Tarenate. [He was] a
Portuguese and the captain-general
of the king of Tarenate and opposed
the king of Tadore. He did so well
that he constrained the king of
Tadore to give one of his daughters

to wife to the king of Tarenate, and
almost all the sons of the chiefs as
hostages. The above mentioned
grandson of the king of Tadore was
born to that daughter. Peace having
been made between the two kings,
and when Francesco Seranno came
one day to Tadore to trade cloves,
the king of Tadore had him poisoned
with the said betel leaves. He lived
only four days. His king wished to
have him buried according to his
law [*i.e.*, with Mahometan rites], but
three Christians who were his
servants would not consent to it. He
left a son and a daughter, both
young, born by a woman whom he
had taken to wife in Java Major, and
two hundred bahars of cloves. He
was a close friend and a relative of
our royal captain-general, and was
the cause of inciting the latter to
undertake that enterprise, for when
our captain was at Malacha, he had
written to him several times that he
was in Tarenate. As Don Manuel,
then king of Portugal, refused to
increase our captain-general's
pension by only a single testoon per
month for his merits, the latter went
to Spagnia, where he had obtained
everything for which he could ask
from his sacred Majesty.⁴⁷⁷ Ten
days after the death of Francesco
Seranno, the king of Tarenate, by

name, Raya Abuleis, having expelled his son-in-law, the king of Bachian, was poisoned by his daughter, the wife of the latter king, under pretext of trying to bring about peace between the two kings. The king lingered but two days, and left nine principal sons, whose names are Chechili Momuli, Jadore Vunighi, Chechili de Roix, Cili Manzur, Cili Pagi, Chialin, Chechilin Cathara, Vaiechu Serich, and Calano Ghapi.⁴⁷⁸

On Monday, November xi, one of the sons of the king of Tarenate, [to wit], Chechili de Roix, came to the ships clad in red velvet. He had two praus and his men were playing upon the abovementioned gongs. He refused to enter the ship at that time. He had [charge of] the wife and children, and the other possessions of Francesco Seranno. When we found out who he was, we sent a message to the king, asking him whether we should receive Chechili de Roix, since we were in his port, and he replied to us that we could do as we pleased. But the son of the king, seeing that we were hesitating, moved off somewhat from the ships. We went to him with the boat in order to present him an Indian cloth of gold and silk, and some knives,

mirrors, and ſciſſors. He accepted
them ſomewhat haughtily, and
immediately departed. He had a
Chriſtian Indian with him named
Manuel, the ſervant of one Petro
Alfonſo de Lorosa,⁴⁷⁹ a Portuguese
who went from Bandan to Tarenate,
after the death of Francesco
Seranno. As the ſervant knew how
to talk Portuguese, he came aboard
our ſhip, and told us that, although
the ſons of the king of Tarenate
were at enmity with the king of
Tadore, yet they were always at the
ſervice of the king of Spagnia.
We⁴⁸⁰ ſent a letter to Pietro Alfonſo
de Lorosa, through his ſervant,
[telling him] that he could come
without any hesitation.

Thoſe kings have as many women
as they wiſh, but only one chief
wife, whom all the others obey. The
abovesaid king of Tadore had a
large houſe outside of the city,
where two hundred of his chief
women lived with a like number of
women to ſerve them. When the
king eats, he ſits alone or with his
chief wife in a high place like a
gallery whence he can ſee all the
other women who ſit about the
gallery; and he orders her who beſt
pleaſes him to ſleep with him that
night. After the king has finiſhed

mangiare se lui comanda Q³ queste mangião in fieme Lo fanno se non ognuna va mangiare nella sua camera. eating, if he orders those women to eat together, they do so, but if not, each one goes to eat in her own chamber. No one is allowed to see those women without permission from the king, and if anyone is found near the king's house by day or by night, he is put to death. Every family is obliged to give the king one or two of its daughters. That king had twenty-six children, eight sons, and the rest daughters. Lying next that island there is a very large island, called Giailolo [*i.e.*, Gilolo], which is inhabited by Moros and heathens. Two kings are found there among the Moros, one of them, as we were told by the king, having had six hundred children, and the other five hundred and twenty-five.⁴⁸¹ The heathens do not have so many women; nor do they live under so many superstitions, but adore for all that day the first thing that they see in the morning when they go out of their houses. The king of those heathens, called Raya Papua, is exceedingly rich in gold, and lives in the interior of the island. Reeds as thick around as the leg and filled with water that is very good to drink, grow on the flinty rocks in the island of Giaiallo.⁴⁸² We bought many of them from those people.

On Tuesday, November twelve, the king had a house built for us in the city in one day for our merchandise. We carried almost all of our goods thither, and left three of our men to guard them. We immediately began to trade in the following manner. For x brazas of red cloth of very good quality, they gave us one bahar of cloves, which is equivalent to four quintals and six libras; for fifteen brazas of cloth of not very good quality, one quintal and one hundred libras; for fifteen hatchets, one bahar; for thirty-five glass drinking-cups, one bahar (the king getting them all); for seventeen cathils of cinnabar, one bahar; for seventeen cathils of quicksilver, one bahar; for twenty-six brazas of linen, one bahar; for twenty-five brazas of finer linen, one bahar; for one hundred and fifty knives, one bahar; for fifty pairs of scissors, one bahar; for forty caps, one bahar; for x pieces of Guzerat cloth,⁴⁸³ one bahar; for three of those gongs of theirs, two bahars;⁴⁸⁴ for one quinta of bronze [*metalo*], one bahar. [Almost] all the mirrors were broken, and the few good ones the king wished for himself. Many of those things [that we traded] were from the abovementioned junks

apresentaffemo tucti li prefoni saluo

which we had captured. Our haste to
return to Spagnia made us dispose
of our merchandise at better
bargains [to the natives] than we
should have done.⁴⁸⁵ Daily so many
boatloads of goats, fowls, figs [*i.e.*,
bananas], cocoanuts, and other
kinds of food were brought to the
ships, that we were surprised. We
supplied the ships with good water,
which issues forth hot [from the
ground], but if it stands for the
space of an hour outside its spring,
it becomes very cold, the reason
therefor being that it comes from the
mountain of cloves. This is quite the
opposite from the assertion in
Spagnia that water must be carried
to Maluco from distant parts.⁴⁸⁶

On Wednesday, the king sent his
son, named Mossahap, to Mutir, so
that they might supply us more
quickly. On that day we told the
king that we had captured certain
Indians. The king thanked God
heartily, and asked us to do him the
kindness to give him their persons,
so that he might send them back to
their land, with five of his own men,
in order that they might make the
king of Spagnia and his fame
known. Then we gave him the three
women who had been captured in
the queen's name for the reason

q'elli de burne ne hebe grandissimo piacere. Dapoy ne difce doueffemo ꝑ suo amore amazare tucti li porci haueuão nele nauj ꝑ che ne darebe tante capre et galine gli amazaffemo ꝑ farli piacere et li apichaffemo foto la Couuerta Quado Coftoro ꝑ ventura li vedeuano se copriuano lo volto ꝑ non vederli ne sentire lo suo odore.

(Continued in Vol. XXXIV, page 38.)

already advanced. Next day, we gave the king all the prisoners, except those from Burne, for which he thanked us fervently. Thereupon, he asked us, in order thereby to show our love for him, to kill all the swine that we had in the ships, in return for which he would give us an equal number of goats and fowls. We killed them in order to show him a pleasure,⁴⁸⁷ and hung them up under the deck. When those people happen to see any swine they cover their faces in order that they might not look upon them or catch their odor.

(Continued in Vol. XXXIV, page 39.)

NOTES

[Note: In the following notes, citations from Richard Eden are made from Arber's reprint *The first three English books on America* (Birmingham, 1885), from the third book, entitled *The decades of the newe worlde*, first printed in London in 1555; from Mosto, from *Il primo viaggio, intorno al globo di Antonio Pigafetta*, by Andrea da Mosto (Roma, 1894), which was published as a portion of part v of volume iii of *Raccolta di documenti e studi pubblicati dalla R. Commissione Colombiana pel quarto centenario dalla scoperta dell'America*, appearing under the auspices of the Minister of Public Instruction; and from Stanley, from his *First voyage round the world, by Magellan* (Hakluyt Society publications, London, 1874), which was translated by Lord Stanley in part from the longer French MS. in the Bibliothèque Nationale, Paris, and in part from the Amoretti publication (Milan, 1800) made from the Italian MS. in the Biblioteca Ambrosiana.]

¹ The greater part of the life of Antonio Pigafetta is shrouded in darkness. The Pigafetta family, who resided at Venice, and was formerly of Tuscan origin, dates back before him for several centuries. The Pigafetta escutcheon was white above and black below with a white transverse bar running from left to right. On the lower part were three red roses, one of them on the bar. The old family house is still standing and shows the motto *Il nest rose sans espine*, i.e., "No rose without a thorn," which was probably carved in 1481, when the house was repaired, and not by Antonio Pigafetta after his return from his voyage as some assert. Antonio Pigafetta was born toward the close of the fifteenth century, but the date cannot be positively fixed, some declaring it to be 1491; but HARRISSE who follows MARZARI, gives the date as 1480. It is unknown who his parents were and some have asserted that he was a natural child, although this is evidently unfounded, as he was received into the military order of St. John. At an early age he probably became familiar with the sea and developed his taste for traveling. He went to Spain with the Roman ambassador Chiericato, in 1519, but in what capacity is unknown. Hearing details of Magalhães's intended voyage

he contrived to accompany him. Navarrete surmises that he is the Antonio Lombardo mentioned in the list of the captain's servants and volunteers who sailed on the expedition, so called as his country was Lombardy. After the return of the "Victoria," he journeyed in Spain, Portugal, and France, and returned to Italy probably in January, 1523. The relation presented by him to Carlos I was probably a draft of his notes taken daily throughout the voyage. His *Relation* as we know it was undertaken at the request of the marchioness of Mantova, but its composition was arrested by an order from Clement VII to come to Rome, whither he went in December, 1523, or January, 1524, meeting Villiers l'Isle-Adam on his journey thither. He remained in the pope's service but a short time, for in April, 1524, he was back in Venice. That same year he was granted a copyright on his *Relation*, which he intended to print, for twenty years. Pozzo says that he was received into the Order of St. John, October 3, 1524, but it was probably somewhat before that date. Between the dates of August, 1524, and August, 1530, his work was presented to Villiers l'Isle-Adam. Nothing further is known of him, though some say that he fought against the Turks as late as 1536, while others have placed his death in 1534 or 1535 and at Malta. In addition to his *Relation* Pigafetta wrote a *Treatise on the art of navigation*, which follows his *Relation*. This is not presented in the present publication, notwithstanding its importance, as being outside of the present scope. It is reproduced by Mosto. He has sometimes been confused with Marcantonio Pigafetta (a Venetian gentleman), the author of *Itinerario da Vienna a Constantinopoli* (London, 1585); and wrongly called Vincenzo Antonio Pigafetta, the "Vincenzo" being an error for "vicentino," i.e., "Venetian." See Mosto, *Il primo viaggio ... di Antonio Pigafetta* (Roma, 1894), pp. 13–30; Larousse's *Dictionnaire*; and *La grande Encyclopédie* (Paris).

² The Order of St. John of Jerusalem. See VOL. II, p. 26, note 2. Throughout this *Relation* Pigafetta's spelling of proper names is retained.

³ Philippe de Villiers l'Isle-Adam, the forty-third grand master of the Order of the Knights of St. John (called Knights of Malta after 1530), was born of an old and distinguished family at Beauvais, in 1464, and died at Malta, August 21, 1534, at grief, some say, over the dissensions in his order. He was elected grand master of his order in 1521 and in the following year

occurred his heroic defense of Rhodes with but four thousand five hundred soldiers against the huge fleet and army of Soliman. After six months he was compelled to surrender his stronghold in October, and refusing Soliman's entreaties to remain with him, went to Italy. In 1524 he was given the city of Viterbe by Clement VII, where in June of 1527 he held a general chapter of his order, at which it was decided to accept the island of Malta which had been offered by Charles V. The gift was confirmed by the letters-patent of Charles V in 1530, and Villiers l'Isle-Adam went thither in October of that year. He was always held in high esteem for his bravery, prudence, and piety. See Moreri's *Dictionaire*, and Larousse's *Dictionnaire*.

⁴ The four MSS. of Pigafetta's *Relation* are those known as the Ambrosian or Italian, so called from its place of deposit, the Biblioteca Ambrosiana in Milan; no. 5,650, conserved in the Bibliothèque Nationale, Paris, in French; no. 24,224, in the same library, also in French; and the Nancy MS. (also French) so called because it was conserved in Nancy, France, now owned by the heirs of Sir Thomas Phillips, Cheltenham, England. The MSS. of the Bibliothèque Nationale are both shorter than the Italian MS. The Nancy MS. is said to be the most complete of the French manuscripts. The best bibliographical account of these four MSS. that has yet appeared is by Mosto *ut supra*. A full bibliographical account of both the MSS. and printed books will be given in the volume on bibliography in this series.

There are a number of radical differences between the Paris MS. no. 5,650 (which will be hereafter referred to simply as MS. 5,650) and the Italian MS., these differences including paragraph structure and the division of MS. 5,650 into various chapters, although the sequence is on the whole identical. The most radical of the differences will be shown in these notes. MS. 5,650 contains the following title on the page immediately preceding the beginning of the relation proper: "Navigation and discovery of Upper Indie, written by me, Anthoyne Pigaphete, a Venetian, and knight of Rhodes."

⁵ The emperor Charles V; but he was not elected to that dignity until June, 1519. Pigafetta writing after that date is not explicit.

⁶ Francesco Chiericati was born in Venice, in one of the most ancient and famous families of that city, at the end of the fifteenth century. He attained preëminence at Sienna in both civil and ecclesiastical law. Aided by Cardinal Matteo Lang, bishop of Sion, he was received among the prelates of the apostolic palace. Later he conducted several diplomatic missions with great skill. He left Rome for Spain in December, 1518, on a private mission for the pope, and especially to effect a crusade against the Turks who were then invading Egypt and threatening Christianity. His house at Barcelona became the meeting-place of the savants of that day who discussed literature and science. See Mosto, p. 19, note 3.

⁷ MS. 5,650 adds: “scholars and men of understanding.”

⁸ MS. 5,650 reads: “so that I might satisfy the wish of the said gentlemen and also my own desire, so that it could be said that I had made the said voyage and indeed been an eyewitness of the things hereafter written.”

⁹ See VOL. I, p. 250, note 192 for sketch of Magalhães. The only adequate life of Magalhães in English is that of Guillemard.

¹⁰ That is, the Order of Santiago. See VOL. I, p. 145, note 171. Magalhães and Falero were decorated with the cross of comendador of the order by Cárlos I in the presence of the royal Council in July, 1518. See Guillemard’s *Ferdinand Magellan*, p. 114.

¹¹ See VOL. I for various documents during the period of the preparation of the fleet; also Guillemard’s *Magellan*, pp. 114–116 and 130–134; and Stanley’s *First Voyage*, pp. xxxiv–xlvi.

¹² Pope Clement VII, who assumed the papacy November 19, 1523. Pigafetta was summoned to Rome very soon after Clement’s election, for he was in Rome either in December, 1523, or January, 1524.

¹³ The Amoretti edition (Milan, 1800; a wofully garbled adaptation of the Italian MS.) wrongly ascribes this desire to Clement VII, instead of Villiers L’Isle-Adam. See Stanley, p. 36, note 3.

¹⁴ MS. 5,650 reads: “Finally, most illustrious Lordship, after all provisions had been made and the ships were in readiness, the captain-general, a wise and virtuous man, and one mindful of his honor, would not commence his voyage without first making some good and suitable rules, such as it is the approved custom to make for those who go to sea, although he did not entirely declare the voyage that he was about to make lest those men, through astonishment and fear, should refuse to accompany him on the so long voyage that he had determined upon. In consideration of the furious and violent storms that reign on the Ocean Sea where he was about to sail, and in consideration of another reason also, namely, that the masters and captains of the other ships in his fleet had no liking for him (the reason for which I know not, unless because he, the captain-general, was a Portuguese, and they Spaniards or Castilians, who have for a long while been biased and ill-disposed toward one another, but who, in spite of that, rendered him obedience), he made his rules such as follow, so that his ships might not go astray or become separated from one another during storms at sea. He published those rules and gave them in writing to every master in the ships and ordered them to be inviolably observed and kept, unless for urgent and legitimate excuse, and the proof that any other action was impossible.”

¹⁵ A Spanish word, meaning “lantern.”

¹⁶ Mosto wrongly derives *strengue* from the Spanish *trenza* “braid” or “twist.” Instead it is the Spanish word *estrenque*, which denotes a large rope made from Spanish grass hemp (*stipa*)—known to the Spaniards as *esparto*. MS. 5,650 reads: “Sometimes he set out a lantern; at other times a thick rush cord which was lighted and was called ‘trenche’ [*i.e.*, ‘estrenque,’ ‘rope of Spanish grass hemp’].” Barcio (*Diccionario general etimológico*) says that the origin of *estrenque* is unknown.

¹⁷ MS. 5,650 reads: “If he wished the other ships to haul in a bonnet-sail, which was a part of the sail attached to the mainsail, he showed three lights. Also by three lights notwithstanding that the weather might be favorable for making better time, it was understood that the bonnet-sail was to be hauled in, so that the mainsail might be sooner and easier struck and furled when bad weather came suddenly in any squall or otherwise.”

¹⁸ MS. 5,650 adds: “which he had extinguished immediately after;” and continues: “then showing a single light as a sign that he intended to stop there and wait until the other ships should do as he.”

¹⁹ MS. 5,650 adds: “that is to say, a rock in the sea.”

²⁰ Stanley translates the following passage wrongly. Rightly translated, it is: “Also when he desired the bonnet-sail to be reattached to the sail, he showed three fires.”

²¹ This passage is omitted in MS. 5,650.

²² *Hora de la modorra* is in Spanish that part of the night immediately preceding the dawn. Mosto, p. 52, note 8.

²³ *Contra maestro* (boatswain) corresponding to the French *contremaître* and the Spanish *contramaestre*, was formerly the third officer of a ship’s crew. *Nochiero* (French *nocher*) was the officer next to *contramaestre*, although the name, according to Littré was applied to the master or seacaptain of certain small craft. The *maestro* (French *maître*) was a sub-officer in charge of all the crew. The pilot was next to the captain in importance. The translator or adapter who made MS. 5,650 confuses the above officers (see following note).

²⁴ The instructions pertaining to the different watches are as follows in MS. 5,650: “In addition to the said rules for carrying on the art of navigation as is fitting, and in order to avoid the dangers that may come upon those who do not have watches set, the said captain, who was skilled in the things required and in navigation, ordered three watches to be set. The first was at the beginning of the night; the second at midnight; and the third toward daybreak, which is commonly called the ‘diane’ [*i.e.*, ‘morn’] or otherwise ‘the star of dawn.’ The abovenamed watches were changed nightly: that is to say, that he who had stood first watch stood second the day following, while he who had stood second, stood third; and thus did they continue to change nightly. The said captain ordered that his rules, both those of signals and of watches, be thoroughly observed, so that their voyage might be made

with the greatest of safety. The men of the said fleet were divided into three divisions: the first was that of the captain; the second that of the pilot or boatswain's mate; and the third that of the master. The above rules having been instituted, the captain-general determined to depart, as follows."

²⁵ See Guillemard's *Magellan*, pp. 329–336, and Navarrete, *Col. de viages*, iv, pp. 3–11, 162–188, for the stores and equipments of the fleet and their cost. The stores carried consisted of wine, olive oil, vinegar, fish, pork, peas and beans, flour, garlic, cheese, honey, almonds, anchovies, raisins, prunes, figs, sugar, quince preserves, capers, mustard, beef, and rice. The apothecary supplies were carried in the "Trinidad," and the ecclesiastical ornaments in that ship and the "San Antonio."

²⁶ The exact number of men who accompanied Magalhães is a matter of doubt. A royal decree, dated Barcelona, May 5, 1519, conserved in the papers of the India House of Trade in Archivo general de Indias at Sevilla, with pressmark est. 41, caj. 6, leg. 2–25, orders that only two hundred and thirty-five persons sail in the fleet. The same archives contain various registers of the fleet (see Llorens Ascensio's *Primera vuelta al mundo*, Madrid, 1903), one of which is published by Medina in his *Colección* (i, p. 113). Guillemard (*Magellan*, p. 326) says that at least two hundred and sixty-eight men went as is shown by the official lists and "the casual occurrence of names in the numerous and lengthy *autos fiscales* connected with the expedition." Guillemard conjectures that the total number must have been between two hundred and seventy and two hundred and eighty. Mosto (p. 53, note 2) says: "Castanheda and Barros say that the crews amounted to 250 men, while Herrera says 234. Navarrete's lists show a total of 265 men. At least 37 were Portuguese, and in addition to them and the Spaniards, the crews contained Genoese and Italians (thirty or more), French (nineteen), Flemings, Germans, Sicilians, English, Corfiotes, Malays, Negroes, Moors, Madeirans, and natives of the Azores and Canary Islands. But seventeen are recorded from Seville, while there are many Biscayans. (See Guillemard, *ut supra*, pp. 326–329.) The registers of men as given by Navarrete (*Col. de viages*, iv, pp. 12–26) are as follows.

TRINIDAD

(Flagship of 110 tons)

<i>Capacity</i>	<i>Name</i>	<i>Nationality</i>
Chief captain of the fleet	Hernando de Magallanes	Portuguese, citizen of Oporto
Pilot of his Highness	Esteban Gomez	Portuguese
Notary	Leon de Espeleta	
Master	Juan Bautista de Punzorol ¹	Cestre, on the Genoese shore
Alguacil ²	Gonzalo Gomez de Espinosa	Espinosa
Contramaestre	Francisco Albo ³	Axio, citizen of Rodas
Surgeon	Juan de Morales ⁴	Sevilla
Barber	Marcos de Bayas	San Lucar de Alpechin
Carpenter	Master Antonio	Genoese
Steward	Cristóbal Ros <i>or</i> Rodriguez	Lepe
Calker	Felipe ⁵	Genoese, native of Reco
Cooper	Francisco Martin	Sevilla
Sailor	Francisco de Espinosa	De le Brizuela
Sailor	Ginés de Mafra	Jerez
Sailor	Leon Pancaldo ⁶	Saona, in Génova
Sailor	Juan Ginovés ⁷	San Remó
Sailor	Francisco Piora	Saona
Sailor	Martin Ginovés	Cestre
Sailor	Anton Hernandez Colmenero	Huelva
Sailor	Anton Ros, <i>or</i> Rodriguez	Huelva
Sailor	Bartolomé Sanchez	Huelva
Sailor	Tomas de Natia	Cestre
Sailor	Diego Martin	Huelva

Sailor	Domingo de Urrutia ⁸	Lequeitio
Sailor	Francisco Martin	Huelva
Sailor	Juan Rodriguez	Sevilla
Gunner	Master Andres, chief gunner	Bristol, in England
Gunner	Juan Bautista	Mompeller
Gunner	Guillermo Tañegui	Lila de Groya
Common seaman	Antonio de Goa	Loró
Common seaman	Anton de Noya ⁹	Noya in Galicia
Common seaman	Francisco de Ayamonte	Ayamonte
Common seaman	Juan de Santandres ¹⁰	Cueto
Common seaman	Blas de Toledo ¹¹	Almunia in Aragon
Common seaman	Anton ¹²	Black
Common seaman	Basco Gomez Gallego	Portuguese
Common seaman	Juan Gallego	Pontevedra
Common seaman	Luis de Beas ¹³	Beas in Galicia
Common seaman	Juan de Grijol	Grijol in Portugal
Boy	Gutierrez	Asturian from Villasevil
Boy	Juan Genovés ¹⁴	A port on the Genoese shore
Boy	Andres de la Cruz ¹⁵	Sevilla

*Servants of the captain and sobresalientes*¹⁶

Servant	Cristóbal Rabelo	Portuguese, native of Oporto
Sobresaliente	Joan Miñez or Martinez	Sevilla
Servant	Fernando Portogues ¹⁷	Portuguese, native of Oporto

Sobresaliente	Antonio Lombardo ¹⁸	Lombardía
	Peti-Joan	French, native of Angeo [<i>i.e.</i> , Anjou]
	Gonzalo Rodriguez	Portuguese
	Diego Sanchez Barrasa	Sevilla
	Luis Alonso, <i>de Gois</i> ¹⁹	Portuguese, citizen of Ayamonte
	Duarte Barbosa	Portuguese
	Albaro de la Mezquita	Portuguese
Servant	Nuño	Portuguese, native of Montemayor Nuevo
Servant	Diego	San Lucar
Captain's boy	Francisco ²⁰	Portuguese, native of Estremiz
<i>Idem</i>	Jorge Morisco	Lombardía
Chaplain	Pedro de Balderrama	Ecija
Merino	Alberto ²¹ Merino	Cordova
Servant of the alguacil	Pero Gomez	Hornilla la Prieta
Armorer	Pero Sanchez ²²	Sevilla
Interpreter, a servant	Henrique de Malaca ²³	Malaca
	Lázaro de Torres	Aracena

SAN ANTONIO

(120 tons)

<i>Capacity</i>	<i>Name</i>	<i>Nationality</i>
-----------------	-------------	--------------------

Captain and supervisor of the fleet	Juan de Cartagena	
Accountant	Antonio de Coca	
Notary	Hierónimo Guerra	
His Majesty's pilot	Andres de San Martin	
Pilot of his Highness	Juan Rodriguez de Mafra	
Master	Juan de Elorriaga ²⁴	Guipúzcoa
Boatswain	Diego Hernandez	Sevilla
Barber	Pedro Olabarrieta ²⁵	Bilbao
Steward	Juan Ortiz de Gopegar ²⁶	Bilbao
Calker	Pedro de Bilbao	Bilbao
Carpenter	Pedro de Sabtua	Bermeo
Calker	Martin de Goytisoló	Baquio
Cooper	Joan de Oviedo	Sevilla
Sailor	Sebastian de Olarte	Bilbao
Sailor	Lope de Uguarte	
Sailor	Joanes de Segura	Segura in Guipúzcoa
Sailor	Joan de Francia	Ruan [<i>i.e.</i> , Rouen]
Sailor	Jácome de Mecina	Mesina
Sailor	Christóbal García	From Palos
Sailor	Pero Hernandez	Rivadesella
Sailor	Antonio Rodríguez, Calderero [<i>i.e.</i> , blacksmith]	Sevilla
Sailor	Hernando de Morales ²⁷	From Moguer
Sailor	Francisco, Marinero [<i>i.e.</i> , a sailor]	Citizen of Huelva
Sailor	Francisco Ros, or Rodriguez	From Huelva
Sailor	Pedro de Laredo	Portogalete
Sailor	Simon de Asio	Axio

Gunner	Master Jacques, chief gunner	From Tierra Lorena [<i>i.e.</i> , land of Lorraine]
Gunner	Rojer Dupict	Monaym
Gunner	Joan Jorge	Silvedrin
Common seaman	Luis, ²⁸ Grumete [<i>i.e.</i> , a common seaman]	Galicia
Common seaman	Martin de Aguirre	Arrigorriaga
Common seaman	Columbazo	Bolonia [<i>i.e.</i> , Bologna]
Common seaman	Lucas de Mecina	Mesina
Common seaman	Lorenzo Rodriguez	From Moguer
Common seaman	Miguel	Pravia, in Astúrias
Common seaman	Joanes de Irun Iranzo	Irun Iranza in Guipúzcoa
Common seaman	Joan Ginoves	Saona
Common seaman	Joan de Orue	Munguia
Common seaman	Alonso del Puerto ²⁹	Puerto de Santa María
Boy	Diego, son of Cristóbal Garcia	From Palos
Boy	Diego, son of Juan Rodriguez de Mafra	

Servants and sobresalientes

Chaplain	Bernardo Calmeta	Laytora in France
Sobresaliente	Joan de Chinchilla	Murcia
Sobresaliente	Anton de Escobar	Talavera
Sobresaliente	Francisco de Angulo	Moron
Servant to the captain	Francisco de Molino	Baeza
Servant to the captain	Roque Pelea	Salamanca
Servant to the captain	Rodrigo Nieto, a Galician	Orense

Servant to the captain	Alonso del Rio	Búrgos
Servant to the captain	Pedro de Balpuesta	Citizen of Búrgos
Servant to the captain	Joan de Leon	Leon
Servant to the captain	Gutierre de Tuñon ³⁰	Tunon in Astúrias
Servant to the captain	Joan de Sagredo, ³¹ merino	Revenga, in the land of Búrgos
Servant to the captain	Joan de Minchaca, a crossbowman	Bilbao
Captain's servant	Antonio Hernandez; interpreter	Ayamonte
Servant to the accountant	Juan Gomez de Espinosa	Espinosa
Servant to the accountant	Pedro de Urrea	Brujas

CONCEPCION

(90 tons)

Captain	Gaspar de Quesada	
Notary	Sancho de Heredia	
Pilot of his Highness	Joan Lopez Caraballo	Portuguese
Master	Joan Sebastian de Elcano ³²	Gueteria
Boatswain	Joan de Acurio	Bermeo
Barber	Hernando de Bustamente ³³	Mérida
Calker	Antonio de Basazabal ³⁴	Bermeo
Carpenter	Domingo de Irazza ³⁵	Deva
Steward	Joan de Campos	Alcalá de Henares

Cooper	Pero Perez	Sevilla
Sailor	Francisco Rodriguez ^{36}	Sevilla
Sailor	Francisco Ruiz	Moguer
Sailor	Mateo de Gorfo ^{37}	Gorfo
Sailor	Joan Rodriguez ^{38}	Huelva
Sailor	Sebastian Garcia ^{39}	Huelva
Sailor	Gomez Hernandez	Huelva
Sailor	Lorenzo de Iruna ^{40}	Socavila in Guipúzcoa
Sailor	Joan Rodriguez, ^{41} el sordo [<i>i.e.</i> , the deaf man]	Sevilla
Sailor	Joan de Aguirre	Bermeo
Sailor	Joan de Ortega	Cifuentes
Gunner	Hans Vargue, ^{42} chief gunner	German
Gunner	Master Pedro	Bruselas
Gunner	Roldan de Argote	Flandes, in Brujas
Common seaman	Joan de Olivar ^{43}	
Common seaman	Guillermo de Lole ^{44}	
Common seaman	Cristóbal de Costa ^{45}	Jerez
Common seaman	Guillen	Galvey
Common seaman	Gonzalo de Vigo	Vigo
Common seaman	Pedro de Muguertegui	Muguertegui
Common seaman	Martin de Isaurraga	Bermeo
Common seaman	Rodrigo Macias	Sevilla
Common seaman	Joan Navarro ^{46}	Pamplona
Common seaman	Joanes de Tuy	
Boy	Juanillo ^{47}	Galbey
Boy	Pedro de Churdurza ^{48}	Bermeo

Sobresalientes

Captain's servant	Luis del Molino	Baeza
Captain's servant	Antonio Fernandez	Portuguese, of Sevilla
Captain's servant	Alonso Coto ⁴⁹	Genoese
Captain's servant	Francisco Diaz de Madrid	Madrid
Merino	Martin de Judicibus	Genoese
	Juan de Silva	Isla Graciosa, in Azores
Blacksmith	Gonzalo Hernandez	Santa María del Puerto
	Martin de Magallayns	Portuguese, of Lisboa
	Joan de la Torre	Almonaster, a boundary of Sevilla

VICTORIA

(85 tons)

Captain and treasurer of fleet	Luis de Mendoza	
Pilot of his Highness	Basco Gallego	Portuguese
Notary	Martin Mendez	Citizen of Sevilla
Master	Anton Salomon	Trápana in Sicilia
Boatswain	Miguel de Rodas	Rodas
Alguacil	Diego de Peralta	Peralta in Navarra
Steward	Alonso Gonzales	Portuguese
Calker	Simon de la Rochela	From La Rochela
Carpenter	Martin de Griate ⁵⁰	From Deva
Sailor	Miguel Benesciano	Bresá

Sailor	Diego Gallego	Bayona in Galicia
Sailor	Lope Navarro	Tudela
Sailor	Nicolas Ginoves	Génova
Sailor	Nicolao de Nápoles	Nápoles de Romanía
Sailor	Miguel Sanchez	Rodas
Sailor	Nicolao de Capua	Capua
Sailor	Benito Genovés	Arvenga
Sailor	Felipe de Rodas	Rodas
Sailor	Esteban Villon ⁵¹	Troya
Sailor	Joan Griego	Nápoles de Romanía
Gunner	Jorge Aleman [<i>i.e.</i> , the German], chief gunner	From Estric
Gunner	Filiberto de Torres ⁵²	Toriana
Gunner	Hans, a German ⁵³	Agan
Common seaman	Joanico, ⁵⁴ a Viscayan	Somoroostro
Common seaman	Joan de Arratia ⁵⁵	Bilbao
Common seaman	Ochote ⁵⁶	Bilbao
Common seaman	Martin de Ayamonte	
Common seaman	Pedro de Tolosa	Tolosa in Guipúzcoa
Common seaman	Sebastian Ortiz	Gelver
Common seaman	Antonio	Baresa in Génova
Common seaman	Bernal Mahuri ⁵⁷	Narbona
Common seaman	Rodrigo Gallego [<i>i.e.</i> , a Galician]	Coruña
Common seaman	Domingo Portugues [<i>i.e.</i> , a Portuguese]	Coimbra

Boy	Juan de Zuvileta, the son of Basco Gallego	Baracaldo
-----	--	-----------

Sobresalientes

The captain's servant	Francisco Carvajal	Salamanca
Captain's servant	Joan Martin ⁵⁸	Aguilar de Campo
Captain's servant	Simon de Burgos	Portuguese
Captain's servant	Bartolomé de Saldaña	Palos
Blacksmith	Gonzalo Rodriguez	
Blacksmith	Pero Garcia de Herrero ⁵⁹	Ciudad Real
Blacksmith	Joan Villalon	Antequera
Blacksmith	Alonso de Mora, or de Ebora ⁶⁰	Mora, in Portugal
Cooper	Joan de Córdoba	Sanlúcar
Cooper	Diego Diaz	Sanlúcar

SANTIAGO

(75 tons)

Captain and pilot of his Highness	Joan Serrano	Citizen of Sevilla
Notary	Antonio de Costa	
Master	Baltasar Ginoves	Ribera de Génova [<i>i.e.</i> , the Genoese shore]
Boatswain	Bartolomé Prior ⁶¹	San Malo
Steward	Gaspar Diaz	Isla Graciosa, in the Azores
Calker	Joan García	Génova
Carpenter	Ripart ⁶²	Bruz in Normandia [<i>i.e.</i> , Normandy]
Sailor	Antonio Flamenco [<i>i.e.</i> , Enveres a Fleming]	
Sailor	Luis Martinez	Huelva

Sailor	Bartolomé García	Palos
Sailor	Joan García	Palos
Sailor	Agustin	Saona
Sailor	Bocacio Alfonso ⁶³	Bollullos
Sailor	Pedro Gascon ⁶⁴ [<i>i.e.</i> , a Gascon]	Burdeos [<i>i.e.</i> , Bordeaux]
Sailor	Domingo ⁶⁵	
Sailor	Diego García de Trigueros	Trigueros
Gunner	Lorenzo Corrat	Talesa in Normandia [<i>i.e.</i> , Normandy]
Gunner	Joan Macia ⁶⁶	Troya
Common seaman	Pedro Diaz ⁶⁷	Huelva
Common seaman	Antonio Hernandez ⁶⁸	Palos
Common seaman	Juan, ⁶⁹ a negro	
Common seaman	Joan Breton [<i>i.e.</i> , a Breton]	Cruesic in Bretaña [<i>i.e.</i> , Brittany]
Common seaman	Pedro Bello ⁷⁰	Palos
Common seaman	Hierónimo Garcia ⁷¹	Sevilla
Common seaman	Pero Arnaot	Horrai
Common seaman	Pero Garcia	Trigueros
Boy	Joan Flamenco [<i>i.e.</i> , a Fleming]	Enveres
Boy	Francisco Paxe ⁷²	

Sobresalientes

Merino Joan de Aroche Aroche, boundary of Sevilla
Martin Barrena Villafranco in Guipúzcoa
Hernan Lorenzo Aroche

The total number of men for the ships as above given is 235. Navarrete made his list from the list conserved in Archivo general de Indias, and notes of Juan Bautista Muñoz, and various other sources. The obstacles in the way of a correct register were the abbreviation of names and places, the custom prevalent of naming people from their native town or province, and the fact that the various registers were made between 1519 and 1525. From some of these registers, it appears that the following men were also in the fleet.

<i>Capacity</i>	<i>Name</i>	<i>Nationality</i>
Carpenter	Aroca	Viscayan
Steward	Blas Alfonso	Portuguese
Calker	Juan Gutierrez	
	Maestre Pedro ⁷³	
Sailor	Bautista Genovés	Génova
Common seaman	Perucho de Bermeo	
Common seaman	Domingo Alvarez	
Common seaman	Domingo Gonzalez	
Common seaman	Domingo de Zubillan ⁷⁴	Portuguese
Common seaman	Andres Blanco	
Common seaman	Antonio Gomez	Axio
Common seaman	Juan Portugués [<i>i.e.</i> , a Portuguese]	
Common seaman	Juan Bras	
Common seaman	Gonzalo Gallego	
Common seaman	Rodrigo de Hurrira	
	Sebastian Portugués [<i>i.e.</i> , a Portuguese]	
	Juan de Ircepais	

Sobresalientes

Secular priest	Pero Sanchez de Reina
	Licentiate Morales

	Hernando Rodriguez	
	Hartiga	
	Diugurria	
Soldier	Diego Arias	Sanlúcar
Blacksmith	Juan Hernandez	Triana
Servant of Luis de Mendoza	Hernando de Aguilar	
	The negro of the pilot	Juan Carballo

In addition there were probably others, this list being still three short of Guillemard's figures, 268. Harrisse (*Disc. of N. Amer.*, London and Paris, 1892, pp. 714 *et seq.*) gives a partial list.

²⁷ The Moorish name of Guadalquivir (from Arabic *Wâd-al-Kebir*, "the great river"), superseded the Roman name of Bætis. The Romans formed all Southern Spain into one province called Bætica after the name of the Bætis. By the town Gioan dal Farax is meant San Juan de Aznalfarache (from Moorish *Hisn al-Faradj*). Its Gothic name was Osset and its Roman name Julia Constantia. It is a favorite resort of the inhabitants of Sevilla. Coría was once a Roman potters' town and is still celebrated for its jars. San Lúcar de Barrameda was named in honor of St. Luke. It was captured from the Moors in 1264 and granted to the father of Guzman el Bueno. It attained importance after the discovery of America because of its good harbor. The house of Medina-Sidonia was founded by Alfonso Pérez de Guzman, a famous captain.

²⁸ The original of this passage is obscure. The distance given (ten leagues; and both MS. 5,650 and Eden agree substantially with it) is far too short for the distance between San Lucar and Cape St. Vincent, which is over one hundred miles. Pigafetta may have forgotten the actual distance, or it may have been an error of his amanuensis. It is possible to translate as follows: "which lies in 37 degrees of latitude, [that parallel being] x leguas from the said port;" for "longui" may be taken as agreeing with "gradi." In all rendering of distances, the Spanish form will be used in preference to the Italian; and the same will apply to the names of Spanish coins.

²⁹ MS. 5,650 reads: “And after passing many small villages along the said river, we at last reached a chateau belonging to the duke of Medinacidonia, and called Saint Lucar, where there is a port with an entrance into the Ocean Sea. One enters that port by the east wind, and leaves by the west. Nearby is the cape of Saint Vincent, which, according to cosmography, lies in a latitude of thirty-seven degrees at a distance of twenty miles from the said port. From the said city [of Sevilla] to the said port by the river abovesaid, the distance is thirty-five or forty miles.” This passage might be cited as a proof that Pigafetta did not translate or write the French version, but that the work was done by another, who takes various liberties with his original.

³⁰ MS. 5,650 reads: “furnish the fleet.”

³¹ *Ninguna* in original, a Spanish word.

³² MS. 5,650 adds: “otherwise called ‘labeiche.’” Labech (Italian libeccio) is simply a name for the southwest wind. This is another instance in which the French adapter adds an explanation to the Italian, thus explaining the Italian term *garbino*, “southwest.”

³³ MS. 5,650 reads wrongly: “sixteenth.” The so-called Genoese pilot (the author of the “Roteiro,” by which name his account will be hereafter designated, and concerning whom, see Guillemard’s *Magellan*, p. 145, and Mosto, p. 32, and note 4) gives the date of departure as September 21 (with which Barros agrees) and the arrival at Tenerife as the twenty-ninth (see Stanley, p. 1). Peter Martyr, Gomara, and Oviedo agree with Pigafetta, while Castanheda makes the departure in January, 1520. Hughes observes that if one keep in mind the circumstance that the day of the arrival coincided with the day dedicated by the Church to St. Michael, the date September 29 seems more admissible. However, one may reconcile the two dates of the arrival by observing that the ships stopped at Tenerife until October 2; while Herrera says that the ships fetched Montaña Roja (the Monte rosso of the text) on September 29. See Mosto, p. 53, notes 4 and 5. It should be noted that Gomara and Oviedo are not entirely trustworthy

authorities, and that many times they have simply copied from authorities, such as Maximilianus Transylvanus, who is not always to be relied upon.

³⁴ The Canaries were known to the ancients under the names of Islands of the Blest, Fortunate Islands, and the Hesperides. The Moors knew of them under the name of Islands of Khaledat, but had no practical acquaintance with them. In the fourteenth century these islands began to be known to Europeans, especially through the Portuguese. In 1402, the Frenchman Jean de Bethencourt went there, and shortly after began their conquest under the auspices of the crown of Castile. In consequence of the settlements made by Bethencourt, the islands were definitely ceded to Spain in 1481 (see Birch's *Alboquerque*, London, 1875–1884, Hakluyt Society Publications, ii, p. vi). The inhabitants of the islands were known as Guanches or Guanchinet, the latter meaning “men of Tenerife.” The inhabitants of this island, holding out longer than the others, were not subdued until 1496. See also *Conquest of Canaries* (London, 1877); and *History and Description of Africa* (London, 1896), i, pp. 99–101: both publications of the Hakluyt Society. The island of Tenerife was formerly called Nivana and by some the Island of Hell. Like all the other islands of the Canaries it is volcanic in formation, and its peak, the Teyde, is one of the largest volcanic cones known. Its latitude is 28° 15'.

³⁵ Guillemard conjectures that this is Punta Roxa, located at the south end of Tenerife.

³⁶ MS. 5,650 adds: “which is a substance needed by ships.” Herrera says that they waited three days at the port awaiting a caravel that was laden with pitch for the fleet (Mosto, p. 53, note 8).

³⁷ MS. 5,650 reads: “water coming from spring or river.”

³⁸ Eden (p. 250) adds to this account which he greatly abridges: “The lyke thyng is also scene in the Iland of faynt Thomas, lyinge directly vnder the Equinoctiall lyne.” Of this island of Hierro, Pory (*History and description of Africa*, Hakluyt Society edition, p. 100) says: “Hierro hath neither spring nor well, but is miraculously furnished with water by a cloud which over-spreadeth a tree, from whence distilleth so much moisture, as sufficeth both

for men and cattel. This cloud ariseth an hower or two before the sunne, and is dissolued two howers after sunne rising.” This is an old story and is related by Pliny and founded upon fact “for both in Madeira and the Canaries the laurel and other heavy-foliaged evergreens condense abundant water from the daily mists” (Guillemard’s *Magellan*, p. 149). Gregorio Chil y Naranjo (*Estudios históricos ... de las islas Canarias*, 1879) believes Pigafetta means here the island of Palma, and that the first navigators visited only the coast and so did not see the lake in the interior (Mosto, p. 53, note 9).

³⁹ MS. 5,650 adds: “which the sailors of the east call ‘Cyroc’” This is the Italian *sirocco*, which is the name for the southeast wind instead of the south. Herrera says they left the port October 2 (Mosto, p. 54, note 2).

⁴⁰ Eden (p. 250) reads incorrectly: “In this coaft they had no maner of contrary wynds but a great calme and fayre wether for the fpace of three fcore and tenne dayes, in the which they came vnder the Equinoctiall lyne.”

⁴¹ MS. 5,650 adds: “and of those persons who have sailed there often.”

⁴² MS. 5,650 reads: “And in order that our ships might not be wrecked or broach to (which often happens when the squalls come together).”

⁴³ This last phrase, as well as the two following sentences are missing in MS. 5,650. The third sentence following begins: “During the calm weather, large fish called tiburoni,” etc. The word *tiburoni*, “sharks” is from the Spanish *tiburón*, which comes from the French *tibéron* (*tiburin*, *tiburón*).—Echagaray’s *Diccionario Etimológico* (Madrid, 1889).

⁴⁴ MS. 5,650 reads: “The said fish are caught by means of a contrivance which sailors call ‘hame’ which is an iron fishhook.” *Hame* (*ain*) is the French form of the Italian *Amo*, meaning “fishhook.”

⁴⁵ MS. 5,650 adds: “because of the bad weather.”

⁴⁶ MS. 5,650 reads “a quarter of an hour,” and the same duration of time is given by Eden (p. 250).

⁴⁷ MS. 5,650 adds: “It is to be noted that whenever that fire that represents the said Saint Anselme ascends and descends the mast of a ship while in a storm at sea, that the said ship is never wrecked.” Herrera (cited by Mosto, p. 54, note 5) says that St. Elmo appeared on the masthead with a lighted candle and sometimes two during the storms encountered along the coasts of Guinea, and that the sailors were greatly comforted thereby, and saluted the saint as is the custom of seamen. When he appeared, he remained a quarter of an hour; and at his departure a great flash of light occurred which blinded all the men. Eden (p. 250) calls it the fire of St. Helen. Continuing, Eden injects into his abridgment of the first circumnavigation a description of St. Elmo’s fire by Hieronimus Cardanus in the second book of *De Subtilitate*. He says: “Of the kynde of trewe fyer, is the fyer baule or starre commonly cauled faynt Helen which is sumtyme feene abowt the maistes of shippes, beinge of such fyery nature that it sumetyme melteth brasse vessels, and is a token of downyng, forasmuch as this chaunceth only in great tempestes. For the vapoure or exhalation whereof this fyre is engendered, can not bee dryven togyther or compacte in forme of fyre, but of a grosse vapoure and by a great poure of wynde, and is therefore a token of imminent perell.” The fires called after St. Peter and St. Nicholas are on the contrary, he says, good omens, and are generally to be seen on the cables, after a storm. Being little and swift moving they can do no damage as they could do if massed and of slow movement. St. Elmo’s fire is the popular name for the atmospheric electricity that gathers in the form of a star or brush about the masthead of ships and on the rigging. It was sometimes accompanied by a hissing noise and was considered as a good omen by sailors. The Greeks who observed this phenomenon wove it into the Castor and Pollux myth; and the French edition of Pigafetta’s relation published by Simon de Colines has the passage (see Mosto, p. 54): “They saw the fires called Sainct Eline and Sainct Nicolas like blazing torches (whom the ancients called Castor and Pollux).” “Elmo” is said by some to be a corruption of “Helena,” the sister of Castor and Pollux, and the name “Hellene” or “Helen” was often given to the fire when only one light was

visible. It is, however, more probably derived from St. Elmo, bishop of Formine who died about 304, and who is invoked by sailors on the Mediterranean. The phenomenon is also called fire of “St. Elias,” “St. Clara,” “St. Nicolas,” and “composite,” “composant,” and “corposant (*i.e.*, *corpus sanctum*).”

⁴⁸ The second bird mentioned is the stormy petrel (of the family *Laridæ* and genus *Thalassidroma*), which is found along all the Atlantic coasts and on some of the Pacific. The tale of the text was current among sailors (see Wilkes, *U. S. Exploring Expedition*, viii, pp. 402, 403). The cagassela (“cagaselo” in MS. 5,650) is the *Stercorarius parasiticus*, called also the jaeger, and by sailors “boatswain,” “teaser,” and “dung-hunter.” The last name arose from the belief, long held even by scientists, that this bird fed on the dung of gulls and terns. In reality it pursues the latter birds and compels them to disgorge the fish that they have swallowed. The flying-fish is either a species of *Exocætus*, or the *Scomberesox saurus* of Europe and America, both of which feed in large schools and jump from the water to escape their enemies. See *Riverside Natural History* (Boston and New York).

⁴⁹ MS. 5,650 adds: “which is the collateral wind between the south and the west;” and below reads: “twenty-four and one-half degrees;” while Eden (p. 250) reads: “xxii degrees and a halfe.”

⁵⁰ *Verzino*, the etymology of which is unknown (see Varthema’s *Travels*, Hakluyt Society edition, p. lxxviii, note, and 205 note), is the Italian name for brazil-wood, from which Brazil, which was first visited by Vicente Pinzon, Diego Lope, Pedro Alvares Cabral, and Amerigo Vespucci, was named. The first names of the country were Vera Cruz and Santa Cruz. Cape Santo Agostinho, mentioned below, lies in 8° 21′ south latitude, and is the most eastern headland of South America. It was the first land of that continent to be discovered, being sighted at least as early as 1500 by Pinzon. Before sighting the above cape, Magalhães arrested Juan de Cartagena for insubordination and gave the command of the “San Antonio” to Antonio de Coca (see Guillemard’s *Magellan*, p. 153). Albo’s log begins slightly before the sighting of the point, his first entry being November 29.

See Burton's "Introduction" in his *Captivity of Hans Stade* (Hakluyt Society publications, London, 1874).

⁵¹ MS. 5,650 reads: "veal." The *anta* is the tapir, once very plentiful in South America, but now rare in the well civilized districts. See Burton's *Captivity of Hans Stade*, p. viii. Albo, however, seems to designate the llama by this name, for he says when speaking of the stay at Bay St. Julian: "and many Indians came there, who are clad in certain skins of *antas*, which resemble camels without the hump." (Navarrete, *Col. de viages*, iv, p. 214).

⁵² Stanley mistranslates the French phrase of MS. 5,650 *et est de la longueur dun naveau*, "and is of the length of a shuttle," confusing *naveau* with *navette*, "shuttle." *Naveau* here is equivalent to *navet*, "turnip" or *navette*, "rape," a plant of the turnip class, as is proved by the Italian.

⁵³ MS. 5,650 reads: "And for a king of cards, of the kind which are used to play with in Italy, they gave me five fowls." The four suits of Italian playing cards are called *spade* ("swords"), *bastoni* ("clubs"), *danari* (literally: "money;" "diamonds"), and *coppe* ("cups").

⁵⁴ MS. 5,650 reads: "five."

⁵⁵ MS. 5,650 adds: "which is an astrological term. That zenith is a point in the sky, according to astrologers, but only in the imagination, and is in a straight line over our head, as can be seen by the treatise of the sphere, and in Aristotle, in the first book *De caelo et mondo*." By the treatise of the sphere is evidently meant the treatise of Pigafetta which follows his relation, and which is not reproduced here as being outside the scope of the present work. In the flyleaf of the Italian original is the following: "Notices concerning the new world, with the charts of the countries discovered, written by Antonio Pigafeta, Venetian and knight of Rodi. At the end are added some rules for finding the longitude and latitude of places east and west." In the Italian MS. this treatise occupies the last twelve folios. Stanley translates Amoretti's version of the *Treatise*, which is greatly abridged. Mosto (p. 35) conjectures that the treatise is the fruits of his three-years' experience during the expedition.

⁵⁶ Albo (Navarrete, iv, p. 210) says that the fleet continued to coast southwest from November 29 until arriving at St. Lucy's bay on December 13 (St. Lucy's day). Of the coast he says: "The mountains are peaked and have many reefs about them. There are many rivers and ports in the said Brasil and San Tomé, and some six leguas down the coast there are many bays running two leguas into the land. But the coast runs northeast and southwest to Cape Frio, and has many islands and rivers. Cape Frio is a very large river.... At the entrance of the said bay is a very large bay, and at the mouth a very low island, and inside it spreads out extensively and has many ports ... and is called the bay of Santa Lucía.... In the said bay, one finds a well-disposed and numerous race, who go naked and trade for fishhooks, mirrors, and hawk's bells with food.... We entered that place on the very day of St. Lucy, and stayed there until the day of St. John, namely, the twenty-seventh of the said month of December. On that day we went and took our course west southwest, and found seven islands. To the right of them is a bay called the bay of Los Reyes [*i.e.*, the Kings] which has a good entrance." The "Roteiro" (Stanley, p. 1) says: "as soon as they sighted the other coast of Brazil, he steered to the south-east [*sic*] along the coast as far as Cabo-frio, which is in twenty-three degrees south latitude; and from this cape he steered to the west, a matter of thirty leagues, to make the Rio de Janeiro, which is in the same latitude as Cabo-frio, and they entered the said river on the day of St. Lucy, which was the 13th December, in which place they took in wood, and they remained there until the first octave of Christmas, which was the 26th of December of the same year." Brito (Navarrete, iv, p. 306) says: "Setting sail thence [*i.e.*, from Tenerife], the first land sighted was the cape of the shoals of Ambas. They descended the coast as far as the river called Janeiro, where they stayed 15 or 16 days."

⁵⁷ Eden (p. 251) says: "bygger then all Spayne, Portugale, Fraunce, and Italie."

⁵⁸ MS. 5,650 adds: "more like beasts than anything else."

⁵⁹ MS. 5,650 reads: "And some of those people live to the age of one hundred, one hundred and twenty, one hundred and forty, or more." Eden (p. 251) says: "C.xx. and C.xl. yeares." For description of the Brazil

Indians, and their manners and customs, see *Captivity of Hans Stade* (Hakluyt Society edition), pp. 117–169.

⁶⁰ Wrongly transcribed by Stanley as “boy.”

⁶¹ MS. 5,650 reads: “You must know that a family of one hundred persons, who make a great racket, lives in each of those houses called *boii*.” One of these houses (called Oca, in Tupi) is described by Wilson (*Transactions of Ethnological Society*, new series, vol. i) as being “60 or 70 feet long, divided into rooms for several families by rush mats, and provided with a central fire whose smoke passed through the roof. Some of them contained 200 head.” See Burton’s *Captivity of Hans Stade*, pp. 59, 60, note. The Indians described by Pigafetta are probably the Tamoyos of the Tupi or Guarani stock (Mosto, p. 56, note 1; see also Burton, *ut supra*, pp. lxi-lxxvi).

⁶² Amoretti makes this passage read: “Their boats, called canoes, are hollowed out from the single trunk of a huge tree;” understanding *maschize* as *massiccio* “huge.” Mosto prefers to read *maschize* as two words *ma schize* (notwithstanding that it is one word in the original), for *ma schiacciate*, “but flattened.” Accepting this, the translation would be: “They have boats made from one single tree, only flattened.” Amoretti’s interpretation is to be preferred.

⁶³ MS. 5,650 reads: “and one would believe them to be enemies from hell.”

⁶⁴ MS. 5,650 adds: “of the said country of Verzin.”

⁶⁵ MS. 5,650 reads: “daily.” Amerigo Vespucci says in a letter (Mosto, p. 55, note 6): “I saw human flesh salted and suspended from the beams, in the same way as we are wont to hang up bacon and swine’s flesh.” See *Jesuit Relations and Allied Documents* (Cleveland reissue), for instances of cannibalism among the North American Indians. See also *Captivity of Hans Stade* (Hakluyt Society edition), pp. 151, 155–159; and Dominguez’s *Conquest of the River Plate* (Hakluyt Society publications, London, 1891), pp. 129, 130.

⁶⁶ For *Carvagio*, as in MS. 5,650, and later in the Italian; an error of the amanuensis. This was João Carvalho (the Juan Lopez Caraballo of the register—see note 26, *ante*). Carvalho was a Portuguese, of none too scrupulous morals, even in his age, as appears later in Pigafetta's narrative. After the fatal banquet in the island of Cebú, he became the leader of the remaining men of the fleet, but was later deposed (see *post*, note 441). He remained behind with the ill-fated "Trinidad," and never returned to Europe. His son, borne to him by a native woman of Brazil, was left behind in Borneo. See Stanley, pp. 252–255, for Correa's account of the actions of Carvalho after the death of Magalhães.

⁶⁷ The early French edition and the Italian edition of 1536 both include the women and children.—STANLEY.

⁶⁸ It is a widespread (perhaps universal) characteristic of the American Indian to pull out the hair of the body. See *Jesuit Relations and Allied Documents* (Cleveland reissue).

⁶⁹ Eden (p. 45), defines *gatti mammoni* as monkeys. Monkeys of the genus *Cebus* are probably meant (Mosto, p. 55, note 8).

⁷⁰ MS. 5,650 reads: "fresh cheese." Pigafetta may here refer to the bread made from the casava or manioc root. See Burton's *Captivity of Hans Stade*, pp. 130–132, for a description of the method of preparing this root.

⁷¹ The swine mentioned by Pigafetta is the Tayasu (Tagaçu), or peccari (*Dicotyles torquatus*), which has quills resembling those of the porcupine, and is generally of a whitish color. It is tailless and very fierce and difficult to domesticate. The flesh was eaten; and the teeth were worn by some of the chiefs as necklaces. Burton (*ut supra*), p. 160, note.

⁷² The *Platalea ajaja* or rosy spoonbill, belonging to the family of the *Plataleidae*, whose habitat extends through all of tropical and subtropical America, including the West Indies, south to the Falkland Islands, Patagonia and Chile, and north to the southern part of the United States.

⁷³ Hans Stade (Burton, *ut supra*) testifies to the chastity of the people of Eastern Brazil among whom he lived as a prisoner.

⁷⁴ MS. 5,650 reads: “The women attend to the outside affairs, and carry everything necessary for their husband’s food in small panniers on the head or fastened to the head.”

⁷⁵ MS. 5,650 adds: “and compassion.”

⁷⁶ MS. 5,650 reads: “When we departed they gave us a very great quantity of verzin;” and adds: “That is a color which comes from trees which grow in the said country, and so abundantly, that the country is called Verzin from it.”

⁷⁷ MS. adds: “which was a piece of great simplicity.”

⁷⁸ This sentence is preceded by the following in MS. 5,650: “Besides the abovesaid which proclaims their simplicity, the people of the above place showed us another very simple thing.”

⁷⁹ This passage in Stanley reads as follows: “A beautiful young girl came one day inside the ship of our captain, where I was, and did not come except to seek for her luck: however, she directed her looks to the cabin of the master, and saw a nail, of a finger’s length, and went and took it as something valuable and new, and hid it in her hair, for otherwise she would not have been able to conceal it, because she was naked, and, bending forwards, she went away; and the captain and I saw this mystery.” The matter between the words “length” and “naked” is taken from MS. 24,224 (wrongly declared by Stanley to be the copy of his travels presented to the regent Louise by Pigafetta, the conclusion being based on the fact that some of the details are softened down), as Stanley considered the incident as told in MS. 5,650, the Italian MS. and the first French edition, as unfit for publication. Stanley cites the following (in the original) from the edition of 1536 which omits the above story: “At the first land at which we stopped, some female slaves whom we had brought in the ships from other countries and who were heavy with child, were taken with the pains of childbirth.

Consequently, they went alone out of the ships, went ashore, and after having given birth, returned immediately to the ships with their infants in their arms.” He also cites the following passage from the first French printed edition, which also narrates the above story of the girl: “At the first coast that we passed, some slave women gave birth. When they were in travail, they left the boat, after which they immediately returned, and nursed their children.” Stanley adds that this story of the slave women is improbable, as women were not allowed to come aboard ship.

⁸⁰ MS. 5,650 gives the words of the Brazil as follows: “maiz, huy, pinda, taesse, chignap, pirame, itenmaraca, tum maraghatom.” Amoretti (see Stanley’s edition, p. 48) reads *tacse* as *tarse* and *itanmaraca* as *Hanmaraca*. Stanley mistranslates the French *forcette* (“scissors”) as “fork.”

⁸¹ Eden says (p. 251): “xxxiiii. degree and a halfe toward the pole Antartike.”

⁸² MS. 5,650 reads: “and to ask whether the others might come.”

⁸³ MS. 5,650 reads: “That place was formerly called Cape Sainte Marye and it was thought that one could pass thence to the sea of Sur, that is to say the South Sea, but it has not been ascertained that any ships have ever discovered anything farther on.” Eden (p. 251) reads: “Abowt the mouth of this ryuer are leuen ilandes, in the byggeft whereof, they founde certeyne precious stones, and cauled it the cape of Saynt Marie. The Spanyardes thought that by this ryuer they might haue passfed into the south sea. But they were deceaued in theyr opinion. For there was none other passage than by the ryuer which is xvii. leagues large in the mouth.” This river was the Rio de la Plata. The “Roteiro” (Stanley, p. 2) says that Magalhães left Rio de Janeiro December 26, proceeding to the cape Santa María and the river which was called St. Christopher. There they remained until February 2, 1520. Albo (Navarrete, iv, p. 211) also mentions the river which he calls the “river of Solís.” The ships sent to look for a strait through the river were gone two days, and a careful exploration of the mouth of the river was made. Brito (Navarrete, iv, pp. 306, 307) says: “They left that place [i.e., Rio de Janeiro] and coasted along shore until they reached the river called

Solís, where Fernando Magallanes thought that he could find a strait. They stayed there forty days. Magallanes ordered the ship ‘Santiago’ to sail forward for about 50 leguas to see whether there was any passage. Not finding a passage, he crossed the river which is about 25 leguas wide and found the [opposite] coast which runs northeast and southwest.” For early history of this region, see Dominguez’s *Conquest of the River Plata*.

⁸⁴ Juan Diaz de Solis, a famous Spanish navigator, was born at Lebrixa, in 1470. He is said, although without sufficient authority, to have discovered Yucatan with Pinzon in 1506. He was appointed chief pilot of Spain after the death of Amerigo Vespucci in 1512. In October, 1515, he sailed in command of an expedition in search of a southwest passage to India. He discovered Rio de la Plata which he explored as far as the region of the Charrua tribe, by whom he and some of his men were killed and eaten before September, 1516. The remnant of the expedition was conducted back to Spain by his brother-in-law.

⁸⁵ Eden adds (p. 251): “which fum thynke to bee thofe fyffhes that wee caule pikes.” Below, the sea-wolf is described as having a head “of golden coloure.” They were probably some species of the *Otariidæ* or fur-seals (Giullemard, p. 160, note). The “geese” were penguins. Albo, Herrera, and others, also mention the “sea-wolves and ducks.” Kohl (*Zeitschrift der Gesellschaft für Erdkunde*, xi, 362) says that this bay where the ships were laden with the seals and penguins is probably Desvelos Bay, but it is more probably Puerto Deseado (“Port Desire;” see Mosto, p. 57, note 2). Drake also secured fresh provisions from these “sea-wolves,” calling the bay where he secured them “Seale Bay.” See *World Encompassed* (Hakluyt Society edition), pp. 54, 55.

⁸⁶ Port St. Julian. The “Roteiro” pilot (Stanley, p. 3) says that they reached it on March 31, 1520, and places it in 49° 20′ south latitude. Albo (Navarrete, iv, p. 214) says: “We went to a port called San Julian, where we entered the last day of March, and where we stayed until the day of St. Bartholomew. The said port lies in a latitude of 49 and two-thirds degrees. We pitched the ships in that port.” Other writers give slightly different locations (see Mosto, p. 57, note 5). Antonio Brito, the Portuguese, whose

MS. is preserved in the Torre do Tombo at Lisbon, writes in 1523 to the king of Portugal certain news obtained from some of the men of the “Trinidad.” His information as might be expected, is at times faulty. Of Port St. Julian, he says: “They coasted along shore until they reached a river called San Juan where they wintered for four months.”

⁸⁷ MS. 5,650 adds: “jumping up and down.” The only reference made to the Patagonians by Albo is as follows: “Many Indians came there, who dress in certain skins of the *anta*, which resemble camels without the hump. They have certain bows made from cane, which are very small and resemble turkish bows. The arrows also resemble Turkish arrows, and are tipped with flint instead of iron. Those Indians are very prudent, swift runners, and very well-built and well-appearing men.” (Navarrete, iv, pp. 214, 215). Cf. with Pigafetta’s account that given by Maximilianus Transylvanus, in Vol. I, pp. 303–337.

⁸⁸ MS. 5,650 reads: “he began to marvel and to be afraid.”

⁸⁹ Guillemard, who follows the Amoretti edition, translates (p. 180) this passage: “His hair was short and colored white,” but this translation is borne out by neither the Italian MS. nor MS. 5,650. Guillemard presents a picture of a Patagonian, as does also Wilkes (*Narrative of U. S. Exploring Expedition*, 1838–1842), i, facing p. 95. The latter describes Indians, whom the officers of the expedition thought to be Patagonians, and who were taller than average Europeans, as follows: “They had good figures and pleasant looking countenances, low foreheads, and high cheekbones, with broad faces, the lower part projecting; their hair was course and cut short on the crown leaving a narrow border of hair hanging down; over this they wore a kind of cap or band of skin or woolen yarn. The front teeth of all of them were very much worn, more apparent, however, in the old than in the young. On one foot they wore a rude skin sandal. Many of them had their faces painted in red and black stripes, with clay, soot, and ashes. Their whole appearance, together with their inflamed and sore eyes, was filthy and disgusting.” They showed that they had had previous communication with white men. Their food was fish and shellfish, and they carried bows and arrows and had dogs. Brinton (*American Race*, New York, 1891) says

that “The Patagonians call themselves Chonek or Tzoneca, or Inaken (men, people), and by their Pampean neighbors are referred to as Tehuel-Che, southerners.” Many of them are “from six to six feet four inches in height, and built in proportion. In color they are a reddish brown, and have aquiline noses and good foreheads.” Ramon Lista (*Viage al pais de los Tehuel-Ches*) gives the average height of the Patagonians as 1.854 m., hence the early accounts of their great stature are greatly exaggerated (Mosto, p. 57, note 6). See also the description of the Patagonians in the “Roteiro” (Stanley, p. 5); and *World encompassed by Sir Francis Drake* (Hakluyt Society edition), pp. 40, 56–61 (where the origin of the name “Patagonian” is wrongly given).

⁹⁰ The guanaco, a species of llama. See also VOL. II, p. 34, note 5*.

⁹¹ Hence arose the name “Patagonians” or “men with big feet,” given by Magalhães, because of the awkward appearance of the feet in such coverings, which were stuffed with straw for greater warmth.

⁹² The words “somewhat thicker than those of a lute” are lacking in MS. 5,650.

⁹³ This sentence is omitted by MS. 5,650.

⁹⁴ Eden (p. 251) says “two,” and following says that Magalhaes gave the giant “certeyne haukes belles and other great belles, with alfo a lookynge glaffe, a combe, and a payre of beades of glaffe.”

⁹⁵ MS. 5,650 adds: “on the face.”

⁹⁶ MS. 5,650 omits “face.”

⁹⁷ “For the smiths” is omitted by MS. 5,650.

⁹⁸ Maximilianus Transylvanus says that only one Patagonian was captured, but that he died shortly from self-starvation (VOL. I, pp. 314, 315). The “Roteiro” says (Stanley, p. 5) that three or four were captured, but all died

except one, who went to Spain in the “San Antonio.” Pigafetta’s account, as given by an eyewitness, is to be preferred.

[99](#) MS. 5,650 reads: “for otherwise they could have caused some of our men trouble.” Below Stanley (p. 53) again mistranslates the French “forces” as “forks.”

[100](#) MS. 5,650 adds: “of malefactors,” and reads farther: “and their faces lighted up at seeing those manacles.”

[101](#) MS. 5,650 reads: “and they were grieved that they could not take the irons with their hands, for they were hindered by the other things that they were holding.” Eden (p. 252) says at the end of his account of the capture: “Being thus taken, they were immediately leperate and put in fundry fhypes.”

[102](#) MS. 5,650 adds: “that is, the big devil.”

Arber in his introduction to *The first three English books on America* says that Shakespeare had access to *The decades of the newe worlde* of Eden, and created the character of Caliban (who invokes Setebos) in the *Tempest* from the description of the Patagonian giants. See also *World encompassed by Sir Francis Drake* (Hakluyt Society edition), p. 48, for mention of the god Settaboth.

[103](#) MS. 5,650 reads: “the wife of one of the giants who had remained behind in irons.”

[104](#) MS. 5,650 makes this plural.

[105](#) See *ante*, note 103.

[106](#) This word is omitted in MS. 5,650.

[107](#) MS. 5,650 adds: “in their language.”

[108](#) MS. 5,650 omits this sentence.

[109](#) MS. 5,650 reads “instead of taking medicine.” See *Jesuit Relations and Allied Documents* (Cleveland reissue) for examples of medicine and surgery as practiced by the North American Indians.

[110](#) MS. 5,650 reads “two feet or so.”

[111](#) MS. 5,650 reads “cut short and shaven like religious.” Hans Stade also notices the tonsure among the Indians who captured him (see *Captivity of Hans Stade*, Hakluyt Society edition, pp. 136–138, and note, from which it appears that this manner of wearing the hair, was practiced among many Tupi tribes).

[112](#) Stanley (p. 55) does not translate this sentence, but gives the original from MS. 5,650.

[113](#) In MS. 5,650 this sentence reads as follows: “They seem to be painted, and one of those enemies is taller than the others, and makes a greater noise and gives expression to greater joy than the others.”

[114](#) Mosto (p. 59) mistranscribes or misprints “Setebas.” Roncagli (*Da punta arenas a Santo Cruz*, in “*Bollettino della Società geografica italiana*,” 1884, p. 775) says that the Patagonians sacrificed to an evil spirit called “Wallichu.” Brinton, *ut supra*, p. 328, says: “They are not without some religious rites, and are accustomed to salute the new moon, and at the beginning of any solemn undertaking to puff the smoke of their pipes to the four cardinal points, just as did the Algonquins and Iroquois.”

[115](#) See *ante*, note 91. Stanley mistranscribes “Pataghoni” of MS. 5,650 as “Palaghom.”

[116](#) A reference to the gypsies who had made their appearance in Italy as early as 1422, where they practiced various deceptions upon the credulous people. The name “Cingani” or Zingari, as they are generally called in Italy, comes from the Greek word τᾱσιγγᾱνοι, by which they were called by

Byzantine writers of the ix–xii centuries; the same name appearing also in slightly different forms in Turkey, Bulgaria, Roumania, Hungary, Bohemia, and Germany. Their ancestral home was probably in northwestern India, whence they emigrated in successive waves. In many countries extreme and harsh measures were taken against them, especially in Germany, where they had appeared as early as 1417. They were never allowed a foothold in France, but have become a significant part of the population in Russia, Hungary, and Spain. In the latter country, where they are called Gitános (Egyptians), in spite of many severe laws passed against them until the reign of Cárlos III, they continued, more fortunate than the Jews, to thrive. They are mentioned by Cervantes in his *Don Quixote* (pt. i, chap, xxx), but the name Gitáno had first appeared in a Spanish document of 1499, where their customs are described. The few in Italy have been allowed to remain, and those in the Slavic countries and England were generally treated kindly. Their language is Aryan and was highly inflected; and while they have been given many names by the nations among whom they have lived, their own appellation is “Rom” “the man.” See *New International Encyclopedia* (New York, 1903).

¹¹⁷ MS. 5,650 reads: “capae;” but Stanley has mistranscribed “capac.”

¹¹⁸ “Albo (Navarrete iv, p. 215), the “Roteiro” (Stanley, p. 4), Transylvanus and Oviedo (Mosto, p. 59, note 3) give the date of departure from Port San Julian August 24, 1520; but the second errs in giving 5½ instead of 4½ months for the period for which the fleet remained there. Peter Martyr places the date of departure as August 21. Castanheda, who gives the same date says that the name “St. Julian” or “of the ducks” was given to that bay which he calls a river. Barros gives the date of arrival as April 2, and says that the place was called “river of São Julião.” See Mosto, *ut supra*.

¹¹⁹ A portion of the passage relating to the attempted mutiny reads as follows in MS. 5,650: “However the treason was discovered, and as a consequence the treasurer was killed by a dagger and then quartered. Gaspar de Casada was beheaded and then quartered. The overseer trying shortly after to lead another mutiny, was banished together with a priest and set ashore on that land of Pathagonia.” The Italian MS. is badly confused,

while the above is more in accordance with the facts, and shows the hand of the translator and adapter. Eden (p. 252) says of the attempted mutiny: "They remayned fyue monethes in this porte of Sainte Iulian, where certeyne of the vnder capitaynes conspirynge the death of theyr general, were hanged and quartered: Amonge whom the treafurer Luigo of Mendozza was one. Certeyne of the other conspirators, he left in the fayd land of Patogoni." See the short account of the mutiny given by Transylvanus in VOL. I, p. 317, and the account given in the same volume, pp. 297, 299. The *Roteiro* (Stanley, p. 3) says that three of the ships revolted against Magalhães" saying that they intended to take him to Castile in arrest, as he was taking them all to destruction;" but Magalhães subdued the mutiny by the aid of the foreigners with him. Mendoza was killed by Espinosa the chief constable of the fleet, and Gaspar Quesada was beheaded and quartered. Alvaro de Mesquita, Magalhães's cousin, is wrongly reported to have been given command of one of the ships of those killed, but the command of the "San Antonio" that had previously been given to Antonio de Coca, after Magalhães had deprived Cartagena of it, had been given him before the real outbreak of the mutiny.

The narrative of the mutiny as given by Navarrete (*Col. de viages*, iv, pp. 34–38) which was compiled mainly from documents presented in the same volume and from Herrera, is as follows:

"March 31, the eve of Palm Sunday, Magallanes entered the port of San Julian, where he intended to winter, and consequently ordered the rations to be served by measure. In view of that and of the barrenness and cold of the country, the men asked Magallanes by various arguments to increase the rations or turn back, since there was no hope of finding the end of that country or any strait. But Magallanes replied that he would either die or accomplish what he had promised; that the king had ordered the voyage which he was to accomplish; and that he had to sail until he found that land or some strait which must surely exist; that in regard to the food, they had no reason to complain, since that bay had an abundance of good fish, good water, many game birds, and quantities of wood, and that bread and wine had not failed them, nor would fail them if they would abide by the rule regarding rations. Among other observations, he exhorted and begged them

not to be found wanting in the valorous spirit which the Castilian nation had manifested and showed daily in greater affairs; and offering them corresponding rewards in the king's name. By such means did he quiet the men.

“April 1, Palm Sunday, Magallanes summoned all his captains, officers, and pilots to go ashore to hear mass and afterward to dine in his ship. Alvaro de la Mezquita, Antonio de Coca, and all the men went to hear mass. Louis de Mendoza, Gaspar de Quesada, and Juan de Cartagena (the latter because he was a prisoner in Quesada's keeping) did not go, however; and Alvaro de la Mezquita alone went to dine with Magallanes.

“During the night, Gaspar de Quesada and Juan de Cartagena with about thirty armed men of the ship ‘Concepcion’ went to the ‘San Antonio,’ where Quesada requested that the captain, Alvaro de la Mezquita, be surrendered to him, and told the crew of the ship to seize it, as they had already done with the ‘Concepcion’ and ‘Victoria.’ [He said] that they already knew how Magallanes had treated and was treating them, because they had asked him to fulfil the king's orders; that they were lost men; and that they should help him make another request of Magallanes, and if necessary, seize him. Juan de Elorriaga, the master of the ‘San Antonio,’ spoke in favor of his captain, Alvaro de la Mezquita, saying to Gaspar de Quesada: ‘I summon you, in God's name and that of the king, Don Carlos, to go to your ship, for the present is no time to go through the ships with armed men; and I also summon you to release our captain.’ Thereupon Quesada replied: ‘Must our deed remain unaccomplished because of this madman?’ and drawing his dagger stabbed him four times in the arm, thus overawing the men. Mezquita was kept prisoner, Elorriaga was cared for, Cartagena went to the ship ‘Concepcion,’ while Quesada remained in the ‘San Antonio.’ Thus were Quesada, Cartagena, and Mendoza masters of the three ships, ‘San Antonio,’ ‘Concepcion,’ and ‘Victoria.’

“Thereupon, they sent a message to Magallanes to the effect that they held three ships and the small boats of all five at their disposal in order to require him to fulfil his Majesty's provisions. They said that they had done that in order that he might no longer illtreat them as he had done thitherto. If he

would agree to fulfil his Majesty's orders, they would obey his commands, and [said] that if they had thitherto treated him as a superior, they would thenceforth treat him as a master, and would be most respectful to him.

“Magallanes sent word to them to come to his ship, where he would hear them and do what was proper. They answered that they did not dare come lest he illtreat them, but that he should go to the ship ‘San Antonio,’ where they would all assemble and decide definitely on what the king's orders commanded.

“Magallanes believing that boldness was more useful than meekness in the face of such actions, determined to employ craft and force together. He kept the small boat of the ship ‘San Antonio’ which was used for those negotiations, at his ship; and sent the alguacil, Gonzalo Gomez de Espinosa, in the skiff belonging to his ship, to the ‘Victoria,’ with six men armed secretly and a letter for the treasurer, Luis de Mendoza, in which he told the latter to come to the flagship. While the treasurer was reading the letter and smiling as if to say ‘You don't catch me that way,’ Espinosa stabbed him in the throat, while another sailor stabbed him at the same instant on the head so that he fell dead. Magallanes, being a man with foresight, sent a boat under command of Duarte Barbosa, sobresaliente of the ‘Trinidad’ with fifteen armed men, who entering the ‘Victoria’ flung the banner to the breeze without any resistance. That happened on April 2. Then the ‘Victoria’ approached the flagship, and they together immediately approached the ‘Santiago.’

“On the following day, the ‘San Antonio’ and the ‘Concepcion’ which were held by Quesada and Cartagena tried to put to sea, but it was necessary for them to pass close to the flagship which stood farthest out. The ‘San Antonio’ raised two anchors, and being in danger with one, Quesada determined to free Alvaro de la Mezquita, whom he held a prisoner in his ship, in order to send him to Magallanes to arrange peace between them. Mezquita, however, told him that nothing would be obtained. Finally, they arranged that when they set sail, Mezquita should station himself forward and ask Magallanes as they approached his ship, not to fire and that they would anchor provided affairs would be settled favorably.

“Before setting sail in the ‘San Antonio,’ where they were endangered, as it was night and the crew were asleep, the ship dragged and ran foul of the flagship. The latter discharged some large and small shots and men leaped aboard the ‘San Antonio’ crying, ‘For whom are you?’ they responding, ‘For the king, our sovereign, and your Grace,’ surrendered to Magallanes. The latter seized Quesada, the accountant, Antonio de Coca, and other sobresalientes who had gone to the ‘San Antonio’ with Quesada. Then he sent to the ‘Concepcion’ for Juan de Cartagena and imprisoned him with them.

“Next day Magallanes ordered the body of Mendoza taken ashore and had it quartered, and Mendoza cried as a traitor. On the seventh, he ordered Gaspar de Quesada beheaded and quartered with a like cry. That was done by Quesada’s own follower and sobresaliente, Luis de Molino, in order to save himself from hanging, for that sentence had been passed on him. Magallanes sentenced Juan de Cartagena and the lay priest, Pedro Sanchez de la Reina, who had been active in causing the men to mutiny, to be marooned in that country. He pardoned more than forty men who merited death, as they were needed to work the ships, and so that he might not excite hard feelings by the severity of the punishment.”

Brito’s account of the mutiny (Navarrete, iv, p. 307) is very brief and unsatisfactory: “In that port the captains began to ask him where he was taking them, especially one Juan de Cartagena, who said that he had a royal cedula naming him as associate with Magallanes, as Rui Falero would also have been, had he been there. Then they tried to rise against Magallanes and kill him, and go back to Castilla or to Rodas. From that point they went to the river of Santa Cruz, where they endeavored to put their plan in execution. But when Magallanes discovered their ill-considered attempt, for the captains said that they would kill him or take him prisoner, he ordered his ship armed and Juan de Cartagena arrested. As soon as the other captains saw their chief arrested they thought no longer of prosecuting their attempt. Magallanes, however, seized them all, for most of the crew were in his favor. He sent the merino or alguacil to kill Luis de Mendoza with his dagger, for the latter refused to be arrested; while he had another named Gaspar Quesada beheaded. When they set sail, he left Juan de Cartagena

together with a secular priest ashore at a place where there were no inhabitants.”

Correa (Stanley, pp. 247–250) gives a different and imperfect account of the meeting.

Cf. with these accounts the one given by Guillemard (*Magellan*), pp. 162–174. When the “San Antonio” deserted, Esteban Gomez is said to have rescued Cartagena and the priest. João Serrão (after the loss of the “Santiago”) was given command of the “Concepcion,” Mesquita of the “San Antonio,” and Duarte Barbosa of the “Victoria,” all Portuguese (Guillemard, *ut supra*, p. 179). It is rather singular that Sir Francis Drake should also have faced a mutiny in this same port, where Thomas Doughty was executed. That the history of Magalhães’s expedition was generally known is evident from the following: “The next day after, being the twentieth of June, wee harboured ourselues againe in a very good harborough, called by Magellan *Port S. Julian*, where we found a gibbet standing upon the maine, which we supposed to be the place where *Magellan* did execution upon some of his disobedient and rebellious company.” *World encompassed* (Hakluyt Society edition), p. 234.

¹²⁰ MS. 5,650 reads: “twenty-five leagues.”

¹²¹ Instead of this last phrase, MS. 5,650 reads: “and very little of that.” The account of the shipwreck and rescue as given here is very confusing and inadequate. Cf. Guillemard, *ut supra*, pp. 175–179, and Navarrete, iv, pp. 38, 39. One man was lost, namely, the negro slave of João Serrão. The “Roteiro” (Stanley, p. 4) gives the briefest mention of it. Brito (Navarrete, iv, p. 307) says: “After this [*i.e.*, the mutiny], they wintered for three months; and Magallanes again ordered the ship ‘Santiago’ to go ahead in order to explore. The ship was wrecked but all of its crew were saved.” Correa’s account (Stanley, p. 250) is very short, and mentions that only the hull of the vessel was lost.

¹²² Mosto (p. 60, note 3) derives this word from the Spanish *mejillon*, a variety of cockle, which he thinks may be the *Mytilus* or common mussel.

[123](#) See VOL. II, p. 34, note 5*.

[124](#) Eden (p. 252) says: “52. degree ... lackynge a thyrde parte.”

[125](#) MS. 5,650 omits: “and the holy bodies,” and has in its place: “by His grace.”

[126](#) MS. 5,650 omits these last two words. The Italian form *braccio* is retained in view of these words; for the Spanish *braza* is a measure about equivalent to the English fathom, while the *braccio*, although varying in different cities, is near three palmos (spans) in length. The term is, however, translated *brasse* (“fathom”) in MS. 5,650. Mosto (p. 60, note 8), conjectures this fish to be the *Eliginus maclovinus*. Of this fish, Theodore Gill, the well-known ichthyologist, says in a letter of May 22, 1905: “The Italian editor gave a shrewd guess in the suggestion that the fish in question was what was formerly called *Eliginus maclovinus*. The only vulgar name that I have been able to find for it is ‘robalo,’ and this name is applied to it by the Spanish-speaking people of both sides of South America. Like most popular names, however, it is very misleading. ‘Robalo’ is the Spanish name for the European bass, which is nearly related to our striped bass or rock bass. To that fish the robalo of South America has no affinity or real resemblance, and belongs to a very different family peculiar to the southern hemisphere—the *Nototheniids*. The so-called *Eliginus maclovinus* (properly, *Eliginops maclovinus*) is the most common and widely distributed species and probably the one obtained by the fleet of Magalhães.”

[127](#) Of the river Santa Cruz and the stay there, Albo (Navarrete, iv, p. 215) says: “We left that place [*i.e.*, Port San Julian] on the 24th of the said month [of August] and coasted along to the southwest by west. About 30 leguas farther on, we found a river named Santa Cruz, which we entered on the 26th of the same month. We stayed there until the day of San Lucas, the 18th of the month of October. We caught many fish there and got wood and water. That coast extends northeast by east and southwest by west, and is an excellent coast with good indentations.” The “Roteiro” (Stanley, p. 4) places the river Santa Cruz twenty leagues from San Julian and in about

50°. That narrative says that the four remaining boats continued to pick up the wreckage of the “Santiago” until September 18. The name Santa Cruz was said to have been given to the river because they entered it on September 14, the day of the exaltation of the holy cross (see Stanley, p. 4, note 4, and Mosto, p. 60, note 7), but Kohl (Mosto, *ut supra*) attributes the name to João Serrão who was near that river on May 3, 1520, the day on which the church celebrates the feast of the finding of the holy cross. Navarrete (iv, p. 41) cites Herrera as authority for an eclipse of the sun that happened while at this river on October 11, 1520. Guillemard (*ut supra*, pp. 187, 188) is disinclined to believe the report, although he mentions an annular eclipse of the sun on October 20, 1520, which was however not visible in Patagonia. Navarrete (*ut supra*) says that Magalhães gave instructions to his captains here “saying that he would follow those coasts until finding a strait or the end of that continent, even if he had to go to a latitude of 75°; that before abandoning that enterprise, the ships might be twice unrigged; and that after that he would go in search of Maluco toward the east and east northeast, by way of the cape of Buena Esperanza and the island of San Lorenzo.”

A new chapter begins at this point in MS. 5,650, being simply headed “chapter.”

[128](#) The anonymous Portuguese who accompanied Duarte Barbosa says 53° 30′; Barros, 52° 56′; Elcano, 54°; and Albo, 52° 30′. Mosto, p. 60, note 9.

[129](#) MS. 5.650 has the words in brackets.

[130](#) Eden (p. 252) says of the strait: “they founde the ftraight nowe cauled the ftraight of Magellanus, beinge in fum place C.x. leagues in length: and in breadth fumwhere very large and in other places lyttle more than halfe a league in bredth.” Stanley (p. 57) is uncertain of the French *et quasi autant de largeur moins de demye lieue*, which is (translated freely) simply “something like almost a half-league wide.” The “Roteiro” (Stanley, p. 7) says that the channel “at some places has a width of three leagues, and two, and one, and in some places half a league.” Transylvanus (VOL. I, p. 320) gives the width as two, three, five, or ten Italian miles; Gomara, two leagues

or so; Barros, one league at the mouth, and the strait, from a musket or cannon shot to one and one and one-half leagues; Castanheda, at the mouth as wide as two ships close together, then opening up to one league; Peter Martyr, a sling-shot's distance in places. (Mosto, p. 61, note 2.)

¹³¹ *Proise* or *Proi* (*proy*, *proic*) is an ancient Catalan word meaning the “bow moorings;” Cf. Jal, *Glossaire nautique* (Mosto, p. 61, note 3). The old Spanish word is “*proís*,” which signifies both the thing to which the ship is moored ashore, and the rope by which it is moored to the shore.

¹³² This passage is as follows in MS. 5,650: “The said strait was a circular place surrounded with mountains (as I have said), and the majority of the sailors thought that there was no exit from it into the said Pacific Sea. But the captain-general declared that there was another strait which led out, and that he knew that well, for he had seen it on a marine chart of the king of Portugal. That map had been made by a renowned sailor and pilot, named Martin de Boesme. The said captain sent two of his ships forward—one named the ‘Saint Anthoine,’ and the other the ‘Conception’—in order that they might look for and discover the exit from the said strait, which was called the cape de la Baya.”

Martin de Behaim (Beham, Behem, Behemira, Behen, Bøhem), Bøhm) was born about 1459 (some say also in 1430 or 1436) of a family originally from Bohemia, in Nuremberg, Germany, and died at Lisbon, July 29, 1506. He was a draper in Flanders, 1477–1479, after which he went to Lisbon (1480) where he became acquainted with Columbus. In 1484 he was chosen geographer of Diego Cam's expedition to Western Africa. On his return, he received the order of knighthood in the military order of Christ of Portugal; after which he went to the island of Fayal in the Azores where he became interested in colonization and agriculture, and married the daughter of the governor. In 1491 he returned to Germany, where he lived at Nuremberg until 1493, and where, at the request of his townsmen, he constructed an immense globe on the information of Ptolemy, Strabo, and others, which contains many errors (see facsimile in Guillemard), In 1493 he returned to Lisbon, and in 1494 to Fayal, where he remained until 1506, when he went to Lisbon. Many myths sprung up about him, such that he had visited

America before Columbus and the straits of Magellan before Magalhães, the latter of whom he may have known at Lisbon. See Rose, *New Biographical Dictionary* (London, 1848); *Grande Encyclopédie* (Paris, Lamirault et Cie.); and Guillemard, pp. 73, 74.

See Guillemard (*ut supra*, pp. 189–198) for a discussion of knowledge regarding the existence of a strait to the south of the American continent, prior to Magalhães’s discovery and passage of it. Guillemard, after weighing the evidence for and against, decides that there may have been a “more or less inexact knowledge of the existence of some antarctic break “that would allow access to the eastern world.

¹³³ Possession Bay, according to Mosto, p. 61, note 5, but Guillemard (pp. 199, 200) thinks it may have been Lomas Bay.

¹³⁴ Probably Anegada Point to the northwest of Cape Orange.

¹³⁵ The “First Narrows” or Primera Garganta, just beyond Anegada Point.

¹³⁶ Lago de los Estrechos, St. Philip’s Bay, or Boucant Bay.

¹³⁷ The “Second Narrows” and Broad Reach.

¹³⁸ MS. 5,650 does not mention the smoke signals.

¹³⁹ MS. 5,650 reads: “When near us they suddenly discharged a number of guns, whereat we very joyously saluted them with artillery and cries.”

¹⁴⁰ The first is the passage east of Dawson Island, which extends to the northeast into Useless Bay and to the southeast into Admiralty Sound. The second opening was the passage between the western side of Dawson Island and Brunswick Peninsula.

¹⁴¹ Esteban Gomez was an experienced Portuguese navigator and pilot with ambitions only less than those of Magalhães, his kinsman (Guillemard, p. 203). His desertion occurred probably in the first part of November, and

was perhaps directly due to pique at what he considered lack of appreciation from Magalhães. Conspiring with Gerónimo Guerra, the notary, who was elected captain of the “San Antonio” they made off with that ship, and after imprisoning Alvaro de Mezquita, returned to Spain, anchoring at Sevilla May 6, 1521. There Gomez was imprisoned after the return of the “Victoria,” but was liberated, and in 1524 proposed an expedition to discover a northwest passage. An expedition having been fitted out by Carlos I, he coasted Florida and the eastern coast, as far as Cape Cod, and returned to Spain in 1525. See *Grande Encyclopédie*; Navarrete, iv, pp. 42–45, and 201–208; and Guillemard, *ut supra*, pp. 203–205.

Brito’s story of the exploration of the strait and the loss of the “San Antonio” (Navarrete, iv, pp. 307, 308) is as follows: “They left that place [*i.e.*, the river of Santa Cruz] on October 20, and went to enter a strait of which they had no knowledge. The entrance of the strait extends for about 15 leguas; and after they had entered, it seemed to them that it was all land-locked, and they accordingly anchored there. Magallanes sent a Portuguese pilot named Juan Carballo ashore with orders to ascend a mountain in order to ascertain whether there was any outlet. Carballo returned saying that it appeared land-locked to him. Thereupon Magallanes ordered the ships ‘San Antonio’ and the ‘Concepcion’ to go in advance in order to explore the strait. After having gone ahead for about 30 leguas, they returned to tell Magallanes that the river went farther but that they could not tell where it would take them. Upon receiving that information Magallanes weighed anchor with all three ships, and advanced along the strait until reaching the point to which the others had explored. Then he ordered the ‘San Antonio’ of which Alvaro de Mezquito, his cousin, was captain, and Esteban Gomez, a Portuguese pilot, to go ahead and explore a southern channel that opened in the strait. That ship did not return to the others and it is not known whether it returned to Castilla or whether it was wrecked. Magallanes proceeded with his remaining ships until he found an exit.” Correa’s account of the desertion of the “San Antonio” is as usual with him, inadequate, and evidently based on hearsay evidence (see Stanley, p. 250).

¹⁴² Literally “brother;” but to be understood probably as the expression *cugino germano*, “cousin german.”

¹⁴³ MS. 5,650 begins this sentence as follows: “But that ship lost its time, for the other.”

¹⁴⁴ Guillemard (p. 206) conjectures from the records of Albo, Pigafetta, and Herrera that the river of Sardines is Port Gallant which is located on the Brunswick Peninsula, opposite the Charles Islands. Albo (Navarrete, iv, p. 215) says that after taking the course to the northwest they sailed about 15 leagues before anchoring.

¹⁴⁵ Albo (Navarrete, iv, p. 216) says that the two capes at the exit of the strait were called Ferosa and Deseado, this latter being Cape Pillar (see Guillemard, map facing p. 198).

¹⁴⁶ MS. 5,650 adds: “which were on the other side.”

¹⁴⁷ João Serrão, the brother of Magalhães’s staunchest friend Francisco Serrão, and a firm supporter of the great navigator. Pigafetta errs in calling him a Spaniard (see p. 183), though he may have become a naturalized Spaniard, since the register speaks of him as a citizen of Sevilla. One document (Navarrete, iv, p. 155) calls him a Portuguese pilot, and Brito (Navarrete, iv, p. 308) a Castilian. He was an experienced navigator and captain, and had served under Vasco da Gama, Almeida, and Albuquerque. Vasco da Gama (on his second voyage, 1502–1503) made him captain of the ship “Pomposa” which was built in Mozambique where he was left to attend to Portuguese affairs. On this expedition he saw the coast of Brazil for the first time, for Vasco da Gama’s fleet, ere doubling the Cape of Good Hope, crossed to the Brazilian coast, which they followed as far as Cape Santo Agostinho. He fought bravely in the battle of Cananor under Almeida (March 16, 1506, in which Magalhães also participated). He was chief captain of three caravels in August, 1510, in Eastern water, and was in the Java seas in 1512, but must have returned to Portugal soon after that, for he was there in 1513; although he seems to have been appointed clerk at the fortress of Calicut in the latter year. He embarked with Magalhães as

captain and pilot of the “Santiago,” but after the wreck of that vessel near port San Julian was given command of the “Concepcion,” in which he later explored the strait. Failing to dissuade Magalhães from attacking the natives of Matan, he became commander, with Duarte Barbosa, of the fleet at Magalhães’s death, and was murdered by the Cebuans after the treacherous banquet given by them to the fleet. See Guillemard (*ut supra*), and Stanley’s *Three voyages of Vasco da Gama* (Hakluyt Society publications, London, 1869).

[148](#) MS. 5,650 reads as follows: “Such was the method ordered by the captain from the beginning, in order that the ship that happened to become separated from the others might rejoin the fleet.” Then it adds: “Thereupon the crew of the said ship did what the captain had ordered them and more, for they set two banners with their letters,” etc.

[149](#) “The island of Santa Magdalena (Mosto, p. 62, note 11).

[150](#) According to Guillemard the river of Isleo (or “of Islands”) is located on Brunswick Peninsula, and is identified with the port of San Miguel, just east of the “River of Sardines;” the island where the cross was planted would be one of the Charles Islands.

[151](#) The “Roteiro” (Stanley, p. 3) mentions that the day at the port of San Julian was about seven hours long; while the anonymous Portuguese (Stanley, p. 30) says that the sun only appeared for some “four hours each day” in June and July. Transylvanus says the nights in the strait were not longer than five hours.

[152](#) MS. 5,650 adds: “which is the collateral wind between the east and south.”

[153](#) MS. 5,650 adds: “and anchorages.”

[154](#) Various kinds of these umbelliferous parsley plants are still to be found in Patagonia, where they are highly esteemed (Mosto, p. 63, note 3).

¹⁵⁵ MS. 5,650 reads: “I do not believe that there is a more beautiful country or a better strait than that.” See Albo’s description of the strait, in VOL. I, pp. 264–265; that of Transylvanus, VOL. I, pp. 319–321; and that in *World encompassed* (Hakluyt Society edition), pp. 236, 237 (this last account also mentioning the difficulty of finding water sufficiently shallow for anchoring). The anonymous Portuguese (Stanley, p. 31) says that the strait was called the “Strait of Victoria, because the ship ‘Victoria’ was the first that had seen it: some called it the Strait of Magalhaens because our captain was named Fernando de Magalhaens.” Castanheda says that Magalhães gave it the name of “bay of All Saints” because it was discovered on November 1; and San Martin in his reply to Magalhães’s request for opinions regarding the continuance of the expedition calls it “channel of All Saints:” but this name was first applied to only one gulf or one branch and later extended to the entire channel. This name is found in the instructions given for the expedition of Sebastian Cabot in 1527, and in the map made that same year at Sevilla by the Englishman Robert Thorne. Sarmiento de Gamboa petitioned Felipe II that it be called “strait of the Mother of God.” It was also called “strait of Martin Behaim.” The anonymous Portuguese (Stanley, p. 31) says that the strait is 400 miles long. The “Roterio” (Stanley, pp. 7, 8) says that it is 100 leagues in length, and that in traversing it, they “sailed as long as it was daylight, and anchored when it was night.” Transylvanus (VOL. I, p. 320) gives the length as 100 Spanish miles; Oviedo, 100 or 110 leagues; Herrera, 100 leagues, and twenty days to navigate; Gomara, 110 to 120 leagues; Peter Martyr, 110 leagues. See Mosto, p. 60, note 10, and p. 62, note 2; and *ante*, note 130.

¹⁵⁶ These fish are: a species of *Coryphæna*; the *Thymnus albacora*, and the *Thymnus plamys*.

¹⁵⁷ From the Spanish *golondrina*, the sapphirine gurnard or tubfish (*Trigla hirundo*).

¹⁵⁸ MS. 5,650 reads: “one foot or more.”

¹⁵⁹ At this point in the original Italian MS., which ends a page, occurs the heading of the following page *Sequitur Vocabuli pataghoni*, that is,

“Continuation of Patagonian words.”

[160](#) Literally: “for the nature of women.”

[161](#) MS. 5,650 presents the following differences in the list of Patagonian words from the Italian MS.

Eyes	ather
Eyelashes	occhechl
Lips	schiane
Hair	ajchir
Throat	ohumer
Shoulders	peles
Penis	scachet
Testicles	scaneos
Rump	schiachen
Arm	mar
Pulse	ohon
Legs	choss
Feet	teche
Heel	there
Sole of the foot	cartscheni
Fingernails	colini
To scratch	ghecare
Young man	calemi
Water	oli
Smoke	jaiche
We	chen
Yes	zei
Petre lazure	secheghi
Sun	calexcheni
To eat	mecchiere
To look	conne
To walk	rhei

Ship	theu
To run	haim
Ostrich eggs	jan
The powder of the herb which they eat	capae
Red cloth	terechai
Black	amel
Red	theiche
To cook	jrecoles
A goose	chache
Their little devils	Cheleult

In the above list, *chen* corresponds in the Italian MS. to *ehen*, the equivalent of “no;” *theu* is “ship” in the above, and “snow” in the Italian; *courire* (the equivalent of *covrire* or *coprire*, “to cover”) in the Italian, becomes *courir* (“to run”) in MS. 5,650. All are to be regarded as errors of the French.

Certain words are left in Italian in MS. 5,650, which are as follows: *la copa*; *alcalcagno*; (Italian MS. *al calcagno*); *homo squerzo* (Italian MS. *squerco*); *a la pignate* (Italian MS. *pigniata*); *alstruzzo vcelo* (Italian MS. *al seruzo ucelo*); and *alcocinare* (Italian MS. *al coçinare*). Stanley offers this as proof that MS. 5,650 was written by Pigafetta, and not translated from his Italian, but it furnishes no evidence that Pigafetta even saw the French version of his relation. It must be remembered that Stanley did not himself see the Italian MS. but only the Amoretti mutilation of it (from which, and from MS. 5,650, he reproduces the vocabulary, without English translation); and hence bases his observations on that and the conjectures of its editor.

Stanley points out the fact that Amoretti has omitted several words of this list, but they are all in the Italian MS. A sad blunder has been made by Stanley in his transcription of *La pouldre dherbe qui mangent* whose Patagonian equivalent is *capac*. He transcribes as follows: *la pouldre d’herbe* with Patagonian equivalent *qui* (which it is to be noted is only the wrong form of the French relative), and *mangent* with Patagonian equivalent *capac*, explaining *mangent* in a footnote as “Food, the root used as bread.” Stanley also makes the following mistranscriptions: *orescho* for *oresche* (“nostrils”); *canneghin* for *caimeghin* (“palm of the hand”); *ochy*

for *ochii* (“bosom”); *scancos* for *scaneos* (“testicles”); *hou* for *hoii* (“buttocks”); *ohoy* for *ohon* (“pulse”); *cartschem* for *cartscheni* (“sole of the foot”); *chol* for *thol* (“heart”); *om* for *oni* (“wind”); *aschame* for *aschanie* (“earthen pot”); *oamaghei* for *oamaghce* (“to fight”); *amet* for *amel* (“black”); and *ixecoies* for *jrocoies* (“to cook”). Amoretti has also made many errors (see Stanley’s *First Voyage*, pp. 62, 63). Mosto, who is on the whole a faithful transcriber, has *sacancos* as the Patagonian equivalent of *a li testiculi*; *om jani* for *a li sui*, the correct forms of the latter being *jani* and *a li sui oui*; and *tcrechai* for the equivalent of “red cloth.” Eden (p. 252) gives only the following words: “breade, Capar: water, Oli: redde clothe, Cherecai: red colour, Cheiche: blacke colour, Amel.”

Mosto (p. 63, note 8) gives the following words from the vocabulary of the Tehuel-ches compiled by the second lieutenant of the ship “Roncagli,” which correspond almost exactly with those given by Pigafetta.

English Roncagli Pigafetta

Nose	or	or
eye	óthel	other
hand	tzén	chene
ear	sha	sane
ostrich	óyue	hoi hoi

Brinton (*American Race*, p. 328) cites Ramon Lista (*Mis exploraciones y descubrimientos en Patagonia*, Buenos Ayres, 1880) in proof that the language of the Patagonians has undergone but slight change since the time of Pigafetta. See also lists of words in Brinton (*ut supra*), p. 364, from the Patagonian and Fuegian languages. The vocabularies given by Horatio Hale (Wilkes’s *U. S. Exploring Expedition*, 1838–1842, Philadelphia, 1846, viii, pp. 651–656) bear no resemblance to Pigafetta’s vocabulary. Hale says that guttural sounds are frequent among the Indians of the Patagonian district.

¹⁶² MS. 5,650 reads: “capae.”

¹⁶³ Cf. with the methods of fire-making used by the North American Indians in *Jesuit Relations and Allied Documents* (Cleveland reissue); see *also* *Captivity of Hans Stade* (Hakluyt Society edition), p. 126.

At this point (folio 14a) in the original Italian MS. occurs the first chart, representing the straits of Magellan (see p. 86). The cardinal points in all of Pigafetta's charts are the reverse of the ordinary, the north being below and the south above. MS. 5,650 precedes this chart (which there occupies folio 21a) by the words: "Below is depicted the strait of Patagonie." Immediately following this chart in the Italian MS. (folio 15a) is the chart of the *Ysole Infortunate* ("Unfortunate Isles;" see p. 92). These islands are shown in MS. 5,650 on folio 23a, with the following notice: "Here are shown the two islands called 'Unfortunate Islands.'" The charts in the Italian MS. are brown or dull black on a blue ground.

¹⁶⁴ The "Roteiro" (Stanley, p. 9) says that Magalhães left the strait November 26 (having entered it October 21); the anonymous Portuguese (Stanley, p. 31) and Peter Martyr (Mosto, p. 65, note 1), November 27.

¹⁶⁵ MS. 5,650 reads: "And we ate only biscuits that had fallen to powder, which was quite full of worms, and stank from the filth of the urine of rats that covered it, and of which the good had been eaten." Eden (p. 252) reads: "And hauynge in this tyme confumed all theyr bylket and other vyttales, they fell into luche neceffitie that they were inforced to eate the poudre that remayned therof beinge nowe full of woormes and stynkyng lyke pyffe by reason of the falte water," Herrera (Navarrete, iv, p. 51) says that the rice was cooked with salt water.

¹⁶⁶ A curious coincidence in view of Magalhães's answer to Esteban Gomez at a council called in the strait to discuss the continuance of the voyage that "although he had to eat the cowhide wrappings of the yardarms, he would still persevere and discover what he had promised the emperor" (Navarrete, iv, p. 43; cited from Herrera). At that council André de San Martin, pilot in the "San Antonio," advised that they continue explorations until the middle of January, 1521, and then return to Spain; and urged that no farther southward descent be made, and that navigation along so dangerous coasts

be only by day, in order that the crew might have some rest (Navarrete, iv, pp. 45–49).

¹⁶⁷ MS. 5,650 reads: “enough of them.”

¹⁶⁸ This was the scurvy. Navarrete (iv, p. 54) following a document conserved in Archivo general de Indias, says that only eleven men died of scurvy during the voyage from the strait to the Ladrones.

¹⁶⁹ The anonymous Portuguese says (Stanley, p. 31) that after sailing west and northwest for 9,858 miles, the equator was reached. At the line (“Roteiro,” Stanley, p. 9), Magalhães changed the course in order to strike land north of the Moluccas, as “he had information that there were no provisions” there.

¹⁷⁰ MS. 5,650 reads: “It is well named Pacific.”

¹⁷¹ MS. 5,650 adds: “which is a large fish called tiburoni.” The anonymous Portuguese (Stanley, p. 31), says that the Unfortunate Islands were met before the line was reached and were eight hundred miles distant from one another. One was called St. Peter (in 18°) and the other the island of Tiburones (in 14°). Transylvanus (VOL. I, p. 321), Herrera, and Oviedo, say that the three vessels stopped two days at those islands for supplies, but Albo’s journal (Navarrete, iv, p. 218) indicates that no stop was made there. The “Roteiro” (Stanley, p. 9), gives the latitude of these islands as 18° or 19° and 13° or 14°. Albo (Navarrete, iv, p. 218) says that the first was discovered January 24 in 16° 15′, and was called San Pablo, because that was the date of St. Paul’s conversion; and the island of Tiburones was discovered February 4, in 10° 40′, at a distance of 9° (*sic*) from the former. Eden (p. 253) says that the second island lay in 5°. These two islands were probably Puka-puka (the Honden Eyland of the Dutch atlases) of the Tuamotu group, located in latitude 14° 45′ south, and longitude 138° 48′ west; and Flint Island of the Manihiki group, located in latitude 11° 20′ south and longitude 151° 48′ west. The latter is still uninhabited, but the former contains a population of over four hundred. See *ante*, note 163. See Guillemard, p. 220, and Mosto, p. 65, note 6.

¹⁷² MS. 5,650 reads: “now at the stern, now at the windward side, or otherwise.” Amoretti changes this passage completely, reading: “According to our measurement of the distance that we made with the chain astern, we ran from sixty to seventy leagues daily.” Many basing themselves on this passage of Amoretti, have believed that the log was in use at the time of the first circumnavigation. Dr. Breusing (*Die Catena a poppa bei Pigafetta und die Logge*, in “*Zeitschrift der Gesellschaft für Erdkunde zu Berlin*,” 1869, iv, pp. 107–115) believes that the “stern chain (*catena poppa*) is not the log properly so-called, but an instrument for determining the angle of the ship’s leeway, an opinion accepted also by Gelcich in his *La scoperta d’America e Cristoforo Colombo nella letteratura moderna* (Gorizia, 1890). L’Vzielle (*Studi bibliogr. e biogr. sulla storia della geogr. in Italia*, Roma, 1875, part ii, introduction, pp. 294–296), combats that opinion, as well as the idea that the log is meant. The difficulty of the passage, he says, hinges on the word *ho* and whether it is interpreted as a verb or a conjunction. If it be a conjunction then the passage, means “estimating by sight, the rate of the ship from the ‘bow catena,’ or at the stern” (‘catena’ being a beam perpendicular to the ship’s axis at the point near the bow where it begins to curve inward; that is, at such a point that from that place to the stern, the direction of the apparent way is parallel to the longitudinal axis of the ship) his ship made fifty, sixty, or seventy leagues.” One might suppose, if *ho* be regarded as a verb, that Pigafetta called *catena* a cross beam of the stern (the passage reading “the catena that was at the stern”); or that the disjunctive *ho*, “or” is used in place of *e*, “and,” and that Pigafetta, dividing the distance between the stern and the bow catena by the time necessary for a fixed point of the sea to pass from the elevation of the bow to that of the stern, thus deduced the ship’s rate. See Mosto, p. 66, note 1. L’Vzielli’s opinion is the most probable, for although the log is mentioned by Purchas as early as 1607, its use did not become general until 1620. An instrument used to measure the rates of vessels is mentioned as early as 1577, but it was very deficient.

¹⁷³ The “Roteiro” (Stanley, p. 6) says that this cape, which he calls “cape of the virgins” was discovered on October 21, 1520, and lay in latitude about

52° south. Barros says that it was discovered on October 20; and Transylvanus and Oviedo, on November 27. See Mosto, p. 61, note 1.

¹⁷⁴ Regarding the reckonings Eden says: “In so much that it was necessarie to helpe the needle with the lode stone (commonly cauled the adamant) before they could faile therewith, bycause it moued not as it doothe when it is in these owre partes.” Eden also gives a cut of the “starres abowt the pole Antartike.” The same author also (pp. 277–280) compiles from Amerigo Vespucci and Andreas de Corsali a treatise entitled “Of the Pole Antartike and the stars abowt the same and of the qualitie of the regions and disposition of the Elementes abowt the Equinoctiall line. Also certeyne secretes touching the arte of saylynge.” The former says: “The pole Antartike hath nother the great beare nor the lyttle as is seene abowte owre pole. But hath foure starres whiche compasse it abowt in forme of a quadrangle. When these are hydden, there is seene on the lefte syde a bryght Canopus of three starres of notable greatnesse, whiche beinge in the myddest of heauen, representeth this figure.” The latter says: “Here we sawe a marueylous order of starres, so that in the parte of heauen contrary to owre northe pole, to knowe in what place and degree the south pole was, we tooke the day with the foonne, and obserued the nyght with the astrolabie, and saw manifestly twoo clowdes of reasonable bygnesse mouynge abowt the place of the pole continually nowe rylynge and nowe faulynge, so keepynge theyr continuall course in circular mouynge, with a starre euer in the myddest which is turned abowt with them abowte. xi. degrees frome the pole. Aboue these appeareth a marueylous crosse in the myddest of fyue notable starres which compasse it abowt.... This crosse is so fayre and bewtiful, that none other heuenly gne may be compared to it....” These are the Magallanic clouds (Nuebecula major and Nubecula minor) and the constellation of the Southern Cross or Crux. The Magellanic clouds resemble portions of the milky way, Nubecula major being visible to the naked eye in strong moonlight and covering about two hundred times the moon’s surface, while the Nubecula minor, although visible to the naked eye, disappears in full moonlight, and covers an area only one-fourth that of the former. They were first observed by the Arabians. The Portuguese pilots probably called them at first “clouds of the cape.” (Mosto, p. 66, note 2). The Southern Cross, which resembles a lute rather than a cross, was first

erected into a constellation by Royer in 1679, although often spoken of before as a cross. Only one of its five principal stars belongs to the first magnitude. The cross is only 6° in extent north and south and less than that east and west.

The second chart of the plate at p. 92 represents the Ladrones Islands and occurs in the Italian MS. at this point (folio 16b). This chart is found on folio 25b in MS. 5,650, and is preceded by the inscription: “The island of the robbers and the style of their boats.”

¹⁷⁵ MS. 5,650 reads: “During that time of two months and twelve days.”

¹⁷⁶ Amoretti reads: “three degrees east of Capo Verde.” If the cape is meant, the correction is proper, but if the islands, the MS. is correct. See Mosto, p. 67, note 4.

¹⁷⁷ Cipangu is Japan, while Sumbdit Pradit may be the island of Antilia, called “Septe citade” on Martin Behaim’s globe (Mosto, p. 67, note 5). The locations given by Pigafetta prove that they did not see them, but that he writes only from vague reports. Europe first learned of Japan, near the end of the thirteenth century, through Marco Polo, who had been told in China fabulous tales of the wealth of Zipangu. This word is derived by Marco Polo from the Chinese Dschi-pen-Kuë or Dschi-pon, which the Japanese have transformed into Nippon or Nihon. See *Travels of Marco Polo*, book iii, ch. ii; and Rein’s *Japan*, p. 4.

¹⁷⁸ See VOL. I, pp. 208, 209, 210, 312, 336.

¹⁷⁹ MS. 5,650 reads: “sixty.” Transylvanus (VOL. I, p. 322) names two islands of the Ladrones Inuagana and Acacan, but says that both were uninhabited. Guillemard (*ut supra*, p. 223) conjectures these names to be identical with Agana in Guam and Sosan in Rota. Hugues (Mosto, p. 67, note 7) believes the first island visited to have been Guam, and his conjecture is undoubtedly correct.

¹⁸⁰ MS. 5,650 adds: “called skiff.”

[181](#) MS. 5,650 adds: “of the said island.”

[182](#) MS. 5,650 has a new unnumbered chapter heading before the following paragraph.

[183](#) This phrase is omitted in MS. 5,650, as is also all the following sentence; but that MS. adds: “We left the said island immediately afterward, and continued our course.” This was on March 9, on which day the only Englishman in the fleet, “Master Andrew” of Bristol, died (Guillemard, *ut supra*, p. 226).

[184](#) Eden (p. 254) says: “two hundreth of theyr boates.”

[185](#) MS. 5,650 has a new chapter at this point, although the chapter is unnumbered.

When Loaisa’s expedition reached the Ladrones, they found still alive a Galician, one of three deserters from Espinosa’s ship (see VOL. II, pp. 30, 34, 35, 110). See the reception accorded Legazpi, and a description of one of those islands in 1565, VOL. II, pp. 109–113. The “Roteiro” (Stanley, p. 9) says that the expedition reached the Ladrones, March 6, 1521 (with which Albo, Navarrete, iv, p. 219 agrees); and that after the theft of the skiff, Magellan landed with fifty or sixty men, burned the whole village, killed seven or eight persons, both men and women; and that supplies were taken aboard. The anonymous Portuguese (Stanley, p. 31) says that the Ladrones (which lay in 10°–12° north latitude, were 2,046 miles by the course traveled from the equator. Brito (Navarrete, iv, p. 308) says: “Thence [*i.e.*, the Unfortunate Islands] they laid their course westward, and after sailing 500 leguas came to certain islands where they found a considerable number of savages. So many of the latter boarded the vessels that when the men tried to restore order in them, they were unable to get rid of the savages except by lance-thrusts. They killed many savages, who laughed as if it were a cause for rejoicing.”

[186](#) MS. 5,650 adds: “or superior.”

[187](#) MS. 5,650 reads: “cloth.”

[188](#) At this point, MS. 5,650 begins a new sentence, thus: “There are found in that place.”

[189](#) MS. 5,650 reads: “Those women.”

[190](#) MS. 5,650 makes use of the Italian word *store* for *stuoje* or *stoje* meaning “mats,” and explains by adding: “which we call mats.”

[191](#) They also (according to Herrera) received the name *Las Velas*, “the sails” from the lateen-rigged vessels that the natives used (Mosto, p. 67, note 7). See also VOL. XVI, pp. 200–202.

[192](#) In MS. 5,650 this sentence reads as follows: “The pastime of the men and women of the said place and their sport, is to go in their boats to catch those flying fish with fishhooks made of fishbone.”

[193](#) Mosto (p. 68, note 5) says that these boats were the *fisolere*, which were small and very swift oared-vessels, used in winter on the Venetian lakes by the Venetian nobles for hunting with bows and arrows and guns. Amoretti conjectures that Pigafetta means the *fusiniere*, boats named after Fusine whence people are ferried to Venice.

[194](#) MS. 5,650 reads: “The said boats have no difference between stern and bow.” Albo (Navarrete, iv, p. 219), in speaking of the boats of the Chamorros, uses almost identically the same expression: “They went both ways, for they could make the stern, bow, and the bow, stern, whenever they wished.” The apparatus described by Pigafetta as belonging to these boats is the outrigger, common to many of the boats of the eastern islands.

[195](#) In the Italian MS., the chart of *Aguada ly boni segnaly* (“Watering-place of good signs”), Zzamal (Samar), Abarien, Humunu, Hyunagan, Zuluam, Cenalo, and Ybusson (*q.v.*, p. 102) follows at this point. It is found on folio 29b of MS. 5,650 and is preceded by the following: “Here is shown the

island of Good Signs, and the four islands, Cenalo, Humanghar, Ibusson, and Abarien, and several others.”

¹⁹⁶ “The tenth of March” in Eden, and the distance of Zamal from the Ladrones is given as “xxx. leagues.” Albo (Navarrete, iv, p. 220) says that the first land seen was called Yunagan, “which extended north and had many bays;” and that going south from there they anchored at a small island called Suluan. At the former “we saw some canoes, and went thither, but they fled. That island lies in 9° 40′ north latitude.” The “Roteiro” (Stanley, p. 10) says that the first land seen was in “barely eleven degrees,” and that the fleet “went to touch at another further on, which appeared first.” Two praus approached a boat sent ashore, whereupon the latter was ordered back, and the praus fled. Thereupon the fleet went to another nearby island “which lies in ten degrees, to which they gave the name of the ‘Island of Good Signs,’ because they found some gold in it.”

¹⁹⁷ This word is omitted in MS. 5,650.

¹⁹⁸ MS. 5,650 reads: “more than one foot long.”

¹⁹⁹ Since rice is an important staple among all the eastern islands, it is natural that there are different and distinctive names for that grain in the various languages and dialects for all stages of its growth and all its modes of preparation. Thus the Tagálog has words for “green rice,” “rice with small heads,” “dirty and partly rotten rice,” “early rice,” “late rice,” “cooked rice,” and many others. See also *U. S. Philippine Gazetteer*, pp. 70, 71.

²⁰⁰ MS. 5,650 reads: “In order to explain what manner of fruit is that above named, one must know that what is called ‘cochi’ is the fruit borne by the palm-tree. Just as we have bread, wine, oil, and vinegar, which are obtained from different things, so those people get the above named substances from those palm-trees alone.” See Delgado’s *Historia*, pp. 634–659, for description of the useful cocoa palm; also, *U. S. Philippine Gazetteer*, pp. 72, 73, 75.

[201](#) MS. 5,650 reads: “along the tree.” Practically the method used today to gather the cocoanut wine. See *U. S. Philippine Gazetteer*, p. 75.

[202](#) In describing the cocoanut palm and fruit, Eden (p. 254) reads: “Vnder this rynde, there is a thicke shell whiche they burne and make poudre thereof and vse it as a remedie for certeyne diseases.” He says lower, that the cocoanut milk on congealing “lyeth within the shell lyke an egge.”

[203](#) MS. 5,650 reads: “By so doing they last a century.”

[204](#) Called “Suluan” by Albo (Navarrete, iv, p. 220). It is a small island southeast of Samar. See *ante*, note 196. Dr. David P. Barrows (*Census of the Philippines*, Washington, 1905, i, p. 413), says that the men from Suluan “were perhaps not typical of the rest of the population which Magellan found sparsely scattered about the coasts of the central islands, but ... were almost certainly of the same stock from which the present Visayan people are in the main descended.” These natives had probably come, he says, “in successively extending settlements, up the west coast of Mindanao from the Sulu archipelago. ‘Sulúan’ itself means ‘Where there are Suluges,’ that is, men of Sulu or Joló.”

[205](#) MS. adds: “seeing that they were thus well dispositioned.”

[206](#) MS. 5,650 adds: “into the sea.”

[207](#) Albo calls it (Navarrete, iv, p. 220) the island of Gada (*i.e.*, *Aguada*, “watering-place”) “where we took on water and wood, that island being very free of shoals” (see *ante*, note 196). This island is now called Homonhón, Jomonjol, or Malhón. Its greatest dimensions are ten miles from northwest to southeast, and five miles from northeast to southwest. It is eleven miles southwest from the nearest point in Samar. It is called “Buenas Señas” on Murillo Velarde’s map.

[208](#) The “Roteiro” (Stanley p. 11) says that the archipelago was also called “Vall Sem Periguo,” or “Valley without Peril.” The name “Filipinas” was not applied to them until 1542 by Villalobos (see VOL. II, p. 48).

[209](#) Probably the jungle-fowl (*Gallus bankiva*) which is caught and tamed in large numbers by the natives of the Philippines and still used for crossing with the domestic fowl. See Guillemard (*ut supra*, p. 228, note 1).

[210](#) This sentence is omitted in MS. 5,650.

[211](#) MS. 5,650 reads: "In his ears he wore pendants of gold jewels, which they call 'schione.'"

[212](#) MS. adds: "whom he had put ashore on that island that they might recruit their strength."

[213](#) MS. 5,650 reads: "There is another island near the above island, inhabited by people." Mosto says (p. 70, note 6) that *picheti* is from the Spanish *piquete*, "a small hole made with a sharp pointed instrument." This custom of piercing the ears is quite general among savage, barbarous, and semi-barbarous peoples.

[214](#) Eden (p. 254) reads: "*caphranita* that is gentyles." See VOL. III, p. 93, note 29.

[215](#) This word is omitted in MS. 5,650.

[216](#) Our transcript reads *facine*, and MS. 5,650 *fascine*, both of which translate "fascines." Mosto reads *focine*, which is amended by Amoretti to *foscine*. This latter is probably the same word as *fiocina*, a "harpoon" or "eel-spear," and hence here a "dart."

[217](#) Stanley failed to decipher this word in MS. 5,650, which is the same as the word in the Italian MS. Mosto, citing Boerio (*Dizion. veneziano*), says of *rizali*: "*Rizzagio* or *rizzagno*, 'sweepnet' a fine thickly woven net, which when thrown into rivers by the fisherman, opens, and when near the bottom, closes, and covers and encloses the fish. *Rizzagio* is also called that contrivance or net, made in the manner of an inverted cone, with a barrel hoop attached to the circumference as a selvage. It has a hole underneath,

through which if the eels in the ponds slyly enter the net, there is no danger of their escape.”

Fish are caught in the Philippines by various devices—in favorable situations by traps, weirs, corrals of bamboo set along the shore in shallow waters. Various kinds of nets and seines, the hook and line, and also the spear, are also used. See *Census of the Philippine Islands* (Washington, 1905), iv, p. 533.

[218](#) MS. 5,650 reads: “Hiunanghar.” Stanley has mistranscribed “Huinanghar.” It is difficult to identify the four islands of Cenalo, Hiunanghan, Ibusson, and Abarien with certainty. Mosto (p. 71, notes) suggests that they may be Dinagat, Cabugan, Gibuson, and Cabalarián. The first three are evidently correct, as those islands would naturally be sighted in the course followed. The last island is shown in Pigafetta’s chart to be north of Malhón, and the probability is that he names and locates it merely from hearsay, and that they did not see it. Its position seems to indicate Manicani rather than Cabalarián.

After this paragraph in the Italian MS. (folio 21a) follows the chart of the islands of Pozzon, Ticobon, Polon, Baibai and Ceilon (together forming the island of Leyte), Gatighan, Bohol, and Mazzana (*sic*) (*q.v.*, p. 112). This chart in MS. 5,650 (on folio 36a) is preceded by: “Below is shown the cape of Gatighan and many other islands surrounding it.”

[219](#) Albo (Navarrete, iv, p. 220) says: “We departed thence [*i.e.*, from Malhón] and went toward the west in order to strike a large island called Seilani [*i.e.*, Leyte] which is inhabited and has gold in it. We coasted along it and took our course to the west southwest in order to strike a small island, which is inhabited and called Mazava. The people there are very friendly. We erected a cross on a mountain in that island. Three islands lying to the west southwest were pointed out to us from that island, which are said to possess gold in abundance. They showed us how it was obtained. They found pieces as large as chickpeas and beans. Masava lies in latitude 9 and two-thirds degrees north.” The “Roteiro” (Stanley, p. 11) says: “They ran on to another island twenty leagues from that from which they sailed [*i.e.*,

Malhón], and came to anchor at another island, which is named Macangor [*i.e.*, Masaua], which is nine degrees; and in this island they were very well received, and they placed a cross in it.” See also VOL. I, pp. 322, 323.

[220](#) MS. 5,650 reads: “But they moved off immediately and would not enter the ship through distrust of us.” The slave who acted as interpreter is the Henrique de Malaca of Navarrete’s list.

[221](#) *Bara*: the Spanish word *barra*.

[222](#) MS. 5,650 reads: “to ask him to give him some food for his ships in exchange for his money.”

[223](#) MS. 5,650 reads: “The king hearing that came with seven or eight men.”

[224](#) For *dorade*, *i.e.*, the dorado. MS. 5,650 adds: “which are very large fish of the kind abovesaid.”

[225](#) The ceremony of blood brotherhood. *Casicasi* means “intimate friends.” See Trumbull’s *Blood Covenant* (Philadelphia, 1898), which shows how widespread was the covenant or friendship typified by blood.

[226](#) MS. 5,650 reads: “After that the said captain had one of his men-at-arms armed in offensive armor.” Stanley has translated *harnois blanc* literally as “white armor.”

[227](#) This passage may be translated: “Thereby was the king rendered almost speechless, and told the captain, through the slave, that one of those armed men was worth a hundred of his own men. The captain answered that that was a fact, and that he had brought two hundred men in each ship, who were armed in that manner.” Eden so understood it, and reads: “whereat the Kynge marualed greatly, and layde to th[e] interpretoure (who was a flaue borne in Malacha) that one of those armed men was able to encounter with a hundreth of his men.” MS. 5,650 agrees with the translation of the text.

[228](#) Instead of this last phrase MS. 5,650 has: “and he made two of his men engage in sword-play before the king.”

[229](#) MS. 5,650 says only: “Then he showed the king the sea-chart, and the navigation compass.” Eden says (p. 348) that the first to use the compass was one “Flavius of Malpha, a citie in the kingdom of Naples.... Next vnto Flavius, the chiefe commendation is dew to the Spanyardes and Portugales by whose daylye experience, the fame is brought to further perfection, and the vse thereof better knowen; althowghe hytherto no man knoweth the cause why the iren touched with the lode stone, turneth euer toward the north starre, as playnely appeareth in euery common dyall.” He also says: “As touchynge the needle of the compasse, I haue redde in the Portugales nauigations that saylynge as farre fouth as Cap. de Bona Speranza, the poynt of the needle styll respected the northe as it dyd on this fyde the Equinoctiall, fauyng that it sumwhat trembeled and declyned a lyttle, whereby the force seemed sumwhat to be diminifshed, so that they were fayne to helpe it with the lode stone.” (See *ante*, p. 93). The compass was known in a rough form to the Chinese at early as 2634 B.C., and first applied to navigation in the third or fourth century A.D., or perhaps earlier. It was probably introduced into Europe through the Arabs who learned of it from the Chinese. It is first referred to in European literature by Alexander Neckam in the twelfth century in *De Utensilibus*. The variations from the true north were observed as early as 1269.

[230](#) Stanley says that the Amoretti edition represents the king as making this request and Magalhães as assenting thereto; but the Italian MS. reads as distinctly as MS. 5,650, that Magalhães made the request.

[231](#) MS. 5,650 omits the remainder of this sentence.

[232](#) MS. 5,650 adds: “that is, a boat.”

[233](#) The following passage relating to the meal reads thus in MS. 5,650: “Then the king had a plate of pork and some wine brought in. Their fashion of drinking is as follows. First they lift their hands toward the sky, and then take with the right hand the vessel from which they drink, while extending

the fist of the left hand toward the people. The king did that to me, and extended his fist toward me, so that I thought that he was going to strike me. But I did the same to him, and in such wise did we banquet and afterwards sup with him using that ceremony and others.” See Spencer’s *Ceremonial Institutions*, especially chapter I.

[234](#) Eden reads (p. 255): “When the kynge lawe Antonie Pigafetta write the names of many thinges, and afterwarde rehearse them ageyne, he marualed yet more, makynge fygnes that fuche men descended from heauen.” Continuing he confuses the eldest son of the first king with the latter’s brother, the second king.

[235](#) A tolerably good description of the native houses of the present day in the Philippines. Cf. Morga’s description, VOL. XVI, pp. 117–119.

[236](#) MS. 5,650 begins a new unnumbered chapter at this point.

[237](#) This sentence to this point in MS. 5,650, is wrongly made to refer to the house of the king. The passage there reads: “All the dishes with which he is served, and also a part of his house, which was well furnished according to the custom of the country, were of gold.”

[238](#) MS. 5,650 omits this sentence.

[239](#) Butuan and Caraga in the northeastern part of Mindanao.

[240](#) This name is variously rendered: Mosto, *Siain*; MS. 5,650, *Siaui*; Stanley, *Siani*; and Amoretti and Eden, *Siagu*.

[241](#) MS. 5,650 reads: “the captain sent the chaplain ashore to celebrate mass.”

[242](#) MS. 5,650 says that they took only their swords; but the Italian MS. says distinctly that a signal was given to the ships from the shore by means of muskets, and again that the musketry was fired when the kings and Magalhães separated, both of which references are omitted by MS. 5,650.

Eden reads: “The Captaine came alande with fyftie of his men in theyr best apparel withowte weapons or harnesse, and all the refydue well armed.”

[243](#) In Eden (p. 255): “damafke water.”

[244](#) MS. 5,650 reads: “but they offered nothing.”

[245](#) MS. 5,650 says: “every one did his duties as a Christian and received our Lord.”

[246](#) MS. 5,650 adds: “for the people.”

[247](#) The Italian MS. reads literally and somewhat ambiguously: “they made immediate reverence;” MS. 5,650 says “to which these kings made reverence,” which is scarcely likely, as the latter would, until told by Magalhães, see nothing in the ceremony. Rather it was the Spaniards who made the reverence.

[248](#) MS. 5,650 reads: “whenever any ships came from Spain.”

[249](#) Cf. Morga, VOL. XVI, p. 132.

[250](#) MS. 5,650 reads: “men and ships to render them obedient to him.”

[251](#) MS. 5,650 reads: “to the middle of the highest mountain,” evidently confusing *mezo di* (“afternoon”) of the Italian MS. with *mezo* (*mezzo*; “middle”); for the cross was set up on the summit of the mountain. The passage in MS. 5,650 continues: “Then those two kings and the captain rested, and while conversing, the latter had them asked [*not* “I had them asked” as in Stanley, who mistranscribes *jl (il)* as *je*] where the best port was for getting food. They replied that there were three, namely, Ceylom, Zzubu, and Galaghan, but that Zzeubu was the largest and the best trading place.” These are the islands of Leyte (the Seilani of Albo, Navarrete, iv, p. 20; and the Selani of Transylvanus, VOL. I, p. 322), Cebú, and Mindanao (the Caraga district).

[252](#) 5,650 reads simply: “Then we descended to the place where their boats were.”

[253](#) This account is very much shortened in MS. 5,650, where it reads as follows: “As the captain intended to leave next morning, he asked the king for pilots in order that they might conduct him to the ports abovesaid. He promised the king to treat those pilots as he would them themselves, and that he would leave one of his men as a hostage. In reply the first king said that he would go himself to guide the captain to those ports and that he would be his pilot, but asked him to wait two days until he should gather his rice, and do some other things which he had to do. He asked the captain to lend him some of his men, so that he could accomplish it sooner, and the captain agreed to it.” At this point MS. 5,650 begins a new unnumbered chapter.

[254](#) The billon and afterward copper coin *quattrino*, which was struck in the mints of Venice, Rome, Florence, Reggio, the Two Sicilies, etc. The quattrino of the popes was often distinguished as “quattrino Romano.” The Venetian copper quattrino was first struck in the reign of Francesco Foscari (1423–57). See W. C. Hazlitt’s *Coinage of European Continent* (London and New York, 1893), p. 226.

[255](#) *Doppione*: a gold coin struck by Louis XII of France during his occupation of the Milanese (1500–1512). Hazlitt, *ut supra*, p. 196.

[256](#) *Colona*: possibly the name of some coin of the period.

[257](#) This entire paragraph is omitted in MS. 5,650. That MS. has another chapter division at this point.

[258](#) Stanley mistranslates the French *gentilz* as “gentle.”

[259](#) Probably the abacá, although it may be the cloth made from the palm. See Morga’s description of the Visayans, VOL. XVI, p. 112.

[260](#) Cf. Morga’s *Sucesos*, VOL. XVI, pp. 80, 81.

[261](#) MS. 5,650 greatly abridges this account, reading as follows: “They cut that fruit into four parts, and after they have chewed it a long time, they spit it out and throw it away.” Cf. the account in Morga’s *Sucesos*, VOL. XVI, pp. 97–99.

[262](#) MS. 5,650 omits this product. Cf. Morga’s *Sucesos*, VOL. XVI, pp. 84–97.

[263](#) In MS. 5,650, “Mazzaua;” in Eden, “Melfana;” in Mosto, “Mazana,” while in the chart it appears as “Mazzana;” Transylvanus, “Massana;” and Albo, “Masava.” It is now called the island of Limasaua, and has an area of about ten and one-half square miles.

[264](#) Mosto mistranscribes the Italian word for “among” *fra* as *prima* “first.” The error arises through the abbreviation used, namely *f^a*, Mosto mistaking it for *p^a*, which would be *prima*.

[265](#) Stanley mistranscribes “Gatighan” from MS. 5,650 as “Satighan.” The names of the five islands as given by Eden are: “Zeilon, Bohol, Canghu, Barbai, and Catighan.” These are the islands of Leite, Bohol, Canigao (west of Leyte), the northern part of Leyte (today the name of a town, hamlet and inlet in Leyte), and possibly Apit or Himuquitan, or one of the other nearby islands on the west coast of Leyte. See chart of these islands on p. 112.

Albo (Navarrete, iv, pp. 220, 221) says: “We left Mazava and went north toward the island of Seilani, after which we ran along the said island to the northwest as far as 10 degrees. There we saw three rocky islands, and turned our course west for about 10 leguas where we came upon two islets. We stayed there that night and in the morning went toward the south southwest for about 12 leguas, as far as 10 and one-third degrees. At that point we entered a channel between two islands, one of which is called Matan and the other Subu. Subu, as well as the islands of Mazava and Suluan extend north by east and south by west. Between Subu and Seilani we spied a very lofty land lying to the north, which is called Baibai. It is said to contain considerable gold and to be well stocked with food, and so great an extent of land that its limits are unknown. From Mazava, Seilani,

and Subu, on the course followed toward the south, look out for the many shoals, which are very bad. On that account a canoe which was guiding us along that course, refused to go ahead. From the beginning of the channel of Subu and Matan, we turned west by a middle channel and reached the city of Subu. There we anchored and made peace, and the people there gave us rice, millet, and meat. We stayed there for a considerable time. The king and queen of that place and many of the inhabitants readily became Christians.” The “Roteiro” (Stanley, p. 11) says that the king of Macangar (*i.e.*, Mazaua) conducted the Spaniards “a matter of thirty leagues to another island named Cabo [*i.e.*, Cebú], which is in ten degrees, and in this island Fernando de Magalhães did what he pleased with the consent of the country.” Brito says merely (Navarrete, iv, p. 308): “After that, after passing amid many islands, they reached one called Mazaba, which lies in 9 degrees. The king of Mazaba conducted them to another large island called Zubó.”

[266](#) MS. 5,650 reads: “only one of them.” *Barbastili* is a Venetian word for *pipistrelli*. These bats are the Pteropi or “flying foxes,” the large fruit-eating bats of which so many species inhabit the Malay Archipelago. Bats are especially found in Guimarás, Siquijor, and Cebú, and the skins of some are used as fur. See Guillemard (*ut supra*, p. 235). See also Delgado’s *Historia*, pp. 842, 843; and *U. S. Philippine Gazetteer*.

[267](#) Stanley mistranslates as “tortoises.” The “black birds with the long tail” are the tabón “mound-building *Megapodes*, gallinacious birds peculiar to the Austro-Malayan subregion” (Guillemard’s *Magellan*, p. 235). See also VOL. V, p. 167, note 14, and VOL. XVI, page 198, note 43; also VOL. XVI, p. 81, note 84.

[268](#) These are the Camotes, which lie west of Leyte, and their names are Poro, Pasijan, and Pansón. See Pigafetta’s chart showing these islands on p. 112.

[269](#) Following this point in the Italian MS. (folio 26a) is the chart of the islands of Bohol, Mattam, and Zzubu (*q.v.*, p. 136).

MS. 5,650 presents this chart on folio 51a, preceded by the words: “Below are shown the islands of Zzubu, Mattan, and Bohól.”

[270](#) MS. 5,650 reads: “But the interpreter reassured them by telling them.”

[271](#) MS. 5,650 reads: “and he was going, by the orders of the said sovereign, to discover the islands of Mallucque.”

[272](#) MS. 5,650 reads: “Thereupon the abovesaid merchant said to the king in their language,” etc., without giving the original Malay words. Eden gives the phrase as *catacaia chita*.

[273](#) Calicut, properly Kálíkot (said to be derived from two words meaning cock-crow, because the territory granted to the first king of Kálíkot was limited to the extent over which a cock could be heard to crow; or from Káli, one of the names of the goddess Gauri) is the name of a district and city on the Malabar coast. The king of all the Malabar coast from Goa to Cape Comorin, Samari Perymal, having adopted the Mahometan faith divided his kingdom into the kingdoms of Calicut, Cochin, Cananor, and Coulão, and gave them to his friends, on condition that the king of Calicut be termed “Zamorim” or “Samorim,” *i.e.*, “Supreme emperor and God upon earth” (although the proper form is said to be “Tamurin” which is conjectured by some to be a modification of the Sanskrit “Samunri,” “seaking.” The city of Kálíkot, a noted emporium of trade, was built perhaps as early as 805 A.D., although the date 1300 A.D. is also given as that of its founding; and is described by Ibn Batuta in 1342 as one of the finest ports in the world. It was visited by Covilham in 1486, and Vasco da Gama’s ships were freighted there in 1498. The latter attacked the city in 1503 and 1510, and the Portuguese built a fortified factory there in 1513 which was destroyed by the governor in 1525 to avoid its falling into the enemy’s hands. The English established a factory in the city in 1616, which was captured in 1766 by Haidar Ali; but after a further series of capture and recapture, the city and district was permanently turned over to the British (1792). See Stanley’s *Vasco da Gama* (Hakluyt Society publications, London, 1869); Birch’s *Alboquerque* (Hakluyt Society publications, London, 1875–1884); Jones and Badger’s *Ludovico di Varthema* (Hakluyt

Society publications, London, 1863), pp. 135–177; also Grey's *Travels of Pietro della Valle* (Hakluyt Society publications, London, 1892), pp. 344, 345, note.

Malacca, or more correctly Mâlaka is the name of an ancient territory and city, which was probably first settled by Javanese, and is possibly derived from “Malayu” meaning in Javanese “to run” or “fugitive.” At an early period Malacca fell under the sway of the Siamese. The city, located on both sides of the Malacca River, and only one hundred and thirty miles northwest of Singapore (which has usurped the great volume of trade once centering at Malacca) was founded about 1250 A.D. The first European to visit the city was Varthema, about the year 1505. It was captured by the Portuguese under Albuquerque in 1511, and they held it (1580–1640 under Spanish control) until 1641 when it was captured by the Dutch, who had unsuccessfully besieged it, with the aid of the king of Jahor, in 1606. The English obtained possession of it in 1795, and still hold it, although the Dutch possessed it from 1818–1825. For descriptions and history of Malacca, see the following Hakluyt Society publications: Stanley's *East Africa and Malabar* (London, 1866), pp. 190–195; Birch's *Albuquerque*, iii, pp. 71–90 (and other citations); Burnell and Tiele's *Linschoten* (London, 1885), i, pp. 104–106; Gray's *Voyage of François Pyrard* (London, 1888), part i, p. ii. Also see Crawford's *Dictionary*, pp. 238–249.

The terms India Major (Greater India) and India Minor (Lesser India) are differently applied by different authors. Schiltbergen applied the term Lesser India to the northern portion of the peninsula on this side of the Ganges, while the southern portion of the peninsula was termed Greater India. Marco Polo's Lesser India extended from Makran to and including the Coromandel coast, and his Greater India extended from the Coromandel coast to Cochin China, while Middle India was Abyssinia. Mosto wrongly identifies India Major with the present Indian empire. See Telfer's *Johann Schiltberger* (Hakluyt Society publications, 1879). Friar Jordanus (*Wonders of the East*, Hakluyt Society edition, London, 1863), describes (pp. 11–45) India the Less, India the Greater, and India Tertia. Yule points out that Jordanus's Lesser India embraces Sindh, and probably Mekran, and India along the coast as far as some point immediately north of Malabar. Greater

India extends from Malabar very indefinitely to the eastward, for he makes it include Champa. India Tertia is the east of Africa below Abyssinia. Thus Jordanus just reverses the Lesser and Greater Indias of Marco Polo. Ramusio who gives the *Summary of Kingdoms* of an old Portuguese geographer, ends First India at Mangalore, and Second India at the Ganges. Benjamin of Tudela speaks of "Middle India which is called Aden." Conti divides India into three parts: the first extending from Persia to the Indus, the second from the Indus to the Ganges, and the third all the land beyond. Pliny discusses whether Mekran and other lands belonged to India or Ariana.

[274](#) MS. 5,650 adds: "and treat his subjects well."

[275](#) This phrase is omitted in MS. 5,650.

[276](#) MS. 5,650 adds: "who was in the captain's ship."

[277](#) MS. 5,650 reads: "Thereupon the king told them that he was willing, and that as a greater token of his love, he would send the captain a drop of his blood from his right arm, and [asked] the captain to do the same."

[278](#) MS. 5,650 reads: "Consequently they should ask their captain whether he intended to observe the custom."

[279](#) MS. 5,650 reads: "he should commence by giving a present, whereupon the captain would do his duty." This MS. begins another chapter at this point.

[280](#) MS. 5,650 reads: "so do our arms destroy the enemies of our faith."

[281](#) MS. 5,650 adds: "of the ships."

[282](#) MS. 5,650 reads: "and whether that prince who had come with them, was empowered to make peace."

[283](#) MS. 5,650 omits these last two clauses.

[284](#) This phrase is omitted in MS. 5,650.

[285](#) MS. 5,650 adds: “and for love toward God.”

[286](#) MS. 5,650: “he would leave them the arms that the Christians use.”

[287](#) These last two clauses are omitted in MS. 5,650.

[288](#) MS. 5,650 adds: “of Sainct Jacques [*i.e.*, Santiago].”

[289](#) This sentence is omitted in MS. 5,650.

[290](#) Called “drynking glaffes of Venice woorke” in Eden (p. 257).

[291](#) MS. 5,650 reads: “He had his face painted with fire in various designs.” Eden reads: “and had the residue of his body paynted with dyuers coloures whereof fum were lyke vnto flamynge fyre.”

[292](#) MS. 5,650 reads: “he had four jars full of palm-wine, which he was drinking through reed pipes.”

[293](#) MS. 5,650 reads: “We made the due reverence to him while presenting to him the present sent him by the captain, and told him through the mouth of the interpreter that it was not to be regarded as a recompense for his present which he had made to the captain, but for the love which the captain bore him.” This MS. omits the following three sentences.

[294](#) The “Sinus Magnus” of Ptolemy, today the Chinese Gulf (Mosto, p. 76, note 3).

[295](#) This passage is considerably abbreviated in MS. 5,650, where it reads as follows: “The prince, the king’s nephew, took us to his house, where he showed us four girls who were playing on four very strange and very sweet instruments, and their manner of playing was somewhat musical. Afterward he had us dance with them. Those girls were naked except that they wore a garment made of the said palm-tree cloth before their privies and which

hung from the waist to the knee, although some were quite naked. We were given refreshments there, and then we returned to the ships.” These gongs are used in many parts of the Orient.

[296](#) MS. 5,650 adds: “by the captain’s order.”

[297](#) MS. 5,650 reads: “we told him of the death of our man, and that our captain requested that he might be buried.”

[298](#) MS. 5,650 adds: “according to our manner.”

[299](#) MS. 5,650 reads: “The king took it under his charge, and promised that no trickery or wrong would be done the king. Four of our men were chosen to despatch and to sell the said merchandise.”

[300](#) MS. 5,650 reads: “They have wooden balances like those of Pardeca to weigh their merchandise.” *Pardeca*, as Stanley points out, is for *par de ça de Loire* which is equivalent to *Langue d’oil*, and denotes the region in France north of the Loire. *Par de la* meant Languedoc. This passage was adapted to the French understanding by the person who translated and adapted the Italian manuscript.

[301](#) This sentence is omitted in MS. 5,650. As Mosto points out the measure here mentioned would be one of capacity, and must have been the common measure for rice, perhaps the ganta.

[302](#) *Lagan* is a shellfish found in the Philippines which has a shell resembling that of the *Nautilus pompilius* that is used for holding incense or as a drinking vessel. This shell is very white inside, while the exterior is spotted a pale yellow color. It resembles mother-of-pearl, and is very common. Delgado says that most of the shellfish, are indigestible but highly esteemed. See Delgado’s *Historia*, p. 928.

[303](#) MS. 5,650 adds: “Which was of various strange kinds.”

[304](#) Eden says: “xvi. poundes weyght of iren.”

[305](#) MS. 5,650 reads: “The captain-general did not wish to take too great a quantity of gold, so that the sailors might not sell their share in the merchandise too cheaply, because of their lust for gold, and so that on that account he should not be constrained to do the same with his merchandise, for he wished to sell it at as high a price as possible.”

[306](#) MS. 5,650 adds: “or any other balls”

[307](#) MS. 5,650 makes the two armed men follow instead of precede the royal banner.

[308](#) MS. 5,650 adds: “and the natives of the country for their fear of it, fled hither and thither,” which is in place of the following sentence.

[309](#) This sentence is omitted in MS. 5,650.

[310](#) MS. 5,650 reads: “One covered with red and the other with velvet.”

[311](#) MS. 5,650 adds: “in the manner of the country.”

[312](#) The account of the baptism of the king is considerably abridged in MS. 5,650 where it reads as follows: “Then the captain began to address the king through the interpreter, in order that he might incite him to the faith of Jesus Christ. He told him that if he wished to become a good Christian (as he had signified on the preceding day), that he must have all the idols of his country burned and set up a cross in their place, which they were all to adore daily on both knees, with hands clasped and raised toward the heaven. The captain showed the king how he was to make the sign of the cross daily. In reply the king and all his men said that they would obey the captain’s commandment, and do all that he told them. The captain took the king by the hand, and they walked to the platform. At his baptism the captain told the king that he would call him Dom Charles, after the emperor his sovereign. He named the prince Dom Fernand, after the brother of the said emperor, and the king of Mazzaua, Jehan. He gave the name of Christofle to the Moro, while he called each of the others by names according to his fancy. Thus before the mass fifty men [sic: but an error of

the French adapter for five hundred] were baptized. At the conclusion of mass, the captain invited the king and the others of his chief men to dine with him, but he would not accept. However, he accompanied the captain to the shore, where, at his arrival, the ships discharged all the artillery. Then embracing they took leave of one another.” Eden gives the number baptized as five hundred men.

[313](#) MS. 5,650 reads: “On seeing that, she expressed the greatest desire to become a Christian, and asking for baptism, she was baptized and given the name of Jehanne, after the emperor’s mother.”

[314](#) There are many cases of this wholesale baptism in the history of the Catholic missions in various countries, and it cannot be condemned entirely and regarded as devoid of good effects, for many instances reveal the contrary. See *Jesuit Relations* (Cleveland reissue).

[315](#) Those last six words are omitted in MS. 5,650. Mosto conjectures that *solana* means *solecchio* or *solicchio* signifying an apparatus to protect one from the sun. Pigafetta may have misapplied the Spanish word *solana*, which signifies a place bathed by the noontide sun or a place in which to take the sun.

[316](#) This last clause is omitted in MS. 5,650.

[317](#) MS. 5,650 adds: “and we gave it to her.” This was the image found by one of Legazpi’s soldiers in Cebú in 1565 (see VOL. II, pp. 120, 121, 128, 216, 217; and VOL. V, p. 41). Encarnación (*Dic. bisaya-español*, Manila, 1851), says: “The Cebuan Indians, both past and present, give the name of *Bathála* [God] to the image of the Holy Child, which is supposed to have been left by the celebrated Magallanes.”

[318](#) MS. 5,650 reads: “evening.”

[319](#) MS. 5,650 mentions only the artillery. The “tromb” or “trunk” was a kind of hand rocket-tube made of wood and hooped with iron, and was used for discharging wild-fire or Greek-fire (see Corbett’s *Spanish War*, 1585–87

[London], 1898, p. 335). At this point Stanley discontinues the narrative of MS. 5,650, and translates from Amoretti's version of the Italian MS.

[320](#) MS. 5,650 reads: "to better instruct and confirm him in the faith."

[321](#) Eden says the queen was preceded by "three younge damofelles and three men with theyr cappes in theyr handes."

[322](#) MS. 5,650 adds: "and presentation."

[323](#) MS. 5,650 reads simply for this last clause: "and several others," omitting all the names.

[324](#) MS. 5,650 reads: "and they all so swore."

[325](#) MS. 5,650 reads from this point: "Then they swore, and thus the captain caused the king to swear by that image, by the life of the emperor his sovereign, and by his habit, to ever remain faithful and subject to the emperor," thus ascribing this oath to the king instead of to Magalhães. The words "by his habit" can refer only to Magalhães, who wore that of Santiago, and not to any habit worn by the barbaric ruler of Cebú.

[326](#) MS. 5,650 adds: "and hang."

[327](#) MS. 5,650 adds: "and deck."

[328](#) MS. 5,650 adds: "and demolished."

[329](#) MS. 5,650 adds: "and overthrew."

[330](#) There is a strange difference between the Italian MS. and MS. 5,650 in regard to these names. The latter reads to this point: "There are a number of villages in that island, whose names and those of their chiefs are as follows: Cinghapola, Cilaton, Ciguibucan, Cimaningha, Cimaticat, and Cicambul; another, Mandaui, and its chief and seignior, Lambuzzan; another Cot-cot, and its chief, Acibagalen; another, Puzzo, and its chief, Apanoan; another,

Lalan, and its chief, Theteu; another, Lulutan, and its chief, Tapan [Amoretti, followed by Stanley, says Japau, and Mosto, Iapan]; another Cilumay; and also Lubucun.” Amoretti, who places this list after the disastrous battle and consequent treachery of the Cebuans, and Stanley, have “Lubucin: its chief is Cilumai.” Mandaui is Mandaue; Lalan may be Liloan; Cot-cot is on the east coast; Lubucun may be Lubú, but Mosto (p. 78, note 3) conjectures it to be Lambusan. An examination of the Nancy MS. may reveal the source of this difference.

[331](#) MS. 5,650 adds after the word *borchies*: “instruments so called.”

[332](#) Probably cotton cloth. See Stanley’s *East African and Malabar Coasts*, p. 65: “They make there [*i.e.*, in Cambay] many cloths of white cotton, fine and coarse, and other woven and colored fabrics, of all kinds and colours.”

[333](#) MS. 5,650 adds: “and closed.”

[334](#) MS. 5,650 reads: “She who has killed the hog, puts a lighted torch in her mouth, which she extinguishes, and which she holds constantly alight with her teeth during that ceremony.”

[335](#) Cf. the ceremonies of the *baylanes* described by Loarca, VOL. V, pp. 131, 133, and by Chirino, VOL. XII, p. 270.

[336](#) *Otorno*: Mosto, p. 79, mistranscribes *otoro*, and queries *Attorno* in a note.

[337](#) MS. 5,650 omits the description of this custom, giving only the first and last sentence to this point. Stanley omits the translation to this point. See VOL. V, p. 117, and VOL. XVI, p. 130, where Loarca and Morga describe this custom.

[338](#) *Valzi*: Mosto queries *vasi*, “jars,” which appears probable.

[339](#) MS. 5,650 adds: “made in the manner abovesaid;” but this was crossed out, showing that the writer or adapter of that MS. had at first intended to

narrate the custom that is given in the Italian MS.

³⁴⁰ This word is omitted in MS. 5,650.

³⁴¹ MS. 5,650 reads: “The other women sit about the dead chamber sadly and in tears.”

³⁴² Pigafetta uses the present and imperfect tenses rather indiscriminately throughout this narration, but we have translated uniformly in the present. Cf. Loarca’s description of burial and mourning customs among the Visayans, VOL. V, pp. 129, 135, 137–141; Plasencia’s description among the Tagálogs, VOL. VII, pp. 194, 195; and Morga, VOL. XVI, p. 133.

³⁴³ MS. 5,650 reads: “five or six hours.”

³⁴⁴ Eden in describing the island of Matan confuses the Pigafetta narrative. He says: “Not farre from this Ilande of Zubut, is the Hand of Mathan, whose inhabitauntes vfe maruelous ceremonies in theyr sacrifices to the loone and burying the deade. They were rynges of gold abowt theyr priuie members.” In the description of the battle in Matan, Eden says that each of the three divisions of the islanders contained “two thouland and fiftie men armed with bowes, arrowes, dartes and iauelins hardened at the poyntes with fyer.”

³⁴⁵ To this point the Italian MS. and MS. 5,650 agree approximately. The story of the battle in the latter MS., however, is much abridged and much less graphic. It is as follows: “They replied that they had bamboo spears and stakes burned and hardened in the fire, and that we could attack them when we wished. At daybreak, forty-nine of us leaped into the water, in the place whither we had thus gone, at a distance of more than three [*sic*] crossbow flights before we could reach shore, for the boats could not approach nearer because of the rocks and reefs which were in the water. Thus we reached land, and attacked them. They were arranged in three divisions, of more than one thousand five hundred persons. We shot many arrows at them from a distance, but it was in vain, for they received them on their shields. They leaped hither and thither in such a way that scarce could we wound one of them. On the other hand, our artillery in the boats was so far away from us

that it could not aid us. Those people seeing that, and that the captain had had some of their houses burned in order to inspire them with terror, and having become more enraged, threw so many iron pointed spears at us, and shot so many arrows even at the captain himself that we could defend ourselves with difficulty. Finally, having been driven by them quite down to the shore, and while our captain was fighting bravely although wounded in the leg with an arrow, one of those Indians hurled a poisoned bamboo lance into his face which laid him stiff and dead. Then they pressed upon us so closely that we were forced to retire to our boats and to leave the dead body of the captain-general, with our other killed.” The eulogy on the dead commander is approximately the same in both MSS., except at the end, where MS. 5,650 reads: “Eight of our men died there with him, and four Indians, who had become Christians. Of the enemy fifteen were killed by the artillery of the ships, which had at last come to our aid, while many of us were wounded.”

Brito (Navarrete, iv, p. 308) says of the stay at Cebú and the death of Magalhães: “They stayed there about one month, and the majority of the people and the king became Christians. The king of Zubó ordered the kings of the other islands to come to him, but inasmuch as two of them refused to come, Magallanes, as soon as he learned it, resolved to go to fight with them, and went to an island called Mathá. He set fire to a village, and not content with that, set out for a large settlement, where he, his servant, and five Castilians were killed in combat with the savages. The others, seeing their captain dead, went back to their boats.”

³⁴⁶ *Terciado*: a Spanish word.

³⁴⁷ *Carteava*: a Spanish word.

³⁴⁸ The “Roteiro” (Stanley, p. 12) dates the battle April 28. The account of the battle is as follows: “Fernan de Magalhães desired that the other kings, neighbours to this one, should become subject to this who had become Christian: and these did not choose to yield such obedience. Fernan de Magalhães seeing that, got ready one night with his boats, and burned the villages of those who would not yield the said obedience; and a matter of

ten or twelve days after this was done, he sent to a village about half a league from that which he had burned, which is named Matam, and which is also an island, and ordered them to send him at once three goats, three pigs, three loads of rice, and three loads of millet for provisions for the ships; they replied that for each article which he sent to ask them three of, they would send to him by twos, and if he was satisfied with this they would at once comply, if not, it might be as he pleased, but that they would not give it. Because they did not choose to grant what he demanded of them, Fernan de Magalhães ordered three boats to be equipped with a matter of fifty or sixty men, and went against the said place, which was on the 28th day of April, in the morning; there they found many people, who might well be as many as three thousand or four thousand men, who fought with such a good will that the said Fernan de Magalhães was killed there, with six of his men, in the year 1521.”

³⁴⁹ Navarrete (iv, pp. 65, 66) gives the names of the men killed with Magalhães on April 27 as follows: Christóbal Rabelo, then captain of the “Victoria;” Francisco Espinosa, a sailor; Anton Gallego, a common seaman; Juan de Torres, sobresaliente and soldier; Rodrigo Nieto, servant of Juan de Cartagena; Pedro Gomez, servant of Gonzalo Espinosa; and Anton de Escovar, sobresaliente, wounded but died April 29.

³⁵⁰ See VOL. I, pp. 325, 326, note 215*.

³⁵¹ MS. 5,650 gives this name as Duart Bobase, although lower it is spelled Barbbase. Duarte or Odoardo Barbosa, the son of Diogo Barbosa, who after serving in Portugal, became alcaide of the Sevilla arsenal, was born at Lisbon at the end of the fifteenth century. He spent the years 1501–1516 in the Orient, the result of that stay being his *Livro emque dà relação do que viu e ouviu no Oriente*, which was first published at Lisbon in 1813 in vol. vii of *Collecção de noticias para a historia et geographia das nações ultramarinas*, and its translation by Stanley, *A description of the coasts of East Africa and Malabar* (Hakluyt Society publications, London, 1866). He became a clerk in the Portuguese factory at Cananor under his uncle Gil Fernandez Barbosa, and became so expert in the Malabar language that he was said to speak it even better than the natives. On account of his facility

in the language he had been appointed commissioner by Nuno da Cunha to negotiate peace with the Zamorin. He was commissioned in 1515 to oversee the construction of some galleys by Alboquerque. While at Sevilla, Magalhães lived in the household of Diogo Barbosa, where he married Duarte's sister Beatriz. Duarte embarked on the "Trinidad" as a sobresaliente, and it was he who captured the "Victoria" from the mutineers at Port St. Julian, after which he became captain of that vessel. Failing to recover Magalhães body from the natives of Mactán, he was himself slain at Cebú at the fatal banquet May 1, 1521. Besides the above book, which is a most valuable contribution to early Oriental affairs, there is extant in the Torre do Tombo a letter written by him from Cananor, January 12, 1513, complaining of the Portuguese excesses. See Guillemard's *Magellan*; Stanley's *Vasco da Gama*; Birch's *Alboquerque*; and Hoefer's *Nouvelle Biographie Générale* (Paris, 1855)

³⁵² See *ante*, note 147.

³⁵³ Magalhães married Beatriz Barbosa, daughter of Diogo Barbosa in Sevilla, probably in the year 1517. One son Rodrigo was born of the union, who was about six months old at the time of the departure. Rodrigo died in September, 1521, and in the March following Beatriz died. See Guillemard, *ut supra*, pp. 89–91, 322.

³⁵⁴ MS. 5,650 adds: "and to advise the Christian king."

³⁵⁵ Mosto transcribes this word wrongly as *facente*, "busy." MS. 5,650 reads: "wiser and more affectionate than before."

³⁵⁶ MS. 5,650 adds: "and presents."

³⁵⁷ The constable was Gonzalo Gomez de Espinosa, who was left behind with the "Trinidad" and was one of the four survivors of that ill-fated vessel, returning to Spain long after.

³⁵⁸ This sentence is confused in MS. 5,650, reading: *jehan Caruaie auецques le barifel fen retournerêt qui nous dirent comment jlz auoyent veu*

mener celluy quy fut guery par miracle et le prestre a fa maison et que pour cela jlz fen estoyent partiz eulx doubtans de quelque male aduanture. By dropping the first *et* this becomes equivalent to the text.

[359](#) MS. 5,650 reads: “for we would kill him.”

[360](#) MS. 5,650 reads: “But Jehan Carvaie, his comrade, and others refused, for fear lest they would not remain masters there if the boat went ashore.”

In regard to João Serrão’s death, Brito (Navarrete, iv, p. 309) says: “As soon as the men in the ships saw that slaughter, they hoisted their anchors, and tried to set sail in order to return to Burneo. At that juncture, the savages brought Juan Serrano, one of those whom they wished to ransom, and asked two guns and two bahars of copper for him, besides some Brittanias or linens such as they carried in the ships as merchandise of trade and barter. Serrano told them to take him to the ship and he would give them what they asked, but they, on the contrary, insisted that those things be taken ashore. But [the men in the ships] fearing another act of treachery like the past, set sail, and abandoned that man there, and nothing more was heard of him.”

[361](#) The “Roteiro” (Stanley, p. 13) says nothing about the banquet, but says that the men, twenty-eight in number, counting the two captains, went ashore to ask pilots to Borneo, whereupon the natives, who had determined upon their course of action attacked and killed them. Peter Martyr (Mosto, p. 81, note 5) asserts that the violation of the women by the sailors was the cause of the massacre. Concerning the number killed, Brito (Navarrete, iv, p. 309) says that thirty-five or thirty-six men went ashore, and Castanheda and Gomara say thirty, the last asserting that a like number were made slaves, of whom eight were sold in China. Peter Martyr places the number of the slain at twelve. Navarrete (iv, pp. 66, 67) gives the names of those massacred as follows:

Duarte Barbosa	captain of the “Trinidad”
Juan Serrano	captain of the “Concepcion”
Luis Alfonso de Gois	captain of the “Victoria”

Andres de S. Martin	pilot of his Majesty
Sancho de Heredia	notary
Leon de Ezpeleta	notary
Pedro de Valderrama	priest
Francisco Martin	cooper
Simon de la Rochela	calker
Cristóbal Rodriguez	steward
Francisco de Madrid	sobresaliente and soldier
Hernando de Aguilar	servant of Luis de Mendoza
Guillermo Fenesi or Tanaguì	gunner of the “Trinidad”
Anton Rodriguez	sailor
Juan Sigura	sailor
Francisco Picora	sailor
Francisco Martin	sailor
Anton de Goa	common seaman
Rodrigo de Hurrira	common seaman
Pedro Herrero	sobresaliente
Hartiga	sobresaliente
Juan de Silva, Portuguese	sobresaliente
Nuño	servant of Magallanes
Henrique, from Málaga	servant of Magallanes and interpreter
Peti Juan, French	servant of Magallanes
Francisco de la Mezquita	servant of Magallanes
Francisco	son-in-law of Juan Serrano

All of these names are to be found in Navarrete’s list. See *ante*, note 26.

³⁶² *Chiacare*: the nangca; see VOL. XXXIV, p. 107, where Pigafetta describes and names this fruit. Mosto confuses it with the *durio xibethenus*, which is abundant in the western islands of the Indian archipelagoes, Mindanao being the only one of the Philippines where it is found

(Crawfurd, *Dictionary*); but it is the *Artocarpus integrifolia* (see VOL. XVI, p. 88, note 72). MS. 5,650 makes this “capers.”

[363](#) MS. 5,650 omits mention of the panicum, sorgo, garlic, and nangcas.

[364](#) MS. 5,650 reads: “one to the east northeast, and the other to the west southwest.”

[365](#) MS. 5,650 adds: “and eleven minutes.”

[366](#) Stanley says wrongly 154°.

[367](#) This word ends a page in the original Italian MS. On the following page is a repetition of the title: *Vocabili deli populi gentilli*, that is “Words of those heathen peoples.” MS. 5,650 does not contain this list, and it is also omitted by Stanley.

[368](#) See *ante*, note 160.

[369](#) *Bassag bassag* does not correspond to “shin,” but to “basket for holding clothes, etc.,” or “cartilage of the nose;” or possibly to *basac basac*, “the sound made by falling water.”

[370](#) The equivalent of Pigafetta’s *dana* is *daoa* or *daua*, “millet.” *Mais*, probably the equivalent of *humas* is the word for “panicum.”

[371](#) *Tahil* is found in the Tagalog dictionaries, and is the name of a specific weight, not weight in general. It is the Chinese weight called “tael,” which was introduced by the Chinese into the East Indies, whence it spread throughout the various archipelagoes. See Crawfurd’s *Dictionary*; and VOLS. III, p. 192, note 57; IV, p. 100, note 11; and VII, p. 88.

[372](#) See Note 582, *post*.

[373](#) Tinapay (used also by the Bicolis to denote any kind of bread) denotes a kind of cake or loaf made with flour and baked about the size of a

chocolate-cup saucer. Two of these are put together before baking with some sugar between. The word is extended also to wheat bread and to the hosts. See Encarnación's *Diccionario*.

³⁷⁴ Amoretti's conjectured reading of *sonaglio* ("hawk's-bell") for *conaglio* (see Mosto, p. 83), proves correct from the Visayan dictionaries.

³⁷⁵ *Baloto* signifies a canoe dug out of a single log. One of twenty varas in length is termed *bilis*, while the hull alone is called *dalámas*.

³⁷⁶ Most of the words of Pigafetta's Visayan vocabulary can be distinguished in the dictionaries of that language, although it is necessary to make allowance at times for Pigafetta's Italian phonetic rendering. Following is a list of the words that can be distinguished from *Diccionario bisaya-español y español-bisaya* (Manila, 1885), by Juan Félix de la Encarnación, O.S.A. (Recollect); and *Diccionario Hispano-bisaya y bisaya-español* (Manila, 1895) by Antonio Sanchez de la Rosa, O.S.F. See also *Pocket dictionary of the English, Spanish and Visayan languages* (Cebu, 1900) by H. M. Cohen; and Mallat's *Les Philippines* (Paris, 1846), ii, pp. 175–238. The words queried in the following list are simply offered as conjectural equivalents.

<i>English</i>	<i>Visayan</i>		
	(<i>Pigafetta</i>)	(<i>Encarnación</i>)	(<i>Sanchez</i>)
man	lac	——	lalaqui (?)
woman (married)	babay	babaye	babaye
hair	boho	bohóc	bohoc
face	guay	——	bayhon (?)
eyebrows	chilei	quilay	quiray
eye	matta	matà	mata
nose	ilon	ilong	irong
jaw	apin	aping	aping
mouth	baba	bá-ba	bábá

teeth	nipin	ngipon	ngipon
gums	leghex	lagos	lagus
tongue	dilla	dila	dila
ear	delenghan	dalonggan	doronggan
throat	liogh	liog	——
chin	queilan	solang (?)	sulang (?)
beard	bonghot	bongot	bongot
shoulder	bagha	abaga	abaga
spine [backbone]	licud	licod	licod
breast	dughan	doghan	dughan
body	tiam	tian	tian
armpit	ilot	iloc	iroc
arm	botchen	bocton; botcon	butcon
elbow	sico	sico	sico
hand	camat	camot	camut
palm of hand	palan	palad [sa camot]	palad [sa camut]
finger	dudlo	todlo	tudlo
fingernail	coco	coco	coco; colo
navel	pusut	posad	posud
penis	utin	otin	otin
testicles	boto	boto	boto
vagina	billat	bilat	bilat
buttocks	samput	sampot	——
thigh	paha	paa	paa
knee	tuhud	tohod	tohud
calf of leg	bitis	bitiis	bíti-is
ankle	bolbol	bool bool	boco boco
heel	tiochid	ticód	ticud
sole of foot	lapa lapa	lapa lapa	——
gold	balaoan	buláoan	bulauan

silver	pilla	pilác	——
brass	concach	calonggáqui	——
iron	butan	pothao	puthao
sugarcane	tube	tobó	tubo
honey	deghex	dogos	dugos

polo

napoló

napolo

Some of the words present difficulties however, due probably to error on Pigafetta's part and the obstacles in the method of communication between peoples the genius of whose respective languages is entirely distinct. The general Visayan word for "man" is *tao* or *tauo*, although Mallat gives a form *dala*, which may correspond to the *lac* of Pigafetta (but see VOL. V, p. 123, where the origin of the words *lalac*, "man," and *babaye*, "woman," are given by Loarca). *Babaye* (*babae*) is the general word for "woman" or "married woman;" while *binibini* is given by Mallat as the Tagalog equivalent of "girl," and by Santos in his *Vocabulario de la lengua tagala* (Manila, 1835) as the equivalent of "influential woman." *Liog* is used for both "throat" and "neck." *Tian* is properly "belly," and the mistake would arise naturally in Pigafetta pointing to himself when desiring the word for "body," which would be construed by the natives to that particular part toward which he happened to point. *Boto* is used for both the male and female generative organs, especially the latter, as well as for the testicles. *Britiis* corresponds to both "shin" and "calf of the leg." *Iro* denotes also the civet cat. *Bulan* the equivalent of Pigafetta's *bolon* is the word for "moon" instead of "star." The occurrence of what are today Tagalog forms in Pigafetta's list shows how the various dialects shade into one another and how the one has retained words that have sunk into disuse in the other.

[377](#) Preceding this paragraph in the Italian MS. (folio 38b) is the chart of the island of Panilonghon (Panisonghon; *q.v.*, p. 202). It is given on folio 51a of MS. 5,650, preceded by the words: "Below is shown the islands of Panilonghon."

[378](#) The "Roteiro" (Stanley, pp. 13, 14) says that the captains elected in place of those killed at Cebú were "Joam Lopez [Carvalho], who was the chief treasurer" to "be captain-major of the fleet, and the chief constable of the fleet" to "be captain of one of the ships; he was named Gonzalo Vaz Despinosa." Pigafetta makes no mention at all of Elcano, who brought the "Victoria" home; both the above captains remaining with the "Trinidad." When the "Concepcion" was burned, only one hundred and fifteen men were left for the working of the two ships (see Guillemard, *ut supra*, p.

267), although the “Roteiro” (Stanley, p. 14) says one hundred and eight men, and Barros, one hundred and eighty.

[379](#) In Eden: “Paulloghon, where they founde blacke men lyke vnto the Sarafins.” This is the island of Panglao and the “black men” are the Negritos. See W. A. Reed’s *Negritos of Zambales*, published by Department of the Interior “Ethnological Survey Publications” ii, part i (Manila, 1904), which says (p. 20) that the only large islands, besides Luzón, inhabited at present by Negritos are Panay, Negros, Mindanao, and Paragua, although they do inhabit some of the smaller islands. The pure type is decreasing through marriage with the Bukidnon or mountain Visayans; and (p. 22) “so far there is no evidence that Negritos exist on Cebu, Bohol, Samar, and Leyte. The Negrito population of the Philippines is probably not in excess of 25,000. The U. S. census report of 1900 gives to Panglao a population of 14,347, all civilized. See also *Census of the Philippines*, i, pp. 411, 415, 436, 468, 478, 532, 533.

[380](#) MS. 5,650 reads: “When entering that house, we were preceded by many reed and palmleaf torches.”

[381](#) These two words are omitted in MS. 5,650.

[382](#) See Crawford’s *Dictionary*, pp. 368, 369, on the origin and use of rice in the eastern islands, and the etymology of the native names for that grain; and *Census of the Philippines*, iv.

[383](#) Instead of this last clause, MS. 5,650 reads: “where he slept with his principal wife.”

[384](#) MS. 5,650 reads: “in the houses of the king.”

[385](#) MS. 5,650 reads: “little valleys.”

[386](#) Cf. VOL. III, pp. 56, 57.

[387](#) MS. 5,650 reads: “boat.”

[388](#) MS. 5,650 reads: “Calanoa;” and Eden: “Calauar.”

[389](#) MS. 5,650 reads: “one hundred and sixty-six;” and Eden: “170.”

[390](#) Albo (Navarrete, iv, p. 221) reads as follows when relating the course of the ships on leaving Cebú: “We left Subu and sailed southwest to a latitude of 9 and three-fourths degrees, between the end of Subu and an island called Bohol. Toward the western end of Subu lies another island, by name, Panilongo, which is inhabited by blacks. That island and Subu contain gold and considerable ginger. The former lies in 9 and one-third degrees and Subu in 10 and one-third degrees. Accordingly we left that channel and went 10 leguas south and anchored in the island of Bohol. There we made two ships of the three, burning the third, because we had no men. The last-named island lies in 9 and one-half degrees. We left Bohol and sailed southwest toward Quipit, and anchored at that settlement on the right hand side of a river. On the northwest and open side are two islets which lie in 8 and one-half degrees. We could get no food there, for the people had none, but we made peace with them. That island of Quipit contains a quantity of gold, ginger, and cinnamon. Accordingly, we determined to go in search of food. The distance from the headland of Quipit to the first islands is about 112 leguas. It and the islands lie in an east by north and south by west direction; and this island [*i.e.*, Mindanao] extends quite generally east and west.”

The “Roteiro” (Stanley, p. 14) calls the port of Quipit (which is located on the northeastern coast of Mindanao) Capiyam or Quype. Carvalho gave the boat of the burned ship to the inhabitants of that place. Brito (Navarrete, iv, p. 309) says that they learned the location of Borneo at Mindanao. Quipit becomes Gibith in Transylvanus, Chipico in Peter Martyr, and Quepindo in Barros (see Mosto, p. 84, note 2).

[391](#) The first European mention of the island of Luzón. Luzón is derived from the Malay *lâsung* (Tagalog, *losong*), “mortar.” See Crawford’s *Dictionary*, pp. 222, 223.

[392](#) Pigafetta evidently means the Chinese by the Lequians who are known to have carried on trade for many years with the Philippines, and who indeed, once owned them.

Following this paragraph in the Italian MS. (folio 40a) is the chart of Caghaiaim (*q.v.*, p. 202). This chart is shown on folio 53b in MS. 5,650, preceded by the words: “Below is shown the island of Caghaian.”

[393](#) MS. 5,650 does not mention the cuirasses.

[394](#) Eden reads: “40. leagues.”

[395](#) Albo (Navarrete, iv, p. 221) says: “We left that place [*i.e.*, Quipit] and sailed west southwest, southwest, and west, until we came to an island containing very few inhabitants and called Quagayan. We anchored in the northern part of that island, where we asked for the location of the island of Poluan, in order to get provisions of rice, for that island contains it in abundance, and many ships are laden there for other districts. Accordingly we sailed west northwest and came across the headland of the island of Poluan.” The “Roteiro” (Stanley, p. 14) calls Cagaiaim, Caram. It is the island of Cagayan Sulu, which lies northeast of Borneo.

[396](#) The “Roteiro” (Stanley, p. 15) says that the ships contained only sufficient provisions for a week.

[397](#) Eden reads: “C.lxxix. degrees and a third parte.” MS. 5,650 reads: “one hundred and sixty-one and one-third degrees.”

[398](#) Occurrences at Palawan are given as follows by Albo (Navarrete, iv, pp. 221, 222): “Then we sailed north by east along the coast [of Palawan] until we reached a village called Saocao, where we made peace. Its inhabitants were Moros. We went to another village of Cafres, where we bartered for a considerable quantity of rice, and consequently laid in a good supply of provisions. That coast extends northeast and southwest. The headland of its northeastern part lies in 9 and one-third degrees, and that of the southwestern part in 8 and one-third degrees. Then on returning to the

southwest quite to the headland of this island, we found an island near which is a bay. In this course and along Poluan many shoals are found. This headland lies east and west with Quipit and northeast by east and southwest by west with Quagayan.”

The “Roteiro” (Stanley, pp. 15–17) gives a fuller account of occurrences at Palawan. At the first settlement at which they attempt to land, the natives prove hostile, whereupon they go toward another island, but contrary weather compelling them to anchor near Palawan, they are invited ashore on that island by the people of another village. There one of the soldiers, Joam de Campos, lands alone in order to get provisions. Being received kindly at this port, named Dyguasam (perhaps Puerto Princesa), the people set about preparing provisions for the strangers. Then going to another nearby village, where Carvalho makes peace with the chief, provisions of rice, goats, and swine are bought. At the latter village, a Portuguese-speaking negro who has been baptized at the Moluccas, is met, who promises to guide them to Borneo, but he fails them at the last moment. Capturing a prau and three Moros near the former village, they are guided to Borneo. Brito (Navarrete, iv, p. 309) says that the two ships remained a month in Palawan, “a rich country, where they got new directions about Burneo, and captured two men to guide them there.”

At this point in the Italian MS. (folio 41a) follows the chart of Sundan and Pulaoam (*q.v.*, p. 210). MS. 5,650 shows it on folio 54b, where it is preceded by the words: “Chart of the island of Pulaoan and the port of Tegozzao.”

³⁹⁹ MS. 5,650 reads: “all.”

⁴⁰⁰ This passage is defective in MS. 5,650, where it reads as follows: “They have bows with wooden arrows more than one palmo long, some of which are pointed with long sharp fishbones, poisoned with poisonous herbs, while others are tipped with poisoned bamboo.”

⁴⁰¹ MS. 5,650 reads: “mace.” Jannetone as pointed out by Mosto (p. 85, note 4) was a missile weapon.

[402](#) Cockfighting is still the great diversion of the Malays and Malasian peoples. See Wallace's *Malay Archipelago* (New York, 1869), p. 477; and Bowring's *Visit to Philippine Isles* (London, 1859). pp. 149–153.

[403](#) Eden reads: “fyue leaques.”

[404](#) From the Spanish word *almadia*, (a sort of canoe used by the inhabitants of the East Indies; also a boat used by the Portuguese and their slaves in the East Indies: generally of one single tree, although there are various kinds, to one of which is given the name *coche*, “carriage”) which is derived from the Arabic *al-madia* or *almadiya*, from the root *adar*, “to cross,” so called because those vessels are used in crossing rivers.—Echegaray's *Dic. etimológico* (Madrid, 1887).

[405](#) This word is omitted in MS. 5,650.

[406](#) Gomara says there were eight (Mosto, p. 86, note 1).

[407](#) MS. 5,650 reads: “a red cap.”

[408](#) MS. 5,650 omits the remainder of this sentence.

[409](#) MS. 5,650 adds “and seigniors.”

[410](#) Stanley makes the unhappy translation “with naked daggers in their hands, which they held on their thighs.”

[411](#) Cf. the account of the reception accorded the captain of a Portuguese vessel in Borneo in 1578, VOL. IV, pp. 222, 223, where the king is found playing chess.

[412](#) This clause is omitted in MS. 5,650.

[413](#) The city of Brunei or Brunai. See Guillemard's *Magellan*, pp. 269–373. See also descriptions of Bornean villages in Wallace's *Malay Archipelago*;

and Forest's account of Brunai quoted by Crawford (*Dictionary*, p. 70), who mentions the boat-markets held by the women.

⁴¹⁴ MS. 5,650 reads: "twenty or twenty-five thousand." Crawford (*Dictionary*, p. 70) thinks that Pigafetta overstates the population, and that he probably gained his information from a Malay courtier.

⁴¹⁵ MS. 5,650 reads: "the women and daughters."

⁴¹⁶ *Cherita-tulis*, "writers of narratives" (Stanley, p. 114); *jurutulis*, "adepts in writing" (Crawford's *Dictionary*, p. 61).

⁴¹⁷ MS. 5,650 reads: "timghuly."

⁴¹⁸ Ortelius (*Theatrum orbis terrarum*) calls this region "Lao" (see also chart on p. 210) and Mercatore (*Atlas sive cosmographicae meditationes*) "Lave." It may possibly be the modern island of Laut off the southeast of Borneo. (See Mosto, p. 87, note 3). Crawford (*Dictionary*, p. 72) conjectures that it is some place in Banjarmasin.

⁴¹⁹ The journey to Borneo, events there, and a description of Borneo are thus described by Albo (Navarrete, iv, p. 222): "We sailed from Poluan to Borney. Coasting the above named island [*i.e.*, Poluan] to its southwest headland, we discovered an island with a shoal on its eastern side, and which lies in 7 and one-half degrees, so that we had to deviate to the west for about fifteen leguas. Then we sailed southwest coasting along the island of Borney to a city of the same name. You must needs know that the land must be approached closely, for there are many shoals outside, and one must keep the sounding line in constant use, for it is a harsh coast. Borney is a large city with a very large bay. Both inside and outside of it are many shoals, so that a native pilot of that place is necessary. We remained there for a considerable number of days, and commenced to trade there and made firm friendship. But later, many canoes, in number 260, were equipped to capture us and came upon us. When we saw them, we left hurriedly, and sailed out of the bay, whereupon we saw some junks coming. We went to them and captured one, in which was a son of the king of Luzon. The latter

is a very large island. The captain afterward let him go [*i.e.*, the prince of Luzón] without asking advice of anyone. Borneo is a large island which yields cinnamon, mirabolans, and camphor, the last named of which is much esteemed in these lands, and it is said that when people die they are embalmed with it. Borneo (that is, the port of Borneo) lies in a latitude of 5 degrees and 25 minutes, and a longitude of 201 degrees and 5 minutes from the line of demarcation.”

The “Roteiro” (Stanley, pp. 17–20) says that while on the way to Borneo, the ships anchor at islands which they call the islets of St. Paul (now, the Mantanani Islands—Guillemard, *Magellan*, p. 269) at a distance of two and one-half or three leagues from Borneo. Proceeding past a lofty mountain (Kina Balu—Guillemard) in Borneo, they coast that island to the port of Borneo. Anchoring in that port, the Moro pilots captured at Palawan are sent ashore with one of the crew, and on reaching the city of Borneo, they are taken before the Shahbender of Borneo. The two ships draw in closer to the city and establish trade with the natives. Gonzalo Gomez Espinosa is chosen ambassador to the king to whom he takes a present. After a stay of twenty-three days in Borneo, the men in the ships fearing treachery from the evolutions of a number of praus and junks, attack and capture one of the latter with twenty-seven men. Next morning the junk commanded by the son of the king of Luzon and ninety men, are captured. Of the seven men ashore the king sends two to the ships, but retains the others, whereupon the ships leave, taking with them fourteen men and three women of those captured in the junks. While sailing back over their downward course, the “Trinidad” grounds on a point of the island of Borneo, where it remains for four hours until swung clear by the tide.

Brito in his account (Navarrete, iv, pp. 309, 310) says that the Borneans fear at first lest the strangers be Portuguese and that their object is conquest, but finally being reassured by Espinosa who takes a present to the king, pilots are promised as far as Mindanao. During their stay of a month at Borneo, two Greeks desert the ships. Three others, among them Carvalho’s son, are ashore when the fear of attack instigated by the two Greeks leads the two ships to attack the Borneans, and the five men are left behind on the island.

The island of Borneo, the largest island (properly so-called) in the world, is mentioned first by Varthema (*Travels*, Hakluyt Society edition), pp. 246–248. See also Crawford’s *Dictionary*, pp. 57–66. See also Henry Ling Roth’s *Natives of Sarawak and British North Borneo* (London, 1896) in two volumes, which is an excellent work on modern conditions in Borneo.

⁴²⁰ The word “junk” is probably derived from the Malay *Jong* or *Ajong* “a great ship.” For a description of these ships, see Yule’s *Cathay* (Hakluyt Society publications, London, 1866), ii, pp. 417, 418.

⁴²¹ MS. 5,650 reads: “If venom or poison be put in a vase of fine porcelain, it breaks immediately.” In accordance with this reading we have added in brackets in the Italian the word *veleno*, i.e., “poison,” which seems to have been omitted by the amanuensis. Mosto (p. 88, note 3) quotes the following from Marcantonio Pigafetta’s *Itinerario da Vienna a Constantinopoli* (p. 208), when speaking of the present brought to Sultan Selim II by the Persian ambassador which consisted of “eight dishes [*piati firuarii*] which break if any one puts poison in them. Those *piati firuarii* are made of the substance which we call porcelain, and are made in China, the province situated in the extreme outskirts of the Orient. They are made of earth, which is kept for more than fifty years buried in the earth, in order to refine it, and which is buried by the father for his son. Thus it passes from hand to hand.” See also Yule’s *Cathay*, ii, p. 478; and Burnell and Tiele’s *Linschoten* (Hakluyt Society publications), i, pp. 129, 130.

⁴²² The small brass, copper, tin, and zinc coins common throughout the eastern islands were called “pichis” or “pitis,” which was the name of the ancient Javanese coin, now used as a frequent appellative for money in general. Chinese coins were early in general use throughout the southern islands of the eastern archipelagoes. See Crawford’s *Dictionary*, pp. 285–288.

⁴²³ The cate or catty. See VOL. XVIII, p. 141, note 32.

⁴²⁴ MS. 5,650 mentions only the six porcelain dishes, the wax, and the pitch, for the last eighty, instead of forty, cathils, of bronze being traded.

The bahar of the Italian MS. becomes “barrel” or “cask” in the French. The *anime* (pitch) may have been one of the numerous resins yielded by various trees in the Philippines (see *Report of Philippine Commission*, 1900, iii, 282, 283).

[425](#) MS. 5,650 omits this word.

[426](#) Spectacles were invented in the thirteenth century; and the credit for the invention is assigned to Alessandro di Spina, a Florentine monk, or to Roger Bacon.

[427](#) MS. 5,650 reads: “not to wash the buttocks with the left hand; not to eat with it.”

[428](#) Stanley (p. 116) omits a portion of this paragraph. He says that had Pigafetta been a Spaniard or Portuguese, he would not have written as he did concerning the Mahometan laws, as he would have been better informed. Notwithstanding the fact that Stanley was a convert to Islamism and a student of that faith, some of these practices may have been introduced into Borneo, as the rites there being far from their center, may have become vitiated or imperfectly learned in the first place. For instance, that the law was not strictly observed there is seen from the fact recorded by Pigafetta that they used the intoxicant arrack.

[429](#) MS. 5,650 says simply that the camphor exudes in small drops. The Malay camphor tree (*dipterocarpus* or *Dryabalanops camphora*) is confined, so far as known, to a few parts of the islands of Sumatra and Borneo, where it is very abundant. The oil (both fluid and solid) is found in the body of the tree where the sap should be, but not in all trees. The Malay name for camphor is a slight corruption of the Sanskrit one “karpura,” and to distinguish it from the camphor of China and Japan, the word Barus is annexed (the name of the seaport of the western coast of Sumatra, whence camphor was chiefly exported from that island). The Malay variety is higher priced than the Chinese. See Crawford’s *Dictionary*, p. 81.

⁴³⁰ MS. 5,650 omits mention of the turnips and cabbages, and adds: “hinds.”

⁴³¹ Immediately following this paragraph in the Italian MS. are three charts: 1. On folio 45b, the chart of Burne (*q.v.*, p. 210), at the lower (*i.e.*, northern) end of which is a scroll reading “Here are found the living leaves;” found on folio 60b of MS. 5,650, preceded by the words “Chart of the island of Burne and the place where the living leaves are found.” 2. On folio 46b, the chart of Mindanao, which is divided into the districts of Cippit, Butuam, Maingdanao, Calagan, and Benaian (*q.v.*, p. 230); found on folio 63a of MS. 5,650, preceded by the words “Chart of five islands—Benaian.” 3. On folio 47a, the chart of the islands of Zzolo [*i.e.*, Joló], Tagima, and Chaut and Subanìn, (*q.v.*, p. 230), accompanied by a scroll reading “Where pearls are produced;” found on folio 63b of MS. 5,650, preceded by the words “Chart of the islands of Zzolo, Caut, Tagima, and others.”

⁴³² Cape Sampanmangio (Guillemard, p. 274). See *ante*, note 418.

⁴³³ MS. 5,650 omits this sentence.

⁴³⁴ The “Roteiro” (Stanley, p. 20) also narrates the capture of this junk.

⁴³⁵ In Eden: “Cimbubon, beinge. viii. degrees aboue the Equinoctiall lyne. Here they remayned. xl. to calke theyr shyppes and furnyffe them with fresshe water and fuell.” Cimbubon is probably Banguay or one of the neighboring islets between Borneo and Palawan. It is called in the “Roteiro” (Stanley, p. 21), port Santa Maria de Agosto, (St. Mary of August) because it was reached on the fifteenth of August, the day of our Lady of August. It is assigned a latitude of fully seven degrees. Herrera says that the ships were overhauled on Borneo itself. Guillemard (p. 274) interprets Pigafetta wrongly by saying that he assigns the careening place as Palawan or Paragua.

⁴³⁶ MS. 5,650 reads: “two and one-half feet long.”

⁴³⁷ Cf. Transylvanus, VOL. I, pp. 330, 331. The *Tridacna gigas*, described by Delgado, *Historia*, p. 929, under the name of *taclobo*. Colin asserts that he saw one of the shells which was used as a watering-trough and another as a holy-water font. The shells sometimes attain a length of five or six feet, and weigh hundreds of pounds. The natives burn them for lime. See *Official Handbook of Philippines* (Manila, 1903), p. 152.

⁴³⁸ Mosto (p. 89, note 8) conjectures this to be a fish of the family of the *Squamipen*, perhaps of the genus *Heniochus*.

⁴³⁹ *Coca*: An Italian word formed from the Spanish word “chocar” “to jostle” (Mosto, p. 89, note 9). The living leaves, were the insects of the genus of Phyllium of the order of the *Orthoptera*. They are known as walking leaves from their resemblance to a leaf.

⁴⁴⁰ This sentence is omitted in MS. 5,650. Eden says that Pigafetta kept the leaf “for the space of viii. dayes.”

⁴⁴¹ The date of the departure was September 27, 1521. At this place João Carvalho was deposed from the chief command for his high-handed measures and non-observance of royal orders, and retook his old position as chief pilot. Espinosa was elected in his place and Elcano was chosen captain of the “Victoria.” See Navarrete, iv, pp. 73, 289, 292, 294.

⁴⁴² Basilan; see VOL. III, p. 168, note 44.

⁴⁴³ The true pearl oysters of the Philippine Islands are found along the coasts of Paragua, Mindanao, and in the Sulu Archipelago, especially in the last named, where many very valuable pearls are found. These fisheries are said to rank with the famous fisheries of Ceylon and the Persian Gulf. The mother-of-pearl of the shells is more valuable than the pearls. The Sultan of Joló claims the fisheries as his own and rents them out, but always has trouble with the lessees, and his ownership is disputed by the datos. The pearl fishery has figured in a treaty between that sultan and the United States government. See *Affairs of Philippines, Hearing before U. S. Senate Committee* (Washington, 1902), part i, p. 18; *Official Handbook of*

Philippines (Manila, 1903), p. 153; and *Census of Philippine Islands* (Washington, 1905), pp. 534–536. An early interesting account of pearl-fishing is given by Eden (Arber’s edition), pp. 213, 214.

⁴⁴⁴ MS. 5,650 reads: “fifty.”

⁴⁴⁵ Cáuit is a point and bay on the west coast of Zamboanga, Mindanao; Subanin refers to a portion of Zamboanga; and the island of Monoripa is perhaps the island of Saccol, located at the southeastern end of the Zamboanga province. “Subanim” says Dr. Barrows (*Census of the Philippines*, i, p. 416) “suggests a settlement of the present aborigines of that part of Mindanao, who are known as Subanon. Here, too, they saw the notorious ‘sea-gypsies,’ the Bajau or Sámal Laut, whose wandering boats, then as now, shifted their stations with the changing of the Monsoon.”

⁴⁴⁶ Crawford (*Dictionary*, p. 100) says that the cinnamon of Mindanao is not very strong or valuable; but the *Official Handbook of Philippines* (Manila, 1903) says (p. 114) that a cinnamon of stronger taste and fragrance is found in Zamboanga, Caraga, and the mountain districts of Misamis, than that of Ceylon, although containing a bitter element that depreciates its value, but which can be eliminated by cultivation. Many of the old writers describe the plant and its cultivation, one of the earliest being Varthema (Hakluyt Society edition), p. 191. Pigafetta’s etymology of the Malay word is correct.

⁴⁴⁷ Mosto (p. 90) mistranscribes *biguiday*, and Stanley has (p. 121), *bignaday*. Perhaps it is the *biniray*, a boat resembling a large banca, or the *binitan* (see Pastells’s *Colin*, i, p. 25).

⁴⁴⁸ MS. 5,650 reads: “seventeen men seemingly as bold and ready as any others whom we had seen in those districts.”

⁴⁴⁹ Stanley says (p. 122) that this was attributed by a newspaper of 1874 to the Battas of Sumatra. Semper found the custom of eating the heart or liver of their slain enemies among the Manobos in eastern Mindanao (Mosto, p.

91, note 2). Tribes of Malayan origin living in northern Luzón are said to have ceremonial cannibalism (*Official Handbook of Philippines*, p. 158).

⁴⁵⁰ MS. 5,650 reads: “twenty.”

⁴⁵¹ At this point in the Italian MS. (folio 50a) is found the chart of Ciboco, Biraban Batolach, Sarangani, and Candigar (*q.v.*, p. 238). This chart is shown on folio 65a of MS. 5,650, preceded by the words: “Chart of the four islands of Ciboco, etc.”

⁴⁵² Albo (Navarrete, iv, p. 223) calls these two islands Sibuco and Virano Batolaque, the first of which Mosto (p. 91, note 3) conjectures to be Sibago, and the second (note 4), part of the southern portion of Mindanao. The first conjecture is probably correct if we take Albo’s word that the two ships turned to the southeast after passing the island Sibuco; and the fact that the main west coast east of Zamboanga is remarkably free of islands, lends color to the second.

⁴⁵³ The islands of Balut and Sarangani, just south of the most southern point of Mindanao.

⁴⁵⁴ MS. adds: “who are St. Elmo. St. Nicholas, and St. Clara.”

⁴⁵⁵ It is just such acts as this bit of lawlessness, together with the unprovoked capture of inoffensive vessels, that show that the discipline of the ships had in great measure disappeared with the loss of Magalhães. Such acts amounted to nothing less than piracy.

⁴⁵⁶ These islands are of the Carcaralong or Karkaralong group south of Mindanao. Mosto conjectures Cabaluzao (Cabulazao on the chart) to be the island of Kabalusu, and that of Lipan, to be Lipang. Valentyn’s *Oud en Nieuw Oost-Indien* (Dordrecht and Amsterdam; 1724), i, between pp. 36 and 37, shows a group of islands at about this location with the names Lirong (Lipan ?), Karkelang, Cabroewang Noessa (Nuza ?), Karkarotang, and Karotta.

⁴⁵⁷ At this point in the Italian MS. occur two charts: 1. On folio 51a, the islands of Cauiao, Cabiao, Cabulazao, Lipan, Cheava, Camanuca, Cheai, Nuza, and Sanghir (*q.v.*, p. 242); in MS. 5,650 shown on folio 65b, preceded by the words: “Chart of the islands of Sanghir etc.” 2. On folio 51b, the islands of Cheama, Carachita, Para, Zangalura, Ciau, Paghinzara, Talaut, Zoar, and Meau (*q.v.* p. 246); in MS. 5,650, on folio 66b, preceded by the words: “Chart of the islands of Meau, etc.”

Sanghir (now Sanguir) is called Sanguin by Albo (Navarrete, iv, p. 223), and by Castanheda (Mosto, p. 92, note 1).

⁴⁵⁸ Of these islands (some of them in the Talantse group) Cheama is Kima; Carachita is Karakitang; Para still retains that name, or is called Pala; Zanghalura is Sangalong or Sangaluan; Ciau is Siao or Sian; Paghinzara (so called by Albo, *ut supra*) figures on Valentyn’s map (*ut supra*, note 457) as Pangasare, though the same island seems also to be called Tagulanda, so that Guillemard is right in his identification of this island; it is identified with the island of Roang by the British Admiralty map of 1890, while Mosto conjectures that it may be the island of Biaro. See Guillemard’s *Magellan*, map, facing p. 226; and Mosto, p. 92, notes 2–7.

⁴⁵⁹ MS. 5,650 gives this name as “Babintau.” That MS. adds: “All those islands are inhabited by heathens,” and continuing, reads: “There is an island called Talant east of Cheama.”

⁴⁶⁰ Talaut is evidently one of the Tulus islands east of Sanguir. Zoar (called Suar by Albo) and Meau may be the islands of Meyo and Tifore. See Guillemard (*ut supra*), and Mosto, p. 92, notes 8–10. The geography of the islands of the East India groups has not yet been set forth in a detailed and masterly manner, or definite proportions given to it, although it is a subject that merits enthusiastic research and labor.

⁴⁶¹ Eden reads (p. 259): “the fyxte daye of Nouember and the. xxvii. monethe after theyr departure owt of Spayne.”

⁴⁶² MS. 5,650 adds: “by which they were deceived.”

Albo's narrative (Navarrete, iv, pp. 222–224) of the events of the two ships from the time they leave Borneo to the arrival at the Moluccas is as follows: "We left Borney, and returned by the road whence we had come, and consequently took the channel between the headland of the island of Borney and Poluan. Turning west [*sic*] we went toward the island of Quagayan, and thus we went by that same route in search of the island of Quipit toward the south. On this course between Quipit and Cagayan, we saw to the southward an island called Solo, where many very large pearls are to be found. The king of that island is said to have a pearl as large as an egg. That island lies in a latitude of 6 degrees. While on that course, we came across three small islets and farther on we met an island called Tagima, where many pearls are said to be found. The latter island lies northeast by east and southwest by west with Solo. Tagima lies in a latitude of 6 and five-sixths degrees, and is located opposite the headland of Quipit. Many islets lie between those two islands, and one must take to the open as he approaches Quipit. The abovenamed headland lies in 7 and one-fourth degrees, and extends southeast and west northwest with Poluan.

"Thence we coasted the island of Quipit going toward the south. Turning east by south we sailed toward certain rocky islets. Along the coast many settlements are passed, where considerable excellent cinnamon grows, and for which we traded. That coast also produces a quantity of ginger. Then we sailed northeast until we saw a gulf, whereupon we turned southeast until we saw a large island. There is a very large settlement extending from that point to the eastern headland of the island of Quipit, and at the headland of the said island. Considerable gold is obtained there from a very large river. That headland lies 91 and one-half degrees from the meridian.

"We left Quipit for Maluco and turned southeast, where we saw an island called Sibuco. Then we turned south southeast, where we saw another island called Viramo Batolaque, continuing along that same course to the head of that island. Then we saw another island called Candicar, and sailed eastward between the two islands until we reached a point some distance ahead, and at that place we entered a channel between Candicar and another island called Sarangani. We anchored at the latter island and took a pilot for Maluco. Those two islands lie in 4 and two-thirds degrees, while the

headland of Quipit lies in 7 and one-fourth degrees, the headland of Sibuco in 6 degrees south latitude, and the headland of Virano Batolaque in 5 degrees. From the headland of Quipit and Candicar, the course is north northwest and south southeast without meeting any headland.

“We left Sarangani and sailed south by east until we reached the right side of an island called Sanguin. Between the two islands lie a number of islets lying toward the west. Sanguin lies in 3 and two-thirds degrees.

“From Sanguin we sailed south by east to an island called Sian. Between those islands lie many rocky islets. The latter island lies in exactly 3 degrees.

“We sailed south by west to an island called Paginsara, which lies in 10 and one-sixth degrees. The course from that island to Sarangani is north by east and south by west and all those islands are sighted.

“From Paginsara we sailed south by east until we reached a position midway between two islets which lie northeast and southwest from one another. The one to the northeast is called Suar and the other Mean. The first lies in 1 degree 45 minutes and the other in 1 and one-half degrees.

“We sailed south southeast from Mean, until we sighted the islands of the Malucos. Then we turned east and entered a channel between Mare and Tidori, where we anchored. We were received there with the utmost friendliness and established a firm peace. We built a house ashore in order to trade with those people, and abode there many days until the ships were laden.”

The “Roteiro” (Stanley, pp. 20–23) says that after leaving Borneo, a small junk laden with cocoanuts was overhauled and captured, and that shortly after the ships were careened for repairs in the port of St. Mary of August (see *ante*, note 435). Steering southwest on again setting sail, they come to the island of Fagajam (Cagayan) and that of Seloque (Solo or Joló), where they learn that pearls are abundant. Next they reach Quipe (Quipit), running between it and the island of Tamgym (Tagima). “And always running along the coast of the said island, and going thus, they fell in with a parao laden

with sago in loaves, which is bread made of a tree which is named cajare, which the people of that country eat as bread. This parao carried twenty-one men, and the chief of them had been in Maluco in the house of Francisco Serram, and having gone further along this island they arrived in sight of some islands which are named Semrryn.” A guide to Maluco is bargained for, but after arrangements are concluded he attempts to play false, whereupon he and some others are captured. The natives attempt pursuit but are unable to overtake the two ships. Next day sighting an island, and a calm coming upon them, while the currents drew the vessels in toward shore, the old pilot escapes. Continuing they sight “three high mountains belonging to a nation of people whom they call the Salabos [Celebes?],” and shortly after desiring to take water at a small island, they are deterred by one of their native pilots, who assures them that the people are hostile. “While still in this neighborhood, they saw the islands themselves of Maluco, and for rejoicing they fired all the artillery, and they arrived at the island on the 8th of November of 1521, so that they spent from Seville to Maluco two years, two months and twenty-eight days, for they sailed on the 10th of August of 1519.”

The anonymous Portuguese (Stanley, p. 31) places the distance from the Ladrones to the Moluccas at 1,000 miles, the archipelago of St. Lazarus “where there occur many islands” intervening.

At this point in the Italian MS. are found two charts, as follows: 1. On folio 52b, a chart of the islands of Hiri, Tarenate, Mastara, and Giallonlo (*q.v.*, p. 250), with the inscription “All the islands shown in this book are in the other hemisphere, at the antipodes;” probably the same chart appears on folio 73b of MS. 5,650 preceded by the words (in a different hand than most of that MS.): “Here follow the cloves.” 2. On folio 53a, a chart entitled “Maluco,” showing the islands Tadore, Mare, Pulongha, Mutir, and Machiam (*q.v.*, VOL. XXXIV, p. 72), with a tree bearing the inscription “*Cauì gomode*, that is, cloves;” shown on folio 74a of MS. 5,650, preceded by the words: “Description of the clove trees; how they grow; season for gathering; method of finding the best; and also of nutmegs.”

[463](#) Eden (p. 259) says that they entered port “before the ryfinge of the foone.”

[464](#) MS. 5,650 adds: “by astrology.”

[465](#) This sentence is omitted in MS. 5,650.

[466](#) MS. 5,650 omits the drinking-cups.

[467](#) From this point this sentence reads as follows in MS. 5,650: “To some others we gave either silk cloth or some knives, or caps.”

[468](#) This sentence is omitted in MS. 5,650.

[469](#) MS. 5,650 reads: “a royal presence and eloquence.”

[470](#) “Mauzor” in Eden (p. 259).

[471](#) MS. 5,650 does not mention the “quintalada.” The quintalada was a per cent of the freight or of the lading space of the ship allowed the officers and crew of sailing vessels. The amount allowed to each of the officers and crews of Magalhães’s fleet was specified in section 74 of the instructions given by Carlos I to Magalhães and Falero at Barcelona, May 8, 1519. The amounts (see Navarrete, iv, pp. 150–152) are as follows:

Following are declared the quintaladas which shall be laden in the ships about to sail to the spice regions, and the amount which each one shall lade, from which he will pay the twenty-fourth part to his Highness.

	Quintaladas
First, Fernando de Magallanes and Falero, captains-general of the said fleet will be allowed sixty quintals of cabin space [cámara] apiece	60
<i>Item:</i> of quintalada, and twenty quintals apiece, these twenty to be stowed below decks, and the cabin space above decks	20
The other three captains shall each be allowed forty quintals of cabin space, ten of them quintalada	40
Treasurer, twenty quintals of cabin space, and one quintalada below decks	22
Accountant, a like amount of twenty-two quintals	22
Notaries of the ships, fifteen [sic] quintals of cabin space and one quintalada	22
Alguacil of the fleet, six quintals and one quintalada	8
The sailors of the ships, one and one-half quintalada	3
Chaplains, four quintals apiece	4
Physician and surgeon, five quintals apiece	5
Masters and pilots, twelve quintaladas of cabin space and one quintalada apiece	14
Boatswains, eight quintals of cabin space and one quintalada apiece	10
Sailors, one quintalada apiece	2
Common seamen, one and one-half quintals apiece	1½
Boys, three arrobas of quintalada apiece	3 arrobas

Gunners

The master gunners, three quintals of cabin space apiece and one quintalada	5
The other gunners, one and one-half quintaladas apiece	2½
Carpenters, one and one-half quintaladas	2½
Calkers, the same	2½
Coopers, the same	2½
Crossbowmen, the same	2½
Servants of the captains, one quintalada apiece	1
Stewards, three quintals apiece	3
Stonecutters, three quintals apiece	3

In case that our service is performed by building a fortress there, the persons abovementioned who shall remain in it, shall be allowed the said quintaladas in the ships that shall come [to these kingdoms], and they shall receive also a like sum annually from the quintaladas that shall remain there.

If a fortress be made, our captain shall appoint such persons with the duties and functions that shall be necessary in the said fortress, and shall appoint them the competent recompense until we appoint to those duties.

Chests

The captains-general shall take four chests, on which they will pay only the twentieth	4
The other captains shall take three chests apiece on the same terms	3
Accountant and treasurer two chests apiece	2
The notaries of the ships one chest apiece	1
Masters and pilots, each one chest	1
Boatswains, one chest apiece	1
Alguacil of the fleet, one chest	1
Chaplains, one chest apiece	1

The merinos of the fleets, one chest apiece	1
The captains' servants, one chest for each two	1
Physician and surgeon, one chest	1
Sailors, one chest for each two	1
Common seamen, one chest for each two	1
Boys, one chest for each three	1
Master gunners of the ships, each one chest	1
The other gunners, one chest for each two	1
Carpenters, calkers, coopers, masons, crossbowmen, and sailors, one chest for each two	1
Stewards, one chest apiece	1
Sobresalientes, one chest apiece	1

[472](#) Not nephew, as translated by Stanley (p. 126), as is shown later by the context. MS. 5,650 spells his name “Calanoghapi.”

[473](#) The remainder of this sentence is not in MS. 5,650.

[474](#) In MS. 5,650 this is changed considerably, reading: “And because he did not have enough merchandise to furnish our ships, he told us that he would go to an island called Bacchian,” etc.

[475](#) Leonardo de Argensola (VOL. XVI, p. 221) derives Maluco from the word “Moloc” meaning “the capital.” Crawford says that the derivation and meaning of the word is unknown, although said to be that of a people and place in Gilolo. It has been applied as a collective name to all the islands of their district, but it is correct of only the five mentioned by Pigafetta (for whose ancient names, see VOL. XVI, p. 221). Varthema (*Travels*, Hakluyt Society edition, pp. 245, 246), gives a slight account of the district under the name of the “island of Monoch, where the cloves grow,” which Magalhães showed to Carlos I (Guillemard’s *Magellan*, p. 102). Barbosa gives the first authentic account of the five Moluccas (which he names) in his *East African and Malabar Coasts* (Hakluyt Society edition), pp. 201, 202, 219, 220. See also Crawford’s *Dictionary*, pp. 283–285.

⁴⁷⁶ Francisco Serrão, brother of João Serrão, was Magalhães's most intimate friend, and they had been close companions in the stirring years of early Portuguese operations in far eastern waters. In 1509, Serrão sailed on the fleet sent by Almeida to reconnoiter Malacca. Having been sent ashore with a large force, he was attacked by the Malays and only the prompt assistance headed by Magalhães saved him. In January, 1510, while returning from the expedition, he suffered shipwreck. In 1511 he was sent as captain of one of three ships under Antonio d' Abreu to the Moluccas for purposes of exploration and trade, but the expedition failed to reach the islands, going only as far as the islands of Banda. On this expedition, Serrão's ship was abandoned as unseaworthy, and the junk bought in its stead was wrecked on an island. Here pirates landing, Serrão and his men took possession of their boats and thus reached Amboina in safety. The opportunity offering, Serrão went to Ternate, where he espoused the cause of that king against the king of Tidore, by the latter of whom he was finally poisoned about the time of Magalhães's death. A number of letters passed between Magalhães and Serrão, during the years spent by the latter in Ternate, and Magalhães made use of them to persuade Carlos I to undertake the expedition. See Guillemard's *Magellan*.

⁴⁷⁷ See Navarrete, iv, and Guillemard's *Magellan* for details regarding Magalhães's negotiations with Manoel of Portugal and his subsequent denaturalization. The testoon (tostão, tostões) is a Portuguese silver coin. It was first struck in the fifteenth century (Hazlitt's *Coinage of European Continent*).

⁴⁷⁸ It is impossible to be sure of the correct form of these names. MS. 5,650 gives them as follows: "Checchily Momoly, Tadore Vimghi, Checchily de Roix, Cili Manzur, Cilli Paggi, Chialin, Checchilin Catara, Vaiechuserich, and Colano Ghappi." Amoretti (followed by Stanley) makes these names "Chechili-Momuli, Jadore Vunghi, Chechilideroix, Cilimanzur, Cilipagi, Chialinchechilin, Cataravajecu, Serich, and Calanopagi." Mosto gives the names as in the present edition with the exception of the sixth and seventh which he gives as "Chialin Chechilin" and "Cathara." *Checheli* (*Chechelin*) and possibly *Cili*, denotes the title *Cachil* ("noble").

[479](#) Called by Barros “João de Lourosa, a man disloyal to his country (Mosto, p. 94, note 5). The “Roteiro” (Stanley, pp. 23, 24), says that this man was found in the island of Targatell (Ternate) and that letters were sent him, asking him “to come and speak with them, to which he replied that he did not dare, because the king of the country forbade it.” However, permission is secured from the king and Lorosa comes to the ships. An extract from a letter from the Indies (VOL. I, p. 299) says that Lorosa was taken prisoner. Brito (Navarrete, iv, p. 305) merely mentions the fact that he had left with the Spaniards. He remained with the “Trinidad,” and was promptly executed by the Portuguese when he fell into their hands (see Guillemard’s *Magellan*, p. 303).

[480](#) MS. 5,650 adds: “hearing that.”

[481](#) In Eden: “fixe hundreth and fiftie.” The native name of Gilolo is Batotsima (also called Almahera), and the island belongs to the Netherlands, being included in the residency of Ternate. The population, estimated at 120,000, consists of Malays and Alfuros (pagans; a word apparently formed from the Arabic article *al* and *fora*, “without,” and applied by the Portuguese to natives outside of their authority) the latter probably representing the pre-Malayan populations, and inhabiting the central portion of the island.

[482](#) Eden (p. 227), translating from Oviedo, mentions canes “as bygge as a mans legge in the knee and three spannes in length frome ioynt to ioynt or more.... Theyr canes are full of molte cleare water without any maner of taft or fauore eyther of the canes or of any other thyng: And fuche as yf it were taken owte of the freffheste sprynge in the worlde.” Pigafetta probably refers to some species of bamboo.

[483](#) MS. 5,650 reads: “for ten aunes of cloth [dyed with] munjeet.” Guzerati or Guzerat (Gujerat, Gugerat, Goojerat, Gujrat) one of the old provinces of India, of which the Kattywar peninsula forms the western part, was a dependency of the Affghân or Ghôri empire of Hindostan until the end of the fourteenth century. It became an independent kingdom in 1408. See Badger’s introduction to Varthema’s *Travels* (Hakluyt Society edition), p.

lviii. Foster's *Embassy of Sir Thomas Roe* (Hakluyt Society publications, London, 1899), says of Guzerat (pp. 539, 540): "Guzratt. A goodly Kingdom enclosing the bay of Cambaya. The Cheefe Citty is Amadavaz [Ahmadábád]. It Conteynes the Citty and Gouverment of Cambaya, the bewty of India, the Territorie and Citty of Surat, and Barooch [Broach]. It is watered with many goodly Riwers, as that of Cambaya [the Máhi], falsely supposed to be Indus, the Riuer of Narbadah, falling into the Sea at Barooch, that of Suratt, and diuers others. It trades to the Red Sea, to Achyn, and many places." Its ports were important centers of trade.

[484](#) This item is missing in MS. 5,650, and in Eden.

[485](#) Cf. with the prices of various oriental products in Barbosa's *East African and Malabar Coasts* (Hakluyt Society edition), pp. 221–223.

[486](#) Probably it was because of this belief that the ships intended to take in water near Celebes, "because they feared that in Maluco they would not be allowed to take it in" (see the "Roteiro," Stanley, p. 22).

[487](#) MS. 5,650 omits the remainder of this paragraph.

[1](#) Called in other lists Juan Bautista, Bautista de Poncero, Ponceron, and by Herrera, Juan Bautista de Poncevera.—NAVARRETE.

[2](#) A marine officer above the rank of soldier, but below that of ensign.

[3](#) The pilot who wrote the logbook of the ship “Victoria” from its arrival at the cape of San Augustin in Brazil until its return to Spain. Navarrete says that Herrera calls him Francisco Calvo.

[4](#) Called Bachelor Morales in another register.—NAVARRETE.

[5](#) Called Filipo de Troa in another register.—NAVARRETE.

[6](#) Called Pancado in another register.—NAVARRETE.

[7](#) Called Sanremo Ginovés in another register.—NAVARRETE.

[8](#) Called in other registers, Barruti, Barrutia, Barote, and Domingo Vizcaino.—NAVARRETE.

[9](#) Called Anton Gallego and Antonio Varela in other registers.—NAVARRETE.

[10](#) Called Juan de Santander in another register.—NAVARRETE.

[11](#) Called Blas Durango in another register.—NAVARRETE.

[12](#) The slave of Gonzalo Gomez de Espinoza, called Anton Moreno in another register.—NAVARRETE.

[13](#) Said to be a Portuguese in another register.—NAVARRETE.

[14](#) Called Juan Antonio in another register.—NAVARRETE.

[15](#) Called Andres Paye in another register.—NAVARRETE.

[16](#) *Sobresaliente* is thus defined by Las Partiday—the laws of Castilla, compiled by Alfonso X.—parte I., tit. 24, ley 6: “Sobresalientes are called otherwise men who are placed over and above the requisite number in the ships, both as crossbowmen and other classes of soldiers. Such men have no other duty than to defend those who might be in their ships when fighting with enemies.” Cited by MOSTO from A. Jal in *Glossaire nautique*. (Paris, 1848). Mosto speaks of them as soldiers or volunteers who were embarked to take part in battles and in boarding. Guillemard says of them: “The young men of good family, who took part in the expedition from love of adventure or desire for advancement in military service, shipped as *sobresalientes*, or supernumeraries” (*ut supra*, p. 328).

- [17](#) Called in another register, Fernan Lopez, volunteer.—NAVARRETE.
- [18](#) Called Antonio da Plegafetis [*i.e.*, Pigafetta] in another register.—NAVARRETE.
- [19](#) Called Luis Alfonso in another register.—NAVARRETE.
- [20](#) Called Francisco de la Mezquita in another register.—NAVARRETE.
- [21](#) Called Albertos, a sobresaliente, in another register.—NAVARRETE. *Merino*: A shepherd, and formerly by extension an alguacil, which is its meaning here.
- [22](#) Called Pedro Sanildes in another register.—NAVARRETE.
- [23](#) Magalhães's slave, who afterward, according to Pigafetta, plotted the death of the Europeans, by conspiring with the ruler of Cebu.
- [24](#) Called in other registers, Uriaga, Hurriaga, Loriaga, and Elorraga.—NAVARRETE.
- [25](#) In another register said to be the servant of Antonio de Coca.—NAVARRETE.
- [26](#) Called Juan Ortiz de Goperi in another register.—NAVARRETE.
- [27](#) Called Francisco de Morales in another register.—NAVARRETE.
- [28](#) Luis de Avendaño in another register.—NAVARRETE.
- [29](#) Called Alonso de Palos in another register.—NAVARRETE.
- [30](#) Called Garcia de Tunon in another register.—NAVARRETE.
- [31](#) Called Segredo in another register.—NAVARRETE.
- [32](#) In other registers called Del Cano, Delcano, and simply Juan Sebastian.—NAVARRETE.
- [33](#) Said to be a native of Alcantara in another register.—NAVARRETE.
- [34](#) Called Anton de Bazaza in another register.—NAVARRETE.
- [35](#) Called Domingo de Yarza in another register.—NAVARRETE.
- [36](#) Said to be a native of Portugal in another register.—NAVARRETE.
- [37](#) Called Mateo Griego in another register.—NAVARRETE.
- [38](#) Called in another register Juan Rodriguez de Huelva, native of Mallorca.—NAVARRETE.
- [39](#) Called Sebastian de Huelva in another register.—NAVARRETE.
- [40](#) Called Lorenzo Duirna in another register.—NAVARRETE.
- [41](#) Called Juan Roiz in another register.—NAVARRETE.
- [42](#) In other registers called Master Ance and Master Otans.—NAVARRETE.

- [43](#) Called Oliver de Valencia in another register.—NAVARRETE.
- [44](#) Called Guillermo Irés in another register.—NAVARRETE.
- [45](#) Called Cristobal de Jerez in another register.—NAVARRETE.
- [46](#) Called Juan Novoro in another register.—NAVARRETE.
- [47](#) In another register called the young son of Juan Caraballo.—NAVARRETE.
- [48](#) Called Pedro Chindurza in another register.—NAVARRETE.
- [49](#) In other registers called Alonzo Genoves, Cota, and Costa.—NAVARRETE.
- [50](#) Called in other registers Garate, Yarat, and Perez.—NAVARRETE.
- [51](#) Called in another register Estéban Breton, and a third register says that he was a native of Trosig in Bretaña.—NAVARRETE.
- [52](#) Another register says that he was a native of Hourienes in Torayn [*i.e.*, Tourraine.].—NAVARRETE.
- [53](#) Another register calls him Airés, and says that he was afterward chief gunner in the “Victoria.”—NAVARRETE.
- [54](#) Called in another register Machin Vizcaino [*i.e.*, a Viscayan].—NAVARRETE.
- [55](#) In other registers called Juan de Sahelices and Saylices.—NAVARRETE.
- [56](#) Called in another register Ochot de Randio.—NAVARRETE.
- [57](#) In other registers called Cristôbal Mahuri and Bernardo Mauri.—NAVARRETE.
- [58](#) Another register declares him to be a native of Sevilla.—NAVARRETE.
- [59](#) Called Pedro Herrero [*i.e.*, the blacksmith] in another register.—NAVARRETE.
- [60](#) Called Alonso Portugués [*i.e.*, the Portuguese] in another register.—NAVARRETE.
- [61](#) Called in other registers Malo a Frenchman, Malvo, and Amalo.—NAVARRETE.
- [62](#) Called in other registers Ricarte, Ruxar, and Rigarte; while another says that he was a native of Ebras in France.—NAVARRETE.
- [63](#) Called Socacio Alonso in another register.—NAVARRETE.
- [64](#) Called Pedro Gaston in another register.—NAVARRETE.
- [65](#) Called Domingo Marinero [*i.e.*, a sailor] in another register.—NAVARRETE.
- [66](#) Called Juan de Troya in another register.—NAVARRETE.
- [67](#) Called Pedro de Huelva in another register.—NAVARRETE.

- [68](#) Called Alonso Hernandez in another register.—NAVARRETE.
- [69](#) The slave of Juan Serrano.—NAVARRETE.
- [70](#) Pedro Brito in another register.—NAVARRETE.
- [71](#) Geronimo Sevillano [*i.e.*, a native of Sevilla] in another register.—NAVARRETE.
- [72](#) Another register calls him Francisco, the son-in-law of Juan Serrano.—NAVARRETE.
- [73](#) This man was Shanghaied at the island of Teneriffe by order of Magalhães, October 1, 1519, and embarked on the “Santiago,” but his occupation or country is unknown. He returned in the “Victoria,” and was one of those captured by the Portuguese in the island of Santiago in the Cape Verde Islands, as is proved by documents in Archivo General de Indias.—Navarrete.
- [74](#) Named in other registers Domingo, from Tovilla, Portugal, and Domingo, native of Cobillana, Portugal.—NAVARRETE.

BIBLIOGRAPHICAL DATA

Primo viaggio intorno al mondo (1519–1522), by Antonio Pigafetta, knight of the Order of Jerusalem.—This document exists in manuscript in Biblioteca Ambrosiana, Milan, Italy, where it bears pressmark, “L. 103—Sup.”

Colophon

*** END OF THE PROJECT GUTENBERG EBOOK THE PHILIPPINE
ISLANDS, 1493-1898, VOLUME 33, 1519-1522 ***

Updated editions will replace the previous one—the old editions will be renamed.

Creating the works from print editions not protected by U.S. copyright law means that no one owns a United States copyright in these works, so the Foundation (and you!) can copy and distribute it in the United States without permission and without paying copyright royalties. Special rules, set forth in the General Terms of Use part of this license, apply to copying and distributing Project Gutenberg™ electronic works to protect the PROJECT GUTENBERG™ concept and trademark. Project Gutenberg is a registered trademark, and may not be used if you charge for an eBook, except by following the terms of the trademark license, including paying royalties for use of the Project Gutenberg trademark. If you do not charge anything for copies of this eBook, complying with the trademark license is very easy. You may use this eBook for nearly any purpose such as creation of derivative works, reports, performances and research. Project Gutenberg eBooks may be modified and printed and given away—you may do practically ANYTHING in the United States with eBooks not protected by U.S. copyright law. Redistribution is subject to the trademark license, especially commercial redistribution.

START: FULL LICENSE

THE FULL PROJECT GUTENBERG™ LICENSE

PLEASE READ THIS BEFORE YOU DISTRIBUTE OR USE THIS WORK

To protect the Project Gutenberg™ mission of promoting the free distribution of electronic works, by using or distributing this work (or any other work associated in any way with the phrase “Project Gutenberg”), you agree to comply with all the terms of the Full Project Gutenberg License available with this file or online at www.gutenberg.org/license.

Section 1. General Terms of Use and Redistributing Project Gutenberg electronic works

1.A. By reading or using any part of this Project Gutenberg electronic work, you indicate that you have read, understand, agree to and accept all the terms of this license and intellectual property (trademark/copyright) agreement. If you do not agree to abide by all the terms of this agreement, you must cease using and return or destroy all copies of Project Gutenberg electronic works in your possession. If you paid a fee for obtaining a copy of or access to a Project Gutenberg electronic work and you do not agree to be bound by the terms of this agreement, you may obtain a refund from the person or entity to whom you paid the fee as set forth in paragraph 1.E.8.

1.B. “Project Gutenberg” is a registered trademark. It may only be used on or associated in any way with an electronic work by people who agree to be bound by the terms of this agreement. There are a few things that you can do with most Project Gutenberg electronic works even without complying with the full terms of this agreement. See paragraph 1.C below. There are a lot of things you can do with Project Gutenberg electronic works if you follow the terms of this agreement and help preserve free future access to Project Gutenberg electronic works. See paragraph 1.E below.

1.C. The Project Gutenberg Literary Archive Foundation (“the Foundation” or PGLAF), owns a compilation copyright in the collection of Project Gutenberg electronic works. Nearly all the individual works in the collection are in the public domain in the United States. If an individual work is unprotected by copyright law in the United States and you are located in the United States, we do not claim a right to prevent you from copying, distributing, performing, displaying or creating derivative works based on the work as long as all references to Project Gutenberg are removed. Of course, we hope that you will support the Project Gutenberg mission of promoting free access to electronic works by freely sharing Project Gutenberg works in compliance with the terms of this agreement for keeping the Project Gutenberg name associated with the work. You can easily comply with the terms of this agreement by keeping this work in the same format with its attached full Project Gutenberg License when you share it without charge with others.

1.D. The copyright laws of the place where you are located also govern what you can do with this work. Copyright laws in most countries are in a constant state of change. If you are outside the United States, check the laws of your country in addition to the terms of this agreement before downloading, copying, displaying, performing, distributing or creating derivative works based on this work or any other Project Gutenberg work. The Foundation makes no representations concerning the copyright status of any work in any country other than the United States.

1.E. Unless you have removed all references to Project Gutenberg:

1.E.1. The following sentence, with active links to, or other immediate access to, the full Project Gutenberg License must appear prominently whenever any copy of a Project Gutenberg work (any work on which the phrase “Project Gutenberg” appears, or with which the phrase “Project Gutenberg” is associated) is accessed, displayed, performed, viewed, copied or distributed:

This eBook is for the use of anyone anywhere in the United States and most other parts of the world at no cost and with almost no restrictions whatsoever. You may copy it, give it away or re-use it under the terms of the Project Gutenberg™ License included with this eBook or online at www.gutenberg.org. If you are not located in the United States, you will have to check the laws of the country where you are located before using this eBook.

1.E.2. If an individual Project Gutenberg electronic work is derived from texts not protected by U.S. copyright law (does not contain a notice indicating that it is posted with permission of the copyright holder), the work can be copied and distributed to anyone in the United States without paying any fees or charges. If you are redistributing or providing access to a work with the phrase “Project Gutenberg” associated with or appearing on the work, you must comply either with the requirements of paragraphs 1.E.1 through 1.E.7 or obtain permission for the use of the work and the Project Gutenberg trademark as set forth in paragraphs 1.E.8 or 1.E.9.

1.E.3. If an individual Project Gutenberg electronic work is posted with the permission of the copyright holder, your use and distribution must comply with both paragraphs 1.E.1 through 1.E.7 and any additional terms imposed by the copyright holder. Additional terms will be linked to the Project Gutenberg License for all works posted with the permission of the copyright holder found at the beginning of this work.

1.E.4. Do not unlink or detach or remove the full Project Gutenberg License terms from this work, or any files containing a part of this work or any other work associated with Project Gutenberg.

1.E.5. Do not copy, display, perform, distribute or redistribute this electronic work, or any part of this electronic work, without prominently displaying the sentence set forth in paragraph 1.E.1 with active links or immediate access to the full terms of the Project Gutenberg License.

1.E.6. You may convert to and distribute this work in any binary, compressed, marked up, nonproprietary or proprietary form, including any word processing or hypertext form. However, if you provide access to or distribute copies of a Project Gutenberg work in a format other than “Plain Vanilla ASCII” or other format used in the official version posted on the official Project Gutenberg website (www.gutenberg.org), you must, at no additional cost, fee or expense to the user, provide a copy, a means of exporting a copy, or a means of obtaining a copy upon request, of the work in its original “Plain Vanilla ASCII” or other form. Any alternate format must include the full Project Gutenberg License as specified in paragraph 1.E.1.

1.E.7. Do not charge a fee for access to, viewing, displaying, performing, copying or distributing any Project Gutenberg works unless you comply with paragraph 1.E.8 or 1.E.9.

1.E.8. You may charge a reasonable fee for copies of or providing access to or distributing Project Gutenberg electronic works provided that:

- You pay a royalty fee of 20% of the gross profits you derive from the use of Project Gutenberg works calculated using the method you already use to calculate your applicable taxes. The fee is owed to the owner of the Project Gutenberg trademark, but he has agreed to donate royalties under this paragraph to the Project Gutenberg Literary Archive Foundation. Royalty payments must be paid within 60 days following each date on which you prepare (or are legally required to prepare) your periodic tax returns. Royalty payments should be clearly marked as such and sent to the Project Gutenberg Literary Archive Foundation at the address specified in Section 4, “Information about donations to the Project Gutenberg Literary Archive Foundation.”
- You provide a full refund of any money paid by a user who notifies you in writing (or by e-mail) within 30 days of receipt that s/he does not agree to the terms of the full Project Gutenberg™ License. You must require such a user to return or destroy all copies of the works

possessed in a physical medium and discontinue all use of and all access to other copies of Project Gutenberg™ works.

- You provide, in accordance with paragraph 1.F.3, a full refund of any money paid for a work or a replacement copy, if a defect in the electronic work is discovered and reported to you within 90 days of receipt of the work.
- You comply with all other terms of this agreement for free distribution of Project Gutenberg™ works.

1.E.9. If you wish to charge a fee or distribute a Project Gutenberg™ electronic work or group of works on different terms than are set forth in this agreement, you must obtain permission in writing from the Project Gutenberg Literary Archive Foundation, the manager of the Project Gutenberg™ trademark. Contact the Foundation as set forth in Section 3 below.

1.F.

1.F.1. Project Gutenberg volunteers and employees expend considerable effort to identify, do copyright research on, transcribe and proofread works not protected by U.S. copyright law in creating the Project Gutenberg™ collection. Despite these efforts, Project Gutenberg™ electronic works, and the medium on which they may be stored, may contain “Defects,” such as, but not limited to, incomplete, inaccurate or corrupt data, transcription errors, a copyright or other intellectual property infringement, a defective or damaged disk or other medium, a computer virus, or computer codes that damage or cannot be read by your equipment.

1.F.2. LIMITED WARRANTY, DISCLAIMER OF DAMAGES - Except for the “Right of Replacement or Refund” described in paragraph 1.F.3, the Project Gutenberg Literary Archive Foundation, the owner of the Project Gutenberg™ trademark, and any other party distributing a Project Gutenberg™ electronic work under this agreement, disclaim all liability to you for damages, costs and

expenses, including legal fees. YOU AGREE THAT YOU HAVE NO REMEDIES FOR NEGLIGENCE, STRICT LIABILITY, BREACH OF WARRANTY OR BREACH OF CONTRACT EXCEPT THOSE PROVIDED IN PARAGRAPH 1.F.3. YOU AGREE THAT THE FOUNDATION, THE TRADEMARK OWNER, AND ANY DISTRIBUTOR UNDER THIS AGREEMENT WILL NOT BE LIABLE TO YOU FOR ACTUAL, DIRECT, INDIRECT, CONSEQUENTIAL, PUNITIVE OR INCIDENTAL DAMAGES EVEN IF YOU GIVE NOTICE OF THE POSSIBILITY OF SUCH DAMAGE.

1.F.3. LIMITED RIGHT OF REPLACEMENT OR REFUND - If you discover a defect in this electronic work within 90 days of receiving it, you can receive a refund of the money (if any) you paid for it by sending a written explanation to the person you received the work from. If you received the work on a physical medium, you must return the medium with your written explanation. The person or entity that provided you with the defective work may elect to provide a replacement copy in lieu of a refund. If you received the work electronically, the person or entity providing it to you may choose to give you a second opportunity to receive the work electronically in lieu of a refund. If the second copy is also defective, you may demand a refund in writing without further opportunities to fix the problem.

1.F.4. Except for the limited right of replacement or refund set forth in paragraph 1.F.3, this work is provided to you 'AS-IS', WITH NO OTHER WARRANTIES OF ANY KIND, EXPRESS OR IMPLIED, INCLUDING BUT NOT LIMITED TO WARRANTIES OF MERCHANTABILITY OR FITNESS FOR ANY PURPOSE.

1.F.5. Some states do not allow disclaimers of certain implied warranties or the exclusion or limitation of certain types of damages. If any disclaimer or limitation set forth in this agreement violates the law of the state applicable to this agreement, the agreement shall be interpreted to make the maximum disclaimer or limitation permitted by

the applicable state law. The invalidity or unenforceability of any provision of this agreement shall not void the remaining provisions.

1.F.6. INDEMNITY - You agree to indemnify and hold the Foundation, the trademark owner, any agent or employee of the Foundation, anyone providing copies of Project Gutenberg™ electronic works in accordance with this agreement, and any volunteers associated with the production, promotion and distribution of Project Gutenberg™ electronic works, harmless from all liability, costs and expenses, including legal fees, that arise directly or indirectly from any of the following which you do or cause to occur: (a) distribution of this or any Project Gutenberg work, (b) alteration, modification, or additions or deletions to any Project Gutenberg work, and (c) any Defect you cause.

Section 2. Information about the Mission of Project Gutenberg

Project Gutenberg is synonymous with the free distribution of electronic works in formats readable by the widest variety of computers including obsolete, old, middle-aged and new computers. It exists because of the efforts of hundreds of volunteers and donations from people in all walks of life.

Volunteers and financial support to provide volunteers with the assistance they need are critical to reaching Project Gutenberg's goals and ensuring that the Project Gutenberg collection will remain freely available for generations to come. In 2001, the Project Gutenberg Literary Archive Foundation was created to provide a secure and permanent future for Project Gutenberg and future generations. To learn more about the Project Gutenberg Literary Archive Foundation and how your efforts and donations can help, see Sections 3 and 4 and the Foundation information page at www.gutenberg.org.

Section 3. Information about the Project Gutenberg Literary Archive Foundation

The Project Gutenberg Literary Archive Foundation is a non-profit 501(c)(3) educational corporation organized under the laws of the state of Mississippi and granted tax exempt status by the Internal Revenue Service. The Foundation's EIN or federal tax identification number is 64-6221541. Contributions to the Project Gutenberg Literary Archive Foundation are tax deductible to the full extent permitted by U.S. federal laws and your state's laws.

The Foundation's business office is located at 41 Watchung Plaza #516, Montclair NJ 07042, USA, +1 (862) 621-9288. Email contact links and up to date contact information can be found at the Foundation's website and official page at www.gutenberg.org/contact

Section 4. Information about Donations to the Project Gutenberg Literary Archive Foundation

Project Gutenberg™ depends upon and cannot survive without widespread public support and donations to carry out its mission of increasing the number of public domain and licensed works that can be freely distributed in machine-readable form accessible by the widest array of equipment including outdated equipment. Many small donations (\$1 to \$5,000) are particularly important to maintaining tax exempt status with the IRS.

The Foundation is committed to complying with the laws regulating charities and charitable donations in all 50 states of the United States. Compliance requirements are not uniform and it takes a considerable effort, much paperwork and many fees to meet and keep up with these requirements. We do not solicit donations in locations where we have not received written confirmation of compliance. To SEND DONATIONS or determine the status of compliance for any particular state visit www.gutenberg.org/donate.

While we cannot and do not solicit contributions from states where we have not met the solicitation requirements, we know of no prohibition

against accepting unsolicited donations from donors in such states who approach us with offers to donate.

International donations are gratefully accepted, but we cannot make any statements concerning tax treatment of donations received from outside the United States. U.S. laws alone swamp our small staff.

Please check the Project Gutenberg web pages for current donation methods and addresses. Donations are accepted in a number of other ways including checks, online payments and credit card donations. To donate, please visit: www.gutenberg.org/donate.

Section 5. General Information About Project Gutenberg electronic works

Professor Michael S. Hart was the originator of the Project Gutenberg concept of a library of electronic works that could be freely shared with anyone. For forty years, he produced and distributed Project Gutenberg eBooks with only a loose network of volunteer support.

Project Gutenberg eBooks are often created from several printed editions, all of which are confirmed as not protected by copyright in the U.S. unless a copyright notice is included. Thus, we do not necessarily keep eBooks in compliance with any particular paper edition.

Most people start at our website which has the main PG search facility: www.gutenberg.org.

This website includes information about Project Gutenberg, including how to make donations to the Project Gutenberg Literary Archive Foundation, how to help produce our new eBooks, and how to subscribe to our email newsletter to hear about new eBooks.
