Introduction Latvia

Background:

After a brief period of independence between the two World Wars, Latvia was annexed by the USSR in 1940. It reestablished its independence in 1991 following the breakup of the Soviet Union. Although the last Russian troops left in 1994, the status of the Russian minority (some 30% of the population) remains of concern to Moscow. Latvia joined both NATO and the EU in the spring of 2004.

Economy Latvia

Economy - overview:

Latvia's transitional economy recovered from the 1998 Russian financial crisis, largely due to the SKELE government's budget stringency and a gradual reorientation of exports toward EU countries, lessening Latvia's trade dependency on Russia. The majority of companies, banks, and real estate have been privatized, although the state still holds sizable stakes in a few large enterprises. Latvia officially joined the World Trade Organization in February 1999. Preparing for EU membership continues as a top foreign policy goal. The current account and internal government deficits remain major concerns, but the government's efforts to increase efficiency in revenue collection may lessen the budget deficit.

Introduction Lebanon

Background:

Lebanon has made progress toward rebuilding its political institutions since 1991 and the end of the devastating 15-year civil war. Under the Ta'if Accord - the blueprint for national reconciliation - the Lebanese have established a more equitable political system, particularly by giving Muslims a greater say in the political process while institutionalizing sectarian divisions in the government. Since the end of the war, the Lebanese have conducted several successful elections, most of the militias have been weakened or disbanded, and the Lebanese Armed Forces (LAF) have extended central government authority over about two-thirds of the country. Hizballah, a radical Shia organization, retains its weapons. Syria maintains about 16,000 troops in Lebanon, based mainly east of Beirut and in the Bekaa Valley. Syria's troop deployment was legitimized by the Arab League during Lebanon's civil war and in the Ta'if Accord. Damascus justifies its continued military presence in Lebanon by citing Beirut's requests and the

failure of the Lebanese Government to implement all of the constitutional reforms in the Ta'if Accord. Israel's withdrawal from southern Lebanon in May 2000, however, encouraged some Lebanese groups to demand that Syria withdraw its forces as well. The passage of UNSCR 1559 in early October 2004 - a resolution calling for Syria to withdraw from Lebanon and end its interference in Lebanese affairs - further emboldened Lebanese groups opposed to Syria's presence in Lebanon.

Economy Lebanon

Economy - overview:
The 1975-91 civil war seriously damaged Lebanon's economic infrastructure, cut national output by half, and all but ended Lebanon's position as a Middle Eastern entrepot and banking hub. Peace enabled the central government to restore control in Beirut, begin collecting taxes, and regain access to key port and government facilities. Economic recovery was helped by a financially sound banking system and resilient small- and medium-scale manufacturers. Family remittances, banking services, manufactured and farm exports, and international aid provided the main sources of foreign exchange. Lebanon's economy made impressive gains since the launch in 1993 of "Horizon 2000," the government's \$20 billion reconstruction program. Real GDP grew 8% in 1994, 7% in 1995, 4% in 1996 and in 1997, but

slowed to 1.2% in 1998, -1.6% in 1999, -0.6% in 2000, 0.8% in 2001, 1.5% in 2002, and 3% in 2003. During the 1990s, annual inflation fell to almost 0% from more than 100%. Lebanon has rebuilt much of its war-torn physical and financial infrastructure. The government nonetheless faces serious challenges in the economic arena. It has funded reconstruction by borrowing heavily - mostly from domestic banks. In order to reduce the ballooning national debt, the re-installed HARIRI government began an economic austerity program to rein in government expenditures, increase revenue collection, and privatize state enterprises. The HARIRI government met with international donors at the Paris II conference in November 2002 to seek bilateral assistance restructuring its domestic debt at lower rates of interest. While privatization of state-owned enterprises had not occurred by the end of 2003, massive receipts from donor nations stabilized government finances in 2002-04.

Introduction Lesotho

Background:

Basutoland was renamed the Kingdom of Lesotho upon independence from the UK in 1966. King MOSHOESHOE was exiled in 1990. Constitutional government was restored in 1993 after 23 years of military rule. In 1998, violent protests and a military mutiny following a contentious election prompted a brief but bloody South African military intervention. Constitutional reforms have since restored political stability; peaceful parliamentary elections were held in 2002.

Economy Lesotho

Economy - overview:

Small, landlocked, and mountainous, Lesotho relies on remittances from miners employed in South Africa and customs duties from the Southern Africa Customs Union for the majority of government revenue, but the government has strengthened its tax system to

reduce dependency on customs duties. Completion of a major hydropower facility in January 1998 now permits the sale of water to South Africa, also generating royalties for Lesotho. As the number of mineworkers has declined steadily over the past several years, a small manufacturing base has developed based on farm products that support the milling, canning, leather, and jute industries and a rapidly growing apparel-assembly sector. The economy is still primarily based on subsistence agriculture, especially livestock, although drought has decreased agricultural activity. The extreme inequality in the distribution of income remains a major drawback. Lesotho has signed an Interim Poverty Reduction and Growth Facility with the IMF.

Introduction Liberia

Background:

In August 2003, a comprehensive peace agreement ended 14 years of civil war and prompted the resignation of former president Charles TAYLOR, who was exiled to Nigeria. The National Transitional Government of Liberia (NTGL) - which is composed of rebel, government, and civil society groups - assumed control in October 2003. Chairman Gyude BRYANT, who was given a two-year mandate to oversee efforts to rebuild Liberia, heads the new government. The United Nations Mission in Liberia (UNMIL), which maintains a strong presence throughout the country, completed a disarmament program for former combatants in late 2004, but the security situation is still volatile and the process of rebuilding the social and economic structure of this war-torn country remains sluggish.

Economy Liberia

Economy - overview:

Civil war and misgovernment have destroyed much of Liberia's economy, especially the infrastructure in and around Monrovia. Many businessmen have fled the country, taking capital and expertise with them. Some have returned, many will not. Richly endowed with water, mineral resources, forests, and a climate favorable to agriculture, Liberia had been a producer and exporter of basic products - primarily raw timber and rubber. Local manufacturing, mainly foreign owned, had been small in scope. The departure of the former president, Charles TAYLOR, to Nigeria in August 2003, the establishment of the all-inclusive National Transition Government of Liberia (NTGL), and the arrival of a UN mission are all encouraging signs that the political crisis is coming to an end. The restoration of infrastructure and the raising of incomes in this ravaged economy depend on the implementation of sound macro- and micro-economic policies, including the encouragement of foreign investment, and generous support from donor countries.

Introduction Libya

Background:

From the earliest days of his rule following his 1969 military coup, Col. Muammar Abu Minyar al-QADHAFI has espoused his own political system, the Third Universal Theory. The system is a combination of socialism and Islam derived in part from tribal practices and is supposed to be implemented by the Libyan people themselves in a unique form of "direct democracy." QADHAFI has always seen himself as a revolutionary and visionary leader. He used oil funds during the 1970s and 1980s to promote his ideology outside Libya, supporting subversives and terrorists abroad to hasten the end of Marxism and capitalism. In addition, beginning in 1973, he engaged in military operations in northern Chad's Aozou Strip - to gain access to minerals and to use as a base of influence in Chadian politics - but was forced to retreat in 1987. UN sanctions in 1992 isolated QADHAFI politically following the downing of Pan AM Flight 103 over Lockerbie, Scotland. Libyan support for terrorism appears to have decreased after the sanction imposition. During the 1990s, QADHAFI also began to rebuild his relationships with Europe. UN sanctions were suspended in April 1999 and finally lifted in September 2003 after Libya resolved the Lockerbie case. In December 2003, Libya announced that it had agreed to reveal and end its

programs to develop weapons of mass destruction, and QADHAFI has made significant strides in normalizing relations with western nations since then. He has received various Western European leaders as well as many working-level and commercial delegations, and made his first trip to Western Europe in 15 years when he traveled to Brussels in April 2004. QADHAFI also finally resolved in 2004 several outstanding cases against his government for terrorist activities in the 1980s by paying compensation to the families of victims of the UTA and La Belle disco bombings.

Economy Libya

Economy - overview:

The Libyan economy depends primarily upon revenues from the oil sector, which contribute practically all export earnings and about one-quarter of GDP. These oil revenues and a small population give Libya one of the highest per capita GDPs in Africa, but little of

this income flows down to the lower orders of society. Libyan officials in the past three years have made progress on economic reforms as part of a broader campaign to reintegrate the country into the international fold. This effort picked up steam after UN sanctions were lifted in September 2003 and as Libya announced in December 2003 that it would abandon programs to build weapons of mass destruction. Libya faces a long road ahead in liberalizing the socialist-oriented economy, but initial steps - including applying for WTO membership, reducing some subsidies, and announcing plans for privatization - are laying the groundwork for a transition to a more market-based economy. The non-oil manufacturing and construction sectors, which account for about 20% of GDP, have expanded from processing mostly agricultural products to include the production of petrochemicals, iron, steel, and aluminum. Climatic conditions and poor soils severely limit agricultural output, and Libya imports about 75% of its food.

@Liechtenstein

Introduction Liechtenstein

Background:

The Principality of Liechtenstein was established within the Holy Roman Empire in 1719; it became a sovereign state in 1806. Until the end of World War I, it was closely tied to Austria, but the economic devastation caused by that conflict forced Liechtenstein to enter into a customs and monetary union with Switzerland. Since World War II (in which Liechtenstein remained neutral), the country's low taxes have spurred outstanding economic growth. Shortcomings in banking regulatory oversight have resulted in concerns about the use of the financial institutions for money laundering. Liechtenstein has, however, implemented new anti-money-laundering legislation and recently concluded a Mutual Legal Assistance Treaty with the US.

Economy Liechtenstein

Economy - overview:

Despite its small size and limited natural resources, Liechtenstein has developed into a prosperous, highly industrialized, free-enterprise economy with a vital financial service sector and living standards on a par with its large European neighbors. The Liechtenstein economy is widely diversified with a large number of small businesses. Low business taxes - the maximum tax rate is 20% - and easy incorporation rules have induced many holding or so-called letter box companies to establish nominal offices in Liechtenstein, providing 30% of state revenues. The country participates in a customs union with Switzerland and uses the Swiss franc as its

national currency. It imports more than 90% of its energy requirements. Liechtenstein has been a member of the European Economic Area (an organization serving as a bridge between the European Free Trade Association (EFTA) and the EU) since May 1995. The government is working to harmonize its economic policies with those of an integrated Europe.

Introduction Lithuania

Background:

Independent between the two World Wars, Lithuania was annexed by the USSR in 1940. On 11 March 1990, Lithuania became the first of the Soviet republics to declare its independence, but Moscow did not recognize this proclamation until September of 1991 (following the abortive coup in Moscow). The last Russian troops withdrew in 1993. Lithuania subsequently restructured its economy for integration into Western European institutions; it joined both NATO and the EU in the spring of 2004.

Economy Lithuania

Economy - overview:

Lithuania, the Baltic state that has conducted the most trade with Russia, has slowly rebounded from the 1998 Russian financial crisis. Unemployment remains high, still 10.7% in 2003, but is improving. Growing domestic consumption and increased investment have furthered recovery. Trade has been increasingly oriented toward the West. Lithuania has gained membership in the World Trade Organization and has moved ahead with plans to join the EU. Privatization of the large, state-owned utilities, particularly in the energy sector, is nearing completion. Overall, more than 80% of enterprises have been privatized. Foreign government and business support have helped in the transition from the old command economy to a market economy.

in May 2003, the Russian Parliament ratified the 1997 land and maritime boundary treaty with Lithuania, which ratified the treaty in 1999, legalizing limits of former Soviet republic borders; both states also implement a simplified transit regime for Russian nationals transiting Lithuania to and from the Russian Kaliningrad coastal enclave; the Latvian Parliament has not ratified its 1998 maritime boundary treaty with Lithuania, primarily due to concerns over oil exploration rights

Illicit drugs:
transshipment point for opiates and other illicit drugs from Southwest Asia, Latin America, and Western Europe to Western Europe and Scandinavia; limited production of methamphetamine and ecstasy; susceptible to money laundering despite changes to banking legislation

Introduction Luxembourg

Background:

Founded in 963, Luxembourg became a grand duchy in 1815 and an independent state under the Netherlands. It lost more than half of its territory to Belgium in 1839, but gained a larger measure of autonomy. Full independence was attained in 1867. Overrun by Germany in both World Wars, it ended its neutrality in 1948 when it entered into the Benelux Customs Union and when it joined NATO the following year. In 1957, Luxembourg became one of the six founding countries of the European Economic Community (later the European Union), and in 1999 it joined the euro currency area.

Economy Luxembourg

Economy - overview:

This stable, high-income economy features solid growth, low inflation, and low unemployment. The industrial sector, initially dominated by steel, has become increasingly diversified to include

chemicals, rubber, and other products. Growth in the financial sector, which now accounts for about 22% of GDP, has more than compensated for the decline in steel. Most banks are foreign-owned and have extensive foreign dealings. Agriculture is based on small family-owned farms. The economy depends on foreign and trans-border workers for more than 30% of its labor force. Although Luxembourg, like all EU members, has suffered from the global economic slump, the country has maintained a fairly strong growth rate and enjoys an extraordinarily high standard of living.

Introduction Macau

Background:

Colonized by the Portuguese in the 16th century, Macau was the first European settlement in the Far East. Pursuant to an agreement signed by China and Portugal on 13 April 1987, Macau became the Macau Special Administrative Region (SAR) of China on 20 December 1999. China has promised that, under its "one country, two systems" formula, China's socialist economic system will not be practiced in Macau, and that Macau will enjoy a high degree of autonomy in all matters except foreign and defense affairs for the next 50 years.

Economy Macau

Economy - overview:

Macau's well-to-do economy has remained one of the most open in the world since its reversion to China in 1999. The territory's net exports of goods and services account for roughly 41% of GDP with tourism and apparel exports as the mainstays. Although the territory was hit hard by the 1998 Asian financial crisis and the global downturn in 2001, its economy grew 9.5% in 2002. A rapid rise in the number of mainland visitors because of China's easing of restrictions on travel drove the recovery. The budget also returned to surplus in 2002 because of the surge in visitors from China and a hike in taxes on gambling profits, which generated about 70% of government revenue. The liberalization of Macao's gambling monopoly contributes to GDP growth, as the three companies awarded gambling

licenses have pledged to invest \$2.2 billion in the territory. Much of Macau's textile industry may move to the mainland as the Multi-Fiber Agreement is phased out. The territory may have to rely more on gambling and trade-related services to generate growth. The government estimated GDP growth at 4% in 2003 with the drop in large measure due to concerns over the Severe Acute Respiratory Syndrome (SARS), but private sector analysts think the figure may have been higher because of the continuing boom in tourism.

Introduction Macedonia

Background:

International recognition of Macedonia's independence from Yugoslavia in 1991 was delayed by Greece's objection to the new state's use of what it considered a Hellenic name and symbols. Greece finally lifted its trade blockade in 1995 and the two countries agreed to normalize relations, although differences over Macedonia's name remain. The undetermined status of neighboring Kosovo, implementation of the Framework Agreement - which ended the 2001 ethnic Albanian armed insurgency - and a weak economy continue to be challenges for Macedonia.

Economy Macedonia

Economy - overview:

At independence in September 1991, Macedonia was the least developed of the Yugoslav republics, producing a mere 5% of the total federal output of goods and services. The collapse of Yugoslavia ended transfer payments from the center and eliminated advantages from inclusion in a de facto free trade area. An absence of infrastructure, UN sanctions on Yugoslavia, one of its largest markets, and a Greek economic embargo over a dispute about the country's constitutional name and flag hindered economic growth until 1996. GDP subsequently rose each year through 2000. However, the leadership's commitment to economic reform, free trade, and regional integration was undermined by the ethnic Albanian insurgency of 2001. The economy shrank 4.5% because of decreased trade, intermittent border closures, increased deficit spending on security needs, and investor uncertainty. Growth barely recovered in 2002 to 0.9%, then rose to 2.8% in 2003. Unemployment at one-third of the workforce remains the most critical economic problem. The gray economy is estimated at around 40% of GDP. Politically, the country is more stable than in 2002.

Transnational Issues Macedonia

Disputes - international:
the Albanian government calls for the protection of the rights of ethnic Albanians in Macedonia while continuing to seek regional cooperation; ethnic Albanians in Kosovo resist demarcation of a small section of the Macedonia-Kosovo boundary in accordance with the 2000 delimitation treaty, which transferred a small amount of land to Macedonia; dispute with Greece over country's name persists

Refugees and internally displaced persons:
IDPs: 2,678 (ethnic conflict in 2001; most IDPs have returned)
(2004)

Illicit drugs:

major transshipment point for Southwest Asian heroin and hashish;
minor transit point for South American cocaine destined for Europe;
although most criminal activity is thought to be domestic and not a
financial center, money laundering is a problem due to a mostly
cash-based economy and weak enforcement (no arrests or prosecutions
for money laundering to date)

Introduction Madagascar

Background:

Formerly an independent kingdom, Madagascar became a French colony
in 1896, but regained its independence in 1960. During 1992-93, free
presidential and National Assembly elections were held, ending 17
years of single-party rule. In 1997, in the second presidential
race, Didier RATSIRAKA, the leader during the 1970s and 1980s, was
returned to the presidency. The 2001 presidential election was
contested between the followers of Didier RATSIRAKA and Marc

RAVALOMANANA, nearly causing secession of half of the country. In April 2002, the High Constitutional Court announced RAVALOMANANA the winner.

Economy Madagascar

Economy - overview:

Having discarded past socialist economic policies, Madagascar has since the mid 1990s followed a World Bank and IMF led policy of privatization and liberalization. This strategy has placed the country on a slow and steady growth path from an extremely low level. Agriculture, including fishing and forestry, is a mainstay of the economy, accounting for more than one-fourth of GDP and employing four-fifths of the population. Exports of apparel have boomed in recent years primarily due to duty-free access to the United States. Deforestation and erosion, aggravated by the use of firewood as the primary source of fuel are serious concerns.

President RAVALOMANANA has worked aggressively to revive the economy

following the 2002 political crisis, which triggered a 12% drop in GDP that year. Poverty reduction and combating corruption will be the centerpieces of economic policy for the next few years.

@Malawi

Introduction Malawi

Background:
Established in 1891, the British protectorate of Nyasaland became
the independent nation of Malawi in 1964. After three decades of
one-party rule under President Hastings Kamuzu BANDA the country

held multiparty elections in 1994, under a provisional constitution, which came into full effect the following year. Current President

Bingu wa MUTHARIKA, elected in May 2004 after the previous president

was unable to amend the constitution to permit another term, has struggled to assert his authority against his predecessor, who still leads their shared political party. MATHARIKA's anti-corruption efforts have led to several high-level arrests but no convictions.

Increasing corruption, population growth, increasing pressure on agricultural lands, and HIV/AIDS pose major problems for the country.

Economy Malawi

Economy - overview:

Landlocked Malawi ranks among the world's least developed countries. The economy is predominately agricultural, with about 90% of the population living in rural areas. Agriculture accounted for nearly 40% of GDP and 88% of export revenues in 2001. The economy depends on substantial inflows of economic assistance from the IMF, the World Bank, and individual donor nations. In late 2000, Malawi was approved for relief under the Heavily Indebted Poor Countries (HIPC) program. In November 2002 the World Bank approved a \$50 million drought recovery package, which is to be used for famine relief. The government faces strong challenges, e.g., to fully develop a market economy, to improve educational facilities, to face up to environmental problems, to deal with the rapidly growing problem of HIV/AIDS, and to satisfy foreign donors that fiscal discipline is being tightened. The performance of the tobacco sector is key to short-term growth as tobacco accounts for over 50% of exports.

Introduction Malaysia

Background:

During the late 18th and 19th centuries, Great Britain established colonies and protectorates in the area of current Malaysia; these were occupied by Japan from 1942 to 1945. In 1948, the British-ruled territories on the Malay Peninsula formed the Federation of Malaya, which became independent in 1957. Malaysia was formed in 1963 when

the former British colonies of Singapore and the East Malaysian states of Sabah and Sarawak on the northern coast of Borneo joined the Federation. The first several years of the country's history were marred by Indonesian efforts to control Malaysia, Philippine claims to Sabah, and Singapore's secession from the Federation in 1965.

Economy Malaysia

Economy - overview:

Malaysia, a middle-income country, transformed itself from 1971 through the late 1990s from a producer of raw materials into an emerging multi-sector economy. Growth was almost exclusively driven by exports - particularly of electronics. As a result Malaysia was hard hit by the global economic downturn and the slump in the

information technology (IT) sector in 2001 and 2002. GDP in 2001 grew only 0.5% due to an estimated 11% contraction in exports, but a substantial fiscal stimulus package equal to US \$1.9 billion mitigated the worst of the recession and the economy rebounded in 2002 with a 4.1% increase. The economy grew 4.9% in 2003, notwithstanding a difficult first half, when external pressures from SARS and the Iraq War led to caution in the business community. Healthy foreign exchange reserves and a relatively small external debt make it unlikely that Malaysia will experience a crisis similar to the one in 1997, but the economy remains vulnerable to a more protracted slowdown in Japan and the US, top export destinations and key sources of foreign investment. The Malaysian ringgit is pegged to the dollar, and the Japanese central bank continues to intervene and prop up the yen against the dollar.

Disputes - international:
involved in complex dispute with China, Philippines, Taiwan, Vietnam and possibly Brunei over the Spratly Islands; the 2002 "Declaration on the Conduct of Parties in the South China Sea" has eased tensions but falls short of a legally binding "code of conduct" desired by several of the disputants; disputes over deliveries of fresh water to Singapore, Singapore's land reclamation, bridge construction, maritime boundaries, and Pedra Branca Island/Pulau Batu Putih persist - parties agree to ICJ arbitration on island dispute within three years; ICJ awarded Ligitan and Sipadan islands off the coast of Sabah, also claimed by Indonesia and Philippines, to Malaysia; a 1 kilometer segment at the mouth of the Golok River remains in dispute with Thailand; Philippines retains a now dormant claim to Malaysia's Sabah State in northern Borneo based on the Sultanate of Sulu's granting the Philippines Government power of attorney to pursue the Sultanate's sovereignty claim; in 2003 Brunei and Malaysia ceased gas and oil

exploration in their offshore and deepwater seabeds until negotiations progress to an agreement over allocation of disputed areas; Malaysia's land boundary with Brunei around Limbang is in dispute

Illicit drugs:

Introduction Maldives

Background:

The Maldives were long a sultanate, first under Dutch and then under British protection. They became a republic in 1968, three years after independence. Since 1978, President Maumoon Abdul GAYOOM

- currently in his sixth term in office - has dominated the island's political scene. Following riots in the capital Male in August 2004, the president and his government have pledged to embark upon

democratic reforms, including a more representative political system and expanded political freedoms. Tourism and fishing are being developed on the archipelago.

Economy Maldives

Economy - overview:
Tourism, Maldives' largest industry, accounts for 20% of GDP and more than 60% of the Maldives' foreign exchange receipts. Over 90% of government tax revenue comes from import duties and tourism-related taxes. Fishing is a second leading sector. The Maldivian Government began an economic reform program in 1989 initially by lifting import quotas and opening some exports to the private sector. Subsequently, it has liberalized regulations to allow more foreign investment. Agriculture and manufacturing continue to play a lesser role in the economy, constrained by the limited availability of cultivable land and the shortage of domestic labor. Most staple foods must be imported. Industry, which consists mainly of garment production, boat building, and handicrafts, accounts for about 18% of GDP. Maldivian authorities worry about the

impact of erosion and possible global warming on their low-lying country; 80% of the area is one meter or less above sea level.

Introduction Mali

Background:

The Sudanese Republic and Senegal became independent of France in 1960 as the Mali Federation. When Senegal withdrew after only a few months, what formerly made up the Sudanese Republic was renamed Mali. Rule by dictatorship was brought to a close in 1991 with a transitional government and in 1992 when Mali's first democratic presidential election was held. After his reelection in 1997,

President Alpha KONARE continued to push through political and economic reforms and to fight corruption. In keeping with Mali's two-term constitutional limit, he stepped down in 2002 and was succeeded by Amadou TOURE.

Economy Mali

Economy - overview:

Mali is among the poorest countries in the world, with 65% of its land area desert or semidesert and with a highly unequal distribution of income. Economic activity is largely confined to the riverine area irrigated by the Niger. About 10% of the population is nomadic and some 80% of the labor force is engaged in farming and fishing. Industrial activity is concentrated on processing farm commodities. Mali is heavily dependent on foreign aid and vulnerable to fluctuations in world prices for cotton, its main export, along with gold. The government has continued its successful implementation of an IMF-recommended structural adjustment program that is helping the economy grow, diversify, and attract foreign investment. Mali's adherence to economic reform and the 50% devaluation of the African franc in January 1994 have pushed up economic growth to a sturdy 5% average in 1996-2002. Worker

remittances and external trade routes have been jeopardized by continued unrest in neighboring Cote d'Ivoire.

@Malta

Introduction Malta

Background:

Great Britain formally acquired possession of Malta in 1814. The island staunchly supported the UK through both World Wars and remained in the Commonwealth when it became independent in 1964. A decade later Malta became a republic. Since about the mid-1980s, the island has transformed itself into a freight transshipment point, a financial center, and a tourist destination. Malta became an EU member in May of 2004.

Geography Malta

Economy Malta

Economy - overview:

Major resources are limestone, a favorable geographic location, and a productive labor force. Malta produces only about 20% of its food needs, has limited fresh water supplies, and has no domestic energy sources. The economy is dependent on foreign trade, manufacturing (especially electronics and textiles), and tourism. Malta is privatizing state-controlled firms and liberalizing markets in order to prepare for membership in the European Union. The island remains divided politically, however, over the question of joining the EU. Continued sluggishness in the global economy is holding back exports, tourism, and overall growth.

@Marshall Islands

Introduction Marshall Islands

Background:

After almost four decades under US administration as the easternmost part of the UN Trust Territory of the Pacific Islands, the Marshall Islands attained independence in 1986 under a Compact of Free Association. Compensation claims continue as a result of US nuclear testing on some of the atolls between 1947 and 1962. The Marshall Islands hosts the US Army Kwajalein Atoll (USAKA) Reagan Missile Test Site, a key installation in the US missile defense network.

Economy Marshall Islands

Economy - overview:
US Government assistance is the mainstay of this tiny island
economy. Agricultural production is primarily subsistence and is
concentrated on small farms; the most important commercial crops are
coconuts and breadfruit. Small-scale industry is limited to
handicrafts, tuna processing, and copra. The tourist industry, now a
small source of foreign exchange employing less than 10% of the
labor force, remains the best hope for future added income. The
islands have few natural resources, and imports far exceed exports.
Under the terms of the Compact of Free Association, the US has
provided more than \$1 billion in aid since 1986. Negotiations have
continued for an extended agreement. Government downsizing, drought,
a drop in construction, the decline in tourism and foreign
investment due to the Asian financial difficulties, and less income
from the renewal of fishing vessel licenses have held GDP growth to
an average of 1% over the past decade.

Economy Martinique

Economy - overview:

The economy is based on sugarcane, bananas, tourism, and light industry. Agriculture accounts for about 6% of GDP and the small industrial sector for 11%. Sugar production has declined, with most of the sugarcane now used for the production of rum. Banana exports are increasing, going mostly to France. The bulk of meat, vegetable, and grain requirements must be imported, contributing to a chronic trade deficit that requires large annual transfers of aid from France. Tourism, which employs more than 11,000 people, has become more important than agricultural exports as a source of foreign exchange.

@Mauritania

Introduction Mauritania

Background:

Independent from France in 1960, Mauritania annexed the southern third of the former Spanish Sahara (now Western Sahara) in 1976, but relinquished it after three years of raids by the Polisario guerrilla front seeking independence for the territory. Opposition parties were legalized and a new constitution approved in 1991. Two multiparty presidential elections since then were widely seen as

flawed, but October 2001 legislative and municipal elections were generally free and open. Mauritania remains, in reality, a one-party state. The country continues to experience ethnic tensions between its black population and the dominant Moor (Arab-Berber) populace.

Economy Mauritania

Economy - overview:

Half the population still depends on agriculture and livestock for a livelihood, even though many of the nomads and subsistence farmers were forced into the cities by recurrent droughts in the 1970s and 1980s. Mauritania has extensive deposits of iron ore, which account

for nearly 40% of total exports. The decline in world demand for this ore, however, has led to cutbacks in production. The nation's coastal waters are among the richest fishing areas in the world, but overexploitation by foreigners threatens this key source of revenue. The country's first deepwater port opened near Nouakchott in 1986. In the past, drought and economic mismanagement resulted in a buildup of foreign debt. In February 2000, Mauritania qualified for debt relief under the Heavily Indebted Poor Countries (HIPC) initiative and in December 2001 received strong support from donor and lending countries at a triennial Consultative Group review. In 2001, exploratory oil wells in tracts 80 km offshore indicated potential extraction at current world oil prices. A new investment code approved in December 2001 improved the opportunities for direct foreign investment. Ongoing negotiations with the IMF involve problems of economic reforms and fiscal discipline. Substantial oil production and exports probably will not begin until 2005. Meantime the government emphasizes reduction of poverty, improvement of health and education, and promoting privatization of the economy.

Introduction Mauritius

Background:

Discovered by the Portuguese in 1505, Mauritius was subsequently held by the Dutch, French, and British before independence was attained in 1968. A stable democracy with regular free elections and a positive human rights record, the country has attracted considerable foreign investment and has earned one of Africa's highest per capita incomes. Recent poor weather and declining sugar prices have slowed economic growth, leading to some protests over standards of living in the Creole community.

Economy Mauritius

Economy - overview:

Since independence in 1968, Mauritius has developed from a low-income, agriculturally based economy to a middle-income diversified economy with growing industrial, financial, and tourist sectors. For most of the period, annual growth has been in the order of 5% to 6%. This remarkable achievement has been reflected in more equitable income distribution, increased life expectancy, lowered infant mortality, and a much-improved infrastructure. Sugarcane is grown on about 90% of the cultivated land area and accounts for 25% of export earnings. The government's development strategy centers on

expanding local financial institutions and building a domestic information telecommunications industry. Mauritius has attracted more than 9,000 offshore entities, many aimed at commerce in India and South Africa, and investment in the banking sector alone has reached over \$1 billion. Mauritius, with its strong textile sector and responsible fiscal management, has been well poised to take advantage of the Africa Growth and Opportunity Act (AGOA).

@Mexico

Introduction Mexico

Background:

The site of advanced Amerindian civilizations, Mexico came under Spanish rule for three centuries before achieving independence early in the 19th century. A devaluation of the peso in late 1994 threw Mexico into economic turmoil, triggering the worst recession in over half a century. The nation continues to make an impressive recovery. Ongoing economic and social concerns include low real wages, underemployment for a large segment of the population, inequitable income distribution, and few advancement opportunities for the largely Amerindian population in the impoverished southern states. Elections held in July 2000 marked the first time since the 1910 Mexican Revolution that the opposition defeated the party in government, the Institutional Revolutionary Party (PRI). Vicente FOX of the National Action Party (PAN) was sworn in on 1 December 2000 as the first chief executive elected in free and fair elections.

Economy Mexico

Economy - overview:

Mexico has a free market economy with a mixture of modern and outmoded industry and agriculture, increasingly dominated by the private sector. Recent administrations have expanded competition in seaports, railroads, telecommunications, electricity generation, natural gas distribution, and airports. Per capita income is one-fourth that of the US; income distribution remains highly unequal. Trade with the US and Canada has tripled since the implementation of NAFTA in 1994. Real GDP growth was a weak -0.3% in

2001, 0.9% in 2002, and 1.2% in 2003, with the US slowdown the principal cause. Mexico implemented free trade agreements with Guatemala, Honduras, El Salvador, and the European Free Trade Area in 2001, putting more than 90% of trade under free trade agreements. The government is cognizant of the need to upgrade infrastructure, modernize the tax system and labor laws, and provide incentives to invest in the energy sector, but progress is slow.

Introduction Micronesia, Federated States of

Background:

In 1979 the Federated States of Micronesia, a UN Trust Territory under US administration, adopted a constitution. In 1986 independence was attained under a Compact of Free Association with the US, which was amended and renewed in 2003. Present concerns include large-scale unemployment, overfishing, and overdependence on US aid.

Economy Micronesia, Federated States of

Economy - overview:

Economic activity consists primarily of subsistence farming and fishing. The islands have few mineral deposits worth exploiting, except for high-grade phosphate. The potential for a tourist industry exists, but the remote location, a lack of adequate facilities, and limited air connections hinder development. In November 2002, the country experienced a further reduction in future revenues from the Compact of Free Association - the agreement with the US in which Micronesia received \$1.3 billion in financial and technical assistance over a 15-year period until 2001. The country's medium-term economic outlook appears fragile due not only to the reduction in US assistance but also to the slow growth of the private sector. Geographical isolation and a poorly developed infrastructure remain major impediments to long-term growth.

@Midway Islands

Introduction Midway Islands

Background:

The US took formal possession of the islands in 1867. The laying of the trans-Pacific cable, which passed through the islands, brought the first residents in 1903. Between 1935 and 1947, Midway was used as a refueling stop for trans-Pacific flights. The US naval victory

over a Japanese fleet off Midway in 1942 was one of the turning points of World War II. The islands continued to serve as a naval station until closed in 1993. Today the islands are a national wildlife refuge. From 1996 to 2001 the refuge was open to the public; it is now temporarily closed.

Introduction Moldova

Background:

Formerly part of Romania, Moldova was incorporated into the Soviet Union at the close of World War II. Although independent from the USSR since 1991, Russian forces have remained on Moldovan territory east of the Dniester River supporting the Slavic majority population, mostly Ukrainians and Russians, who have proclaimed a "Transnistria" republic. The poorest nation in Europe, Moldova became the first former Soviet state to elect a Communist as its president in 2001.

Economy Moldova

Economy - overview:

Moldova remains the poorest country in Europe despite recent progress from its small economic base. It enjoys a favorable climate and good farmland but has no major mineral deposits. As a result, the economy depends heavily on agriculture, featuring fruits, vegetables, wine, and tobacco. Moldova must import almost all of its energy supplies from Russia. Energy shortages contributed to sharp production declines after the breakup of the Soviet Union in 1991. As part of an ambitious reform effort, Moldova introduced a convertible currency, freed prices, stopped issuing preferential credits to state enterprises, backed steady land privatization, removed export controls, and freed interest rates. The government entered into agreements with the World Bank and the IMF to promote growth and reduce poverty. The economy returned to positive growth, of 2.1% in 2000, 6.1% in 2001, 7.2% in 2002, and 6.3% in 2003. Further reforms will come slowly because of strong political forces backing government controls. The economy remains vulnerable to higher fuel prices, poor agricultural weather, and the skepticism of foreign investors.

Economy Monaco

Economy - overview:
Monaco, bordering France on the Mediterranean coast, is a popular
resort, attracting tourists to its casino and pleasant climate. In
2001, a major construction project extended the pier used by cruise
ships in the main harbor. The principality has successfully sought
to diversify into services and small, high-value-added, nonpolluting
industries. The state has no income tax and low business taxes and
thrives as a tax haven both for individuals who have established
residence and for foreign companies that have set up businesses and
offices. The state retains monopolies in a number of sectors,
including tobacco, the telephone network, and the postal service.
Living standards are high, roughly comparable to those in prosperous
French metropolitan areas. Monaco does not publish national income

@Mongolia

Introduction Mongolia

Background:

The Mongols gained fame in the 13th century when under Chinggis

KHAN they conquered a huge Eurasian empire. After his death the empire was divided into several powerful Mongol states, but these broke apart in the 14th century. The Mongols eventually retired to their original steppe homelands and later came under Chinese rule. Mongolia won its independence in 1921 with Soviet backing. A Communist regime was installed in 1924. During the early 1990s, the ex-Communist Mongolian People's Revolutionary Party (MPRP) gradually yielded its monopoly on power to the Democratic Union Coalition (DUC), which defeated the MPRP in a national election in 1996. Since then, parliamentary elections returned the MPRP overwhelmingly to power in 2000 and produced a coalition government in 2004.

Economy Mongolia

Economy - overview:

Economic activity traditionally has been based on agriculture and breeding of livestock. Mongolia also has extensive mineral deposits; copper, coal, molybdenum, tin, tungsten, and gold account for a large part of industrial production. Soviet assistance, at its height one-third of GDP, disappeared almost overnight in 1990-91 at the time of the dismantlement of the USSR. Mongolia was driven into deep recession, prolonged by the Mongolian People's Revolutionary Party's (MPRP) reluctance to undertake serious economic reform. The Democratic Union Coalition (DUC) government embraced free-market economics, eased price controls, liberalized domestic and international trade, and attempted to restructure the banking system and the energy sector. Major domestic privatization programs were undertaken, as well as the fostering of foreign investment through international tender of the oil distribution company, a leading cashmere company, and banks. Reform was held back by the ex-Communist MPRP opposition and by the political instability brought about through four successive governments under the DUC. Economic growth picked up in 1997-99 after stalling in 1996 due to a series of natural disasters and declines in world prices of copper and cashmere. In August and September 1999, the economy suffered from a temporary Russian ban on exports of oil and oil products, and Mongolia remains vulnerable in this sector. Mongolia joined the World Trade Organization (WTO) in 1997. The international donor community pledged over \$300 million per year at the Consultative Group Meeting, held in Ulaanbaatar in June 1999. The MPRP government, elected in July 2000, was anxious to improve the investment climate; it also had to deal with a heavy burden of external debt. Falling prices for Mongolia's mainly primary sector exports, widespread opposition to privatization, and adverse effects

of weather on agriculture in early 2000 and 2001 restrained real GDP growth. Despite drought problems in 2002, GDP rose 4.0%, followed by a solid 5.0% increase in 2003. The first applications under the land privatization law have been marked by a number of disputes over particular sites. Russia claims Mongolia owes it \$11 billion from the Soviet period; any settlement could substantially increase Mongolia's foreign debt burden.

Economy Montserrat

Economy - overview:

Severe volcanic activity, which began in July 1995, has put a damper on this small, open economy. A catastrophic eruption in June 1997 closed the airports and seaports, causing further economic and social dislocation. Two-thirds of the 12,000 inhabitants fled the island. Some began to return in 1998, but lack of housing limited the number. The agriculture sector continued to be affected by the lack of suitable land for farming and the destruction of crops. Prospects for the economy depend largely on developments in relation to the volcano and on public sector construction activity. The UK has launched a three-year \$122.8 million aid program to help reconstruct the economy. Half of the island is expected to remain uninhabitable for another decade.

Introduction Morocco

Background:

Morocco's long struggle for independence from France ended in 1956. The internationalized city of Tangier was turned over to the new country that same year. Morocco virtually annexed Western Sahara during the late 1970s, but final resolution on the status of the territory remains unresolved. Gradual political reforms in the 1990s resulted in the establishment of a bicameral legislature in 1997. Parliamentary elections were held for the second time in September 2002 and municipal elections were held in September 2003.

Economy Morocco

Economy - overview:

Morocco faces the problems typical of developing countries - restraining government spending, reducing constraints on private activity and foreign trade, and achieving sustainable economic growth. Despite structural adjustment programs supported by the IMF, the World Bank, and the Paris Club, the dirham is only fully convertible for current account transactions. Reforms of the financial sector are being contemplated. Droughts depressed activity in the key agricultural sector and contributed to a stagnant economy in 2002. Morocco reported large foreign exchange inflows from the sale of a mobile telephone license, and partial privatization of the state-owned telecommunications company and the state tobacco company. Favorable rainfall in 2003 led to a growth of 6%. Formidable long-term challenges include: preparing the economy for freer trade with the EU and US, improving education, and attracting foreign investment to boost living standards and job prospects for Morocco's youth.

Transnational Issues Morocco

Disputes - international:
claims and administers Western Sahara whose sovereignty remains unresolved - UN-administered cease-fire has remained in effect since September 1991, but attempts to hold a referendum have failed and parties thus far have rejected all brokered proposals; Morocco protests Spain's control over the coastal enclaves of Ceuta, Melilla, and Penon de Velez de la Gomera, the islands of Penon de Alhucemas and Islas Chafarinas, and surrounding waters; Morocco also rejected Spain's unilateral designation of a median line from the Canary Islands in 2002 to set limits to undersea resource exploration and refugee interdiction, but agreed in 2003 to discuss a comprehensive maritime delimitation; Morocco serves as one of the primary launching areas of illegal migration into Spain from North Africa

Illicit drugs:

Introduction Mozambique

Background:

Almost five centuries as a Portuguese colony came to a close with
independence in 1975. Large-scale emigration by whites, economic
dependence on South Africa, a severe drought, and a prolonged civil
war hindered the country's development. The ruling Front for the

Liberation of Mozambique (FRELIMO) party formally abandoned
Marxism

in 1989, and a new constitution the following year provided for
multiparty elections and a free market economy. A UN-negotiated
peace agreement between FRELIMO and rebel Mozambique National
Resistance (RENAMO) forces ended the fighting in 1992. In December

2004, Mozambique underwent a delicate transition as Joaquim CHISSANO

stepped down after 18 years in office. His newly elected successor,

Armando Emilio GUEBUZA, has promised to continue the sound economic

policies that have encouraged foreign investment.

Economy Mozambique

Economy - overview:
At independence in 1975, Mozambique was one of the world's poorest countries. Socialist mismanagement and a brutal civil war from 1977-92 exacerbated the situation. In 1987, the government embarked on a series of macroeconomic reforms designed to stabilize the economy. These steps, combined with donor assistance and with political stability since the multi-party elections in 1994, have led to dramatic improvements in the country's growth rate. Inflation was reduced to single digits during the late 1990s although it returned to double digits in 2000-03. Fiscal reforms, including the introduction of a value-added tax and reform of the customs service, have improved the government's revenue collection abilities. In

spite of these gains, Mozambique remains dependent upon foreign assistance for much of its annual budget, and the majority of the population remains below the poverty line. Subsistence agriculture continues to employ the vast majority of the country's workforce. A substantial trade imbalance persists although the opening of the MOZAL aluminum smelter, the country's largest foreign investment project to date has increased export earnings. Additional investment projects in titanium extraction and processing and garment manufacturing should further close the import/export gap. Mozambique's once substantial foreign debt has been reduced through forgiveness and rescheduling under the IMF's Heavily Indebted Poor Countries (HIPC) and Enhanced HIPC initiatives, and is now at a manageable level.

@Namibia

Introduction Namibia

Background:

South Africa occupied the German colony of South-West Africa during World War I and administered it as a mandate until after World War II, when it annexed the territory. In 1966 the Marxist South-West Africa People's Organization (SWAPO) guerrilla group launched a war of independence for the area that was soon named Namibia, but it was not until 1988 that South Africa agreed to end its administration in accordance with a UN peace plan for the entire region. Namibia won its independence in 1990 and has been governed by SWAPO since. Hifikepunye POHAMBA was elected president in November 2004 in a landslide victory replacing Sam NUJOMA who led the country during its first 14 years of self rule.

Economy Namibia

Economy - overview:

The economy is heavily dependent on the extraction and processing of minerals for export. Mining accounts for 20% of GDP. Rich alluvial diamond deposits make Namibia a primary source for gem-quality diamonds. Namibia is the fourth-largest exporter of nonfuel minerals in Africa, the world's fifth-largest producer of uranium, and the producer of large quantities of lead, zinc, tin, silver, and tungsten. The mining sector employs only about 3% of the population while about half of the population depends on subsistence agriculture for its livelihood. Namibia normally imports about 50% of its cereal requirements; in drought years food shortages are a major problem in rural areas. A high per capita GDP, relative to the region, hides the great inequality of income distribution; nearly one-third of Namibians had annual incomes of less than \$1,400 in constant 1994 dollars, according to a 1993 study. The Namibian economy is closely linked to South Africa with the Namibian dollar pegged to the South African rand. Privatization of several enterprises in coming years may stimulate long-run foreign investment. Mining of zinc, copper, and silver and increased fish production led growth in 2003.

Introduction Nauru

Background:

Nauru's phosphate deposits began to be mined early in the 20th century by a German-British consortium; the island was occupied by Australian forces in World War I. Nauru achieved independence in 1968 and joined the UN in 1999. Nauru is the world's smallest independent republic.

Economy Nauru

Economy - overview:

Revenues of this tiny island have traditionally come from exports of phosphates, but reserves are now depleted. Few other resources exist with most necessities being imported, mainly from Australia, its former occupier and later major source of support. The rehabilitation of mined land and the replacement of income from phosphates are serious long-term problems. In anticipation of the exhaustion of Nauru's phosphate deposits, substantial amounts of phosphate income have been invested in trust funds to help cushion the transition and provide for Nauru's economic future. As a result of heavy spending from the trust funds, the government faces virtual bankruptcy. To cut costs the government has called for a freeze on wages, a reduction of over-staffed public service departments, privatization of numerous government agencies, and closure of some overseas consulates. In recent years Nauru has encouraged the registration of offshore banks and corporations. In 2004 the deterioration in housing, hospitals, and other capital plant continued, and the cost to Australia of keeping the government and economy afloat has substantially mounted. Few comprehensive statistics on the Nauru economy exist, with estimates of Nauru's GDP varying widely.

@Navassa Island

Introduction Navassa Island

Background:

This uninhabited island was claimed by the US in 1857 for its guano. Mining took place between 1865 and 1898. The lighthouse, built in 1917, was shut down in 1996 and administration of Navassa Island transferred from the Coast Guard to the Department of the Interior. A 1998 scientific expedition to the island described it as a unique preserve of Caribbean biodiversity; the following year it became a National Wildlife Refuge and annual scientific expeditions have continued.

@Nepal

Introduction Nepal

Background:

In 1951, the Nepalese monarch ended the century-old system of rule by hereditary premiers and instituted a cabinet system of government. Reforms in 1990 established a multiparty democracy within the framework of a constitutional monarchy. A Maoist insurgency, launched in 1996, has gained traction and is threatening to bring down the regime, especially after a negotiated cease-fire between the Maoists and government forces broke down in August 2003. In 2001, the crown prince massacred ten members of the royal family, including the king and queen, and then took his own life. In October 2002, the new king dismissed the prime minister and his cabinet for "incompetence" after they dissolved the parliament and were subsequently unable to hold elections because of the ongoing insurgency. While stopping short of reestablishing parliament, the king in June 2004 reinstated the most recently elected Prime Minister who formed a four-party coalition government, which the king subsequently tasked with paving the way for elections to be held in spring of 2005.

Economy Nepal

Economy - overview:

Nepal is among the poorest and least developed countries in the world with 42% of its population living below the poverty line. Agriculture is the mainstay of the economy, providing a livelihood for over 80% of the population and accounting for 40% of GDP. Industrial activity mainly involves the processing of agricultural produce including jute, sugarcane, tobacco, and grain. Security concerns in the wake of the Maoist conflict and the 11 September 2001 terrorist attacks in the US have led to a decrease in tourism, a key source of foreign exchange. Nepal has considerable scope for exploiting its potential in hydropower and tourism, areas of recent foreign investment interest. Prospects for foreign trade or investment in other sectors will remain poor, however, because of the small size of the economy, its technological backwardness, its remoteness, its landlocked geographic location, its civil strife, and its susceptibility to natural disaster. The international community's role of funding more than 60% of Nepal's development budget and more than 28% of total budgetary expenditures will likely continue as a major ingredient of growth.

Introduction Netherlands

Background:

The Kingdom of the Netherlands was formed in 1815. In 1830 Belgium seceded and formed a separate kingdom. The Netherlands remained neutral in World War I, but suffered invasion and occupation by Germany in World War II. A modern, industrialized nation, the Netherlands is also a large exporter of agricultural products. The country was a founding member of NATO and the EEC (now the EU), and participated in the introduction of the euro in 1999.

Economy Netherlands

Economy - overview:

The Netherlands has a prosperous and open economy, which depends heavily on foreign trade. The economy is noted for stable industrial relations, moderate unemployment and inflation, a sizable current account surplus, and an important role as a European transportation hub. Industrial activity is predominantly in food processing, chemicals, petroleum refining, and electrical machinery. A highly mechanized agricultural sector employs no more than 4% of the labor force but provides large surpluses for the food-processing industry and for exports. The Netherlands, along with 11 of its EU partners, began circulating the euro currency on 1 January 2002. The country continues to be one of the leading European nations for attracting foreign direct investment. Economic growth slowed considerably in 2001-03, as part of the global economic slowdown, but for the four years before that, annual growth averaged nearly 4%, well above the EU average. The government is wrestling with a deteriorating budget position, and is moving toward the EU 3% of GDP budget deficit limit.

@Netherlands Antilles

Introduction Netherlands Antilles

Background:

Once the center of the Caribbean slave trade, the island of Curacao was hard hit by the abolition of slavery in 1863. Its prosperity (and that of neighboring Aruba) was restored in the early 20th century with the construction of oil refineries to service the newly discovered Venezuelan oil fields. The island of Saint Martin is shared with France; its southern portion is named Sint Maarten and is part of the Netherlands Antilles; its northern portion is called Saint-Martin and is part of Guadeloupe.

Economy Netherlands Antilles

Economy - overview:

Tourism, petroleum refining, and offshore finance are the mainstays of this small economy, which is closely tied to the outside world. Although GDP has declined or grown slightly in each of the past

seven years, the islands enjoy a high per capita income and a well-developed infrastructure compared with other countries in the region. Almost all consumer and capital goods are imported, the US and Mexico being the major suppliers. Poor soils and inadequate water supplies hamper the development of agriculture. Budgetary problems hamper reform of the health and pension systems of an aging population.

Economy New Caledonia

Economy - overview:

New Caledonia has about 25% of the world's known nickel resources. Only a small amount of the land is suitable for cultivation, and food accounts for about 20% of imports. In addition to nickel, substantial financial support from France - equal to more than one-fourth of GDP - and tourism are keys to the health of the economy. Substantial new investment in the nickel industry, combined with the recovery of global nickel prices, brightens the economic outlook for the next several years.

@New Zealand

Introduction New Zealand

Background:

The Polynesian Maori reached New Zealand in about A.D. 800. In 1840, their chieftains entered into a compact with Britain, the Treaty of Waitangi, in which they ceded sovereignty to Queen Victoria while retaining territorial rights. In that same year, the British began the first organized colonial settlement. A series of land wars between 1843 and 1872 ended with the defeat of the native peoples. The British colony of New Zealand became an independent dominion in 1907 and supported the UK militarily in both World Wars. New Zealand's full participation in a number of defense alliances lapsed by the 1980s. In recent years, the government has sought to address longstanding Maori grievances.

Economy New Zealand

Economy - overview:
Over the past 20 years the government has transformed New Zealand
from an agrarian economy dependent on concessionary British market
access to a more industrialized, free market economy that can
compete globally. This dynamic growth has boosted real incomes (but

left behind many at the bottom of the ladder), broadened and deepened the technological capabilities of the industrial sector, and contained inflationary pressures. Per capita income has been rising and is now 80% of the level of the four largest EU economies. New Zealand is heavily dependent on trade - particularly in agricultural products - to drive growth, and it has been affected by the global economic slowdown and the slump in commodity prices. Thus far the economy has been resilient, and growth should continue at the same level in 2004. Expenditures on health, education, and pensions will increase proportionately.

Introduction Nicaragua

Background:

The Pacific Coast of Nicaragua was settled as a Spanish colony from Panama in the early 16th century. Independence from Spain was declared in 1821 and the country became an independent republic in 1838. Britain occupied the Caribbean Coast in the first half of the 19th century, but gradually ceded control of the region in subsequent decades. Violent opposition to governmental manipulation and corruption spread to all classes by 1978 and resulted in a short-lived civil war that brought the Marxist Sandinista guerrillas to power in 1979. Nicaraguan aid to leftist rebels in El Salvador caused the US to sponsor anti-Sandinista contra guerrillas through much of the 1980s. Free elections in 1990, 1996, and again in 2001 saw the Sandinistas defeated. The country has slowly rebuilt its economy during the 1990s, but was hard hit by Hurricane Mitch in 1998.

Economy Nicaragua

Economy - overview:

Nicaragua, one of the hemisphere's poorest countries, faces low per capita income, massive unemployment, and huge external debt. Distribution of income is one of the most unequal on the globe. While the country has made progress toward macroeconomic stability over the past few years, GDP annual growth of 1.5% - 2.5% has been far too low to meet the country's need. Nicaragua will continue to be dependent on international aid and debt relief under the Heavily Indebted Poor Countries (HIPC) initiative. Nicaragua has undertaken significant economic reforms that are expected to help the country qualify for more than \$4 billion in debt relief under HIPC in early 2004. Donors have made aid conditional on the openness of government financial operation, poverty alleviation, and human rights. A three-year poverty reduction and growth plan, agreed to with the IMF in December 2002, guides economic policy.

@Niger

Introduction Niger

Background:

Not until 1993, 33 years after independence from France, did Niger hold its first free and open elections. A 1995 peace accord ended a five-year Tuareg insurgency in the north. Coups in 1996 and 1999 were followed by the creation of a National Reconciliation Council that effected a transition to civilian rule by December 1999. Niger is one of the poorest countries in the world with minimal government services and insufficient funds to develop its resource base. The largely agrarian and subsistence-based economy is frequently disrupted by extended droughts common to the Sahel region of Africa.

Economy Niger

Economy - overview:

Niger is a poor, landlocked Sub-Saharan nation, whose economy centers on subsistence agriculture, animal husbandry, and reexport trade, and increasingly less on uranium, because of declining world demand. The 50% devaluation of the West African franc in January 1994 boosted exports of livestock, cowpeas, onions, and the products of Niger's small cotton industry. The government relies on bilateral and multilateral aid - which was suspended following the April 1999 coup d'etat - for operating expenses and public investment. In 2000-01, the World Bank approved a structural adjustment loan of \$105 million to help support fiscal reforms. However, reforms could

prove difficult given the government's bleak financial situation. The IMF approved a \$73 million poverty reduction and growth facility for Niger in 2000 and announced \$115 million in debt relief under the Heavily Indebted Poor Countries (HIPC) initiative. Further disbursements of aid occurred in 2002. Future growth may be sustained by exploitation of oil, gold, coal, and other mineral resources.

Introduction Nigeria

Background:

Following nearly 16 years of military rule, a new constitution was adopted in 1999, and a peaceful transition to civilian government was completed. The president faces the daunting task of rebuilding a petroleum-based economy, whose revenues have been squandered through corruption and mismanagement, and institutionalizing democracy. In addition, the OBASANJO administration must defuse longstanding ethnic and religious tensions, if it is to build a sound foundation for economic growth and political stability. Despite some irregularities, the April 2003 elections marked the first civilian transfer of power in Nigeria's history.

Economy Nigeria

Economy - overview:

Oil-rich Nigeria, long hobbled by political instability, corruption, inadequate infrastructure, and poor macroeconomic management, is undertaking some reforms under the new civilian administration. Nigeria's former military rulers failed to diversify the economy away from overdependence on the capital-intensive oil sector, which provides 20% of GDP, 95% of foreign exchange earnings, and about 65% of budgetary revenues. The largely subsistence agricultural sector has failed to keep up with rapid population growth - Nigeria is Africa's most populous country - and the country, once a large net exporter of food, now must import food. Following the signing of an IMF stand-by agreement in August 2000, Nigeria received a debt-restructuring deal from the Paris Club and a \$1 billion credit from the IMF, both contingent on economic reforms. Nigeria pulled out of its IMF program in April 2002, after failing to meet spending and exchange rate targets, making it ineligible for

additional debt forgiveness from the Paris Club. The government has lacked the political will to implement the market-oriented reforms urged by the IMF, such as to modernize the banking system, to curb inflation by blocking excessive wage demands, and to resolve regional disputes over the distribution of earnings from the oil industry. During 2003, however, the government deregulated fuel prices and announced the privatization of the country's four oil refineries. GDP growth probably will rise marginally in 2004, led by oil and natural gas exports.

@Niue

Introduction Niue

Background:

Niue's remoteness, as well as cultural and linguistic differences between its Polynesian inhabitants and those of the rest of the Cook Islands, have caused it to be separately administered. The population of the island continues to drop (from a peak of 5,200 in 1966 to about 2,100 in 2004), with substantial emigration to New Zealand, 2,400 km to the southwest.

Economy Niue

Economy - overview:

The economy suffers from the typical Pacific island problems of geographic isolation, few resources, and a small population. Government expenditures regularly exceed revenues, and the shortfall is made up by critically needed grants from New Zealand that are used to pay wages to public employees. Niue has cut government expenditures by reducing the public service by almost half. The agricultural sector consists mainly of subsistence gardening, although some cash crops are grown for export. Industry consists primarily of small factories to process passion fruit, lime oil, honey, and coconut cream. The sale of postage stamps to foreign collectors is an important source of revenue. The island in recent years has suffered a serious loss of population because of migration of Niueans to New Zealand. Efforts to increase GDP include the promotion of tourism and a financial services industry, although

Premier LAKATANI announced in February 2002 that Niue will shut down

the offshore banking industry. Economic aid from New Zealand in 2002 was about \$2.6 million.

@Norfolk Island

Introduction Norfolk Island

Background:

Two British attempts at establishing the island as a penal colony (1788-1814 and 1825-55) were ultimately abandoned. In 1856, the island was resettled by Pitcairn Islanders, descendants of the Bounty mutineers and their Tahitian companions.

Economy Northern Mariana Islands

Economy - overview:

The economy benefits substantially from financial assistance from the US. The rate of funding has declined as locally generated government revenues have grown. The key tourist industry employs about 50% of the work force and accounts for roughly one-fourth of GDP. Japanese tourists predominate. Annual tourist entries have exceeded one-half million in recent years, but financial difficulties in Japan have caused a temporary slowdown. The agricultural sector is made up of cattle ranches and small farms producing coconuts, breadfruit, tomatoes, and melons. Garment production is by far the most important industry with employment of 17,500 mostly Chinese workers and sizable shipments to the US under duty and quota exemptions.

Introduction Norway

Background:

Two centuries of Viking raids into Europe tapered off following the adoption of Christianity by King Olav TRYGGVASON in 994.

Conversion

of the Norwegian kingdom occurred over the next several decades. In 1397, Norway was absorbed into a union with Denmark that was to last for more than four centuries. In 1814, Norwegians resisted the cession of their country to Sweden and adopted a new constitution.

Sweden then invaded Norway but agreed to let Norway keep its constitution in return for accepting the union under a Swedish king.

Rising nationalism throughout the 19th century led to a 1905 referendum granting Norway independence. Although Norway remained neutral in World War I, it suffered heavy losses to its shipping.

Norway proclaimed its neutrality at the outset of World War II, but was nonetheless occupied for five-years by Nazi Germany (1940-45).

In 1949, neutrality was abandoned and Norway became a member of NATO. Discovery of oil and gas in adjacent waters in the late 1960s boosted Norway's economic fortunes. The current focus is on containing spending on the extensive welfare system and planning for the time when petroleum reserves are depleted. In referenda held in 1972 and 1994, Norway rejected joining the EU.

Economy Norway

Economy - overview:

The Norwegian economy is a prosperous bastion of welfare capitalism, featuring a combination of free market activity and government intervention. The government controls key areas, such as the vital petroleum sector (through large-scale state enterprises).

The country is richly endowed with natural resources - petroleum, hydropower, fish, forests, and minerals - and is highly dependent on its oil production and international oil prices, with oil and gas

accounting for one-third of exports. Only Saudi Arabia and Russia export more oil than Norway. Norway opted to stay out of the EU during a referendum in November 1994. The government has moved ahead

with privatization. With arguably the highest quality of life worldwide, Norwegians still worry about that time in the next two decades when the oil and gas begin to run out. Accordingly, Norway has been saving its oil-boasted budget surpluses in a Government Petroleum Fund, which is invested abroad and now is valued at more than \$43 billion. GDP growth was a lackluster 1% in 2002 and 0.5% in 2003 against the background of a faltering European economy.

Economy Oman

Economy - overview:

Oman is a small, well-off middle Eastern economy with large oil and gas resources, a substantial trade surplus, and low inflation. The government is moving ahead with privatization of its utilities, the development of a body of commercial law to facilitate foreign investment, and increased budgetary outlays. Oman continues to liberalize its markets and joined the World Trade Organization (WTO) in November 2000. In order to reduce unemployment and limit dependence on foreign countries, the government is encouraging the replacement of expatriate workers with local people, i.e., the process of Omanization. Training in information technology, business management, and English support this objective. Industrial development plans focus on gas resources.

@Pacific Ocean

Introduction Pacific Ocean

Background:

The Pacific Ocean is the largest of the world's five oceans (followed by the Atlantic Ocean, Indian Ocean, Southern Ocean, and Arctic Ocean). Strategically important access waterways include the La Perouse, Tsugaru, Tsushima, Taiwan, Singapore, and Torres Straits. The decision by the International Hydrographic Organization in the spring of 2000 to delimit a fifth ocean, the Southern Ocean, removed the portion of the Pacific Ocean south of 60 degrees south.

Geography Pacific Ocean

Location:

body of water between the Southern Ocean, Asia, Australia, and the Western Hemisphere

Geographic coordinates:

0 00 N, 160 00 W

Map references:

Political Map of the World

Area:

total: 155.557 million sq km

note: includes Bali Sea, Bering Sea, Bering Strait, Coral Sea, East China Sea, Gulf of Alaska, Gulf of Tonkin, Philippine Sea, Sea of Japan, Sea of Okhotsk, South China Sea, Tasman Sea, and other tributary water bodies

Area - comparative:

about 15 times the size of the US; covers about 28% of the global surface; larger than the total land area of the world

Coastline:

135,663 km

Climate:

planetary air pressure systems and resultant wind patterns exhibit remarkable uniformity in the south and east; trade winds and westerly winds are well-developed patterns, modified by seasonal fluctuations; tropical cyclones (hurricanes) may form south of Mexico from June to October and affect Mexico and Central America; continental influences cause climatic uniformity to be much less pronounced in the eastern and western regions at the same latitude in the North Pacific Ocean; the western Pacific is monsoonal - a rainy season occurs during the summer months, when moisture-laden winds blow from the ocean over the land, and a dry season during the winter months, when dry winds blow from the Asian landmass back to the ocean; tropical cyclones (typhoons) may strike southeast and east Asia from May to December

Terrain:

surface currents in the northern Pacific are dominated by a clockwise, warm-water gyre (broad circular system of currents) and in the southern Pacific by a counterclockwise, cool-water gyre; in the northern Pacific, sea ice forms in the Bering Sea and Sea of Okhotsk in winter; in the southern Pacific, sea ice from Antarctica reaches its northernmost extent in October; the ocean floor in the eastern Pacific is dominated by the East Pacific Rise, while the

western Pacific is dissected by deep trenches, including the Mariana Trench, which is the world's deepest

Elevation extremes:

lowest point: Challenger Deep in the Mariana Trench -10,924 m

highest point: sea level 0 m

Natural resources:

oil and gas fields, polymetallic nodules, sand and gravel
aggregates, placer deposits, fish

Natural hazards:

surrounded by a zone of violent volcanic and earthquake activity
sometimes referred to as the "Pacific Ring of Fire"; subject to
tropical cyclones (typhoons) in southeast and east Asia from May to
December (most frequent from July to October); tropical cyclones
(hurricanes) may form south of Mexico and strike Central America and
Mexico from June to October (most common in August and September);
cyclical El Nino/La Nina phenomenon occurs in the equatorial
Pacific, influencing weather in the Western Hemisphere and the
western Pacific; ships subject to superstructure icing in extreme
north from October to May; persistent fog in the northern Pacific
can be a maritime hazard from June to December

Environment - current issues:

endangered marine species include the dugong, sea lion, sea otter,
seals, turtles, and whales; oil pollution in Philippine Sea and
South China Sea

Geography - note:

the major chokepoints are the Bering Strait, Panama Canal, Luzon
Strait, and the Singapore Strait; the Equator divides the Pacific

Ocean into the North Pacific Ocean and the South Pacific Ocean; dotted with low coral islands and rugged volcanic islands in the southwestern Pacific Ocean

Economy Pacific Ocean

Economy - overview:

The Pacific Ocean is a major contributor to the world economy and particularly to those nations its waters directly touch. It provides low-cost sea transportation between East and West, extensive fishing grounds, offshore oil and gas fields, minerals, and sand and gravel for the construction industry. In 1996, over 60% of the world's fish catch came from the Pacific Ocean. Exploitation of offshore oil and gas reserves is playing an ever-increasing role in the energy supplies of the US, Australia, NZ, China, and Peru. The high cost of recovering offshore oil and gas, combined with the wide swings in world prices for oil since 1985, has led to fluctuations in new drillings.

Transportation Pacific Ocean

Ports and harbors:

Bangkok (Thailand), Hong Kong, Kao-hsiung (Taiwan), Los Angeles (US), Manila (Philippines), Pusan (South Korea), San Francisco (US), Seattle (US), Shanghai (China), Singapore, Sydney (Australia), Vladivostok (Russia), Wellington (NZ), Yokohama (Japan)

Transportation - note:

Inside Passage offers protected waters from southeast Alaska to Puget Sound (Washington state)

@Pakistan

Introduction Pakistan

Background:

The separation in 1947 of British India into the Muslim state of Pakistan (with two sections West and East) and largely Hindu India was never satisfactorily resolved, and India and Pakistan have fought two wars - in 1947-48 and 1965 - over the disputed Kashmir territory. A third war between these countries in 1971 - in which India capitalized on Islamabad's marginalization of Bengalis in Pakistani politics - resulted in East Pakistan becoming the separate

nation of Bangladesh. In response to Indian nuclear weapons testing, Pakistan conducted its own tests in 1998. The dispute over the state of Kashmir is ongoing, but recent discussions and confidence-building measures may be a start toward lessened tensions.

Economy Pakistan

Economy - overview:

Pakistan, an impoverished and underdeveloped country, has suffered from decades of internal political disputes, low levels of foreign investment, and a costly, ongoing confrontation with neighboring India. However, IMF-approved government policies, bolstered by generous foreign assistance and renewed access to global markets since late 2001, have generated solid macroeconomic recovery the last two years. The government has made substantial inroads in macroeconomic reform since 2000, although progress on more politically sensitive reforms has slowed. For example, in the third and final year of its \$1.3 billion IMF Poverty Reduction and Growth Facility, Islamabad has continued to require waivers for energy sector reforms. While long-term prospects remain uncertain, given Pakistan's low level of development, medium-term prospects for job creation and poverty reduction are the best in nearly a decade. Islamabad has raised development spending from about 2% of GDP in the 1990s to 4% in 2003, a necessary step towards reversing the broad underdevelopment of its social sector. GDP growth is heavily dependent on rain-fed crops, and last year's end to a four-year drought should support moderate agricultural growth for the next few years. Foreign exchange reserves continued to reach new levels in

2003, supported by robust export growth and steady worker remittances.

Kashmir remains the world's largest and most highly militarized territorial dispute with portions under the de facto administration of China (Aksai Chin), India (Jammu and Kashmir), and Pakistan (Azad Kashmir, and Northern Areas), but recent discussions and confidence-building measures among the parties are beginning to defuse tensions; India does not recognize Pakistan's ceding lands to China in 1965 boundary agreement; disputes with Pakistan over Indus River water sharing and the terminus of the Sir Creek Estuary at the mouth of the Rann of Kutch, which prevents maritime boundary delimitation; Pakistani maps continue to show Junagadh claim in India's Gujarat State; despite largely successful UN efforts at voluntary repatriation, 2-3 million Afghan refugees continue to reside in Pakistan, many at their own choosing; Pakistan has sent troops into remote tribal areas to control the border with Afghanistan to stem organized terrorist and other illegal cross-border activities; regular meetings with Afghan and coalition allies aim to resolve periodic claims of boundary encroachments

@Palmyra Atoll

Introduction Palmyra Atoll

Background:

The Kingdom of Hawaii claimed the atoll in 1862, and the US included it among the Hawaiian Islands when it annexed the archipelago in 1898. The Hawaii Statehood Act of 1959 did not include Palmyra Atoll, which is now privately owned by the Nature Conservancy. This organization is managing the atoll as a nature preserve. The lagoons and surrounding waters within the 12 nautical mile US territorial seas were transferred to the US Fish and Wildlife Service and were designated a National Wildlife Refuge in January 2001.

Introduction Panama

Background:

With US backing, Panama seceded from Colombia in 1903 and promptly signed a treaty with the US allowing for the construction of a canal and US sovereignty over a strip of land on either side of the structure (the Panama Canal Zone). The Panama Canal was built by the US Army Corps of Engineers between 1904 and 1914. On 7 September 1977, an agreement was signed for the complete transfer of the Canal from the US to Panama by the end of 1999. Certain portions of the Zone and increasing responsibility over the Canal were turned over in the intervening years. With US help, dictator Manuel NORIEGA was deposed in 1989. The entire Panama Canal, the area supporting the Canal, and remaining US military bases were turned over to Panama by or on 31 December 1999.

Economy Panama

Economy - overview:

Panama's dollarised economy rests primarily on a well-developed services sector that accounts for three-fourths of GDP. Services include operating the Panama Canal, banking, the Colon Free Zone, insurance, container ports, flagship registry, and tourism. A slump in Colon Free Zone and agricultural exports, the global slowdown, and the withdrawal of US military forces held back economic growth in 2000-03. The government has been backing public works programs, tax reforms, new regional trade agreements, and development of tourism in order to stimulate growth. Unemployment remains at an unacceptably high level.

@Papua New Guinea

Introduction Papua New Guinea

Background:

The eastern half of the island of New Guinea - second largest in the world - was divided between Germany (north) and the UK (south) in 1885. The latter area was transferred to Australia in 1902, which occupied the northern portion during World War I and continued to administer the combined areas until independence in 1975. A nine-year secessionist revolt on the island of Bougainville ended in 1997 after claiming some 20,000 lives.

Economy Papua New Guinea

Economy - overview:

Papua New Guinea is richly endowed with natural resources, but exploitation has been hampered by rugged terrain and the high cost of developing infrastructure. Agriculture provides a subsistence livelihood for 85% of the population. Mineral deposits, including oil, copper, and gold, account for 72% of export earnings. The economy has faltered over the past four years. Former Prime Minister Mekere MORAUTA had tried to restore integrity to state institutions, to stabilize the kina, restore stability to the national budget, to privatize public enterprises where appropriate, and to ensure ongoing peace on Bougainville. The government has had considerable success in attracting international support, specifically gaining the backing of the IMF and the World Bank in securing development assistance loans. Challenges face Prime Minister Michael SOMARE, including curbing inflation, gaining further investor confidence, continuing efforts to privatize government assets, maintaining the support of members of Parliament, and balancing relations with Australia, the former colonial ruler.

@Paracel Islands

Introduction Paracel Islands

Background:

The Paracel Islands are surrounded by productive fishing grounds and by potential oil and gas reserves. In 1932, French Indochina annexed the islands and set up a weather station on Pattle Island; maintenance was continued by its successor, Vietnam. China has occupied the Paracel Islands since 1974, when its troops seized a South Vietnamese garrison occupying the western islands. The islands are claimed by Taiwan and Vietnam.

@Paraguay

Introduction Paraguay

Background:

In the disastrous War of the Triple Alliance (1865-70), Paraguay lost two-thirds of all adult males and much of its territory. It stagnated economically for the next half century. In the Chaco War of 1932-35, large, economically important areas were won from Bolivia. The 35-year military dictatorship of Alfredo STROESSNER was overthrown in 1989, and, despite a marked increase in political infighting in recent years, relatively free and regular presidential elections have been held since then.

Economy Paraguay

Economy - overview:

Paraguay has a market economy marked by a large informal sector. The informal sector features both reexport of imported consumer goods to neighboring countries as well as the activities of thousands of microenterprises and urban street vendors. Because of the importance of the informal sector, accurate economic measures are difficult to obtain. A large percentage of the population derives their living from agricultural activity, often on a subsistence basis. The formal economy grew by an average of about 3% annually in 1995-97; but GDP declined slightly in 1998, 1999, and 2000, rose slightly in 2001, only to fall again in 2002. On a per capita basis, real income has stagnated at 1980 levels. Most observers attribute Paraguay's poor economic performance to political uncertainty, corruption, lack of progress on structural

reform, substantial internal and external debt, and deficient infrastructure.

Introduction Peru

Background:

Ancient Peru was the seat of several prominent Andean civilizations, most notably that of the Incas whose empire was captured by the Spanish conquistadors in 1533. Peruvian independence was declared in 1821, and remaining Spanish forces defeated in 1824. After a dozen years of military rule, Peru returned to democratic leadership in 1980, but experienced economic problems and the growth

of a violent insurgency. President Alberto FUJIMORI's election in 1990 ushered in a decade that saw a dramatic turnaround in the economy and significant progress in curtailing guerrilla activity. Nevertheless, the president's increasing reliance on authoritarian measures and an economic slump in the late 1990s generated mounting dissatisfaction with his regime. FUJIMORI won reelection to a third term in the spring of 2000, but international pressure and corruption scandals led to his ouster by Congress in November of that year. A caretaker government oversaw new elections in the spring of 2001, which ushered in Alejandro TOLEDO as the new head of government; his presidency has been hampered by allegations of corruption.

Economy Peru

Economy - overview:
Peru's economy reflects its varied geography - an arid coastal
region, the Andes further inland, and tropical lands bordering
Colombia and Brazil. Abundant mineral resources are found in the
mountainous areas, and Peru's coastal waters provide excellent
fishing grounds. However, overdependence on minerals and metals
subjects the economy to fluctuations in world prices, and a lack of
infrastructure deters trade and investment. After several years of
inconsistent economic performance, the Peruvian economy was one of
the fastest growing in Latin America in 2002 and 2003, growing by 5%
and 4%, respectively, with the exchange rate stable and an annual
inflation lower than 2%. Foreign direct investment also was strong,
thanks to the ongoing Camisea natural gas pipeline project
(scheduled to begin operations in 2004) and investments in gold

mining. Risk premiums on Peruvian bonds on secondary markets reached historically low levels in late 2003, reflecting investor optimism and the government's fiscal restraint. Despite the strong macroeconomic performance, political intrigue and allegations of corruption continued to swirl in 2003, with the TOLEDO administration growing increasingly unpopular, and local and foreign concern rising that the political turmoil could place the country's hard-won fiscal and financial stability at risk. Moreover, as of late 2003, unemployment had yet to respond to the strong growth in economic activity, owing in part to rigid labor market regulations that act as an impediment to hiring.

Introduction Philippines

Background:

The Philippine Islands became a Spanish colony during the 16th century; they were ceded to the US in 1898 following the Spanish-American War. In 1935 the Philippines became a self-governing commonwealth. Manuel QUEZON was elected President and

was tasked with preparing the country for independence after a 10-year transition. In 1942 the islands fell under Japanese occupation during WWII, and US forces and Filipinos fought together during 1944-45 to regain control. On 4 July 1946 the Philippines attained their independence. The 21-year rule of Ferdinand MARCOS ended in 1986, when a widespread popular rebellion forced him into exile and installed Corazon AQUINO as president. Her presidency was hampered by several coup attempts, which prevented a return to full political stability and economic development. Fidel RAMOS was elected president in 1992 and his administration was marked by greater stability and progress on economic reforms. In 1992, the US closed its last military bases on the islands. Joseph ESTRADA was elected president in 1998, but was succeeded by his vice-president, Gloria MACAPAGAL-ARROYO, in January 2001 after Estrada's stormy impeachment trial on corruption charges broke down and widespread demonstrations led to his ouster. MACAPAGAL-ARROYO was elected to a

six-year term in May 2004. The Philippine Government faces threats from armed communist insurgencies and from Muslim separatists in the south.

Economy Philippines

Economy - overview:
The Philippines was less severely affected by the Asian financial crisis of 1998 than its neighbors, aided in part by annual remittances of \$6-7 billion from overseas workers. From a 0.6% decline in 1998, GDP expanded by 2.4% in 1999, and 4.4% in 2000, but slowed to 3.2% in 2001 in the context of a global economic slowdown, an export slump, and political and security concerns. GDP growth accelerated to 4.4% in 2002 and 4.2% in 2003, reflecting the

continued resilience of the service sector, gains in industrial output, and improved exports. Nonetheless, it will take a higher, sustained growth path to make appreciable progress in poverty alleviation given the Philippines' high annual population growth rate and unequal distribution of income. The MACAPAGAL-ARROYO Administration has promised to continue economic reforms to help the Philippines match the pace of development in the newly industrialized countries of East Asia. The strategy includes improving the infrastructure, strengthening tax collection to bolster government revenues, furthering deregulation and privatization of the economy, enhancing the viability of the financial system, and increasing trade integration with the region. Prospects for 2004 will depend on the economic performance of two major trading partners, the US and Japan, and on increased confidence on the part of the international investment community.

@Pitcairn Islands

Introduction Pitcairn Islands

Background:

Pitcairn Island was discovered in 1767 by the British and settled in 1790 by the Bounty mutineers and their Tahitian companions. Pitcairn was the first Pacific island to become a British colony (in 1838) and today remains the last vestige of that empire in the South Pacific. Outmigration, primarily to New Zealand, has thinned the population from a peak of 233 in 1937 to less than 50 today.

Economy Pitcairn Islands

Economy - overview:

The inhabitants of this tiny isolated economy exist on fishing, subsistence farming, handicrafts, and postage stamps. The fertile soil of the valleys produces a wide variety of fruits and vegetables, including citrus, sugarcane, watermelons, bananas, yams, and beans. Bartering is an important part of the economy. The major sources of revenue are the sale of postage stamps to collectors and the sale of handicrafts to passing ships.

Introduction Poland

Background:

Poland is an ancient nation that was conceived around the middle of the 10th century. Its golden age occurred in the 16th century. During the following century, the strengthening of the gentry and internal disorders weakened the nation. In a series of agreements between 1772 and 1795, Russia, Prussia, and Austria partitioned Poland amongst themselves. Poland regained its independence in 1918 only to be overrun by Germany and the Soviet Union in World War II. It became a Soviet satellite state following the war, but its government was comparatively tolerant and progressive. Labor turmoil in 1980 led to the formation of the independent trade union "Solidarity" that over time became a political force and by 1990 had swept parliamentary elections and the presidency. A "shock therapy" program during the early 1990s enabled the country to transform its

economy into one of the most robust in Central Europe, but Poland currently suffers low GDP growth and high unemployment. Solidarity suffered a major defeat in the 2001 parliamentary elections when it failed to elect a single deputy to the lower house of Parliament, and the new leaders of the Solidarity Trade Union subsequently pledged to reduce the Trade Union's political role. Poland joined NATO in 1999 and the European Union in 2004.

Environment - current issues:

situation has improved since 1989 due to decline in heavy industry and increased environmental concern by post-Communist governments; air pollution nonetheless remains serious because of sulfur dioxide emissions from coal-fired power plants, and the resulting acid rain has caused forest damage; water pollution from industrial and municipal sources is also a problem, as is disposal of hazardous wastes; pollution levels should continue to decrease as industrial establishments bring their facilities up to European Union code, but at substantial cost to business and the government

Economy Poland

Economy - overview:

Poland has steadfastly pursued a policy of economic liberalization throughout the 1990s and today stands out as a success story among transition economies. Even so, much remains to be done. The

privatization of small and medium state-owned companies and a liberal law on establishing new firms has encouraged the development of the private business sector, but legal and bureaucratic obstacles alongside persistent corruption are hampering its further development. Poland's agricultural sector remains handicapped by structural problems, surplus labor, inefficient small farms, and lack of investment. Restructuring and privatization of "sensitive sectors" (e.g., coal, steel, railroads, and energy), while recently initiated, have stalled. Reforms in health care, education, the pension system, and state administration have resulted in larger than expected fiscal pressures. Further progress in public finance depends mainly on privatization of Poland's remaining state sector, the reduction of state employment, and an overhaul of the tax code to incorporate the growing gray economy and farmers, most of whom pay no tax. The government's determination to enter the EU has shaped most aspects of its economic policy and new legislation; in a nationwide referendum in November 2003, 77% of the voters voted in favor of Poland's EU accession, now scheduled for May 2004. Improving Poland's export competitiveness and containing the internal budget deficit are top priorities. Due to political uncertainty, the zloty has recently depreciated in relation to the euro, while currencies of the other euro-zone aspirants have been appreciating. GDP per capita equals that of the three Baltic states.

Introduction Portugal

Background:
Following its heyday as a world power during the 15th and 16th
centuries, Portugal lost much of its wealth and status with the
destruction of Lisbon in a 1755 earthquake, occupation during the
Napoleonic Wars, and the independence in 1822 of Brazil as a colony.
A 1910 revolution deposed the monarchy; for most of the next six
decades, repressive governments ran the country. In 1974, a
left-wing military coup installed broad democratic reforms. The
following year, Portugal granted independence to all of its African

colonies. Portugal is a founding member of NATO and entered the EC (now the EU) in 1986.

Economy Portugal

Economy - overview:

Portugal has become a diversified and increasingly service-based economy since joining the European Community in 1986. Over the past decade, successive governments have privatized many state-controlled

firms and liberalized key areas of the economy, including the financial and telecommunications sectors. The country qualified for the Economic and Monetary Union (EMU) in 1998 and began circulating the euro on 1 January 2002 along with 11 other EU member economies. Economic growth has been above the EU average for much of the past decade, but fell back in 2001-03. GDP per capita stands at 70% of that of the leading EU economies. A poor educational system, in particular, has been an obstacle to greater productivity and growth. Portugal has been increasingly overshadowed by lower-cost producers in Central Europe and Asia as a target for foreign direct investment. The coalition government faces tough choices in its attempts to boost Portugal's economic competitiveness and to keep the budget deficit within the 3% EU ceiling.

@Puerto Rico

Introduction Puerto Rico

Background:

Populated for centuries by aboriginal peoples, the island was claimed by the Spanish Crown in 1493 following Columbus' second voyage to the Americas. In 1898, after 400 years of colonial rule that saw the indigenous population nearly exterminated and African slave labor introduced, Puerto Rico was ceded to the US as a result of the Spanish-American War. Puerto Ricans were granted US citizenship in 1917. Popularly-elected governors have served since 1948. In 1952, a constitution was enacted providing for internal self government. In plebiscites held in 1967, 1993, and 1998, voters chose to retain commonwealth status.

Economy Puerto Rico

Economy - overview:

Puerto Rico has one of the most dynamic economies in the Caribbean region. A diverse industrial sector has far surpassed agriculture as the primary locus of economic activity and income. Encouraged by duty-free access to the US and by tax incentives, US firms have invested heavily in Puerto Rico since the 1950s. US minimum wage laws apply. Sugar production has lost out to dairy production and other livestock products as the main source of income in the agricultural sector. Tourism has traditionally been an important source of income, with estimated arrivals of nearly 5 million tourists in 1999. Growth fell off in 2001-03, largely due to the slowdown in the US economy.

Introduction Qatar

Background:

Ruled by the Al Thani family since the mid-1800s, Qatar transformed itself from a poor British protectorate noted mainly for pearling into an independent state with significant oil and natural gas revenues. During the late 1980s and early 1990s, the Qatari economy was crippled by a continuous siphoning off of petroleum revenues by the amir, who had ruled the country since 1972. He was overthrown by his son, the current Amir HAMAD bin Khalifa Al Thani, in a bloodless coup in 1995. In 2001, Qatar resolved its longstanding border disputes with both Bahrain and Saudi Arabia. Oil and natural gas revenues enable Qatar to have one of the highest per capita incomes in the world.

Economy Qatar

Economy - overview:

Oil and gas account for more than 55% of GDP, roughly 85% of export earnings, and 70% of government revenues. Oil and gas have given Qatar a per capita GDP about 80% of that of the leading West European industrial countries. Proved oil reserves of 14.5 billion barrels should ensure continued output at current levels for 23 years. Qatar's proved reserves of natural gas exceed 17.9 trillion cubic meters, more than 5% of the world total and third largest in

the world. Long-term goals feature the development of offshore natural gas reserves to offset the ultimate decline in oil production. Since 2000, Qatar has consistently posted trade surpluses largely because of high oil prices and increased natural gas exports.

Introduction Reunion

Background:

The Portuguese discovered the uninhabited island in 1513. From the 17th to the 19th centuries, French immigration, supplemented by influxes of Africans, Chinese, Malays, and Malabar Indians, gave the island its ethnic mix. The opening of the Suez Canal in 1869 cost the island its importance as a stopover on the East Indies trade route.

Economy Reunion

Economy - overview:

The economy has traditionally been based on agriculture, but services now dominate. Sugarcane has been the primary crop for more than a century, and in some years it accounts for 85% of exports. The government has been pushing the development of a tourist industry to relieve high unemployment, which amounts to one-third of the labor force. The gap in Reunion between the well-off and the poor is extraordinary and accounts for the persistent social tensions. The white and Indian communities are substantially better off than other segments of the population, often approaching European standards, whereas minority groups suffer the poverty and unemployment typical of the poorer nations of the African continent. The outbreak of severe rioting in February 1991 illustrates the seriousness of socioeconomic tensions. The economic well-being of Reunion depends heavily on continued financial assistance from France.

Introduction Romania

Background:

The principalities of Wallachia and Moldavia - for centuries under the suzerainty of the Turkish Ottoman Empire - secured their autonomy in 1856; they united in 1859 and a few years later adopted the new name of Romania. The country gained full independence in 1878. It joined the Allied Powers in World War I and acquired new territories following the conflict. In 1940, it allied with the Axis powers and participated in the 1941 German invasion of the USSR. Three years later, overrun by the Soviets, Romania signed an armistice. The post-war Soviet occupation led to the formation of a Communist "people's republic" in 1947 and the abdication of the king. The decades-long rule of dictator Nicolae CEAUSESCU, who took power in 1965, and his Securitate police state became increasingly oppressive and draconian through the 1980s. CEAUSESCU was overthrown

and executed in late 1989. Former Communists dominated the government until 1996, when they were swept from power by a fractious coalition of centrist parties. In 2000, the center-left Social Democratic Party (PSD) became Romania's leading party, governing with the support of the Democratic Union of Hungarians in Romania (UDMR). The opposition center-right alliance formed by the National Liberal Party (PNL) and the Democratic Party (PD) scored a surprise victory over the ruling PSD in December 2004 presidential elections. The PNL-PD alliance maintains a parliamentary majority with the support of the UDMR, the Humanist Party (PUR), and various ethnic minority groups. Although Romania completed accession talks

with the European Union (EU) in December 2004, it must continue to address rampant corruption - while invigorating lagging economic and democratic reforms - before it can achieve its hope of joining the EU, tentatively set for 2007. Romania joined NATO in March of 2004.

Economy Romania

Economy - overview:

Romania began the transition from Communism in 1989 with a largely obsolete industrial base and a pattern of output unsuited to the country's needs. The country emerged in 2000 from a punishing three-year recession thanks to strong demand in EU export markets. Despite the global slowdown in 2001-02, strong domestic activity in construction, agriculture, and consumption have kept growth above 4%. An IMF standby agreement, signed in 2001, was accompanied by slow but palpable gains in privatization, deficit reduction, and the curbing of inflation. The IMF Board approved Romania's completion of the standby agreement in October 2003, the first time Romania had successfully concluded an IMF agreement since the 1989 revolution.

In July 2004, the Executive Board of the IMF approved a 24-month standby arrangement for \$367 million. The Romanian authorities do not intend to draw on this arrangement, viewing it as a precaution. Meanwhile, recent macroeconomic gains have done little to address Romania's widespread poverty, and corruption and red tape handicap the business environment.

@Russia

Introduction Russia

Background:

Founded in the 12th century, the Principality of Muscovy, was able to emerge from over 200 years of Mongol domination (13th-15th centuries) and to gradually conquer and absorb surrounding principalities. In the early 17th century, a new Romanov Dynasty continued this policy of expansion across Siberia to the Pacific. Under PETER I (ruled 1682-1725), hegemony was extended to the Baltic Sea and the country was renamed the Russian Empire. During the 19th century, more territorial acquisitions were made in Europe and Asia. Repeated devastating defeats of the Russian army in World War I led to widespread rioting in the major cities of the Russian Empire and to the overthrow in 1917 of the imperial household. The Communists under Vladimir LENIN seized power soon after and formed the USSR. The brutal rule of Josef STALIN (1928-53) strengthened Russian dominance of the Soviet Union at a cost of tens of millions of lives. The Soviet economy and society stagnated in the following decades until General Secretary Mikhail GORBACHEV (1985-91) introduced glasnost (openness) and perestroika (restructuring) in an attempt to modernize Communism, but his initiatives inadvertently released forces that by December 1991 splintered the USSR into 15 independent republics. Since then, Russia has struggled in its efforts to build a democratic political system and market economy to replace the strict social, political, and economic controls of the Communist period. While some progress has been made on the economic front, recent years have seen a recentralization of power under Vladimir PUTIN and an erosion in nascent democratic institutions. A determined guerrilla conflict still plagues Russia in Chechnya.

Economy Russia

Economy - overview:

Russia ended 2003 with its fifth straight year of growth, averaging 6.5% annually since the financial crisis of 1998. Although high oil prices and a relatively cheap ruble are important drivers of this economic rebound, since 2000 investment and consumer-driven demand have played a noticeably increasing role. Real fixed capital investments have averaged gains greater than 10% over the last four years and real personal incomes have averaged increases over 12%. Russia has also improved its international financial position since the 1998 financial crisis, with its foreign debt declining from 90% of GDP to around 28%. Strong oil export earnings have allowed Russia

to increase its foreign reserves from only \$12 billion to some \$80 billion. These achievements, along with a renewed government effort to advance structural reforms, have raised business and investor confidence in Russia's economic prospects. Nevertheless, serious problems persist. Oil, natural gas, metals, and timber account for more than 80% of exports, leaving the country vulnerable to swings in world prices. Russia's manufacturing base is dilapidated and must be replaced or modernized if the country is to achieve broad-based economic growth. Other problems include a weak banking system, a poor business climate that discourages both domestic and foreign investors, corruption, local and regional government intervention in the courts, and widespread lack of trust in institutions. In addition, a string of investigations launched against a major Russian oil company, culminating with the arrest of its CEO in the fall of 2003, have raised concerns by some observers that President PUTIN is granting more influence to forces within his government that desire to reassert state control over the economy.

Transnational Issues Russia

Disputes - international:

China and Russia in 2004 resolved their last border dispute over islands in the Amur and Argun Rivers, but details on demarcation have not yet been worked-out; the sovereignty dispute over the islands of Etorofu, Kunashiri, Shikotan, and the Habomai group known in Japan as the "Northern Territories" and in Russia as the "Southern Kurils," occupied by the Soviet Union in 1945, now administered by Russia, and claimed by Japan, remains the primary sticking point to signing a peace treaty formally ending World War II hostilities; about a third of the boundary with Georgia remains undelimited and none of it demarcated with several small, strategic segments remaining in dispute; OSCE observers monitor volatile areas such as the Pankisi Gorge in the Akhmeti region and the Kodori Gorge in Abkhazia; equidistant seabed treaties have been signed with Azerbaijan and Kazakhstan in the Caspian Sea but no consensus on dividing the water column among the littoral states; Russia and Norway dispute their maritime limits in the Barents Sea and Russia's fishing rights beyond Svalbard's territorial limits within the Svalbard Treaty zone; Russia continues to reject signing and ratifying the joint 1996 technical border agreement with Estonia; the Russian Parliament refuses to consider ratification of the boundary treaties with Estonia and Latvia, but in May 2003, ratified land and maritime boundary treaty with Lithuania, which ratified the

1997 treaty in 1999, legalizing limits of former Soviet republic borders; a simplified transit regime was adopted in July 2003 for residents of the Kaliningrad coastal exclave to travel through Lithuania to Russia; delimitation of land boundary with Ukraine is complete, but demarcation remains unresolved; Ukraine protests Russia's construction of a causeway in the direction of Ukrainian-administered Tuzla Island in the Kerch Strait; Kazakhstan and Russia will complete delimitation of their interstate border in 2004 and demarcation is underway; Russian Duma has not yet ratified 1990 Maritime Boundary Agreement with the US in the Bering Sea

Refugees and internally displaced persons:
IDPs: 368,000 (displacement from Chechnya and North Ossetia) (2004)

Illicit drugs:
limited cultivation of illicit cannabis and opium poppy and producer of methamphetamine, mostly for domestic consumption; government has active illicit crop eradication program; used as transshipment point for Asian opiates, cannabis, and Latin American cocaine bound for growing domestic markets, to a lesser extent Western and Central Europe, and occasionally to the US; major source of heroin precursor chemicals; corruption and organized crime are key concerns; heroin increasingly popular in domestic market

Introduction Rwanda

Background:

In 1959, three years before independence from Belgium, the majority ethnic group, the Hutus, overthrew the ruling Tutsi king. Over the next several years, thousands of Tutsis were killed, and some 150,000 driven into exile in neighboring countries. The children of these exiles later formed a rebel group, the Rwandan Patriotic Front (RPF), and began a civil war in 1990. The war, along with several political and economic upheavals, exacerbated ethnic tensions, culminating in April 1994 in the genocide of roughly 800,000 Tutsis and moderate Hutus. The Tutsi rebels defeated the Hutu regime and ended the killing in July 1994, but approximately 2 million Hutu refugees - many fearing Tutsi retribution - fled to neighboring Burundi, Tanzania, Uganda, and the former Zaire. Since then, most of the refugees have returned to Rwanda, but about 10,000 that remain in the neighboring Democratic Republic of the Congo have formed an extremist insurgency bent on retaking Rwanda, much as the RPF tried in 1990. Despite substantial international assistance and political reforms - including Rwanda's first local elections in March 1999 and its first post-genocide presidential and legislative elections in August and September 2003, respectively - the country continues to struggle to boost investment and agricultural output, and ethnic reconciliation is complicated by the real and perceived Tutsi political dominance. Kigali's increasing centralization and intolerance of dissent, the nagging Hutu extremist insurgency across the border, and Rwandan involvement in two wars in recent years in

the neighboring Democratic Republic of the Congo continue to hinder Rwanda's efforts to escape its bloody legacy.

Economy Rwanda

Economy - overview:

Rwanda is a poor rural country with about 90% of the population engaged in (mainly subsistence) agriculture. It is the most densely populated country in Africa; landlocked with few natural resources and minimal industry. Primary foreign exchange earners are coffee and tea. The 1994 genocide decimated Rwanda's fragile economic base, severely impoverished the population, particularly women, and eroded the country's ability to attract private and external investment. However, Rwanda has made substantial progress in stabilizing and rehabilitating its economy to pre-1994 levels, although poverty levels are higher now. GDP has rebounded, and inflation has been curbed. Export earnings, however, have been hindered by low beverage prices, depriving the country of much needed hard currency. Attempts to diversify into non-traditional agriculture exports such as flowers and vegetables have been stymied by a lack of adequate transportation infrastructure. Despite Rwanda's fertile ecosystem, food production often does not keep pace with population growth, requiring food to be imported. Rwanda continues to receive substantial aid money and was approved for IMF-World Bank Heavily Indebted Poor Country (HIPC) initiative debt relief in late 2000. But Kigali's high defense expenditures cause tension between the government and international donors and lending agencies.

@Saint Helena

Introduction Saint Helena

Background:

Uninhabited when first discovered by the Portuguese in 1502, Saint Helena was garrisoned by the British during the 17th century. It acquired fame as the place of Napoleon BONAPARTE's exile, from 1815 until his death in 1821, but its importance as a port of call declined after the opening of the Suez Canal in 1869. Ascension Island is the site of a US Air Force auxiliary airfield; Gough Island has a meteorological station.

@Saint Kitts and Nevis

Introduction Saint Kitts and Nevis

Background:

First settled by the British in 1623, the islands became an associated state with full internal autonomy in 1967. The island of Anguilla rebelled and was allowed to secede in 1971. Saint Kitts and Nevis achieved independence in 1983. In 1998, a vote in Nevis on a referendum to separate from Saint Kitts fell short of the two-thirds majority needed. Nevis is once more trying to separate from the Saint Kitts.

Economy Saint Kitts and Nevis

Economy - overview:
Sugar was the traditional mainstay of the Saint Kitts economy until the 1970s. Although the crop still dominates the agricultural sector, activities such as tourism, export-oriented manufacturing, and offshore banking have assumed larger roles in the economy. As tourism revenues are now the chief source of the islands' foreign exchange, a decline in stopover tourist arrivals following the 11 September 2001 terrorist attacks has eroded government finances. The

opening of a 1,000+ bed Marriott hotel in February 2003 was expected to bring in much-needed revenue.

Economy Saint Pierre and Miquelon

Economy - overview:

The inhabitants have traditionally earned their livelihood by fishing and by servicing fishing fleets operating off the coast of Newfoundland. The economy has been declining, however, because of disputes with Canada over fishing quotas and a steady decline in the number of ships stopping at Saint Pierre. In 1992, an arbitration panel awarded the islands an exclusive economic zone of 12,348 sq km to settle a longstanding territorial dispute with Canada, although it represents only 25% of what France had sought. The islands are heavily subsidized by France to the great betterment of living standards. The government hopes an expansion of tourism will boost economic prospects. Recent test drilling for oil may pave the way for development of the energy sector.

Economy Saint Vincent and the Grenadines

Economy - overview:

Economic growth in this lower-middle-income country hinges upon seasonal variations in the agricultural and tourism sectors.

Tropical storms wiped out substantial portions of crops in 1994,

1995, and 2002, and tourism in the Eastern Caribbean has suffered low arrivals following 11 September 2001. Saint Vincent is home to a small offshore banking sector and has moved to adopt international regulatory standards. Saint Vincent is also a large producer of marijuana and is being used as a transshipment point for illegal narcotics from South America.

Introduction Samoa

Background:

New Zealand occupied the German protectorate of Western Samoa at the outbreak of World War I in 1914. It continued to administer the islands as a mandate and then as a trust territory until 1962, when the islands became the first Polynesian nation to reestablish independence in the 20th century. The country dropped the "Western" from its name in 1997.

Economy Samoa

Economy - overview:

The economy of Samoa has traditionally been dependent on development aid, family remittances from overseas, and agriculture and fishing. The country is vulnerable to devastating storms. Agriculture employs two-thirds of the labor force, and furnishes 90% of exports, featuring coconut cream, coconut oil, and copra. The manufacturing sector mainly processes agricultural products. The decline of fish stocks in the area is a continuing problem. Tourism is an expanding sector, accounting for 25% of GDP; about 88,000 tourists visited the islands in 2001. The Samoan Government has called for deregulation of the financial sector, encouragement of investment, and continued fiscal discipline, meantime protecting the environment. Observers point to the flexibility of the labor market as a basic strength for future economic advances. Foreign reserves are in a relatively healthy state, the external debt is stable, and inflation is low.

@San Marino

Introduction San Marino

Background:

The third smallest state in Europe (after the Holy See and Monaco) also claims to be the world's oldest republic. According to tradition, it was founded by a Christian stonemason named Marino in 301 A.D. San Marino's foreign policy is aligned with that of Italy. Social and political trends in the republic also track closely with those of its larger neighbor.

@Sao Tome and Principe

Introduction Sao Tome and Principe

Background:

Discovered and claimed by Portugal in the late 15th century, the islands' sugar-based economy gave way to coffee and cocoa in the 19th century - all grown with plantation slave labor, a form of which lingered into the 20th century. Although independence was achieved in 1975, democratic reforms were not instituted until the late 1980s. Though the first free elections were held in 1991, the political environment has been one of continued instability with frequent changes in leadership and coup attempts in 1995 and 2003. The recent discovery of oil in the Gulf of Guinea is likely to have a significant impact on the country's economy.

Economy Sao Tome and Principe

Economy - overview:

This small poor island economy has become increasingly dependent on cocoa since independence 29 years ago. Cocoa production has substantially declined in recent years because of drought and mismanagement, but strengthening prices helped boost export earnings in 2003. Sao Tome has to import all fuels, most manufactured goods, consumer goods, and a substantial amount of food. Over the years, it has been unable to service its external debt and has had to depend on concessional aid and debt rescheduling. Sao Tome benefited from \$200 million in debt relief in December 2000 under the Highly Indebted Poor Countries (HIPC) program. Sao Tome's success in implementing structural reforms has been rewarded by international donors, who pledged increased assistance in 2001. Considerable potential exists for development of a tourist industry, and the government has taken steps to expand facilities in recent years. The government also has attempted to reduce price controls and subsidies. Sao Tome is optimistic about the development of petroleum resources in its territorial waters in the oil-rich Gulf of Guinea; production could begin as early as 2004.

Introduction Saudi Arabia

Background:

In 1902, ABD AL-AZIZ bin Abd al-Rahman Al Saud captured Riyadh and set out on a 30-year campaign to unify the Arabian Peninsula. Today, the monarchy is ruled by a son of ABD AL-AZIZ, and the country's Basic Law stipulates that the throne shall remain in the hands of the aging sons and grandsons of the kingdom's founder. Following Iraq's invasion of Kuwait in 1990, Saudi Arabia accepted the Kuwaiti royal family and 400,000 refugees while allowing Western and Arab troops to deploy on its soil for the liberation of Kuwait the following year. The continuing presence of foreign troops on Saudi soil after Operation Desert Storm remained a source of tension between the royal family and the public until the US military's near-complete withdrawal to neighboring Qatar in 2003. The first major terrorist attacks in Saudi Arabia in several years, which occurred in May and November 2003, prompted renewed efforts on the part of the Saudi government to counter domestic terrorism and extremism, which also coincided with a slight upsurge in media

freedom and announcement of government plans to phase in partial political representation. A burgeoning population, aquifer depletion, and an economy largely dependent on petroleum output and prices are all ongoing governmental concerns.

Economy Saudi Arabia

Economy - overview:

This is an oil-based economy with strong government controls over major economic activities. Saudi Arabia has the largest reserves of petroleum in the world (25% of the proved reserves), ranks as the largest exporter of petroleum, and plays a leading role in OPEC. The petroleum sector accounts for roughly 75% of budget revenues, 45% of GDP, and 90% of export earnings. About 40% of GDP comes from the private sector. Roughly five and a half million foreign workers play an important role in the Saudi economy, for example, in the oil and service sectors. The government in 1999 announced plans to begin privatizing the electricity companies, which follows the ongoing privatization of the telecommunications company. The government is encouraging private sector growth to lessen the kingdom's dependence on oil and increase employment opportunities for the swelling Saudi population. Priorities for government spending in the short term include additional funds for education and for the water and sewage systems. Economic reforms proceed cautiously because of deep-rooted political and social conservatism.

Introduction Senegal

Background:

Independent from France in 1960, Senegal joined with The Gambia to form the nominal confederation of Senegambia in 1982. However, the envisaged integration of the two countries was never carried out, and the union was dissolved in 1989. Despite peace talks, a southern separatist group sporadically has clashed with government forces since 1982. Senegal has a long history of participating in international peacekeeping.

Economy Senegal

Economy - overview:

In January 1994, Senegal undertook a bold and ambitious economic reform program with the support of the international donor community. This reform began with a 50% devaluation of Senegal's currency, the CFA franc, which was linked at a fixed rate to the French franc. Government price controls and subsidies have been steadily dismantled. After seeing its economy contract by 2.1% in 1993, Senegal made an important turnaround, thanks to the reform program, with real growth in GDP averaging 5% annually during 1995-2003. Annual inflation had been pushed down to the low single

digits. As a member of the West African Economic and Monetary Union (WAEMU), Senegal is working toward greater regional integration with a unified external tariff. Senegal also realized full Internet connectivity in 1996, creating a miniboom in information technology-based services. Private activity now accounts for 82% of GDP. On the negative side, Senegal faces deep-seated urban problems of chronic unemployment, trade union militancy, juvenile delinquency, and drug addiction.

@Serbia and Montenegro

Introduction Serbia and Montenegro

Background:

The Kingdom of Serbs, Croats, and Slovenes was formed in 1918; its name was changed to Yugoslavia in 1929. Occupation by Nazi Germany in 1941 was resisted by various paramilitary bands that fought each other as well as the invaders. The group headed by Marshal TITO took full control upon German expulsion in 1945. Although Communist, his new government and its successors (he died in 1980) managed to steer their own path between the Warsaw Pact nations and the West for the next four and a half decades. In the early 1990s, post-TITO Yugoslavia began to unravel along ethnic lines: Slovenia, Croatia, Macedonia, and Bosnia and Herzegovina were recognized as independent states in 1992. The remaining republics of Serbia and Montenegro declared a new "Federal Republic of Yugoslavia" (FRY) in April 1992 and, under President Slobodan MILOSEVIC, Serbia led various military intervention efforts to unite ethnic Serbs in neighboring republics into a "Greater Serbia." All of these efforts were ultimately unsuccessful and led to Yugoslavia being ousted from the UN in 1992. In 1998-99, massive expulsions by FRY forces and Serb paramilitaries of ethnic Albanians living in Kosovo provoked an international response, including the NATO bombing of Serbia and the stationing of a NATO-led force (KFOR), in Kosovo. Federal elections in the fall of

2000, brought about the ouster of MILOSEVIC and installed Vojislav KOSTUNICA as president. The arrest of MILOSEVIC in 2001 allowed for

his subsequent transfer to the International Criminal Tribunal for the Former Yugoslavia in The Hague to be tried for crimes against humanity. In 2001, the country's suspension from the UN was lifted, and it was once more accepted into UN organizations under the name of the Federal Republic of Yugoslavia. Kosovo has been governed by the UN Interim Administration Mission in Kosovo (UNMIK) since June 1999, under the authority of UN Security Council Resolution 1244, pending a determination by the international community of its future status. In 2002, the Serbian and Montenegrin components of Yugoslavia began negotiations to forge a looser relationship. These talks became a reality in February 2003 when lawmakers restructured the country into a loose federation of two republics called Serbia and Montenegro. The Constitutional Charter of Serbia and Montenegro includes a provision that allows either republic to hold a referendum after three years that would allow for their independence from the state union.

Economy Serbia and Montenegro

Economy - overview:

MILOSEVIC-era mismanagement of the economy, an extended period of

economic sanctions, and the damage to Yugoslavia's infrastructure and industry during the NATO airstrikes in 1999 have left the economy only half the size it was in 1990. After the ousting of former Federal Yugoslav President MILOSEVIC in October 2000, the Democratic Opposition of Serbia (DOS) coalition government implemented stabilization measures and embarked on an aggressive market reform program. After renewing its membership in the IMF in December 2000, Yugoslavia continued to reintegrate into the international community by rejoining the World Bank (IBRD) and the European Bank for Reconstruction and Development (EBRD). A World Bank-European Commission sponsored Donors' Conference held in June 2001 raised \$1.3 billion for economic restructuring. An agreement rescheduling the country's \$4.5 billion Paris Club government debts was concluded in November 2001; it wrote off 66% of the debt. The smaller republic of Montenegro severed its economy from federal control and from Serbia during the MILOSEVIC era and continues to maintain its own central bank, uses the euro instead of the Yugoslav dinar as official currency, collects customs tariffs, and manages its own budget. Kosovo, while technically still part of the Federal Republic of Yugoslavia (now Serbia and Montenegro) according to United Nations Security Council Resolution 1244, is largely autonomous under United Nations Interim Administration Mission in Kosovo (UNMIK) and is greatly dependent on the international community and the diaspora for financial and technical assistance. The euro and the Yugoslav dinar are official currencies, and UNMIK collects taxes and manages the budget. The complexity of Serbia and Montenegro political relationships, slow progress in privatization, legal uncertainty over property rights, and scarcity of foreign-investment are holding back Serbia and Montenegro's economy. Arrangements with the IMF, especially requirements for fiscal

discipline, are an important element in policy formation. Severe unemployment remains a key political economic problem.

Transnational Issues Serbia and Montenegro

Disputes - international:
the future status of Kosovo remains an unresolved issue in South Central Europe with Kosovo Albanians overwhelmingly supporting and Serbian officials opposing Kosovo independence; the international community has agreed to begin a process to determine final status only after significant progress has been made in solidifying multi-ethnic democracy in Kosovo as outlined in the policy of "standards before status"; the Contact group (including the US, UK, France, Germany, Italy, and Russia) will review progress on the UNMIK standard around mid-2005; ethnic Albanians in Kosovo resist demarcation of the F.Y.R.O.M. boundary in accordance with the 2000 delimitation treaty, which transfers on net a small amount of land to F.Y.R.O.M.; Serbia and Montenegro have delimited about half of

the boundary with Bosnia and Herzegovina, but sections along the Drina River remain in dispute

Refugees and internally displaced persons:
refugees (country of origin): 99,170 (Bosnia), 188,656 (Croatia)

Introduction Seychelles

Background:
A lengthy struggle between France and Great Britain for the islands ended in 1814, when they were ceded to the latter. Independence came in 1976. Socialist rule was brought to a close with a new constitution and free elections in 1993. The most recent

presidential elections were held 31 August-2 September 2001.
President RENE, who has served since 1977, was re-elected. On 14 April 2004 RENE stepped down and Vice President James MICHEL was sworn in as president.

Economy Seychelles

Economy - overview:

Since independence in 1976, per capita output in this Indian Ocean

archipelago has expanded to roughly seven times the old near-subsistence level. Growth has been led by the tourist sector, which employs about 30% of the labor force and provides more than 70% of hard currency earnings, and by tuna fishing. In recent years the government has encouraged foreign investment in order to upgrade hotels and other services. At the same time, the government has moved to reduce the dependence on tourism by promoting the development of farming, fishing, and small-scale manufacturing. A sharp drop illustrated the vulnerability of the tourist sector in 1991-92 due largely to the Gulf war, and once again following the 11 September 2001 terrorist attacks on the US. Other issues facing the government are the curbing of the budget deficit, including the containment of social welfare costs, and further privatization of public enterprises. Growth slowed in 1998-2002, due to sluggish tourist and tuna sectors. Also, tight controls on exchange rates and the scarcity of foreign exchange have impaired short-term economic prospects. The black market value of the Seychelles rupee is half the official exchange rate; without a devaluation of the currency the tourist sector should remain sluggish as vacationers seek cheaper destinations such as Comoros, Mauritius, and Madagascar.

Introduction Sierra Leone

Background:

The 1991 to 2002 civil war between the government and the Revolutionary United Front (RUF) resulted in tens of thousands of deaths and the displacement of more than 2 million people (well over one-third of the population), many of whom are now refugees in neighboring countries. With the support of the UN peacekeeping force and contributions from the World Bank and international community, demobilization and disarmament of the RUF and Civil Defense Forces (CDF) combatants has been completed. National elections were held in May 2002 and the government continues to slowly reestablish its authority. However, the gradual withdrawal of most UN Mission in Sierra Leone (UNAMSIL) peacekeepers in 2004 and early 2005, deteriorating political and economic conditions in Guinea, and the

tenuous security situation in neighboring Liberia may present challenges to the continuation of Sierra Leone's stability.

Economy Sierra Leone

Economy - overview:

Sierra Leone is an extremely poor African nation with tremendous inequality in income distribution. It does have substantial mineral, agricultural, and fishery resources. However, the economic and social infrastructure is not well developed, and serious social disorders continue to hamper economic development, following a 11-year civil war. About two-thirds of the working-age population engages in subsistence agriculture. Manufacturing consists mainly of the processing of raw materials and of light manufacturing for the domestic market. Plans continue to reopen bauxite and rutile mines shut down during the conflict. The major source of hard currency consists of the mining of diamonds. The fate of the economy depends upon the maintenance of domestic peace and the continued receipt of substantial aid from abroad, which is essential to offset the severe trade imbalance and to supplement government revenues.

Economy Singapore

Economy - overview:
Singapore, a highly developed and successful free market economy, enjoys a remarkably open and corruption-free environment, stable prices, and a high per capita GDP. The economy depends heavily on exports, particularly in electronics and manufacturing. It was hard hit in 2001-03 by the global recession and the slump in the technology sector. The government hopes to establish a new growth path that will be less vulnerable to the external business cycle but is unlikely to abandon efforts to establish Singapore as Southeast Asia's financial and high-tech hub. Fiscal stimulus, low interest

rates, and global economic recovery should lead to much improved growth in 2004.

Introduction Slovakia

Background:

In 1918 the Slovaks joined the closely related Czechs to form Czechoslovakia. Following the chaos of World War II, Czechoslovakia became a Communist nation within Soviet-ruled Eastern Europe. Soviet influence collapsed in 1989 and Czechoslovakia once more became free. The Slovaks and the Czechs agreed to separate peacefully on 1 January 1993. Slovakia joined both NATO and the EU in the spring of 2004.

Economy Slovakia

Economy - overview:

Slovakia has mastered much of the difficult transition from a
centrally planned economy to a modern market economy. The
DZURINDA

government made excellent progress during 2001-03 in macroeconomic
stabilization and structural reform. Major privatizations are nearly
complete, the banking sector is almost completely in foreign hands,
and foreign investment has picked up. Slovakia's economy exceeded
expectations in 2001-03, despite the general European slowdown.
Unemployment, at an unacceptable 15% in 2003, remains the economy's
Achilles heel. The government faces other strong challenges in 2004,
especially cutting the budget deficit, containing inflation, and
strengthening the health care system.

Introduction Slovenia

Background:

The Slovene lands were part of the Holy Roman Empire and Austria until 1918 when the Slovenes joined the Serbs and Croats in forming a new multinational state, renamed Yugoslavia in 1929. After World War II, Slovenia became a republic of the renewed Yugoslavia, which though Communist, distanced itself from Moscow's rule. Dissatisfied with the exercise of power of the majority Serbs, the Slovenes

succeeded in establishing their independence in 1991 after a short 10-day war. Historical ties to Western Europe, a strong economy, and a stable democracy have assisted in Slovenia's transformation to a modern state. Slovenia acceded to both NATO and the EU in the spring of 2004.

Economy Slovenia

Economy - overview:
Slovenia, with its historical ties to Western Europe, enjoys a GDP per capita substantially higher than that of the other transitioning economies of Central Europe. In March 2004, Slovenia became the

first transition country to graduate from borrower status to donor partner at the World Bank. Privatization of the economy proceeded at an accelerated pace in 2002-03, and the budget deficit dropped from 3.0% of GDP in 2002 to 1.6% in 2003. Despite the economic slowdown in Europe in 2001-03, Slovenia maintained 3% growth. Structural reforms to improve the business environment allow for greater foreign participation in Slovenia's economy and help to lower unemployment. Further measures to curb inflation are also needed. Corruption and the high degree of coordination between government, business, and central bank policy are issues of concern in the run-up to Slovenia's scheduled 1 May 2004 accession to the European Union.

@Solomon Islands

Introduction Solomon Islands

Background:

The UK established a protectorate over the Solomon Islands in the 1890s. Some of the bitterest fighting of World War II occurred on these islands. Self-government was achieved in 1976 and independence two years later. Ethnic violence, government malfeasance, and endemic crime have undermined stability and civil society. In June 2003, Prime Minister Sir Allen KEMAKEZA sought the assistance of Australia in reestablishing law and order; the following month, an Australian-led multinational force arrived to restore peace and disarm ethnic militias. The Regional Assistance Mission to the Solomon Islands (RAMSI) has been very effective in restoring law and order and rebuilding government institutions.

Economy Solomon Islands

Economy - overview:
The bulk of the population depends on agriculture, fishing, and forestry for at least part of their livelihood. Most manufactured goods and petroleum products must be imported. The islands are rich in undeveloped mineral resources such as lead, zinc, nickel, and gold. However, severe ethnic violence, the closing of key business enterprises, and an empty government treasury have led to serious economic disarray, indeed near collapse. Tanker deliveries of crucial fuel supplies (including those for electrical generation)

have become sporadic due to the government's inability to pay and attacks against ships. Telecommunications are threatened by the nonpayment of bills and by the lack of technical and maintenance staff many of whom have left the country. The disintegration of law and order left the economy in tatters by mid-2003, and on 24 July 2003 more than 2000 Australian soldiers entered the Solomon Islands to restore order and to facilitate the restoration of basic services.

@Somalia

Introduction Somalia

Background:

The SIAD BARRE regime was ousted in January 1991; turmoil, factional fighting, and anarchy have followed in the years since. In May of 1991, northern clans declared an independent Republic of Somaliland that now includes the administrative regions of Awdal, Woqooyi Galbeed, Togdheer, Sanaag, and Sool. Although not recognized by any government, this entity has maintained a stable existence, aided by the overwhelming dominance of a ruling clan and economic infrastructure left behind by British, Russian, and American military assistance programs. The regions of Bari and Nugaal and northern Mudug comprise a neighboring self-declared autonomous state of Puntland, which has been self-governing since 1998, but does not aim at independence; it has also made strides towards reconstructing a legitimate, representative government, but has suffered some civil strife. Puntland disputes its border with Somaliland as it also claims portions of eastern Sool and Sanaag. Beginning in 1993, a two-year UN humanitarian effort (primarily in the south) was able to alleviate famine conditions, but when the UN withdrew in 1995, having suffered significant casualties, order still had not been restored. The mandate of the Transitional National Government (TNG), created in August 2000 in Arta, Djibouti, expired in August 2003.

New Somali President Abdullahi YUSUF Ahmed has formed a new Transitional Federal Government (TFG) consisting of a 275-member parliament. It was established in October 2004 to replace the TNG but has not yet moved to Mogadishu. Discussions regarding the establishment of a new government in Mogadishu are ongoing in Kenya. Numerous warlords and factions are still fighting for control of the capital city as well as for other southern regions. Suspicion of Somali links with global terrorism further complicates the picture.

Economy Somalia

Economy - overview:

Somalia's economic fortunes are being driven by its deep political divisions. The northern area has declared its independence as "Somaliland"; the central area, Puntland, is a self-declared autonomous state; and the remaining southern portion is riddled with the struggles of rival factions. Economic life continues, in part because much activity is local and relatively easily protected. Agriculture is the most important sector, with livestock normally accounting for about 40% of GDP and about 65% of export earnings, but Saudi Arabia's recent ban on Somali livestock, because of Rift Valley Fever concerns, has severely hampered the sector. Nomads and semi-nomads, who are dependent upon livestock for their livelihood, make up a large portion of the population. Livestock, hides, fish, charcoal, and bananas are Somalia's principal exports, while sugar, sorghum, corn, qat, and machined goods are the principal imports. Somalia's small industrial sector, based on the processing of agricultural products, has largely been looted and sold as scrap metal. Despite the seeming anarchy, Somalia's service sector has managed to survive and grow. Telecommunication firms provide wireless services in most major cities and offer the lowest international call rates on the continent. In the absence of a formal banking sector, money exchange services have sprouted throughout the country, handling between \$200 million and \$500 million in remittances annually. Mogadishu's main market offers a variety of goods from food to the newest electronic gadgets. Hotels

continue to operate, and militias provide security. The ongoing civil disturbances and clan rivalries, however, have interfered with any broad-based economic development and international aid arrangements. In 2002 Somalia's overdue financial obligations to the IMF continued to grow. Statistics on Somalia's GDP, growth, per capita income, and inflation should be viewed skeptically.

@South Africa

Introduction South Africa

Background:

After the British seized the Cape of Good Hope area in 1806, many of the Dutch settlers (the Boers) trekked north to found their own republics. The discovery of diamonds (1867) and gold (1886) spurred wealth and immigration and intensified the subjugation of the native inhabitants. The Boers resisted British encroachments, but were defeated in the Boer War (1899-1902). The resulting Union of South Africa operated under a policy of apartheid - the separate development of the races. The 1990s brought an end to apartheid politically and ushered in black majority rule.

Economy South Africa

Economy - overview:

South Africa is a middle-income, emerging market with an abundant supply of natural resources; well-developed financial, legal, communications, energy, and transport sectors; a stock exchange that ranks among the 10 largest in the world; and a modern infrastructure supporting an efficient distribution of goods to major urban centers throughout the region. However, growth has not been strong enough to lower South Africa's high unemployment rate; and daunting economic problems remain from the apartheid era, especially poverty and lack of economic empowerment among the disadvantaged groups. High crime and HIV/AIDS infection rates also deter investment. South African economic policy is fiscally conservative, but pragmatic, focusing on targeting inflation and liberalizing trade as means to increase job growth and household income.

Military - note:
with the end of apartheid and the establishment of majority rule, former military, black homelands forces, and ex-opposition forces were integrated into the South African National Defense Force (SANDF); as of 2003 the integration process was considered complete

Transnational Issues South Africa

Disputes - international: managed dispute with Namibia over the location of the boundary in the Orange River

Illicit drugs:
transshipment center for heroin, hashish, marijuana, and cocaine; cocaine consumption on the rise; world's largest market for illicit methaqualone, usually imported illegally from India through various east African countries; illicit cultivation of marijuana; attractive

venue for money launderers given the increasing level of organized criminal and narcotics activity in the region

@Southern Ocean

Introduction Southern Ocean

Background:

A decision by the International Hydrographic Organization in the spring of 2000 delimited a fifth world ocean - the Southern Ocean - from the southern portions of the Atlantic Ocean, Indian Ocean, and Pacific Ocean. The Southern Ocean extends from the coast of Antarctica north to 60 degrees south latitude, which coincides with the Antarctic Treaty Limit. The Southern Ocean is now the fourth largest of the world's five oceans (after the Pacific Ocean, Atlantic Ocean, and Indian Ocean, but larger than the Arctic Ocean).

Geography Southern Ocean

Location:

body of water between 60 degrees south latitude and Antarctica

Geographic coordinates:

65 00 S, 0 00 E (nominally), but the Southern Ocean has the unique distinction of being a large circumpolar body of water totally encircling the continent of Antarctica; this ring of water lies between 60 degrees south latitude and the coast of Antarctica and encompasses 360 degrees of longitude

Map references:

Antarctic Region

Area:

total: 20.327 million sq km

note: includes Amundsen Sea, Bellingshausen Sea, part of the Drake Passage, Ross Sea, a small part of the Scotia Sea, Weddell Sea, and other tributary water bodies

Area - comparative:

slightly more than twice the size of the US

Coastline:

17,968 km

Climate:

sea temperatures vary from about 10 degrees Celsius to -2 degrees Celsius; cyclonic storms travel eastward around the continent and frequently are intense because of the temperature contrast between ice and open ocean; the ocean area from about latitude 40 south to the Antarctic Circle has the strongest average winds found anywhere on Earth; in winter the ocean freezes outward to 65 degrees south

latitude in the Pacific sector and 55 degrees south latitude in the Atlantic sector, lowering surface temperatures well below 0 degrees Celsius; at some coastal points intense persistent drainage winds from the interior keep the shoreline ice-free throughout the winter

Terrain:

the Southern Ocean is deep, 4,000 to 5,000 meters over most of its extent with only limited areas of shallow water; the Antarctic continental shelf is generally narrow and unusually deep, its edge lying at depths of 400 to 800 meters (the global mean is 133 meters); the Antarctic icepack grows from an average minimum of 2.6 million square kilometers in March to about 18.8 million square kilometers in September, better than a sixfold increase in area; the Antarctic Circumpolar Current (21,000 km in length) moves perpetually eastward; it is the world's largest ocean current, transporting 130 million cubic meters of water per second - 100 times the flow of all the world's rivers

Elevation extremes:

lowest point: -7,235 m at the southern end of the South Sandwich Trench

highest point: sea level 0 m

Natural resources:

probable large and possible giant oil and gas fields on the continental margin, manganese nodules, possible placer deposits, sand and gravel, fresh water as icebergs; squid, whales, and seals - none exploited; krill, fishes

Natural hazards:

huge icebergs with drafts up to several hundred meters; smaller bergs and iceberg fragments; sea ice (generally 0.5 to 1 meter

thick) with sometimes dynamic short-term variations and with large annual and interannual variations; deep continental shelf floored by glacial deposits varying widely over short distances; high winds and large waves much of the year; ship icing, especially May-October; most of region is remote from sources of search and rescue

Environment - current issues:

increased solar ultraviolet radiation resulting from the Antarctic ozone hole in recent years, reducing marine primary productivity (phytoplankton) by as much as 15% and damaging the DNA of some fish; illegal, unreported, and unregulated fishing in recent years, especially the landing of an estimated five to six times more Patagonian toothfish than the regulated fishery, which is likely to affect the sustainability of the stock; large amount of incidental mortality of seabirds resulting from long-line fishing for toothfish
note: the now-protected fur seal population is making a strong comeback after severe overexploitation in the 18th and 19th centuries

Environment - international agreements:

the Southern Ocean is subject to all international agreements regarding the world's oceans; in addition, it is subject to these agreements specific to the Antarctic region: International Whaling Commission (prohibits commercial whaling south of 40 degrees south [south of 60 degrees south between 50 degrees and 130 degrees west]); Convention on the Conservation of Antarctic Seals (limits sealing); Convention on the Conservation of Antarctic Marine Living Resources (regulates fishing)

note: many nations (including the US) prohibit mineral resource exploration and exploitation south of the fluctuating Polar Front (Antarctic Convergence) which is in the middle of the Antarctic Circumpolar Current and serves as the dividing line between the very

cold polar surface waters to the south and the warmer waters to the north

Geography - note:

the major chokepoint is the Drake Passage between South America and Antarctica; the Polar Front (Antarctic Convergence) is the best natural definition of the northern extent of the Southern Ocean; it is a distinct region at the middle of the Antarctic Circumpolar Current that separates the very cold polar surface waters to the south from the warmer waters to the north; the Front and the Current extend entirely around Antarctica, reaching south of 60 degrees south near New Zealand and near 48 degrees south in the far South Atlantic coinciding with the path of the maximum westerly winds

Economy Southern Ocean

Economy - overview:

Fisheries in 2000-01 (1 July to 30 June) landed 112,934 metric tons, of which 87% was krill and 11% Patagonian toothfish. International agreements were adopted in late 1999 to reduce illegal, unreported, and unregulated fishing, which in the 2000-01 season landed, by one estimate, 8,376 metric tons of Patagonian and antarctic toothfish. In the 2000-01 antarctic summer 12,248 tourists, most of them seaborne, visited the Southern Ocean and Antarctica, compared to 14,762 the previous year.

Transportation Southern Ocean

Ports and harbors:

McMurdo, Palmer, and offshore anchorages in Antarctica
note: few ports or harbors exist on the southern side of the Southern Ocean; ice conditions limit use of most of them to short periods in midsummer; even then some cannot be entered without icebreaker escort; most antarctic ports are operated by government research stations and, except in an emergency, are not open to commercial or private vessels; vessels in any port south of 60 degrees south are subject to inspection by Antarctic Treaty observers (see Article 7)

Transportation - note:

Drake Passage offers alternative to transit through the Panama Canal

Transnational Issues Southern Ocean

Disputes - international:

Antarctic Treaty defers claims (see Antarctica entry), but Argentina, Australia, Chile, France, NZ, Norway, and UK assert claims (some overlapping), including the continental shelf in the Southern Ocean; several states have expressed an interest in extending those continental shelf claims under the United Nations Convention on the Law of the Sea (UNCLOS) to include undersea ridges; the US and most other states do not recognize the land or maritime claims of other states and have made no claims themselves (the US and Russia have reserved the right to do so); no formal claims have been made in the sector between 90 degrees west and 150 degrees west

@South Georgia and the South Sandwich Islands

Introduction South Georgia and the South Sandwich Islands

Background:

The islands lie approximately 1,000 km east of the Falkland Islands and have been under British administration since 1908, except for a brief period in 1982 when Argentina occupied them. Grytviken, on South Georgia, was a 19th and early 20th century whaling station. Famed explorer Ernest SHACKLETON stopped there in 1914 en route to his ill-fated attempt to cross Antarctica on foot. He returned some 20 months later with a few companions in a small boat and arranged a successful rescue for the rest of his crew, stranded off the Antarctic Peninsula. He died in 1922 on a subsequent expedition and is buried in Grytviken. Today, the station houses scientists from the British Antarctic Survey. The islands have large bird and seal populations, and, recognizing the importance of preserving the marine stocks in adjacent waters, the UK, in 1993, extended the exclusive fishing zone from 12 nm to 200 nm around each island.

Economy South Georgia and the South Sandwich Islands

Economy - overview:

Some fishing takes place in adjacent waters. Fees from fishing licenses and related activities traditionally account for around 90% of South Georgia's revenue (about \$5.6 million in 2004). There is a potential source of income from harvesting finfish and krill. The islands receive income from postage stamps produced in the UK, sale of fishing licenses, and harbor and landing fees from tourist

vessels. Tourism from specialized cruise ships is increasing rapidly. Annual tourist volume hovers around 3,000 arrivals.

@Spain

Introduction Spain

Background:

Spain's powerful world empire of the 16th and 17th centuries ultimately yielded command of the seas to England. Subsequent failure to embrace the mercantile and industrial revolutions caused the country to fall behind Britain, France, and Germany in economic and political power. Spain remained neutral in World Wars I and II, but suffered through a devastating civil war (1936-39). In the second half of the 20th century, Spain has played a catch-up role in the western international community; it joined the EU in 1986. Continuing challenges include Basque Fatherland and Liberty (ETA) terrorism and further reductions in unemployment.

Economy Spain

Economy - overview:

Spain's mixed capitalist economy supports a GDP that on a per capita basis is 80% that of the four leading West European economies. The center-right government of former President AZNAR successfully worked to gain admission to the first group of countries launching the European single currency (the euro) on 1 January 1999. The AZNAR administration continued to advocate liberalization, privatization, and deregulation of the economy and introduced some tax reforms to that end. Unemployment fell steadily under the AZNAR administration but remains high at 11.7%. Growth of 2.4% in 2003 was satisfactory given the background of a faltering European economy. Incoming President RODRIGUEZ ZAPATERO, whose party won the election three days after the Madrid train bombings in March, plans to reduce government intervention in business, combat tax fraud, and support innovation, research and development, but also intends to reintroduce labor market regulations that had been scrapped by the AZNAR government. Adjusting to the monetary and other economic policies of an integrated Europe - and reducing unemployment - will pose challenges to Spain over the next few years.

since Gibraltar residents voted overwhelmingly by referendum in 2003 against a "total shared sovereignty" arrangement, talks between the UK and Spain over the fate of the 300-year old UK colony have stalled; Spain disapproves of UK plans to grant Gibraltar greater autonomy; Morocco protests Spain's control over the coastal enclaves of Ceuta, Melilla, and the islands of Penon de Velez de la Gomera, Penon de Alhucemas and Islas Chafarinas, and surrounding waters; Morocco serves as the primary launching area of illegal migration

into Spain from North Africa; Morocco rejected Spain's unilateral designation of a median line from the Canary Islands in 2002 to set limits to undersea resource exploration and refugee interdiction, but agreed in 2003 to discuss a comprehensive maritime delimitation; some Portuguese groups assert dormant claims to territories ceded to Spain around the town of Olivenza

@Spratly Islands

Introduction Spratly Islands

Background:

The Spratly Islands consist of more than 100 small islands or reefs. They are surrounded by rich fishing grounds and potentially

by gas and oil deposits. They are claimed in their entirety by China, Taiwan, and Vietnam, while portions are claimed by Malaysia and the Philippines. About 45 islands are occupied by relatively small numbers of military forces from China, Malaysia, the Philippines, Taiwan, and Vietnam. Brunei has established a fishing zone that overlaps a southern reef, but has not made any formal claim.

Geography Spratly Islands

Location:

Southeastern Asia, group of reefs and islands in the South China Sea, about two-thirds of the way from southern Vietnam to the southern Philippines

Geographic coordinates:

Economy Spratly Islands

Economy - overview:

Economic activity is limited to commercial fishing. The proximity to nearby oil- and gas-producing sedimentary basins suggests the potential for oil and gas deposits, but the region is largely unexplored; there are no reliable estimates of potential reserves; commercial exploitation has yet to be developed.

Transnational Issues Spratly Islands

Disputes - international:
all of the Spratly Islands are claimed by China, Taiwan, and Vietnam; parts of them are claimed by Malaysia and the Philippines; in 1984, Brunei established an exclusive fishing zone that encompasses Louisa Reef in the southern Spratly Islands but has not publicly claimed the reef; claimants in November 2002 signed the "Declaration on the Conduct of Parties in the South China Sea," which has eased tensions but falls short of a legally binding "code of conduct"

@Sri Lanka

Introduction Sri Lanka

Background:

The Sinhalese arrived in Sri Lanka late in the 6th century B.C., probably from northern India. Buddhism was introduced beginning in about the mid-third century B.C., and a great civilization developed at the cities of Anuradhapura (kingdom from circa 200 B.C. to circa A.D. 1000) and Polonnaruwa (from about 1070 to 1200). In the 14th century, a south Indian dynasty seized power in the north and established a Tamil kingdom. Occupied by the Portuguese in the 16th century and by the Dutch in the 17th century, the island was ceded to the British in 1796, became a crown colony in 1802, and was united under British rule by 1815. As Ceylon, it became independent in 1948; its name was changed to Sri Lanka in 1972. Tensions between the Sinhalese majority and Tamil separatists erupted into war in 1983. Tens of thousands have died in an ethnic conflict that continues to fester. After two decades of fighting, the government and Liberation Tigers of Tamil Eelam formalized a cease-fire in February 2002, with Norway brokering peace negotiations.

Economy Sri Lanka

Economy - overview:

In 1977, Colombo abandoned statist economic policies and its import substitution trade policy for market-oriented policies and export-oriented trade. Sri Lanka's most dynamic sectors now are food processing, textiles and apparel, food and beverages, telecommunications, and insurance and banking. In 2003, plantation crops made up only 15% of exports (compared with 93% in 1970), while textiles and garments accounted for 63%. GDP grew at an average annual rate of 5.5% in the early 1990s until a drought and a deteriorating security situation lowered growth to 3.8% in 1996. The economy rebounded in 1997-2000 with average growth of 5.3%, but 2001 saw the first contraction in the country's history, -1.4%, due to a combination of power shortages, severe budgetary problems, the global slowdown, and continuing civil strife. Growth recovered to 4.0% in 2002 and 5.2% in 2003. About 800,000 Sri Lankans work abroad, 90% in the Middle East. They send home about \$1 billion a year. The struggle by the Tamil Tigers of the north and east for a largely independent homeland continues to cast a shadow over the economy.

Introduction Sudan

Background:

Military regimes favoring Islamic-oriented governments have dominated national politics since independence from the UK in 1956. Sudan has been embroiled in a civil war for all but 10 years of this period (1972-82). The wars are rooted in northern economic, political, and social domination of non-Muslim, non-Arab southern Sudanese. Since 1983, the war and war- and famine-related effects have led to more than 2 million deaths and over 4 million people displaced. The ruling regime is a mixture of military elite and an Islamist party that came to power in a 1989 coup. Some northern opposition parties have made common cause with the southern rebels and entered the war as a part of an anti-government alliance. Peace talks gained momentum in 2002-03 with the signing of several accords, including a cease-fire agreement.

Economy Sudan

Economy - overview:

Sudan has turned around a struggling economy with sound economic policies and infrastructure investments, yet it still faces formidable economic problems, starting from its low level of per capita output and extending to its devastating civil strife. From 1997 to date, Sudan has been implementing IMF macroeconomic reforms. In 1999, Sudan began exporting crude oil and in the last quarter of 1999 recorded its first trade surplus, which, along with monetary policy, has stabilized the exchange rate. Increased oil production, revived light industry, and expanded export processing zones helped sustain GDP growth at 6.1% in 2003 and 7% in 2004. Agriculture production remains Sudan's most important sector, employing 80% of the work force and contributing 39% of GDP, but most farms remain rain-fed and susceptible to drought. Chronic instability - including the long-standing civil war between the Muslim north and the Christian/pagan south, the ethnic purges in Darfur, adverse weather, and weak world agricultural prices - ensure that much of the population will remain at or below the poverty line for years.

@Suriname

Introduction Suriname

Background:

Independence from the Netherlands was granted in 1975. Five years later the civilian government was replaced by a military regime that soon declared a socialist republic. It continued to rule through a succession of nominally civilian administrations until 1987, when international pressure finally forced a democratic election. In 1989, the military overthrew the civilian government, but a democratically-elected government returned to power in 1991.

Economy Suriname

Economy - overview:

The economy is dominated by the bauxite industry, which accounts for more than 15% of GDP and 70% of export earnings. Suriname's economic prospects for the medium term will depend on renewed commitment to responsible monetary and fiscal policies and to the introduction of structural reforms to liberalize markets and promote competition. The government of Ronald VENETIAAN has begun an austerity program, raised taxes, and attempted to control spending. However, in 2002, President VENETIAAN agreed to a large pay raise for civil servants, which threatens his earlier gains in stabilizing the economy. The Dutch Government has agreed to restart the aid flow, which will allow Suriname to access international development financing. The short-term economic outlook depends on the

government's ability to control inflation and on the development of projects in the bauxite and gold mining sectors.

Economy Svalbard

Economy - overview:

Coal mining is the major economic activity on Svalbard. The treaty of 9 February 1920 gives the 41 signatories equal rights to exploit mineral deposits, subject to Norwegian regulation. Although US, UK, Dutch, and Swedish coal companies have mined in the past, the only companies still mining are Norwegian and Russian. The settlements on Svalbard are essentially company towns. The Norwegian state-owned coal company employs nearly 60% of the Norwegian population on the island, runs many of the local services, and provides most of the local infrastructure. There is also some hunting of seal, reindeer, and fox.

@Swaziland

Introduction Swaziland

Background:

Autonomy for the Swazis of southern Africa was guaranteed by the British in the late 19th century; independence was granted in 1968. Student and labor unrest during the 1990s pressured the monarchy (one of the oldest on the continent) to grudgingly allow political reform and greater democracy. Swaziland recently surpassed Botswana as the country with the world's highest known rates of HIV/AIDS infection

Economy Swaziland

Economy - overview:

In this small, landlocked economy, subsistence agriculture occupies more than 80% of the population. The manufacturing sector has diversified since the mid-1980s. Sugar and wood pulp remain important foreign exchange earners. Mining has declined in importance in recent years with only coal and quarry stone mines remaining active. Surrounded by South Africa, except for a short border with Mozambique, Swaziland is heavily dependent on South Africa from which it receives about nine-tenths of its imports and to which it sends nearly three-quarters of its exports. Customs duties from the Southern African Customs Union and worker remittances from South Africa substantially supplement domestically earned income. The government is trying to improve the atmosphere for foreign investment. Overgrazing, soil depletion, drought, and sometimes floods persist as problems for the future. More than one-fourth of the population needed emergency food aid in 2002 because of drought, and more than one-third of the adult population was infected by HIV/AIDS.

Introduction Sweden

Background:

A military power during the 17th century, Sweden has not participated in any war in almost two centuries. An armed neutrality was preserved in both World Wars. Sweden's long-successful economic formula of a capitalist system interlarded with substantial welfare elements was challenged in the 1990s by high unemployment and in 2000-02 by the global economic downturn, but fiscal discipline over the past several years has allowed the country to weather economic vagaries. Indecision over the country's role in the political and economic integration of Europe delayed Sweden's entry into the EU until 1995, and waived the introduction of the euro in 1999.

Economy Sweden

Economy - overview:

Aided by peace and neutrality for the whole 20th century, Sweden has achieved an enviable standard of living under a mixed system of high-tech capitalism and extensive welfare benefits. It has a modern distribution system, excellent internal and external communications, and a skilled labor force. Timber, hydropower, and iron ore constitute the resource base of an economy heavily oriented toward foreign trade. Privately owned firms account for about 90% of industrial output, of which the engineering sector accounts for 50% of output and exports. Agriculture accounts for only 2% of GDP and 2% of the jobs. The government's commitment to fiscal discipline resulted in a substantial budgetary surplus in 2001, which was cut by more than half in 2002, due to the global economic slowdown, declining revenue, and increased spending. The Swedish central bank (the Riksbank) is focusing on price stability with its inflation target of 2%. Growth remained sluggish in 2003. On September 14, 2003, Swedish voters turned down entry into the euro system, concerned about the impact on democracy and sovereignty.

Introduction Switzerland

Background:

Switzerland's independence and neutrality have long been honored by the major European powers, and Switzerland was not involved in either of the two World Wars. The political and economic integration of Europe over the past half century, as well as Switzerland's role in many UN and international organizations, has strengthened Switzerland's ties with its neighbors. However, the country did not

officially become a UN member until 2002. Switzerland remains active in many UN and international organizations, but retains a strong commitment to neutrality.

Economy Switzerland

Economy - overview:

Switzerland is a prosperous and stable modern market economy with low unemployment, a highly skilled labor force, and a per capita GDP larger than that of the big Western European economies. The Swiss in recent years have brought their economic practices largely into conformity with the EU's to enhance their international competitiveness. Switzerland remains a safe haven for investors, because it has maintained a degree of bank secrecy and has kept up the franc's long-term external value. Reflecting the anemic economic conditions of Europe, GDP growth dropped in 2001 to about 0.8%, to 0.2% in 2002, and to -0.3% in 2003.

Introduction Syria

Background:

Following the breakup of the Ottoman Empire during World War I, Syria was administered by the French until independence in 1946. In the 1967 Arab-Israeli War, Syria lost the Golan Heights to Israel. Since 1976, Syrian troops have been stationed in Lebanon, ostensibly in a peacekeeping capacity. Over the past decade, Syria and Israel have held occasional peace talks over the return of the Golan Heights.

Economy Syria

Economy - overview:

Syria's predominantly statist economy lately has been growing more slowly than its 2.4% annual population growth rate. Recent legislation allows private banks to operate in Syria, although a private banking sector will take years and further government cooperation to develop. Factors, including the war between the US-led coalition and Iraq, probably drove real annual GDP growth levels back below 1% in 2003 following growth of 3.5% in 2001 and 4.5% in 2002. A long-run economic constraint is the pressure on water supplies caused by rapid population growth, industrial expansion, and increased water pollution.

@Taiwan

Introduction Taiwan

Background:

In 1895, military defeat forced China to cede Taiwan to Japan. Taiwan reverted to Chinese control after World War II. Following the Communist victory on the mainland in 1949, 2 million Nationalists fled to Taiwan and established a government using the 1946 constitution drawn up for all of China. Over the next five decades, the ruling authorities gradually democratized and incorporated the native population within the governing structure. In 2000, Taiwan underwent its first peaceful transfer of power from the Nationalist to the Democratic Progressive Party. Throughout this period, the island prospered and became one of East Asia's economic "Tigers." The dominant political issues continue to be the relationship between Taiwan and China - specifically the question of eventual unification - as well as domestic political and economic reform.

Economy Taiwan

Economy - overview:

Taiwan has a dynamic capitalist economy with gradually decreasing guidance of investment and foreign trade by government authorities. In keeping with this trend, some large government-owned banks and industrial firms are being privatized. Exports have provided the primary impetus for industrialization. The trade surplus is substantial, and foreign reserves are the world's third largest. Agriculture contributes 2% to GDP, down from 32% in 1952. While Taiwan is a major investor throughout Southeast Asia, China has become the largest destination for investment and has overtaken the US to become Taiwan's largest export market. Because of its conservative financial approach and its entrepreneurial strengths, Taiwan suffered little compared with many of its neighbors from the Asian financial crisis in 1998. The global economic downturn, combined with problems in policy coordination by the administration and bad debts in the banking system, pushed Taiwan into recession in 2001, the first year of negative growth ever recorded. Unemployment also reached record levels. Output recovered moderately in 2002 in the face of continued global slowdown, fragile consumer confidence, and bad bank loans. Growing economic ties with China are a dominant

long-term factor. Exports to China - mainly parts and equipment for the assembly of goods for export to developed countries - drove Taiwan's economic recovery in 2002. Although the SARS epidemic, Typhoon Maemi, corporate scandals, and a drop in consumer spending caused GDP growth to contract to 3.2% in 2003, increasingly strong export performance kept Taiwan's economy on track, and the government expects Taiwan's economy to grow 4.1% in 2004.

Introduction Tajikistan

Background:

Tajikistan has completed its transition from the civil war that plagued the country from 1992 to 1997. There have been no major security incidents in more than two years, although the country remains the poorest in the region. Attention by the international community in the wake of the war in Afghanistan has brought increased economic development assistance, which could create jobs and increase stability in the long term. Tajikistan is in the early stages of seeking World Trade Organization membership and has joined NATO's Partnership for Peace.

Economy Tajikistan

Economy - overview:

Tajikistan has the lowest per capita GDP among the 15 former Soviet republics. Only 5% to 6% of the land area is arable. Cotton is the most important crop. Mineral resources, varied but limited in amount, include silver, gold, uranium, and tungsten. Industry consists only of a large aluminum plant, hydropower facilities, and small obsolete factories mostly in light industry and food processing. The civil war (1992-97) severely damaged the already weak economic infrastructure and caused a sharp decline in industrial and agricultural production. Even though 60% of its people continue to live in abject poverty, Tajikistan has experienced steady economic growth since 1997. Continued privatization of medium and large state-owned enterprises will further increase productivity. Tajikistan's economic situation, however, remains fragile due to uneven implementation of structural reforms, weak governance, widespread unemployment, and the external debt burden. A debt restructuring agreement was reached with Russia in December 2002, including an interest rate of 4%, a 3-year grace period, and a US \$49.8 million credit to the Central Bank of Tajikistan.

Introduction Tanzania

Background:

Shortly after independence, Tanganyika and Zanzibar merged to form the nation of Tanzania in 1964. One-party rule came to an end in 1995 with the first democratic elections held in the country since the 1970s. Zanzibar's semi-autonomous status and popular opposition

have led to two contentious elections since 1995, which the ruling party won despite international observers' claims of voting irregularities.

Economy Tanzania

Economy - overview:

Tanzania is one of the poorest countries in the world. The economy depends heavily on agriculture, which accounts for about half of GDP, provides 85% of exports, and employs 80% of the work force. Topography and climatic conditions, however, limit cultivated crops to only 4% of the land area. Industry traditionally featured the processing of agricultural products and light consumer goods. The World Bank, the International Monetary Fund, and bilateral donors have provided funds to rehabilitate Tanzania's out-of-date economic infrastructure and to alleviate poverty. Growth in 1991-2002 featured a pickup in industrial production and a substantial increase in output of minerals, led by gold. Oil and gas exploration

and development played an important role in this growth. Recent banking reforms have helped increase private sector growth and investment. Continued donor assistance and solid macroeconomic policies supported real GDP growth of more than 5.2% in 2004.

Introduction Thailand

Background:

A unified Thai kingdom was established in the mid-14th century. Known as Siam until 1939, Thailand is the only Southeast Asian country never to have been taken over by a European power. A bloodless revolution in 1932 led to a constitutional monarchy. In alliance with Japan during World War II, Thailand became a US ally following the conflict. Thailand is currently facing armed violence in its three Muslim-majority southernmost provinces.

Economy Thailand

Economy - overview:
Thailand has a free-enterprise economy and welcomes foreign investment. Exports feature textiles and footwear, fishery products, rice, rubber, jewelry, automobiles, computers and electrical appliances. Thailand has recovered from the 1997-98 Asian Financial Crisis and was one of East Asia's best performers in 2002. Increased consumption and investment spending and strong export growth pushed GDP growth up to 6.3% in 2003 despite a sluggish global economy. The highly popular government has pushed an expansionist policy, including major support of village economic development.

Introduction Togo

Background:
French Togoland became Togo in 1960. Gen. Gnassingbe EYADEMA, installed as military ruler in 1967, is Africa's longest-serving head of state. Despite the facade of multiparty elections instituted

in the early 1990s, the government continues to be dominated by President EYADEMA, whose Rally of the Togolese People (RPT) party has maintained power almost continually since 1967. In addition, Togo has come under fire from international organizations for human rights abuses and is plagued by political unrest. While most bilateral and multilateral aid to Togo remains frozen, the European Union initiated a partial resumption of cooperation and development aid to Togo in late 2004.

Economy Togo

Economy - overview:

This small sub-Saharan economy is heavily dependent on both commercial and subsistence agriculture, which provides employment for 65% of the labor force. Some basic foodstuffs must still be imported. Cocoa, coffee, and cotton generate about 40% of export earnings, with cotton being the most important cash crop. Togo is the world's fourth-largest producer of phosphate, but production fell an estimated 22% in 2002 due to power shortages and the cost of developing new deposits. The government's decade-long effort, supported by the World Bank and the IMF, to implement economic reform measures, encourage foreign investment, and bring revenues in line with expenditures has moved slowly. Progress depends on following through on privatization, increased openness in government financial operations, progress toward legislative elections, and continued support from foreign donors.

Economy Tonga

Economy - overview:

Tonga, a small, open, South Pacific island economy, has a narrow export base in agricultural goods. Squash, coconuts, bananas, and vanilla beans are the main crops, and agricultural exports make up two-thirds of total exports. The country must import a high proportion of its food, mainly from New Zealand. Tourism is the second-largest source of hard currency earnings following remittances. The country remains dependent on external aid and remittances from Tongan communities overseas to offset its trade deficit. The government is emphasizing the development of the private sector, especially the encouragement of investment, and is committing increased funds for health and education. Tonga has a reasonably sound basic infrastructure and well-developed social services. High unemployment among the young and the continuing upturn in inflation are major issues facing the government.

Economy Trinidad and Tobago

Economy - overview:
Trinidad and Tobago, the leading Caribbean producer of oil and gas, has earned a reputation as an excellent investment site for international businesses. Tourism is a growing sector, although not proportionately as important as in many other Caribbean islands. The economy benefits from low inflation and a growing trade surplus. Prospects for growth in 2004 are good as prices for oil, petrochemicals, and liquified natural gas are expected to remain high, and foreign direct investment continues to grow to support expanded capacity in the energy sector. The government is coping with a rise in violent crime.

@Tunisia

Introduction Tunisia

Background:

Following independence from France in 1956, President Habib BOURGUIBA established a strict one-party state. He dominated the country for 31 years, repressing Islamic fundamentalism and establishing rights for women unmatched by any other Arab nation. In recent years, Tunisia has taken a moderate, non-aligned stance in its foreign relations. Domestically, it has sought to defuse rising pressure for a more open political society.

Economy Tunisia

Economy - overview:

Tunisia has a diverse economy, with important agricultural, mining, energy, tourism, and manufacturing sectors. Governmental control of economic affairs while still heavy has gradually lessened over the past decade with increasing privatization, simplification of the tax structure, and a prudent approach to debt. Real growth, averaging 5% for the latter half of the last decade, slowed to a 15-year low of 1.9% in 2002 because of agricultural drought, slow investment, and lackluster tourism. Better rains in 2003, however, pushed GDP growth up to an estimated 6 percent, and tourism also recovered after the end of combat operations in Iraq. GDP growth remained at 6% in 2004. Tunisia has agreed to gradually remove barriers to trade with the European Union over the next decade. Broader privatization, further liberalization of the investment code to increase foreign investment, improvements in government efficiency, and reduction of the trade deficit are among the challenges for the future.

Introduction Turkey

Background:

Modern Turkey was founded in 1923 from the Anatolian remnants of the defeated Ottoman Empire by national hero Mustafa KEMAL, who was later honored with the title Ataturk, or "Father of the Turks."

Under his authoritarian leadership, the country adopted wide-ranging social, legal, and political reforms. After a period of one-party rule, an experiment with multi-party politics led to the 1950 election victory of the opposition Democratic Party and the peaceful transfer of power. Since then, Turkish political parties have multiplied, but democracy has been fractured by periods of instability and intermittent military coups (1960, 1971, 1980), which in each case eventually resulted in a return of political

power to civilians. In 1997, the military again helped engineer the ouster - popularly dubbed a "post-modern coup" - of the then Islamic-oriented government. Turkey intervened militarily on Cyprus in 1974 to prevent a Greek takeover of the island and has since acted as patron state to the "Turkish Republic of Northern Cyprus," which only Turkey recognizes. A separatist insurgency begun in 1984 by the Kurdistan Workers' Party (PKK) - now known as the People's Congress of Kurdistan or Kongra-Gel (KGK) - has dominated the Turkish military's attention and claimed more than 30,000 lives, but after the capture of the group's leader in 1999, the insurgents largely withdrew from Turkey, mainly to northern Iraq. In 2004, KGK announced an end to its ceasefire and attacks attributed to the KGK increased. Turkey joined the UN in 1945 and in 1952 it became a member of NATO. In 1964, Turkey became an associate member of the European Community; over the past decade, it has undertaken many reforms to strengthen its democracy and economy, enabling it to begin accession membership talks with the European Union.

Economy Turkey

Economy - overview:

Turkey's dynamic economy is a complex mix of modern industry and commerce along with a traditional agriculture sector that in 2001 still accounted for 40% of employment. It has a strong and rapidly growing private sector, yet the state still plays a major role in basic industry, banking, transport, and communication. The largest industrial sector is textiles and clothing, which accounts for one-third of industrial employment; it faces stiff competition in international markets with the end of the global quota system. However, other sectors, notably the automotive and electronics industries, are rising in importance within Turkey's export mix. In recent years the economic situation has been marked by erratic economic growth and serious imbalances. Real GNP growth has exceeded 6% in many years, but this strong expansion has been interrupted by sharp declines in output in 1994, 1999, and 2001. Meanwhile, the public sector fiscal deficit has regularly exceeded 10% of GDP - due in large part to the huge burden of interest payments, which accounted for more than 40% of central government spending in 2003. Inflation, in recent years in the high double-digit range, fell to 11.3% in 2004. Perhaps because of these problems, foreign direct investment in Turkey remains low - less than \$1 billion annually. Results in 2002-04 improved, because of strong financial support from the IMF and tighter fiscal policy. A major political and economic issue over the next decade is whether or not Turkey will become a member of the EU.

Introduction Turkmenistan

Background:

Annexed by Russia between 1865 and 1885, Turkmenistan became a Soviet republic in 1924. It achieved its independence upon the dissolution of the USSR in 1991. President NIYAZOV retains absolute control over the country and opposition is not tolerated. Extensive hydrocarbon/natural gas reserves could prove a boon to this underdeveloped country if extraction and delivery projects were to be expanded. The Turkmenistan Government is actively seeking to develop alternative petroleum transportation routes in order to break Russia's pipeline monopoly.

chief of state: President and Chairman of the Cabinet of Ministers Saparmurat NIYAZOV (since 27 October 1990, when the first direct presidential election occurred); note - the president is both the chief of state and head of government

head of government: President and Chairman of the Cabinet of Ministers Saparmurat NIYAZOV (since 27 October 1990, when the first direct presidential election occurred); note - the president is both the chief of state and head of government

cabinet: Cabinet of Ministers appointed by the president

elections: president elected by popular vote for a five-year term;

election last held 21 June 1992 (next to be held in 2008 when

NIYAZOV turns 70 and is constitutionally ineligible to run); note -

President NIYAZOV was unanimously approved as president for life by

the People's Council on 28 December 1999; deputy chairmen of the cabinet of ministers are appointed by the president
election results: Saparmurat NIYAZOV elected president without opposition; percent of vote - Saparmurat NIYAZOV 99.5%
note: NIYAZOV's term in office was extended indefinitely on 28 December 1999 during a session of the People's Council (Halk Maslahaty)

Legislative branch:

under the 1992 constitution, there are two parliamentary bodies, a unicameral People's Council or Halk Maslahaty (supreme legislative body of up to 2,500 delegates, some of which are elected by popular vote and some of which are appointed; meets at least yearly) and a unicameral Parliament or Mejlis (50 seats; members are elected by popular vote to serve five-year terms)

election results: Mejlis - DPT 100%; seats by party - DPT 50; note - all 50 elected officials are members of the Democratic Party of Turkmenistan and are preapproved by President NIYAZOV

note: in late 2003, a new law was adopted, reducing the powers of the Mejlis and making the Halk Maslahaty the supreme legislative organ; the Halk Maslahaty can now legally dissolve the Mejlis, and the president is now able to participate in the Mejlis as its supreme leader; the Mejlis can no longer adopt or amend the constitution, or announce referendums or its elections; since the president is both the "Chairman for Life" of the Halk Maslahaty and the supreme leader of the Mejlis, the 2003 law has the effect of making him the sole authority of both the executive and legislative branches of government

Economy Turkmenistan

Economy - overview:
Turkmenistan is largely desert country with intensive agriculture
in irrigated oases and large gas and oil resources. One-half of its
irrigated land is planted in cotton, making it at one time the
world's tenth-largest producer. Poor harvests in recent years have
led to a nearly 46% decline in cotton exports. With an authoritarian
ex-Communist regime in power and a tribally based social structure,
Turkmenistan has taken a cautious approach to economic reform,
hoping to use gas and cotton sales to sustain its inefficient
economy. Privatization goals remain limited. In 1998-2003,
Turkmenistan suffered from the continued lack of adequate export
routes for natural gas and from obligations on extensive short-term
external debt. At the same time, however, total exports rose by 38%
in 2003, largely because of higher international oil and gas prices.
Overall prospects in the near future are discouraging because of

widespread internal poverty, the burden of foreign debt, and the unwillingness of the government to adopt market-oriented reforms. However, Turkmenistan's cooperation with the international community in transporting humanitarian aid to Afghanistan may foreshadow a change in the atmosphere for foreign investment, aid, and technological support. Turkmenistan's economic statistics are state secrets, and GDP and other figures are subject to wide margins of error. In particular, the 20% rate of GDP growth is a guess.

@Turks and Caicos Islands

Introduction Turks and Caicos Islands

Background:

The islands were part of the UK's Jamaican colony until 1962, when they assumed the status of a separate crown colony upon Jamaica's independence. The governor of The Bahamas oversaw affairs from 1965 to 1973. With Bahamian independence, the islands received a separate governor in 1973. Although independence was agreed upon for 1982, the policy was reversed and the islands remain a British overseas territory.

@Tuvalu

Introduction Tuvalu

Background:
In 1974, ethnic differences within the British colony of the
Gilbert and Ellice Islands caused the Polynesians of the Ellice
Islands to vote for separation from the Micronesians of the Gilbert
Islands. The following year, the Ellice Islands became the separate
British colony of Tuvalu. Independence was granted in 1978. In 2000,
Tuvalu negotiated a contract leasing its Internet domain name ".tv"
for \$50 million in royalties over the next dozen years.

Geography Tuvalu

Location:

Oceania, island group consisting of nine coral atolls in the South Pacific Ocean, about one-half of the way from Hawaii to Australia

Natural resources: fish

Land use: arable land: 0% permanent crops: 0% other: 100% (2001)

Irrigated land:

NA sq km

Natural hazards:

severe tropical storms are usually rare, but, in 1997, there were three cyclones; low level of islands make them very sensitive to changes in sea level

Environment - current issues:

since there are no streams or rivers and groundwater is not potable, most water needs must be met by catchment systems with storage facilities (the Japanese Government has built one desalination plant and plans to build one other); beachhead erosion because of the use of sand for building materials; excessive clearance of forest undergrowth for use as fuel; damage to coral reefs from the spread of the Crown of Thorns starfish; Tuvalu is very concerned about global increases in greenhouse gas emissions and their effect on rising sea levels, which threaten the country's underground water table; in 2000, the government appealed to Australia and New Zealand to take in Tuvaluans if rising sea levels should make evacuation necessary

Environment - international agreements:

party to: Biodiversity, Climate Change, Climate Change-Kyoto Protocol, Desertification, Law of the Sea, Ozone Layer Protection, Ship Pollution

signed, but not ratified: none of the selected agreements

Geography - note:

one of the smallest and most remote countries on Earth; six of the coral atolls - Nanumea, Nui, Vaitupu, Nukufetau, Funafuti, and Nukulaelae - have lagoons open to the ocean; Nanumaya and Niutao have landlocked lagoons; Niulakita does not have a lagoon

Economy Tuvalu

Economy - overview:
Tuvalu consists of a densely populated, scattered group of nine coral atolls with poor soil. The country has no known mineral resources and few exports. Subsistence farming and fishing are the primary economic activities. Fewer than 1,000 tourists, on average, visit Tuvalu annually. Government revenues largely come from the sale of stamps and coins and worker remittances. About 1,000 Tuvaluans work in Nauru in the phosphate mining industry. Nauru has begun repatriating Tuvaluans, however, as phosphate resources decline. Substantial income is received annually from an international trust fund established in 1987 by Australia, NZ, and the UK and supported also by Japan and South Korea. Thanks to wise investments and conservative withdrawals, this Fund has grown from an initial \$17 million to over \$35 million in 1999. The US government is also a major revenue source for Tuvalu, because of payments from a 1988 treaty on fisheries. In an effort to reduce its dependence on foreign aid, the government is pursuing public sector

reforms, including privatization of some government functions and personnel cuts of up to 7%. In 1998, Tuvalu began deriving revenue from use of its area code for "900" lines and in 2000, from the lease of its ".tv" Internet domain name. Royalties from these new technology sources could increase substantially over the next decade. With merchandise exports only a fraction of merchandise imports, continued reliance must be placed on fishing and telecommunications license fees, remittances from overseas workers, official transfers, and investment income from overseas assets.

@Uganda

Introduction Uganda

Background:

Uganda achieved independence from the UK in 1962. The dictatorial regime of Idi AMIN (1971-79) was responsible for the deaths of some 300,000 opponents; guerrilla war and human rights abuses under Milton OBOTE (1980-85) claimed at least another 100,000 lives. During the 1990s, the government promulgated non-party presidential and legislative elections.

Economy Uganda

Economy - overview:

Uganda has substantial natural resources, including fertile soils, regular rainfall, and sizable mineral deposits of copper and cobalt. Agriculture is the most important sector of the economy, employing over 80% of the work force. Coffee accounts for the bulk of export revenues. Since 1986, the government - with the support of foreign countries and international agencies - has acted to rehabilitate and stabilize the economy by undertaking currency reform, raising producer prices on export crops, increasing prices of petroleum products, and improving civil service wages. The policy changes are especially aimed at dampening inflation and boosting production and export earnings. During 1990-2001, the economy turned in a solid performance based on continued investment in the rehabilitation of infrastructure, improved incentives for production and exports, reduced inflation, gradually improved domestic security, and the

return of exiled Indian-Ugandan entrepreneurs. Corruption within the government and slippage in the government's determination to press reforms raise doubts about the continuation of strong growth. In 2000, Uganda qualified for enhanced Highly Indebted Poor Countries (HIPC) debt relief worth \$1.3 billion and Paris Club debt relief worth \$145 million. These amounts combined with the original HIPC debt relief added up to about \$2 billion. Growth for 2001-02 was solid despite continued decline in the price of coffee, Uganda's principal export. Solid growth in 2003 reflected an upturn in Uganda's export markets.

Introduction Ukraine

Background:

Ukraine was the center of the first Slavic state, Kievan Rus, which during the 10th and 11th centuries was the largest and most powerful state in Europe. Weakened by internecine quarrels and Mongol invasions, Kievan Rus was incorporated into the Grand Duchy of Lithuania and eventually into the Polish-Lithuanian Commonwealth. The cultural and religious legacy of Kievan Rus laid the foundation for Ukrainian nationalism through subsequent centuries. A new Ukrainian state, the Cossack Hetmanate, was established during the mid-17th century after an uprising against the Poles. Despite continuous Muscovite pressure, the Hetmanate managed to remain autonomous for well over 100 years. During the latter part of the 18th century, most Ukrainian ethnographic territory was absorbed by the Russian Empire. Following the collapse of czarist Russia in 1917, Ukraine was able to bring about a short-lived period of independence (1917-1920), but was reconquered and forced to endure a brutal Soviet rule that engineered two artificial famines (1921-22 and 1932-33) in which over 8 million died. In World War II, German and Soviet armies were responsible for some 7 to 8 million more deaths. Although final independence for Ukraine was achieved in 1991 with the dissolution of the USSR, democracy remained elusive as the legacy of state control and endemic corruption stalled efforts at economic reform, privatization, and civil liberties. A peaceful mass protest "Orange Revolution" in the closing months of 2004 forced the authorities to overturn a rigged presidential election and to allow a new internationally monitored vote that swept into power a reformist slate under Viktor YUSHCHENKO. The new government presents its citizens with hope that the country may at last attain true freedom and prosperity.

Economy Ukraine

Economy - overview:

After Russia, the Ukrainian republic was far and away the most important economic component of the former Soviet Union, producing about four times the output of the next-ranking republic. Its fertile black soil generated more than one-fourth of Soviet agricultural output, and its farms provided substantial quantities of meat, milk, grain, and vegetables to other republics. Likewise, its diversified heavy industry supplied the unique equipment (for example, large diameter pipes) and raw materials to industrial and mining sites (vertical drilling apparatus) in other regions of the former USSR. Ukraine depends on imports of energy, especially natural gas, to meet some 85% of its annual energy requirements. Shortly after independence in December 1991, the Ukrainian Government liberalized most prices and erected a legal framework for privatization, but widespread resistance to reform within the government and the legislature soon stalled reform efforts and led to some backtracking. Output by 1999 had fallen to less than 40% of the 1991 level. Loose monetary policies pushed inflation to hyperinflationary levels in late 1993. Ukraine's dependence on Russia for energy supplies and the lack of significant structural reform have made the Ukrainian economy vulnerable to external shocks. President KUCHMA had pledged to reduce the number of government agencies, streamline the regulatory process, create a legal environment to encourage entrepreneurs, and enact a comprehensive tax overhaul. Reforms in the more politically sensitive areas of structural reform and land privatization are still lagging. Outside institutions - particularly the IMF - have encouraged Ukraine to quicken the pace and scope of reforms. GDP in 2000 showed strong export-based growth of 6% - the first growth since independence - and industrial production grew 12.9%. The

economy continued to expand in 2001 as real GDP rose 9% and industrial output grew by over 14%. Growth of 4.6% in 2002 was more moderate, in part a reflection of faltering growth in the developed world. In general, growth has been undergirded by strong domestic demand, low inflation, and solid consumer and investor confidence. Growth was a sturdy 9.3% in 2003 and a remarkable 12% in 2004, despite a loss of momentum in needed economic reforms.

general assessment: Ukraine's telecommunication development plan, running through 2005, emphasizes improving domestic trunk lines, international connections, and the mobile cellular system
domestic: at independence in December 1991, Ukraine inherited a telephone system that was antiquated, inefficient, and in disrepair; more than 3.5 million applications for telephones could not be satisfied; telephone density is now rising slowly and the domestic

trunk system is being improved; the mobile cellular telephone system is expanding at a high rate

international: country code - 380; two new domestic trunk lines are a part of the fiber-optic Trans-Asia-Europe (TAE) system and three Ukrainian links have been installed in the fiber-optic Trans-European Lines (TEL) project that connects 18 countries; additional international service is provided by the Italy-Turkey-Ukraine-Russia (ITUR) fiber-optic submarine cable and by earth stations in the Intelsat, Inmarsat, and Intersputnik satellite systems

based on 1997 friendship treaty to find a solution in two years;
ongoing dispute between Ukraine and Romania over the Danube River
delta

Illicit drugs:

limited cultivation of cannabis and opium poppy, mostly for CIS
consumption; some synthetic drug production for export to the West;
limited government eradication program; used as transshipment point
for opiates and other illicit drugs from Africa, Latin America, and
Turkey to Europe and Russia; Ukraine has improved
anti-money-laundering controls, resulting in its removal from the
Financial Action Task Force's (FATF's) Noncooperative Countries and
Territories List in February 2004; Ukraine's anti-money-laundering
regime continues to be monitored by FATF

@United Arab Emirates

Introduction United Arab Emirates

Background:

The Trucial States of the Persian Gulf coast granted the UK control

of their defense and foreign affairs in 19th century treaties. In 1971, six of these states - Abu Zaby, 'Ajman, Al Fujayrah, Ash Shariqah, Dubayy, and Umm al Qaywayn - merged to form the United Arab Emirates (UAE). They were joined in 1972 by Ra's al Khaymah. The UAE's per capita GDP is on par with those of leading West European nations. Its generosity with oil revenues and its moderate foreign policy stance have allowed the UAE to play a vital role in the affairs of the region.

Economy United Arab Emirates

Economy - overview:

The UAE has an open economy with a high per capita income and a sizable annual trade surplus. Its wealth is based on oil and gas output (about 33% of GDP), and the fortunes of the economy fluctuate with the prices of those commodities. Since 1973, the UAE has undergone a profound transformation from an impoverished region of small desert principalities to a modern state with a high standard of living. At present levels of production, oil and gas reserves should last for more than 100 years. The government has increased spending on job creation and infrastructure expansion and is opening up its utilities to greater private sector involvement.

Introduction United Kingdom

Background:

Great Britain, the dominant industrial and maritime power of the 19th century, played a leading role in developing parliamentary democracy and in advancing literature and science. At its zenith, the British Empire stretched over one-fourth of the earth's surface. The first half of the 20th century saw the UK's strength seriously depleted in two World Wars. The second half witnessed the dismantling of the Empire and the UK rebuilding itself into a modern and prosperous European nation. As one of five permanent members of the UN Security Council, a founding member of NATO, and of the Commonwealth, the UK pursues a global approach to foreign policy; it currently is weighing the degree of its integration with continental Europe. A member of the EU, it chose to remain outside the European

Monetary Union for the time being. Constitutional reform is also a significant issue in the UK. The Scottish Parliament, the National Assembly for Wales, and the Northern Ireland Assembly were established in 1999, but the latter is suspended due to bickering over the peace process.

blue field with the red cross of Saint George (patron saint of England) edged in white superimposed on the diagonal red cross of Saint Patrick (patron saint of Ireland), which is superimposed on the diagonal white cross of Saint Andrew (patron saint of Scotland); properly known as the Union Flag, but commonly called the Union

Jack; the design and colors (especially the Blue Ensign) have been the basis for a number of other flags including other Commonwealth countries and their constituent states or provinces, as well as British overseas territories

Economy United Kingdom

Economy - overview:

The UK, a leading trading power and financial center, is one of the quartet of trillion dollar economies of Western Europe. Over the past two decades the government has greatly reduced public ownership and contained the growth of social welfare programs. Agriculture is intensive, highly mechanized, and efficient by European standards, producing about 60% of food needs with only 1% of the labor force. The UK has large coal, natural gas, and oil reserves; primary energy production accounts for 10% of GDP, one of the highest shares of any industrial nation. Services, particularly banking, insurance, and business services, account by far for the largest proportion of GDP while industry continues to decline in importance. GDP growth slipped in 2001-03 as the global downturn, the high value of the pound, and the bursting of the "new economy" bubble hurt manufacturing and exports. Still, the economy is one of the strongest in Europe; inflation, interest rates, and unemployment remain low. The relatively good economic performance has complicated the BLAIR government's efforts to make a case for Britain to join the European Economic and Monetary Union (EMU). Critics point out, however, that the economy is doing well outside of EMU, and they point to public opinion polls that continue to show a majority of Britons opposed to the euro. Meantime, the government has been speeding up the improvement of education, transport, and health

services, at a cost in higher taxes. The war in March-April 2003 between a US-led coalition and Iraq, together with the subsequent problems of restoring the economy and the polity, involve a heavy commitment of British military forces.

Introduction United States

Background:

Britain's American colonies broke with the mother country in 1776 and were recognized as the new nation of the United States of America following the Treaty of Paris in 1783. During the 19th and 20th centuries, 37 new states were added to the original 13 as the nation expanded across the North American continent and acquired a number of overseas possessions. The two most traumatic experiences in the nation's history were the Civil War (1861-65) and the Great Depression of the 1930s. Buoyed by victories in World Wars I and II and the end of the Cold War in 1991, the US remains the world's most powerful nation state. The economy is marked by steady growth, low unemployment and inflation, and rapid advances in technology.

Economy United States

Economy - overview: The US has the largest and most technologically powerful economy in the world, with a per capita GDP of \$37,800. In this market-oriented economy, private individuals and business firms make most of the decisions, and the federal and state governments buy needed goods and services predominantly in the private marketplace. US business firms enjoy considerably greater flexibility than their counterparts in Western Europe and Japan in decisions to expand capital plant, to lay off surplus workers, and to develop new products. At the same time, they face higher barriers to entry in their rivals' home markets than the barriers to entry of foreign firms in US markets. US firms are at or near the forefront in technological advances, especially in computers and in medical, aerospace, and military equipment; their advantage has narrowed since the end of World War II. The onrush of technology largely explains the gradual development of a "two-tier labor market" in which those at the bottom lack the education and the professional/technical skills of those at the top and, more and more, fail to get comparable pay raises, health insurance coverage, and other benefits. Since 1975, practically all the gains in household income have gone to the top 20% of households. The years

1994-2000 witnessed solid increases in real output, low inflation rates, and a drop in unemployment to below 5%. The year 2001 saw the end of boom psychology and performance, with output increasing only 0.3% and unemployment and business failures rising substantially. The response to the terrorist attacks of 11 September 2001 showed the remarkable resilience of the economy. Moderate recovery took place in 2002 with the GDP growth rate rising to 2.4%. A major short-term problem in first half 2002 was a sharp decline in the stock market, fueled in part by the exposure of dubious accounting practices in some major corporations. The war in March/April 2003 between a US-led coalition and Iraq shifted resources to the military. In 2003, growth in output and productivity and the recovery of the stock market to above 10,000 for the Dow Jones Industrial Average were promising signs. Unemployment stayed at the 6% level, however, and began to decline only at the end of the year. Long-term problems include inadequate investment in economic infrastructure, rapidly rising medical and pension costs of an aging population, sizable trade and budget deficits, and stagnation of family income in the lower economic groups.

Introduction Uruguay

Background:

A violent Marxist urban guerrilla movement, the Tupamaros, launched in the late 1960s, led Uruguay's president to agree to military control of his administration in 1973. By yearend, the rebels had been crushed, but the military continued to expand its hold throughout the government. Civilian rule was not restored until 1985. Uruguay's political and labor conditions are among the freest on the continent.

Geography Uruguay

Location:

Southern South America, bordering the South Atlantic Ocean, between

Argentina and Brazil

Irrigated land:

1,800 sq km (1998 est.)

Natural hazards:

seasonally high winds (the pampero is a chilly and occasional violent wind which blows north from the Argentine pampas), droughts, floods; because of the absence of mountains, which act as weather barriers, all locations are particularly vulnerable to rapid changes from weather fronts

Environment - current issues: water pollution from meat packing/tannery industry; inadequate solid/hazardous waste disposal

Environment - international agreements: party to: Antarctic-Environmental Protocol, Antarctic-Marine Living Resources, Antarctic Treaty, Biodiversity, Climate Change, Climate Change-Kyoto Protocol, Desertification, Endangered Species, Environmental Modification, Hazardous Wastes, Law of the Sea, Ozone Layer Protection, Ship Pollution, Tropical Timber 94, Wetlands signed, but not ratified: Marine Dumping, Marine Life Conservation

Geography - note:

second-smallest South American country (after Suriname); most of the low-lying landscape (three-quarters of the country) is grassland, ideal for cattle and sheep raising

Economy Uruguay

Economy - overview:

Uruguay's well-to-do economy is characterized by an export-oriented agricultural sector, a well-educated workforce, and high levels of social spending. After averaging growth of 5% annually during 1996-98, in 1999-2002 the economy suffered a major downturn, stemming largely from the spillover effects of the economic problems of its large neighbors, Argentina and Brazil. For instance, in 2001-02 massive withdrawals by Argentina of dollars deposited in Uruguayan banks led to a plunge in the Uruguayan peso and a massive rise in unemployment. Total GDP in these four years dropped by nearly 20%, with 2002 the worst year due to the serious banking crisis. Unemployment rose to nearly 20% in 2002, inflation surged, and the burden of external debt doubled. Cooperation with the IMF and the US has limited the damage. The debt swap with private creditors carried out in 2003, which extended the maturity dates on nearly half of Uruguay's \$11.3 billion in public debt, substantially alleviated the country's amortization burden in the coming years and restored public confidence. The economy is expected to resume growth in 2004 (perhaps 4% or more) as a result of high commodity prices for Uruguayan exports, the weakness of the dollar against the euro, growth in the region, low international interest rates, and greater export competitiveness. On the negative side, in December 2003 the

electorate voted to repeal the law permitting a cautious liberalization of the energy industry.

Introduction Uzbekistan

Background:

Russia conquered Uzbekistan in the late 19th century. Stiff resistance to the Red Army after World War I was eventually suppressed and a socialist republic set up in 1924. During the Soviet era, intensive production of "white gold" (cotton) and grain led to overuse of agrochemicals and the depletion of water supplies, which have left the land poisoned and the Aral Sea and certain rivers half dry. Independent since 1991, the country seeks to gradually lessen its dependence on agriculture while developing its

mineral and petroleum reserves. Current concerns include terrorism by Islamic militants, economic stagnation, and the curtailment of human rights and democratization.

Geography Uzbekistan

Maritime claims:

none (doubly landlocked)

Climate:

mostly midlatitude desert, long, hot summers, mild winters;
semiarid grassland in east

Terrain:

mostly flat-to-rolling sandy desert with dunes; broad, flat
intensely irrigated river valleys along course of Amu Darya, Syr
Darya (Sirdaryo), and Zarafshon; Fergana Valley in east surrounded
by mountainous Tajikistan and Kyrgyzstan; shrinking Aral Sea in west

Elevation extremes:

lowest point: Saryqarnish Kuli -12 m
highest point: Adelunga Toghi 4,301 m

Natural resources:

natural gas, petroleum, coal, gold, uranium, silver, copper, lead
and zinc, tungsten, molybdenum

Natural hazards:

NA

Environment - current issues:

shrinkage of the Aral Sea is resulting in growing concentrations of
chemical pesticides and natural salts; these substances are then

blown from the increasingly exposed lake bed and contribute to desertification; water pollution from industrial wastes and the heavy use of fertilizers and pesticides is the cause of many human health disorders; increasing soil salination; soil contamination from buried nuclear processing and agricultural chemicals, including DDT

Environment - international agreements:

party to: Biodiversity, Climate Change, Climate Change-Kyoto Protocol, Desertification, Endangered Species, Environmental Modification, Hazardous Wastes, Ozone Layer Protection, Wetlands
signed, but not ratified: none of the selected agreements

Geography - note:

along with Liechtenstein, one of the only two doubly landlocked countries in the world

Economy Uzbekistan

Economy - overview:

Uzbekistan is a dry, landlocked country of which 11% consists of intensely cultivated, irrigated river valleys. More than 60% of its population lives in densely populated rural communities. Uzbekistan is now the world's second-largest cotton exporter, a large producer of gold and oil, and a regionally significant producer of chemicals and machinery. Following independence in December 1991, the government sought to prop up its Soviet-style command economy with subsidies and tight controls on production and prices. Uzbekistan responded to the negative external conditions generated by the Asian and Russian financial crises by emphasizing import substitute industrialization and by tightening export and currency controls within its already largely closed economy. The government, while aware of the need to improve the investment climate, sponsors measures that often increase, not decrease, the government's control over business decisions. A sharp increase in the inequality of income distribution has hurt the lower ranks of society since independence. In 2003, the government accepted the obligations of Article VIII under the International Monetary Fund (IMF), providing for full currency convertibility. However, strict currency controls and tightening of borders have lessened the effects of convertibility and have also lead to some shortages which have further stifled economic activity.

Economy Vanuatu

Economy - overview:

This South Pacific island economy is based primarily on small-scale agriculture, which provides a living for 65% of the population. Fishing, offshore financial services, and tourism, with about 50,000 visitors in 1997, are other mainstays of the economy. Mineral deposits are negligible; the country has no known petroleum deposits. A small light industry sector caters to the local market. Tax revenues come mainly from import duties. Economic development is hindered by dependence on relatively few commodity exports, vulnerability to natural disasters, and long distances from main markets and between constituent islands. A severe earthquake in November 1999 followed by a tsunami, caused extensive damage to the northern island of Pentecote and left thousands homeless. Another

powerful earthquake in January 2002 caused extensive damage in the capital, Port-Vila, and surrounding areas, and also was followed by a tsunami. GDP growth rose less than 3% on average in the 1990s. In response to foreign concerns, the government has promised to tighten regulation of its offshore financial center. In mid-2002 the government stepped up efforts to boost tourism. Agriculture, especially livestock farming, is a second target for growth. Australia and New Zealand are the main suppliers of tourists and foreign aid. Growth expanded moderately in 2003.

Introduction Venezuela

Background:

Venezuela was one of three countries that emerged from the collapse of Gran Colombia in 1830 (the others being Colombia and Ecuador). For most of the first half of the 20th century, Venezuela was ruled by generally benevolent military strongmen, who promoted the oil industry and allowed for some social reforms. Democratically elected governments have held sway since 1959. Current concerns include: a polarized political environment, a divided military, drug-related

conflicts along the Colombian border, increasing internal drug consumption, overdependence on the petroleum industry with its price fluctuations, and irresponsible mining operations that are endangering the rain forest and indigenous peoples.

Economy Venezuela

Economy - overview:
Venezuela continues to be highly dependent on the petroleum sector,
which accounts for roughly one-third of GDP, around 80% of export
earnings, and more than half of government operating revenues.
Despite higher oil prices at the end of 2002 and into 2003, domestic
political instability, culminating in a disastrous two-month
national oil strike from December 2002 to February 2003, temporarily
halted economic activity. The economy remained in depression in

Introduction Vietnam

Background:

The conquest of Vietnam by France began in 1858 and was completed by 1884. It became part of French Indochina in 1887. Independence was declared after World War II, but the French continued to rule until 1954 when they were defeated by Communist forces under Ho Chi Minh, who took control of the North. US economic and military aid to South Vietnam grew through the 1960s in an attempt to bolster the government, but US armed forces were withdrawn following a cease-fire agreement in 1973. Two years later, North Vietnamese forces overran the South. Despite the return of peace, for over two decades the country experienced little economic growth because of conservative leadership policies. Since 2001, Vietnamese authorities have committed to economic liberalization and enacted structural reforms needed to modernize the economy and to produce more competitive, export-driven industries. The country continues to experience protests from the Montagnard ethnic minority population of the Central Highlands over loss of land to Vietnamese settlers and religious persecution.

Economy Vietnam

Economy - overview:

Vietnam is a poor, densely-populated country that has had to

recover from the ravages of war, the loss of financial support from the old Soviet Bloc, and the rigidities of a centrally-planned economy. Substantial progress was achieved from 1986 to 1996 in moving forward from an extremely low starting point - growth averaged around 9% per year from 1993 to 1997. The 1997 Asian financial crisis highlighted the problems in the Vietnamese economy, but rather than prompting reform, reaffirmed the government's belief that shifting to a market-oriented economy would lead to disaster. GDP growth of 8.5% in 1997 fell to 6% in 1998 and 5% in 1999. Growth then rose to 6% to 7% in 2000-02 even against the background of global recession. These numbers mask some major difficulties in economic performance. Many domestic industries, including coal, cement, steel, and paper, have reported large stockpiles of inventory and tough competition from more efficient foreign producers. Since the Party elected new leadership in 2001, Vietnamese authorities have reaffirmed their commitment to economic liberalization and have moved to implement the structural reforms needed to modernize the economy and to produce more competitive, export-driven industries. The US-Vietnam Bilateral Trade Agreement entered into force near the end of 2001 and is expected to significantly increase Vietnam's exports to the US. The US is assisting Vietnam with implementing the legal and structural reforms called for in the agreement.

2.5% (FY98)

Transnational Issues Vietnam

Disputes - international:

demarcation of the land boundary with China continues, but maritime boundary and joint fishing zone agreement remains unimplemented; Cambodia and Laos protest Vietnamese squatters and armed encroachments along border; China occupies Paracel Islands also

claimed by Vietnam and Taiwan; involved in complex dispute with China, Malaysia, Philippines, Taiwan, and possibly Brunei over the Spratly Islands; the 2002 "Declaration on the Conduct of Parties in the South China Sea" has eased tensions but falls short of a legally binding "code of conduct" desired by several of the disputants

Illicit drugs:

minor producer of opium poppy; probable minor transit point for Southeast Asian heroin; domestic opium/heroin/methamphetamine addiction problems

@Virgin Islands

Introduction Virgin Islands

Background: During the 17th century, the archipelago was divided into two territorial units, one English and the other Danish. Sugarcane, produced by slave labor, drove the islands' economy during the 18th and early 19th centuries. In 1917, the US purchased the Danish portion, which had been in economic decline since the abolition of slavery in 1848.

Economy Virgin Islands

Economy - overview:

Tourism is the primary economic activity, accounting for 80% of GDP and employment. The islands normally host 2 million visitors a year. The manufacturing sector consists of petroleum refining, textiles, electronics, pharmaceuticals, and watch assembly. The agricultural sector is small, with most food being imported. International business and financial services are a small but growing component of the economy. One of the world's largest petroleum refineries is at Saint Croix. The islands are subject to substantial damage from storms. The government is working to improve fiscal discipline, to support construction projects in the private sector, to expand tourist facilities, to reduce crime, and to protect the environment.

@Wake Island

Introduction Wake Island

Background:

The US annexed Wake Island in 1899 for a cable station. An important air and naval base was constructed in 1940-41. In December 1941, the island was captured by the Japanese and held until the end of World War II. In subsequent years, Wake was developed as a stopover and refueling site for military and commercial aircraft transiting the Pacific. Since 1974, the island's airstrip has been used by the US military and some commercial cargo planes, as well as for emergency landings. There are over 700 landings a year on the island.

@West Bank

Introduction West Bank

Background:

The Israel-PLO Declaration of Principles on Interim Self-Government Arrangements (the DOP), signed in Washington on 13 September 1993, provided for a transitional period not exceeding five years of Palestinian interim self-government in the Gaza Strip and the West Bank. Under the DOP, Israel agreed to transfer certain powers and responsibilities to the Palestinian Authority, which includes the Palestinian Legislative Council elected in January 1996, as part of the interim self-governing arrangements in the West Bank and Gaza Strip. A transfer of powers and responsibilities for the Gaza Strip and Jericho took place pursuant to the Israel-PLO 4 May 1994 Cairo Agreement on the Gaza Strip and the Jericho Area and in additional areas of the West Bank pursuant to the Israel-PLO 28 September 1995 Interim Agreement, the Israel-PLO 15 January 1997 Protocol Concerning Redeployment in Hebron, the Israel-PLO 23 October 1998 Wye River Memorandum, and the 4 September 1999 Sharm el-Sheikh Agreement. The DOP provides that Israel will retain responsibility during the transitional period for external and internal security and for public order of settlements and Israeli citizens. Direct negotiations to determine the permanent status of Gaza and West Bank that began in September 1999 after a three-year hiatus, were

derailed by a second intifadah that broke out in September 2000. The resulting widespread violence in the West Bank and Gaza Strip, Israel's military response, and instability within the Palestinian Authority continue to undermine progress toward a permanent agreement. Following the death of longtime Palestinian leader Yasir

ARAFAT in November 2004, the election of his successor Mahmud ABBAS

in January 2005 could bring a turning point in the conflict.

Economy West Bank

Economy - overview:

Real per capita GDP for the West Bank and Gaza Strip (WBGS)
declined by about one-third between 1992 and 1996 due to the

combined effect of falling aggregate incomes and rapid population growth. The downturn in economic activity was largely the result of Israeli closure policies - the imposition of border closures in response to security incidents in Israel - which disrupted labor and commodity market relationships between Israel and the WBGS. The most serious social effect of this downturn was rising unemployment, which in the WBGS during the 1980s was generally under 5%; by 1995 it had risen to over 20%. Israel's use of comprehensive closures during the next three years decreased and, in 1998, Israel implemented new policies to reduce the impact of closures and other security procedures on the movement of Palestinian goods and labor. These changes fueled an almost three-year-long economic recovery in the West Bank and Gaza Strip; real GDP grew by 5% in 1998 and 6% in 1999. Recovery was upended in the last quarter of 2000 with the outbreak of violence, which triggered tight Israeli closures of Palestinian self-rule areas and severely disrupted trade and labor movements. In 2001, and even more severely in 2002, Israeli military measures in Palestinian Authority areas resulted in the destruction of much capital plant and administrative structure, widespread business closures, and a sharp drop in GDP. Including Gaza Strip, the UN estimates that more than 100,000 Palestinians out of the 125,000 who used to work in Israel, in Israeli settlements, or in joint industrial zones have lost their jobs. In addition, about 80,000 Palestinian workers inside the Territories are losing their jobs. International aid of \$2 billion in 2001-02 to the West Bank and Gaza Strip prevented the complete collapse of the economy. In 2004, on-going border issues and the death of Yasser ARAFAT continued to complicate the economic situation.

@Western Sahara

Introduction Western Sahara

Background:

Morocco virtually annexed the northern two-thirds of Western Sahara (formerly Spanish Sahara) in 1976, and the rest of the territory in 1979, following Mauritania's withdrawal. A guerrilla war with the Polisario Front contesting Rabat's sovereignty ended in a 1991

UN-brokered cease-fire; a UN-organized referendum on final status has been repeatedly postponed.

Economy Western Sahara

Economy - overview:

Western Sahara depends on pastoral nomadism, fishing, and phosphate mining as the principal sources of income for the population. The territory lacks sufficient rainfall for sustainable agricultural production, and most of the food for the urban population must be imported. All trade and other economic activities are controlled by the Moroccan Government. Moroccan energy interests in 2001 signed contracts to explore for oil off the coast of Western Sahara, which has angered the Polisario. Incomes and standards of living in Western Sahara are substantially below the Moroccan level.

Introduction World

Background:

Globally, the 20th century was marked by: (a) two devastating world wars; (b) the Great Depression of the 1930s; (c) the end of vast colonial empires; (d) rapid advances in science and technology, from the first airplane flight at Kitty Hawk, North Carolina (US) to the landing on the moon; (e) the Cold War between the Western alliance and the Warsaw Pact nations; (f) a sharp rise in living standards in North America, Europe, and Japan; (g) increased concerns about the environment, including loss of forests, shortages of energy and water, the decline in biological diversity, and air pollution; (h) the onset of the AIDS epidemic; and (i) the ultimate emergence of the US as the only world superpower. The planet's population continues to explode: from 1 billion in 1820, to 2 billion in 1930,

3 billion in 1960, 4 billion in 1974, 5 billion in 1988, and 6 billion in 2000. For the 21st century, the continued exponential growth in science and technology raises both hopes (e.g., advances in medicine) and fears (e.g., development of even more lethal weapons of war).

Maritime claims:

a variety of situations exist, but in general, most countries make the following claims measured from the mean low-tide baseline as described in the 1982 UN Convention on the Law of the Sea: territorial sea - 12 nm, contiguous zone - 24 nm, and exclusive economic zone - 200 nm; additional zones provide for exploitation of continental shelf resources and an exclusive fishing zone; boundary situations with neighboring states prevent many countries from extending their fishing or economic zones to a full 200 nm

note: in the oceanic realm, Challenger Deep in the Mariana Trench is the lowest point, lying -10,924 m below the surface of the Pacific Ocean

highest point: Mount Everest 8,850 m (1999 est.)

Natural resources:

the rapid depletion of nonrenewable mineral resources, the depletion of forest areas and wetlands, the extinction of animal and plant species, and the deterioration in air and water quality (especially in Eastern Europe, the former USSR, and China) pose

serious long-term problems that governments and peoples are only beginning to address

Economy World

Economy - overview: Global output rose by 3.7% in 2003, led by China (9.1%), India (7.6%), and Russia (7.3%). The other 14 successor nations of the USSR and the other old Warsaw Pact nations again experienced widely divergent growth rates; the three Baltic nations continued as strong performers, in the 5%-7% range of growth. Growth results posted by the major industrial countries varied from a loss by Germany (-0.1%) to a strong gain by the United States (3.1%). The developing nations also varied in their growth results, with many countries facing population increases that erode gains in output. Externally, the nation-state, as a bedrock economic-political institution, is steadily losing control over international flows of people, goods, funds, and technology. Internally, the central government often finds its control over resources slipping as separatist regional movements - typically based on ethnicity - gain momentum, e.g., in many of the successor states of the former Soviet Union, in the former Yugoslavia, in India, in Iraq, in Indonesia, and in Canada. Externally, the central government is losing decision-making powers to international bodies. In Western Europe, governments face the difficult political problem of channeling resources away from welfare programs in order to increase investment and strengthen incentives to seek employment. The addition of 80 million people each year to an already overcrowded globe is exacerbating the problems of pollution, desertification, underemployment, epidemics, and famine. Because of their own internal problems and priorities, the industrialized countries devote insufficient resources to deal effectively with the poorer areas of the world, which, at least from the

economic point of view, are becoming further marginalized. The introduction of the euro as the common currency of much of Western Europe in January 1999, while paving the way for an integrated economic powerhouse, poses economic risks because of varying levels of income and cultural and political differences among the participating nations. The terrorist attacks on the US on 11 September 2001 accentuate a further growing risk to global prosperity, illustrated, for example, by the reallocation of resources away from investment to anti-terrorist programs. The opening of war in March 2003 between a US-led coalition and Iraq added new uncertainties to global economic prospects. After the coalition victory, the complex political difficulties and the high economic cost of establishing domestic order in Iraq became major global problems that continue into 2004.

Industries:
dominated by the onrush of technology, especially in computers, robotics, telecommunications, and medicines and medical equipment; most of these advances take place in OECD nations; only a small portion of non-OECD countries have succeeded in rapidly adjusting to these technological forces; the accelerated development of new industrial (and agricultural) technology is complicating already grim environmental problems

Transnational Issues World

Disputes - international:

stretching over 250,000 km, the world's 325 international land boundaries separate the 192 independent states and 72 dependencies, areas of special sovereignty, and other miscellaneous entities; ethnicity, culture, race, religion, and language have divided states into separate political entities as much as history, physical terrain, political fiat, or conquest, resulting in sometimes arbitrary and imposed boundaries; maritime states have claimed limits and have so far established over 130 maritime boundaries and joint development zones to allocate ocean resources and to provide for national security at sea; boundary, borderland/resource, and territorial disputes vary in intensity from managed or dormant to violent or militarized; most disputes over the alignment of political boundaries are confined to short segments and are today less common and less hostile than borderland, resource, and

territorial disputes; undemarcated, indefinite, porous, and unmanaged boundaries, however, encourage illegal cross-border activities, uncontrolled migration, and confrontation; territorial disputes may evolve from historical and/or cultural claims, or they may be brought on by resource competition; ethnic clashes continue to be responsible for much of the territorial fragmentation around the world; disputes over islands at sea or in rivers frequently form the source of territorial and boundary conflict; other sources of contention include access to water and mineral (especially petroleum) resources, fisheries, and arable land; nonetheless, most nations cooperate to clarify their international boundaries and to resolve territorial and resource disputes peacefully; regional discord directly affects the sustenance and welfare of local populations, often leaving the world community to cope with resultant refugees, hunger, disease, impoverishment, deforestation, and desertification

Illicit drugs:

cocaine: worldwide, coca is grown on an estimated 173,450 hectares-almost exclusively in South America with 70% in Colombia; potential cocaine production during 2003 is estimated at 728 metric tons (or 835 metric tons of export quality cocaine); coca eradication programs continue in Bolivia, Colombia, and Peru; 376 metric tons of export quality cocaine are documented to have been seized in 2003, and 26 metric tons disrupted (jettisoned or destroyed); consumption of export quality cocaine is estimated to have been 800 metric tons

opiates: cultivation of opium poppy occurred on an estimated 137,944 hectares in 2003-mostly in Southwest and Southeast Asia-with 44% in Afghanistan, potentially produced 3,775 metric tons of opium - which conceivably could be converted to the equivalent of 429 metric tons

of pure heroin; opium eradication programs have been undertaken in Afghanistan, Burma, Colombia, Mexico, Pakistan, Thailand, and Vietnam

Introduction Yemen

Background:

North Yemen became independent of the Ottoman Empire in 1918. The British, who had set up a protectorate area around the southern port of Aden in the 19th century, withdrew in 1967 from what became South Yemen. Three years later, the southern government adopted a Marxist orientation. The massive exodus of hundreds of thousands of Yemenis from the south to the north contributed to two decades of hostility between the states. The two countries were formally unified as the Republic of Yemen in 1990. A southern secessionist movement in 1994 was quickly subdued. In 2000, Saudi Arabia and Yemen agreed to a delimitation of their border.

Economy Yemen

Economy - overview:

Yemen, one of the poorest countries in the Arab world, reported strong growth in the mid-1990s with the onset of oil production. It has been harmed by periodic declines in oil prices, but now benefits from current high prices. Yemen has embarked on an IMF-supported structural adjustment program designed to modernize and streamline the economy, which has led to substantial foreign debt relief and restructuring. International donors, meeting in Paris in October 2002, agreed on a further \$2.3 billion economic support package. Yemen has worked to maintain tight control over spending and to implement additional components of the IMF program. A markedly high population growth rate and internal political dissension complicate the government's task. Plans include a diversification of the economy, encouragement of tourism, and more efficient use of scarce water resources.

@Zambia

Introduction Zambia

Background:

The territory of Northern Rhodesia was administered by the South Africa Company from 1891 until it was taken over by the UK in 1923. During the 1920s and 1930s, advances in mining spurred development and immigration. The name was changed to Zambia upon independence in 1964. In the 1980s and 1990s, declining copper prices and a prolonged drought hurt the economy. Elections in 1991 brought an end to one-party rule, but the subsequent vote in 1996 saw blatant harassment of opposition parties. The election in 2001 was marked by

administrative problems with three parties filing a legal petition challenging the election of ruling party candidate Levy MWANAWASA. The new president launched a far-reaching anti-corruption campaign in 2002, which resulted in the prosecution of former President Frederick CHILUBA and many of his supporters in late 2003. Opposition parties currently hold a majority of seats in the National Assembly.

Economy Zambia

Economy - overview:

Despite progress in privatization and budgetary reform, Zambia's economic growth remains below the 5% to 7% necessary to reduce poverty significantly. Privatization of government-owned copper mines relieved the government from covering mammoth losses generated by the industry and greatly improved the chances for copper mining to return to profitability and spur economic growth. Copper output increased in 2003 and is expected to increase again in 2004, due to higher copper prices. The maize harvest doubled in 2003, helping boost GDP by 4.0%. Cooperation continues with international bodies on programs to reduce poverty, including a new lending arrangement with the IMF expected in the second quarter, 2004. A tighter monetary policy will help cut inflation, but Zambia still has a serious problem with fiscal discipline.

Introduction Zimbabwe

Background:

The UK annexed Southern Rhodesia from the South Africa Company in 1923. A 1961 constitution was formulated that favored whites in power. In 1965 the government unilaterally declared its independence, but the UK did not recognize the act and demanded more complete voting rights for the black African majority in the country (then called Rhodesia). UN sanctions and a guerrilla uprising finally led to free elections in 1979 and independence (as Zimbabwe) in 1980. Robert MUGABE, the nation's first prime minister, has been the country's only ruler (as president since 1987) and has dominated the country's political system since independence. His chaotic land redistribution campaign begun in 2000 caused an exodus of white

farmers, crippled the economy, and ushered in widespread shortages of basic commodities. Ignoring international condemnation, MUGABE rigged the 2002 presidential election to ensure his reelection. Opposition and labor groups launched general strikes in 2003 to pressure MUGABE to retire early; security forces continued their brutal repression of regime opponents.

Economy Zimbabwe

Economy - overview:

The government of Zimbabwe faces a wide variety of difficult economic problems as it struggles with an unsustainable fiscal deficit, an overvalued exchange rate, soaring inflation, and bare shelves. Its 1998-2002 involvement in the war in the Democratic

Republic of the Congo, for example, drained hundreds of millions of dollars from the economy. Badly needed support from the IMF has been suspended because of the country's failure to meet budgetary goals. Inflation rose from an annual rate of 32% in 1998 to 383% in 2003, and is expected to reach 700% in 2004. The government's land reform program, characterized by chaos and violence, has badly damaged the commercial farming sector, the traditional source of exports and foreign exchange and the provider of 400,000 jobs.
