=====

What's New

- Country information has been updated as of 10 February, 2005.

- There have been some significant changes to the latest edition of The World Factbook. Recent confirmation that the United Kingdom Government administers the Sovereign Base Areas of Akrotiri and Dhekelia

on Cyprus as dependencies (and not as lease areas like the US Guantanamo Bay Naval Station in Cuba) has required a changing of their status and their addition to the Factbook as new entities. In addition, the European Union has been included as an "Other" entity at the end of the listing. The European Union continues to accrue more nation-like characteristics for itself and so a separate listing was deemed appropriate. A fuller explanation may be found under the European Union Preliminary statement.

- Along with the new entities and the regular information updates, The World Factbook now also features five new fields. In the Economy category, entries have been added for Current account balance, Investment (gross fixed), Public debt, and Reserves of foreign exchange and gold. The Transnational issues category has a new Refugees and internally displaced persons entry.

- Revision of some individual country maps, first introduced in the 2001 edition, is continued in this edition. Several regional maps have also been updated to reflect boundary changes and place name spelling changes.

The World Factbook 2004 printed version provides a "snapshot" of the world as of 1 January, 2004.

Guide to Rank Order Pages

Rank Order pages are presorted lists of data from selected Factbook data fields. Rank Order pages are generally given in descending order - highest to lowest - such as Population and Area. The two exceptions are Unemployment Rate and Inflation Rate, which are in ascending - lowest to highest - order. Rank Order pages are available for the following 40 fields in six of the nine Factbook categories.

Factbook fields with Rank Order pages are easily identified with a small bar chart icon to the right of the data field title.

Not all Rank Order pages include the same number of entries because information for a particular field is not available for all countries. In addition, not all data fields are suitable for displaying as Rank Order pages, such as those containing textual information. Textual information is more readily viewed by clicking on the Field Listing icon next to the Data field title. The other icon next to the data field title provides the definition of the field.

All of the 'Rank Order' pages can be downloaded as tab-delimited data files and can be opened in other applications such as spreadsheets and databases. To save a Rank Order page in a spreadsheet, first click on the 'Download Datafile' choice above the Rank Order page you selected; then, at the top of your browser window, click on 'File' and 'Save As'. After saving the file, open the spreadsheet, find the saved file, and 'Open' it.

Additional Rank Order pages being considered for future updates of the Factbook Web site include:

- Median age
- Literacy
- Population below the poverty line
- Waterways
- Airports

Notes and Definitions

Along with the new entities and the regular information updates, The World Factbook now also features six new fields. In the Economy category, entries have been added for Current account balance, Investment (gross fixed), Public debt, and Reserves of foreign exchange and gold. The Transnational issues category has a new Refugees and internally displaced persons entry. Revision of some individual country maps, first introduced in

the 2001 edition, is continued in this edition. Several regional maps have also been updated to reflect boundary changes and place name spelling changes.

Abbreviations This information is included in Appendix A: Abbreviations, which includes all abbreviations and acronyms used in the Factbook, with their expansions.

Acronyms An acronym is an abbreviation coined from the initial letter of each successive word in a term or phrase. In general, an acronym made up solely from the first letter of the major words in the expanded form is rendered in all capital letters (NATO from North Atlantic Treaty Organization; an exception would be ASEAN for Association of Southeast Asian Nations). In general, an acronym made up of more than the first letter of the major words in the expanded form is rendered with only an initial capital letter (Comsat from Communications Satellite Corporation; an exception would be NAM from Nonaligned Movement). Hybrid forms are sometimes used to distinguish between initially identical terms (WTO: WTrO for World Trade Organization and WToO for World Tourism Organization.)

Administrative divisions This entry generally gives the numbers, designatory terms, and first- order administrative divisions as approved by the US Board on Geographic Names (BGN). Changes that have been reported but not yet acted on by BGN are noted.

Age structure This entry provides the distribution of the population according to age. Information is included by sex and age group (0-14 years, 15-64 years, 65 years and over). The age structure of a population affects a nation's key socioeconomic issues. Countries with young populations (high

percentage under age 15) need to invest more in schools, while countries with older populations (high percentage ages 65 and over) need to invest more in the health sector. The age structure can also be used to help predict potential political issues. For example, the rapid growth of a young adult population unable to find employment can lead to unrest.

Agriculture - products This entry is an ordered listing of major crops and products starting with the most important.

Airports This entry gives the total number of airports. The runway(s) may be paved (concrete or asphalt surfaces) or unpaved (grass, dirt, sand, or gravel surfaces), but must be usable. Not all airports have facilities for refueling, maintenance, or air traffic control.

Airports - with paved runways This entry gives the total number of airports with paved runways (concrete or asphalt surfaces) by length. For airports with more than one runway, only the longest runway is included according to the following five groups - (1) over 3,047 m, (2) 2,438 to 3,047 m, (3) 1,524 to 2,437 m, (4) 914 to 1,523 m, and (5) under 914 m. Only airports with usable runways are included in this listing. Not all airports have facilities for refueling, maintenance, or air traffic control.

Airports - with unpaved runways This entry gives the total number of airports with unpaved runways (grass, dirt, sand, or gravel surfaces) by length. For airports with more than one runway, only the longest runway is included according to the following five groups - (1) over 3,047 m, (2) 2,438 to 3,047 m, (3) 1,524 to 2,437 m, (4) 914 to 1,523 m, and (5) under 914 m. Only airports with usable runways are included in this listing. Not all airports have facilities for refueling, maintenance, or air traffic control

Appendixes

This section includes Factbook-related material by topic.

Area This entry includes three subfields. Total area is the sum of all land and water areas delimited by international boundaries and/or coastlines. Land area is the aggregate of all surfaces delimited by international boundaries and/or coastlines, excluding inland water bodies (lakes, reservoirs, rivers). Water area is the sum of all water surfaces delimited by international boundaries and/or coastlines, including inland water bodies (lakes, reservoirs, rivers).

Area - comparative This entry provides an area comparison based on total area equivalents. Most entities are compared with the entire US or one of the 50 states based on area measurements (1990 revised) provided by the US Bureau of the Census. The smaller entities are compared with Washington, DC (178 sq km, 69 sq mi) or The Mall in Washington, DC (0.59 sq km, 0.23 sq mi, 146 acres).

Background This entry usually highlights major historic events and current issues and may include a statement about one or two key future trends.

Birth rate This entry gives the average annual number of births during a year per 1,000 persons in the population at midyear; also known as crude birth rate. The birth rate is usually the dominant factor in determining the rate of population growth. It depends on both the level of fertility and the age structure of the population.

Budget This entry includes revenues, total expenditures, and capital expenditures. These figures are calculated on an exchange rate basis, i.e., not in purchasing power parity (PPP) terms

Capital

This entry gives the location of the seat of government.

Climate This entry includes a brief description of typical weather regimes throughout the year.

Coastline This entry gives the total length of the boundary between the land area (including islands) and the sea.

Communications This category deals with the means of exchanging information and includes the telephone, radio, television, and Internet service provider entries.

Communications - note This entry includes miscellaneous communications information of significance not included elsewhere.

Constitution This entry includes the dates of adoption, revisions, and major amendments.

Country data codes see Data codes

Country map Most versions of the Factbook provide a country map in color. The maps were produced from the best information available at the time of preparation. Names and/or boundaries may have changed subsequently.

Country name This entry includes all forms of the country's name approved by the US Board on Geographic Names (Italy is used as an example): conventional long form (Italian Republic), conventional short form (Italy), local long form (Repubblica Italiana), local short form (Italia), former (Kingdom of Italy), as well as the abbreviation. Also see the Terminology note.

Crude oil
See entry for oil.

Currency This entry identifies the national medium of exchange and its basic subunit.

Currency code

This entry gives the International Organization for Standardization (ISO) 4217 alphabetic currency code for each country.

Current account balance This entry records a country's net trade in goods and services, plus net earnings from rents, interest, profits, and dividends, and net transfer payments (such as pension funds and worker remittances) to and from the rest of the world during the period specified.

Data codes This information is presented in Appendix D: Cross-Reference List of Country Data Codes and Appendix E: Cross-Reference List of Hydrographic Data Codes. This appendix includes the US Government approved Federal Information Processing Standards (FIPS) codes, the International Organization for Standardization (ISO) codes, and Internet codes for land entities. The appendix also includes the International Hydrographic Organization (IHO) codes, Aeronautical Chart and Information Center (ACIC; now a part of the National Geospatial-Intelligence Agency or NGA) codes, and Defense Intelligence Agency (DIA) codes for hydrographic entities. The US Government has not yet approved a standard for hydrographic data codes similar to the FIPS 10-4 standard for country data codes.

Date of information In general, information available as of 1 January 2004, was used in the preparation of this edition.

Death rate This entry gives the average annual number of deaths during a year per 1,000 population at midyear; also known as crude death rate. The death rate, while only a rough indicator of the mortality situation in a country, accurately indicates the current mortality impact on population

growth. This indicator is significantly affected by age distribution, and most countries will eventually show a rise in the overall death rate, in spite of continued decline in mortality at all ages, as declining fertility results in an aging population.

Debt - external This entry gives the total public and private debt owed to nonresidents repayable in foreign currency, goods, or services.

Dependency status This entry describes the formal relationship between a particular nonindependent entity and an independent state.

Dependent areas This entry contains an alphabetical listing of all nonindependent entities associated in some way with a particular independent state.

Diplomatic representation The US Government has diplomatic relations with 186 independent states, including 185 of the 191 UN members (excluded UN members are Bhutan, Cuba, Iran, Iraq, North Korea, and the US itself). In addition, the US has diplomatic relations with 1 independent state that is not in the UN - Holy See.

Diplomatic representation in the US This entry includes the chief of mission, chancery, telephone, FAX, consulate general locations, and consulate locations.

Diplomatic representation from the US This entry includes the chief of mission, embassy address, mailing address, telephone number, FAX number, branch office locations, consulate general locations, and consulate locations.

Disputes - international This entry includes a wide variety of situations that range from traditional bilateral boundary disputes to unilateral claims

of one sort or another. Information regarding disputes over international terrestrial and maritime boundaries has been reviewed by the US Department of State. References to other situations involving borders or frontiers may also be included, such as resource disputes, geopolitical questions, or irredentist issues; however, inclusion does not necessarily constitute official acceptance or recognition by the US Government.

Distribution of family income - Gini index This index measures the degree of inequality in the distribution of family income in a country. The index is calculated from the Lorenz curve, in which cumulative family income is plotted against the number of families arranged from the poorest to the richest. The index is the ratio of (a) the area between a country's Lorenz curve and the 45 degree helping line to (b) the entire triangular area under the 45 degree line. The more nearly equal a country's income distribution, the closer its Lorenz curve to the 45 degree line and the lower its Gini index, e.g., a Scandinavian country with an index of 25. The more unequal a country's income distribution, the farther its Lorenz curve from the 45 degree line and the higher its Gini index, e.g., a Sub- Saharan country with an index of 50. If income were distributed with perfect equality, the Lorenz curve would coincide with the 45 degree line and the index would be zero; if income were distributed with perfect inequality, the Lorenz curve would coincide with the horizontal axis and the right vertical axis and the index would be 100.

Economic aid - donor This entry refers to net official development assistance (ODA) from Organization for Economic Cooperation and Development (OECD) nations to developing countries and multilateral organizations. ODA is defined as financial assistance that is concessional in character, has the main objective to promote economic development and welfare of the less developed countries (LDCs), and contains a grant

element of at least 25%. The entry does not cover other official flows (OOF) or private flows.

Economic aid - recipient This entry, which is subject to major problems of definition and statistical coverage, refers to the net inflow of Official Development Finance (ODF) to recipient countries. The figure includes assistance from the World Bank, the IMF, and other international organizations and from individual nation donors. Formal commitments of aid are included in the data. Omitted from the data are grants by private organizations. Aid comes in various forms including outright grants and loans. The entry thus is the difference between new inflows and repayments.

Economy This category includes the entries dealing with the size, development, and management of productive resources, i.e., land, labor, and capital.

Economy - overview This entry briefly describes the type of economy, including the degree of market orientation, the level of economic development, the most important natural resources, and the unique areas of specialization. It also characterizes major economic events and policy changes in the most recent 12 months and may include a statement about one or two key future macroeconomic trends.

Electricity - consumption This entry consists of total electricity generated annually plus imports and minus exports, expressed in kilowatt-hours. The discrepancy between the amount of electricity generated and/or imported and the amount consumed and/or exported is accounted for as loss in transmission and distribution.

Electricity - exports

This entry is the total exported electricity in kilowatt-hours.

Electricity - imports

This entry is the total imported electricity in kilowatt-hours.

Electricity - production This entry is the annual electricity generated expressed in kilowatt- hours. The discrepancy between the amount of electricity generated and/or imported and the amount consumed and/or exported is accounted for as loss in transmission and distribution.

Electricity - production by source This entry states the percentage share of electricity generated from each energy source. These are fossil fuel, hydro, nuclear, and other (solar, geothermal, and wind).

Elevation extremes

This entry includes both the highest point and the lowest point.

Entities Some of the independent states, dependencies, areas of special sovereignty, and governments included in this publication are not independent, and others are not officially recognized by the US Government. "Independent state" refers to a people politically organized into a sovereign state with a definite territory. "Dependencies" and "areas of special sovereignty" refer to a broad category of political entities that are associated in some way with an independent state. "Country" names used in the table of contents or for page headings are usually the short-form names as approved by the US Board on Geographic Names and may include independent states, dependencies, and areas of special sovereignty, or other geographic entities. There are a total of 271 separate geographic entities in The World Factbook that may be categorized as follows:

Environment - current issues This entry lists the most pressing and important environmental problems. The following terms and abbreviations are used throughout the entry: acidification - the lowering of soil and water pH due to acid precipitation and deposition usually through precipitation; this process disrupts ecosystem nutrient flows and may kill freshwater fish and plants dependent on more neutral or alkaline conditions (see acid rain). acid rain - characterized as containing harmful levels of sulfur dioxide or nitrogen oxide; acid rain is damaging and potentially deadly to the earth's fragile ecosystems; acidity is measured using the pH scale where 7 is neutral, values greater than 7 are considered alkaline, and values below 5.6 are considered acid precipitation; note - a pH of 2.4 (the acidity of vinegar) has been measured in rainfall in New England. aerosol - a collection of airborne particles dispersed in a gas, smoke, or fog. afforestation - converting a bare or agricultural space by planting trees and plants; reforestation involves replanting trees on areas that have been cut or destroyed by fire. asbestos - a naturally occurring soft fibrous mineral commonly used in fireproofing materials and considered to be highly carcinogenic in particulate form. biodiversity - also biological diversity; the relative number of species, diverse in form and function, at the genetic, organism, community, and ecosystem level; loss of biodiversity reduces an ecosystem's ability to recover from natural or man-induced disruption. bio-indicators - a plant or animal species whose presence, abundance, and health reveal the general condition of its habitat. biomass - the total weight or volume of living matter in a given area or volume. carbon cycle - the term used to describe the exchange of carbon (in various forms, e.g., as carbon dioxide) between the atmosphere, ocean, terrestrial biosphere, and geological deposits. catchments - assemblages used to capture and retain rainwater and runoff; an important water management technique in areas with limited freshwater resources, such as Gibraltar. DDT (dichloro-diphenyl-trichloro-ethane) - a colorless, odorless insecticide that has toxic

effects on most animals; the use of DDT was banned in the US in 1972. defoliants - chemicals which cause plants to lose their leaves artificially; often used in agricultural practices for weed control, and may have detrimental impacts on human and ecosystem health. deforestation - the destruction of vast areas of forest (e.g., unsustainable forestry practices, agricultural and range land clearing, and the over exploitation of wood products for use as fuel) without planting new growth. desertification - the spread of desert-like conditions in arid or semi-arid areas, due to overgrazing, loss of agriculturally productive soils, or climate change. dredging - the practice of deepening an existing waterway; also, a technique used for collecting bottom-dwelling marine organisms (e.g., shellfish) or harvesting coral, often causing significant destruction of reef and ocean-floor ecosystems. drift-net fishing - done with a net, miles in extent, that is generally anchored to a boat and left to float with the tide; often results in an over harvesting and waste of large populations of non- commercial marine species (by-catch) by its effect of "sweeping the ocean clean." ecosystems - ecological units comprised of complex communities of organisms and their specific environments. effluents - waste materials, such as smoke, sewage, or industrial waste which are released into the environment, subsequently polluting it. endangered species - a species that is threatened with extinction either by direct hunting or habitat destruction. freshwater - water with very low soluble mineral content; sources include lakes, streams, rivers, glaciers, and underground aquifers. greenhouse gas - a gas that "traps" infrared radiation in the lower atmosphere causing surface warming; water vapor, carbon dioxide, nitrous oxide, methane, hydrofluorocarbons, and ozone are the primary greenhouse gases in the Earth's atmosphere. groundwater - water sources found below the surface of the earth often in naturally occurring reservoirs in permeable rock strata; the source for wells and natural springs. Highlands Water Project - a series of dams constructed jointly by Lesotho and South Africa to redirect Lesotho's

abundant water supply into a rapidly growing area in South Africa; while it is the largest infrastructure project in southern Africa, it is also the most costly and controversial; objections to the project include claims that it forces people from their homes, submerges farmlands, and squanders economic resources. Inuit Circumpolar Conference (ICC) - represents the 145,000 Inuits of Russia, Alaska, Canada, and Greenland in international environmental issues; a General Assembly convenes every three years to determine the focus of the ICC; the most current concerns are long-range transport of pollutants, sustainable development, and climate change. metallurgical plants - industries which specialize in the science, technology, and processing of metals; these plants produce highly concentrated and toxic wastes which can contribute to pollution of ground water and air when not properly disposed. noxious substances - injurious, very harmful to living beings. overgrazing - the grazing of animals on plant material faster than it can naturally regrow leading to the permanent loss of plant cover, a common effect of too many animals grazing limited range land. ozone shield - a layer of the atmosphere composed of ozone gas (O₃) that resides approximately 25 miles above the Earth's surface and absorbs solar ultraviolet radiation that can be harmful to living organisms. poaching - the illegal killing of animals or fish, a great concern with respect to endangered or threatened species. pollution - the contamination of a healthy environment by man-made waste. potable water - water that is drinkable, safe to be consumed. salination - the process through which fresh (drinkable) water becomes salt (undrinkable) water; hence, desalination is the reverse process; also involves the accumulation of salts in topsoil caused by evaporation of excessive irrigation water, a process that can eventually render soil incapable of supporting crops. siltation - occurs when water channels and reservoirs become clotted with silt and mud, a side effect of deforestation and soil erosion. slash-and-burn agriculture - a rotating cultivation technique in which trees are cut down and burned in

order to clear land for temporary agriculture; the land is used until its productivity declines at which point a new plot is selected and the process repeats; this practice is sustainable while population levels are low and time is permitted for regrowth of natural vegetation; conversely, where these conditions do not exist, the practice can have disastrous consequences for the environment . soil degradation - damage to the land's productive capacity because of poor agricultural practices such as the excessive use of pesticides or fertilizers, soil compaction from heavy equipment, or erosion of topsoil, eventually resulting in reduced ability to produce agricultural products. soil erosion - the removal of soil by the action of water or wind, compounded by poor agricultural practices, deforestation, overgrazing, and desertification. ultraviolet (UV) radiation - a portion of the electromagnetic energy emitted by the sun and naturally filtered in the upper atmosphere by the ozone layer; UV radiation can be harmful to living organisms and has been linked to increasing rates of skin cancer in humans. water-borne diseases - those in which the bacteria survive in, and is transmitted through, water; always a serious threat in areas with an untreated water supply.

Environment - international agreements This entry separates country participation in international environmental agreements into two levels - party to and signed but not ratified. Agreements are listed in alphabetical order by the abbreviated form of the full name.

Environmental agreements This information is presented in Appendix C: Selected International Environmental Agreements, which includes the name, abbreviation, date opened for signature, date entered into force, objective, and parties by category.

Ethnic groups This entry provides an ordered listing of ethnic groups starting with the largest and normally includes the percent of total population.

Exchange rates This entry provides the official value of a country's monetary unit at a given date or over a given period of time, as expressed in units of local currency per US dollar and as determined by international market forces or official fiat.

Executive branch This entry includes several subfields. **Chief of state** includes the name and title of the titular leader of the country who represents the state at official and ceremonial functions but may not be involved with the day-to-day activities of the government. **Head of government** includes the name and title of the top administrative leader who is designated to manage the day-to-day activities of the government. For example, in the UK, the monarch is the chief of state, and the prime minister is the head of government. In the US, the president is both the chief of state and the head of government. **Cabinet** includes the official name for this body of high-ranking advisers and the method for selection of members. **Elections** includes the nature of election process or accession to power, date of the last election, and date of the next election. **Election results** includes the percent of vote for each candidate in the last election.

Exports This entry provides the total US dollar amount of exports on an f.o.b. (free on board) basis.

Exports - commodities This entry provides a rank ordering of exported products starting with the most important; it sometimes includes the percent of total dollar value.

Exports - partners This entry provides a rank ordering of trading partners starting with the most important; it sometimes includes the percent of total dollar value.

Fiscal year This entry identifies the beginning and ending months for a country's accounting period of 12 months, which often is the calendar year

but which may begin in any month. All yearly references are for the calendar year (CY) unless indicated as a noncalendar fiscal year (FY).

Flag description This entry provides a written flag description produced from actual flags or the best information available at the time the entry was written. The flags of independent states are used by their dependencies unless there is an officially recognized local flag. Some disputed and other areas do not have flags.

Flag graphic Most versions of the Factbook include a color flag at the beginning of the country profile. The flag graphics were produced from actual flags or the best information available at the time of preparation. The flags of independent states are used by their dependencies unless there is an officially recognized local flag. Some disputed and other areas do not have flags.

GDP This entry gives the gross domestic product (GDP) or value of all final goods and services produced within a nation in a given year. GDP dollar estimates in the Factbook are derived from purchasing power parity (PPP) calculations. See the note on GDP methodology for more information.

GDP methodology In the Economy category, GDP dollar estimates for all countries are derived from purchasing power parity (PPP) calculations rather than from conversions at official currency exchange rates. The PPP method involves the use of standardized international dollar price weights, which are applied to the quantities of final goods and services produced in a given economy. The data derived from the PPP method provide the best available starting point for comparisons of economic strength and well-being between countries. The division of a GDP estimate in domestic currency by the corresponding PPP estimate in dollars gives the PPP conversion rate. Whereas PPP estimates for OECD countries are quite

reliable, PPP estimates for developing countries are often rough approximations. Most of the GDP estimates are based on extrapolation of PPP numbers published by the UN International Comparison Program (UNICP) and by Professors Robert Summers and Alan Heston of the University of Pennsylvania and their colleagues. In contrast, the currency exchange rate method involves a variety of international and domestic financial forces that often have little relation to domestic output. In developing countries with weak currencies the exchange rate estimate of GDP in dollars is typically one-fourth to one-half the PPP estimate. Furthermore, exchange rates may suddenly go up or down by 10% or more because of market forces or official fiat whereas real output has remained unchanged. On 12 January 1994, for example, the 14 countries of the African Financial Community (whose currencies are tied to the French franc) devalued their currencies by 50%. This move, of course, did not cut the real output of these countries by half. One important caution: the proportion of, say, defense expenditures as a percentage of GDP in local currency accounts may differ substantially from the proportion when GDP accounts are expressed in PPP terms, as, for example, when an observer tries to estimate the dollar level of Russian or Japanese military expenditures. Note: the numbers for GDP and other economic data cannot be chained together from successive volumes of the Factbook because of changes in the US dollar measuring rod, revisions of data by statistical agencies, use of new or different sources of information, and changes in national statistical methods and practices.

GDP - composition by sector This entry gives the percentage contribution of agriculture, industry, and services to total GDP.

GDP - per capita This entry shows GDP on a purchasing power parity basis divided by population as of 1 July for the same year.

GDP - real growth rate This entry gives GDP growth on an annual basis adjusted for inflation and expressed as a percent.

Geographic coordinates This entry includes rounded latitude and longitude figures for the purpose of finding the approximate geographic center of an entity and is based on the Gazetteer of Conventional Names, Third Edition, August 1988, US Board on Geographic Names and on other sources.

Geographic names This information is presented in Appendix F: Cross-Reference List of Geographic Names. It includes a listing of various alternate names, former names, local names, and regional names referenced to one or more related Factbook entries. Spellings are normally, but not always, those approved by the US Board on Geographic Names (BGN). Alternate names and additional information are included in parentheses.

Geography This category includes the entries dealing with the natural environment and the effects of human activity.

Geography - note This entry includes miscellaneous geographic information of significance not included elsewhere.

GINI index

See entry for Distribution of family income - Gini index

GNP Gross national product (GNP) is the value of all final goods and services produced within a nation in a given year, plus income earned by its citizens abroad, minus income earned by foreigners from domestic production. The Factbook, following current practice, uses GDP rather than GNP to measure national production. However, the user must realize that in certain countries net remittances from citizens working abroad may be important to national well-being.

Government This category includes the entries dealing with the system for the adoption and administration of public policy.

Government type This entry gives the basic form of government. Definitions of the major governmental terms are as follows: **Anarchy** - a condition of lawlessness or political disorder brought about by the absence of governmental authority. **Commonwealth** - a nation, state, or other political entity founded on law and united by a compact of the people for the common good. **Communism** - a system of government in which the state plans and controls the economy and a single - often authoritarian - party holds power; state controls are imposed with the elimination of private ownership of property or capital while claiming to make progress toward a higher social order in which all goods are equally shared by the people (i.e., a classless society). **Confederacy (Confederation)** - a union by compact or treaty between states, provinces, or territories, that creates a central government with limited powers; the constituent entities retain supreme authority over all matters except those delegated to the central government. **Constitutional** - a government by or operating under an authoritative document (constitution) that sets forth the system of fundamental laws and principles that determines the nature, functions, and limits of that government. **Constitutional Democracy** - a form of government in which the sovereign power of the people is spelled out in a governing constitution. **Constitutional Monarchy** - a system of government in which a monarch is guided by a constitution whereby his/her rights, duties, and responsibilities are spelled out in written law or by custom. **Democracy** - a form of government in which the supreme power is retained by the people, but which is usually exercised indirectly through a system of representation and delegated authority periodically renewed. **Democratic Republic** - a state in which the supreme power rests in the body of citizens entitled to vote for officers and representatives responsible to them. **Dictatorship** - a form of government in which a ruler or small clique wield

absolute power (not restricted by a constitution or laws). Ecclesiastical - a government administrated by a church. Federal (Federative) - a form of government in which sovereign power is formally divided - usually by means of a constitution - between a central authority and a number of constituent regions (states, colonies, or provinces) so that each region retains some management of its internal affairs; differs from a confederacy in that the central government exerts influence directly upon both individuals as well as upon the regional units. Federal Republic - a state in which the powers of the central government are restricted and in which the component parts (states, colonies, or provinces) retain a degree of self-government; ultimate sovereign power rests with the voters who chose their governmental representatives. Maoism - the theory and practice of Marxism-Leninism developed in China by Mao Zedong (Mao Tse-tung), which states that a continuous revolution is necessary if the leaders of a communist state are to keep in touch with the people. Marxism - the political, economic, and social principles espoused by 19th century economist Karl Marx; he viewed the struggle of workers as a progression of historical forces that would proceed from a class struggle of the proletariat (workers) exploited by capitalists (business owners), to a socialist "dictatorship of the proletariat," to, finally, a classless society - communism. Marxism-Leninism - an expanded form of communism developed by Lenin from doctrines of Karl Marx; Lenin saw imperialism as the final stage of capitalism and shifted the focus of workers' struggle from developed to underdeveloped countries. Monarchy - a government in which the supreme power is lodged in the hands of a monarch who reigns over a state or territory, usually for life and by hereditary right; the monarch may be either a sole absolute ruler or a sovereign - such as a king, queen, or prince - with constitutionally limited authority. Oligarchy - a government in which control is exercised by a small group of individuals whose authority generally is based on wealth or power. Parliamentary Democracy - a

political system in which the legislature (parliament) selects the government - a prime minister, premier, or chancellor along with the cabinet ministers - according to party strength as expressed in elections; by this system, the government acquires a dual responsibility: to the people as well as to the parliament.

Parliamentary Government (Cabinet-Parliamentary Government) - a government in which members of an executive branch (the cabinet and its leader - a prime minister, premier, or chancellor) are nominated to their positions by a legislature or parliament, and are directly responsible to it; this type of government can be dissolved at will by the parliament (legislature) by means of a no confidence vote or the leader of the cabinet may dissolve the parliament if it can no longer function.

Parliamentary Monarchy - a state headed by a monarch who is not actively involved in policy formation or implementation (i.e., the exercise of sovereign powers by a monarch in a ceremonial capacity); true governmental leadership is carried out by a cabinet and its head - a prime minister, premier, or chancellor - who are drawn from a legislature (parliament).

Republic - a representative democracy in which the people's elected deputies (representatives), not the people themselves, vote on legislation.

Socialism - a government in which the means of planning, producing, and distributing goods is controlled by a central government that theoretically seeks a more just and equitable distribution of property and labor; in actuality, most socialist governments have ended up being no more than dictatorships over workers by a ruling elite.

Sultanate - similar to a monarchy, but a government in which the supreme power is in the hands of a sultan (the head of a Muslim state); the sultan may be an absolute ruler or a sovereign with constitutionally limited authority.

Theocracy - a form of government in which a Deity is recognized as the supreme civil ruler, but the Deity's laws are interpreted by ecclesiastical authorities (bishops, mullahs, etc.); a government subject to religious authority.

Totalitarian - a government that seeks to subordinate the individual to the state by

controlling not only all political and economic matters, but also the attitudes, values, and beliefs of its population.

Government - note This entry includes miscellaneous government information of significance not included elsewhere.

Gross domestic product see GDP

Gross national product see GNP

Gross world product see GWP

GWP This entry gives the gross world product (GWP) or aggregate value of all final goods and services produced worldwide in a given year.

Heliports This entry gives the total number of established helicopter takeoff and landing sites (which may or may not have fuel or other services).

Highways This entry states the total length of the highway system and the length of the paved and unpaved parts.

HIV/AIDS - adult prevalence rate This entry gives an estimate of the percentage of adults (aged 15-49) living with HIV/AIDS. The adult prevalence rate is calculated by dividing the estimated number of adults living with HIV/AIDS at yearend by the total adult population at yearend.

HIV/AIDS - deaths This entry gives an estimate of the number of adults and children who died of AIDS during a given calendar year.

HIV/AIDS - people living with HIV/AIDS This entry gives an estimate of all people (adults and children) alive at yearend with HIV infection, whether or not they have developed symptoms of AIDS.

Household income or consumption by percentage share Data on household income or consumption come from household surveys, the results adjusted for household size. Nations use different standards and procedures in collecting and adjusting the data. Surveys based on income will normally show a more unequal distribution than surveys based on consumption. The quality of surveys is improving with time, yet caution is still necessary in making inter-country comparisons.

Hydrographic data codes see Data codes

Illicit drugs This entry gives information on the five categories of illicit drugs - narcotics, stimulants, depressants (sedatives), hallucinogens, and cannabis. These categories include many drugs legally produced and prescribed by doctors as well as those illegally produced and sold outside of medical channels. Cannabis (*Cannabis sativa*) is the common hemp plant, which provides hallucinogens with some sedative properties, and includes marijuana (pot, Acapulco gold, grass, reefer), tetrahydrocannabinol (THC, Marinol), hashish (hash), and hashish oil (hash oil). Coca (mostly *Erythroxylum coca*) is a bush with leaves that contain the stimulant used to make cocaine. Coca is not to be confused with cocoa, which comes from cacao seeds and is used in making chocolate, cocoa, and cocoa butter. Cocaine is a stimulant derived from the leaves of the coca bush. Depressants (sedatives) are drugs that reduce tension and anxiety and include chloral hydrate, barbiturates (Amytal, Nembutal, Seconal, phenobarbital), benzodiazepines (Librium, Valium), methaqualone (Quaalude), glutethimide (Doriden), and others (Equanil, Placidyl, Valmid). Drugs are any chemical substances that effect a physical, mental, emotional, or behavioral change in an individual. Drug abuse is the use of any licit or illicit chemical substance that results in physical, mental, emotional, or behavioral impairment in an individual. Hallucinogens are drugs that affect sensation, thinking, self-awareness, and emotion. Hallucinogens include

LSD (acid, microdot), mescaline and peyote (mexc, buttons, cactus), amphetamine variants (PMA, STP, DOB), phencyclidine (PCP, angel dust, hog), phencyclidine analogues (PCE, PCPy, TCP), and others (psilocybin, psilocyn). Hashish is the resinous exudate of the cannabis or hemp plant (*Cannabis sativa*). Heroin is a semisynthetic derivative of morphine. Mandrax is a trade name for methaqualone, a pharmaceutical depressant. Marijuana is the dried leaf of the cannabis or hemp plant (*Cannabis sativa*). Methaqualone is a pharmaceutical depressant, referred to as mandrax in Southwest Asia and Africa. Narcotics are drugs that relieve pain, often induce sleep, and refer to opium, opium derivatives, and synthetic substitutes. Natural narcotics include opium (paregoric, parepectolin), morphine (MS-Contin, Roxanol), codeine (Tylenol with codeine, Empirin with codeine, Robitussin AC), and thebaine. Semisynthetic narcotics include heroin (horse, smack), and hydromorphone (Dilaudid). Synthetic narcotics include meperidine or Pethidine (Demerol, Mepergan), methadone (Dolophine, Methadose), and others (Darvon, Lomotil). Opium is the brown, gummy exudate of the incised, unripe seedpod of the opium poppy. Opium poppy (*Papaver somniferum*) is the source for the natural and semisynthetic narcotics. Poppy straw is the entire cut and dried opium poppy-plant material, other than the seeds. Opium is extracted from poppy straw in commercial operations that produce the drug for medical use. Qat (kat, khat) is a stimulant from the buds or leaves of *Catha edulis* that is chewed or drunk as tea. Quaaludes is the North American slang term for methaqualone, a pharmaceutical depressant. Stimulants are drugs that relieve mild depression, increase energy and activity, and include cocaine (coke, snow, crack), amphetamines (Desoxyn, Dexedrine), ephedrine, ecstasy (clarity, essence, doctor, Adam), phenmetrazine (Preludin), methylphenidate (Ritalin), and others (Cylert, Sanorex, Tenuate).

Imports This entry provides the total US dollar amount of imports on a c.i.f. (cost, insurance, and freight) or f.o.b. (free on board) basis.

Imports - commodities This entry provides a rank ordering of imported products starting with the most important; it sometimes includes the percent of total dollar value.

Imports - partners This entry provides a rank ordering of trading partners starting with the most important; it sometimes includes the percent of total dollar value.

Independence For most countries, this entry gives the date that sovereignty was achieved and from which nation, empire, or trusteeship. For the other countries, the date given may not represent "independence" in the strict sense, but rather some significant nationhood event such as the traditional founding date or the date of unification, federation, confederation, establishment, fundamental change in the form of government, or state succession. Dependent areas include the notation "none" followed by the nature of their dependency status. Also see the Terminology note.

Industrial production growth rate This entry gives the annual percentage increase in industrial production (includes manufacturing, mining, and construction).

Industries This entry provides a rank ordering of industries starting with the largest by value of annual output.

Infant mortality rate This entry gives the number of deaths of infants under one year old in a given year per 1,000 live births in the same year; included is the total death rate, and deaths by sex, male and female. This rate is often used as an indicator of the level of health in a country.

Inflation rate (consumer prices) This entry furnishes the annual percent change in consumer prices compared with the previous year's consumer

prices.

Internet country code

This entry includes the two-letter codes maintained by the International Organization for Standardization (ISO) in the ISO 3166 Alpha-2 list and used by the Internet Assigned Numbers Authority (IANA) to establish country-coded top-level domains (ccTLDs).

Internet hosts This entry lists the number of Internet hosts available within a country. An Internet host is a computer connected directly to the Internet; normally an Internet Service Provider's (ISP) computer is a host. Internet users may use either a hard-wired terminal, at an institution with a mainframe computer connected directly to the Internet, or may connect remotely by way of a modem via telephone line, cable, or satellite to the Internet Service Provider's host computer. The number of hosts is one indicator of the extent of Internet connectivity.

Internet users This entry gives the number of users within a country that access the Internet. Statistics vary from country to country and may include users who access the Internet at least several times a week to those who access it only once within a period of several months.

International disputes see Disputes - international

International organization participation This entry lists in alphabetical order by abbreviation those international organizations in which the subject country is a member or participates in some other way.

International organizations

This information is presented in Appendix B: International Organizations and Groups which includes the name, abbreviation, date established, aim, and members by category.

Introduction

This category includes one entry, Background.

Investment (gross fixed) This entry records total business spending on fixed assets, such as factories, machinery, equipment, dwellings, and inventories of raw materials, which provide the basis for future production. It is measured gross of depreciation of the assets, i.e., it includes investment that merely replaces worn-out or scrapped capital.

Irrigated land This entry gives the number of square kilometers of land area that is artificially supplied with water.

Judicial branch This entry contains the name(s) of the highest court(s) and a brief description of the selection process for members.

Labor force

This entry contains the total labor force figure.

Labor force - by occupation This entry contains a rank ordering of component parts of the labor force by occupation.

Land boundaries This entry contains the total length of all land boundaries and the individual lengths for each of the contiguous border countries.

Land use This entry contains the percentage shares of total land area for three different types of land use: arable land - land cultivated for crops like wheat, maize, and rice that are replanted after each harvest; permanent crops - land cultivated for crops like citrus, coffee, and rubber that are not replanted after each harvest; includes land under flowering shrubs, fruit trees, nut trees, and vines, but excludes land under trees grown for wood or timber; other - any land not arable or under permanent crops; includes

permanent meadows and pastures, forests and woodlands, built-on areas, roads, barren land, etc.

Languages This entry provides a rank ordering of languages starting with the largest and sometimes includes the percent of total population speaking that language.

Legal system

This entry contains a brief description of the legal system's historical roots, role in government, and acceptance of International Court of Justice (ICJ) jurisdiction.

Legislative branch This entry contains information on the structure (unicameral, bicameral, tricameral), formal name, number of seats, and term of office. Elections includes the nature of election process or accession to power, date of the last election, and date of the next election. Election results includes the percent of vote and/or number of seats held by each party in the last election.

Life expectancy at birth This entry contains the average number of years to be lived by a group of people born in the same year, if mortality at each age remains constant in the future. The entry includes total population as well as the male and female components. Life expectancy at birth is also a measure of overall quality of life in a country and summarizes the mortality at all ages. It can also be thought of as indicating the potential return on investment in human capital and is necessary for the calculation of various actuarial measures.

Literacy This entry includes a definition of literacy and Census Bureau percentages for the total population, males, and females. There are no universal definitions and standards of literacy. Unless otherwise specified, all rates are based on the most common definition - the ability to read and

write at a specified age. Detailing the standards that individual countries use to assess the ability to read and write is beyond the scope of the Factbook. Information on literacy, while not a perfect measure of educational results, is probably the most easily available and valid for international comparisons. Low levels of literacy, and education in general, can impede the economic development of a country in the current rapidly changing, technology-driven world.

Location This entry identifies the country's regional location, neighboring countries, and adjacent bodies of water.

Map references This entry includes the name of the Factbook reference map on which a country may be found. The entry on Geographic coordinates may be helpful in finding some smaller countries.

Maritime claims This entry includes the following claims, the definitions of which are excerpted from the United Nations Convention on the Law of the Sea (UNCLOS), which alone contains the full and definitive descriptions: territorial sea - the sovereignty of a coastal state extends beyond its land territory and internal waters to an adjacent belt of sea, described as the territorial sea in the UNCLOS (Part II); this sovereignty extends to the air space over the territorial sea as well as its underlying seabed and subsoil; every state has the right to establish the breadth of its territorial sea up to a limit not exceeding 12 nautical miles; the normal baseline for measuring the breadth of the territorial sea is the low-water line along the coast as marked on large-scale charts officially recognized by the coastal state; the UNCLOS describes specific rules for archipelagic states contiguous zone - according to the UNCLOS (Article 33), this is a zone contiguous to a coastal state's territorial sea, over which it may exercise the control necessary to: prevent infringement of its customs, fiscal, immigration, or sanitary laws and regulations within its territory or

territorial sea; punish infringement of the above laws and regulations committed within its territory or territorial sea; the contiguous zone may not extend beyond 24 nautical miles from the baselines from which the breadth of the territorial sea is measured (e.g., the US has claimed a 12-nautical mile contiguous zone in addition to its 12-nautical mile territorial sea) exclusive economic zone (EEZ) - the UNCLOS (Part V) defines the EEZ as a zone beyond and adjacent to the territorial sea in which a coastal state has: sovereign rights for the purpose of exploring and exploiting, conserving and managing the natural resources, whether living or non-living, of the waters superjacent to the seabed and of the seabed and its subsoil, and with regard to other activities for the economic exploitation and exploration of the zone, such as the production of energy from the water, currents, and winds; jurisdiction with regard to the establishment and use of artificial islands, installations, and structures; marine scientific research; the protection and preservation of the marine environment; the outer limit of the exclusive economic zone shall not exceed 200 nautical miles from the baselines from which the breadth of the territorial sea is measured continental shelf - the UNCLOS (Article 76) defines the continental shelf of a coastal state as comprising the seabed and subsoil of the submarine areas that extend beyond its territorial sea throughout the natural prolongation of its land territory to the outer edge of the continental margin, or to a distance of 200 nautical miles from the baselines from which the breadth of the territorial sea is measured where the outer edge of the continental margin does not extend up to that distance; the continental margin comprises the submerged prolongation of the landmass of the coastal state, and consists of the seabed and subsoil of the shelf, the slope and the rise; wherever the continental margin extends beyond 200 nautical miles from the baseline, coastal states may extend their claim to a distance not to exceed 350 nautical miles from the baseline or 100 nautical miles from the 2500 meter isobath; it does not include the deep ocean floor with its oceanic ridges or the subsoil thereof

exclusive fishing zone - while this term is not used in the UNCLOS, some states (e.g. the United Kingdom) have chosen not to claim an EEZ, but rather to claim jurisdiction over the living resources off their coast; in such cases, the term exclusive fishing zone is often used; the breadth of this zone is normally the same as the EEZ or 200 nautical miles

Median age This entry is the age that divides a population into two numerically equal groups; that is, half the people are younger than this age and half are older. It is a single index that summarizes the age distribution of a population. Currently, the median age ranges from a low of about 15 in Uganda and Gaza Strip to 40 or more in several European countries and Japan. See the entry for "Age structure" for the importance of a young versus an older age structure and, by implication, a low versus a higher median age.

Merchant marine Merchant marine may be defined as all ships engaged in the carriage of goods; or all commercial vessels (as opposed to all nonmilitary ships), which excludes tugs, fishing vessels, offshore oil rigs, etc. This entry contains information in four fields - total, ships by type, foreign-owned, and registered in other countries. Total includes the number of ships (1,000 GRT or over), total DWT for those ships, and total GRT for those ships. DWT or dead weight tonnage is the total weight of cargo, plus bunkers, stores, etc., that a ship can carry when immersed to the appropriate load line. GRT or gross register tonnage is a figure obtained by measuring the entire sheltered volume of a ship available for cargo and passengers and converting it to tons on the basis of 100 cubic feet per ton; there is no stable relationship between GRT and DWT. Ships by type includes a listing of barge carriers, bulk cargo ships, cargo ships, chemical tankers, combination bulk carriers, combination ore/oil carriers, container ships, liquefied gas tankers, livestock carriers, multifunctional large-load carriers, petroleum tankers, passenger ships, passenger/cargo ships, railcar carriers, refrigerated

cargo ships, roll-on/roll-off cargo ships, short-sea passenger ships, specialized tankers, and vehicle carriers. Foreign-owned are ships that fly the flag of one country but belong to owners in another. Registered in other countries are ships that belong to owners in one country but fly the flag of another.

Military This category includes the entries dealing with a country's military structure, manpower, and expenditures.

Military branches This entry lists the names of the ground, naval, air, marine, and other defense or security forces.

Military expenditures - dollar figure This entry gives current military expenditures in US dollars; the figure is calculated by multiplying the estimated defense spending in percentage terms by the gross domestic product (GDP) calculated on an exchange rate basis, not purchasing power parity (PPP) terms. Dollar figures for military expenditures should be treated with caution because of different price patterns and accounting methods among nations, as well as wide variations in the strength of their currencies.

Military expenditures - percent of GDP This entry gives current military expenditures as an estimated percent of gross domestic product (GDP).

Military manpower - availability This entry gives the total numbers of males and females age 15-49 and assumes that every individual is fit to serve.

Military manpower - fit for military service This entry gives the number of males and females age 15-49 fit for military service. This is a more refined measure of potential military manpower availability which tries to account for the health situation in the country and reduces the maximum

potential number to a more realistic estimate of the actual number fit to serve.

Military manpower - military age This entry gives the minimum age at which an individual may volunteer for military service or be subject to conscription.

Military manpower - reaching military age annually This entry gives the number of draft-age males and females entering the military manpower pool in any given year and is a measure of the availability of draft-age young adults.

Military - note This entry includes miscellaneous military information of significance not included elsewhere.

Money figures All money figures are expressed in contemporaneous US dollars unless otherwise indicated.

National holiday This entry gives the primary national day of celebration - usually independence day.

Nationality This entry provides the identifying terms for citizens - noun and adjective.

Natural gas - production This entry is the total natural gas produced in cubic meters (cu m). The discrepancy between the amount of natural gas produced and/or imported and the amount consumed and/or exported is due to the omission of stock changes and other complicating factors.

Natural gas - consumption This entry is the total natural gas consumed in cubic meters (cu m). The discrepancy between the amount of natural gas produced and/or imported and the amount consumed and/or exported is due to the omission of stock changes and other complicating factors.

Natural gas - exports

This entry is the total natural gas exported in cubic meters (cu m).

Natural gas - imports

This entry is the total natural gas imported in cubic meters (cu m).

Natural gas - proved reserves This entry is the stock of proved reserves of natural gas in cubic meters (cu m). Proved reserves are those quantities of natural gas, which, by analysis of geological and engineering data, can be estimated with a high degree of confidence to be commercially recoverable from a given date forward, from known reservoirs and under current economic conditions.

Natural hazards

This entry lists potential natural disasters.

Natural resources This entry lists a country's mineral, petroleum, hydropower, and other resources of commercial importance.

Net migration rate This entry includes the figure for the difference between the number of persons entering and leaving a country during the year per 1,000 persons (based on midyear population). An excess of persons entering the country is referred to as net immigration (e.g., 3.56 migrants/1,000 population); an excess of persons leaving the country as net emigration (e.g., -9.26 migrants/1,000 population). The net migration rate indicates the contribution of migration to the overall level of population change. High levels of migration can cause problems such as increasing unemployment and potential ethnic strife (if people are coming in) or a reduction in the labor force, perhaps in certain key sectors (if people are leaving).

Oil - production This entry is the total oil produced in barrels per day (bbl/day). The discrepancy between the amount of oil produced and/or imported and the amount consumed and/or exported is due to the omission of stock changes, refinery gains, and other complicating factors.

Oil - consumption This entry is the total oil consumed in barrels per day (bbl/day). The discrepancy between the amount of oil produced and/or imported and the amount consumed and/or exported is due to the omission of stock changes, refinery gains, and other complicating factors.

Oil - exports This entry is the total oil exported in barrels per day (bbl/day), including both crude oil and oil products.

Oil - imports This entry is the total oil imported in barrels per day (bbl/day), including both crude oil and oil products.

Oil - proved reserves This entry is the stock of proved reserves of crude oil in barrels (bbl). Proved reserves are those quantities of petroleum which, by analysis of geological and engineering data, can be estimated with a high degree of confidence to be commercially recoverable from a given date forward, from known reservoirs and under current economic conditions.

People This category includes the entries dealing with the characteristics of the people and their society.

People - note This entry includes miscellaneous demographic information of significance not included elsewhere.

Personal Names - Capitalization The Factbook capitalizes the surname or family name of individuals for the convenience of our users who are faced with a world of different cultures and naming conventions. The need for capitalization, bold type, underlining, italics, or some other indicator of the

individual's surname is apparent in the following examples: MAO Zedong, Fidel CASTRO Ruz, George W. BUSH, and TUNKU SALAHUDDIN Abdul Aziz Shah ibni Al-Marhum Sultan Hisammuddin Alam Shah. By knowing the surname, a short form without all capital letters can be used with confidence as in President Castro, Chairman Mao, President Bush, or Sultan Tunku Salahuddin. The same system of capitalization is extended to the names of leaders with surnames that are not commonly used such as Queen ELIZABETH II.

Personal Names - Spelling The romanization of personal names in the Factbook normally follows the same transliteration system used by the US Board on Geographic Names for spelling place names. At times, however, a foreign leader expressly indicates a preference for, or the media or official documents regularly use, a romanized spelling that differs from the transliteration derived from the US Government standard. In such cases, the Factbook uses the alternative spelling.

Personal Names - Titles The Factbook capitalizes any valid title (or short form of it) immediately preceding a person's name. A title standing alone is not capitalized. Examples: President PUTIN and President BUSH are chiefs of state. In Russia, the president is chief of state and the premier is the head of the government, while in the US, the president is both chief of state and head of government.

Petroleum

See entry for "oil."

Petroleum products

See entry for "oil."

Pipelines This entry gives the lengths and types of pipelines for transporting products like natural gas, crude oil, or petroleum products.

Political parties and leaders This entry includes a listing of significant political organizations and their leaders.

Political pressure groups and leaders This entry includes a listing of organizations with leaders involved in politics, but not standing for legislative election.

Population This entry gives an estimate from the US Bureau of the Census based on statistics from population censuses, vital statistics registration systems, or sample surveys pertaining to the recent past and on assumptions about future trends. The total population presents one overall measure of the potential impact of the country on the world and within its region. Note: starting with the 1993 Factbook, demographic estimates for some countries (mostly African) have explicitly taken into account the effects of the growing impact of the HIV/AIDS epidemic. These countries are currently: The Bahamas, Benin, Botswana, Brazil, Burkina Faso, Burma, Burundi, Cambodia, Cameroon, Central African Republic, Democratic Republic of the Congo, Republic of the Congo, Cote d'Ivoire, Ethiopia, Gabon, Ghana, Guyana, Haiti, Honduras, Kenya, Lesotho, Malawi, Mozambique, Namibia, Nigeria, Rwanda, South Africa, Swaziland, Tanzania, Thailand, Togo, Uganda, Zambia, and Zimbabwe.

Population below poverty line National estimates of the percentage of the population falling below the poverty line are based on surveys of sub-groups, with the results weighted by the number of people in each group. Definitions of poverty vary considerably among nations. For example, rich nations generally employ more generous standards of poverty than poor nations.

Population growth rate The average annual percent change in the population, resulting from a surplus (or deficit) of births over deaths and the balance of migrants entering and leaving a country. The rate may be

positive or negative. The growth rate is a factor in determining how great a burden would be imposed on a country by the changing needs of its people for infrastructure (e.g., schools, hospitals, housing, roads), resources (e.g., food, water, electricity), and jobs. Rapid population growth can be seen as threatening by neighboring countries.

Ports and harbors This entry lists the major ports and harbors selected on the basis of overall importance to each country. This is determined by evaluating a number of factors (e.g., dollar value of goods handled, gross tonnage, facilities, military significance).

Public debt This entry records the cumulative total of all government borrowings less repayments that are denominated in a country's home currency. Public debt should not be confused with external debt, which reflects the foreign currency liabilities of both the private and public sector and must be financed out of foreign exchange earnings.

Radio broadcast stations This entry includes the total number of AM, FM, and shortwave broadcast stations.

Railways This entry states the total route length of the railway network and of its component parts by gauge: broad, standard, narrow, and dual. Other gauges are listed under note.

Reference maps

This section includes world and regional maps.

Refugees and internally displaced persons This entry includes those persons residing in a country as refugees or internally displaced persons (IDPs). The definition of a refugee according to a United Nations Convention is "a person who is outside his/her country of nationality or habitual residence; has a well- founded fear of persecution because of

his/her race, religion, nationality, membership in a particular social group or political opinion; and is unable or unwilling to avail himself/herself of the protection of that country, or to return there, for fear of persecution." The UN established the Office of the UN High Commissioner for Refugees (UNHCR) in 1950 to handle refugee matters worldwide. The UN Relief and Works Agency for Palestine Refugees in the Near East (UNRWA) has a different, operational definition for a Palestinian refugee: "a person whose normal place of residence was Palestine during the period 1 June 1946 to 15 May 1948 and who lost both home and means of livelihood as a result of the 1948 conflict." However, UNHCR also assists some 400,000 Palestinian refugees not covered under the UNRWA definition. The term "internally displaced person" is not specifically covered in the UN Convention; it is used to describe people who have fled their homes for reasons similar to refugees, but who remain within their own national territory and are subject to the laws of that state. The United Nations High Commissioner for Refugees (UNHCR) estimated that in December 2003 there was a global population of 9.7 million refugees and as many as 25 million IDPs.

Religions This entry is an ordered listing of religions by adherents starting with the largest group and sometimes includes the percent of total population.

Reserves of foreign exchange and gold This entry gives the dollar value for the stock of all financial assets that are available to the central monetary authority for use in meeting a country's balance of payments needs as of the end-date of the period specified. This category includes not only foreign currency and gold, but also a country's holdings of Special Drawing Rights in the International Monetary Fund, and its reserve position in the Fund.

Sex ratio This entry includes the number of males for each female in five age groups - at birth, under 15 years, 15-64 years, 65 years and over, and for

the total population. Sex ratio at birth has recently emerged as an indicator of certain kinds of sex discrimination in some countries. For instance, high sex ratios at birth in some Asian countries are now attributed to sex-selective abortion and infanticide due to a strong preference for sons. This will affect future marriage patterns and fertility patterns. Eventually it could cause unrest among young adult males who are unable to find partners.

Suffrage This entry gives the age at enfranchisement and whether the right to vote is universal or restricted.

Telephone numbers All telephone numbers in the Factbook consist of the country code in brackets, the city or area code (where required) in parentheses, and the local number. The one component that is not presented is the international access code, which varies from country to country. For example, an international direct dial telephone call placed from the US to Madrid, Spain, would be as follows:

011 [34] (1) 577-xxxx, where

011 is the international access code for station-to-station calls;

01 is for calls other than station-to-station calls,

[34] is the country code for Spain,

(1) is the city code for Madrid,

577 is the local exchange, and

xxxx is the local telephone number.

An international direct dial telephone call placed from another country to the US would be as follows:

international access code + [1] (202) 939-xxxx, where

[1] is the country code for the US,

(202) is the area code for Washington, DC,

939 is the local exchange, and

xxxx is the local telephone number.

Telephone system This entry includes a brief general assessment of the system with details on the domestic and international components. The following terms and abbreviations are used throughout the entry:

Africa ONE - a fiber-optic submarine cable link encircling the continent of Africa. Arabsat - Arab Satellite Communications Organization (Riyadh, Saudi Arabia). Autodin - Automatic Digital Network (US Department of Defense). CB - citizen's band mobile radio communications. cellular telephone system - the telephones in this system are radio transceivers, with each instrument having its own private radio frequency and sufficient radiated power to reach the booster station in its area (cell), from which the telephone signal is fed to a telephone exchange. Central American Microwave System - a trunk microwave radio relay system that links the countries of Central America and Mexico with each other. coaxial cable - a multichannel communication cable consisting of a central conducting wire, surrounded by and insulated from a cylindrical conducting shell; a large number of telephone channels can be made available within the insulated space by the use of a large number of carrier frequencies. Comsat - Communications Satellite Corporation (US). DSN - Defense Switched Network (formerly Automatic Voice Network or Autovon); basic general-purpose, switched voice network of the Defense Communications System (US Department of Defense). Eutelsat - European Telecommunications Satellite Organization (Paris). fiber-optic cable - a multichannel communications cable using a thread of optical glass fibers as a transmission medium in which the signal (voice, video, etc.) is in the form of a coded pulse of light. GSM - a global system for mobile (cellular) communications devised by the Groupe Special Mobile of the pan-European standardization organization, Conference Europeenne des Posts et Telecommunications (CEPT) in 1982. HF - high frequency; any radio frequency in the 3,000- to 30,000- kHz range. Inmarsat - International Maritime Satellite Organization (London); provider of global mobile

satellite communications for commercial, distress, and safety applications at sea, in the air, and on land. Intelsat - International Telecommunications Satellite Organization (Washington, DC). Intersputnik - International Organization of Space Communications (Moscow); first established in the former Soviet Union and the East European countries, it is now marketing its services worldwide with earth stations in North America, Africa, and East Asia. landline - communication wire or cable of any sort that is installed on poles or buried in the ground. Marecs - Maritime European Communications Satellite used in the Inmarsat system on lease from the European Space Agency. Marisat - satellites of the Comsat Corporation that participate in the Inmarsat system. Medarabtel - the Middle East Telecommunications Project of the International Telecommunications Union (ITU) providing a modern telecommunications network, primarily by microwave radio relay, linking Algeria, Djibouti, Egypt, Jordan, Libya, Morocco, Saudi Arabia, Somalia, Sudan, Syria, Tunisia, and Yemen; it was initially started in Morocco in 1970 by the Arab Telecommunications Union (ATU) and was known at that time as the Middle East Mediterranean Telecommunications Network. microwave radio relay - transmission of long distance telephone calls and television programs by highly directional radio microwaves that are received and sent on from one booster station to another on an optical path. NMT - Nordic Mobile Telephone; an analog cellular telephone system that was developed jointly by the national telecommunications authorities of the Nordic countries (Denmark, Finland, Iceland, Norway, and Sweden). Orbita - a Russian television service; also the trade name of a packet-switched digital telephone network. radiotelephone communications - the two-way transmission and reception of sounds by broadcast radio on authorized frequencies using telephone handsets. PanAmSat - PanAmSat Corporation (Greenwich, CT). SAFE - South African Far East Cable satellite communication system - a communication system consisting of two or more earth stations and at least

one satellite that provide long distance transmission of voice, data, and television; the system usually serves as a trunk connection between telephone exchanges; if the earth stations are in the same country, it is a domestic system. satellite earth station - a communications facility with a microwave radio transmitting and receiving antenna and required receiving and transmitting equipment for communicating with satellites. satellite link - a radio connection between a satellite and an earth station permitting communication between them, either one-way (down link from satellite to earth station - television receive-only transmission) or two-way (telephone channels). SHF - super high frequency; any radio frequency in the 3,000- to 30,000-MHz range. shortwave - radio frequencies (from 1.605 to 30 MHz) that fall above the commercial broadcast band and are used for communication over long distances. Solidaridad - geosynchronous satellites in Mexico's system of international telecommunications in the Western Hemisphere. Statsionar - Russia's geostationary system for satellite telecommunications. submarine cable - a cable designed for service under water. TAT - Trans-Atlantic Telephone; any of a number of high-capacity submarine coaxial telephone cables linking Europe with North America. telefax - facsimile service between subscriber stations via the public switched telephone network or the international Dattel network. telegraph - a telecommunications system designed for unmodulated electric impulse transmission. telex - a communication service involving teletypewriters connected by wire through automatic exchanges. tropospheric scatter - a form of microwave radio transmission in which the troposphere is used to scatter and reflect a fraction of the incident radio waves back to earth; powerful, highly directional antennas are used to transmit and receive the microwave signals; reliable over-the-horizon communications are realized for distances up to 600 miles in a single hop; additional hops can extend the range of this system for very long distances. trunk network - a network of switching centers, connected by multichannel trunk lines. UHF - ultra high

frequency; any radio frequency in the 300- to 3,000-MHz range. VHF - very high frequency; any radio frequency in the 30- to 300- MHz range.

Telephones - main lines in use

This entry gives the total number of main telephone lines in use.

Telephones - mobile cellular

This entry gives the total number of mobile cellular telephones in use.

Television - broadcast stations This entry gives the total number of separate broadcast stations plus any repeater stations.

Terminology Due to the highly structured nature of the Factbook database, some collective generic terms have to be used. For example, the word Country in the Country name entry refers to a wide variety of dependencies, areas of special sovereignty, uninhabited islands, and other entities in addition to the traditional countries or independent states. Military is also used as an umbrella term for various civil defense, security, and defense activities in many entries. The Independence entry includes the usual colonial independence dates and former ruling states as well as other significant nationhood dates such as the traditional founding date or the date of unification, federation, confederation, establishment, or state succession that are not strictly independence dates. Dependent areas have the nature of their dependency status noted in this same entry.

Terrain

This entry contains a brief description of the topography.

Total fertility rate This entry gives a figure for the average number of children that would be born per woman if all women lived to the end of their childbearing years and bore children according to a given fertility rate at each age. The total fertility rate is a more direct measure of the level of

fertility than the crude birth rate, since it refers to births per woman. This indicator shows the potential for population growth in the country. High rates will also place some limits on the labor force participation rates for women. Large numbers of children born to women indicate large family sizes that might limit the ability of the families to feed and educate their children.

Transnational Issues This category includes only two entries at the present time - Disputes - international and Illicit drugs - that deal with current issues going beyond national boundaries.

Transportation This category includes the entries dealing with the means for movement of people and goods.

Transportation - note This entry includes miscellaneous transportation information of significance not included elsewhere.

Unemployment rate This entry contains the percent of the labor force that is without jobs. Substantial underemployment might be noted.

Waterways This entry gives the total length of navigable rivers, canals, and other inland bodies of water.

Years All year references are for the calendar year (CY) unless indicated as fiscal year (FY). The calendar year is an accounting period of 12 months from 1 January to 31 December. The fiscal year is an accounting period of 12 months other than 1 January to 31 December.

Note: Information for the US and US dependencies was compiled from material in the public domain and does not represent Intelligence Community estimates.

History

A Brief History of Basic Intelligence and The World Factbook

The Intelligence Cycle is the process by which information is acquired, converted into intelligence, and made available to policymakers. Information is raw data from any source, data that may be fragmentary, contradictory, unreliable, ambiguous, deceptive, or wrong. Intelligence is information that has been collected, integrated, evaluated, analyzed, and interpreted. Finished intelligence is the final product of the Intelligence Cycle ready to be delivered to the policymaker.

The three types of finished intelligence are: basic, current, and estimative. Basic intelligence provides the fundamental and factual reference material on a country or issue. Current intelligence reports on new developments. Estimative intelligence judges probable outcomes. The three are mutually supportive: basic intelligence is the foundation on which the other two are constructed; current intelligence continually updates the inventory of knowledge; and estimative intelligence revises overall interpretations of country and issue prospects for guidance of basic and current intelligence. The World Factbook, The President's Daily Brief, and the National Intelligence Estimates are examples of the three types of finished intelligence.

The United States has carried on foreign intelligence activities since the days of George Washington but only since World War II have they been coordinated on a government-wide basis. Three programs have highlighted the development of coordinated basic intelligence since that time: (1) the Joint Army Navy Intelligence Studies (JANIS), (2) the National Intelligence Survey (NIS), and (3) The World Factbook.

During World War II, intelligence consumers realized that the production of basic intelligence by different components of the US Government resulted in a great duplication of effort and conflicting information. The Japanese attack on Pearl Harbor in 1941 brought home to leaders in Congress and the executive branch the need for integrating departmental reports to national policymakers. Detailed and coordinated information was needed not only on such major powers as Germany and Japan, but also on places of little previous interest. In the Pacific Theater, for example, the Navy and Marines had to launch amphibious operations against many islands about which information was unconfirmed or nonexistent. Intelligence authorities resolved that the United States should never again be caught unprepared.

In 1943, Gen. George B. Strong (G-2), Adm. H. C. Train (Office of Naval Intelligence - ONI), and Gen. William J. Donovan (Director of the Office of Strategic Services - OSS) decided that a joint effort should be initiated. A steering committee was appointed on 27 April 1943 that recommended the formation of a Joint Intelligence Study Publishing Board to assemble, edit, coordinate, and publish the Joint Army Navy Intelligence Studies (JANIS). JANIS was the first interdepartmental basic intelligence program to fulfill the needs of the US Government for an authoritative and coordinated appraisal of strategic basic intelligence. Between April 1943 and July 1947, the board published 34 JANIS studies. JANIS performed well in the war effort, and numerous letters of commendation were received, including a

statement from Adm. Forrest Sherman, Chief of Staff, Pacific Ocean Areas, which said, "JANIS has become the indispensable reference work for the shore-based planners."

The need for more comprehensive basic intelligence in the postwar world was well expressed in 1946 by George S. Pettee, a noted author on national security. He wrote in *The Future of American Secret Intelligence* (Infantry Journal Press, 1946, page 46) that world leadership in peace requires even more elaborate intelligence than in war. "The conduct of peace involves all countries, all human activities - not just the enemy and his war production."

The Central Intelligence Agency was established on 26 July 1947 and officially began operating on 18 September 1947. Effective 1 October 1947, the Director of Central Intelligence assumed operational responsibility for JANIS. On 13 January 1948, the National Security Council issued Intelligence Directive (NSCID) No. 3, which authorized the National Intelligence Survey (NIS) program as a peacetime replacement for the wartime JANIS program. Before adequate NIS country sections could be produced, government agencies had to develop more comprehensive gazetteers and better maps. The US Board on Geographic Names (BGN) compiled the names; the Department of the Interior produced the gazetteers; and CIA produced the maps.

The Hoover Commission's Clark Committee, set up in 1954 to study the structure and administration of the CIA, reported to Congress in 1955 that: "The National Intelligence Survey is an invaluable publication which provides the essential elements of basic intelligence on all areas of the world. There will always be a continuing requirement for keeping the Survey up-to-date." The Factbook was created as an annual summary and update to the encyclopedic NIS studies. The first classified Factbook was published in August 1962, and the first unclassified version was published

in June 1971. The NIS program was terminated in 1973 except for the Factbook, map, and gazetteer components. The 1975 Factbook was the first to be made available to the public with sales through the US Government Printing Office (GPO). The year 2004 marks the 57th anniversary of the establishment of the Central Intelligence Agency and the 61st year of continuous basic intelligence support to the US Government by The World Factbook and its two predecessor programs.

Contributors and Copyright Information

In general, information available as of 1 January, 2004 was used in the preparation of this edition.

The World Factbook is prepared by the Central Intelligence Agency for the use of US Government officials, and the style, format, coverage, and content are designed to meet their specific requirements. Information is provided by Antarctic Information Program (National Science Foundation), Bureau of the Census (Department of Commerce), Bureau of Labor Statistics (Department of Labor), Central Intelligence Agency, Council of Managers of National Antarctic Programs, Defense Intelligence Agency (Department of Defense), Department of State, Fish and Wildlife Service (Department of the Interior), Maritime Administration (Department of Transportation), National Geospatial- Intelligence Agency (Department of

Defense), Naval Facilities Engineering Command (Department of Defense), Office of Insular Affairs (Department of the Interior), Office of Naval Intelligence (Department of Defense), US Board on Geographic Names (Department of the Interior), US Transportation Command (Department of Defense), and other public and private sources.

The Factbook is in the public domain. Accordingly, it may be copied freely without permission of the Central Intelligence Agency (CIA). The official seal of the CIA, however, may NOT be copied without permission as required by the CIA Act of 1949 (50 U.S.C. section 403m). Misuse of the official seal of the CIA could result in civil and criminal penalties.

Frequently Asked Questions

The World Factbook staff thanks you for your comments, suggestions, updates, kudos, and corrections over the past years. The willingness of readers from around the world to share their observations and specialized knowledge is very helpful as we try to produce the best possible publications. Please feel free to continue to write and e-mail us. At least two Factbook staffers review every item. The sheer volume of correspondence precludes detailed personal replies, but we sincerely appreciate your time and interest in the Factbook. If you include your e-mail address we will at least acknowledge your note. Thank you again.

Answers to many frequently asked questions (FAQs) are explained in the Notes and Definitions section in The World Factbook. Please review this section to see if your question is already answered there. In addition, we have compiled the following list of FAQs to answer other common questions. Select from the following categories to narrow your search:

Policies and Procedures

Technical

General

Can you provide additional information for a specific country?

The staff cannot provide data beyond what appears in The World Factbook. The format and information in the Factbook are tailored to the specific requirements of US Government officials and content is focused on their current and anticipated needs. The staff welcomes suggestions for new entries.

How often is The World Factbook updated?

Formerly our Web site (and the published Factbook) were only updated annually. Beginning in November 2001 we instituted a new system of more frequent online updates.

The annual printed version of the Factbook is usually released about midyear. US Government officials may obtain information about Factbook availability from their own organizations or through liaison channels to the CIA. Other users may obtain sales information through the following channels:

Superintendent of Documents

P. O. Box 371954 Pittsburgh, PA 15250-7954

Telephone: [1] (202) 512-1800

FAX: [1] (202) 512-2250

Can I use some or all of The World Factbook for my Web site (book, research project, homework, etc.)?

The World Factbook is in the public domain and may be used freely by anyone at anytime without seeking permission. However, US Code prohibits use of the CIA seal in a manner which implies that the CIA approved, endorsed, or authorized such use. If you have any questions about your intended use, you should consult with legal counsel. Further information on The World Factbook's use is described on the Contributors and Copyright Information page. As a courtesy, please cite The World Factbook when used.

Why doesn't The World Factbook include information on states, departments, provinces, etc., in the country format?

The World Factbook provides national-level information on countries, territories, and dependencies, but not subnational administrative units within a country. A good encyclopedia should provide state/province- level information.

Is it possible to access older editions of The World Factbook to do comparative research and trend analysis?

Only the current version is available for browsing on the CIA Web site. In the future, the staff hopes to post electronic versions of The World Factbook as far back as 1986. Hardcopy editions for earlier years are available from libraries.

Would it be possible to set up a partnership or collaboration between the producers of The World Factbook and other organizations or individuals?

The World Factbook does not partner with other organizations or individuals, but we do welcome comments and suggestions that such groups or persons choose to provide.

Geography

I can't find a geographic name for a particular country. Why not?

The World Factbook is not a gazetteer (a dictionary or index of places, usually with descriptive or statistical information) and cannot provide more than the names of the administrative divisions (in the Government category) and major cities/towns (on the country maps). Our expanded Cross-Reference List of Geographic Names, however, includes many of the world's major geographic features as well as historic (former) names of countries and cities mentioned in The World Factbook.

Why are Taiwan and the European Union listed out of alphabetical order at the end of the Factbook entries?

Taiwan is listed after the regular entries because even though the mainland People's Republic of China claims Taiwan, elected Taiwanese authorities de facto administer the island and reject mainland sovereignty claims. With the establishment of diplomatic relations with China on January 1, 1979, the US Government recognized the People's Republic of China as the sole legal government of China, acknowledging the Chinese position that there is only one China and that Taiwan is part of China.

The European Union (EU) is not a country, but it has taken on many nation-like attributes and these are likely to be expanded in the future. A more complete explanation on the inclusion of the EU into the Factbook may be found in the Preliminary statement.

Since we have an ambassador who represents the US at the Vatican, why is this entity not listed in the Factbook?

Vatican City is found under Holy See. The term "Holy See" refers to the authority, jurisdiction, and sovereignty vested in the Pope and his advisors to direct the worldwide Catholic Church. The Holy See has a legal personality that allows it to enter into treaties as the juridical equal of a state and to send and receive diplomatic representatives. Vatican City, created in 1929 to administer properties belonging to the Holy See in Rome, is recognized under international law as a sovereign state, but it does not send or receive diplomatic representatives. Consequently, Holy See is included as a Factbook entry, with Vatican City cross-referenced in the Geographic Names appendix.

Why is Palestine not listed in The World Factbook?

The areas that could potentially form a future Palestinian state — the West Bank and Gaza Strip — do appear in the Factbook. These areas are presently Israeli-occupied with current status subject to the Israeli-Palestinian 1995 Interim Agreement; their permanent status is to be determined through further negotiation.

Why are the Golan Heights not shown as part of Israel or Northern Cyprus with Turkey?

Territorial occupations/annexations not recognized by the United States Government are not shown on US Government maps.

Why don't you include information on entities such as Tibet, Kashmir, or Kosovo?

The World Factbook provides information on the administrative divisions of a country as recommended by the United States Board on Geographic Names (BGN). The BGN is a component of the US Government that develops policies, principles, and procedures governing the spelling, use,

and application of geographic names—domestic, foreign, Antarctic, and undersea. Its decisions enable all departments and agencies of the US Government to have access to uniform names of geographic features.

Also included in the Factbook are entries on parts of the world whose status has not yet been resolved (e.g., West Bank, Spratly Islands). Specific regions within a country or areas in dispute among countries are not covered.

What do you mean when you say that a country is "doubly landlocked"?

A doubly landlocked country is one that is separated from an ocean or an ocean-accessible sea by two intervening countries. Uzbekistan and Liechtenstein are the only countries that fit this definition.

Spelling and Pronunciation

Why is the spelling of proper names such as rulers, presidents, and prime ministers in The World Factbook different than their spelling in my country?

The Factbook staff applies the names and spellings from the Chiefs of State link on the CIA Web site. The World Factbook is prepared using the standard American English computer keyboard and does not use any special characters, symbols, or most diacritical markings in its spellings. Surnames are always spelled with capital letters; they may appear first in some cultures.

The spelling of geographic names, features, cities, administrative divisions, etc. in the Factbook differs from those used in my country. Why is this?

The United States Board on Geographic Names (BGN) recommends and approves names and spellings. The BGN is the component of the United States Government that develops policies, principles, and procedures governing the spelling, use, and application of geographic names—domestic, foreign, Antarctic, and undersea. Its decisions enable all departments and agencies of the US Government to use uniform names of geographic features. (A note is usually included where changes may have occurred but have not yet been approved by the BGN). The World Factbook is prepared using the standard American English computer keyboard and does not use any special characters, symbols, or most diacritical markings in its spellings.

Why doesn't The World Factbook include pronunciations of country or leader names?

There are too many variations in pronunciation among English-speaking countries, not to mention English renditions of non-English names, for pronunciations to be included. American English pronunciations are included for some countries like Qatar and Kiribati.

Why is the name of the Labour party misspelled?

When American and British spellings of common English words differ, The World Factbook always uses the American spelling, even when these common words form part of a proper name in British English.

Policies and Procedures

What is The World Factbook's source for a specific subject field?

The Factbook staff uses many different sources to publish what we judge are the most reliable and consistent data for any particular category. Space considerations preclude a listing of these various sources.

The names of some geographic features provided in the Factbook differ from those used in other publications. For example, in Asia the Factbook has Burma as the country name, but in other publications Myanmar is used; also, the Factbook uses Sea of Japan whereas other publications label it East Sea. What is your policy on naming geographic features?

The Factbook staff follows the guidance of the United States Board on Geographic Names (BGN). The BGN is the component of the United States Government that develops policies, principles, and procedures governing the spelling, use, and application of geographic names—domestic, foreign, Antarctic, and undersea. Its decisions enable all departments and agencies of the US Government to have access to uniform names of geographic features. The position of the BGN is that the names Burma and Sea of Japan be used in official US Government maps and publications.

Why is most of the statistical information in the Factbook given in metric units, rather than the units standard to US measure?

US Federal agencies are required by the Metric Conversion Act of 1975 (Public Law 94-168) and by Executive Order 12770 of July 1991 to use the International System of Units, commonly referred to as the metric system or SI. In addition, the metric system is used by over 95 percent of the world's population.

Why don't you include information on minimum and maximum temperature extremes?

The Factbook staff judges that this information would only be useful for some (generally smaller) countries. Larger countries can have large temperature extremes that do not represent the landmass as a whole. In the future, such a category may be adopted listing the extremes, but also adding a normal temperature range found throughout most of a country's territory.

What information sources are used for the country flags?

Flag designs used in The World Factbook are those recognized by the protocol office of the US Department of State.

Why do your GDP (Gross Domestic Product) statistics differ from other sources?

GDP dollar estimates in The World Factbook are derived from purchasing power parity (PPP) calculations. See the Notes and Definitions section on GDP methodology for more information.

On the CIA Web site, Chiefs of State is updated weekly, but the last update for the Factbook was an earlier date. Why the discrepancy?

Although Chiefs of State and The World Factbook both appear on the CIA Web site, they are produced and updated by separate staffs. Chiefs of State includes fewer countries but more leaders, and is updated more frequently than The World Factbook, which has a much larger database, and includes all countries.

Some percentage distributions do not add to 100. Why not?

Because of rounding, percentage distributions do not always add precisely to 100%. Rounding of numbers always results in a loss of precision—i.e., error. This error becomes apparent when percentage data are totaled, as the following two examples show:

Original Data Rounded to whole integer

Example 1 43.2 43

30.4 30

26.4 26

—— —

100.0 99

Example 2 42.8 43

31.6 32

25.6 26

—— —

100.0 101

When this occurs, we do not force the numbers to add exactly to 100, because doing so would introduce additional error into the distribution.

What rounding convention does The World Factbook use?

In deciding on the number of digits to present, the Factbook staff assesses the accuracy of the original data and the needs of US Government officials. All of the economic data are processed by computer—either at the source or by the Factbook staff. The economic data presented in The Factbook, therefore, follow the rounding convention used by virtually all numerical software applications, namely, any digit followed by a "5" is rounded up to the next higher digit, no matter whether the original digit is even or odd. Thus, for example, when rounded to the nearest integer, 2.5 becomes 3, rather than 2, as occurred in some pre-computer rounding systems.

Technical

Does The World Factbook comply with Section 508 of the Rehabilitation Act regarding accessibility of Web pages?

The World Factbook home page has a link entitled "Text/Low Bandwidth Version." The country data in the text version is fully accessible. We believe The World Factbook is compliant with the Section 508 law in both fact and spirit. If you are experiencing difficulty, please use our comment form to provide us details of the specific problem you are experiencing and the assistive software and/or hardware that you are using so that we can work with our technical support staff to find and implement a solution. We welcome visitors' suggestions to improve accessibility of The World Factbook and the CIA Web site.

I am using the Factbook online and it is not working. What is wrong?

Hundreds of "Factbook" look-alikes exist on the Internet. The Factbook site at: www.cia.gov is the only official site.

When I attempt to download a PDF (Portable Document Format) map file (or some other map) the file has no image. Can you fix this?

Some of the files on The World Factbook Web site are large and could take several minutes to download on a dial-up connection. The screen might be blank during the download process.

When I open a map on The World Factbook site, it is fuzzy or granular, or too big or too small. Why?

Adjusting the resolution setting on your monitor should correct this problem.

Is The World Factbook country data available in machine-readable format? All I can find is HTML, but I'm looking for simple tabular data.

The Factbook Web site now features "Rank Order" pages for selected Factbook entries. "Rank Order" pages are available for those data fields identified with a small bar chart icon located next to the title of the data entry. In addition, all of the "Rank Order" pages can be downloaded as tab-delimited data files that can be opened in other applications such as spreadsheets and databases.

Introduction Afghanistan

Background:

Afghanistan's recent history is a story of war and civil unrest. The Soviet Union invaded in 1979, but was forced to withdraw 10 years later by anti-Communist mujahidin forces. The Communist regime in Kabul collapsed in 1992. Fighting that subsequently erupted among the various mujahidin factions eventually helped to spawn the Taliban, a hardline Pakistani-sponsored movement that fought to end the warlordism and civil war which gripped the country. The Taliban seized Kabul in 1996 and were able to capture most of the country outside of Northern Alliance strongholds primarily in the northeast. Following the 11 September 2001 terrorist attacks, a US, Allied, and Northern Alliance military action toppled the Taliban for sheltering

Osama BIN LADIN. In late 2001, a conference in Bonn, Germany, established a process for political reconstruction that ultimately resulted in the adoption of a new constitution and presidential election in 2004. On 9 October 2004, Hamid KARZAI became the first democratically elected president of Afghanistan. The new Afghan government's next task is to hold National Assembly elections, tentatively scheduled for April 2005.

Economy Afghanistan

Economy - overview:

Afghanistan's economic outlook has improved significantly over the past two years because of the infusion of over \$2 billion in international assistance, dramatic improvements in agricultural production, and the end of a four-year drought in most of the country. However, Afghanistan remains extremely poor, landlocked, and highly dependent on foreign aid, farming, and trade with neighboring countries. It will probably take the remainder of the decade and continuing donor aid and attention to raise Afghanistan's living standards up from its current status among the lowest in the world. Much of the population continues to suffer from shortages of housing, clean water, electricity, medical care, and jobs, but the Afghan government and international donors remain committed to improving access to these basic necessities by prioritizing infrastructure development, education, housing development, jobs programs, and economic reform over the next year. Growing political stability and continued international commitment to Afghan reconstruction create an optimistic outlook for maintaining improvements to the Afghan economy in 2004. The replacement of the

opium trade - which may account for one-third of GDP - is one of several potential spoilers for the economy over the long term.

Military Afghanistan

Military branches:
Afghan National Army, currently being trained by the US with the assistance of the international community, is 7,000 strong; note - the December 2001 Bonn Agreement called for all militia forces to come under the authority of the central government, but regional leaders have continued to retain their militias and the formation of a national army remains a gradual process; Afghanistan's militia forces continue to be factionalized, largely along ethnic lines

Military manpower - military age and obligation:

Transnational Issues Afghanistan

Disputes - international:
despite largely successful UN efforts at voluntary repatriation, 2-3 million Afghan refugees continue to reside in Iran and Pakistan, many at their own choosing; Pakistan has sent troops into remote tribal areas to control the border and stem organized terrorist and other illegal cross-border activities; regular meetings between Pakistani and coalition allies aim to resolve periodic claims of boundary encroachments; occasional conflicts over water-sharing arrangements with Amu Darya and Helmand River states

Refugees and internally displaced persons:
IDPs: 167,000 - 200,000 (mostly Pashtuns and Kuchis displaced in south and west due to drought and instability) (2004)

Illicit drugs:

world's largest producer of opium; cultivation of opium poppy reached unprecedented level of 206,700 hectares in 2004; counterdrug efforts largely unsuccessful; potential opium production of 4,950 metric tons; potential heroin production of 582 metric tons if all opium was processed; source of hashish; many narcotics-processing labs throughout the country; drug trade source of instability and some antigovernment groups profit from the trade; 80-90% of the heroin consumed in Europe comes from Afghan opium; vulnerable to narcotics money laundering through informal financial networks

@Albania

Introduction Albania

Background:

Between 1990 and 1992 Albania ended 46 years of xenophobic Communist rule and established a multiparty democracy. The transition has proven difficult as successive governments have tried to deal with high unemployment, widespread corruption, a dilapidated infrastructure, powerful organized crime networks with links to high government officials, and disruptive political opponents.

International observers judged parliamentary elections in 2001 and local elections in 2003 to be acceptable and a step toward democratic development, but identified serious deficiencies. Many of these deficiencies have been addressed through bi-partisan changes to the electoral code in 2003 and 2005, but implementation of these changes will not be demonstrated until parliamentary elections in July 2005.

Economy Albania

Economy - overview:

Poor and backward by European standards, Albania is making the difficult transition to a more modern open-market economy. The government has taken measures to curb violent crime and to spur economic activity and trade. The economy is bolstered by remittances from abroad of \$400-\$600 million annually, mostly from Greece and Italy; this helps offset the sizable trade deficit. Agriculture, which accounts for one-half of GDP, is held back because of frequent drought and the need to modernize equipment and consolidate small plots of land. Severe energy shortages and antiquated and inadequate infrastructure make it difficult to attract and sustain foreign investment. The government plans to boost energy imports to relieve the shortages and is moving slowly to improve the poor national road and rail network, a long-standing barrier to sustained economic growth.

@Algeria

Introduction Algeria

Background:

After more than a century of rule by France, Algerians fought through much of the 1950s to achieve independence in 1962. Algeria's primary political party, the National Liberation Front (FLN), has dominated politics ever since. Many Algerians in the subsequent generation were not satisfied, however, and moved to counter the FLN's centrality in Algerian politics. The surprising first round success of the Islamic Salvation Front (FIS) in the December 1991 balloting spurred the Algerian army to intervene and postpone the second round of elections to prevent what the secular elite feared would be an extremist-led government from assuming power. The army began a crack down on the FIS that spurred FIS supporters to begin attacking government targets. The government later allowed elections featuring pro-government and moderate religious-based parties, but did not appease the activists who progressively widened their attacks. The fighting escalated into an insurgency, which saw intense fighting between 1992-1998 and which resulted in over 100,000 deaths - many attributed to indiscriminate massacres of villagers by extremists. The government gained the upper hand by the late-1990s and FIS's armed wing, the Islamic Salvation Army, disbanded in January 2000. However, small numbers of armed militants persist in confronting government forces and conducting ambushes and occasional attacks on villages. The army placed Abdelaziz BOUTEFLIKA in the presidency in 1999 in a fraudulent election but claimed neutrality in his 2004 landslide reelection victory. A number of longstanding problems continue to face BOUTEFLIKA in his second

term, including the ethnic minority Berbers' ongoing autonomy campaign, large-scale unemployment, a shortage of housing, unreliable electrical and water supplies, government inefficiencies and corruption, and the continuing - although significantly degraded - activities of extremist militants. Algeria must also diversify its petroleum-based economy, which has yielded a large cash reserve but which has not been used to redress Algeria's many social and infrastructure problems. Algeria assumed a two-year seat on the UN Security Council in January 2004.

Economy Algeria

Economy - overview:

The hydrocarbons sector is the backbone of the economy, accounting for roughly 60% of budget revenues, 30% of GDP, and over 95% of export earnings. Algeria has the seventh-largest reserves of natural gas in the world and is the second-largest gas exporter; it ranks 14th in oil reserves. Economic policy reforms supported by the IMF and debt rescheduling from the Paris Club in the past decade have helped improve Algeria's financial and macroeconomic indicators. Because of sustained high oil prices in the past three years, Algeria's finances have further benefited from substantial trade surpluses and record foreign exchange reserves. Real GDP has risen due to higher oil output and increased government spending. The government's continued efforts to diversify the economy by attracting foreign and domestic investment outside the energy sector, however, has had little success in reducing high unemployment and improving living standards. Structural reform within the economy moves ahead slowly.

Transnational Issues Algeria

Disputes - international:
Algeria supports the exiled Sahrawi Polisario Front and rejects Moroccan administration of Western Sahara; Algeria's border with Morocco remains an irritant to bilateral relations; each nation has accused the other of harboring militants and arms smuggling; in an attempt to improve relations after unilaterally imposing a visa requirement on Algerians in the early 1990s, Morocco lifted the requirement in mid-2004 - a gesture not reciprocated by Algeria; Algeria remains concerned about armed bandits operating throughout the Sahel who sometimes destabilize southern Algerian towns; dormant disputes include Libyan claims of about 32,000 sq km still reflected on its maps of southeastern Algeria and the FLN's assertions of a claim to Chirac Pastures in southeastern Morocco

Refugees and internally displaced persons: refugees (country of origin): 165,000 (Western Saharan Sahrawi, mostly living in Algerian-sponsored camps in the southeastern Algerian town of Tindouf) IDPs: 100,000 - 200,000 (conflict between government forces, Islamic insurgents) (2004)

@American Samoa

Introduction American Samoa

Background:

Settled as early as 1000 B.C., Samoa was "discovered" by European explorers in the 18th century. International rivalries in the latter half of the 19th century were settled by an 1899 treaty in which Germany and the US divided the Samoan archipelago. The US formally occupied its portion - a smaller group of eastern islands with the excellent harbor of Pago Pago - the following year.

Geography American Samoa

Economy American Samoa

Economy - overview:

This is a traditional Polynesian economy in which more than 90% of the land is communally owned. Economic activity is strongly linked to the US, with which American Samoa conducts most of its foreign trade. Tuna fishing and tuna processing plants are the backbone of the private sector, with canned tuna the primary export. Transfers from the US Government add substantially to American Samoa's economic well-being. Attempts by the government to develop a larger and broader economy are restrained by Samoa's remote location, its limited transportation, and its devastating hurricanes. Tourism is a promising developing sector.

Introduction Andorra

Background:

For 715 years, from 1278 to 1993, Andorrans lived under a unique co-principality, ruled by French and Spanish leaders (from 1607 onward, the French chief of state and the Spanish bishop of Urgel). In 1993, this feudal system was modified with the titular heads of state retained, but the government transformed into a parliamentary democracy. Long isolated and impoverished, mountainous Andorra achieved considerable prosperity since World War II through its tourist industry. Many immigrants (legal and illegal) are attracted to the thriving economy with its lack of income taxes.

Economy Andorra

Economy - overview:

Tourism, the mainstay of Andorra's tiny, well-to-do economy, accounts for roughly 80% of GDP. An estimated 9 million tourists visit annually, attracted by Andorra's duty-free status and by its summer and winter resorts. Andorra's comparative advantage has recently eroded as the economies of neighboring France and Spain have been opened up, providing broader availability of goods and lower tariffs. The banking sector, with its "tax haven" status, also contributes substantially to the economy. Agricultural production is limited - only 2% of the land is arable - and most food has to be imported. The principal livestock activity is sheep raising. Manufacturing output consists mainly of cigarettes, cigars, and furniture. Andorra is a member of the EU Customs Union and is treated as an EU member for trade in manufactured goods (no tariffs) and as a non-EU member for agricultural products.

@Angola

Introduction Angola

Background:

Angola has begun to enjoy the fruits of peace since the end of a 27-year civil war in 2002. Fighting between the Popular Movement for the Liberation of Angola (MPLA), led by Jose Eduardo DOS SANTOS, and the National Union for the Total Independence of Angola (UNITA), led by Jonas SAVIMBI, followed independence from Portugal in 1975. Peace seemed imminent in 1992 when Angola held national elections, but UNITA renewed fighting after being beaten by the MPLA at the polls. Up to 1.5 million lives may have been lost - and 4 million people displaced - in the quarter century of fighting. SAVIMBI's death in 2002 ended UNITA's insurgency and strengthened the MPLA's hold on power. DOS SANTOS has pledged to hold national elections in 2006.

Economy Angola

Economy - overview:

Angola has been an economy in disarray because of a quarter century of nearly continuous warfare. An apparently durable peace was established after the death of rebel leader Jonas SAVIMBI on February 22, 2002, but consequences from the conflict continue including the impact of wide-spread land mines. Subsistence agriculture provides the main livelihood for 85% of the population. Oil production and the supporting activities are vital to the economy, contributing about 45% to GDP and more than half of exports. Much of the country's food must still be imported. To fully take advantage of its rich natural resources - gold, diamonds, extensive forests, Atlantic fisheries, and large oil deposits - Angola will need to continue reforming government policies and to reduce corruption. While Angola made progress in bringing inflation down further, from 325% in 2000 to about 106% in 2002, the government has failed to make sufficient progress on reforms recommended by the IMF such as increasing foreign exchange reserves and promoting greater transparency in government spending. Increased oil production supported 7% GDP growth in 2003.

@Anguilla

Introduction Anguilla

Background:

Colonized by English settlers from Saint Kitts in 1650, Anguilla was administered by Great Britain until the early 19th century, when the island - against the wishes of the inhabitants - was incorporated into a single British dependency, along with Saint Kitts and Nevis. Several attempts at separation failed. In 1971, two years after a revolt, Anguilla was finally allowed to secede; this arrangement was formally recognized in 1980, with Anguilla becoming a separate British dependency.

Economy - overview:

Anguilla has few natural resources, and the economy depends heavily on luxury tourism, offshore banking, lobster fishing, and remittances from emigrants. Increased activity in the tourism industry, which has spurred the growth of the construction sector, has contributed to economic growth. Anguillan officials have put substantial effort into developing the offshore financial sector, which is small, but growing. In the medium term, prospects for the

economy will depend largely on the tourism sector and, therefore, on revived income growth in the industrialized nations as well as on favorable weather conditions.

@Antarctica

Introduction Antarctica

Background:

Speculation over the existence of a "southern land" was not confirmed until the early 1820s when British and American commercial operators and British and Russian national expeditions began exploring the Antarctic Peninsula region and other areas south of the Antarctic Circle. Not until 1840 was it established that Antarctica was indeed a continent and not just a group of islands. Several exploration "firsts" were achieved in the early 20th century. Following World War II, there was an upsurge in scientific research on the continent. A number of countries have set up year-round research stations on Antarctica. Seven have made territorial claims, but not all countries recognize these claims. In order to form a legal framework for the activities of nations on the continent, an Antarctic Treaty was negotiated that neither denies nor gives recognition to existing territorial claims; signed in 1959, it entered into force in 1961.

Geography Antarctica

Location:

continent mostly south of the Antarctic Circle

Geographic coordinates:

90 00 S, 0 00 E

Map references:

Antarctic Region

Area:

total: 14 million sq km

note: fifth-largest continent, following Asia, Africa, North America, and South America, but larger than Australia and the subcontinent of Europe

land: 14 million sq km (280,000 sq km ice-free, 13.72 million sq km ice-covered) (est.)

Area - comparative:

slightly less than 1.5 times the size of the US

Land boundaries: 0 km note: see entry on Disputes - international

Coastline:

17,968 km

Maritime claims:

Australia, Chile, and Argentina claim Exclusive Economic Zone (EEZ) rights or similar over 200 nm extensions seaward from their continental claims, but like the claims themselves, these zones are not accepted by other countries; 20 of 27 Antarctic consultative nations have made no claims to Antarctic territory (although Russia and the US have reserved the right to do so) and do not recognize the claims of the other nations; also see the Disputes - international entry

Climate:

severe low temperatures vary with latitude, elevation, and distance from the ocean; East Antarctica is colder than West Antarctica because of its higher elevation; Antarctic Peninsula has the most moderate climate; higher temperatures occur in January along the coast and average slightly below freezing

Terrain:

about 98% thick continental ice sheet and 2% barren rock, with average elevations between 2,000 and 4,000 meters; mountain ranges up to nearly 5,000 meters; ice-free coastal areas include parts of southern Victoria Land, Wilkes Land, the Antarctic Peninsula area, and parts of Ross Island on McMurdo Sound; glaciers form ice shelves along about half of the coastline, and floating ice shelves constitute 11% of the area of the continent

Elevation extremes:

lowest point: Bentley Subglacial Trench -2,555 m

highest point: Vinson Massif 4,897 m

note: the lowest known land point in Antarctica is hidden in the Bentley Subglacial Trench; at its surface is the deepest ice yet discovered and the world's lowest elevation not under seawater

Natural resources:

iron ore, chromium, copper, gold, nickel, platinum and other minerals, and coal and hydrocarbons have been found in small uncommercial quantities; none presently exploited; krill, finfish, and crab have been taken by commercial fisheries

Land use: arable land: 0% permanent crops: 0% other: 100% (ice 98%, barren rock 2%) (2001)

Irrigated land:

0 sq km

Natural hazards:

katabatic (gravity-driven) winds blow coastward from the high interior; frequent blizzards form near the foot of the plateau; cyclonic storms form over the ocean and move clockwise along the coast; volcanism on Deception Island and isolated areas of West Antarctica; other seismic activity rare and weak; large icebergs may calve from ice shelf

Environment - current issues:

in 1998, NASA satellite data showed that the antarctic ozone hole was the largest on record, covering 27 million square kilometers; researchers in 1997 found that increased ultraviolet light coming through the hole damages the DNA of icefish, an antarctic fish lacking hemoglobin; ozone depletion earlier was shown to harm one-celled antarctic marine plants; in 2002, significant areas of ice shelves disintegrated in response to regional warming

Geography - note:

the coldest, windiest, highest (on average), and driest continent; during summer, more solar radiation reaches the surface at the South Pole than is received at the Equator in an equivalent period; mostly uninhabitable

People Antarctica

Population:

no indigenous inhabitants, but there are both permanent and summer-only staffed research stations

note: 26 nations, all signatory to the Antarctic Treaty, operate seasonal (summer) and year-round research stations on the continent and in its surrounding oceans; the population of persons doing and supporting science on the continent and its nearby islands south of 60 degrees south latitude (the region covered by the Antarctic Treaty) varies from approximately 4,000 in summer to 1,000 in winter; in addition, approximately 1,000 personnel including ship's crew and scientists doing onboard research are present in the waters of the treaty region; summer (January) population - 3,687 total; Argentina 302, Australia 201, Belgium 13, Brazil 80, Bulgaria 16, Chile 352, China 70, Finland 11, France 100, Germany 51, India 60, Italy 106, Japan 136, South Korea 14, Netherlands 10, NZ 60, Norway 40, Peru 28, Poland 70, Russia 254, South Africa 80, Spain 43, Sweden 20, UK 192, US 1,378 (1998-99); winter (July) population - 964 total; Argentina 165, Australia 75, Brazil 12, Chile 129, China 33, France 33, Germany 9, India 25, Japan 40, South Korea 14, NZ 10, Poland 20, Russia 102, South Africa 10, UK 39, US 248 (1998-99); research stations operated within the Antarctic Treaty area (south of 60 degrees south) by members of the Council of Managers of National Antarctic Programs (COMNAP): year-round stations - 37 total; Argentina 6, Australia 3, Brazil 1, Chile 4, China 2, France 1, Germany 1, India 1, Japan 1, South Korea 1, NZ 1, Poland 1, Russia 6, South Africa 1, Ukraine 1, UK 2, US 3, Uruguay 1 (2004); summer-only stations - 36 total; Argentina 8, Australia 2, Bulgaria 1, Chile 5, Ecuador 1, Finland 1, Germany 1, India 1, Italy 1, Japan 3, Norway 2, Peru 1, Russia 2, South Africa 1, Spain 2, Sweden 2, UK 1, Italy and France jointly 1 (2003-2004); in addition, during the austral summer some nations have numerous occupied locations such as tent camps, summer-long temporary facilities, and mobile traverses in support of research

Government Antarctica

Country name: conventional long form: none conventional short form: Antarctica

Government type: Antarctic Treaty Summary - the Antarctic Treaty, signed on 1 December 1959 and entered into force on 23 June 1961, establishes the legal framework for the management of Antarctica; the 26th Antarctic Treaty Consultative Meeting was held in Madrid, Spain in June 2003; at these periodic meetings, decisions are made by consensus (not by vote) of all consultative member nations; at the end of 2003, there were 45 treaty member nations: 27 consultative and 18 non-consultative; consultative (decision-making) members include the seven nations that claim portions of Antarctica as national territory (some claims overlap) and 20 non-claimant nations; the US and Russia have reserved the right to make claims; the US does not recognize the claims of others; Antarctica is administered through meetings of the consultative member nations; decisions from these meetings are carried out by these member nations (with respect to their own nationals and operations) in accordance with their own national laws; the year in parentheses indicates when an acceding nation was accepted as a consultative member, while no date indicates the country was an original 1959 treaty signatory; claimant nations are - Argentina, Australia, Chile, France, New Zealand, Norway, and the UK. Nonclaimant consultative nations are - Belgium, Brazil (1983), Bulgaria (1998) China (1985), Ecuador (1990), Finland (1989), Germany (1981), India (1983), Italy (1987), Japan, South Korea (1989), Netherlands (1990), Peru (1989), Poland (1977), Russia, South Africa, Spain (1988), Sweden (1988), Uruguay (1985), and the US; non-consultative members, with year of accession in parentheses, are - Austria (1987), Canada (1988), Colombia (1989), Cuba (1984), Czech Republic (1993), Denmark (1965), Estonia

(2001), Greece (1987), Guatemala (1991), Hungary (1984), North Korea (1987), Papua New Guinea (1981), Romania (1971), Slovakia (1993), Switzerland (1990), Turkey (1995), Ukraine (1992), and Venezuela (1999); Article 1 - area to be used for peaceful purposes only; military activity, such as weapons testing, is prohibited, but military personnel and equipment may be used for scientific research or any other peaceful purpose; Article 2 - freedom of scientific investigation and cooperation shall continue; Article 3 - free exchange of information and personnel, cooperation with the UN and other international agencies; Article 4 - does not recognize, dispute, or establish territorial claims and no new claims shall be asserted while the treaty is in force; Article 5 - prohibits nuclear explosions or disposal of radioactive wastes; Article 6 - includes under the treaty all land and ice shelves south of 60 degrees 00 minutes south and reserves high seas rights; Article 7 - treaty-state observers have free access, including aerial observation, to any area and may inspect all stations, installations, and equipment; advance notice of all expeditions and of the introduction of military personnel must be given; Article 8 - allows for jurisdiction over observers and scientists by their own states; Article 9 - frequent consultative meetings take place among member nations; Article 10 - treaty states will discourage activities by any country in Antarctica that are contrary to the treaty; Article 11 - disputes to be settled peacefully by the parties concerned or, ultimately, by the ICJ; Articles 12, 13, 14 - deal with upholding, interpreting, and amending the treaty among involved nations; other agreements - some 200 recommendations adopted at treaty consultative meetings and ratified by governments include - Agreed Measures for Fauna and Flora (1964) which were later incorporated into the Environmental Protocol; Convention for the Conservation of Antarctic Seals (1972); Convention on the Conservation of Antarctic Marine Living Resources (1980); a mineral resources agreement was signed in 1988 but remains unratified; the Protocol on Environmental Protection to the Antarctic Treaty

was signed 4 October 1991 and entered into force 14 January 1998; this agreement provides for the protection of the Antarctic environment through five specific annexes: 1) environmental impact assessment, 2) conservation of Antarctic fauna and flora, 3) waste disposal and waste management, 4) prevention of marine pollution, and 5) area protection and management; it prohibits all activities relating to mineral resources except scientific research

Legal system:

Antarctica is administered through meetings of the consultative member nations; decisions from these meetings are carried out by these member nations (with respect to their own nationals and operations) in accordance with their own national laws; US law, including certain criminal offenses by or against US nationals, such as murder, may apply extra-territorially; some US laws directly apply to Antarctica; for example, the Antarctic Conservation Act, 16 U.S.C. section 2401 et seq., provides civil and criminal penalties for the following activities, unless authorized by regulation of statute: the taking of native mammals or birds; the introduction of nonindigenous plants and animals; entry into specially protected areas; the discharge or disposal of pollutants; and the importation into the US of certain items from Antarctica; violation of the Antarctic Conservation Act carries penalties of up to \$10,000 in fines and one year in prison; the National Science Foundation and Department of Justice share enforcement responsibilities; Public Law 95-541, the US Antarctic Conservation Act of 1978, as amended in 1996, requires expeditions from the US to Antarctica to notify, in advance, the Office of Oceans, Room 5805, Department of State, Washington, DC 20520, which reports such plans to other nations as required by the Antarctic Treaty; for more information, contact Permit Office, Office of Polar Programs, National Science

Foundation, Arlington, Virginia 22230; telephone: (703) 292-8030, or visit their website at www.nsf.gov

Economy Antarctica

Economy - overview:

Fishing off the coast and tourism, both based abroad, account for the limited economic activity. Antarctic fisheries in 2000-01 (1 July-30 June) reported landing 112,934 metric tons. Unregulated fishing, particularly of Patagonian toothfish, is a serious problem. The Convention on the Conservation of Antarctic Marine Living Resources determines the recommended catch limits for marine species. A total of 13,571 tourists visited in the 2002-03 antarctic summer, up from the 11,588 who visited the previous year. Nearly all of them were passengers on commercial (nongovernmental) ships and several yachts that make trips during the summer. Most tourist trips last approximately two weeks.

Transportation Antarctica

Ports and harbors:

there are no developed ports and harbors in Antarctica; most coastal stations have offshore anchorages, and supplies are transferred from ship to shore by small boats, barges, and helicopters; a few stations have a basic wharf facility; US coastal

stations include McMurdo (77 51 S, 166 40 E), Palmer (64 43 S, 64 03 W); government use only except by permit (see Permit Office under "Legal System"); all ships at port are subject to inspection in accordance with Article 7, Antarctic Treaty; offshore anchorage is sparse and intermittent

Airports:

there are no developed public access airports or landing facilities; 30 stations, operated by 16 national governments party to the Antarctic Treaty, have restricted aircraft landing facilities for either helicopters and/or fixed-wing aircraft; commercial enterprises operate two additional aircraft landing facilities; helicopter pads are available at 27 stations; runways at 15 locations are gravel, sea-ice, blue-ice, or compacted snow suitable for landing wheeled, fixed-wing aircraft; of these, 1 is greater than 3 km in length, 6 are between 2 km and 3 km in length, 3 are between 1 km and 2 km in length, 3 are less than 1 km in length, and 2 are of unknown length; snow surface skiways, limited to use by ski-equipped, fixed-wing aircraft, are available at another 15 locations; of these, 4 are greater than 3 km in length, 3 are between 2 km and 3 km in length, 2 are between 1 km and 2 km in length, 2 are less than 1 km in length, and 4 are of unknown length; aircraft landing facilities generally subject to severe restrictions and limitations resulting from extreme seasonal and geographic conditions; aircraft landing facilities do not meet ICAO standards; advance approval from the respective governmental or nongovernmental operating organization required for landing; landed aircraft are subject to inspection in accordance with Article 7, Antarctic Treaty (2003 est.)

Airports - with unpaved runways: total: 20 over 3,047 m: 6 2,438 to 3,047 m: 3 914 to 1,523 m: 4 under 914 m: 6 (2004 est.) 1,524 to 2,437 m: 1

Heliports:

27 stations have restricted helicopter landing facilities (helipads) (2003 est.)

Military Antarctica

Military - note:

the Antarctic Treaty prohibits any measures of a military nature, such as the establishment of military bases and fortifications, the carrying out of military maneuvers, or the testing of any type of weapon; it permits the use of military personnel or equipment for scientific research or for any other peaceful purposes

Transnational Issues Antarctica

Disputes - international:

Antarctic Treaty freezes claims (see Antarctic Treaty Summary in Government type entry); sections (some overlapping) claimed by Argentina, Australia, Chile, France, NZ, Norway, and UK; the US and most other states do not recognize the territorial claims of other states and have made no claims themselves (the US and Russia reserve the right to do so); no claims have been made in the sector between 90 degrees west and 150 degrees west; several states with land claims in Antarctica have expressed their intention to submit data to the UN Commission on the Limits of the Continental Shelf to extend their continental shelf claims to adjoining undersea ridges

@Antigua and Barbuda

Introduction Antigua and Barbuda

Background:

The Siboney were the first to inhabit the islands of Antigua and Barbuda in 2400 B.C., but Arawak and Carib Indians populated the islands when Columbus landed on his second voyage in 1493. Early settlements by the Spanish and French were succeeded by the English who formed a colony in 1667. Slavery, established to run the sugar plantations on Antigua, was abolished in 1834. The islands became an independent state within the British Commonwealth of Nations in 1981.

Economy Antigua and Barbuda

Economy - overview:

Tourism continues to dominate the economy, accounting for more than half of GDP. Weak tourist arrival numbers since early 2000 have slowed the economy, however, and pressed the government into a tight fiscal corner. The dual-island nation's agricultural production is focused on the domestic market and constrained by a limited water supply and a labor shortage stemming from the lure of higher wages in tourism and construction. Manufacturing comprises enclave-type assembly for export with major products being bedding, handicrafts, and electronic components. Prospects for economic growth in the medium term will continue to depend on income growth in the industrialized world, especially in the US, which accounts for slightly more than one-third of tourist arrivals.

@Arctic Ocean

Introduction Arctic Ocean

Background:

The Arctic Ocean is the smallest of the world's five oceans (after the Pacific Ocean, Atlantic Ocean, Indian Ocean, and the recently delimited Southern Ocean). The Northwest Passage (US and Canada) and Northern Sea Route (Norway and Russia) are two important seasonal

waterways. A sparse network of air, ocean, river, and land routes circumscribes the Arctic Ocean.

Geography Arctic Ocean

Location:

body of water between Europe, Asia, and North America, mostly north of the Arctic Circle

Geographic coordinates:

90 00 N, 0 00 E

Map references:

Arctic Region

Area:

total: 14.056 million sq km

note: includes Baffin Bay, Barents Sea, Beaufort Sea, Chukchi Sea, East Siberian Sea, Greenland Sea, Hudson Bay, Hudson Strait, Kara Sea, Laptev Sea, Northwest Passage, and other tributary water bodies

Area - comparative:

slightly less than 1.5 times the size of the US

Coastline:

45,389 km

Climate:

polar climate characterized by persistent cold and relatively narrow annual temperature ranges; winters characterized by continuous darkness, cold and stable weather conditions, and clear

skies; summers characterized by continuous daylight, damp and foggy weather, and weak cyclones with rain or snow

Terrain:

central surface covered by a perennial drifting polar icepack that averages about 3 meters in thickness, although pressure ridges may be three times that size; clockwise drift pattern in the Beaufort Gyral Stream, but nearly straight-line movement from the New Siberian Islands (Russia) to Denmark Strait (between Greenland and Iceland); the icepack is surrounded by open seas during the summer, but more than doubles in size during the winter and extends to the encircling landmasses; the ocean floor is about 50% continental shelf (highest percentage of any ocean) with the remainder a central basin interrupted by three submarine ridges (Alpha Cordillera, Nansen Cordillera, and Lomonosov Ridge)

Elevation extremes:

lowest point: Fram Basin -4,665 m

highest point: sea level 0 m

Natural resources:

sand and gravel aggregates, placer deposits, polymetallic nodules, oil and gas fields, fish, marine mammals (seals and whales)

Natural hazards:

ice islands occasionally break away from northern Ellesmere Island; icebergs calved from glaciers in western Greenland and extreme northeastern Canada; permafrost in islands; virtually ice locked from October to June; ships subject to superstructure icing from October to May

Environment - current issues:

endangered marine species include walruses and whales; fragile ecosystem slow to change and slow to recover from disruptions or damage; thinning polar icepack

Geography - note:

major chokepoint is the southern Chukchi Sea (northern access to the Pacific Ocean via the Bering Strait); strategic location between North America and Russia; shortest marine link between the extremes of eastern and western Russia; floating research stations operated by the US and Russia; maximum snow cover in March or April about 20 to 50 centimeters over the frozen ocean; snow cover lasts about 10 months

Economy Arctic Ocean

Economy - overview:

Economic activity is limited to the exploitation of natural resources, including petroleum, natural gas, fish, and seals.

Transportation Arctic Ocean

Ports and harbors:

Churchill (Canada), Murmansk (Russia), Prudhoe Bay (US)

Transportation - note:

sparse network of air, ocean, river, and land routes; the Northwest Passage (North America) and Northern Sea Route (Eurasia) are important seasonal waterways

Transnational Issues Arctic Ocean

Disputes - international: some maritime disputes (see littoral states)

@Argentina

Introduction Argentina

Background:

Following independence from Spain in 1816, Argentina experienced periods of internal political conflict between conservatives and liberals and between civilian and military factions. After World War II, a long period of Peronist authoritarian rule and interference in subsequent governments was followed by a military junta that took power in 1976. Democracy returned in 1983, and numerous elections since then have underscored Argentina's progress in democratic consolidation.

Economy Argentina

Economy - overview:

Argentina benefits from rich natural resources, a highly literate population, an export-oriented agricultural sector, and a diversified industrial base. Over the past decade, however, the country has suffered recurring economic problems of inflation, external debt, capital flight, and budget deficits. Growth in 2000 was a negative 0.8%, as both domestic and foreign investors remained skeptical of the government's ability to pay debts and maintain the peso's fixed exchange rate with the US dollar. The economic situation worsened in 2001 with the widening of spreads on Argentine bonds, massive withdrawals from the banks, and a further decline in consumer and investor confidence. Government efforts to achieve a "zero deficit," to stabilize the banking system, and to restore economic growth proved inadequate in the face of the mounting economic problems. The peso's peg to the dollar was abandoned in January 2002, and the peso was floated in February; the exchange rate plunged and inflation picked up rapidly, but by mid-2002 the economy had stabilized, albeit at a lower level. Strong demand for

the peso compelled the Central Bank to intervene in foreign exchange markets to curb its appreciation in 2003. Led by record exports, the economy began to recover with output up 8% in 2003, unemployment falling, and inflation reduced to under 4% at year-end.

Transnational Issues Argentina

Disputes - international:
UK continues to reject sovereignty talks requested by Argentina, whose constitution still claims UK-administered Falkland Islands (Islas Malvinas) and South Georgia and the South Sandwich Islands, but in 1995 ceded the right to settle the dispute by force; Beagle Channel islands dispute resolved through Papal mediation in 1984, but armed incidents persist since 1992 oil discovery; territorial claim in Antarctica partially overlaps UK and Chilean claims (see Antarctic disputes); unruly region at convergence of Argentina-Brazil-Paraguay borders is locus of money laundering, smuggling, arms and drug trafficking, and fundraising for extremist organizations; uncontested dispute between Brazil and Uruguay over Braziliera Island in the Quarai/Cuareim River leaves the tripoint with Argentina in question

Illicit drugs:
used as a transshipment country for cocaine headed for Europe and the US; some money-laundering activity, especially in the Tri-Border Area; domestic consumption of drugs in urban centers is increasing

Introduction Armenia

Background:

Armenia prides itself on being the first nation to formally adopt Christianity (early 4th century). Despite periods of autonomy, over the centuries Armenia came under the sway of various empires including the Roman, Byzantine, Arab, Persian, and Ottoman. It was incorporated into Russia in 1828 and the USSR in 1920. Armenian leaders remain preoccupied by the long conflict with Muslim Azerbaijan over Nagorno-Karabakh, a primarily Armenian-populated region, assigned to Soviet Azerbaijan in the 1920s by Moscow. Armenia and Azerbaijan began fighting over the area in 1988; the struggle escalated after both countries attained independence from the Soviet Union in 1991. By May 1994, when a cease-fire took hold, Armenian forces held not only Nagorno-Karabakh but also a significant portion of Azerbaijan proper. The economies of both sides have been hurt by their inability to make substantial progress toward a peaceful resolution. Turkey imposed an economic blockade on

Armenia and closed the common border because of the Armenian occupation of Nagorno-Karabakh and surrounding areas.

Economy Armenia

Economy - overview:

Under the old Soviet central planning system, Armenia had developed a modern industrial sector, supplying machine tools, textiles, and other manufactured goods to sister republics in exchange for raw materials and energy. Since the implosion of the USSR in December 1991, Armenia has switched to small-scale agriculture away from the large agroindustrial complexes of the Soviet era. The agricultural sector has long-term needs for more investment and updated technology. The privatization of industry has been at a slower pace, but has been given renewed emphasis by the current administration. Armenia is a food importer, and its mineral deposits (copper, gold, bauxite) are small. The ongoing conflict with Azerbaijan over the ethnic Armenian-dominated region of Nagorno-Karabakh and the breakup of the centrally directed economic system of the former Soviet Union

contributed to a severe economic decline in the early 1990s. By 1994, however, the Armenian Government had launched an ambitious IMF-sponsored economic liberalization program that resulted in positive growth rates in 1995-2003. Armenia joined the WTrO in January 2003. Armenia also has managed to slash inflation, stabilize the local currency (the dram), and privatize most small- and medium-sized enterprises. The chronic energy shortages Armenia suffered in the early and mid-1990s have been offset by the energy supplied by one of its nuclear power plants at Metsamor. Armenia is now a net energy exporter, although it does not have sufficient generating capacity to replace Metsamor, which is under international pressure to close. The electricity distribution system was privatized in 2002. Armenia's severe trade imbalance has been offset somewhat by international aid and foreign direct investment. Economic ties with Russia remain close, especially in the energy sector.

@Aruba

Introduction Aruba

Background:

Discovered and claimed for Spain in 1499, Aruba was acquired by the Dutch in 1636. The island's economy has been dominated by three main industries. A 19th century gold rush was followed by prosperity brought on by the opening in 1924 of an oil refinery. The last decades of the 20th century saw a boom in the tourism industry. Aruba seceded from the Netherlands Antilles in 1986 and became a separate, autonomous member of the Kingdom of the Netherlands. Movement toward full independence was halted at Aruba's request in 1990.

Economy Aruba

Economy - overview:

Tourism is the mainstay of the small, open Aruban economy, with offshore banking and oil refining and storage also important. The rapid growth of the tourism sector over the last decade has resulted in a substantial expansion of other activities. Construction has boomed, with hotel capacity five times the 1985 level. In addition, the reopening of the country's oil refinery in 1993, a major source of employment and foreign exchange earnings, has further spurred growth. Aruba's small labor force and low unemployment rate have led to a large number of unfilled job vacancies, despite sharp rises in wage rates in recent years. Tourist arrivals have declined in the aftermath of the 11 September 2001 terrorist attacks on the US. The government now must deal with a budget deficit and a negative trade balance.

@Ashmore and Cartier Islands

Introduction Ashmore and Cartier Islands

Background:

These uninhabited islands came under Australian authority in 1931; formal administration began two years later. Ashmore Reef supports a rich and diverse avian and marine habitat; in 1983, it became a National Nature Reserve. Cartier Island, a former bombing range, is now a marine reserve.

@Atlantic Ocean

Introduction Atlantic Ocean

Background:

The Atlantic Ocean is the second largest of the world's five oceans (after the Pacific Ocean, but larger than the Indian Ocean, Southern Ocean, and Arctic Ocean). The Kiel Canal (Germany), Oresund (Denmark-Sweden), Bosphorus (Turkey), Strait of Gibraltar (Morocco-Spain), and the Saint Lawrence Seaway (Canada-US) are important strategic access waterways. The decision by the International Hydrographic Organization in the spring of 2000 to delimit a fifth world ocean, the Southern Ocean, removed the portion of the Atlantic Ocean south of 60 degrees south.

Geography Atlantic Ocean

Location:

body of water between Africa, Europe, the Southern Ocean, and the Western Hemisphere

Geographic coordinates:

0 00 N, 25 00 W

Map references:

Political Map of the World

Area:

total: 76.762 million sq km

note: includes Baltic Sea, Black Sea, Caribbean Sea, Davis Strait, Denmark Strait, part of the Drake Passage, Gulf of Mexico, Labrador Sea, Mediterranean Sea, North Sea, Norwegian Sea, almost all of the Scotia Sea, and other tributary water bodies

Area - comparative:

slightly less than 6.5 times the size of the US

Coastline:

111,866 km

Climate:

tropical cyclones (hurricanes) develop off the coast of Africa near Cape Verde and move westward into the Caribbean Sea; hurricanes can occur from May to December, but are most frequent from August to November

Terrain:

surface usually covered with sea ice in Labrador Sea, Denmark Strait, and coastal portions of the Baltic Sea from October to June; clockwise warm-water gyre (broad, circular system of currents) in the northern Atlantic, counterclockwise warm-water gyre in the southern Atlantic; the ocean floor is dominated by the Mid-Atlantic Ridge, a rugged north-south centerline for the entire Atlantic basin

Elevation extremes:

lowest point: Milwaukee Deep in the Puerto Rico Trench -8,605 m

highest point: sea level 0 m

Natural resources:

oil and gas fields, fish, marine mammals (seals and whales), sand and gravel aggregates, placer deposits, polymetallic nodules, precious stones

Natural hazards:

icebergs common in Davis Strait, Denmark Strait, and the northwestern Atlantic Ocean from February to August and have been spotted as far south as Bermuda and the Madeira Islands; ships subject to superstructure icing in extreme northern Atlantic from October to May; persistent fog can be a maritime hazard from May to September; hurricanes (May to December)

Environment - current issues:

endangered marine species include the manatee, seals, sea lions, turtles, and whales; drift net fishing is hastening the decline of fish stocks and contributing to international disputes; municipal sludge pollution off eastern US, southern Brazil, and eastern Argentina; oil pollution in Caribbean Sea, Gulf of Mexico, Lake Maracaibo, Mediterranean Sea, and North Sea; industrial waste and municipal sewage pollution in Baltic Sea, North Sea, and Mediterranean Sea

Geography - note:

major chokepoints include the Dardanelles, Strait of Gibraltar, access to the Panama and Suez Canals; strategic straits include the Strait of Dover, Straits of Florida, Mona Passage, The Sound (Oresund), and Windward Passage; the Equator divides the Atlantic Ocean into the North Atlantic Ocean and South Atlantic Ocean

Economy Atlantic Ocean

Economy - overview:

The Atlantic Ocean provides some of the world's most heavily trafficked sea routes, between and within the Eastern and Western Hemispheres. Other economic activity includes the exploitation of natural resources, e.g., fishing, the dredging of aragonite sands (The Bahamas), and production of crude oil and natural gas (Caribbean Sea, Gulf of Mexico, and North Sea).

Transportation Atlantic Ocean

Ports and harbors:

Alexandria (Egypt), Algiers (Algeria), Antwerp (Belgium), Barcelona (Spain), Buenos Aires (Argentina), Casablanca (Morocco), Colon (Panama), Copenhagen (Denmark), Dakar (Senegal), Gdansk (Poland), Hamburg (Germany), Helsinki (Finland), Las Palmas (Canary Islands, Spain), Le Havre (France), Lisbon (Portugal), London (UK), Marseille (France), Montevideo (Uruguay), Montreal (Canada), Naples (Italy), New Orleans (US), New York (US), Oran (Algeria), Oslo (Norway), Peiraiefs or Piraeus (Greece), Rio de Janeiro (Brazil), Rotterdam (Netherlands), Saint Petersburg (Russia), Stockholm (Sweden)

Transportation - note:

Kiel Canal and Saint Lawrence Seaway are two important waterways; significant domestic commercial and recreational use of Intracoastal Waterway on central and south Atlantic seaboard and Gulf of Mexico coast of US

Transnational Issues Atlantic Ocean

Disputes - international: some maritime disputes (see littoral states)

@Australia

Introduction Australia

Background:

Aboriginal settlers arrived on the continent from Southeast Asia about 40,000 years before the first Europeans began exploration in the 17th century. No formal territorial claims were made until 1770, when Capt. James COOK took possession in the name of Great Britain. Six colonies were created in the late 18th and 19th centuries; they federated and became the Commonwealth of Australia in 1901. The new country took advantage of its natural resources to rapidly develop its agricultural and manufacturing industries and to make a major contribution to the British effort in World Wars I and II. In recent decades, Australia has transformed itself into an internationally competitive, advanced market economy. Long-term concerns include

pollution, particularly depletion of the ozone layer, and management and conservation of coastal areas, especially the Great Barrier Reef. A referendum to change Australia's status, from a commonwealth headed by the British monarch to a republic, was defeated in 1999.

Economy Australia

Economy - overview:

Australia has an enviable Western-style capitalist economy, with a per capita GDP on par with the four dominant West European economies. Rising output in the domestic economy has been offsetting the global slump, and business and consumer confidence remains robust. Australia's emphasis on reforms, low inflation, and growing ties with China are other key factors behind the economy's strength. The impact of drought, weak foreign demand, and strong import demand pushed the trade deficit up to \$18 billion in 2003 and to \$20 billion in 2004 from \$8 billion in 2002. One other concern is the domestic housing bubble.

Disputes - international:
the 1999 maritime delimitation established partial maritime boundaries with East Timor over part of the Timor Gap but temporary resource-sharing agreements over an unreconciled area grant Australia 90% share of exploited gas reserves and hamper creation of a southern maritime boundary with Indonesia (see Ashmore and Cartier Islands disputes); Australia asserts a territorial claim to Antarctica and to its continental shelf (see Antarctica)

Illicit drugs:
Tasmania is one of the world's major suppliers of licit opiate products; government maintains strict controls over areas of opium poppy cultivation and output of poppy straw concentrate

Introduction Austria

Background:

Once the center of power for the large Austro-Hungarian Empire, Austria was reduced to a small republic after its defeat in World War I. Following annexation by Nazi Germany in 1938 and subsequent occupation by the victorious Allies in 1945, Austria's status remained unclear for a decade. A State Treaty signed in 1955 ended the occupation, recognized Austria's independence, and forbade unification with Germany. A constitutional law that same year declared the country's "perpetual neutrality" as a condition for Soviet military withdrawal. Following the Soviet Union's collapse in 1991 and Austria's entry into the European Union in 1995, some Austrian's have called into question this neutrality. A prosperous, democratic country, Austria entered the European Monetary Union in 1999.

Economy Austria

Economy - overview:

Austria, with its well-developed market economy and high standard

of living, is closely tied to other EU economies, especially Germany's. Membership in the EU has drawn an influx of foreign investors attracted by Austria's access to the single European market and proximity to EU aspirant economies. Slow growth in Germany and elsewhere in the world held the economy to 0.7% growth in 2001, 1.4% in 2002, and again less than 1% in 2003. However, recent data signal that the recovery has started. The government estimates economic growth in 2004 of 1.7-2.1% and of 2.5% in 2005. The government is planning a EURO 500 billion income tax cut in 2004, though some economists doubt it will have stimulative effects in 2004, because it will be offset by higher health insurance contributions and higher taxes on energy. For 2005, Austria plans a tax cut of EURO 2.5 billion and harmonization of the various pension schemes. To meet increased competition from both EU and Central European countries, particularly the new EU members, Austria will need to emphasize knowledge-based sectors of the economy, continue to deregulate the service sector, and lower its tax burden. A key issue is the encouragement of much greater participation in the labor market by its aging population.

Introduction Azerbaijan

Background:

Azerbaijan - a nation with a Turkic and majority-Muslim population - regained its independence after the collapse of the Soviet Union in 1991. Despite a 1994 cease-fire, Azerbaijan has yet to resolve its conflict with Armenia over the Azerbaijani Nagorno-Karabakh enclave (largely Armenian populated). Azerbaijan has lost 16% of its territory and must support some 800,000 refugees and internally displaced persons as a result of the conflict. Corruption is ubiquitous and the promise of widespread wealth from Azerbaijan's undeveloped petroleum resources remains largely unfulfilled.

Geography Azerbaijan

Location:

Southwestern Asia, bordering the Caspian Sea, between Iran and Russia, with a small European portion north of the Caucasus range

Geographic coordinates:

40 30 N, 47 30 E

Map references:

Asia

Area:

total: 86,600 sq km

note: includes the exclave of Naxcivan Autonomous Republic and the Nagorno-Karabakh region; the region's autonomy was abolished by Azerbaijani Supreme Soviet on 26 November 1991

water: 500 sq km

land: 86,100 sq km

Area - comparative:

slightly smaller than Maine

Land boundaries:

total: 2,013 km

border countries: Armenia (with Azerbaijan-proper) 566 km, Armenia (with Azerbaijan-Naxcivan exclave) 221 km, Georgia 322 km, Iran (with Azerbaijan-proper) 432 km, Iran (with Azerbaijan-Naxcivan exclave) 179 km, Russia 284 km, Turkey 9 km

Coastline:

Climate:

dry, semiarid steppe

Terrain:

large, flat Kur-Araz Ovaligi (Kura-Araks Lowland) (much of it below sea level) with Great Caucasus Mountains to the north, Qarabag Yaylasi (Karabakh Upland) in west; Baku lies on Abseron Yasaqligi (Apsheron Peninsula) that juts into Caspian Sea

Elevation extremes: lowest point: Caspian Sea -28 m highest point: Bazarduzu Dagi 4,485 m

Natural resources: petroleum, natural gas, iron ore, nonferrous metals, alumina

Natural hazards:
droughts

Environment - current issues:
local scientists consider the Abseron Yasaqligi (Apsheeron Peninsula) (including Baku and Sumqayit) and the Caspian Sea to be the ecologically most devastated area in the world because of severe air, soil, and water pollution; soil pollution results from oil spills, from the use of DDT as a pesticide, and from toxic defoliants used in the production of cotton

Environment - international agreements:
party to: Air Pollution, Biodiversity, Climate Change, Climate Change-Kyoto Protocol, Desertification, Endangered Species, Hazardous Wastes, Marine Dumping, Ozone Layer Protection, Wetlands signed, but not ratified: none of the selected agreements

Geography - note:
both the main area of the country and the Naxcivan exclave are landlocked

Economy Azerbaijan

Economy - overview:

Azerbaijan's number one export is oil. Azerbaijan's oil production

declined through 1997 but has registered an increase every year since. Negotiation of production-sharing arrangements (PSAs) with foreign firms, which have thus far committed \$60 billion to long-term oilfield development, should generate the funds needed to spur future industrial development. Oil production under the first of these PSAs, with the Azerbaijan International Operating Company, began in November 1997. Azerbaijan shares all the formidable problems of the former Soviet republics in making the transition from a command to a market economy, but its considerable energy resources brighten its long-term prospects. Baku has only recently begun making progress on economic reform, and old economic ties and structures are slowly being replaced. One obstacle to economic progress is the need for stepped up foreign investment in the non-energy sector. A second obstacle is the continuing conflict with Armenia over the Nagorno-Karabakh region. Trade with Russia and the other former Soviet republics is declining in importance while trade is building with Turkey and the nations of Europe. Long-term prospects will depend on world oil prices, the location of new pipelines in the region, and Azerbaijan's ability to manage its oil wealth.

Introduction Bahamas, The

Background:

Arawak Indians inhabited the islands when Christopher Columbus first set foot in the New World on San Salvador in 1492. British settlement of the islands began in 1647; the islands became a colony in 1783. Since attaining independence from the UK in 1973, The Bahamas have prospered through tourism and international banking and investment management. Because of its geography, the country is a major transshipment point for illegal drugs, particularly shipments to the US, and its territory is used for smuggling illegal migrants into the US.

Economy Bahamas, The

Economy - overview:

The Bahamas is a stable, developing nation with an economy heavily dependent on tourism and offshore banking. Tourism alone accounts for more than 60% of GDP and directly or indirectly employs half of the archipelago's labor force. Steady growth in tourism receipts and a boom in construction of new hotels, resorts, and residences had led to solid GDP growth in recent years, but the slowdown in the US economy and the attacks of 11 September 2001 held back growth in these sectors in 2001-03. Financial services constitute the second-most important sector of the Bahamian economy, accounting for about 15% of GDP. However, since December 2000, when the government enacted new regulations on the financial sector, many international businesses have left The Bahamas. Manufacturing and agriculture together contribute approximately a tenth of GDP and show little growth, despite government incentives aimed at those sectors. Overall growth prospects in the short run rest heavily on the fortunes of the tourism sector, which depends on growth in the US, the source of more than 80% of the visitors. In addition to tourism and banking, the government supports the development of a "third pillar," e-commerce.

Introduction Bahrain

Background:

Bahrain's small size and central location among Persian Gulf countries require it to play a delicate balancing act in foreign affairs among its larger neighbors. Facing declining oil reserves, Bahrain has turned to petroleum processing and refining and has transformed itself into an international banking center. The new amir, installed in 1999, has pushed economic and political reforms and has worked to improve relations with the Shi'a community. In February 2001, Bahraini voters approved a referendum on the National Action Charter - the centerpiece of the amir's political liberalization program. In February 2002, Amir HAMAD bin Isa Al Khalifa proclaimed himself king. In October 2002, Bahrainis elected members of the lower house of Bahrain's reconstituted bicameral legislature, the National Assembly.

Economy Bahrain

Economy - overview:

In well-to-do Bahrain, petroleum production and refining account for about 60% of export receipts, 60% of government revenues, and 30% of GDP. With its highly developed communication and transport facilities, Bahrain is home to numerous multinational firms with business in the Gulf. Bahrain is dependent on Saudi Arabia for oil granted as aid. A large share of exports consist of petroleum products made from refining imported crude. Construction proceeds on several major industrial projects. Unemployment, especially among the young, and the depletion of oil and underground water resources are major long-term economic problems.

@Baker Island

Introduction Baker Island

Background:

The US took possession of the island in 1857, and its guano deposits were mined by US and British companies during the second half of the 19th century. In 1935, a short-lived attempt at colonization was begun on this island - as well as on nearby Howland Island - but was disrupted by World War II and thereafter abandoned. Presently the island is a National Wildlife Refuge run by the US Department of the Interior; a day beacon is situated near the middle of the west coast.

@Bangladesh

Introduction Bangladesh

Background:

Bangladesh came into existence in 1971 when Bengali East Pakistan seceded from its union with West Pakistan. About a third of this extremely poor country floods annually during the monsoon rainy season, hampering economic development.

Geography Bangladesh

Location:

Southern Asia, bordering the Bay of Bengal, between Burma and India

Geographic coordinates:

24 00 N, 90 00 E

Map references:

Asia

Area:

total: 144,000 sq km

land: 133,910 sq km

water: 10,090 sq km

Area - comparative:

slightly smaller than Iowa

Land boundaries: total: 4,246 km border countries: Burma 193 km, India 4,053 km

Coastline:

580 km

Maritime claims:

territorial sea: 12 nm

continental shelf: up to the outer limits of the continental margin

contiguous zone: 18 nm

exclusive economic zone: 200 nm

Climate:

tropical; mild winter (October to March); hot, humid summer (March to June); humid, warm rainy monsoon (June to October)

Terrain:

mostly flat alluvial plain; hilly in southeast

Elevation extremes: lowest point: Indian Ocean 0 m highest point: Keokradong 1,230 m

Natural resources: natural gas, arable land, timber, coal

Land use: arable land: 62.11% permanent crops: 3.07% other: 34.82% (2001)

Irrigated land:

38,440 sq km (1998 est.)

Natural hazards:

droughts, cyclones; much of the country routinely inundated during the summer monsoon season

Environment - current issues:

many people are landless and forced to live on and cultivate flood-prone land; water-borne diseases prevalent in surface water; water pollution, especially of fishing areas, results from the use of commercial pesticides; ground water contaminated by naturally

occurring arsenic; intermittent water shortages because of falling water tables in the northern and central parts of the country; soil degradation and erosion; deforestation; severe overpopulation

Environment - international agreements:

party to: Biodiversity, Climate Change, Climate Change-Kyoto Protocol, Desertification, Endangered Species, Environmental Modification, Hazardous Wastes, Law of the Sea, Ozone Layer Protection, Wetlands

signed, but not ratified: none of the selected agreements

Geography - note:

most of the country is situated on deltas of large rivers flowing from the Himalayas: the Ganges unites with the Jamuna (main channel of the Brahmaputra) and later joins the Meghna to eventually empty into the Bay of Bengal

Economy Bangladesh

Economy - overview:
Despite sustained domestic and international efforts to improve
economic and demographic prospects, Bangladesh remains a poor,
overpopulated, and ill-governed nation. Although half of GDP is
generated through the service sector, nearly two-thirds of
Bangladeshis are employed in the agriculture sector, with rice as

the single-most-important product. Major impediments to growth include frequent cyclones and floods, inefficient state-owned enterprises, inadequate port facilities, a rapidly growing labor force that cannot be absorbed by agriculture, delays in exploiting energy resources (natural gas), insufficient power supplies, and slow implementation of economic reforms. Economic reform is stalled in many instances by political infighting and corruption at all levels of government. Progress also has been blocked by opposition from the bureaucracy, public sector unions, and other vested interest groups. The BNP government, led by Prime Minister Khaleda ZIA, has the parliamentary strength to push through needed reforms, but the party's political will to do so has been lacking in key areas. One encouraging note: growth has been a steady 5% for the past several years.

@Barbados

Introduction Barbados

Background:

The island was uninhabited when first settled by the British in 1627. Slaves worked the sugar plantations established on the island until 1834 when slavery was abolished. The economy remained heavily

dependent on sugar, rum, and molasses production through most of the 20th century. The gradual introduction of social and political reforms in the 1940s and 1950s led to complete independence from the UK in 1966. In the 1990s, tourism and manufacturing surpassed the sugar industry in economic importance.

Economy Barbados

Economy - overview:

Historically, the Barbadian economy had been dependent on sugarcane cultivation and related activities, but production in recent years has diversified into light industry and tourism. Offshore finance and information services are important foreign exchange earners. The government continues its efforts to reduce unemployment, to encourage direct foreign investment, and to privatize remaining state-owned enterprises. The economy contracted in 2002-03 mainly due to a decline in tourism. Growth should be positive in 2004, the

precise level largely dependent on economic conditions in the US and Europe.

@Belarus

Introduction Belarus

Background:

After seven decades as a constituent republic of the USSR, Belarus attained its independence in 1991. It has retained closer political and economic ties to Russia than any of the other former Soviet republics. Belarus and Russia signed a treaty on a two-state union on 8 December 1999 envisioning greater political and economic integration. Although Belarus agreed to a framework to carry out the accord, serious implementation has yet to take place.

Economy Belarus

Economy - overview:

Belarus' economy in 2003 posted 6.1 percent growth and is likely to continue expanding through 2004, albeit at a slower growth rate. The Belarusian economy in 2004 is likely to be hampered by high inflation, persistent trade deficits, and ongoing rocky relations with Russia, Belarus' largest trading partner and energy supplier. Belarus has seen little structural reform since 1995, when President LUKASHENKO launched the country on the path of "market socialism." In keeping with this policy, LUKASHENKO reimposed administrative controls over prices and currency exchange rates and expanded the state's right to intervene in the management of private enterprises. In addition, businesses have been subject to pressure on the part of central and local governments, e.g., arbitrary changes in regulations, numerous rigorous inspections, retroactive application of new business regulations, and arrests of "disruptive" businessmen and factory owners. A wide range of redistributive policies has helped those at the bottom of the ladder. For the time being, Belarus remains self-isolated from the West and its open-market economies.

Introduction Belgium

Background:

Belgium became independent from the Netherlands in 1830 and was occupied by Germany during World Wars I and II. It has prospered in the past half century as a modern, technologically advanced European state and member of NATO and the EU. Tensions between the Dutch-speaking Flemings of the north and the French-speaking Walloons of the south have led in recent years to constitutional amendments granting these regions formal recognition and autonomy.

Administrative divisions:

10 provinces (French: provinces, singular - province; Dutch: provincies, singular - provincie) and 3 regions* (French: regions; Dutch: gewesten); Antwerpen, Brabant Wallon, Brussels* (Bruxelles), Flanders*, Hainaut, Liege, Limburg, Luxembourg, Namur,

Oost-Vlaanderen, Vlaams-Brabant, Wallonia*, West-Vlaanderen
note: as a result of the 1993 constitutional revision that furthered devolution into a federal state, there are now three levels of government (federal, regional, and linguistic community) with a complex division of responsibilities

Independence:

4 October 1830 (a provisional government declares independence from the Netherlands); 21 July 1831 (King Leopold I ascends to the throne)

National holiday:

21 July (1831) ascension to the Throne of King Leopold I

Constitution:

7 February 1831, last revised 14 July 1993; parliament approved a constitutional package creating a federal state

Legal system:

civil law system influenced by English constitutional theory;
judicial review of legislative acts; accepts compulsory ICJ jurisdiction, with reservations

Suffrage:

18 years of age; universal and compulsory

Executive branch:

chief of state: King ALBERT II (since 9 August 1993); Heir Apparent Prince PHILIPPE, son of the monarch

head of government: Prime Minister Guy VERHOFSTADT (since 13 July 1999)

cabinet: Council of Ministers formally appointed by the monarch

note: government coalition - VLD, MR, PS, SP.A-Spirit

elections: none; the monarchy is hereditary; following legislative elections, the leader of the majority party or the leader of the majority coalition is usually appointed prime minister by the monarch and then approved by Parliament

Legislative branch:

bicameral Parliament consists of a Senate or Senaat in Dutch, Senat in French (71 seats; 40 members are directly elected by popular vote, 31 are indirectly elected; members serve four-year terms) and a Chamber of Deputies or Kamer van Volksvertegenwoordigers in Dutch, Chambre des Représentants in French (150 seats; members are directly elected by popular vote on the basis of proportional representation to serve four-year terms)

Economy Belgium

Economy - overview:

This modern private enterprise economy has capitalized on its central geographic location, highly developed transport network, and diversified industrial and commercial base. Industry is concentrated mainly in the populous Flemish area in the north. With few natural resources, Belgium must import substantial quantities of raw materials and export a large volume of manufactures, making its economy unusually dependent on the state of world markets. Roughly three-quarters of its trade is with other EU countries. Public debt is about 100% of GDP, and the government has succeeded in balancing

its budget. Belgium, together with 11 of its EU partners, began circulating the euro currency in January 2002. Economic growth in 2001-03 dropped sharply because of the global economic slowdown. Prospects for 2004 again depend largely on recovery in the EU and the US.

Economy Belize

Economy - overview:

In this small, essentially private enterprise economy the tourism industry is the number one foreign exchange earner followed by cane sugar, citrus, marine products, bananas, and garments. The government's expansionary monetary and fiscal policies, initiated in September 1998, led to GDP growth of 6.5% in 1999, 10.8% in 2000, 4.6% in 2001, and 3.7% in 2002. Major concerns continue to be the sizable trade deficit and foreign debt. A key short-term objective remains the reduction of poverty with the help of international donors.

Introduction Benin

Background:

Present day Benin was the site of Dahomey, a prominent West African kingdom that rose in the 15th century. The territory became a French Colony in 1872 and achieved independence on 1 August 1960, as the Republic of Benin. A succession of military governments ended in 1972 with the rise to power of Mathieu KEREKOU and the establishment of a government based on Marxist-Leninist principles. A move to

representative government began in 1989. Two years later, free elections ushered in former Prime Minister Nicephore SOGLO as president, marking the first successful transfer of power in Africa from a dictatorship to a democracy. KEREKOU was returned to power by elections held in 1996 and 2001, though some irregularities were alleged.

Economy Benin

Economy - overview:

The economy of Benin remains underdeveloped and dependent on
subsistence agriculture, cotton production, and regional trade.

Growth in real output has averaged a stable 5% in the past six
years, but rapid population rise has offset much of this increase.

Inflation has subsided over the past several years. In order to
raise growth still further, Benin plans to attract more foreign
investment, place more emphasis on tourism, facilitate the
development of new food processing systems and agricultural

products, and encourage new information and communication technology. The 2001 privatization policy should continue in telecommunications, water, electricity, and agriculture in spite of initial government reluctance. The Paris Club and bilateral creditors have eased the external debt situation, while pressing for speeded-up structural reforms.

Introduction Bermuda

Background:

Bermuda was first settled in 1609 by shipwrecked English colonists headed for Virginia. Tourism to the island to escape North American winters first developed in Victorian times. Tourism continues to be important to the island's economy, although international business has overtaken it in recent years. Bermuda has developed into a highly successful offshore financial center. A referendum on independence was soundly defeated in 1995.

Economy Bermuda

Economy - overview:

Bermuda enjoys one of the highest per capita incomes in the world, equal to that of the US. Its economy is primarily based on providing financial services for international business and luxury facilities for tourists. The effects of 11 September 2001 have had both positive and negative ramifications for Bermuda. On the positive side, a number of new reinsurance companies have located on the island, contributing to the expansion of an already robust international business sector. On the negative side, Bermuda's tourism industry - which derives over 80% of its visitors from the US - was severely hit as American tourists chose not to travel. Tourism rebounded somewhat in 2002-03. Most capital equipment and food must be imported. Bermuda's industrial sector is small, although construction continues to be important; the average cost of a house in June 2003 had risen to \$976,000. Agriculture is limited, only 6% of the land being arable.

Introduction Bhutan

Background:

In 1865, Britain and Bhutan signed the Treaty of Sinchulu, under which Bhutan would receive an annual subsidy in exchange for ceding some border land. Under British influence, a monarchy was set up in 1907; three years later, a treaty was signed whereby the British agreed not to interfere in Bhutanese internal affairs and Bhutan allowed Britain to direct its foreign affairs. This role was assumed by independent India after 1947. Two years later, a formal Indo-Bhutanese accord returned the areas of Bhutan annexed by the British, formalized the annual subsidies the country received, and defined India's responsibilities in defense and foreign relations. A refugee issue of some 100,000 Bhutanese in Nepal remains unresolved; 90% of the refugees are housed in seven United Nations Office of the High Commissioner for Refugees (UNHCR) camps.

Economy Bhutan

Economy - overview:

The economy, one of the world's smallest and least developed, is based on agriculture and forestry, which provide the main livelihood for more than 90% of the population. Agriculture consists largely of subsistence farming and animal husbandry. Rugged mountains dominate the terrain and make the building of roads and other infrastructure

difficult and expensive. The economy is closely aligned with India's through strong trade and monetary links and dependence on India's financial assistance. The industrial sector is technologically backward, with most production of the cottage industry type. Most development projects, such as road construction, rely on Indian migrant labor. Bhutan's hydropower potential and its attraction for tourists are key resources. Model education, social, and environment programs are underway with support from multilateral development organizations. Each economic program takes into account the government's desire to protect the country's environment and cultural traditions. For example, the government in its cautious expansion of the tourist sector encourages the visits of upscale, environmentally conscientious visitors. Detailed controls and uncertain policies in areas like industrial licensing, trade, labor, and finance continue to hamper foreign investment.

Introduction Bolivia

Background:

Bolivia, named after independence fighter Simon BOLIVAR, broke away from Spanish rule in 1825; much of its subsequent history has consisted of a series of nearly 200 coups and counter-coups. Comparatively democratic civilian rule was established in 1982, but leaders have faced difficult problems of deep-seated poverty, social unrest, and drug production. Current goals include attracting foreign investment, strengthening the educational system, resolving disputes with coca growers over Bolivia's counterdrug efforts, and waging an anticorruption campaign.

Economy Bolivia

Economy - overview:

Bolivia, long one of the poorest and least developed Latin American countries, made considerable progress in the 1990s toward the development of a market-oriented economy. Successes under President SANCHEZ DE LOZADA (1993-97) included the signing of a free trade agreement with Mexico and becoming an associate member of the Southern Cone Common Market (Mercosur), as well as the privatization of the state airline, telephone company, railroad, electric power company, and oil company. Growth slowed in 1999, in part due to tight government budget policies, which limited needed appropriations for anti-poverty programs, and the fallout from the Asian financial crisis. In 2000, major civil disturbances held down growth to 2.5%. Bolivia's GDP failed to grow in 2001 due to the global slowdown and laggard domestic activity. Growth picked up slightly in 2002, but the first quarter of 2003 saw extensive civil riots and looting and loss of confidence in the government. Bolivia will remain highly dependent on foreign aid unless and until it can develop its substantial natural resources.

@Bosnia and Herzegovina

Introduction Bosnia and Herzegovina

Background:

Bosnia and Herzegovina's declaration of sovereignty in October 1991, was followed by a declaration of independence from the former Yugoslavia on 3 March 1992 after a referendum boycotted by ethnic Serbs. The Bosnian Serbs - supported by neighboring Serbia and Montenegro - responded with armed resistance aimed at partitioning the republic along ethnic lines and joining Serb-held areas to form a "Greater Serbia." In March 1994, Bosniaks and Croats reduced the

number of warring factions from three to two by signing an agreement creating a joint Bosniak/Croat Federation of Bosnia and Herzegovina. On 21 November 1995, in Dayton, Ohio, the warring parties initialed a peace agreement that brought to a halt three years of interethnic civil strife (the final agreement was signed in Paris on 14 December 1995). The Dayton Agreement retained Bosnia and Herzegovina's international boundaries and created a joint multi-ethnic and democratic government. This national government was charged with conducting foreign, diplomatic, and fiscal policy. Also recognized was a second tier of government comprised of two entities roughly equal in size: the Bosniak/Croat Federation of Bosnia and Herzegovina and the Bosnian Serb-led Republika Srpska (RS). The Federation and RS governments were charged with overseeing most government functions. The Office of the High Representative (OHR) was established to oversee the implementation of the civilian aspects of the agreement. In 1995-96, a NATO-led international peacekeeping force (IFOR) of 60,000 troops served in Bosnia to implement and monitor the military aspects of the agreement. IFOR was succeeded by a smaller, NATO-led Stabilization Force (SFOR) whose mission was to deter renewed hostilities. European Union peacekeeping troops (EUFOR) replaced SFOR in December 2004; their mission was to maintain peace and stability throughout the country.

Economy Bosnia and Herzegovina

Economy - overview:

Bosnia and Herzegovina ranked next to The Former Yugoslav Republic of Macedonia as the poorest republic in the old Yugoslav federation. Although agriculture is almost all in private hands, farms are small and inefficient, and the republic traditionally is a net importer of food. Industry has been greatly overstaffed, one reflection of the socialist economic structure of Yugoslavia. TITO had pushed the development of military industries in the republic with the result that Bosnia hosted a number of Yugoslavia's defense plants. The interethnic warfare in Bosnia caused production to plummet by 80% from 1992 to 1995 and unemployment to soar. With an uneasy peace in place, output recovered in 1996-99 at high percentage rates from a low base; but output growth slowed in 2000-02. Part of the lag in output was made up in 2003-04. National-level statistics are limited. Moreover, official data do not capture the large share of black market activity. The konvertibilna marka (convertible mark or BAM)- the national currency introduced in 1998 - is now pegged to the euro, and the Central Bank of Bosnia and Herzegovina has dramatically increased its reserve holdings. Implementation of privatization, however, has been slow, and local entities only reluctantly support national-level institutions. Banking reform accelerated in 2001 as all the Communist-era payments bureaus were shut down. The country receives substantial amounts of reconstruction assistance and humanitarian aid from the international community but will have to prepare for an era of declining assistance.

Introduction Botswana

Background:

Formerly the British protectorate of Bechuanaland, Botswana adopted its new name upon independence in 1966. Four decades of uninterrupted civilian leadership, progressive social policies, and significant capital investment have created one of the most dynamic economies in Africa. Mineral extraction, principally diamond mining, dominates economic activity, though tourism is a growing sector due to the country's conservation practices and extensive nature preserves. Botswana has one of the world's highest known rates of HIV/AIDS infection, but also one of Africa's most progressive and comprehensive programs for dealing with the disease.

Economy Botswana

Economy - overview:

Botswana has maintained one of the world's highest growth rates
since independence in 1966. Through fiscal discipline and sound
management, Botswana has transformed itself from one of the poorest
countries in the world to a middle-income country with a per capita
GDP of \$8,800 in 2003. Two major investment services rank Botswana
as the best credit risk in Africa. Diamond mining has fueled much of
the expansion and currently accounts for more than one-third of GDP
and for nine-tenths of export earnings. Tourism, subsistence

farming, and cattle raising are other key sectors. On the downside, the government must deal with high rates of unemployment and poverty. Unemployment officially is 21%, but unofficial estimates place it closer to 40%. HIV/AIDS infection rates are the highest in the world and threaten Botswana's impressive economic gains. Long-term prospects are overshadowed by the expected leveling off in diamond mining production.

@Bouvet Island

Introduction Bouvet Island

Background:

This uninhabited volcanic island is almost entirely covered by glaciers and is difficult to approach. It was discovered in 1739 by a French naval officer after whom the island was named. No claim was made until 1825, when the British flag was raised. In 1928, the UK waived its claim in favor of Norway, which had occupied the island the previous year. In 1971, Bouvet Island and the adjacent territorial waters were designated a nature reserve. Since 1977, Norway has run an automated meteorological station on the island.

@Brazil

Introduction Brazil

Background:

Following three centuries under the rule of Portugal, Brazil became an independent nation in 1822. By far the largest and most populous country in South America, Brazil overcame more than half a century of military intervention in the governance of the country when in 1985 the military regime peacefully ceded power to civilian rulers. Brazil continues to pursue industrial and agricultural growth and development of its interior. Exploiting vast natural resources and a large labor pool, it is today South America's leading economic power and a regional leader. Highly unequal income distribution remains a pressing problem.

Geography Brazil

Location:

Eastern South America, bordering the Atlantic Ocean

Geographic coordinates:

10 00 S, 55 00 W

Map references:

projections by the US Census Bureau, and is close to the implied
underenumeration of 4.6% for the 1991 census; estimates for this
country explicitly take into account the effects of excess mortality
due to AIDS; this can result in lower life expectancy, higher infant
mortality and death rates, lower population and growth rates, and
changes in the distribution of population by age and sex than would
otherwise be expected (July 2004 est.)

Economy Brazil

Economy - overview:

Possessing large and well-developed agricultural, mining, manufacturing, and service sectors, Brazil's economy outweighs that of all other South American countries and is expanding its presence in world markets. From 2001-03 real wages fell and Brazil's economy grew, on average, only 1.1% per year, as the country absorbed a series of domestic and international economic shocks. That Brazil absorbed these shocks without financial collapse is a tribute to the resiliency of the Brazilian economy and the economic program put in place by former President CARDOSO and strengthened by President Lula DA SILVA. The three pillars of the economic program are a floating exchange rate, an inflation-targeting regime, and tight fiscal policy, which have been reinforced by a series of IMF programs. The currency depreciated sharply in 2001 and 2002, which contributed to a dramatic current account adjustment: in 2003, Brazil ran a record trade surplus and recorded the first current account surplus since 1992. While economic management has been good, there remain important economic vulnerabilities. The most significant are debt-related: the government's largely domestic debt increased

steadily from 1994 to 2003, straining government finances, while Brazil's foreign debt (a mix of private and public debt) is large in relation to Brazil's modest (but growing) export base. Another challenge is maintaining economic growth over a period of time to generate employment and make the government debt burden more manageable.

@British Indian Ocean Territory

Introduction British Indian Ocean Territory

Background:

Established as a territory of the UK in 1965, a number of the British Indian Ocean Territory (BIOT) islands were transferred to the Seychelles when it attained independence in 1976. Subsequently, BIOT has consisted only of the six main island groups comprising the Chagos Archipelago. The largest and most southerly of the islands, Diego Garcia, contains a joint UK-US naval support facility. All of the remaining islands are uninhabited. Former agricultural workers, earlier residents in the islands, were relocated primarily to Mauritius but also to the Seychelles, between 1967 and 1973. In 2000, a British High Court ruling invalidated the local immigration order that had excluded them from the archipelago, but upheld the special military status of Diego Garcia.

Economy British Indian Ocean Territory

Economy - overview:

All economic activity is concentrated on the largest island of

Diego Garcia, where joint UK-US defense facilities are located. Construction projects and various services needed to support the military installations are done by military and contract employees from the UK, Mauritius, the Philippines, and the US. There are no industrial or agricultural activities on the islands. When the Ilois return, they plan to reestablish sugarcane production and fishing.

Transnational Issues British Indian Ocean Territory

Disputes - international:

Mauritius and Seychelles claim the Chagos Archipelago and its former inhabitants, who reside chiefly in Mauritius, but in 2001 were granted UK citizenship and the right to repatriation since eviction in 1965; the UK resists the Chagossians' demand for an immediate return to the islands; repatriation is complicated by the exclusive US military lease of Diego Garcia that restricted access to the largest island in the chain

Economy British Virgin Islands

Economy - overview:

The economy, one of the most stable and prosperous in the

Caribbean, is highly dependent on tourism, generating an estimated 45% of the national income. An estimated 350,000 tourists, mainly from the US, visited the islands in 1998. Tourism suffered in 2002 because of the lackluster US economy. In the mid-1980s, the government began offering offshore registration to companies wishing to incorporate in the islands, and incorporation fees now generate substantial revenues. Roughly 400,000 companies were on the offshore registry by yearend 2000. The adoption of a comprehensive insurance law in late 1994, which provides a blanket of confidentiality with regulated statutory gateways for investigation of criminal offenses, is expected to make the British Virgin Islands even more attractive to international business. Livestock raising is the most important agricultural activity; poor soils limit the islands' ability to meet domestic food requirements. Because of traditionally close links with the US Virgin Islands, the British Virgin Islands has used the dollar as its currency since 1959.

Introduction Brunei

Background:

The Sultanate of Brunei's influence peaked between the 15th and 17th centuries when its control extended over coastal areas of northwest Borneo and the southern Philippines. Brunei subsequently entered a period of decline brought on by internal strife over royal succession, colonial expansion of European powers, and piracy. In 1888, Brunei became a British protectorate; independence was achieved in 1984. The same family has ruled Brunei for over six centuries. Brunei benefits from extensive petroleum and natural gas fields, the source of one of the highest per capita GDPs in the developing world.

Economy Brunei

Economy - overview:

This small, wealthy economy encompasses a mixture of foreign and domestic entrepreneurship, government regulation, welfare measures, and village tradition. Crude oil and natural gas production account for nearly half of GDP. Per capita GDP is far above most other Third World countries, and substantial income from overseas investment supplements income from domestic production. The government provides for all medical services and subsidizes rice and housing. Brunei's leaders are concerned that steadily increased integration in the world economy will undermine internal social cohesion, although it became a more prominent player by serving as chairman for the 2000 APEC (Asian Pacific Economic Cooperation) forum. Plans for the future include upgrading the labor force, reducing unemployment, strengthening the banking and tourist sectors, and, in general, further widening the economic base beyond oil and gas.

Transnational Issues Brunei

Disputes - international:

in 2003 Brunei and Malaysia ceased gas and oil exploration in their offshore and deepwater seabeds until negotiations progress to an agreement over allocation of disputed areas; Malaysia's land boundary with Brunei around Limbang is in dispute; Brunei established an exclusive economic fishing zone encompassing Louisa Reef in southern Spratly Islands in 1984 but makes no public territorial claim to the offshore reefs; the 2002 "Declaration on the Conduct of Parties in the South China Sea" has eased tensions in

the Spratly Islands but falls short of a legally binding "code of conduct" desired by several of the disputants

Illicit drugs:
drug trafficking and illegally importing controlled substances are serious offenses in Brunei and carry a mandatory death penalty

Introduction Bulgaria

Background:

The Bulgars, a Central Asian Turkic tribe, merged with the local Slavic inhabitants in the late 7th century to form the first Bulgarian state. In succeeding centuries, Bulgaria struggled with the Byzantine Empire to assert its place in the Balkans, but by the end of the 14th century the country was overrun by the Ottoman Turks. Northern Bulgaria attained autonomy in 1878 and all of Bulgaria became independent in 1908. Having fought on the losing side in both World Wars, Bulgaria fell within the Soviet sphere of influence and became a People's Republic in 1946. Communist

domination ended in 1990, when Bulgaria held its first multiparty election since World War II and began the contentious process of moving toward political democracy and a market economy while combating inflation, unemployment, corruption, and crime. Today, reforms and democratization keep Bulgaria on a path toward eventual integration into the EU. The country joined NATO in 2004.

Economy Bulgaria

Economy - overview:

Bulgaria, a former communist country striving to enter the European Union, has experienced macroeconomic stability and strong growth since a major economic downturn in 1996 led to the fall of the then socialist government. As a result, the government became committed to economic reform and responsible fiscal planning. A \$300 million stand-by agreement negotiated with the IMF at the end of 2001 has supported government efforts to overcome high rates of poverty and unemployment.

@Burkina Faso

Introduction Burkina Faso

Background:
Burkina Faso (formerly Upper Volta) achieved independence from France in 1960. Repeated military coups during the 1970s and 1980s

were followed by multiparty elections in the early 1990s. Burkina Faso's high population density and limited natural resources result in poor economic prospects for the majority of its citizens. Recent unrest in Cote d'Ivoire and northern Ghana has hindered the ability of several hundred thousand seasonal Burkinabe farm workers to find employment in neighboring countries.

Economy Burkina Faso

Economy - overview:
One of the poorest countries in the world, landlocked Burkina Faso
has few natural resources, a fragile soil, and a highly unequal
distribution of income. About 90% of the population is engaged in
(mainly subsistence) agriculture, which is vulnerable to variations

in rainfall. Cotton is the key crop. Industry remains dominated by unprofitable government-controlled corporations. Following the African franc currency devaluation in January 1994 the government updated its development program in conjunction with international agencies, and exports and economic growth have increased. Maintenance of macroeconomic progress depends on continued low inflation, reduction in the trade deficit, and reforms designed to encourage private investment. The internal crisis in neighboring Cote d'Ivoire continues to hurt trade and industrial prospects and deepens the need for international assistance.

Introduction Burma

Background:

Britain conquered Burma over a period of 62 years (1824-1886) and incorporated it into its Indian Empire. Burma was administered as a province of India until 1937 when it became a separate, self-governing colony; independence from the Commonwealth was attained in 1948. Gen. NE WIN dominated the government from 1962 to 1988, first as military ruler, then as self-appointed president, and later as political kingpin. Despite multiparty legislative elections in 1990 that resulted in the main opposition party - the National League for Democracy (NLD) - winning a landslide victory, the ruling junta refused to hand over power. NLD leader and Nobel Peace Prize recipient AUNG SAN SUU KYI, who was under house arrest from 1989 to

1995 and 2000 to 2002, was imprisoned in May 2003 and is currently under house arrest. In December 2004, the junta announced it was extending her detention for at least an additional year. Her supporters, as well as all those who promote democracy and improved human rights, are routinely harassed or jailed.

Economy Burma

Economy - overview:

Burma is a resource-rich country that suffers from government controls and abject rural poverty. The military regime took steps in the early 1990s to liberalize the economy after decades of failure under the "Burmese Way to Socialism", but those efforts have since stalled. Burma has been unable to achieve monetary or fiscal

stability, resulting in an economy that suffers from serious macroeconomic imbalances - including a steep inflation rate and an official exchange rate that overvalues the Burmese kyat by more than 100 times the market rate. In addition, most overseas development assistance ceased after the junta suppressed the democracy movement in 1988 and subsequently ignored the results of the 1990 election. A crisis in the private banking sector in early 2003 followed by economic moves against Burma by the United States, the European Union, and Japan - including a US ban on imports from Burma and a Japanese freeze on new bilateral economic aid - further weakened the Burmese economy. Burma is data poor, and official statistics are often dated and inaccurate. Published estimates of Burma's foreign trade are greatly understated because of the size of the black market and border trade - often estimated to be one to two times the official economy. Better relations with foreign countries and relaxed controls at home are needed to promote foreign investment, exports, and tourism. In February 2003, a major banking crisis hit the country's 20 private banks, shutting them down and disrupting the economy. In July and August 2003, the United States imposed a ban on all Burmese imports and a ban on provision of financial services, hampering Burma's ability to obtain foreign exchange. As of January 2004, the largest private banks remained moribund, leaving the private sector with little formal access to credit outside of government contracts.

despite continuing border committee talks, significant differences remain with Thailand over boundary alignment and the handling of ethnic rebels, refugees, and illegal cross-border activities; groups in Burma and Thailand express concern over China's construction of 13 hydroelectric dams on the Salween River in Yunnan Province; India seeks cooperation from Burma to keep out Indian Nagaland insurgents

Refugees and internally displaced persons:

Illicit drugs:
world's second largest producer of illicit opium (potential production in 2003 - 484 metric tons, down 23% due to eradication efforts and alternate development; cultivation in 2003 - 47,130 hectares, a 39% decline from 2002); surrender of drug warlord KHUN SA's Mong Tai Army in January 1996 was hailed by Rangoon as a major

counternarcotics success, but lack of government will and ability to take on major narcotrafficking groups and lack of serious commitment against money laundering continues to hinder the overall antidrug effort; major source of methamphetamine and heroin for regional consumption; currently under Financial Action Task Force countermeasures due to continued failure to address its inadequate money-laundering controls

Introduction Burundi

Background:

Burundi's first democratically elected president was assassinated in October 1993 after only one hundred days in office. Since then, some 200,000 Burundians have perished in widespread, often intense ethnic violence between Hutu and Tutsi factions. Hundreds of thousands have been internally displaced or have become refugees in neighboring countries. Burundi troops, seeking to secure their borders, briefly intervened in the conflict in the Democratic

Republic of the Congo in 1998. A new transitional government, inaugurated on 1 November 2001, signed a power-sharing agreement with the largest rebel faction in December 2003 and set in place a provisional constitution in October 2004. Implementation of the agreement has been problematic, however, as one remaining rebel group refuses to sign on and elections have been repeatedly delayed, clouding prospects for a sustainable peace.

Economy Burundi

Economy - overview:

Burundi is a landlocked, resource-poor country with an underdeveloped manufacturing sector. The economy is predominantly agricultural with roughly 90% of the population dependent on subsistence agriculture. Economic growth depends on coffee and tea exports, which account for 90% of foreign exchange earnings. The ability to pay for imports, therefore, rests primarily on weather conditions and international coffee and tea prices. The Tutsi minority, 14% of the population, dominates the government and the coffee trade at the expense of the Hutu majority, 85% of the population. Since October 1993 an ethnic-based war has resulted in more than 200,000 deaths, forced 800,000 refugees into Tanzania, and displaced 525,000 others internally. Doubts about the prospects for sustainable peace continue to impede development. Only one in two children go to school, and approximately one in ten adults has HIV/AIDS. Food, medicine, and electricity remain in short supply.

@Cambodia

Introduction Cambodia

Background:

Most Cambodians consider themselves to be Khmers, whose Angkor Empire extended over much of Southeast Asia and reached its zenith between the 10th and 13th centuries. Subsequently, attacks by the Thai and Cham (from present-day Vietnam) weakened the empire ushering in a long period of decline. In 1863, the king of Cambodia placed the country under French protection; it became part of French Indochina in 1887. Following Japanese occupation in World War II, Cambodia became independent within the French Union in 1949 and fully independent in 1953. After a five-year struggle, Communist Khmer Rouge forces captured Phnom Penh in April 1975 and ordered the evacuation of all cities and towns; at least 1.5 million Cambodians died from execution, enforced hardships, or starvation during the Khmer Rouge regime under POL POT. A December 1978 Vietnamese invasion drove the Khmer Rouge into the countryside, led to a 10-year Vietnamese occupation, and touched off almost 13 years of civil war. The 1991 Paris Peace Accords mandated democratic elections and a ceasefire, which was not fully respected by the Khmer Rouge. UN-sponsored elections in 1993 helped restore some semblance of normalcy and the final elements of the Khmer Rouge surrendered in early 1999. Factional fighting in 1997 ended the

first coalition government, but a second round of national elections in 1998 led to the formation of another coalition government and renewed political stability. The July 2003 elections were relatively peaceful, but it took one year of negotiations between contending political parties before a coalition government was formed. Nation-wide local elections are scheduled for 2007 and national elections for 2008.

Economy Cambodia

Economy - overview:

Cambodia's economy slowed dramatically in 1997-1998 due to the regional economic crisis, civil violence, and political infighting. Foreign investment and tourism fell off. In 1999, the first full year of peace in 30 years, progress was made on economic reforms. Growth resumed and has remained about 5.0% during 2000-2003. Tourism was Cambodia's fastest growing industry, with arrivals up 34% in 2000 and up another 40% in 2001 before the 11 September 2001 terrorist attacks in the US. Cambodia expects 1 million foreign tourists in 2004. Economic growth has been largely driven by expansion in the clothing sector and tourism. Clothing exports were fostered by the U.S.-Cambodian Bilateral Textile Agreement signed in 1999. Even given Cambodia's recent growth, the long-term development of the economy after decades of war remains a daunting challenge. The population lacks education and productive skills, particularly in the poverty-ridden countryside, which suffers from an almost total lack of basic infrastructure. Fear of renewed political instability and a dysfunctional legal system coupled with government corruption discourage foreign investment. The Cambodian government continues to work with bilateral and multilateral donors to address the country's many pressing needs. The major economic challenge for Cambodia over the next decade will be fashioning an economic environment in which the private sector can create enough jobs to handle Cambodia's demographic imbalance. About 60% of the population is 20 years or younger; most of these citizens will seek to enter the workforce over the course of the next 10 years.

Introduction Cameroon

Background:

The former French Cameroon and part of British Cameroon merged in 1961 to form the present country. Cameroon has generally enjoyed stability, which has permitted the development of agriculture, roads, and railways, as well as a petroleum industry. Despite movement toward democratic reform, political power remains firmly in the hands of an ethnic oligarchy.

Economy Cameroon

Economy - overview:

Because of its oil resources and favorable agricultural conditions, Cameroon has one of the best-endowed primary commodity economies in sub-Saharan Africa. Still, it faces many of the serious problems facing other underdeveloped countries, such as a top-heavy civil service and a generally unfavorable climate for business enterprise. Since 1990, the government has embarked on various IMF and World Bank programs designed to spur business investment, increase efficiency in agriculture, improve trade, and recapitalize the nation's banks. In June 2000, the government completed an IMF-sponsored, three-year structural adjustment program; however, the IMF is pressing for more reforms, including increased budget transparency, privatization, and poverty reduction programs. International oil and cocoa prices have considerable impact on the economy.

Transnational Issues Cameroon

Disputes - international:

ICJ ruled in 2002 on the entire Cameroon-Nigeria land and maritime boundary but the parties formed a Joint Border Commission to resolve differences bilaterally and have commenced with demarcation in less-contested sections of the boundary, starting in Lake Chad in the north; the ICF ruled on an equidistance settlement of Cameroon-Equatorial Guinea-Nigeria maritime boundary in the Gulf of Guinea, however, implementation of the decision is delayed due to imprecisely defined coordinates, the unresolved Bakasi allocation, and a sovereignty dispute between Equatorial Guinea and Cameroon over an island at the mouth of the Ntem River; Nigeria initially rejected cession of the Bakasi Peninsula; Lake Chad Commission continues to urge signatories Cameroon, Chad, Niger, and Nigeria to ratify delimitation treaty over the lake region, which remains the site of armed clashes among local populations and militias

Introduction Canada

Background:

A land of vast distances and rich natural resources, Canada became a self-governing dominion in 1867 while retaining ties to the British crown. Economically and technologically the nation has developed in parallel with the US, its neighbor to the south across an unfortified border. Canada's paramount political problem is meeting public demands for quality improvements in health care and education services after a decade of budget cuts. The issue of reconciling Quebec's francophone heritage with the majority anglophone Canadian population has moved to the back burner in recent years; support for separatism abated after the Quebec government's referendum on independence failed to pass in October of 1995.

Geography Canada

Economy Canada

Economy - overview:

As an affluent, high-tech industrial society, Canada today closely resembles the US in its market-oriented economic system, pattern of production, and high living standards. Since World War II, the impressive growth of the manufacturing, mining, and service sectors has transformed the nation from a largely rural economy into one primarily industrial and urban. The 1989 US-Canada Free Trade Agreement (FTA) and the 1994 North American Free Trade Agreement (NAFTA) (which includes Mexico) touched off a dramatic increase in trade and economic integration with the US. As a result of the close cross-border relationship, the economic sluggishness in the United States in 2001-02 had a negative impact on the Canadian economy. Real growth averaged nearly 3% during 1993-2000, but declined in 2001, with moderate recovery in 2002-03. Unemployment is up, with contraction in the manufacturing and natural resource sectors.

Nevertheless, given its great natural resources, skilled labor force, and modern capital plant Canada enjoys solid economic prospects. Solid fiscal management has produced a long-term budget surplus which is substantially reducing the national debt, although public debate continues over how to manage the rising cost of the publicly funded healthcare system. Trade accounts for roughly a third of GDP. Canada enjoys a substantial trade surplus with its principal trading partner, the United States, which absorbs more than 85% of Canadian exports. Roughly 90% of the population lives within 160 kilometers of the US border.

@Cape Verde

Introduction Cape Verde

Background:

The uninhabited islands were discovered and colonized by the Portuguese in the 15th century; Cape Verde subsequently became a trading center for African slaves and later an important coaling and resupply stop for whaling and transatlantic shipping. Following independence in 1975, and a tentative interest in unification with Guinea-Bissau, a one-party system was established and maintained until multi-party elections were held in 1990. Cape Verde continues to exhibit one of Africa's most stable democratic governments. Repeated droughts during the second half of the 20th century caused significant hardship and prompted heavy emigration. As a result, Cape Verde's expatriate population is greater than its domestic one. Most Cape Verdeans have both African and Portuguese antecedents.

Economy Cape Verde

Economy - overview:
This island economy suffers from a poor natural resource base,
including serious water shortages exacerbated by cycles of long-term
drought. The economy is service-oriented, with commerce, transport,
tourism, and public services accounting for 72% of GDP. Although
nearly 70% of the population lives in rural areas, the share of
agriculture in GDP in 2001 was only 11%, of which fishing accounted
for 1.5%. About 82% of food must be imported. The fishing potential,
mostly lobster and tuna, is not fully exploited. Cape Verde annually
runs a high trade deficit, financed by foreign aid and remittances
from emigrants; remittances supplement GDP by more than 20%.
Economic reforms are aimed at developing the private sector and
attracting foreign investment to diversify the economy. Prospects
for 2004 depend heavily on the maintenance of aid flows, tourism,
remittances, and the momentum of the government's development
program.

With no direct taxation, the islands are a thriving offshore financial center. More than 40,000 companies were registered in the Cayman Islands as of 1998, including almost 600 banks and trust companies; banking assets exceed \$500 billion. A stock exchange was opened in 1997. Tourism is also a mainstay, accounting for about 70% of GDP and 75% of foreign currency earnings. The tourist industry is aimed at the luxury market and caters mainly to visitors from North America. Total tourist arrivals exceeded 1.2 million in 1997, with

600,000 from the US. About 90% of the islands' food and consumer goods must be imported. The Caymanians enjoy one of the highest outputs per capita and one of the highest standards of living in the world.

@Central African Republic

Introduction Central African Republic

Background:

The former French colony of Ubangi-Shari became the Central African Republic upon independence in 1960. After three tumultuous decades of misrule - mostly by military governments - civilian rule was established in 1993 and lasted for one decade. President Ange-Felix PATASSE's civilian government was plagued by unrest, and in March 2003 he was deposed in a military coup led by General Francois BOZIZE, who has since established a transitional government. Though the government has the tacit support of civil society groups and the main parties, a wide field of affiliated and independent candidates will contest the municipal, legislative, and presidential elections scheduled for February 2005. The government still does not fully control the countryside, where pockets of lawlessness persist.

Economy Central African Republic

Economy - overview:
Subsistence agriculture, together with forestry, remains the backbone of the economy of the Central African Republic (CAR), with more than 70% of the population living in outlying areas. The agricultural sector generates half of GDP. Timber has accounted for about 16% of export earnings and the diamond industry for 54%. Important constraints to economic development include the CAR's landlocked position, a poor transportation system, a largely unskilled work force, and a legacy of misdirected macroeconomic policies. Factional fighting between the government and its opponents remains a drag on economic revitalization, with GDP likely to contract in 2004. Distribution of income is extraordinarily

unequal. Grants from France and the international community can only partially meet humanitarian needs.

Introduction Chad

Background:

Chad, part of France's African holdings until 1960, endured three decades of ethnic warfare as well as invasions by Libya before a semblance of peace was finally restored in 1990. The government eventually suppressed or came to terms with most political-military groups, settled a territorial dispute with Libya on terms favorable to Chad, drafted a democratic constitution, and held multiparty presidential elections in 1996 and 1997. In 1998, a new rebellion broke out in northern Chad, which sporadically flares up despite two peace agreements signed in 2002 and 2003 between the government and the rebels. Despite movement toward democratic reform, power remains in the hands of a northern ethnic oligarchy.

Economy Chad

Economy - overview:

Chad's primarily agricultural economy will continue to be boosted by major oilfield and pipeline projects that began in 2000. Over 80% of Chad's population relies on subsistence farming and stock raising for its livelihood. Cotton, cattle, and gum arabic provide the bulk of Chad's export earnings, but Chad will begin to export oil in 2004. Chad's economy has long been handicapped by its landlocked position, high energy costs, and a history of instability. Chad relies on foreign assistance and foreign capital for most public and private sector investment projects. A consortium led by two US companies has been investing \$3.7 billion to develop oil reserves estimated at 1 billion barrels in southern Chad. Oil production came on stream in late 2003.

Introduction Chile

Background:

A three-year-old Marxist government was overthrown in 1973 by a dictatorial military regime led by Augusto PINOCHET, who ruled until

a freely elected president was installed in 1990. Sound economic policies, maintained consistently since the 1980s, have contributed to steady growth and have helped secure the country's commitment to democratic and representative government. Chile has increasingly assumed regional and international leadership roles befitting its status as a stable, democratic nation.

Economy Chile

Economy - overview:

Chile has a market-oriented economy characterized by a high level of foreign trade. During the early 1990s, Chile's reputation as a role model for economic reform was strengthened when the democratic government of Patricio AYLWIN - which took over from the military in 1990 - deepened the economic reform initiated by the military government. Growth in real GDP averaged 8% during 1991-97, but fell to half that level in 1998 because of tight monetary policies implemented to keep the current account deficit in check and because of lower export earnings - the latter a product of the global financial crisis. A severe drought exacerbated the recession in 1999, reducing crop yields and causing hydroelectric shortfalls and electricity rationing, and Chile experienced negative economic growth for the first time in more than 15 years. Despite the effects of the recession, Chile maintained its reputation for strong financial institutions and sound policy that have given it the strongest sovereign bond rating in South America. By the end of 1999, exports and economic activity had begun to recover, and growth rebounded to 4.2% in 2000. Growth fell back to 3.1% in 2001 and 2.1% in 2002, largely due to lackluster global growth and the devaluation of the Argentine peso, but recovered to 3.2% in 2003. Unemployment, although declining over the past year, remains stubbornly high, putting pressure on President LAGOS to improve living standards. One bright spot was the signing of a free trade agreement with the US, which took effect on 1 January 2004. In 2004, GDP growth is set to accelerate to more than 4% as copper prices rise, export earnings grow, and foreign direct investment picks up.

Transnational Issues Chile

Disputes - international:

Bolivia has reactivated its claim to the Atacama corridor ceded to Chile in 1884 to secure sovereign maritime access for Bolivian natural gas; dispute with Peru over the economic zone delimited by the maritime boundary; Beagle Channel islands dispute resolved

through Papal mediation in 1984, but armed incidents persist since 1992 oil discovery; territorial claim in Antarctica (Chilean Antarctic Territory) partially overlaps Argentine and British claims

Illicit drugs:

important transshipment country for cocaine destined for Europe and the US; economic prosperity and increasing trade have made Chile more attractive to traffickers seeking to launder drug profits, especially through the Iquique Free Trade Zone, but a new anti-money-laundering law improves controls; imported precursors passed on to Bolivia; domestic cocaine consumption is rising

Introduction China

Background:

For centuries China stood as a leading civilization, outpacing the rest of the world in the arts and sciences, but in the 19th and early 20th centuries, the country was beset by civil unrest, major famines, military defeats, and foreign occupation. After World War

II, the Communists under MAO Zedong established an autocratic socialist system that, while ensuring China's sovereignty, imposed strict controls over everyday life and cost the lives of tens of millions of people. After 1978, his successor DENG Xiaoping and other leaders focused on market-oriented economic development and by 2000 output had quadrupled. For much of the population, living standards have improved dramatically and the room for personal choice has expanded, yet political controls remain tight.

Economy China

Economy - overview: In late 1978 the Chinese leadership began moving the economy from a sluggish, inefficient, Soviet-style centrally planned economy to a more market-oriented system. Whereas the system operates within a political framework of strict Communist control, the economic influence of non-state organizations and individual citizens has been steadily increasing. The authorities switched to a system of household and village responsibility in agriculture in place of the old collectivization, increased the authority of local officials and plant managers in industry, permitted a wide variety of small-scale enterprises in services and light manufacturing, and opened the economy to increased foreign trade and investment. The result has been a quadrupling of GDP since 1978. Measured on a purchasing power parity (PPP) basis, China in 2003 stood as the second-largest economy in the world after the US, although in per capita terms the country is still poor. Agriculture and industry have posted major gains especially in coastal areas near Hong Kong, opposite Taiwan, and in Shanghai, where foreign investment has helped spur output of both domestic and export goods. The leadership, however, often has experienced - as a result of its hybrid system - the worst results of socialism

(bureaucracy and lassitude) and of capitalism (growing income disparities and rising unemployment). China thus has periodically backtracked, retightening central controls at intervals. The government has struggled to (a) sustain adequate jobs growth for tens of millions of workers laid off from state-owned enterprises, migrants, and new entrants to the work force; (b) reduce corruption and other economic crimes; and (c) keep afloat the large state-owned enterprises, many of which had been shielded from competition by subsidies and had been losing the ability to pay full wages and pensions. From 80 to 120 million surplus rural workers are adrift between the villages and the cities, many subsisting through part-time, low-paying jobs. Popular resistance, changes in central policy, and loss of authority by rural cadres have weakened China's population control program, which is essential to maintaining long-term growth in living standards. Another long-term threat to growth is the deterioration in the environment, notably air pollution, soil erosion, and the steady fall of the water table especially in the north. China continues to lose arable land because of erosion and economic development. Beijing says it will intensify efforts to stimulate growth through spending on infrastructure - such as water supply and power grids - and poverty relief and through rural tax reform. Accession to the World Trade Organization helps strengthen its ability to maintain strong growth rates but at the same time puts additional pressure on the hybrid system of strong political controls and growing market influences. China has benefited from a huge expansion in computer internet use. Foreign investment remains a strong element in China's remarkable economic growth. Growing shortages of electric power and raw materials will hold back the expansion of industrial output in 2004.

Transnational Issues China

Disputes - international:
involved in complex dispute with Malaysia, Philippines, Taiwan, Vietnam, and possibly Brunei over the Spratly Islands; the 2002 "Declaration on the Conduct of Parties in the South China Sea" has eased tensions but falls short of a legally binding "code of conduct" desired by several of the disputants; most of the rugged, militarized boundary with India is in dispute, but the two sides are committed to begin resolution with discussions on the least disputed Middle Sector; Kashmir remains the world's largest and highly militarized territorial dispute with portions under the de facto

administration of China (Aksai Chin), India (Jammu and Kashmir), and Pakistan (Azad Kashmir and Northern Areas), but recent discussion and confidence-building measures among parties are beginning to defuse tensions, India does not recognize Pakistan's ceding lands to China in a 1964 boundary agreement; China and Taiwan continue to assert their claims to the Japanese-administered Senkaku Islands (Diaoyu Tai) with increased media coverage and protest actions; certain islands in Yalu and Tumen rivers are in an uncontested dispute with North Korea and a section of boundary around Mount Paektu is indefinite - China has been attempting to manage illegal migration of North Koreans into northern China; China and Russia in 2004 resolved their last border dispute over islands in the Amur and Argun Rivers, but details on demarcation have not yet been worked-out; boundary delimitation agreements signed in 2002 with Tajikistan cedes 1,000 sq km of Pamir Mountain range to China in return for China's relinquishing claims to 28,000 sq km, but demarcation has not commenced; agreements with Vietnam demarcating maritime boundaries and fisheries cooperation in the Gulf of Tonkin were ratified in June, and demarcation of the land boundary continues; China occupies some of the Paracel Islands also claimed by Vietnam and Taiwan; in response to groups in Burma and Thailand expressing concern over China's plans to construct 13 hydroelectric dams on the Nu River in Yunnan Province (Salween River in Burma), Chinese Premier Wen Jiabao suspended the project to conduct an environmental impact assessment, a smaller scale version of only 4 dams is now scheduled to move forward

@Cocos (Keeling) Islands

Introduction Cocos (Keeling) Islands

Background:

There are 27 coral islands in the group. Captain William KEELING discovered the islands in 1609, but they remained uninhabited until the 19th century. Annexed by the UK in 1857, they were transferred

to the Australian Government in 1955. The population on the two inhabited islands generally is split between the ethnic Europeans on West Island and the ethnic Malays on Home Island.

Introduction Colombia

Background:

Colombia was one of the three countries that emerged from the collapse of Gran Colombia in 1830 (the others being Ecuador and Venezuela). A 40-year insurgent campaign to overthrow the Colombian

Government escalated during the 1990s, undergirded in part by funds from the drug trade. Although the violence is deadly and large swaths of the countryside are under guerrilla influence, the movement lacks the military strength or popular support necessary to overthrow the government. An anti-insurgent army of paramilitaries has grown to be several thousand strong in recent years, challenging the insurgents for control of territory and the drug trade, and also the government's ability to exert its dominion over rural areas. While Bogota steps up efforts to reassert government control throughout the country, neighboring countries worry about the violence spilling over their borders.

Economy Colombia

Economy - overview:

Colombia's economy suffers from weak domestic and foreign demand, austere government budgets, and serious internal armed conflict, but seems poised for recovery. Other economic problems facing President URIBE range from reforming the pension system to reducing high unemployment. Two of Colombia's leading exports, oil and coffee, face an uncertain future; new exploration is needed to offset declining oil production, while coffee harvests and prices are depressed. On the positive side, several international financial institutions have praised the economic reforms introduced by URIBE, which includes measures designed to reduce the public-sector deficit below 2.5% of GDP in 2004. The government's economic policy and democratic security strategy have engendered a growing sense of confidence in the economy, particularly within the business sector, and GDP growth in 2003 was among the highest in Latin America.

Introduction Comoros

Background:

Unstable Comoros has endured 19 coups or attempted coups since gaining independence from France in 1975. In 1997, the islands of Anjouan and Moheli declared their independence from Comoros. In 1999, military chief Col. AZALI seized power. He pledged to resolve the secessionist crisis through a confederal arrangement named the

2000 Fomboni Accord. In December 2001, voters approved a new constitution and presidential elections took place in the spring of 2002. Each island in the archipelago elected its own president and a new union president was sworn in on 26 May 2002.

Mwali, Njazidja, Nzwani, and Mayotte (a territorial collectivity of
France, but claimed by Comoros); the crescent, stars, and color
green are traditional symbols of Islam

Economy Comoros

Economy - overview:
One of the world's poorest countries, Comoros is made up of three
islands that have inadequate transportation links, a young and
rapidly increasing population, and few natural resources. The low
educational level of the labor force contributes to a subsistence
level of economic activity, high unemployment, and a heavy
dependence on foreign grants and technical assistance. Agriculture,

including fishing, hunting, and forestry, contributes 40% to GDP, employs 80% of the labor force, and provides most of the exports. The country is not self-sufficient in food production; rice, the main staple, accounts for the bulk of imports. The government - which is hampered by internal political disputes - is struggling to upgrade education and technical training, to privatize commercial and industrial enterprises, to improve health services, to diversify exports, to promote tourism, and to reduce the high population growth rate. Increased foreign support is essential if the goal of 4% annual GDP growth is to be met. Remittances from 150,000 Comorans abroad help supplement GDP.

@Congo, Democratic Republic of the

Introduction Congo, Democratic Republic of the

Background:

Since 1997, the Democratic Republic of the Congo (DROC; formerly called Zaire) has been rent by ethnic strife and civil war, touched off by a massive inflow in 1994 of refugees from the fighting in

Rwanda and Burundi. The government of former president MOBUTU Sese

Seko was toppled by a rebellion led by Laurent KABILA in May 1997; his regime was subsequently challenged by a Rwanda- and Uganda-backed rebellion in August 1998. Troops from Zimbabwe, Angola, Namibia, Chad, and Sudan intervened to support the Kinshasa regime. A cease-fire was signed on 10 July 1999 by the DROC,

Zimbabwe, Angola, Uganda, Namibia, Rwanda, and Congolese armed rebel

groups, but sporadic fighting continued. KABILA was assassinated on 16 January 2001 and his son Joseph KABILA was named head of state ten days later. In October 2002, the new president was successful in getting occupying Rwandan forces to withdraw from eastern Congo; two months later, the Pretoria Accord was signed by all remaining warring parties to end the fighting and set up a government of national unity. A transitional government was set up in July 2003; Joseph KABILA remains as president and is joined by four vice presidents from the former government, former rebel camps, and the political opposition.

Economy Congo, Democratic Republic of the

Economy - overview:

The economy of the Democratic Republic of the Congo - a nation endowed with vast potential wealth - has declined drastically since the mid-1980s. The war, which began in August 1998, has dramatically reduced national output and government revenue, has increased external debt, and has resulted in the deaths from war, famine, and disease of perhaps 3.5 million people. Foreign businesses have curtailed operations due to uncertainty about the outcome of the conflict, lack of infrastructure, and the difficult operating environment. The war has intensified the impact of such basic problems as an uncertain legal framework, corruption, inflation, and lack of openness in government economic policy and financial operations. Conditions improved in late 2002 with the withdrawal of a large portion of the invading foreign troops. Several IMF and World Bank missions have met with the government to help it develop a coherent economic plan, and President KABILA has begun implementing reforms. Much economic activity lies outside the GDP data. Economic stability, aided by international donors, improved in 2003. New mining contracts have been approved, which - combined with high mineral and metal prices - could improve Kinshasa's fiscal position and GDP growth.

Transnational Issues Congo, Democratic Republic of the

Disputes - international:
Democratic Republic of the Congo is in the grip of a civil war, tribal conflict, and rebel gang fighting that has drawn in neighboring states of Burundi, Rwanda and Uganda; in the Great Lakes region and Sudan, heads of the Great Lakes states and UN pledge to end conflict, but unchecked localized violence continues unabated; the location of the boundary in the broad Congo River with the Republic of the Congo is indefinite except in the Pool Malebo/Stanley Pool area

Refugees and internally displaced persons:
refugees (country of origin): 45,060 (Sudan), 123,714 (Angola), 19,552 (Burundi), 6,626 (Republic of Congo), 19,743 (Rwanda), 18,953 (Uganda)
IDPs: 2.33 million (fighting between government forces and rebels since mid-1990s; most IDPs are in eastern provinces) (2004)

Illicit drugs:
illicit producer of cannabis, mostly for domestic consumption; while rampant corruption and inadequate supervision leaves the

banking system vulnerable to money laundering, the lack of a well-developed financial system limits the country's utility as a money-laundering center

@Congo, Republic of the

Introduction Congo, Republic of the

Background:

Upon independence in 1960, the former French region of Middle Congo became the Republic of the Congo. A quarter century of experimentation with Marxism was abandoned in 1990 and a democratically elected government installed in 1992. A brief civil war in 1997 restored former Marxist President SASSOU-NGUESSO, but ushered in a period of ethnic unrest. Southern-based rebel groups agreed to a final peace accord in March 2003. The Republic of Congo is one of Africa's largest petroleum producers with significant potential for offshore development.

Economy Congo, Republic of the

Economy - overview:

The economy is a mixture of village agriculture and handicrafts, an industrial sector based largely on oil, support services, and a government characterized by budget problems and overstaffing. Oil

has supplanted forestry as the mainstay of the economy, providing a major share of government revenues and exports. In the early 1980s, rapidly rising oil revenues enabled the government to finance large-scale development projects with GDP growth averaging 5% annually, one of the highest rates in Africa. The government has mortgaged a substantial portion of its oil earnings, contributing to a shortage of revenues. The 12 January 1994 devaluation of Franc Zone currencies by 50% resulted in inflation of 61% in 1994, but inflation has subsided since. Economic reform efforts continued with the support of international organizations, notably the World Bank and the IMF. The reform program came to a halt in June 1997 when civil war erupted. Denis SASSOU-NGUESSO, who returned to power when

the war ended in October 1997, publicly expressed interest in moving forward on economic reforms and privatization and in renewing cooperation with international financial institutions. However, economic progress was badly hurt by slumping oil prices and the resumption of armed conflict in December 1998, which worsened the republic's budget deficit. The current administration presides over an uneasy internal peace and faces difficult economic problems of stimulating recovery and reducing poverty.

@Cook Islands

Introduction Cook Islands

Background:

Named after Captain Cook, who sighted them in 1770, the islands became a British protectorate in 1888. By 1900, administrative control was transferred to New Zealand; in 1965 residents chose self-government in free association with New Zealand. The emigration of skilled workers to New Zealand and government deficits are continuing problems.

Economy Cook Islands

Economy - overview:

Like many other South Pacific island nations, the Cook Islands' economic development is hindered by the isolation of the country from foreign markets, the limited size of domestic markets, lack of natural resources, periodic devastation from natural disasters, and inadequate infrastructure. Agriculture provides the economic base with major exports made up of copra and citrus fruit. Manufacturing activities are limited to fruit processing, clothing, and handicrafts. Trade deficits are offset by remittances from emigrants and by foreign aid, overwhelmingly from New Zealand. In the 1980s and 1990s, the country lived beyond its means, maintaining a bloated public service and accumulating a large foreign debt. Subsequent reforms, including the sale of state assets, the strengthening of economic management, the encouragement of tourism, and a debt restructuring agreement, have rekindled investment and growth.

@Costa Rica

Introduction Costa Rica

Background:

Costa Rica is a Central American success story: since the late 19th century, only two brief periods of violence have marred its democratic development. Although still a largely agricultural country, it has expanded its economy to include strong technology and tourism sectors. The standard of living is relatively high. Land ownership is widespread.

Economy Costa Rica

Economy - overview:

Costa Rica's basically stable economy depends on tourism, agriculture, and electronics exports. Poverty has been substantially reduced over the past 15 years, and a strong social safety net has been put into place. Foreign investors remain attracted by the country's political stability and high education levels, and tourism continues to bring in foreign exchange. Low prices for coffee and bananas have hurt the agricultural sector. The government continues to grapple with its large deficit and massive internal debt. The reduction of inflation remains a difficult problem because of rises in the price of imports, labor market rigidities, and fiscal deficits. Costa Rica recently concluded negotiations to participate in the US - Central American Free Trade Agreement, which, if ratified by the Costa Rican Legislature, would result in economic reforms and an improved investment climate.

@Cote d'Ivoire

Introduction Cote d'Ivoire

Background:

Close ties to France since independence in 1960, the development of cocoa production for export, and foreign investment made Cote d'Ivoire one of the most prosperous of the tropical African states, but did not protect it from political turmoil. On 25 December 1999, a military coup - the first ever in Cote d'Ivoire's history - overthrew the government led by President Henri Konan BEDIE. Junta leader Robert GUEI held elections in late 2000, but excluded prominent opposition leader Alassane OUATTARA, blatantly rigged the polling results, and declared himself winner. Popular protest forced GUEI to step aside and brought runner-up Laurent GBAGBO into power. Ivorian dissidents and disaffected members of the military launched a failed coup attempt in September 2002. Rebel forces claimed the northern half of the country and in January 2003 were granted ministerial positions in a unity government under the auspices of the Linas-Marcoussis Peace Accord. President GBAGBO and rebel forces resumed implementation of the peace accord in December 2003 after a three-month stalemate, but issues that sparked the civil war, such as land reform and grounds for nationality remain unresolved. The central government has yet to exert control over the northern regions and tensions remain high between GBAGBO and rebel leaders. Several thousand French and West African troops remain in Cote d'Ivoire to maintain peace and facilitate the disarmament, demobilization, and rehabilitation process.

Economy Cote d'Ivoire

Economy - overview:
Cote d'Ivoire is among the world's largest producers and exporters of coffee, cocoa beans, and palm oil. Consequently, the economy is highly sensitive to fluctuations in international prices for these products and to weather conditions. Despite government attempts to diversify the economy, it is still heavily dependent on agriculture and related activities, which engage roughly 68% of the population.

After several years of lagging performance, the Ivorian economy began a comeback in 1994, due to the 50% devaluation of the CFA franc and improved prices for cocoa and coffee, growth in nontraditional primary exports such as pineapples and rubber, limited trade and banking liberalization, offshore oil and gas discoveries, and generous external financing and debt rescheduling by multilateral lenders and France. Moreover, government adherence to donor-mandated reforms led to a jump in growth to 5% annually during 1996-99. Growth was negative in 2000-03 because of the difficulty of meeting the conditions of international donors, continued low prices of key exports, and severe civil war. Political uncertainty will continue to cloud the economic outlook in 2004, but rising world prices for cocoa will help both the current account and the government balances.

Introduction Croatia

Background:

The lands that today comprise Croatia were part of the Austro-Hungarian Empire until the close of World War I. In 1918, the Croats, Serbs, and Slovenes formed a kingdom known after 1929 as Yugoslavia. Following World War II, Yugoslavia became a federal independent Communist state under the strong hand of Marshal TITO. Although Croatia declared its independence from Yugoslavia in 1991, it took four years of sporadic, but often bitter, fighting before occupying Serb armies were mostly cleared from Croatian lands. Under UN supervision, the last Serb-held enclave in eastern Slavonia was returned to Croatia in 1998.

Economy Croatia

Economy - overview:

Before the dissolution of Yugoslavia, the Republic of Croatia, after Slovenia, was the most prosperous and industrialized area, with a per capita output perhaps one-third above the Yugoslav average. The economy emerged from a mild recession in 2000 with tourism, banking, and public investments leading the way.

Unemployment remains high, at over 13 percent, with structural factors slowing its decline. While macroeconomic stabilization has largely been achieved, structural reforms lag because of deep resistance on the part of the public and lack of strong support from politicians. Growth, while impressively over 4% for the last several years, has been achieved through high fiscal and current account deficits. The government is gradually reducing a heavy back log of civil cases, many involving land tenure. The EU accession process should accelerate fiscal and structural reform.

Introduction Cuba

Background:

The native Amerindian population of Cuba began to decline after the European discovery of the island by Christopher COLUMBUS in 1492 and

following its development as a Spanish colony during the next several centuries. Large numbers of African slaves were imported to work the coffee and sugar plantations and Havana became the launching point for the annual treasure fleets bound for Spain from Mexico and Peru. Spanish rule was severe and exploitative and occasional rebellions were harshly suppressed. It was US intervention during the Spanish-American War in 1898 that finally overthrew Spanish rule. The subsequent Treaty of Paris established Cuban independence, which was granted in 1902 after a three-year

transition period. Fidel CASTRO led a rebel army to victory in 1959; his iron rule has held the regime together since then. Cuba's Communist revolution, with Soviet support, was exported throughout Latin America and Africa during the 1960s, 1970s, and 1980s. The country is now slowly recovering from a severe economic recession in 1990, following the withdrawal of former Soviet subsidies, worth \$4 billion to \$6 billion annually. Cuba portrays its difficulties as the result of the US embargo in place since 1961. Illicit migration to the US - using homemade rafts, alien smugglers, air flights, or via the southwest border - is a continuing problem. Some 2,500 Cubans attempted the crossing of the Straits of Florida in 2003; the US Coast Guard apprehended about 60% of the individuals.

Economy Cuba

Economy - overview:

The government continues to balance the need for economic loosening against a desire for firm political control. It has undertaken limited reforms to increase enterprise efficiency and alleviate serious shortages of food, consumer goods, and services. A major feature of the economy is the dichotomy between relatively efficient export enclaves and inefficient domestic sectors. The average Cuban's standard of living remains at a lower level than before the depression of the 1990s, which was caused by the loss of Soviet aid and domestic inefficiencies. The government reluctantly allows a large dollar market sector, fueled by tourism and remittances from Cubans abroad.

Introduction Cyprus

Background:

A former British colony, Cyprus received independence in 1960 following years of resistance to British rule. Tensions between the Greek Cypriot majority and Turkish Cypriot minority came to a head in December 1963, when violence broke out in the capital of Nicosia. Despite the deployment of UN peacekeepers in 1964, sporadic intercommunal violence continued forcing most Turkish Cypriots into enclaves throughout the island. In 1974, a Greek-sponsored attempt to seize the government was met by military intervention from Turkey, which soon controlled more than a third of the island. In 1983, the Turkish-held area declared itself the "Turkish Republic of Northern Cyprus," but it is recognized only by Turkey. The latest two-year round of UN-brokered direct talks - between the leaders of the Greek Cypriot and Turkish Cypriot communities to reach an agreement to reunite the divided island - ended when the Greek Cypriots rejected the UN settlement plan in an April 2004 referendum. Although only the internationally recognized Greek Cypriot-controlled Republic of Cyprus joined the EU on 1 May 2004, every Cypriot carrying a Cyprus passport will have the status of a European citizen. EU laws, however, will not apply to north Cyprus. Nicosia continues to oppose EU efforts to establish direct trade and economic links to north Cyprus as a way of encouraging the Turkish Cypriot community to continue to support reunification.

Economy Cyprus

Economy - overview:

The Greek Cypriot economy is prosperous but highly susceptible to external shocks. Erratic growth rates over the past decade reflect the economy's vulnerability to swings in tourist arrivals, caused by political instability in the region and fluctuations in economic conditions in Western Europe. Economic policy is focused on meeting the criteria for admission to the EU. EU-driven tax reforms in 2003 have introduced fiscal imbalances, which, coupled with a sluggish tourism sector, have resulted in growing fiscal deficits. As in the Turkish sector, water shortages are a perennial problem; a few desalination plants are now on-line. After 10 years of drought, the country received substantial rainfall from 2001-03, alleviating immediate concerns. The Turkish Cypriot economy has roughly one-third of the per capita GDP of the south. Because it is recognized only by Turkey, it has had much difficulty arranging foreign financing and investment. It remains heavily dependent on agriculture and government service, which together employ about half of the work force. To compensate for the economy's weakness, Turkey

provides grants and loans to support economic development. Ankara provided \$200 million in 2002 and pledged \$450 million for the 2003-05 period. Future events throughout the island will be highly influenced by the outcome of negotiations on the UN-sponsored agreement to unite the Greek and Turkish areas.

@Czech Republic

Introduction Czech Republic

Background:

Following the First World War, the closely related Czechs and Slovaks of the former Austro-Hungarian Empire merged to form Czechoslovakia. During the interwar years, the new country's leaders were frequently preoccupied with meeting the demands of other ethnic minorities within the republic, most notably the Sudeten Germans and the Ruthenians (Ukrainians). After World War II, a truncated Czechoslovakia fell within the Soviet sphere of influence. In 1968, an invasion by Warsaw Pact troops ended the efforts of the country's leaders to liberalize Communist party rule and create "socialism with a human face." Anti-Soviet demonstrations the following year ushered in a period of harsh repression. With the collapse of Soviet authority in 1989, Czechoslovakia regained its freedom through a peaceful "Velvet Revolution." On 1 January 1993, the country underwent a "velvet divorce" into its two national components, the Czech Republic and Slovakia. The Czech Republic joined NATO in 1999 and the European Union in 2004.

Economy Czech Republic

Economy - overview:

One of the most stable and prosperous of the post-Communist states, the Czech Republic has been recovering from recession since mid-1999. Growth in 2000-03 was supported by exports to the EU,

primarily to Germany, and a near doubling of foreign direct investment. Domestic demand is playing an ever more important role in underpinning growth as interest rates drop and the availability of credit cards and mortgages increases. High current account deficits - averaging around 5% of GDP in the last several years - could be a persistent problem. Inflation is under control. The EU put the Czech Republic just behind Poland and Hungary in preparations for accession, which will give further impetus and direction to structural reform. Moves to complete banking, telecommunications, and energy privatization will encourage additional foreign investment, while intensified restructuring among large enterprises and banks, and improvements in the financial sector, should strengthen output growth. Nonetheless, revival in the European economies remains essential to stepped-up growth.

Introduction Denmark

Background:

Once the seat of Viking raiders and later a major north European power, Denmark has evolved into a modern, prosperous nation that is participating in the general political and economic integration of

Europe. It joined NATO in 1949 and the EEC (now the EU) in 1973. However, the country has opted out of certain elements of the European Union's Maastricht Treaty, including the European Economic and Monetary Union (EMU), European defense cooperation, and issues concerning certain justice and home affairs.

Geography Denmark

Location:

Northern Europe, bordering the Baltic Sea and the North Sea, on a peninsula north of Germany (Jutland); also includes two major islands (Sjaelland and Fyn)

Economy Denmark

Economy - overview:

This thoroughly modern market economy features high-tech agriculture, up-to-date small-scale and corporate industry, extensive government welfare measures, comfortable living standards, a stable currency, and high dependence on foreign trade. Denmark is a net exporter of food and energy and enjoys a comfortable balance of payments surplus. Government objectives include streamlining the bureaucracy and further privatization of state assets. The government has been successful in meeting, and even exceeding, the economic convergence criteria for participating in the third phase (a common European currency) of the European Economic and Monetary Union (EMU), but Denmark has decided not to join 12 other EU members in the euro; even so, the Danish Krone remains pegged to the euro. Given the sluggish state of the European economy, growth in 2003 was a mere 0.3%.

@Djibouti

Introduction Djibouti

Background:

The French Territory of the Afars and the Issas became Djibouti in 1977. Hassan Gouled APTIDON installed an authoritarian one-party state and proceeded to serve three consecutive six-year terms as president. Unrest among the Afars minority during the 1990s led to multi-party elections resulting in President Ismail Omar GUELLEH attaining office in May 1999. A peace accord in 2001 ended the final phases of a ten-year uprising by Afar rebels. Djibouti occupies a very strategic geographic location at the mouth of the Red Sea and

serves as an important transshipment location for goods entering and leaving the east African highlands. GUELLEH favors close ties to France, which maintains a significant military presence in the country.

Economy Djibouti

Economy - overview:
The economy is based on service activities connected with the country's strategic location and status as a free trade zone in northeast Africa. Two-thirds of the inhabitants live in the capital city, the remainder being mostly nomadic herders. Scanty rainfall limits crop production to fruits and vegetables, and most food must be imported. Djibouti provides services as both a transit port for the region and an international transshipment and refueling center. It has few natural resources and little industry. The nation is, therefore, heavily dependent on foreign assistance to help support its balance of payments and to finance development projects. An unemployment rate of 50% continues to be a major problem. Inflation is not a concern, however, because of the fixed tie of the franc to

the US dollar. Per capita consumption dropped an estimated 35% over the last seven years because of recession, civil war, and a high population growth rate (including immigrants and refugees). Faced with a multitude of economic difficulties, the government has fallen in arrears on long-term external debt and has been struggling to meet the stipulations of foreign aid donors.

Introduction Dominica

Background:

Dominica was the last of the Caribbean islands to be colonized by Europeans, due chiefly to the fierce resistance of the native Caribs. France ceded possession to Great Britain in 1763, which made the island a colony in 1805. In 1980, two years after independence, Dominica's fortunes improved when a corrupt and tyrannical administration was replaced by that of Mary Eugenia CHARLES, the first female prime minister in the Caribbean, who remained in office for 15 years. Some 3,000 Carib Indians still living on Dominica are the only pre-Columbian population remaining in the eastern Caribbean.

Economy Dominica

Economy - overview:

The Dominican economy depends on agriculture, primarily bananas, and remains highly vulnerable to climatic conditions and international economic developments. Production of bananas dropped precipitously in 2003, a major reason for the 1% decline in GDP. Tourism increased in 2003 as the government sought to promote Dominica as an "ecotourism" destination. Development of the tourism industry remains difficult, however, because of the rugged coastline, lack of beaches, and the absence of an international airport. The government began a comprehensive restructuring of the economy in 2003 - including elimination of price controls, privatization of the state banana company, and tax increases - to address Dominica's economic crisis and to meet IMF targets. In order to diversify the island's production base the government is attempting to develop an offshore financial sector and is planning to construct an oil refinery on the eastern part of the island.

@Dominican Republic

Introduction Dominican Republic

Background:

Explored and claimed by Columbus on his first voyage in 1492, the island of Hispaniola became a springboard for Spanish conquest of the Caribbean and the American mainland. In 1697, Spain recognized French dominion over the western third of the island, which in 1804 became Haiti. The remainder of the island, by then known as Santo Domingo, sought to gain its own independence in 1821, but was conquered and ruled by the Haitians for 22 years; it finally attained independence as the Dominican Republic in 1844. In 1861, the Dominicans voluntarily returned to the Spanish Empire, but two years later they launched a war that restored independence in 1865. A legacy of unsettled, mostly non-representative, rule for much of its subsequent history was brought to an end in 1966 when Joaquin BALAGUER became president. He maintained a tight grip on power for most of the next 30 years when international reaction to flawed elections forced him to curtail his term in 1996. Since then, regular competitive elections have been held in which opposition candidates have won the presidency. The Dominican economy has had one of the fastest growth rates in the hemisphere over the past decade.

Economy Dominican Republic

Economy - overview:

The Dominican Republic is a Caribbean representative democracy which enjoyed GDP growth of more than 7% in 1998-2000. Growth subsequently plummeted as part of the global economic slowdown. Although the country has long been viewed primarily as an exporter of sugar, coffee, and tobacco, in recent years the service sector has overtaken agriculture as the economy's largest employer, due to growth in tourism and free trade zones. The country suffers from marked income inequality; the poorest half of the population receives less than one-fifth of GNP, while the richest 10% enjoys nearly 40% of national income. Growth turned negative in 2003 with reduced tourism, a major bank fraud, and limited growth in the US economy, the source of 87% of export revenues. Resumption of a badly needed IMF loan was slowed due to government repurchase of electrical power plants.

@East Timor

Introduction East Timor

Background:

The Portuguese began to trade with the island of Timor in the early 16th century and colonized it in mid-century. Skirmishing with the Dutch in the region eventually resulted in an 1859 treaty in which Portugal ceded the western portion of the island. Imperial Japan occupied East Timor during 1942-1945, but Portugal resumed colonial authority after the Japanese defeat in World War II. East Timor declared itself independent from Portugal on 28 November 1975 and was invaded and occupied by Indonesian forces nine days later. It was incorporated into Indonesia in July 1976 as the province of East Timor. An unsuccessful campaign of pacification followed over the next two decades, during which an estimated 100,000 to 250,000 individuals lost their lives. On 30 August 1999, in a UN-supervised popular referendum, an overwhelming majority of the people of East Timor voted for independence from Indonesia. Between the referendum and the arrival of a multinational peacekeeping force in late September 1999, anti-independence Timorese militias - organized and

supported by the Indonesian military - commenced a large-scale, scorched-earth campaign of retribution. The militias killed approximately 1,300 Timorese and forcibly pushed 300,000 people into West Timor as refugees. The majority of the country's infrastructure, including homes, irrigation systems, water supply systems, and schools, and nearly 100% of the country's electrical grid were destroyed. On 20 September 1999 the Australian-led peacekeeping troops of the International Force for East Timor (INTERFET) deployed to the country and brought the violence to an end. On 20 May 2002, East Timor was internationally recognized as an independent state.

Economy East Timor

Economy - overview:

In late 1999, about 70% of the economic infrastructure of East Timor was laid waste by Indonesian troops and anti-independence militias, and 260,000 people fled westward. Over the next three years, however, a massive international program, manned by 5,000 peacekeepers (8,000 at peak) and 1,300 police officers, led to substantial reconstruction in both urban and rural areas. By mid-2002, all but about 50,000 of the refugees had returned. Growth was held back in 2003 by extensive drought and the gradual winding down of the international presence. The country faces great challenges in continuing the rebuilding of infrastructure, strengthening the infant civil administration, and generating jobs for young people entering the workforce. One promising long-term project is the planned development of oil and gas resources in nearby waters, but the government faces a substantial financing gap over the next several years before these revenues start flowing into state coffers.

@Ecuador

Introduction Ecuador

Background:

The "Republic of the Equator" was one of three countries that emerged from the collapse of Gran Colombia in 1830 (the others being Colombia and Venezuela). Between 1904 and 1942, Ecuador lost territories in a series of conflicts with its neighbors. A border war with Peru that flared in 1995 was resolved in 1999. Although Ecuador marked 25 years of civilian governance in 2004, the period has been marred by political instability. Nine presidents have governed Ecuador since 1996.

Economy Ecuador

Economy - overview:

Ecuador has substantial petroleum resources, which have accounted for 40% of the country's export earnings and one-fourth of public sector revenues in recent years. Consequently, fluctuations in world market prices can have a substantial domestic impact. In the late 1990s, Ecuador suffered its worst economic crisis, with natural disasters and sharp declines in world petroleum prices driving Ecuador's economy into free fall in 1999. Real GDP contracted by more than 6%, with poverty worsening significantly. The banking system also collapsed, and Ecuador defaulted on its external debt later that year. The currency depreciated by some 70% in 1999, and, on the brink of hyperinflation, the MAHAUD government announced it would dollarize the economy. A coup, however, ousted MAHAUD from office in January 2000, and after a short-lived junta failed to garner military support, Vice President Gustavo NOBOA took over the presidency. In March 2000, Congress approved a series of structural reforms that also provided the framework for the adoption of the US dollar as legal tender. Dollarization stabilized the economy, and growth returned to its pre-crisis levels in the years that followed. Under the administration of Lucio GUTIERREZ, who took office in January 2003, Ecuador benefited from higher world petroleum prices, but the government has made little progress on fiscal reforms and reforms of state-owned enterprises necessary to reduce Ecuador's vulnerability to petroleum price swings and financial crises.

Introduction Egypt

Background:

The regularity and richness of the annual Nile River flood, coupled

with semi-isolation provided by deserts to the east and west, allowed for the development of one of the world's great civilizations. A unified kingdom arose circa 3200 B.C. and a series of dynasties ruled in Egypt for the next three millennia. The last native dynasty fell to the Persians in 341 B.C., who in turn were replaced by the Greeks, Romans, and Byzantines. It was the Arabs who introduced Islam and the Arabic language in the 7th century and who ruled for the next six centuries. A local military caste, the Mamluks took control about 1250 and continued to govern after the conquest of Egypt by the Ottoman Turks in 1517. Following the completion of the Suez Canal in 1869, Egypt became an important world transportation hub, but also fell heavily into debt. Ostensibly to protect its investments, Britain seized control of Egypt's government in 1882, but nominal allegiance to the Ottoman Empire continued until 1914. Partially independent from the UK in 1922, Egypt acquired full sovereignty following World War II. The completion of the Aswan High Dam in 1971 and the resultant Lake Nasser have altered the time-honored place of the Nile River in the agriculture and ecology of Egypt. A rapidly growing population (the largest in the Arab world), limited arable land, and dependence on the Nile all continue to overtax resources and stress society. The government has struggled to ready the economy for the new millennium through economic reform and massive investment in communications and physical infrastructure.

Economy Egypt

Economy - overview:

Lack of substantial progress on economic reform since the mid 1990s has limited foreign direct investment in Egypt and kept annual GDP growth in the range of 2-3 percent in 2001-03. Egyptian officials in late 2003 and early 2004 proposed new privatization and customs reform measures, but the government is likely to pursue these initiatives cautiously and gradually to avoid a public backlash over potential inflation or layoffs associated with the reforms. Monetary pressures on an overvalued Egyptian pound led the government to float the currency in January 2003, leading to a sharp drop in its value and consequent inflationary pressure. The existence of a black market for hard currency is evidence that the government continues to influence the official exchange rate offered in banks. In September 2003, Egyptian officials increased subsidies on basic foodstuffs, helping to calm a frustrated public but widening an already deep budget deficit. Egypt's balance-of-payments position was not hurt by the war in Iraq in 2003, as tourism and Suez Canal revenues fared well. The development of an export market for natural gas is a bright spot for future growth prospects, but improvement in the capital-intensive hydrocarbons sector does little to reduce Egypt's persistent unemployment.

Economy El Salvador

Economy - overview:

With the adoption of the US dollar as its currency, El Salvador has lost control over monetary policy and must concentrate on maintaining a disciplined fiscal policy. GDP per capita is roughly only half that of Brazil, Argentina, and Chile, and the distribution of income is highly unequal. The trade deficit has been offset by annual remittances of almost \$2 billion from Salvadorans living abroad and external aid. The government is striving to open new

export markets, encourage foreign investment, modernize the tax and healthcare systems, and stimulate the sluggish economy.

@Equatorial Guinea

Introduction Equatorial Guinea

Background:

Equatorial Guinea gained independence in 1968 after 190 years of Spanish rule. This tiny country, composed of a mainland portion plus five inhabited islands, is one of the smallest on the African continent. President OBIANG NGUEM MBASOGO has ruled the country for

over two decades since seizing power from his uncle, then President MACIAS, in a 1979 coup. Although nominally a constitutional democracy since 1991, the 1996 and 2002 presidential elections - as well as the 1999 legislative elections - were widely seen as being

flawed. The president controls most opposition parties through the judicious use of patronage. Despite the country's economic windfall from oil production resulting in a massive increase in government revenue in recent years, there have been few improvements in the country's living standards.

Economy Equatorial Guinea

Economy - overview:

The discovery and exploitation of large oil reserves have contributed to dramatic economic growth in recent years. Forestry, farming, and fishing are also major components of GDP. Subsistence farming predominates. Although pre-independence Equatorial Guinea counted on cocoa production for hard currency earnings, the neglect of the rural economy under successive regimes has diminished potential for agriculture-led growth (the government has stated its intention to reinvest some oil revenue into agriculture). A number of aid programs sponsored by the World Bank and the IMF have been cut off since 1993 because of corruption and mismanagement. No longer eligible for concessional financing because of large oil revenues, the government has been unsuccessfully trying to agree on a "shadow" fiscal management program with the World Bank and IMF. Businesses, for the most part, are owned by government officials and their family members. Undeveloped natural resources include titanium, iron ore, manganese, uranium, and alluvial gold. Growth will remain strong in 2004, led by oil.

@Eritrea

Introduction Eritrea

Background:

Eritrea was awarded to Ethiopia in 1952 as part of a federation. Ethiopia's annexation of Eritrea as a province 10 years later sparked a 30-year struggle for independence that ended in 1991 with Eritrean rebels defeating governmental forces; independence was overwhelmingly approved in a 1993 referendum. A two-and-a-half-year border war with Ethiopia that erupted in 1998 ended under UN auspices on 12 December 2000. Eritrea currently hosts a UN peacekeeping operation that is monitoring a 25 km-wide Temporary Security Zone on the border with Ethiopia. An international commission, organized to resolve the border dispute, posted its findings in 2002 but final demarcation is on hold due to Ethiopian objections.

Government Eritrea

Country name:

conventional long form: State of Eritrea

conventional short form: Eritrea

local long form: Hagere Ertra

former: Eritrea Autonomous Region in Ethiopia

local short form: Ertra

Government type:

transitional government

note: following a successful referendum on independence for the Autonomous Region of Eritrea on 23-25 April 1993, a National Assembly, composed entirely of the People's Front for Democracy and Justice or PFDJ, was established as a transitional legislature; a Constitutional Commission was also established to draft a constitution; ISAIAS Afworki was elected president by the transitional legislature; the constitution, ratified in May 1997, did not enter into effect, pending parliamentary and presidential elections; parliamentary elections had been scheduled in December 2001, but were postponed indefinitely; currently the sole legal party is the People's Front for Democracy and Justice (PFDJ)

Capital:

Asmara (formerly Asmera)

Administrative divisions:

6 regions (zobatat, singular - zoba); Anseba, Debub, Debubawi
K'eyih Bahri, Gash Barka, Ma'akel, Semenawi Keyih Bahri

Independence:

24 May 1993 (from Ethiopia)

National holiday:

Independence Day, 24 May (1993)

Constitution:

the transitional constitution, decreed on 19 May 1993, was replaced
by a new constitution adopted on 23 May 1997, but not yet implemented

Legal system:

primary basis is the Ethiopian legal code of 1957, with revisions;
new civil, commercial, and penal codes have not yet been
promulgated; also relies on customary and post-independence-enacted
laws and, for civil cases involving Muslims, Sharia law

Suffrage:

18 years of age; universal

Executive branch:

chief of state: President ISAIAS Afworki (since 8 June 1993); note
- the president is both the chief of state and head of government
and is head of the State Council and National Assembly
head of government: President ISAIAS Afworki (since 8 June 1993);
note - the president is both the chief of state and head of

government and is head of the State Council and National Assembly
cabinet: State Council is the collective executive authority;
members appointed by the president
elections: president elected by the National Assembly; election last
held 8 June 1993 (next election date uncertain as the National
Assembly did not hold a presidential election in December 2001 as
anticipated)
election results: ISAIAS Afworki elected president; percent of
National Assembly vote - ISAIAS Afworki 95%

Legislative branch:
unicameral National Assembly (150 seats; term limits not
established)
elections: in May 1997, following the adoption of the new
constitution, 75 members of the PFDJ Central Committee (the old
Central Committee of the EPLF), 60 members of the 527-member
Constituent Assembly, that had been established in 1997 to discuss
and ratify the new constitution, and 15 representatives of Eritreans
living abroad were formed into a Transitional National Assembly to
serve as the country's legislative body until countrywide elections
to a National Assembly were held; although only 75 of 150 members of
the Transitional National Assembly were elected, the constitution
stipulates that once past the transition stage, all members of the
National Assembly will be elected by secret ballot of all eligible
voters; National Assembly elections scheduled for December 2001 were
postponed indefinitely

Judicial branch:
High Court - regional, subregional, and village courts; also have
military and special courts

Political parties and leaders: People's Front for Democracy and Justice or PFDJ, the only party recognized by the government [ISAIAS Afworki]; note - a National Assembly committee drafted a law on political parties in January 2001, but the full National Assembly has not yet debated or voted on it

Political pressure groups and leaders: Eritrean Islamic Jihad or EIJ [leader NA] (also including Eritrean Islamic Jihad Movement or EIJM (also known as the Abu Sihel Movement) [leader NA]); Eritrean Islamic Salvation or EIS (also known as the Arafa Movement) [leader NA]; Eritrean Liberation Front or ELF [ABDULLAH Muhammed]; Eritrean National Alliance or ENA (a coalition including EIJ, EIS, ELF, and a number of ELF factions) [HERUY Tedla Biru]; Eritrean Public Forum or EPF [ARADOM Iyob]

Economy Eritrea

Economy - overview:

Since independence from Ethiopia on 24 May 1993, Eritrea has faced the economic problems of a small, desperately poor country. Like the economies of many African nations, the economy is largely based on subsistence agriculture, with 80% of the population involved in farming and herding. The Ethiopian-Eritrea war in 1998-2000 severely hurt Eritrea's economy. GDP growth fell to zero in 1999 and to -12.1% in 2000. The May 2000 Ethiopian offensive into northern Eritrea caused some \$600 million in property damage and loss, including losses of \$225 million in livestock and 55,000 homes. The attack prevented planting of crops in Eritrea's most productive region, causing food production to drop by 62%. Even during the war, Eritrea developed its transportation infrastructure, asphaltting new roads, improving its ports, and repairing war damaged roads and bridges. Since the war ended, the government has maintained a firm grip on the economy, expanding the use of the military and party-owned businesses to complete Eritrea's development agenda. Erratic rainfall and the delayed demobilization of agriculturalists

from the military kept cereal production well below normal, holding down growth in 2002. Eritrea's economic future depends upon its ability to master social problems such as illiteracy, unemployment, and low skills, and to open its economy to private enterprise so the diaspora's money and expertise can foster economic growth.

Introduction Estonia

Background:

After centuries of Danish, Swedish, German, and Russian rule, Estonia attained independence in 1918. Forcibly incorporated into the USSR in 1940, it regained its freedom in 1991, with the collapse of the Soviet Union. Since the last Russian troops left in 1994, Estonia has been free to promote economic and political ties with Western Europe. It joined both NATO and the EU in the spring of 2004.

Economy Estonia

Economy - overview:

Estonia, as a new member of the World Trade Organization, is steadily moving toward a modern market economy with increasing ties to the West, including the pegging of its currency to the euro. The economy benefits from strong electronics and telecommunications sectors. Estonia has been invited to join the European Union and will do so in May 2004. The economy is greatly influenced by developments in Finland, Sweden, Russia, and Germany, four major trading partners. The high current account deficit remains a concern. However, the state budget enjoyed a surplus of \$130 million in 2003.

@Ethiopia

Introduction Ethiopia

Background:

Unique among African countries, the ancient Ethiopian monarchy maintained its freedom from colonial rule, one exception being the Italian occupation of 1936-41. In 1974 a military junta, the Derg,

deposed Emperor Haile SELASSIE (who had ruled since 1930) and established a socialist state. Torn by bloody coups, uprisings, wide-scale drought, and massive refugee problems, the regime was finally toppled by a coalition of rebel forces, the Ethiopian People's Revolutionary Democratic Front (EPRDF), in 1991. A constitution was adopted in 1994 and Ethiopia's first multiparty elections were held in 1995. A two and a half year border war with Eritrea ended with a peace treaty on 12 December 2000. Final demarcation of the boundary is currently on hold due to Ethiopian objections to an international commission's finding requiring it to surrender sensitive territory.

Economy Ethiopia

Economy - overview:

Ethiopia's poverty-stricken economy is based on agriculture, which accounts for half of GDP, 60% of exports, and 80% of total employment. The agricultural sector suffers from frequent drought and poor cultivation practices. Coffee is critical to the Ethiopian economy with exports of some \$156 million in 2002, but historically low prices have seen many farmers switching to qat to supplement income. The war with Eritrea in 1998-2000 and recurrent drought have buffeted the economy, in particular coffee production. In November 2001 Ethiopia qualified for debt relief from the Highly Indebted Poor Countries (HIPC) initiative. Under Ethiopia's land tenure system, the government owns all land and provides long-term leases to the tenants; the system continues to hamper growth in the industrial sector as entrepreneurs are unable to use land as collateral for loans. Drought struck again late in 2002, leading to a 2% decline in GDP in 2003. Return to normal weather patterns late in 2003 should help agricultural and GDP growth recover in 2004. The government estimates that annual growth of 7% is needed to reduce poverty.

Transnational Issues Ethiopia

Disputes - international:

Eritrea and Ethiopia agreed to abide by the 2002 independent boundary commission's delimitation decision, but demarcation has

been delayed, despite intense international intervention, by Ethiopian insistence that the decision ignored "human geography," made technical errors in the delimitation, and incorrectly awarded Badme - the focus of the 1998-2000 war - and other areas to Eritrea and Eritrea's insistence on not deviating from the commission's decision; Ethiopia maintains only an administrative line and no international border with the Oromo region of southern Somalia and maintains alliances with local clans in opposition to the Transitional National Government, which lost its mandate in August 2003, in Mogadishu; "Somaliland" secessionists provide port facilities and trade ties to landlocked Ethiopia; efforts to demarcate the porous boundary with Sudan have been delayed by civil war

Refugees and internally displaced persons:
refugees (country of origin): 93,032 (Sudan), 23,578 (Somalia)

@European Union

Introduction European Union

Preliminary statement:

The evolution of the European Union (EU) from a regional economic agreement among six neighboring states in 1951 to today's supranational organization of 25 countries across the European continent stands as an unprecedented phenomenon in the annals of history. Dynastic unions for territorial consolidation were long the norm in Europe. On a few occasions even country-level unions were arranged - the Polish-Lithuanian Commonwealth and the Austro-Hungarian Empire were examples - but for such a large number of nation-states to cede some of their sovereignty to an overarching entity is truly unique. Although the EU is not a federation in the strict sense, it is far more than a free-trade association such as ASEAN, NAFTA, or Mercosur, and it has many of the attributes associated with independent nations: its own flag, anthem, founding date, and currency, as well as an incipient common foreign and security policy in its dealings with other nations. In the future, many of these nation-like characteristics are likely to be expanded. Thus, inclusion of basic intelligence on the EU has been deemed appropriate as a new, separate entry in The World Factbook. However, because of the EU's special status, this description is placed after the regular country entries.

Background:

Following the two devastating World Wars of the first half of the 20th century, a number of European leaders in the late 1940s became convinced that the only way to establish a lasting peace was to unite the two chief belligerent nations - France and Germany - both economically and politically. In 1950, the French Foreign Minister Robert SCHUMAN proposed an eventual union of all of Europe, the first step of which would be the integration of the coal and steel industries of Western Europe. The following year the European Coal and Steel Community (ECSC) was set up when six members, Belgium, France, West Germany, Italy, Luxembourg, and the Netherlands, signed the Treaty of Paris.

The ECSC was so successful that within a few years the decision was made to integrate other parts of the countries' economies. In 1957, the Treaties of Rome created the European Economic Community (EEC) and the European Atomic Energy Community (EURATOM), and the six member states undertook to eliminate trade barriers among themselves by forming a common market. In 1967, the institutions of all three communities were formally merged into the European Community (EC), creating a single Commission, a single Council of Ministers, and the European Parliament. Members of the European Parliament were initially selected by national parliaments, but in 1979 the first direct elections were undertaken and they have been held every five years since.

In 1973, the first enlargement of the EC took place with the addition of Denmark, Ireland, and the United Kingdom. The 1980s saw further membership expansion with Greece joining in 1981 and Spain and Portugal in 1986. The 1992 Treaty of Maastricht laid the basis for further forms of cooperation in foreign and defense policy, in judicial and internal affairs, and in the creation of an economic and monetary union - including a

common currency. This further integration created the European Union (EU). In 1995, Austria, Finland, and Sweden joined to the EU, raising the membership total to 15.

A new currency, the euro, was launched in world money markets on 1 January 1999; it became the unit of exchange for all of the EU states except Great Britain, Sweden, and Denmark. In 2002, citizens of the 12 euro-area countries began using euro banknotes and coins. Ten new countries joined the EU in 2004 - Cyprus, the Czech Republic, Estonia, Hungary, Latvia, Lithuania, Malta, Poland, Slovakia, and Slovenia - bringing the current membership to 25. In order to ensure that the EU can continue to function efficiently with an expanded membership, the 2003 Treaty of Nice set forth rules streamlining the size and procedures of EU institutions. An EU Constitutional Treaty, signed in Rome on 29 October 2004, gives member states two years to ratify the document before it is scheduled to take effect on 1 November 2006.

Despite the expansion of membership and functions, "Eurosceptics" in various countries have raised questions about the erosion of national cultures and the imposition of a flood of regulations from the EU capital in Brussels. Failure by member states to ratify the constitution or the inability of newcomer countries to meet euro currency standards might force a loosening of some EU agreements and perhaps lead to several levels of EU participation. These "tiers" might eventually range from an "inner" core of politically integrated countries to a looser "outer" economic association of members.

Economy European Union

Economy - overview:

Domestically, the European Union attempts to lower trade barriers, adopt a common currency, and move toward convergence of living standards. Internationally, the EU aims to bolster Europe's trade position and its political and economic power. Because of the great differences in per capita income (from \$10,000 to \$28,000) and historic national animosities, the European Community faces difficulties in devising and enforcing common policies. For example, both Germany and France since 2003 have flouted the member states' treaty obligation to prevent their national budgets from running more than a 3% deficit. In 2004, the EU admitted 10 central and

eastern European countries that are, in general, less advanced technologically and economically than the existing 15. The Economic and Monetary Union (EMU), an associated organization, introduced the euro as the common currency on 1 January 1999. The UK, Sweden, and Denmark do not now participate; the 10 new countries may choose to join the EMU when they meet its fiscal and monetary criteria and the member states so agree.

Military European Union

Military - note:
In October 2004, the European Union heads of government signed a "constitutional treaty" that offers possibilities - with some limits - for increased defense and security cooperation. If ratified, in a process that may take some two years, this treaty will in effect make operational the European Security and Defense Policy (ESDP) approved in the 2000 Nice Treaty. Despite limits of cooperation for some EU members, development of a European military planning unit is likely to continue. So is creation of a rapid-reaction military force and a humanitarian aid system, which the planning unit will support. France, Germany, Belgium, Netherlands, Luxembourg, and Italy continue to press for wider coordination. The five-nation Eurocorps - created in 1992 by France, Germany, Belgium, Spain, and

Luxembourg - has already deployed troops and police on peacekeeping missions to Bosnia-Herzegovina, Macedonia, and the Democratic Republic of Congo and assumed command of the International Security Assistance Force (ISAF) in Afghanistan in August 2004. Eurocorps directly commands the 5,000-man Franco-German Brigade and the Multinational Command Support Brigade and will command EUFOR, which will take over from SFOR in Bosnia in December 2004. Other troop contributions are under national command - commitments to provide 67,100 troops were made at the Helsinki EU session in 2000. Some 56,000 EU troops were actually deployed in 2003. In August 2004, the new European Defense Agency, tasked with promoting cooperative European defense capabilities, began operations. As of November 2004, Germany, the United Kingdom, and France had proposed creation of three 1,500-man rapid-reaction "battle groups."

@Falkland Islands (Islas Malvinas)

Introduction Falkland Islands (Islas Malvinas)

Background:

Although first sighted by an English navigator in 1592, the first landing (English) did not occur until almost a century later in 1690, and the first settlement (French) was not established until 1764. The colony was turned over to Spain two years later and the islands have since been the subject of a territorial dispute, first between Britain and Spain, then between Britain and Argentina. The UK asserted its claim to the islands by establishing a naval garrison there in 1833. Argentina invaded the islands on 2 April 1982. The British responded with an expeditionary force that landed seven weeks later and after fierce fighting forced Argentine surrender on 14 June 1982.

Economy Falkland Islands (Islas Malvinas)

Economy - overview:

The economy was formerly based on agriculture, mainly sheep farming, but today fishing contributes the bulk of economic activity. In 1987 the government began selling fishing licenses to foreign trawlers operating within the Falklands exclusive fishing zone. These license fees total more than \$40 million per year, which goes to support the island's health, education, and welfare system.

Squid accounts for 75% of the fish taken. Dairy farming supports domestic consumption; crops furnish winter fodder. Exports feature shipments of high-grade wool to the UK and the sale of postage stamps and coins. The islands are now self-financing except for defense. The British Geological Survey announced a 200-mile oil exploration zone around the islands in 1993, and early seismic surveys suggest substantial reserves capable of producing 500,000 barrels per day; to date no exploitable site has been identified. An agreement between Argentina and the UK in 1995 seeks to defuse licensing and sovereignty conflicts that would dampen foreign interest in exploiting potential oil reserves. Tourism, especially eco-tourism, is increasing rapidly, with about 30,000 visitors in 2001. Another large source of income is interest paid on money the government has in the bank. The British military presence also provides a sizeable economic boost.

Economy Faroe Islands

Economy - overview:

The Faroese economy has had a strong performance since 1994, mostly as a result of increasing fish landings and high and stable export prices. Unemployment is falling and there are signs of labor shortages in several sectors. The positive economic development has helped the Faroese Home Rule Government produce increasing budget surpluses, which in turn help to reduce the large public debt, most of it owed to Denmark. However, the total dependence on fishing makes the Faroese economy extremely vulnerable, and the present fishing efforts appear in excess of what is a sustainable level of fishing in the long term. Oil finds close to the Faroese area give hope for deposits in the immediate Faroese area, which may eventually lay the basis for a more diversified economy and thus lessen dependence on Danish economic assistance. Aided by a substantial annual subsidy (15% of GDP) from Denmark, the Faroese have a standard of living not far below the Danes and other Scandinavians.

@Fiji

Introduction Fiji

Background:

Fiji became independent in 1970, after nearly a century as a British colony. Democratic rule was interrupted by two military coups in 1987, caused by concern over a government perceived as dominated by the Indian community (descendants of contract laborers brought to the islands by the British in the 19th century). A 1990 constitution favored native Melanesian control of Fiji, but led to heavy Indian emigration; the population loss resulted in economic difficulties, but ensured that Melanesians became the majority. Amendments enacted in 1997 made the constitution more equitable. Free and peaceful elections in 1999 resulted in a government led by an Indo-Fijian, but a coup in May 2000 ushered in a prolonged period of political turmoil. Parliamentary elections held in August 2001 provided Fiji with a democratically elected government and gave a mandate to the government of Prime Minister Laisenia QARASE.

Economy Fiji

Economy - overview:

Fiji, endowed with forest, mineral, and fish resources, is one of the most developed of the Pacific island economies, though still with a large subsistence sector. Sugar exports and a growing tourist industry - with 300,000 to 400,000 tourists annually - are the major sources of foreign exchange. Sugar processing makes up one-third of industrial activity. Long-term problems include low investment, uncertain land ownership rights, and the government's ability to manage its budget. Yet short-run economic prospects are good, provided tensions do not again erupt between indigenous Fijians and Indo-Fijians.

Introduction Finland

Background:

Finland was a province and then a grand duchy under Sweden from the 12th to the 19th centuries and an autonomous grand duchy of Russia after 1809. It won its complete independence in 1917. During World War II, it was able to successfully defend its freedom and resist invasions by the Soviet Union - albeit with some loss of territory. In the subsequent half century, the Finns made a remarkable transformation from a farm/forest economy to a diversified modern industrial economy; per capita income is now on par with Western

Europe. As a member of the European Union, Finland was the only Nordic state to join the euro system at its initiation in January 1999.

Economy Finland

Economy - overview:

Finland has a highly industrialized, largely free-market economy, with per capita output roughly that of the UK, France, Germany, and Italy. Its key economic sector is manufacturing - principally the wood, metals, engineering, telecommunications, and electronics industries. Trade is important, with exports equaling one-third of GDP. Except for timber and several minerals, Finland depends on imports of raw materials, energy, and some components for manufactured goods. Because of the climate, agricultural development is limited to maintaining self-sufficiency in basic products. Forestry, an important export earner, provides a secondary occupation for the rural population. Rapidly increasing integration with Western Europe - Finland was one of the 12 countries joining

the European Economic and Monetary Union (EMU) - will dominate the economic picture over the next several years. Growth in 2003 was held back by the global slowdown but will pick up in 2004 provided the world economy suffers no further blows.

Introduction France

Background:

Although ultimately a victor in World Wars I and II, France suffered extensive losses in its empire, wealth, manpower, and rank as a dominant nation-state. Nevertheless, France today is one of the most modern countries in the world and is a leader among European nations. Since 1958, it has constructed a presidential democracy resistant to the instabilities experienced in earlier parliamentary democracies. In recent years, its reconciliation and cooperation with Germany have proved central to the economic integration of Europe, including the introduction of a common exchange currency, the euro, in January 1999. At present, France is at the forefront of efforts to develop the EU's military capabilities to supplement progress toward an EU foreign policy.

Economy France

Economy - overview:

France is in the midst of transition, from a well-to-do modern economy that has featured extensive government ownership and intervention to one that relies more on market mechanisms. The Socialist-led government partially or fully privatized many large

companies, banks, and insurers, but the government retains controlling stakes in several leading firms, including Air France, France Telecom, Renault, and Thales, and is dominant in some sectors, particularly power, public transport, and defense industries. The telecommunications sector is gradually being opened to competition. France's leaders remain committed to a capitalism in which they maintain social equity by means of laws, tax policies, and social spending that reduce income disparity and the impact of free markets on public health and welfare. The current government has lowered income taxes and introduced measures to boost employment. The government is focusing on the problems of the high cost of labor and labor market inflexibility resulting from the 35-hour workweek and restrictions on lay-offs. The government is also pushing for pension reforms and simplification of administrative procedures. The tax burden remains one of the highest in Europe (43.8% of GDP in 2003). The current economic slowdown and inflexible budget items have pushed the 2003 deficit to 4% of GDP, above the EU's 3% debt limit. Business investment remains listless because of low rates of capital utilization, sluggish demand, high debt, and the steep cost of capital.

Economy French Guiana

Economy - overview:

The economy is tied closely to the larger French economy through subsidies and imports. Besides the French space center at Kourou (which accounts for 25% of GDP), fishing and forestry are the most important economic activities. Forest and woodland cover 90% of the country. The large reserves of tropical hardwoods, not fully exploited, support an expanding sawmill industry that provides sawn logs for export. Cultivation of crops is limited to the coastal area, where the population is largely concentrated; rice and manioc are the major crops. French Guiana is heavily dependent on imports of food and energy. Unemployment is a serious problem, particularly among younger workers.

@French Polynesia

Introduction French Polynesia

Background:

The French annexed various Polynesian island groups during the 19th century. In September 1995, France stirred up widespread protests by resuming nuclear testing on the Mururoa atoll after a three-year moratorium. The tests were suspended in January 1996.

Economy French Polynesia

Economy - overview:
Since 1962, when France stationed military personnel in the region, French Polynesia has changed from a subsistence agricultural economy to one in which a high proportion of the work force is either employed by the military or supports the tourist industry. With the halt of French nuclear testing in 1996, the military contribution to the economy fell sharply. Tourism accounts for about one-fourth of GDP and is a primary source of hard currency earnings. Other sources of income are pearl farming and deep-sea commercial fishing. The small manufacturing sector primarily processes agricultural

products. The territory benefits substantially from development agreements with France aimed principally at creating new businesses and strengthening social services.

@French Southern and Antarctic Lands

Introduction French Southern and Antarctic Lands

Background:

The Southern Lands consist of two archipelagos, Iles Crozet and Iles Kerguelen, and two volcanic islands, Ile Amsterdam and Ile Saint-Paul. They contain no permanent inhabitants and are visited only by researchers studying the native fauna. The Antarctic portion consists of "Adelie Land," a thin slice of the Antarctic continent discovered and claimed by the French in 1840.

Geography French Southern and Antarctic Lands

Location:

southeast of Africa, islands in the southern Indian Ocean, about equidistant between Africa, Antarctica, and Australia; note - French Southern and Antarctic Lands include Ile Amsterdam, Ile Saint-Paul, Iles Crozet, and Iles Kerguelen in the southern Indian Ocean, along with the French-claimed sector of Antarctica, "Adelie Land"; the US does not recognize the French claim to "Adelie Land"

@Gabon

Introduction Gabon

Background:

Only two autocratic presidents have ruled Gabon since independence from France in 1960. Gabon's current President, El Hadj Omar BONGO - one of the longest-serving heads of state in the world - has dominated Gabon's political scene for almost four decades. President BONGO introduced a nominal multiparty system and a new constitution in the early 1990s. However, the low turnout and allegations of electoral fraud during the most recent local elections in 2002-03 have exposed the weaknesses of formal political structures in Gabon. In addition, recent strikes have underscored the popular disenchantment with the political system. Presidential elections scheduled for 2005 are unlikely to bring change since the opposition remains weak, divided, and financially dependent on the current regime. Despite political conditions, a small population, abundant natural resources, and considerable foreign support have helped make Gabon one of the more prosperous and stable African countries.

Economy Gabon

Economy - overview:

Gabon enjoys a per capita income four times that of most nations of sub-Saharan Africa. This has supported a sharp decline in extreme poverty; yet because of high income inequality a large proportion of the population remains poor. Gabon depended on timber and manganese until oil was discovered offshore in the early 1970s. The oil sector now accounts for 50% of GDP. Gabon continues to face fluctuating prices for its oil, timber, and manganese exports. Despite the abundance of natural wealth, poor fiscal management hobbles the economy. Devaluation of its Francophone currency by 50% on 12 January 1994 sparked a one-time inflationary surge, to 35%; the rate dropped to 6% in 1996. The IMF provided a one-year standby arrangement in 1994-95, a three-year Enhanced Financing Facility (EFF) at near commercial rates beginning in late 1995, and stand-by credit of \$119 million in October 2000. Those agreements mandate progress in privatization and fiscal discipline. France provided additional financial support in January 1997 after Gabon had met IMF targets for mid-1996. In 1997, an IMF mission to Gabon criticized the government for overspending on off-budget items, overborrowing from the central bank, and slipping on its schedule for privatization and administrative reform. The rebound of oil prices in 1999-2000 helped growth, but drops in production hampered Gabon from fully realizing potential gains. In December 2000, Gabon signed

a new agreement with the Paris Club to reschedule its official debt.
A follow-up bilateral repayment agreement with the US was signed in December 2001. Short-term progress depends on an upbeat world economy and fiscal and other adjustments in line with IMF policies.

@Gambia, The

Introduction Gambia, The

Background:

The Gambia gained its independence from the UK in 1965; it formed a
short-lived federation of Senegambia with Senegal between 1982 and
1989. In 1991 the two nations signed a friendship and cooperation

treaty. A military coup in 1994 overthrew the president and banned political activity, but a 1996 constitution and presidential elections, followed by parliamentary balloting in 1997, completed a nominal return to civilian rule. The country undertook another round of presidential and legislative elections in late 2001 and early 2002. Yahya A. J. J. JAMMEH, the leader of the coup, has been elected president in all subsequent elections.

Economy Gambia, The

Economy - overview:

The Gambia has no important mineral or other natural resources and has a limited agricultural base. About 75% of the population depends on crops and livestock for its livelihood. Small-scale manufacturing

activity features the processing of peanuts, fish, and hides. Reexport trade normally constitutes a major segment of economic activity, but a 1999 government-imposed preshipment inspection plan, and instability of the Gambian dalasi (currency) have drawn some of the reexport trade away from The Gambia. The government's 1998 seizure of the private peanut firm Alimenta eliminated the largest purchaser of Gambian groundnuts; the following two marketing seasons have seen substantially lower prices and sales. A decline in tourism in 2000 has also held back growth. Unemployment and underemployment rates are extremely high. Shortrun economic progress remains highly dependent on sustained bilateral and multilateral aid, on responsible government economic management as forwarded by IMF technical help and advice, and on expected growth in the construction sector.

@Gaza Strip

Introduction Gaza Strip

Background:

The Israel-PLO Declaration of Principles on Interim Self-Government Arrangements (the DOP), signed in Washington on 13 September 1993, provided for a transitional period not exceeding five years of Palestinian interim self-government in the Gaza Strip and the West Bank. Under the DOP, Israel agreed to transfer certain powers and responsibilities to the Palestinian Authority, which includes the Palestinian Legislative Council elected in January 1996, as part of the interim self-governing arrangements in the West Bank and Gaza Strip. A transfer of powers and responsibilities for the Gaza Strip and Jericho took place pursuant to the Israel-PLO 4 May 1994 Cairo Agreement on the Gaza Strip and the Jericho Area and in additional areas of the West Bank pursuant to the Israel-PLO 28 September 1995 Interim Agreement, the Israel-PLO 15 January 1997 Protocol Concerning Redeployment in Hebron, the Israel-PLO 23 October 1998 Wye River Memorandum, and the 4 September 1999 Sharm el-Sheikh Agreement. The DOP provides that Israel will retain responsibility during the transitional period for external and internal security and for public order of settlements and Israeli citizens. Direct negotiations to determine the permanent status of Gaza and West Bank that began in September 1999 after a three-year hiatus, were

derailed by a second intifadah that broke out in September 2000. The resulting widespread violence in the West Bank and Gaza Strip, Israel's military response, and instability within the Palestinian Authority continue to undermine progress toward a permanent agreement. Following the death of longtime Palestinian leader Yasir

ARAFAT in November 2004, the election of his successor Mahmud ABBAS

in January 2005 could bring a turning point in the conflict.

Economy Gaza Strip

Economy - overview:

Economic output in the Gaza Strip - under the responsibility of the Palestinian Authority since the Cairo Agreement of May 1994 - declined by about one-third between 1992 and 1996. The downturn was largely the result of Israeli closure policies - the imposition of generalized border closures in response to security incidents in Israel - which disrupted previously established labor and commodity market relationships between Israel and the WBGS (West Bank and Gaza

Strip). The most serious negative social effect of this downturn was the emergence of high unemployment; unemployment in the WBGS during the 1980s was generally under 5%; by 1995 it had risen to over 20%. Israel's use of comprehensive closures decreased during the next few years and, in 1998, Israel implemented new policies to reduce the impact of closures and other security procedures on the movement of Palestinian goods and labor. These changes fueled an almost three-year-long economic recovery in the West Bank and Gaza Strip; real GDP grew by 5% in 1998 and 6% in 1999. Recovery was upended in the last quarter of 2000 with the outbreak of violence, triggering tight Israeli closures of Palestinian self-rule areas and a severe disruption of trade and labor movements. In 2001, and even more severely in 2002, Israeli military measures in Palestinian Authority areas resulted in the destruction of capital plant and administrative structure, widespread business closures, and a sharp drop in GDP. Including West Bank, the UN estimates that more than 100,000 Palestinians out of the 125,000 who used to work in Israel, in Israeli settlements, or in joint industrial zones have lost their jobs. In addition, about 80,000 Palestinian workers inside the Territories are losing their jobs. International aid of \$2 billion in 2001-02 to the West Bank and Gaza Strip prevented the complete collapse of the economy and allowed Finance Minister Salam FAYYAD to implement several financial and economic reforms. Budgetary support, however, was not as forthcoming in 2003.

Introduction Georgia

Background:

The region of present-day Georgia contained the ancient kingdoms of Colchis and Kartli-Iberia. The area came under Roman influence in the first centuries AD and Christianity became the state religion in the 330s. Domination by Persians, Arabs, and Turks was followed by a Georgian golden age (11th to the 13th centuries) that was cut short by the Mongol invasion of 1236. Subsequently, the Ottoman and Persian empires competed for influence in the region. Georgia was absorbed into the Russian Empire in the 19th century. Independent for three years (1918-1921) following the Russian revolution, it was forcibly incorporated into the USSR until the Soviet Union dissolved in 1991. Despite myriad problems, some progress on market reforms and democratization has been made since then. An attempt by the government to manipulate legislative elections in November 2003 touched off widespread protests that led to the resignation of Eduard SHEVARDNADZE, president since 1995. New elections in early 2004 swept Mikheil SAAKASHVILI into power along with his National Movement Party.

Economy Georgia

Economy - overview:

Georgia's main economic activities include the cultivation of agricultural products such as citrus fruits, tea, hazelnuts, and grapes; mining of manganese and copper; and output of a small industrial sector producing alcoholic and nonalcoholic beverages, metals, machinery, and chemicals. The country imports the bulk of its energy needs, including natural gas and oil products. Its only sizable internal energy resource is hydropower. Despite the severe damage the economy has suffered due to civil strife, Georgia, with the help of the IMF and World Bank, has made substantial economic gains since 1995, achieving positive GDP growth and curtailing inflation. However, the Georgian Government suffers from limited resources due to a chronic failure to collect tax revenues. Georgia also suffers from energy shortages; it privatized the T'bilisi distribution network in 1998, but collection rates are low, making

the venture unprofitable. The country is pinning its hopes for long-term growth on its role as a transit state for pipelines and trade. The start of construction on the Baku-T'bilisi-Ceyhan oil pipeline and the Baku-T'bilisi-Erzurum gas pipeline will bring much-needed investment and job opportunities.

Introduction Germany

Background:

As Europe's largest economy and most populous nation, Germany remains a key member of the continent's economic, political, and defense organizations. European power struggles immersed Germany in two devastating World Wars in the first half of the 20th century and left the country occupied by the victorious Allied powers of the US, UK, France, and the Soviet Union in 1945. With the advent of the Cold War, two German states were formed in 1949: the western Federal Republic of Germany (FRG) and the eastern German Democratic Republic (GDR). The democratic FRG embedded itself in key Western economic and security organizations, the EC, which became the EU, and NATO, while the Communist GDR was on the front line of the Soviet-led Warsaw Pact. The decline of the USSR and the end of the Cold War allowed for German unification in 1990. Since then, Germany has expended considerable funds to bring Eastern productivity and wages up to Western standards. In January 1999, Germany and 10 other EU countries introduced a common European exchange currency, the euro.

Economy Germany

Economy - overview:

Germany's affluent and technologically powerful economy- the fifth largest national economy in the world - has become one of the slowest growing economies in the entire euro zone, and a quick turnaround is not in the offing in the foreseeable future. Growth in 2001-03 fell short of 1%. The modernization and integration of the eastern German economy continues to be a costly long-term process, with annual transfers from west to east amounting to roughly \$70 billion. Germany's ageing population, combined with high unemployment, has pushed social security outlays to a level exceeding contributions from workers. Structural rigidities in the labor market - including strict regulations on laying off workers and the setting of wages on a national basis - have made unemployment a chronic problem. Corporate restructuring and growing capital markets are setting the foundations that could allow Germany to meet the long-term challenges of European economic integration and globalization, particularly if labor market rigidities are further addressed. The government is also starting long-needed structural reforms designed to revitalize the country's economy. In

the short run, however, the fall in government revenues and the rise in expenditures have raised the deficit above the EU's 3% debt limit.

Introduction Ghana

Background:

Formed from the merger of the British colony of the Gold Coast and the Togoland trust territory, Ghana in 1957 became the first sub-Saharan country in colonial Africa to gain its independence. A long series of coups resulted in the suspension of the constitution in 1981 and the banning of political parties. A new constitution, restoring multiparty politics, was approved in 1992. Lt. Jerry RAWLINGS, head of state since 1981, won presidential elections in 1992 and 1996, but was constitutionally prevented from running for a third term in 2000. He was succeeded by John KUFUOR, who defeated former Vice President Atta MILLS in a free and fair election.

Economy Ghana

Economy - overview:

Well endowed with natural resources, Ghana has roughly twice the per capita output of the poorer countries in West Africa. Even so, Ghana remains heavily dependent on international financial and technical assistance. Gold, timber, and cocoa production are major sources of foreign exchange. The domestic economy continues to revolve around subsistence agriculture, which accounts for 35% of GDP and employs 60% of the work force, mainly small landholders. Ghana opted for debt relief under the Heavily Indebted Poor Country (HIPC) program in 2002. Policy priorities include tighter monetary and fiscal policies, accelerated privatization, and improvement of social services. Receipts from the gold sector should help sustain GDP growth in 2004. Inflation should ease, but remain a major internal problem.

Introduction Gibraltar

Background:
Strategically important, Gibraltar was ceded to Great Britain by
Spain in the 1713 Treaty of Utrecht; the British garrison was
formally declared a colony in 1830. In referendums held in 1967 and
2002, Gibraltarians ignored Spanish pressure and voted
overwhelmingly to remain a British dependency.

Economy Gibraltar

Economy - overview:
Gibraltar benefits from an extensive shipping trade, offshore banking, and its position as an international conference center. The British military presence has been sharply reduced and now contributes about 7% to the local economy, compared with 60% in 1984. The financial sector, tourism (almost 5 million visitors in 1998), shipping services fees, and duties on consumer goods also generate revenue. The financial sector, the shipping sector, and tourism each contribute 25%-30% of GDP. Telecommunications accounts for another 10%. In recent years, Gibraltar has seen major structural change from a public to a private sector economy, but changes in government spending still have a major impact on the level of employment.

Introduction Greece

Background:

Greece achieved its independence from the Ottoman Empire in 1829. During the second half of the 19th century and the first half of the 20th century, it gradually added neighboring islands and territories, most with Greek-speaking populations. In World War II, Greece was first invaded by Italy (1940) and subsequently occupied by Germany (1941-44); fighting endured in a protracted civil war between royalist supporters of the king and communist rebels. Following the latter's defeat in 1949, Greece was able to join NATO in 1952. A military dictatorship, which in 1967 suspended many political liberties and forced the king to flee the country, lasted seven years. The 1974 democratic elections and a referendum created a parliamentary republic and abolished the monarchy. Greece joined

the European Community or EC in 1981 (which became the EU in 1992); it became the 12th member of the euro zone in 2001.

Economy Greece

Economy - overview:

Greece has a mixed capitalist economy with the public sector
accounting for about 40% of GDP and with per capita GDP 70% of the
leading euro-zone economies. Tourism provides 15% of GDP. Immigrants

make up nearly one-fifth of the work force, mainly in menial jobs. Greece is a major beneficiary of EU aid, equal to about 3.3% of annual GDP. The Greek economy grew by about 4.0% for the past two years, largely because of an investment boom and infrastructure upgrades for the 2004 Athens Olympic Games. Despite strong growth, Greece has failed to meet the EU's Growth and Stability Pact budget deficit criteria of 3% of GDP since 2000; public debt, inflation, and unemployment are also above the eurozone average. Further restructuring of the economy include privatizing several state enterprises, undertaking pension and other reforms, and minimizing bureaucratic inefficiencies.

@Greenland

Introduction Greenland

Background:

The world's largest island, Greenland is about 81% ice-capped. Vikings reached the island in the 10th century from Iceland; Danish colonization began in the 18th century and Greenland was made an integral part of Denmark in 1953. It joined the European Community (now the European Union) with Denmark in 1973 but withdrew in 1985 over a dispute over stringent fishing quotas. Greenland was granted self-government in 1979 by the Danish parliament. The law went into effect the following year. Denmark continues to exercise control of Greenland's foreign affairs.

Economy Greenland

Economy - overview:

The economy remains critically dependent on exports of fish and substantial support from the Danish Government, which supplies about half of government revenues. The public sector, including publicly-owned enterprises and the municipalities, plays the dominant role in the economy. Despite several interesting hydrocarbon and minerals exploration activities, it will take several years before production can materialize. Tourism is the only sector offering any near-term potential, and even this is limited due to a short season and high costs.

Introduction Grenada

Background:

One of the smallest independent countries in the western hemisphere, Grenada was seized by a Marxist military council on 19 October 1983. Six days later the island was invaded by US forces and those of six other Caribbean nations, which quickly captured the ringleaders and their hundreds of Cuban advisers. Free elections were reinstituted the following year.

Economy Guadeloupe

Economy - overview:

The Caribbean economy depends on agriculture, tourism, light industry, and services. It also depends on France for large subsidies and imports. Tourism is a key industry, with most tourists from the US; an increasingly large number of cruise ships visit the islands. The traditional sugarcane crop is slowly being replaced by other crops, such as bananas (which now supply about 50% of export earnings), eggplant, and flowers. Other vegetables and root crops are cultivated for local consumption, although Guadeloupe is still dependent on imported food, mainly from France. Light industry features sugar and rum production. Most manufactured goods and fuel are imported. Unemployment is especially high among the young. Hurricanes periodically devastate the economy.

Economy Guam

Economy - overview:

The economy depends on US military spending, tourism, and the export of fish and handicrafts. Total US grants, wage payments, and procurement outlays amounted to \$1 billion in 1998. Over the past 20 years, the tourist industry has grown rapidly, creating a construction boom for new hotels and the expansion of older ones. More than 1 million tourists visit Guam each year. The industry had recently suffered setbacks because of the continuing Japanese slowdown; the Japanese normally make up almost 90% of the tourists. Most food and industrial goods are imported. Guam faces the problem of building up the civilian economic sector to offset the impact of military downsizing.

Introduction Guatemala

Background:

The Maya civilization flourished in Guatemala and surrounding regions during the first millennium A.D. After almost three centuries as a Spanish colony, Guatemala won its independence in 1821. During the second half of the 20th century, it experienced a variety of military and civilian governments as well as a 36-year guerrilla war. In 1996, the government signed a peace agreement formally ending the conflict, which had led to the death of more than 100,000 people and had created some 1 million refugees.

Economy Guatemala

Economy - overview:

Guatemala is the largest and most populous of the Central American countries with a GDP per capita roughly one-half that of Brazil, Argentina, and Chile. The agricultural sector accounts for about one-fourth of GDP, two-thirds of exports, and half of the labor force. Coffee, sugar, and bananas are the main products. The 1996 signing of peace accords, which ended 36 years of civil war, removed a major obstacle to foreign investment, but widespread political violence and corruption scandals continue to dampen investor confidence. The distribution of income remains highly unequal, with perhaps 75% of the population below the poverty line. Ongoing challenges include increasing government revenues, negotiating further assistance from international donors, upgrading both government and private financial operations, curtailing drug trafficking, and narrowing the trade deficit.

Economy Guernsey

Economy - overview:

Financial services - banking, fund management, insurance, etc. - account for about 55% of total income in this tiny Channel Island economy. Tourism, manufacturing, and horticulture, mainly tomatoes and cut flowers, have been declining. Light tax and death duties make Guernsey a popular tax haven. The evolving economic integration of the EU nations is changing the environment under which Guernsey operates.

@Guinea

Introduction Guinea

Background:

Guinea has had only two presidents since gaining its independence from France in 1958. Lansana CONTE came to power in 1984, when the military seized the government after the death of the first president Sekou TOURE. Guinea did not hold democratic elections until 1993 when Gen. CONTE (head of the military government) was elected president of the civilian government. He was reelected in 1998 and again in 2003. Unrest in Sierra Leone and Liberia has spilled over into Guinea on several occasions over the past decade, threatening stability and creating humanitarian emergencies.

Economy Guinea

Economy - overview:
Guinea possesses major mineral, hydropower, and agricultural resources, yet remains an underdeveloped nation. The country possesses over 30% of the world's bauxite reserves and is the second-largest bauxite producer. The mining sector accounted for about 75% of exports in 1999. Long-run improvements in government fiscal arrangements, literacy, and the legal framework are needed if the country is to move out of poverty. Fighting along the Sierra Leonean and Liberian borders, as well as refugee movements, have caused major economic disruptions, including a loss in investor confidence. Foreign mining companies have reduced expatriate staff, while panic buying has created food shortages and inflation in local markets. Guinea is not receiving multilateral aid. The IMF and World Bank cut off most assistance in 2003. Growth should strengthen in 2004, however, because of a slowly improving security situation and increased investor confidence.

@Guinea-Bissau

Introduction Guinea-Bissau

Background:

Since independence from Portugal in 1974, Guinea-Bissau has experienced considerable upheaval. The founding government consisted of a single party system and command economy. In 1980, a military coup established Joao VIEIRA as president and a path to a market economy and multiparty system was implemented. A number of coup attempts through the 1980s and early 1990s failed to unseat him and

in 1994 he was elected president in the country's first free elections. A military coup attempt and civil war in 1998 eventually led to VIERA's ouster in 1999. In February 2000, an interim government turned over power when opposition leader Kumba YALA took office following two rounds of transparent presidential elections. YALA was ousted in a bloodless coup in September 2003, and Henrique ROSA was sworn in as President. Guinea-Bissau's transition back to democracy will be complicated by its crippled economy, devastated in the civil war.

Economy Guinea-Bissau

Economy - overview:

One of the 10 poorest countries in the world, Guinea-Bissau depends mainly on farming and fishing. Cashew crops have increased remarkably in recent years, and the country now ranks sixth in cashew production. Guinea-Bissau exports fish and seafood along with small amounts of peanuts, palm kernels, and timber. Rice is the major crop and staple food. However, intermittent fighting between Senegalese-backed government troops and a military junta destroyed much of the country's infrastructure and caused widespread damage to the economy in 1998; the civil war led to a 28% drop in GDP that year, with partial recovery in 1999-2002. Before the war, trade reform and price liberalization were the most successful part of the country's structural adjustment program under IMF sponsorship. The tightening of monetary policy and the development of the private sector had also begun to reinvigorate the economy. Because of high costs, the development of petroleum, phosphate, and other mineral resources is not a near-term prospect. However, unexploited offshore oil reserves could provide much-needed revenue in the long run. The inequality of income distribution is one of the most extreme in the world. The government and international donors continue to work out plans to forward economic development from a lamentably low base. Government drift and indecision, however, have resulted in low growth in 2002-03 and dim prospects for 2004.

Introduction Guyana

Background:

Originally a Dutch colony in the 17th century, by 1815 Guyana had become a British possession. The abolition of slavery led to black settlement of urban areas and the importation of indentured servants from India to work the sugar plantations. This ethnocultural divide has persisted and has led to turbulent politics. Guyana achieved independence from the UK in 1966, but until the early 1990s it was ruled mostly by socialist-oriented governments. In 1992, Cheddi JAGAN was elected president, in what is considered the country's

first free and fair election since independence. Upon his death five years later, he was succeeded by his wife Janet, who resigned in 1999 due to poor health. Her successor, Bharrat JAGDEO, was reelected in 2001.

Economy Guyana

Economy - overview:

The Guyanese economy exhibited moderate economic growth in 2001-02, based on expansion in the agricultural and mining sectors, a more favorable atmosphere for business initiatives, a more realistic exchange rate, fairly low inflation, and the continued support of international organizations. Growth then slowed in 2003. Chronic

problems include a shortage of skilled labor and a deficient infrastructure. The government is juggling a sizable external debt against the urgent need for expanded public investment. The bauxite mining sector should benefit in the near term by restructuring and partial privatization.

@Haiti

Introduction Haiti

Background:

The native Arawak Amerindians - who inhabited the island of Hispaniola when it was discovered by Columbus in 1492 - were virtually annihilated by Spanish settlers within 25 years. In the early 17th century, the French established a presence on Hispaniola, and in 1697, Spain ceded to the French the western third of the island - Haiti. The French colony, based on forestry and sugar-related industries, became one of the wealthiest in the Caribbean, but only through the heavy importation of African slaves

and considerable environmental degradation. In the late 18th century, Haiti's nearly half million slaves revolted under Toussaint L'OUVERTURE and after a prolonged struggle, became the first black republic to declare its independence in 1804. Haiti has been plagued by political violence for most of its history. It is the poorest country in the Western Hemisphere.

Economy Haiti

Economy - overview:

In this poorest country in the Western Hemisphere, 80% of the population lives in abject poverty. Two-thirds of all Haitians depend on the agriculture sector, which consists mainly of small-scale subsistence farming. Following legislative elections in May 2000, fraught with irregularities, international donors - including the US and EU - suspended almost all aid to Haiti. The economy shrank an estimated 1.2% in 2001 and an estimated 0.9% in 2002. Suspended aid and loan disbursements totaled more than \$500 million at the start of 2003. Haiti also suffers from rampant inflation, a lack of investment, and a severe trade deficit. The resumption of aid flows from all donors will alleviate but not end the nation's bitter economic problems. Extensive civil strife in

early 2004, marked by the flight of President ARISTIDE, further impoverished Haiti.

@Holy See (Vatican City)

Introduction Holy See (Vatican City)

Background:

Popes in their secular role ruled portions of the Italian peninsula for more than a thousand years until the mid 19th century, when many of the Papal States were seized by the newly united Kingdom of Italy. In 1870, the pope's holdings were further circumscribed when Rome itself was annexed. Disputes between a series of "prisoner" popes and Italy were resolved in 1929 by three Lateran Treaties, which established the independent state of Vatican City and granted Roman Catholicism special status in Italy. In 1984, a concordat between the Holy See and Italy modified certain of the earlier treaty provisions, including the primacy of Roman Catholicism as the Italian state religion. Present concerns of the Holy See include religious freedom, international development, the Middle East, terrorism, the failing health of Pope JOHN PAUL II, interreligious dialogue and reconciliation, and the application of church doctrine in an era of rapid change and globalization. About 1 billion people worldwide profess the Catholic faith.

@Honduras

Introduction Honduras

Background:

Part of Spain's vast empire in the New World, Honduras became an independent nation in 1821. After two and one-half decades of mostly military rule, a freely elected civilian government came to power in 1982. During the 1980s, Honduras proved a haven for anti-Sandinista contras fighting the Marxist Nicaraguan Government and an ally to Salvadoran Government forces fighting against leftist guerrillas. The country was devastated by Hurricane Mitch in 1998, which killed about 5,600 people and caused approximately \$2 billion in damage.

Geography Honduras

Location:

Central America, bordering the Caribbean Sea, between Guatemala and Nicaragua and bordering the Gulf of Fonseca (North Pacific Ocean), between El Salvador and Nicaragua

Geographic coordinates:

Natural hazards:

frequent, but generally mild, earthquakes; extremely susceptible to
damaging hurricanes and floods along the Caribbean coast

Environment - current issues:

urban population expanding; deforestation results from logging and
the clearing of land for agricultural purposes; further land
degradation and soil erosion hastened by uncontrolled development
and improper land use practices such as farming of marginal lands;
mining activities polluting Lago de Yojoa (the country's largest
source of fresh water), as well as several rivers and streams, with
heavy metals

Economy Honduras

Economy - overview:

Honduras, one of the poorest countries in the Western Hemisphere with an extraordinarily unequal distribution of income and massive unemployment, is banking on expanded trade privileges under the

Enhanced Caribbean Basin Initiative and on debt relief under the Heavily Indebted Poor Countries (HIPC) initiative. While the country has met most of its macroeconomic targets, it has failed to meet the IMF's goals to liberalize its energy and telecommunications sectors. Growth remains dependent on the status of the US economy, its major trading partner, on commodity prices, particularly coffee, and on reduction of the high crime rate.

Transnational Issues Honduras

Disputes - international:

in 1992, ICJ ruled on the delimitation of "bolsones" (disputed areas) along the El Salvador-Honduras border, and the OAS is assisting with a technical resolution of bolsones; in 2003, the ICJ rejected El Salvador's request to revise its decision on one bolsone; the 1992 ICJ ruling advised a tripartite resolution to a maritime boundary in the Gulf of Fonseca with consideration of Honduran access to the Pacific; El Salvador continues to claim tiny Conejo Island, not mentioned by the ICJ, off Honduras in the Gulf of Fonseca; Honduras claims Sapodilla Cays off the coast of Belize but agreed to creation of a joint ecological park and Guatemalan corridor in the Caribbean in the failed 2002 Belize-Guatemala Differendum; Nicaragua filed a claim against Honduras in 1999 and against Colombia in 2001 at the ICJ over a complex maritime dispute in the Caribbean Sea

Illicit drugs:

Introduction Hong Kong

Background:

Occupied by the UK in 1841, Hong Kong was formally ceded by China the following year; various adjacent lands were added later in the 19th century. Pursuant to an agreement signed by China and the UK on 19 December 1984, Hong Kong became the Hong Kong Special Administrative Region (SAR) of China on 1 July 1997. In this agreement, China has promised that, under its "one country, two systems" formula, China's socialist economic system will not be imposed on Hong Kong and that Hong Kong will enjoy a high degree of autonomy in all matters except foreign and defense affairs for the next 50 years.

Economy Hong Kong

Economy - overview:

Hong Kong has a free market economy highly dependent on international trade. Natural resources are limited, and food and raw materials must be imported. Imports and exports, including reexports, each exceed GDP in dollar value. Even before Hong Kong reverted to Chinese administration on 1 July 1997 it had extensive trade and investment ties with China. Hong Kong has been further integrating its economy with China because China's growing openness to the world economy has increased competitive pressure on Hong Kong's service industries, and Hong Kong's re-export business from China is a major driver of growth. Per capita GDP compares with the level in the four big economies of Western Europe. GDP growth averaged a strong 5% in 1989-1997, but Hong Kong suffered two recessions in the past 6 years because of the Asian financial crisis in 1998 and the global downturn of 2001-2002. The Severe Acute Respiratory Syndrome (SARS) outbreak also battered Hong Kong's economy, but a boom in tourism from the mainland because of China's easing of travel restrictions, a return of consumer confidence, and a solid rise in exports resulted in the resumption of strong growth in late 2003.

@Hungary

Introduction Hungary

Background:

Hungary was part of the polyglot Austro-Hungarian Empire, which collapsed during World War I. The country fell under Communist rule following World War II. In 1956, a revolt and announced withdrawal from the Warsaw Pact were met with a massive military intervention by Moscow. Under the leadership of Janos KADAR in 1968, Hungary began liberalizing its economy, introducing so-called "goulash Communism." Hungary held its first multiparty elections in 1990 and initiated a free market economy. It joined NATO in 1999 and the EU in 2004.

Economy Hungary

Economy - overview:

Hungary has made the transition from a centrally planned to a market economy, with a per capita income one-half that of the Big Four European nations. Hungary continues to demonstrate strong economic growth and joined the European Union in May 2004. The private sector accounts for over 80% of GDP. Foreign ownership of and investment in Hungarian firms are widespread, with cumulative foreign direct investment totaling more than \$23 billion since 1989. Hungarian sovereign debt was upgraded in 2000 to the second-highest rating among all the Central European transition economies. Inflation has declined substantially, from 14% in 1998 to 4.7% in 2003; unemployment has persisted around the 6% level. Germany is by far Hungary's largest economic partner. Short-term issues include the reduction of the public sector deficit and further increasing the flexibility of the labor markets.

Introduction Iceland

Background:

Settled by Norwegian and Celtic (Scottish and Irish) immigrants
during the late 9th and 10th centuries A.D., Iceland boasts the
world's oldest functioning legislative assembly, the Althing,
established in 930. Independent for over 300 years, Iceland was
subsequently ruled by Norway and Denmark. Fallout from the Askja
volcano of 1875 devastated the Icelandic economy and caused
widespread famine. Over the next quarter century, 20% of the
island's population emigrated, mostly to Canada and the US. Limited

home rule from Denmark was granted in 1874 and complete independence attained in 1944. Literacy, longevity, income, and social cohesion are first-rate by world standards.

Economy Iceland

Economy - overview:

Iceland's Scandinavian-type economy is basically capitalistic, yet with an extensive welfare system (including generous housing subsidies), low unemployment, and remarkably even distribution of income. In the absence of other natural resources (except for abundant geothermal power), the economy depends heavily on the fishing industry, which provides 70% of export earnings and employs 12% of the work force. The economy remains sensitive to declining fish stocks as well as to fluctuations in world prices for its main exports: fish and fish products, aluminum, and ferrosilicon.

Government policies include reducing the budget and current account deficits, limiting foreign borrowing, containing inflation, revising agricultural and fishing policies, diversifying the economy, and privatizing state-owned industries. The government remains opposed to EU membership, primarily because of Icelanders' concern about losing control over their fishing resources. Iceland's economy has been diversifying into manufacturing and service industries in the last decade, and new developments in software production, biotechnology, and financial services are taking place. The tourism

sector is also expanding, with the recent trends in ecotourism and whale watching. Growth had been remarkably steady in 1996-2001 at 3%-5%, but could not be sustained in 2002 in an environment of global recession. Growth resumed in 2003, and inflation dropped back from 5% to 2%.

Introduction India

Background:

The Indus Valley civilization, one of the oldest in the world, dates back at least 5,000 years. Aryan tribes from the northwest invaded about 1500 B.C.; their merger with the earlier inhabitants created the classical Indian culture. Arab incursions starting in the 8th century and Turkish in the 12th were followed by European traders, beginning in the late 15th century. By the 19th century, Britain had assumed political control of virtually all Indian lands. Indian armed forces in the British army played a vital role in both World Wars. Nonviolent resistance to British colonialism under Mohandas GANDHI and Jawaharlal NEHRU led to independence in 1947.

The subcontinent was divided into the secular state of India and the smaller Muslim state of Pakistan. A third war between the two countries in 1971 resulted in East Pakistan becoming the separate nation of Bangladesh. Fundamental concerns in India include the ongoing dispute with Pakistan over Kashmir, massive overpopulation,

environmental degradation, extensive poverty, and ethnic and religious strife, all this despite impressive gains in economic investment and output.

Economy India

Economy - overview:

India's economy encompasses traditional village farming, modern agriculture, handicrafts, a wide range of modern industries, and a multitude of support services. Government controls have been reduced on foreign trade and investment, and privatization of domestic output has proceeded slowly. The economy has posted an excellent average growth rate of 6% since 1990, reducing poverty by about 10 percentage points. India is capitalizing on its large numbers of well-educated people skilled in the English language to become a major exporter of software services and software workers. Despite strong growth, the World Bank and others worry about the continuing public-sector budget deficit, running at approximately 60% of GDP.

Communications India

Telephones - main lines in use:
48.917 million (2003)

Telephones - mobile cellular:
26,154,400 (2003)

Telephone system:

general assessment: recent deregulation and liberalization of telecommunications laws and policies have prompted rapid change; local and long distance service provided throughout all regions of the country, with services primarily concentrated in the urban areas; steady improvement is taking place with the recent admission of private and private-public investors, but telephone density remains low at about seven for each 100 persons nationwide but only one per 100 persons in rural areas and a national waiting list of over 1.7 million; fastest growth is in cellular service with modest growth in fixed lines

domestic: expansion of domestic service, although still weak in rural areas, resulted from increased competition and dramatic reductions in price led in large part by wireless service; mobile cellular service (both CDMA and GSM) introduced in 1994 and organized nationwide into four metropolitan cities and 19 telecom circles each with about three private service providers and one state-owned service provider; in recent years significant trunk capacity added in the form of fiber-optic cable and one of the world's largest domestic satellite systems, the Indian National Satellite system (INSAT), with 5 satellites supporting 33,000 very small aperture terminals (VSAT)

international: country code - 91; satellite earth stations - 8

Intelsat (Indian Ocean) and 1 Inmarsat (Indian Ocean region); nine gateway exchanges operating from Mumbai (Bombay), New Delhi, Kolkata

(Calcutta), Chennai (Madras), Jalandhar, Kanpur, Gandhinagar, Hyderabad, and Ernakulam; 5 submarine cables, including Sea-Me-We-3

with landing sites at Cochin and Mumbai (Bombay), Fiber-Optic Link Around the Globe (FLAG) with landing site at Mumbai (Bombay), South Africa - Far East (SAFE) with landing site at Cochin, i2icn linking to Singapore with landing sites at Mumbai (Bombay) and Chennai (Madras), and Tata Indicom linking Singapore and Chennai (Madras), provide a significant increase in the bandwidth available for both voice and data traffic (2004)

Transnational Issues India

Disputes - international:
Kashmir remains the world's most highly militarized territorial dispute with portions under the de facto administration of China (Aksai Chin), India (Jammu and Kashmir), and Pakistan (Azad Kashmir and Northern Areas), but recent discussions and confidence-building measures among parties are beginning to defuse tensions; India does not recognize Pakistan's ceding lands to China in the 1965 boundary agreement; disputes with Pakistan over Indus River water sharing and the terminus of the Sir Creek Estuary at the mouth of the Rann of Kutch, which prevents maritime boundary delimitation; Pakistani maps continue to show Junagadh claim in Indian Gujarat State; most of the rugged, militarized boundary with China is in dispute, but sides have committed to begin resolution with discussions on the least disputed Middle Sector; Joint Border Committee with Nepal continues to work on resolution of minor disputed boundary sections; discussions with Bangladesh remain stalled to delimit a small section of river boundary, to exchange 162 miniscule enclaves in

both countries, to allocate divided villages, and to stop illegal cross-border trade, migration, and violence; Bangladesh protests India's attempts to fence off high-traffic sections of the porous boundary; dispute with Bangladesh over volcanic New Moore/South Talpatty/Purbasha Island in the Bay of Bengal deters maritime boundary delimitation; India seeks cooperation from Bhutan and Burma to keep out Indian Nagaland insurgents; joint border commission continues to work on small disputed sections of boundary with Nepal; India has instituted a stricter border regime to restrict transit of Maoist insurgents and illegal cross-border activities from Nepal

Refugees and internally displaced persons:
refugees (country of origin): 92,394 (China), 60,922 (Sri Lanka)
IDPs: 650,000 (Jammu and Kashmir conflicts; most IDPs are Kashmiri Hindus) (2004)

Illicit drugs:
world's largest producer of licit opium for the pharmaceutical trade, but an undetermined quantity of opium is diverted to illicit international drug markets; transit point for illicit narcotics produced in neighboring countries; illicit producer of methaqualone; vulnerable to narcotics money laundering through the hawala system

@Indian Ocean

Introduction Indian Ocean

Background:

The Indian Ocean is the third largest of the world's five oceans (after the Pacific Ocean and Atlantic Ocean, but larger than the Southern Ocean and Arctic Ocean). Four critically important access waterways are the Suez Canal (Egypt), Bab el Mandeb (Djibouti-Yemen), Strait of Hormuz (Iran-Oman), and Strait of Malacca (Indonesia-Malaysia). The decision by the International Hydrographic Organization in the spring of 2000 to delimit a fifth ocean, the Southern Ocean, removed the portion of the Indian Ocean south of 60 degrees south.

Geography Indian Ocean

Location:

body of water between Africa, the Southern Ocean, Asia, and Australia

Geographic coordinates:

20 00 S, 80 00 E

Map references:

Political Map of the World

Area:

total: 68.556 million sq km

note: includes Andaman Sea, Arabian Sea, Bay of Bengal, Flores Sea, Great Australian Bight, Gulf of Aden, Gulf of Oman, Java Sea,

Mozambique Channel, Persian Gulf, Red Sea, Savu Sea, Strait of Malacca, Timor Sea, and other tributary water bodies

Area - comparative:

about 5.5 times the size of the US

Coastline:

66,526 km

Climate:

northeast monsoon (December to April), southwest monsoon (June to October); tropical cyclones occur during May/June and October/November in the northern Indian Ocean and January/February in the southern Indian Ocean

Terrain:

surface dominated by counterclockwise gyre (broad, circular system of currents) in the southern Indian Ocean; unique reversal of surface currents in the northern Indian Ocean; low atmospheric pressure over southwest Asia from hot, rising, summer air results in the southwest monsoon and southwest-to-northeast winds and currents, while high pressure over northern Asia from cold, falling, winter air results in the northeast monsoon and northeast-to-southwest winds and currents; ocean floor is dominated by the Mid-Indian Ocean Ridge and subdivided by the Southeast Indian Ocean Ridge, Southwest Indian Ocean Ridge, and Ninetyeast Ridge

Elevation extremes:

lowest point: Java Trench -7,258 m

highest point: sea level 0 m

Natural resources:

oil and gas fields, fish, shrimp, sand and gravel aggregates, placer deposits, polymetallic nodules

Natural hazards:

occasional icebergs pose navigational hazard in southern reaches

Environment - current issues:

endangered marine species include the dugong, seals, turtles, and whales; oil pollution in the Arabian Sea, Persian Gulf, and Red Sea

Geography - note:

major chokepoints include Bab el Mandeb, Strait of Hormuz, Strait of Malacca, southern access to the Suez Canal, and the Lombok Strait

Economy Indian Ocean

Economy - overview:

The Indian Ocean provides major sea routes connecting the Middle East, Africa, and East Asia with Europe and the Americas. It carries a particularly heavy traffic of petroleum and petroleum products from the oilfields of the Persian Gulf and Indonesia. Its fish are of great and growing importance to the bordering countries for domestic consumption and export. Fishing fleets from Russia, Japan, South Korea, and Taiwan also exploit the Indian Ocean, mainly for shrimp and tuna. Large reserves of hydrocarbons are being tapped in the offshore areas of Saudi Arabia, Iran, India, and western Australia. An estimated 40% of the world's offshore oil production comes from the Indian Ocean. Beach sands rich in heavy minerals and offshore placer deposits are actively exploited by bordering

countries, particularly India, South Africa, Indonesia, Sri Lanka, and Thailand.

Introduction Indonesia

Background:

The Dutch began to colonize Indonesia in the early 17th century; the islands were occupied by Japan from 1942 to 1945. Indonesia declared its independence after Japan's surrender, but it required four years of intermittent negotiations, recurring hostilities, and UN mediation before the Netherlands agreed to relinquish its colony. Indonesia is the world's largest archipelagic state. Current issues include: alleviating widespread poverty, preventing terrorism, continuing the transition to popularly-elected governments after four decades of authoritarianism, implementing reforms of the banking sector, addressing charges of cronyism and corruption, holding the military and police accountable for human rights violations, and resolving armed separatist movements in Aceh and Papua.

Economy Indonesia

Economy - overview:

Indonesia, a vast polyglot nation, faces economic development problems stemming from recent acts of terrorism, unequal resource distribution among regions, endemic corruption, the lack of reliable legal recourse in contract disputes, weaknesses in the banking system, and a generally poor climate for foreign investment. Indonesia withdrew from its IMF program at the end of 2003, but issued a "White Paper" that commits the government to maintaining fundamentally sound macroeconomic policies previously established under IMF guidelines. Investors, however, continued to face a host of on-the-ground microeconomic problems and an inadequate judicial system. Keys to future growth remain internal reform, building up the confidence of international and domestic investors, and strong global economic growth.

Introduction Iran

Background:
Known as Persia until 1935, Iran became an Islamic republic in 1979 after the ruling monarchy was overthrown and the shah was forced into exile. Conservative clerical forces established a theocratic system of government with ultimate political authority nominally vested in a learned religious scholar. Iranian-US relations have been strained since a group of Iranian students seized the US Embassy in Tehran on 4 November 1979 and held it until 20 January 1981. During 1980-88, Iran fought a bloody, indecisive war with Iraq that eventually expanded into the Persian Gulf and led to clashes

between US Navy and Iranian military forces between 1987-1988. Iran has been designated a state sponsor of terrorism for its activities in Lebanon and elsewhere in the world and remains subject to US economic sanctions and export controls because of its continued involvement. Following the elections of a reformist President and Majlis in the late 1990s, attempts to foster political reform in response to popular dissatisfaction have floundered as conservative politicians have prevented reform measures from being enacted, increased repressive measures, and consolidated their control over the government.

chief of state: Supreme Leader Ayatollah Ali Hoseini-KHAMENEI (since 4 June 1989)

elections: leader of the Islamic Revolution appointed for life by the Assembly of Experts; president elected by popular vote for a four-year term; election last held 8 June 2001 (next to be held June 2005)

election results: (Ali) Mohammad KHATAMI-Ardakani reelected president; percent of vote - (Ali) Mohammad KHATAMI-Ardakani 77%

cabinet: Council of Ministers selected by the president with legislative approval; the Supreme Leader has some control over appointments to the more sensitive ministries

head of government: President (Ali) Mohammad KHATAMI-Ardakani (since

3 August 1997); First Vice President Dr. Mohammad Reza AREF-Yazdi (since 26 August 2001)

Legislative branch:

unicameral Islamic Consultative Assembly or

Majles-e-Shura-ye-Eslami (290 seats, note - changed from 270 seats with the 18 February 2000 election; members elected by popular vote to serve four-year terms)

conservatives/Islamists 190, reformers 50, independents 43, religious minorities 5, and 2 seats unaccounted for

Judicial branch:

Supreme Court - above a special clerical court, a revolutionary court, and a special administrative court

Political parties and leaders:

formal political parties are a relatively new phenomenon in the Islamic Republic and most conservatives still prefer to work through political pressure groups rather than parties; a loose pro-reform coalition called the 2nd Khordad front, which includes political parties as well as less formal pressure groups and organizations, achieved considerable success at elections to the sixth Majles in early 2000; groups in the coalition include: Islamic Iran

Participation Front (IIPF); Executives of Construction Party (Kargozaran); Solidarity Party; Islamic Labor Party; Mardom Salari; Mojahedin of the Islamic Revolution Organization (MIRO); and Militant Clerics Society (Ruhaniyun); the coalition is expected to participate in the seventh Majles elections in early 2004; a new apparently conservative group, the Builders of Islamic Iran, took a leading position in the new Majles after winning a majority of the seats in February 2004

Political pressure groups and leaders: political pressure groups conduct most of Iran's political activities; groups that generally support the Islamic Republic include Ansar-e Hizballah, Muslim Students Following the Line of the Imam, Tehran Militant Clergy Association (Ruhaniyat), Islamic Coalition Party (Motalefeh), and Islamic Engineers Society; active pro-reform student groups include the Organization for Strengthening Unity; opposition groups include Freedom Movement of Iran, the National Front, Marz-e Por Gohar, and various ethnic and Monarchist organizations; armed political groups that have been almost completely repressed by the government include Mujahidin-e Khalq Organization (MEK), People's Fedayeen, Democratic Party of Iranian Kurdistan, and Komala

Economy Iran

Economy - overview:

Iran's economy is marked by a bloated, inefficient state sector, over reliance on the oil sector, and statist policies that create major distortions throughout. Most economic activity is controlled by the state. Private sector activity is typically small-scale - workshops, farming, and services. President KHATAMI has continued to follow the market reform plans of former President RAFSANJANI, with limited progress. Relatively high oil prices in recent years have enabled Iran to amass some \$22 billion in foreign exchange reserves, but have not eased economic hardships such as high unemployment and inflation. In December 2003 a major earthquake devastated the city of Bam in southeastern Iran, killing more than 30,000 people.

Introduction Iraq

Background:

Formerly part of the Ottoman Empire, Iraq was occupied by Britain during the course of World War I; in 1920, it was declared a League of Nations mandate under UK administration. In stages over the next dozen years, Iraq attained its independence as a kingdom in 1932. A "republic" was proclaimed in 1958, but in actuality a series of military strongmen ruled the country, the latest was SADDAM Husayn. Territorial disputes with Iran led to an inconclusive and costly eight-year war (1980-88). In August 1990, Iraq seized Kuwait, but was expelled by US-led, UN coalition forces during the Gulf War of January-February 1991. Following Kuwait's liberation, the UN Security Council (UNSC) required Iraq to scrap all weapons of mass destruction and long-range missiles and to allow UN verification inspections. Continued Iraqi noncompliance with UNSC resolutions over a period of 12 years resulted in the US-led invasion of Iraq in March 2003 and the ouster of the SADDAM Husayn regime. Coalition forces remain in Iraq, helping to restore degraded infrastructure

and facilitating the establishment of a freely elected government, while simultaneously dealing with a robust insurgency. The Coalition Provisional Authority transferred sovereignty to the Iraqi Interim Government (IG) in June 2004 and the election of its president, Ghazi al-Ujayl al-YAWR, was held in January 2005.

Economy Iraq

Economy - overview: Iraq's economy is dominated by the oil sector, which has traditionally provided about 95% of foreign exchange earnings. In the 1980s financial problems caused by massive expenditures in the eight-year war with Iran and damage to oil export facilities by Iran led the government to implement austerity measures, borrow heavily, and later reschedule foreign debt payments; Iraq suffered economic losses from that war of at least \$100 billion. After hostilities ended in 1988, oil exports gradually increased with the construction of new pipelines and restoration of damaged facilities. Iraq's seizure of Kuwait in August 1990, subsequent international economic sanctions, and damage from military action by an international coalition beginning in January 1991 drastically reduced economic activity. Although government policies supporting large military and internal security forces and allocating resources to key supporters of the regime have hurt the economy, implementation of the UN's oil-for-food program beginning in December 1996 helped improve conditions for the average Iraqi citizen. Iraq was allowed to export limited amounts of oil in exchange for food, medicine, and some infrastructure spare parts. In December 1999, the UN Security Council authorized Iraq to export under the program as much oil as required to meet humanitarian needs. The drop in GDP in 2001-02 was largely the result of the global economic slowdown and lower oil prices. Per capita food imports increased significantly, while medical supplies and health care services steadily improved. Per capita output and living standards were still well below the pre-1991 level, but any estimates have a wide range of error. The military victory of the US-led coalition in March-April 2003 resulted in the shutdown of much of the central economic administrative structure, but with the loss of a comparatively small amount of capital plant. The rebuilding of oil, electricity, and other production is proceeding steadily at the start of 2004

with foreign support and despite the continuation of severe internal strife. A joint UN and World Bank report released in the fall of 2003 estimated that Iraq's key reconstruction needs through 2007 would cost \$55 billion. In October 2003, international donors pledged assistance worth more than \$33 billion toward this rebuilding effort.

Military Iraq

Military branches:

note: in the summer of 2003 the Coalition Provisional Authority (CPA) began recruiting and training a New Iraqi Army (NIA) that would have a purely defensive mission and capability; in March 2004, the Iraqi Interim Government established a Ministry of Defense to create an Iraqi Armed Force; at that time the NIA was renamed the Iraqi Armed Force - Army (IAF-A); plans also were put into effect to reconstitute an Iraqi Army Air Corps (IAAC) and Coastal Defense Force (navy), but there are no plans to reconstitute an Iraqi Air Force; the Army's primary new focus will be domestic counterinsurgency, which is a change of direction from the CPA's intent to create an army not involved in domestic politics; in mid-2004 the Iraqi Civil Defense Corps (ICDC) was designated the Iraqi National Guard (ING) and subordinated to the Defense Ministry and the Iraqi Armed Forces Pre-war Iraqi military equipment was largely destroyed by Coalition forces during combat operations in early 2003 or subsequently looted or scrapped (September 2004)

Introduction Ireland

Background:

Celtic tribes settled on the island from 600-150 B.C. Invasions by Norsemen that began in the late 8th century were finally ended when King Brian BORU defeated the Danes in 1014. English invasions began in the 12th century and set off more than seven centuries of Anglo-Irish struggle marked by fierce rebellions and harsh repressions. A failed 1916 Easter Monday Rebellion touched off several years of guerrilla warfare that in 1921 resulted in independence from the UK for 26 southern counties; six northern (Ulster) counties remained part of the United Kingdom. In 1948 Ireland withdrew from the British Commonwealth; it joined the European Community in 1973. Irish governments have sought the peaceful unification of Ireland and have cooperated with Britain against terrorist groups. A peace settlement for Northern Ireland, known as the Good Friday Agreement and approved in 1998, is being implemented with some difficulties.

Economy Ireland

Economy - overview:

Ireland is a small, modern, trade-dependent economy with growth averaging a robust 8% in 1995-2002. The global slowdown, especially in the information technology sector, pressed growth down to 2.1% in 2003. Agriculture, once the most important sector, is now dwarfed by industry and services. Industry accounts for 46% of GDP and about 80% of exports and employs 28% of the labor force. Although exports remain the primary engine for Ireland's growth, the economy has also benefited from a rise in consumer spending, construction, and business investment. Per capita GDP is 10% above that of the four big European economies and the second highest in the sEU, behind Luxembourg. Over the past decade, the Irish Government has implemented a series of national economic programs designed to curb price and wage inflation, reduce government spending, increase labor force skills, and promote foreign investment. Ireland joined in launching the euro currency system in January 1999 along with 10 other EU nations.

@Israel

Introduction Israel

Background:

Following World War II, the British withdrew from their mandate of Palestine, and the UN partitioned the area into Arab and Jewish states, an arrangement rejected by the Arabs. Subsequently, the Israelis defeated the Arabs in a series of wars without ending the deep tensions between the two sides. The territories occupied by Israel since the 1967 war are not included in the Israel country profile, unless otherwise noted. On 25 April 1982, Israel withdrew from the Sinai pursuant to the 1979 Israel-Egypt Peace Treaty. Israel and Palestinian officials signed on 13 September 1993 a Declaration of Principles (also known as the "Oslo accords") guiding an interim period of Palestinian self-rule. Outstanding territorial and other disputes with Jordan were resolved in the 26 October 1994

Israel-Jordan Treaty of Peace. In addition, on 25 May 2000, Israel withdrew unilaterally from southern Lebanon, which it had occupied since 1982. In keeping with the framework established at the Madrid Conference in October 1991, bilateral negotiations were conducted between Israel and Palestinian representatives and Syria to achieve a permanent settlement. On 24 June 2002, US President BUSH laid out a "road map" for resolving the Israeli-Palestinian conflict, which envisions a two-state solution. However, progress toward a permanent status agreement has been undermined by Palestinian-Israeli violence ongoing since September 2000. The conflict may have reached a turning point with the election in January 2005 of Mahmud ABBAS as the new Palestinian leader following the November 2004 death of Yasir ARAFAT.

Economy Israel

Economy - overview:

Israel has a technologically advanced market economy with substantial government participation. It depends on imports of crude oil, grains, raw materials, and military equipment. Despite limited natural resources, Israel has intensively developed its agricultural and industrial sectors over the past 20 years. Israel imports substantial quantities of grain but is largely self-sufficient in other agricultural products. Cut diamonds, high-technology equipment, and agricultural products (fruits and vegetables) are the leading exports. Israel usually posts sizable current account

deficits, which are covered by large transfer payments from abroad and by foreign loans. Roughly half of the government's external debt is owed to the US, which is its major source of economic and military aid. The bitter Israeli-Palestinian conflict; difficulties in the high-technology, construction, and tourist sectors; and fiscal austerity in the face of growing inflation led to small declines in GDP in 2001 and 2002. The economy grew at 1% in 2003, with improvements in tourism and foreign direct investment. In 2004, rising business and consumer confidence - as well as higher demand for Israeli exports - boosted GDP by 2.7%.

Introduction Italy

Background:

Italy became a nation-state in 1861 when the city-states of the peninsula, along with Sardinia and Sicily, were united under King Victor EMMANUEL II. An era of parliamentary government came to a close in the early 1920s when Benito MUSSOLINI established a Fascist dictatorship. His disastrous alliance with Nazi Germany led to Italy's defeat in World War II. A democratic republic replaced the monarchy in 1946 and economic revival followed. Italy was a charter member of NATO and the European Economic Community (EEC). It has been at the forefront of European economic and political unification, joining the European Monetary Union in 1999. Persistent problems include illegal immigration, organized crime, corruption, high unemployment, sluggish economic growth, and the low incomes and technical standards of southern Italy compared with the prosperous north.

Economy Italy

Economy - overview:

Italy has a diversified industrial economy with roughly the same
total and per capita output as France and the UK. This capitalistic
economy remains divided into a developed industrial north, dominated
by private companies, and a less developed, welfare-dependent
agricultural south, with 20% unemployment. Most raw materials needed
by industry and more than 75% of energy requirements are imported.
Over the past decade, Italy has pursued a tight fiscal policy in
order to meet the requirements of the Economic and Monetary Unions
and has benefited from lower interest and inflation rates. The
current government has enacted numerous short-term reforms aimed at

improving competitiveness and long-term growth. Italy has moved slowly, however, on implementing needed structural reforms, such as lightening the high tax burden and overhauling Italy's rigid labor market and over-generous pension system, because of the current economic slowdown and opposition from labor unions.

Introduction Jamaica

Background:

Jamaica gained full independence within the British Commonwealth in 1962. Deteriorating economic conditions during the 1970s led to recurrent violence and a drop off in tourism. Elections in 1980 saw the democratic socialists voted out of office. Political violence marred elections during the 1990s.

Economy Jamaica

Economy - overview:

The Jamaican economy is heavily dependent on services, which now account for 70% of GDP. The country continues to derive most of its foreign exchange from tourism, remittances, and bauxite/alumina. The global economic slowdown, particularly after the terrorist attacks in the US on 11 September 2001, stunted economic growth; the economy rebounded moderately in 2003, with one of the best tourist seasons on record. But the economy faces serious long-term problems: high interest rates; increased foreign competition; a pressured, sometimes sliding, exchange rate; a sizable merchandise trade deficit; large-scale unemployment; and a growing internal debt, the result of government bailouts to ailing sectors of the economy. The ratio of debt to GDP is close to 150%. Inflation, previously a bright spot, is expected to remain in the double digits. Depressed economic conditions have led to increased civil unrest, including gang violence fueled by the drug trade. In 2004, the government faces the difficult prospect of having to achieve fiscal discipline in order to maintain debt payments while simultaneously attacking a serious and growing crime problem that is hampering economic growth.

@Jan Mayen

Introduction Jan Mayen

Background:

This desolate, mountainous island was named after a Dutch whaling captain who indisputably discovered it in 1614 (earlier claims are inconclusive). Visited only occasionally by seal hunters and trappers over the following centuries, the island came under Norwegian sovereignty in 1929. The long dormant Haakon VII Toppen/Beerenberg volcano resumed activity in 1970; it is the northernmost active volcano on earth.

@Japan

Introduction Japan

Background:

In 1603, a Tokugawa shogunate (military dictatorship) ushered in a long period of isolation from foreign influence in order to secure its power. For 250 years this policy enabled Japan to enjoy stability and a flowering of its indigenous culture. Following the Treaty of Kanagawa with the United States in 1854, Japan opened its ports and began to intensively modernize and industrialize. During the late 19th and early 20th centuries, Japan became a regional power that was able to defeat the forces of both China and Russia. It occupied Korea, Formosa (Taiwan), and southern Sakhalin Island. In 1933 Japan occupied Manchuria and in 1937 it launched a full-scale invasion of China. Japan attacked US forces in 1941 - triggering America's entry into World War II - and soon occupied much of East and Southeast Asia. After its defeat in World War II, Japan recovered to become an economic power and a staunch ally of the US. While the emperor retains his throne as a symbol of national unity, actual power rests in networks of powerful politicians, bureaucrats, and business executives. The economy experienced a major slowdown starting in the 1990s following three decades of unprecedented growth, but Japan still remains a major economic power, both in Asia and globally. In 2005, Japan began a two-year term as a non-permanent member of the UN Security Council.

Economy Japan

Economy - overview:
Government-industry cooperation, a strong work ethic, mastery of high technology, and a comparatively small defense allocation (1% of GDP) helped Japan advance with extraordinary rapidity to the rank of second most technologically-powerful economy in the world after the US and third-largest economy after the US and China. One notable characteristic of the economy is the working together of manufacturers, suppliers, and distributors in closely-knit groups called keiretsu. A second basic feature has been the guarantee of lifetime employment for a substantial portion of the urban labor force. Both features are now eroding. Industry, the most important sector of the economy, is heavily dependent on imported raw materials and fuels. The much smaller agricultural sector is highly subsidized and protected, with crop yields among the highest in the world. Usually self-sufficient in rice, Japan must import about 50%

of its requirements of other grain and fodder crops. Japan maintains one of the world's largest fishing fleets and accounts for nearly 15% of the global catch. For three decades overall real economic growth had been spectacular: a 10% average in the 1960s, a 5% average in the 1970s, and a 4% average in the 1980s. Growth slowed markedly in the 1990s, averaging just 1.7%, largely because of the after effects of overinvestment during the late 1980s and contractionary domestic policies intended to wring speculative excesses from the stock and real estate markets. Government efforts to revive economic growth have met with little success and were further hampered in 2000-2003 by the slowing of the US, European, and Asian economies. Japan's huge government debt, which totals more than 150% of GDP, and the ageing of the population are two major long-run problems. Robotics constitutes a key long-term economic strength with Japan possessing 410,000 of the world's 720,000 "working robots." Internal conflict over the proper way to reform the ailing banking system continues.

@Jarvis Island

Introduction Jarvis Island

Background:

First discovered by the British in 1821, the uninhabited island was annexed by the US in 1858, but abandoned in 1879 after tons of guano had been removed. The UK annexed the island in 1889, but never carried out plans for further exploitation. The US occupied and reclaimed the island in 1935. Abandoned after World War II, the island is currently a National Wildlife Refuge administered by the US Department of the Interior; a day beacon is situated near the middle of the west coast.

Economy Jersey

Economy - overview:

The economy is based largely on international financial services, agriculture, and tourism. Potatoes, cauliflower, tomatoes, and especially flowers are important export crops, shipped mostly to the UK. The Jersey breed of dairy cattle is known worldwide and represents an important export income earner. Milk products go to the UK and other EU countries. In 1996 the finance sector accounted for about 60% of the island's output. Tourism, another mainstay of the economy, accounts for 24% of GDP. In recent years, the government has encouraged light industry to locate in Jersey, with the result that an electronics industry has developed alongside the traditional manufacturing of knitwear. All raw material and energy requirements are imported, as well as a large share of Jersey's food needs. Light taxes and death duties make the island a popular tax haven.

@Johnston Atoll

Introduction Johnston Atoll

Background:

Both the US and the Kingdom of Hawaii annexed Johnston Atoll in 1858, but it was the US that mined the guano deposits until the late 1880s. Johnston and Sand Islands were designated wildlife refuges in 1926. The US Navy took over the atoll in 1934, and subsequently the US Air Force assumed control in 1948. The site was used for high-altitude nuclear tests in the 1950s and 1960s, and until late in 2000 the atoll was maintained as a storage and disposal site for chemical weapons. Munitions destruction is now complete. Cleanup and closure of the facility is progressing, with completion anticipated in 2004.

@Jordan

Introduction Jordan

Background:

For most of its history since independence from British administration in 1946, Jordan was ruled by King HUSSEIN (1953-99). A pragmatic ruler, he successfully navigated competing pressures from the major powers (US, USSR, and UK), various Arab states, Israel, and a large internal Palestinian population, despite several wars and coup attempts. In 1989 he reinstituted parliamentary elections and gradual political liberalization; in 1994 he signed a formal peace treaty with Israel. King ABDALLAH II - the eldest son of King HUSSEIN and Princess MUNA - assumed the throne following his father's death in February 1999. Since then, he has consolidated his power and undertaken an aggressive economic reform program. Jordan acceded to the World Trade Organization in 2000, and began to participate in the European Free Trade Association in 2001. After a two-year delay, parliamentary and municipal elections took place in the summer of 2003. The Prime Minister and government appointed in October 2004 declared their commitment to accelerated economic and political reforms and the new cabinet includes an unprecedented four women as ministers.

Economy Jordan

Economy - overview:

Jordan is a small Arab country with inadequate supplies of water
and other natural resources such as oil. Debt, poverty, and

unemployment are fundamental problems, but King ABDALLAH, since assuming the throne in 1999, has undertaken some broad economic reforms in a long-term effort to improve living standards. 'Amman in the past three years has worked closely with the IMF, practiced careful monetary policy, and made substantial headway with privatization. The government also has liberalized the trade regime sufficiently to secure Jordan's membership in the WTrO (2000), a free trade accord with the US (2000), and an association agreement with the EU (2001). These measures have helped improve productivity and have put Jordan on the foreign investment map. The US-led war in Iraq in 2003 dealt an economic blow to Jordan, which was dependent on Iraq for discounted oil (worth \$300-\$600 million a year). Several Gulf nations have provided temporary aid to compensate for the loss of this oil; when this foreign aid expires, the Jordanian government has pledged to raise retail petroleum product prices and the sales tax base. Other ongoing challenges include fiscal adjustment to reduce the budget deficit, broader investment incentives to promote job-creating ventures, and the encouragement of tourism.

@Kazakhstan

Introduction Kazakhstan

Background:

Native Kazakhs, a mix of Turkic and Mongol nomadic tribes who migrated into the region in the 13th century, were rarely united as a single nation. The area was conquered by Russia in the 18th century and Kazakhstan became a Soviet Republic in 1936. During the 1950s and 1960s agricultural "Virgin Lands" program, Soviet citizens were encouraged to help cultivate Kazakhstan's northern pastures. This influx of immigrants (mostly Russians, but also some other deported nationalities) skewed the ethnic mixture and enabled non-Kazakhs to outnumber natives. Independence in 1991 caused many of these newcomers to emigrate. Current issues include: developing a cohesive national identity; expanding the development of the country's vast energy resources and exporting them to world markets; achieving a sustainable economic growth outside the oil, gas, and mining sectors; and strengthening relations with neighboring states and other foreign powers.

Geography Kazakhstan

Location:

Central Asia, northwest of China; a small portion west of the Ural

River in eastern-most Europe

Geographic coordinates:

48 00 N, 68 00 E

Map references:

Asia

Area:

total: 2,717,300 sq km

water: 47,500 sq km

land: 2,669,800 sq km

Area - comparative:

slightly less than four times the size of Texas

Land boundaries:

total: 12,012 km

border countries: China 1,533 km, Kyrgyzstan 1,051 km, Russia 6,846 km, Turkmenistan 379 km, Uzbekistan 2,203 km

Coastline:

0 km (landlocked); note - Kazakhstan borders the Aral Sea, now split into two bodies of water (1,070 km), and the Caspian Sea (1,894 km)

Climate:

continental, cold winters and hot summers, arid and semiarid

Terrain:

extends from the Volga to the Altai Mountains and from the plains in western Siberia to oases and desert in Central Asia

Elevation extremes:

lowest point: Vpadina Kaundy -132 m

highest point: Khan Tangiri Shyngy (Pik Khan-Tengri) 6,995 m

Natural resources:

major deposits of petroleum, natural gas, coal, iron ore, manganese, chrome ore, nickel, cobalt, copper, molybdenum, lead, zinc, bauxite, gold, uranium

Land use:

arable land: 7.98%

permanent crops: 0.05%

other: 91.97% (2001)

Irrigated land:

23,320 sq km (1998 est.)

Natural hazards:

earthquakes in the south, mudslides around Almaty

Environment - current issues:

radioactive or toxic chemical sites associated with former defense industries and test ranges scattered throughout the country pose health risks for humans and animals; industrial pollution is severe in some cities; because the two main rivers which flowed into the Aral Sea have been diverted for irrigation, it is drying up and leaving behind a harmful layer of chemical pesticides and natural salts; these substances are then picked up by the wind and blown into noxious dust storms; pollution in the Caspian Sea; soil pollution from overuse of agricultural chemicals and salination from poor infrastructure and wasteful irrigation practices

Environment - international agreements:
party to: Air Pollution, Biodiversity, Climate Change,
Desertification, Endangered Species, Hazardous Wastes, Ozone Layer
Protection, Ship Pollution
signed, but not ratified: Climate Change-Kyoto Protocol

Geography - note:
landlocked; Russia leases approximately 6,000 sq km of territory
enclosing the Baykonur Cosmodrome; in January 2004, Kazakhstan and
Russia extended the lease to 2050

Economy Kazakhstan

Economy - overview:

Kazakhstan, the largest of the former Soviet republics in territory, excluding Russia, possesses enormous fossil fuel reserves as well as plentiful supplies of other minerals and metals. It also is a large agricultural - livestock and grain - producer.

Kazakhstan's industrial sector rests on the extraction and processing of these natural resources and also on a growing machine-building sector specializing in construction equipment, tractors, agricultural machinery, and some defense items. The breakup of the USSR in December 1991 and the collapse in demand for

Kazakhstan's traditional heavy industry products resulted in a short-term contraction of the economy, with the steepest annual decline occurring in 1994. In 1995-97, the pace of the government program of economic reform and privatization quickened, resulting in a substantial shifting of assets into the private sector. Kazakhstan enjoyed double-digit growth in 2000-01 - and a solid 9.5% in 2002 - thanks largely to its booming energy sector, but also to economic reform, good harvests, and foreign investment. The opening of the Caspian Consortium pipeline in 2001, from western Kazakhstan's Tengiz oilfield to the Black Sea, substantially raised export capacity. The country has embarked upon an industrial policy designed to diversify the economy away from overdependence on the oil sector, by developing light industry. Additionally, the policy aims to reduce the influence of foreign investment and foreign personnel; the government has engaged in several disputes with foreign oil companies over the terms of production agreements, and tensions continue.

Introduction Kenya

Background:

Founding president and liberation struggle icon Jomo KENYATTA led Kenya from independence until his death in 1978, when President Daniel Toroitich arap MOI took power in a constitutional succession. The country was a de facto one-party state from 1969 until 1982 when the ruling Kenya African National Union (KANU) made itself the sole legal party in Kenya. MOI acceded to internal and external pressure for political liberalization in late 1991. The ethnically fractured opposition failed to dislodge KANU from power in elections in 1992 and 1997, which were marred by violence and fraud, but are viewed as having generally reflected the will of the Kenyan people. President MOI stepped down in December of 2002 following fair and peaceful elections. Mwai KIBAKI, running as the candidate of the multiethnic,

united opposition group, the National Rainbow Coalition, defeated KANU candidate Uhuru KENYATTA and assumed the presidency following a campaign centered on an anticorruption platform.

Economy Kenya

Economy - overview:

The regional hub for trade and finance in East Africa, Kenya has been hampered by corruption, notably in the judicial system, and by reliance upon several primary goods whose prices have remained low. In 1997, the IMF suspended Kenya's Enhanced Structural Adjustment Program due to the government's failure to maintain reforms and curb corruption. A severe drought from 1999 to 2000 compounded Kenya's problems, causing water and energy rationing and reducing agricultural output. As a result, GDP contracted by 0.2% in 2000. The IMF, which had resumed loans in 2000 to help Kenya through the drought, again halted lending in 2001 when the government failed to institute several anticorruption measures. Despite the return of strong rains in 2001, weak commodity prices, endemic corruption, and low investment limited Kenya's economic growth to 1.2%. Growth lagged at 1.1% in 2002 because of erratic rains, low investor confidence, meager donor support, and political infighting up to the elections. In the key 27 December 2002 elections, Daniel Arap Moi's 24-year-old reign ended, and a new opposition government took on the formidable economic problems facing the nation. In 2003, progress was made in rooting out corruption, and encouraging donor support, with GDP growth edging up to 1.7%.

@Kingman Reef

Introduction Kingman Reef

Background:

The US annexed the reef in 1922. Its sheltered lagoon served as a way station for flying boats on Hawaii-to-American Samoa flights during the late 1930s. There are no terrestrial plants on the reef, which is frequently awash, but it does support abundant and diverse marine fauna and flora. In 2001, the waters surrounding the reef out to 12 nm around the reef were designated a US National Wildlife Refuge.

@Kiribati

Introduction Kiribati

Background:

The Gilbert Islands were granted self-rule by the UK in 1971 and complete independence in 1979 under the new name of Kiribati. The US relinquished all claims to the sparsely inhabited Phoenix and Line Island groups in a 1979 treaty of friendship with Kiribati.

Geography Kiribati

Location:

Oceania, group of 33 coral atolls in the Pacific Ocean, straddling the equator; the capital Tarawa is about one-half of the way from Hawaii to Australia; note - on 1 January 1995, Kiribati proclaimed that all of its territory lies in the same time zone as its Gilbert Islands group (GMT +12) even though the Phoenix Islands and the Line

Islands under its jurisdiction lie on the other side of the International Date Line

Economy Kiribati

Economy - overview:

A remote country of 33 scattered coral atolls, Kiribati has few natural resources. Commercially viable phosphate deposits were exhausted at the time of independence from the UK in 1979. Copra and fish now represent the bulk of production and exports. The economy has fluctuated widely in recent years. Economic development is constrained by a shortage of skilled workers, weak infrastructure, and remoteness from international markets. Tourism provides more than one-fifth of GDP. The financial sector is at an early stage of development as is the expansion of private sector initiatives.

Foreign financial aid from UK, Japan, Australia, New Zealand, and

China equals 25%-50% of GDP. Remittances from workers abroad

@Korea, North

Introduction Korea, North

Background:

An independent kingdom under Chinese suzerainty for most of the past millennium, Korea was occupied by Japan in 1905 following the Russo-Japanese War; five years later, Japan formally annexed the entire peninsula. Following World War II, Korea was split, with the northern half coming under Soviet-sponsored Communist domination. After failing in the Korean War (1950-53) to conquer the US-backed republic in the southern portion by force, North Korea under its founder President KIM Il Sung adopted a policy of ostensible diplomatic and economic "self-reliance" as a check against excessive Soviet or Communist Chinese influence and molded political, economic, and military policies around the core ideological objective of eventual unification of Korea under Pyongyang's control. KIM's son, the current ruler KIM Jong Il, was officially designated as KIM's future successor in 1980 and assumed a growing political and managerial role until his father's death in 1994, when he assumed full power without opposition. After decades of economic

mismanagement and resource misallocation, the North since the mid-1990s has relied heavily on international food aid to feed its population while continuing to expend resources to maintain an army of about 1 million. North Korea's long-range missile development and research into nuclear, chemical, and biological weapons and massive conventional armed forces are of major concern to the international community. In December 2002, following revelations it was pursuing a nuclear weapons program based on enriched uranium in violation of a 1994 agreement with the United States to freeze and ultimately dismantle its existing plutonium-based program, North Korea expelled monitors from the International Atomic Energy Agency (IAEA), and in January 2003 declared its withdrawal from the international Non-Proliferation Treaty. In mid-2003 Pyongyang announced it had completed the reprocessing of spent nuclear fuel rods (to extract weapons-grade plutonium) and was developing a "nuclear deterrent." Since August 2003 North Korea has participated in six-party talks with the United States, China, South Korea, Japan, and Russia to resolve the stalemate over its nuclear programs.

Economy Korea, North

Economy - overview:

North Korea, one of the world's most centrally planned and isolated economies, faces desperate economic conditions. Industrial capital stock is nearly beyond repair as a result of years of underinvestment and spare parts shortages. Industrial and power output have declined in parallel. The nation has suffered its tenth year of food shortages because of a lack of arable land, collective farming, weather-related problems, and chronic shortages of

fertilizer and fuel. Massive international food aid deliveries have allowed the regime to escape mass starvation since 1995-96, but the population remains the victim of prolonged malnutrition and deteriorating living conditions. Large-scale military spending eats up resources needed for investment and civilian consumption. In 2003, heightened political tensions with key donor countries and general donor fatigue threatened the flow of desperately needed food aid and fuel aid as well. Black market prices continued to rise following the increase in official prices and wages in the summer of 2002, leaving some vulnerable groups, such as the elderly and unemployed, less able to buy goods. The regime, however, relaxed restrictions on farmers' market activities in spring 2003, leading to an expansion of market activity.

Illicit drugs:
for years, from the 1970's into the 2000's, citizens of the
Democratic People's Republic of (North) Korea (DPRK), many of them
diplomatic employees of the government, were apprehended abroad
while trafficking in narcotics, including two in Turkey in December
2004; in recent years, police investigations in Taiwan and Japan
have linked North Korea to large illicit shipments of heroin and
methamphetamine, including an attempt by the North Korean merchant
ship Pong Su to deliver 150 kg of heroin to Australia in April 2003;
all indications point to North Korea emerging as an important

regional source of illicit drugs targeting markets in Japan, Taiwan,
the Russian Far East, and China

Introduction Korea, South

Background:

Korea was an independent kingdom under Chinese suzerainty for most of the past millennium. Following its victory in the Russo-Japanese War in 1905, Japan occupied Korea; five years later it formally annexed the entire peninsula. After World War II, a republic was set up in the southern half of the Korean Peninsula while a Communist-style government was installed in the north. During the Korean War (1950-1953), US and other UN forces intervened to defend South Korea from North Korean attacks supported by the Chinese. An armistice was signed in 1953, splitting the peninsula along a demilitarized zone at about the 38th parallel. Thereafter, South Korea achieved rapid economic growth with per capita income rising to roughly 18 times the level of North Korea. In 1987, South Korean

voters elected ROH Tae-woo to the presidency, ending 26 years of military dictatorships. South Korea today is a fully functioning modern democracy. In June 2000, a historic first North-South summit took place between the South's President KIM Tae-chung and the North's leader KIM Jong Il.

Economy Korea, South

Economy - overview:

Since the early 1960s, South Korea has achieved an incredible record of growth and integration into the high-tech modern world economy. Four decades ago GDP per capita was comparable with levels in the poorer countries of Africa and Asia. Today its GDP per capita is 18 times North Korea's and equal to the lesser economies of the European Union. This success through the late 1980s was achieved by a system of close government/business ties, including directed credit, import restrictions, sponsorship of specific industries, and

a strong labor effort. The government promoted the import of raw materials and technology at the expense of consumer goods and encouraged savings and investment over consumption. The Asian financial crisis of 1997-99 exposed longstanding weaknesses in South Korea's development model, including high debt/equity ratios, massive foreign borrowing, and an undisciplined financial sector. Growth plunged to a negative 6.6% in 1998, then strongly recovered to 10.8% in 1999 and 9.2% in 2000. Growth fell back to 3.3% in 2001 because of the slowing global economy, falling exports, and the perception that much-needed corporate and financial reforms had stalled. Led by consumer spending and exports, growth in 2002 was an impressive 6.2%, despite anemic global growth, followed by moderate 2.8% growth in 2003. In 2003 the National Assembly approved legislation reducing the six-day work week to five days.

Introduction Kuwait

Background:

Britain oversaw foreign relations and defense for the ruling Kuwaiti AL-SABAH dynasty from 1899 until independence in 1961. Kuwait was attacked and overrun by Iraq on 2 August 1990. Following several weeks of aerial bombardment, a US-led, UN coalition began a ground assault on 23 February 1991 that liberated Kuwait in four days. Kuwait spent more than \$5 billion to repair oil infrastructure damaged during 1990-91.

Economy Kuwait

Economy - overview:

Kuwait is a small, rich, relatively open economy with proved crude oil reserves of about 98 billion barrels - 10% of world reserves.

Petroleum accounts for nearly half of GDP, 95% of export revenues, and 80% of government income. Kuwait's climate limits agricultural development. Consequently, with the exception of fish, it depends

almost wholly on food imports. About 75% of potable water must be distilled or imported. Kuwait continues its discussions with foreign oil companies to develop fields in the northern part of the country.

Economy Kyrgyzstan

Economy - overview:

Kyrgyzstan is a poor, mountainous country with a predominantly agricultural economy. Cotton, tobacco, wool, and meat are the main agricultural products, although only tobacco and cotton are exported in any quantity. Industrial exports include gold, mercury, uranium, and natural gas and electricity. Kyrgyzstan has been fairly progressive in carrying out market reforms, such as an improved regulatory system and land reform. Kyrgyzstan was the first CIS country to be accepted into the World Trade Organization. With fits and starts, inflation has been lowered to an estimated 7% in 2001, 2.1% in 2002, and 4.0% in 2003. Much of the government's stock in enterprises has been sold. Drops in production had been severe after the breakup of the Soviet Union in December 1991, but by mid-1995 production began to recover and exports began to increase. Kyrgyzstan has distinguished itself by adopting relatively liberal economic policies. The drop in output at the Kumtor gold mine sparked a 0.5% decline in GDP in 2002, but GDP growth bounced back to 6% in 2003. The government has made steady strides in controlling its substantial fiscal deficit and aims to reduce the deficit to 4.4 percent of GDP in 2004. The government and the international financial institutions have been engaged in a comprehensive medium-term poverty reduction and economic growth strategy. Further restructuring of domestic industry and success in attracting foreign investment are keys to future growth.

Introduction Laos

Background:

Laos was under the control of Siam (Thailand) from the late 18th century until the late 19th century when it became part of French

Indochina. The Franco-Siamese Treaty of 1907 defined the current Lao border with Thailand. In 1975, the Communist Pathet Lao took control of the government, ending a six-century-old monarchy. Initial closer ties to Vietnam and socialization were replaced with a gradual return to private enterprise, a liberalization of foreign investment laws, and the admission into ASEAN in 1997.

Economy Laos

Economy - overview:

The government of Laos - one of the few remaining official Communist states - began decentralizing control and encouraging private enterprise in 1986. The results, starting from an extremely low base, were striking - growth averaged 7% in 1988-2001 except during the short-lived drop caused by the Asian financial crisis beginning in 1997. Despite this high growth rate, Laos remains a country with a primitive infrastructure; it has no railroads, a rudimentary road system, and limited external and internal telecommunications. Electricity is available in only a few urban areas. Subsistence agriculture accounts for half of GDP and provides 80% of total employment. The economy will continue to benefit from aid from the IMF and other international sources and from new foreign investment in food processing and mining.
