The background of the lower half of the image is a solid blue color. Overlaid on this is a complex, abstract pattern of magenta (bright pink) geometric shapes. These shapes include various sizes of triangles, squares, rectangles, and lines, some of which are arranged to form larger, more complex structures like a stylized 'T' or a 'Z'. The pattern is dense and covers the entire lower half of the image.

HOW UTE JACK WAS TAKEN.

BY OWEN WISTER.

Augustus Albumblatt, young and new and sleek with the latest book-knowledge of war, reported to his first troop commander at Fort Brown. The ladies had watched for him, because he would increase the number of men, the officers because he would lessen the number of duties; and he joined at a crisis favorable to becoming speedily known by them all. Upon that same day had household servants become an extinct race. The last one, the commanding officer's cook, had told the commanding officer's wife that she was used to living where she could see the cars. She added that there was no society here "fit for man or baste at all." This opinion was formed on the preceding afternoon when Casey, a sergeant of roguish attractions in G troop, had told her he would be a brother to her always. Three hours later she wedded a gambler, and this morning at six they took the stage for Green River, two hundred miles south, the nearest point where the bride could see the cars.

"Frank," said the commanding officer's wife, "send over to H troop for York."

"Catherine," he answered, "my dear, our statesmen at Washington say it's wicked to hire the free American soldier to cook for you. It's too menial for his manhood."

"Frank, stuff!"

"Hush, my love. Therefore York must be spared the insult of twenty more dollars a month, our statesmen must be re-elected, and you and I, Catherine, being cookless, must join the general mess."

Thus did all separate housekeeping end, and the garrison began unitedly to eat three meals a day what a Chinaman set before them, when the long-expected Albumblatt stepped into their midst, just in time for supper.

This youth was spic-and-span from the Military Academy, with a top-dressing of three months' thoughtful travel in Germany. "I was deeply impressed with the modernity of their scientific attitude," he pleasantly remarked to the commanding officer. For Captain Duane, silent usually, talked at this first meal to make the boy welcome in this forlorn two-company post.

"We're cut off from all that sort of thing here," said he. "I've not been east of the Missouri since '69. But we've got the railroad across, and we've killed some Indians, and we've had some fun, and we're glad we're alive—eh, Mrs. Starr?"

"I should think so," said the lady.

"Especially now we've got a bachelor at the post!" said Mrs. Bainbridge. "That has been the one drawback, Mr. Albumblatt."

"I thank you for the compliment," said Augustus, bending from his hips; and Mrs. Starr looked at him and then at Mrs. Bainbridge.

"We're not over-gay, I fear," the Captain continued; "but the flat's full of antelope, and there's good shooting up both cañons."

"Have you followed the recent target experiments at Metz?" inquired the traveller. "I refer to the flattened trajectory and the obus controversy."

"We have not heard the reports," answered the commandant. "But we own a mountain howitzer."

"The modernity of German ordnance—" began Augustus.

"Do you dance, Mr. Albumblatt?" asked Mrs. Starr.

"For we'll have a hop and all be your partners," Mrs. Bainbridge exclaimed.

"I will be pleased to accommodate you, ladies."

"It's anything for variety's sake with us, you see," said Mrs. Starr, smoothly smiling; and once again Augustus bent blandly from his hips.

But the commanding officer wished leniency. "You see us all," he hastened to say. "Commissioned officers and dancing-men. Pretty shabby—"

"Oh, Captain!" said a lady.

"And pretty old."

"*Captain!*" said another lady.

"But alive and kicking. Captain Starr, Mr. Bainbridge, the Doctor, and me. We are seven."

Augustus looked accurately about him. "Do I understand seven, Captain?"

"We are seven," the senior officer repeated.

Again Mr. Albumblatt counted heads. "I imagine you include the ladies, Captain? Ha! ha!"

"Seven commissioned males, sir. Our Major is on sick-leave, and two of our Lieutenants have uncles in the Senate. None of us in the churchyard lie—but we are seven."

"Ha! ha, Captain! That's an elegant double-entender on Wordsworth's pome and the War Department. Only, if I may correct your addition—ha! ha!—our total, including myself, is eight."

The commanding officer rolled an intimate eye at his wife.

That lady was sitting big with rage, but her words were cordial still: "Indeed, Mr. Albumblatt, the way officers who have influence in Washington shirk duty here and get details East is something I can't laugh about. At one time the Captain was his own adjutant and quartermaster. There are more officers at this table to-night than I've seen in three years. So we are doubly glad to welcome you at Fort Brown."

"I am fortunate to be on duty where my services are so required, though I could object to calling it Fort Brown." And Augustus exhaled a smile.

"Prefer Smith?" said Captain Starr.

"You misunderstand me. When we say *Fort Brown*, *Fort Russell*, *Fort Et Coetera*, we are inexact. They are not fortified."

"Cantonment Et Coetera would be a trifle lengthy, wouldn't it?" put in the Doctor, his endurance on the wane.

"Perhaps; but technically descriptive of our Western posts. The Germans criticise these military laxities."

Captain Duane now ceased talking, but urbanely listened; and from time to time his eye would scan Augustus, and then a certain sublimated laugh, to his wife well known, would seize him for a single voiceless spasm, and pass. The experienced Albumblatt meanwhile continued, "By-the-way, Doctor, you know the Charité, of course?"

Doctor Guild had visited the great hospital, but being now a goaded man he stuck his nose in his plate, and said, unwisely: "Sharrity? What's that?" For then Augustus told him what and where it was, and that Krankenhaus is German for hospital, and that he had been deeply impressed with the modernity of the ventilation. "Thirty-five cubic metres to a bed in new wards," he stated. "How many do you allow, Doctor?"

"None," answered the surgeon.

"Do I understand none, Doctor?"

"You do, sir. My patients breathe in cubic feet, and swallow their doses in grains, and have their inflation measured in inches."

"Now there again!" exclaimed Augustus, cheerily. "More antiquity to be swept away! And people say we young officers have no work cut out for us!"

"Patients don't die then under the metric system?" said the Doctor.

"No wonder Europe's overcrowded," said Starr.

But the student's mind inhabited heights above such trifling. "Death," he said, "occurs in ratios not differentiated from our statistics." And he told them much more while they looked at him over their plates. He managed to say modernity and differentiate again, for he came from our middle West, where they encounter education too suddenly, and it would take three generations of him to speak clean English. But with all his polysyllabic wallowing, he showed himself keen-minded, pat with authorities, a spruce young graduate among these dingy Rocky Mountain campaigners. They had fought and thirsted and frozen; the books he knew were not written when they went to school; and so far as war is to be mastered on paper, his equipment was full and polished when theirs was meagre and rusty.

And yet, if you know things that other and older men do not, it is as well not to mention them too hastily. These soldiers wished they could have been taught what he knew; but they watched young Augustus unfolding himself with a gaze that might have seemed chill to a less highly abstract thinker. He, however, rose from the table pleasantly edified by himself and hopeful for them. And as he left them, "Good-night, ladies and gentlemen," he said; "we shall meet again."

"Oh, yes," said the Doctor. "Again and again."

"He's given me indigestion," said Bainbridge.

"Take some metric system," said Starr.

"And lie flat on your trajectory," said the Doctor.

"I hate hair parted in the middle for a man," said Mrs. Guild.

"And his superior eye-glasses," said Mrs. Bainbridge.

"His staring conceited teeth," hissed Mrs. Starr.

"I don't like children slopping their knowledge all over me," said the Doctor's wife.

"He's well brushed, though," said Mrs. Duane, seeking the bright side, "He'll wipe his feet on the mat when he comes to call."

"I'd rather have mud on my carpet than that bandbox in any of my chairs," said Mrs. Starr.

"He's no fool," mused the Doctor. "But, kingdom come, what an ass!"

"Well, gentlemen," said the commanding officer (and they perceived a flavor of the official in his tone), "Mr. Albumblatt is just twenty-one. I don't know about you; but I'll never have that excuse again."

"Very well, Captain, we'll be good," said Mrs. Bainbridge.

"And gr-r-ateful," said Mrs. Starr, rolling her r piously. "I prophecy he'll entertain us."

The Captain's demeanor remained slightly official, but walking home, his Catherine by his side in the dark was twice aware of that laugh of his, twinkling in the recesses of his opinions. And later, going to bed, a little joke took him so unready that it got out before he could suppress it. "My love," said he, "my Second Lieutenant is grievously mislaid in the cavalry. Providence designed him for the artillery."

It was wifely but not right in Catherine to repeat this strict confidence in strictest confidence to her neighbor Mrs. Bainbridge over the fence next morning before breakfast. At breakfast Mrs. Bainbridge spoke of artillery re-enforcing the post, and her husband giggled girlishly and looked at the puzzled Duane; and at dinner Mrs. Starr asked Albumblatt, would not artillery strengthen the garrison?

"Even a light battery," pronounced Augustus, promptly, "would be absurd and useless."

Whereupon the mess rattled knives, sneezed, and became variously disturbed. So they called him Albumbattery, and then Blattery, which is more condensed; and Captain Duane's official tone availed him nothing in this matter. But he made no more little military jokes; he disliked garrison personalities. Civilized by birth and ripe from weather-beaten years of men and observing, he looked his Second Lieutenant over, and remembered to have seen worse than this. He had no quarrel with the metric system (truly the most sensible), and thinking to leaven it with a little rule of thumb, he made Augustus his acting quartermaster. But he presently indulged his wife with the soldier cook she wanted at home; and Mrs. Starr said that showed he dreaded his quartermaster worse than the Secretary of War.

Alas for the Quartermaster's sergeant, Johannes Schmoll, that routined and clock-work German! He found Augustus so much more German than he had ever been that he went speechless for three days. Upon his lists, red ink, and ciphering, Augustus swooped like a bird of prey, and all his fond red-tape devices were shredded to the winds. Augustus set going new quadratic ones of his own, with an index and cross-references. It was then that Schmoll recovered his speech and walked alone, saying, "Mein Gott!" And often thereafter, wandering among the piled stores and apparel, he would fling both arms heavenward and repeat the exclamation. He had rated himself the unique human soul at Fort Brown able to count and arrange under-clothing. Augustus rejected his laborious tally, and together they vigiled after hours, verifying socks and drawers. Next Augustus found more horse-shoes than his papers called for.

"That man gif me der stomach pain efry day," wailed Schmoll to Sergeant Casey. "I tell him, 'Lieutenant, dose horse-shoes is expendable. We don't acount for efry shoe like they was men's shoes, und oder dings dot is issued.' 'I prefer to dake them oop!' says Baby Bismarck. Und he smile mit his two beaver teeth."

"Baby Bismarck!" cried, joyfully, the rosy-faced Casey. "Yo-hanny, take a drink."

"Und so," continued the outraged Schmoll, "he haf a Board of Soorvey on dree pound horse-shoes, und I haf der stomach pain."

It was buckles the next month. The allowance exceeded the expenditure, Augustus's arithmetic came out wrong, and another board sat on buckles.

"Yo-hanny, you're lookin' jaded under Colonel Safetypin," said Casey. "Have something."

"Safetypin is my treat," said Schmoll; "und very apt."

But Augustus found leisure to pervade the post with his modernity. He set himself military problems, and solved them; he wrote an essay on "The Contact Squadron"; he corrected Bainbridge for saying "throw back" instead of "refuse the left flank"; he had reading-room ideas, canteen ideas, ideas for the Indians and the Agency, and recruit-drill ideas, which he presented to Sergeant Casey. Casey gave him, in exchange, the name of Napoleon Shave-Tail; and had his whiskey again paid for by the sympathetic Schmoll.

"But bless his educated heart," said Casey, "he didn't learn me nothing that'll soil my innercence!"

Thus did the sunny-humored Sergeant take it, but not thus the mess. Had Augustus seen himself as they saw him, could he have heard Mrs. Starr— But he did not; the youth was impervious, and to remove his complacency would require (so Mrs. Starr said) an operation, probably fatal. The commanding officer held always aloof from gibing, yet often when Augustus passed him his gray eye would dwell upon the Lieutenant's back and his voiceless laugh would possess him. That is the picture I retain of these days—the unending golden sun, the wide, gentle-colored plain, the splendid mountains, the Indians ambling through the flat clear distance; and here, close along the parade-ground, eye-glassed Augustus, neatly hastening, with the Captain on his porch, asleep you might suppose.

One early morning the agent, with two Indian chiefs, waited on the commanding officer, and after their departure his wife found him breakfasting in solitary mirth.

"Without me," she chided, sitting down. "And I know you've had some good news."

"The best, my love. Providence has been tempted at last. The wholesome irony of life is about to function."

"Frank, don't tease so! And where are you rushing now before the cakes?"

"To set our Augustus a little military problem, dearest. Plain living for to-day, and high thinking be jolly well—"

"Frank, you're going to swear, and I *must* know!"

But Frank had sworn and hurried out to the right to the Adjutant's office, while his Catherine flew to the left to the fence.

"Ella!" she cried. "Oh, Ella!"

Mrs. Bainbridge, instantly on the other side of the fence, brought scanty light. A telegram had come, she knew, from the Crow Agency in Montana. Her husband admitted this three nights ago; and Captain Duane (she knew) had given him some orders about something; and could it be the Crows? "Ella, I don't know," said Catherine. "Frank talked all about Providence in his incurable way, and it may be anything." So the two ladies wondered together over the fence, until Mrs. Duane, seeing the Captain return, ran to him and asked, were the Crows on the war-path? Then her

Frank told her yes, and that he had detailed Albumblatt to vanquish them and escort them to Carlisle School to learn German and Beethoven's sonatas.

"Stuff, stuff, stuff! Why, there he does go!" cried the unsettled Catherine. "It's something at the agency!" But Captain Duane was gone into the house for a cigar.

Albumblatt with Sergeant Casey and a detail of six men was in truth hastening over that broad mile which opens between Fort Brown and the agency. On either side of them the level plain stretched, gray with its sage, buff with intervening grass, hay-cocked with the smoky, mellow-stained, meerschaumlike canvas tepees of the Indians, quiet as a painting; far eastward lay rose-red long low hills, half dissolved in the trembling mystery of sun and distance; and westward, close at hand and high, lifted the great pale blue serene mountains through the vaster serenity of the air. The sounding hoofs of the troops brought the Indians out of their tepees to see. When Albumblatt reached the agency, there waited the agent and his two chiefs, who pointed to one lodge standing apart some three hundred yards, and said, "He is there." So then Augustus beheld his problem, the military duty fallen to him from Providence and Captain Duane.

It seems elementary for him who has written of "The Contact Squadron." It was to arrest one Indian. This man, Ute Jack, had done a murder among the Crows, and fled south for shelter. The telegram heralded him, but with boundless miles for hiding he had stolen in under the cover of night. No welcome met him. These Fort Brown Indians were not his friends, and less so when he arrived wild drunk among their families. Hounded out, he sought this empty lodge, and here he was, at bay, his hand against every man's, counting his own life worthless except for destroying others before he must die.

"Is he armed?" Albumblatt inquired, and was told yes.

Augustus considered the peaked cone tent. The opening was this way, but a canvas drop closed it. Not much of a problem—one man inside a sack with eight outside to catch him! But the books gave no rule for this combination, and Augustus had met with nothing of the sort in Germany. He considered at some length. Smoke began to rise through the meeting poles of the tepee, leisurely and natural, and one of the chiefs said:

"Maybe Ute Jack cooking. He hungry."

"This is not a laughing matter," said Augustus to the bystanders, who were swiftly gathering. "Tell him that I command him to surrender," he added to the agent, who shouted this forthwith; and silence followed.

"Tell him I say he must come out at once," said Augustus then; and received further silence.

"He eat now," observed the chief. "Can't talk much."

"Sergeant Casey," bellowed Albumblatt, "go over there and take him out!"

"The Lootenant understands," said Casey, slowly, "that Ute Jack has got the drop on us, and there ain't no getting any drop on him."

"Sergeant, you will execute your orders without further comment."

At this amazing step the silence fell cold indeed; but Augustus was in command.

"Shall I take any men along, sir?" said Casey in his soldier's machine voice.

"Ah—yes. Ah—no. Ah—do as you please."

The six troopers stepped forward to go, for they loved Casey; but he ordered them sharply to fall back. Then, looking in their eyes, he whispered, "Good-by, boys, if it's to be that way," and walked to the lodge, lifted the flap, and fell, shot instantly dead through the heart. "Two bullets into him," muttered a trooper, heavily breathing as the sounds rang. "He's down," another spoke to himself with fixed eyes; and a sigh they did not know of passed among them. The two chiefs looked at Augustus and grunted short talk together; and one, with a sweeping lift of his hand out towards the tepee and the dead man by it, said, "Maybe Ute Jack only got three—four—cartridges—so!" (his fingers counted it). "After he kill three—four—men, you get him pretty good." The Indian took the white man's death so; but the white men could not yet be even saturnine.

"This will require re-enforcement," said Augustus to the audience. "The place must be attacked by a front and flank movement. It must be knocked down. I tell you I must have it knocked down. How are you to see where he is, I'd like to know, if it's not knocked down?" Augustus's voice was getting high. "I want the howitzer," he screeched generally.

A soldier saluted, and Augustus chattered at him.

"The howitzer, the mountain howitzer, I tell you. Don't you hear me? To knock the cursed thing he's in down. Go to Captain Duane and give him my compliments, and—no, I'll go myself. Where's my horse? My horse, I tell you! It's got to be knocked down."

"If you please, Lieutenant," said the trooper, "may we have the Red Cross ambulance?"

"Red Cross? What's that for? What's that?"

"Sergeant Casey, sir. He's a-lyin' there."

"Ambulance? Certainly. The howitzer—perhaps they're only flesh wounds. I hope they are only flesh wounds. I must have more men—you'll come with me."

From his porch Duane viewed Augustus approach and the man stop at the hospital, and having expected a bungle, sat to hear; but at Albumblatt's mottled face he stood up and said, "What's the matter?" And hearing, burst out: "Casey! Why, he was worth fifty of— Go on, Mr. Albumblatt. What next did you achieve, sir?" And as the tale was told he cooled, bitter but official.

"Re-enforcements is it, Mr. Albumblatt?"

"The howitzer, Captain."

"Good. And G troop?"

"For my double flank movement I—"

"Perhaps you'd like H troop as reserve?"

"Not reserve, Captain. I should establish—"

"This is your duty, Mr. Albumblatt. Perform it as you can, with what force you need."

"Thank you, sir. It is not exactly a battle, but with a, so-to-speak, intrenched—"

"Take your troops and go, sir, and report to me when you have arrested your man."

Then Duane went to the hospital, and out with the ambulance, hoping. But the wholesome irony of life reckons beyond our calculations, and the unrepentant, sunny face of his Sergeant evoked marches through long heat and cold, back in the rough, good times.

"Hit twice, I thought they told me," said Duane; and the steward surmised that one had missed.

"Perhaps," mused Duane. "And perhaps it went as intended, too. What's all that fuss?"

He turned sharply, having lost Augustus among his sadder thoughts, and here were the operations going briskly. Powder smoke in three directions at once! Here were pickets far out-lying, and a double line of skirmishers deployed in extended order, and a mounted reserve, and men standing to horse—a command of near a hundred, a pudding of pompous, incompetent, callow bosh, with Augustus by his howitzer, raising and lowering it to bear on the lone white tepee that shone in the plain. Four races were assembled to look on—the mess Chinaman, two black laundresses, all the whites in the place (on horse and foot, some with their hats left behind), and several hundred Indians in blankets. Duane had a thought to go away and leave this humiliation under the eye of Starr, for the officers were at hand also. But his second thought bade him remain, and looking at Augustus and the howitzer, his laugh returned to him.

It was an hour of strategy and cannonade, an hour which Fort Brown tells of to this day; and the tepee lived through it all. For it stood upon fifteen slender poles, not speedily to be chopped down by shooting lead from afar. When low bullets drilled the canvas, the chief suggested to Augustus that Ute Jack had climbed up; and if the bullets flew high, then Ute Jack was doubtless in a hole. Nor did Augustus contrive to drop a shell from the howitzer upon Ute Jack and explode him—a shrewd and deadly conception; the shells went beyond, except one, that ripped through the canvas, somewhat near the ground; and Augustus, dripping, turned at length, and saying "It won't go down," stood vacantly wiping his white face. Then the two chiefs got his leave to stretch a rope between their horses and ride hard against the tepee. It was military neither in essence nor to see, but it prevailed. The tepee sank, a huge umbrella wreck along the earth, and there lay Ute Jack across the fire's slight hollow, his knee-cap gone with the howitzer shell. But no blood had flown from that, because he was already then dead some time. One single other shot had struck him—one through his own heart, that had singed the flesh.

"You see, Mr. Albumblatt," said Duane, in the whole crowd's hearing, "he killed himself directly after killing Casey. But if your manœuvres with his corpse have taught you anything you did not know before, we shall all be gainers."

"Captain," said Mrs. Starr, on a later day, "you and Ute Jack have ended our fun. Since the Court of Inquiry let Mr. Albumblatt off, he has not said Germany once—and that's three months to-morrow."

WANTED: A GIANT.

"The giant I want to look at,"
Said Bobbie, "must be so tall
It'll take me a week and two other days,
To look at him all!"

THE REMARKABLE ADVENTURES OF SANDBOYS.

BY JOHN KENDRICK BANGS.

AN INDIAN EXPERIENCE.

Sandboys, in his stories of adventure told to Bob and Jack, had so frequently in past years alluded to Indians that it suddenly occurred to Bob to find out if possible just how far Sandboys's experiences with the original owners of the soil had gone. There had been Indians in this section of New Hampshire. The boys knew that well, for the names of many of the hills and rivers attested the fact—Pemigewasset, Ammonoosuc, Moosilauke—all these names were decisive evidence that the red men had once inhabited the region, and dominated it sufficiently to leave their names at least forever impressed upon it. Furthermore, the Great Stone Face that looked stolidly out over the placid surface of the little lake, less than a mile from the hotel, had connected with it many an Indian legend which the boys had from time to time picked up in the course of their stay.

But it was not with the Indian as an idea, a memory, that caught their fancy. They wanted to have something of the Indian of the present, a live Indian and therefore a bad one, and with this end in view they approached Sandboys one evening while waiting for their parents to come down to supper.

"Of course," Sandboys said in reply to their question—"of course there's been Indians around here, but there ain't any now. Civilization's driven 'em all out to Nebrasky an' Honnerlulu and other Western States where they can afford to live. They hung on here as long as they could, but when the hotels began to get built and a new set of prices for things was established in the section, they couldn't afford to stay, so they enervated out West."

"They what?" asked Bob, to whom Sandboys's meaning was not quite obvious.

"Enervated—skipped—moved out. That's the right word, ain't it?" asked Sandboys.

"Emigrated, I guess you mean," suggested Jack.

"That's it—emigrated. I allers gets enervated and emigrated mixed up somehow," Sandboys confessed. "Fact is, when words gets above two syllabuls they kerflummux me. I really oughtn't to try to speak 'em, but once in awhile they drop off my tongue without my thinking, and most generally they gets fractured in the fall. But as I was tellin' you, when it began to git expensive living here in the mountains, the Indians found they was too poor to keep in with the best society, and they energated to Nebrasky and other cheaper spots. I've allers felt that the government ought to remember that point, an' instid of sendin' the army out with cannon and shot to kill the Indians and git kilt itself, they should civilize the section by buildin' a half a dozen swell hotels an' charge people ten dollars a day for breathin' the air. That'll kill an Indian quicker'n anything—or if it don't, instid of goin' about scalpin' soldiers and hullaballoin' in war-paint, after one or two seasons he'll begin to make baskits out of hay an' bulrushes an' sell 'em to guests for eight dollars. From what I know about Indians, they'd rather sell a baskit worth ten cents for eight dollars than kill a man, a fact which the government doesn't seem to take notice of. I'd like to be put in charge of the Indian question for just one administration at Washington. You wouldn't hear about any more Piute or

Siouks uprisin's in the West, but you would hear of a great increase in the hay-basket industry and summer-hotel-buildin' trade."

"It sounds well," said Jack.

"I guess it does," said Sandboys. "It would work too."

"It might be dangerous for two or three seasons for the guests, though," said Bobbie. "I don't think I'd want to go to a place for the summer where the Indians were thick and still wild. I don't want to get scalped."

"Oh, you'd be all right as long as you wasn't a dude!" rejoined Sandboys. "Now that the dudes has taken to wearin' their hair long in the back, no wild Indian's goin' to bother with boys. There's no fun scalpin' a small boy, with football scalps in sight. You've hit on the great trouble about Indians, though," Sandboys added, reflectively. "You can civilize 'em. You can teach 'em Latin, Greek, French, or plumbing. You can teach 'em to dance and sing. You can make 'em wear swaller-tail coats and knickerbockers instead o' paint an' hoss blankets, but you can't entirely kill their taste for takin' hair that don't belong to 'em. It was on just that point that I had my only experience with Indians in this place here, and I tell you what there was lively times that summer. It nearly ruined this hotel, and if it hadn't been for me, I kind o' think it would have been goin' on yet."

"It was back in the eighties somewhere that it happened. I don't remember whether it was '87 or '88. Tennyrate, it was the year Mr. Hicks's boy Jimmie caught a five-pound bass in Echo Lake with his Waterbury watch. Ever hear about that? Funniest thing y' ever heard of. Jimmie Hicks was the liveliest little boy you ever saw. You two rolled into one wouldn't be half as lively. He was everywhere at once, Jimmie was. He's the boy that busted the hole in the roof with the elevator. Set the thing goin' up, couldn't stop it, and bang! first thing he knew the whole thing had smashed up through the roof and toppled over on its side. He had a watch—a Waterbury watch. His father got it for him just because it took an hour to wind it up, and that kept Jimmie busy for an hour a day, anyhow, an' he used to be doin' everything he could with it. I've seen him smash a black fly

on the wall with it, usin' it like a sling-shot; but the queerest thing of the lot was his catchin' the bass with it. He was out in a boat, an' nothin' would do but he should trail that watch in the water after him. The bass he see it, thought it was a shiner, snapped at it, swallowed it, and Jimmie pulls him in. Weighed five pounds an' three ounces on the office scales. It was that year we had the time with old Rocky Face—I don't remember his Indian name, but Rocky Face was what it meant in English.

"He was a quiet, peaceable, civilized old Indian, and the last of the old tribe that used to live about here. The others had fled to Nebrasky, as I told you, because they couldn't stand the expense of livin' in the White Mountains, but Rocky Face said they couldn't freeze him out. He'd been born here, and he was goin' to die here, if he had to steal a livin'. So he staid on, an' lived in an old pine-bough shanty he built for himself up on the other side of Mount Lafayette. What he fed on nobody knew, but every once in a while he'd turn up at the hotel and ask what they'd charge to let him look at the clock, and everybody'd laugh, and call him a droll old Indian, and ask him to come back. Finally he got to makin' baskets and birch-bark canoes and bows and arrows, and he'd sell 'em to

the guests. They took so many of 'em that Rocky Face soon got to earnin' twenty an' thirty dollars a day, an' when he got to that point he could afford a small back room in the hotel, and so he came here to live.

"He became one of what they call the features of the place, an' they got to puttin' his picture in the hotel perspectacle."

"Prospectus, do you mean?" queried Bob.

"Hyop. That's the thing," said Sandboys.

"They put his picture in that as one o' the sights. They called him 'A Rollic of the Past: The last of the Pemmijehosophats.' He used to make a good many people nervous, the way he eyed their hair, for, as I've said, although he'd become more or less civilized, it wasn't in him not to covet other people's hair. About that time there was an awfully pretty girl here from down South somewheres—Conneticut, I think. She was a regular belle, and she had the finest yellor hair you ever see. Every night she'd be out rowin' on the lake with all the legible young men in the place; but all of a sudden

she didn't come down to breakfast one morning. She had it sent up, an' her mother looked very anxious when she came down and said her daughter was very sick. Then two other ladies didn't appear any more, and a very well known old lady remarked in my hearin' that there was a thief in the house—she'd lost a switch. Well, that set me to thinkin', but I couldn't come to any conclusion until one night I took a pitcher of ice-water up to the Conneticut young lady's room, and, by Joe, there she sat readin', with scarcely no hair at all on her head."

"Scalped?" cried Bob, in horror.

"Not a bit of it," said Sandboys. "Robbed! An' then it all came to me. That old last of the Pemicans had spoke several times about her hair to me, an' I could see he was kind of thirsty for it, an' I made up my mind to two things. First was, Miss Conneticut's hair was nothin' but a wig; and second, old Rocky Face had it. I stole into his room that night when he was at supper and opened his trunk. Will you believe it, it was full o' false hair, an' in an old hat-box in one corner was the beautiful yellor locks of Miss Conneticut. That feller'd scalped enough bureaus to fill three good-sized mattresses."

"As much as that?" cried Jack.

"Hyop!" said Sandboys. "Most o' the ladies didn't like to mention it, but there was hardly one of 'em that hadn't lost two or three headsful to that old sinner, and I found it out. Of course I told the proprietor, and the hair was restored to its owners. Miss Conneticut appeared again, more popular than ever, and old Rocky Face was sent to jail, and he's never come out as I know of."

"Well, that is a singular story," said Bob.

"Isn't it," said Jack. "I should think Miss Conneticut ought to have been very much obliged to you."

"She was," replied Sandboys. "She gave me twenty-five dollars—five for findin' the wig, and twenty for keepin' quiet about it around the hotel. That's one reason I can't remember her real name."

THE BOY WRECKERS.

BY W. O. STODDARD.

CHAPTER IV.

"Whoop! Bully!" That shout came from the wreckers, within fifty yards, just as Pete got the hook of the Captain's "gaff" into the gills of the bass, and Kroom himself hoisted the prize on board. Every ounce of their suspicion was gone in a moment, and the cat-boat tacked away; but just then Sam said, in a very low voice:

"There's that white thing, if it's a life-preserver. It's got stuck again."

In the other boat there was trouble. All the men noticed the *Elephant* with her extra passenger, now that she was near enough; and suddenly the man at the helm stood up and said:

"Captain Kroom did go to the wreck. I saw that big feller that's with him. He was on the *Goshawk* when the tug left her. We'd better watch Kroom and see if he's gropplin' on his own account. We can't do or say a thing unless we can pick up what was thrown over."

"Thru for ye," replied the man next him. "Thin the inlet's the place to wait for thim. We can luk into his boat, sure."

"I'll tell you what, boys," said the steersman, "those fellers threw over more'll we know of. They'll come back for every pound of it, but we can beat 'em."

It looked as if their view of the matter was just as Captain Kroom had said. They had not the slightest idea but what it was entirely honest to do what they were attempting. Does not anything that drifts ashore belong to the land it is stranded on?

It is true that the laws of most countries and the rights of other men are against the wreckers, but they have a strong belief in a kind of "storm law." It is a law that reaches out into the sea sometimes, and covers anything which may be found floating around. It certainly takes in all that can be fished up from the bottom.

That is the general idea of the men who are known as wreckers. The cat-boat with these four men in it ran on into the inlet for quite a distance while they were talking about Kroom and the *Goshawk* and the tug-boats.

The place at which they had anchored was very near the bay side of the long sandbar island whose front was toward the ocean. Here they were entirely hidden, but at the same time they were unable to keep any watch upon the *Elephant* and the possible doings of her crew. This was not exactly what they intended, and before long the steersman arose and remarked to his mates:

"This won't do. You'd better put me ashore. I'll go over to the ocean beach and keep an eye on 'em. Glad I brought my glass along. 'Tisn't only old Kroom. Some o' the tug-boat fellers may have come back."

A pretty spirited debate followed, and all the while the weakfish and flounders were biting freely. They therefore were having pretty good luck in their ordinary character of fishermen.

In spite of that, however, they all seemed to feel very much as did their steersman, and the entire four at last decided to go ashore on the bar and walk over to watch Kroom. They left their boat, pulled all the way out of water, at the bay end of the inlet, and there was not another craft of any kind in sight when they began to trudge across the sand.

In the *Elephant*, slowly sailing along from its place of danger too near the surf, the course of affairs had been very interesting to its crew.

"Pete," said Sam, at the moment when the wrecker boat tacked away and the big sea-bass lay floundering fiercely on the bottom, "that's the largest fish I ever saw caught."

"Biggest kind!" responded Pete. "You or I couldn't have done anything with him. They generally catch 'em off shore, with a bass-rod and a reel. Tire 'em out, you know, before they try to pull 'em in. It's science!"

Sam had heard of such things, and it made a proud boy of him to find himself right in among what seemed to him the greatest fishing in all the world—unless, he thought, it might be fishing for sharks or whales. Captain Kroom himself had been a whaler, and Pete had been out shark-fishing. Sam was beginning to feel a good deal of respect for Pete, and he whispered to him:

"Why don't you try on that blue suit? It's as dry as a bone. See if it fits."

Captain Pickering must have heard him, for he said at once: "That's it, boy; put it on. What you need most is a new rig."

"Sam pulled it up," he said. "It's one of his fish."

"Fisherman's luck," laughed Captain Kroom, with a very deep, hearty laugh. "It's your share. Put it on."

Pete had eyed that suit until he knew every seam and button of it. Hour after hour during the cruise of the *Elephant* he had grown better and better acquainted with the strange idea that it was to be his own. He had hardly told himself how much more it must have cost than had any clothes he had ever owned before. "Guess I'll wait till I get home," he said.

"No, you don't," thundered Captain Kroom; "I want to see how you look in it. Put it on!"

Pete was pretty well accustomed to obeying the Captain, and not to do so now would have been something like mutiny on shipboard. He turned very red in the face, and he put on the trousers wrong side out the first trial, but then he got them right, and the blue shirt and the jacket followed.

"They fit him!" exclaimed Sam. "Make him look like another fellow."

So they all said, and it made little difference that Pete was still barefooted or that his straw hat turned up in front. It was an out-and-out sailor rig, and it had taken only a twinkling, or perhaps two or three twinklings, to get it on.

Meantime the *Elephant* had tacked to and fro, and Captain Kroom and Sam had kept their trolling-lines out. As for Captain Pickering, he had again opened his valise, and was now at work with his double-barrelled spy-glass, as Sam called it.

"Kroom," he remarked, "keep on fishing. Those chaps are in the inlet, out of sight, just now. One more tack and we can stretch on across the channel, not far from that buoy."

They all knew that he meant the bit of white float, the life-preserver, that was continually appearing and disappearing among the waves to the eastward.

"Now!" exclaimed Captain Kroom; but at that instant Sam shouted,

"Oh! Guess it's a bluefish!"

"Just the thing!" replied Kroom. "Pull! While you're getting him in we'll try for that float. It isn't a hundred yards away."

At that moment, unknown to the crew of the *Elephant*, the four wreckers were plodding along across the dry hot sand of the bar-island, eager to reach the seaward beach, from which they might discover what was going on inside of the tossing, foaming lines of the surf.

The life-preserver was nothing but a long India-rubber-cloth bag of wind, bent around in a ring. It was meant to be worn under the arms of a person in the water. There it was, bobbing to and fro on the water, but not getting along very well. The tide was strong, but there was a hitch as of something that dragged on the bottom.

"Got it!" exclaimed Pickering, as the *Elephant* swung around close to the float. "I'll fetch it up as quick as I can! Oh!"

He had not caught it, for it bobbed away from him as if it were dodging.

"Gaffed!" said Captain Kroom the next instant. "That's it, Pete. Now hold hard. Don't let it get away."

"I won't!" almost gasped Pete, tugging with all his might. "Can't you tack, Captain?"

The *Elephant* seemed to swing on her own account, so perfectly was she handled by the old sailor, but Pickering now had hold of the handle of the gaff, and it was not likely to get away from him.

"In she comes!" he said, but he was now grasping a rope that was knotted hard to the life-preserver.

"I'll let the boat kite along," said Kroom. "Don't let anybody see you pull that in."

He was keeping the sail of the *Elephant* full spread toward the bar and the inlet. That was why a man with a spy-glass, who came running down the beach and began to look, shouted back to some other men:

"There she comes! They're only trolling. They haven't stopped for anything. But the sail kind o' hides 'em."

The *Elephant* had not paused, to speak of, but behind her sail Captain Pickering was lifting something over her gun-wale.

"Conscience!" he exclaimed. "This here is part of my luggage that I thought went on the tug this morning. I saw all the rest of it stowed away safe enough, but I'd ha' lost this."

"Some o' the tug crews are the worst kind o' wreckers," remarked Captain Kroom. "We've beat 'em this time, unless there were some more life-preservers out."

"Guess not," said Pickering. "There isn't much in this that would be hurt by salt water. It's had a soak, that's all."

It was not so large a valise as the other, but it seemed as heavy. It was just the thing to keep a life-preserver under in deep water, and to let a strong current drag it along into shallows.

"Don't open it till you get ashore," suggested Kroom. "I'm heading the boat for the inlet. Cast off the float."

Pickering had already done that; but as the *Elephant* bowed her head and swung away, the life-preserver, although robbed of its precious drag, seemed to be following her.

"Pete," said Sam, "look! I can see those fellows."

"They've come over the bar to watch what we're doing," growled Kroom. "Pickering, now's our time to run through into the bay. I've an idea in my head. Can't you hide those things?"

Off came Pickering's coat, and down it went over the two valises, side by side. Next to them lay the handsome shapes of the bass and the two bluefish, and one more was added to these by Sam himself before they had sailed a hundred yards.

Only four fish, but they made a pretty good appearance. At all events, there was not a sign of recaptured wreckage on board the *Elephant*. Her crew and passengers could not hear the wreckers saying to each other: "Kroom's giving it up. He's off for home. We can go back now."

"Boys," it was the steersman, after a long squint through his glass, "I can see our float! She's coming. Let's go for the boat. Now's our time."

Perhaps so; but they had lost a great deal of time, and the *Elephant* was already in the inlet, running well, when they started back.

"Wish there was more wind," said Pickering, impatiently. "Their boat's over there somewhere."

"That's what I'm after," replied Kroom; "and I reckon we'll get there first."

That might depend a great deal on the strength of the breeze, and even more on the crookedness of the channel. Account had also to be taken of the fact that no man can do his fastest walking in yielding sea-sand.

"There it is!" said Pete. "Captain, they hauled their boat a'most out o' water."

"They can shove it in again quick enough," replied Kroom. "I don't know exactly what to do or say. The fact is, they're a prime good lot of fellows—hard-working, sober, peaceable. All of 'em go to meeting."

"Well, Kroom," said Pickering, "I knew a real partiklar feller once, and they said he'd been a pirate. I didn't quite believe it of him."

"Here we come!" responded Kroom, as the *Elephant* glided somewhat lazily around a sandy curve. "Jump ashore, Pete! Get there!"

Sam had already noticed how remarkably quick his long-shore comrade could be in his movements, but he was surprised now at the sudden elastic bound which took Pete out of the *Elephant* as she almost grazed the bank on that side of the inlet. Then away he went toward the wrecker boat, and his bare feet were the correct thing for sand-walking, or wading.

At that very moment the four bay fishermen came in sight, toiling along breathlessly under the hot sun, and the foremost of them shouted: "Hullo, Kroom! Want to see ye!"

"Come on!" roared Kroom. "We'll wait for ye! H'ist yourselves along. Plenty o' time!"

Pete was now at the hauled-out boat and was peering over into her, but he had not uttered a sound. He was thinking very fast indeed. "We've got 'em!" he said to himself. "What rascals they are! Who'd ha' thought it of 'em! This is what it means to be wrecked among wild savages. Take everything you have. But then they murder a fellow, and old Kroom says some of 'em eat him. Now I wonder what they'll say when they find they're caught?"

He did not have to wait long before he found out. Here came the *Elephant*, her sail slipping down as she ran her nose into the sand. Out stepped Captain Pickering, and at the same moment the four bay fishermen came in a hurry to the opposite side of the cat-boat.

"My quadrant!" shouted Captain Pickering. "Those two English guns of mine, and Captain Sanders's spare chronometer! It beats all!"

"Yours, are they?" loudly responded the steersman of the cat-boat. "Well, if I ain't glad to see ye! And old Kroom, too! I was wonderin' how we'd get 'em back to their owners."

"WHAT?" THUNDERED CAPTAIN KROOM. "JUST SAY THAT OVER AGAIN!"

"What?" thundered Captain Kroom. "Just say that over again!"

"Why, Captain," replied the fisherman, "them there insurance fellers are straight enough, but the tug-boat men are no better than so many river thieves. Reg'lar wreckers! We couldn't do a thing while they were around. Some of the *Goshawk's* crew were just as bad."

"Ye'd not belave me," put in another of the fishermen, "but it's so. They're all foreigners, ivery mon av thim. Not an American among thim. The dirty spalpanes! It's bad enough for a mon to foind himself wrecked, widout bein' ploondered. We got away these things from the toog-boat min, but they threw over stuff and buoyed it to coom and get it. We was gropplin' for it the day. I hope ye're no wrecker, Captain Kroom. They say most o' thim owld sailors'll sthrip ony wreck."

The bronzed face of Captain Kroom was furious with indignation for a moment, and then he burst into a very deep-chested roar of laughter.

"Sam," whispered Pete, "think of their taking him and you and me for wreckers."

"They'll have to give up all those things, though," whispered back Sam.

The bay fishermen had no thought of doing anything else. They listened with keen interest to the account of the spar buoy, that had been set adrift without their knowledge. They seemed entirely satisfied with the capture of the life-preserver. In return, they told all they knew of the ways of the

tug-boat men, and Pat Malone again and again asserted that "those chaps are all sorts, from iverewhere, and not wan American."

Captain Pickering was ready to pay the four very honest fishermen liberally for the time they had spent in watching the thieves and in grappling. It was quite dark, however, before the *Elephant* again had her crew on board.

"Biggest day I ever had," said Sam to Pete. "Let's come again, right away."

"Bully!" said Pete. "We'll come out with Captain Kroom."

"Come along, boys," put in the Captain. "We'll fish all summer. Glad there's more breeze to carry us home. Pickering, it's just as I told you. Our bay fishermen are honest. They' wouldn't cheat you in the weight of a flounder."

The moon came up, as if the new fresh breeze had brought it, and the homeward sail across the bay did great credit to the qualities of the *Elephant*. Nevertheless there was much tacking to and fro, while Pete and Sam listened to the two old sailors. There was really hardly anything for them to do but to exchange yarns about their voyages in the splendid clipper-ships which were now being driven from the seas by that terrible fellow, Steam.

"Pete," said Sam, as they stepped out at last upon the wharf, "ain't I glad I came."

"I'm glad you did," replied Pete; "but the Captain's going to take us out again, any day."

THE END.

A LOYAL TRAITOR.

A STORY OF THE WAR OF 1812 BETWEEN AMERICA AND ENGLAND.

BY JAMES BARNES.

CHAPTER X.

TEST TRIALS.

We did not proceed to sea, as it had been expected that we should, but we stretched several new sails, and the Captain marked them for alteration by the ship's sail-maker, much as a tailor changes the cut of a coat to secure a proper fitting. The men were made to take their positions at the guns, and I found that I had been made a second captain of the long 12-pounder, and was expected to work the roller handspike in getting her into position. For three long hours we were kept at this, slewing the guns hither and thither, aiming and gauging distance, and bringing powder and shot from the magazines. Of course we indulged in no firing, but served the pieces in pantomime.

The men appeared eager, and I could see that Captain Temple looked pleased at their performance. The majority were old hands, and needed little schooling. There is no use denying it, they *jumped* to the best of their ability. But my trial was soon to come. Most of the greenhorns had been enrolled into a company of marines. They were standing in an awkward row arranged in the waist, and keeping out of the way of the more experienced gunners who were indulging in the mimic battle.

"Debrin!" called a voice. "Pass the word for Debrin."

A squint-eyed bowlegged boatswain's mate was bawling about the deck.

For an instant I was so confused that I almost forgot the name I had assumed.

"Here!" I called at last, with my heart giving a wild leap into my throat. I gave over the roller handspike to my friend of the night before, and the boatswain's mate looked at me out of his crooked eyes.

"The old man wishes to speak to you," he said, in a low voice.

I stepped aft and pulled off my cap, as I had seen the other sailors do.

"Take hold of those gawk-legs and lick them into shape," said Captain Temple, apparently counting up my ribs as he looked me through and through. "You say you know the drill. There's a rack of muskets forward on the berth-deck, and a chest of cutlasses at the after-ladder. If any one gives you a sneer or a back word make him sweat his blood."

I hope that the quiver that went over me was not apparent, but I felt a cold sensation from my chest to the end of my spine. Now, as it happened, I had watched closely, as a boy, the drilling of the train-band at Baltimore, where I learned much from my friend the Major, and had once formed a company of my schoolmates at Mr. Thompson's, electing myself their leader. I tried to recall the orders of command and the positions as I marched the men below and armed them at the rack. But when I came back to the deck I was again seized with a fit of trembling that made me keep in

movement to conceal it, for I perceived that those under me were watching with some curiosity to see what I should do. Besides this, it appeared to my imagination that all the crew were standing about with popping eyes, ready to laugh at me if I should open my mouth. So I took a long swallow, threw back my head and shoulders (ah! there is nothing like it to keep up one's courage!) and adopting a terse mode of speech, I began to sift the men into military shape, according to their height.

My uncle had impressed one thing upon my mind as the surest way to obtain authority; it was not to make men hear, but to make them listen; so I did not shout, but endeavored to speak in low firm tones, explaining to the men as I gathered them into line how they should stand and hold themselves. Some were inclined to smile at first, and indeed I cannot blame them; for despite my size, my youth was evident, no matter my air of authority.

To those who appeared amused I kept repeating my instructions until the grin had faded from their faces, and at last I felt that feeling which expands the spirit of the holder of it—the sense of authority over others. So stepping out before them, I picked up a musket and began to drill them according to my recollection of the manual of arms.

If there had been an expert present, he might have found some fault with my method, but I got through without a hitch, and I might claim, without boasting, that I held attention. Over and over again we went through the motions. I was wondering whether there was to be no time limit to the drill, when suddenly some one spoke to me from behind.

"Very good, drill-master," said Mr. Bullard. "Dismiss the landsmen, and take up the boarders with some cutlass-work."

The muskets returned to the racks, I once more came on deck, and found that I had to face a very different ordeal. There, awaiting me, were thirty or forty sailor-men—I could see that at a glance. They regarded the idea of my instructing them as something of a huge joke, for they stood there open-mouthed and nudging one another, half sneering, and all whispering. As soon as I took the position of "on guard," I noticed that some of them fell into it at once involuntarily, but others displayed an awkwardness that I knew must be premeditated. Now was the time for me to stand or fall.

I stepped up to a tall man who topped me by half a head, and bidding him stand out, I gently pushed him into the right position, moulding him, as it were, and paying no attention to the anger which flashed in his eyes and drew the corners of his mouth. The rest were becoming interested, but I saw that they were not grinning at me now, but at their messmate. Satisfied that the man could do what I wished, I again gave the order for them to act together. The tall sailor twisted his cutlass in his hand and held it upside down. Once more, as if believing this came from sheer stupidity, I went through the same performance, trying to speak kindly and firmly, but really on the verge of breaking down. Three times did I do this, and then the man succumbed.

But I had not finished. On the left of the line was a short, thick-set foretopman, with brawny, tattooed arms. Apparently he considered himself beyond all this and an adept with the weapon, for he indulged in side remarks that set those near him tittering, and he exaggerated all my motions. I saw that he was a leader in his way, and that for comfort's sake I should have him with me, so I called the others to a rest, and bade this man step forward. He did so in a careless, jaunty way, although his face had reddened. Placing him before me, I told all hands to observe me closely; that I would show them the bad effect of too open a guard and too lowered a point. It was a dangerous game to play, perhaps, but I called upon the seaman to make the various cuts and thrusts at my

head and body. He did so with a vengeance, and it took all my strength to keep him from reaching me.

Captain Temple and the other officers had gathered in a little knot to one side and were watching. My blood was up, and I would rather have died than fail in what I was attempting. So I called upon the man to guard himself, and assured him that I would not harm him. Keeping my wrist well up, I told him to have a care of his left cheek. He grinned in reply. By a quick motion, the secret of which Monsieur de Brienne had taught me (for he was an adept with the broadsword as well as with the rapier), I got inside the man's guard and laid my blade along his throat. I well believe I could have severed his head from his body with a backward draw-stroke. The man paled and clinched his teeth. I resumed my position, with my eyes fixed on his, for I feared mischief. Then using the same movement that I had in my encounter with Captain Temple, I twisted his blade from his grasp and sent it flying. I verily believe it would have gone overboard had it not caught a stay overhead. Picking it up myself before any one could reach it, I returned it to him, and he stepped back into the ranks. I had no more trouble after that.

Now, strange as it may seem, when I got away I went forward and leaned out of an open port, and there, for some strange reason, the strain under which I had been laboring almost overcame me, and it was all I could do to keep from sobbing or to control the shaking of my limbs. While crouched there I felt a hand laid on my shoulder, and looking up I saw it was Edmundson, the Third Lieutenant.

"The Captain wishes to speak to you in the cabin, lad," he said, kindly. "Jump aft."

When I entered the plainly furnished little space, for the quarters of the officers were almost as confined as those of the crew, I saw that Captain Temple was sitting at the end of the table, which was covered with open charts. He looked up, and seeing who it was, half smiled.

**"IF YOU ARE AS GOOD A SAILOR AS YOU ARE A SWORDSMAN, YOU
WILL END THIS CRUISE AN OFFICER."**

"Debrin," he said, "you have done well. If you are as good a sailor as you are a swordsman, you will end this cruise an officer. This is more than I have ever said in the way of praise or promise to any living man. Forget it, and do your duty."

I could not have replied at this moment, for my wits left me; so I merely touched my forehead in salute, and went forward again. I could see that the men were whispering, and it was all I could do to hide my embarrassment. I believe that I was blushing like a schoolgirl.

The next day was a repetition of this one, albeit the work was quite easy for me, and I grew keen with the interest of it. The Fourth Lieutenant, a Mr. Spencer, arrived in the afternoon; and a sergeant, who had served in the army, was enlisted as a Lieutenant of marines. Apparently he found no fault with whatever they had been taught under my instruction, and Sutton, the man with whom I had had the passage of arms, came to me to learn the disarming stroke. As I met him more than half-way in this overture, we became friendly. In the afternoon I endeavored to get ashore (oh, how I wished to talk to Mary!), and I was delighted at being one of the crew that pulled Captain Temple to the wharf at six o'clock.

Captain Temple's stay on shore, however, had been short, consisting merely of a visit to Mr. McCulough's office (the latter was part owner of the *Young Eagle*), and I got no chance to run up into the town, as I had intended. My wish, if it were possible, to get another glimpse of Mary Tanner, was frustrated. This fortune was not to be mine. Oh, one thing that I almost came to forgetting: On the pier, standing in the crowd, was Gaston, his outrageous black hat tied about with a streamer and his long cloak flapping about his shanks. I doubt not the people were making fun of him. But he did not recognize me, and I breathed more freely.

As we rowed back to the ship, I heard the Captain say to a cadaverous-looking man who had joined him at the dock with a big bundle and an oak chest,

"Well, Mr. Flemming, we sail on the early tide to-morrow."

The new-comer was the ship's surgeon, and one of the bowmen observed to me, as we got the gig up at the davits,

"Well, messmate, how would you like old sawbones there to take a hack at you—eh, Johnny?"

I might state, if I have not done too much bragging in this chapter already, that I had already received a nickname in the forecabin, and was known as "Johnny Cutlass," which, instead of resenting, I felt quite proud of.

The stays and running-gear were tested and made taut before the nightfall, and all sorts of stories went from lips to lips concerning our destination. Some said northward to the Gulf of St. Lawrence; others declared that the Spanish main would be our cruising-ground; while a few asserted that nothing but the English Channel would please old "Kill Devil."

Now whither we were bound, of a truth I never found out, and of this I will speak at some length, and give a strange accounting. My, but I was tired when at last I got into my hammock!

Although it was very early in the morning when the tide was at the flood, a large crowd had gathered at the shore to watch us set sail. It was a damp, low-clouded day.

A fifer had been discovered among the landsmen, and hardly had I reached the deck, sleepily rubbing my eyes, when he began to pipe a merry jig step; the men fitted the capstan bars to the capstan, and while some scrambled aloft, as many as could lay hold and find foot room began trotting merrily about to the music. In came the cable, a couple of men alongside slushing it with water to keep the black mud off the deck, and slowly the *Young Eagle* walked up to her anchor. A slight breeze was blowing toward the mouth of the harbor, and the foresail and top-sail fluttered and caught it. A faint cheer sounded from the wharves, and the crew answered. Then the brass swivel on the forecabin cracked out a salute, and the privateer was off for adventures.

A wild exhilaration thrilled me, but I could see that I was not the only one affected in this manner. A double allowance of grog had been served as soon as we were under way. I tasted it, of course, and it burned my throat like fire, so that I handed my allowance to Sutton, thereby cementing the friendship that had sprung up between us, and it was not bad policy.

Soon Fishers Island and the mainland faded out in the blotch of gray fog that, despite the wind, hung all around. And now, as if to test the seamanship of the crew, sails were taken in and spread again, and as the wind increased the brig heeled over until the sea was roaring and tumbling along her rail, and the lower sails were wet with the splash of the spray as it flew across the deck. But there was no stopping the headway of the little vessel as she met the heavy ground-swell of the ocean. There was none of the thumping that I remembered hearing on board the old *Minetta*.

One great, hairy-chested fellow, as fine a specimen of a sailor as I ever saw, swung his arms about his head and gazed up at the swelling sails.

"Oh, oh! isn't she a beauty?" he exclaimed. "A darling ship! Ay, she's a sweetheart!"

There was an accent of love and of admiration in this that was not to be mistaken; his speech rang with a worshipfulness that was contagious. I caught it and could have shouted.

The last boat to leave the shore had brought off to the ship what appeared to me to be a load of old iron. Apparently short crowbars fastened on rings, and cannon balls welded together by solid bars of iron or attached to each other with short lengths of chain. Fearing to ask what they were, although I knew not, I waited for some landsman less ashamed of his ignorance than I to ask their meaning. My lanky friend who swung with me was the means of my finding out what I wished.

"What are they?" he inquired. "Those things in the boat?"

"Them's Yankee tricks," answered the squint-eyed quartermaster, "and four of them will do more damage in walking through a vessel's rigging than a frigate's broadside. They're British puzzlers."

They were the dreaded star-shot and chain-shot that the English had declared barbarous and inhuman in warfare, for what reason they or no one else could tell you; but they were fearsome things in battle, and this I had afterwards a chance to witness and can subscribe to.

About noon the wind had died away, and the fog thickened, and we drifted, heaving and rearing in the smooth round seas. I had more of a chance to observe the people whom I supposed I was to live with for the next few months. The great majority of them were fine Yankee seamen, men who had served on merchant-vessels or in the Marblehead fishing-fleet, typical Down-Easters, with a scattering of sailors who had seen service on board vessels of the navy. There were a few foreigners, Portuguese or Spaniards, I should judge, quick, active men with black hair and wiry frames. Some rough-looking characters there were, too, whose faces showed instincts not all the best, and, as I have said before, a scattering of countrymen making their first voyage filled out the complement.

The threshing and moving of the vessel seemed to discommode these latter, and many were ill, and wished themselves ashore, I take it, from their looks (one or two desired to die, I am sure). In the little steerage four or five prize-masters bunked together. They were mostly men past middle age, and had the appearance of broken down seafarers, and the majority of them were prone to the bottle habit, unless they belied their appearance. In all there were crowded on board the *Young Eagle* in the neighborhood of one hundred and thirty souls, perhaps more.

I have never seen any one so careful of detail as Captain Temple. He would permit no slouching in appearance, as well as duty. There was an attempt at uniform; and the forecabin, and in fact the whole vessel, was inspected by him as regularly as if she were a man-of-war.

Odd to relate, the skipper himself was a teetotaler when at sea, no matter what his behavior was when dry ground was beneath him. To show his carefulness and regard for neatness, I heard him rate a man severely for not being clean shaven. His own costume, in which he looked most picturesque, would have attracted attention anywhere. He wore his huge cocked hat set lightly athwartships on his head, his neat blue coat fitted his trim figure to a nicety, and his legs were encased in Hessian boots with gold tassels, like those of a dandy. In fact he was a handsome man to look at, and there were stories about his being a great favorite with the ladies.

Junior officers get their key from their commander, and although our Lieutenants did not present so fine an appearance or wear their clothes so well, they were a good-looking set, and all young men with the exception of Edmundson, who may have turned forty odd.

All night long the fog hung about us. We had been drilled during the day, and never have I seen a crew pick up so much knowledge in such a short space of time.

After breakfast on the second day the fog-bank lifted, and land was made out to the northwest. I heard one of the officers say that it was Montauk Point. A slight wind was stirring, and we sailed on, steering south by west, and by noon we had sunk the headland, and a cry came down from aloft that a sail was in sight to windward. We altered our course, and made in the direction of the stranger. An air of eagerness showed in the faces of the crew. I fairly believe that some of them began to count upon their share of prize-money. As the other vessel was approaching, soon we could see her from the deck.

She was bringing the wind with her, and had all sails set, stu'n'-sails and royals. Mr. Spencer went aloft, and took a squint from the cross-trees, through the glass. All hands were watching him, and the way he hastened down to the deck showed that he had something to communicate. This was evident, for immediately the *Young Eagle* was hove to, and then put before the wind.

"Old Kill Devil's changed his mind, I reckon," said Sutton, the foretopman, coming up to me. "And he wouldn't without good reason, you can bet a cotton hat. Now to my way of thinking, that vessel's an English frigate, unless it be one of our own, as the Johnnie Bulls generally sail in company."

It soon became evident that it was Temple's intention to give the on-comer as wide a berth as possible, for we spread every stitch we had, and steered a more westerly course. It was thick weather up aloft, and the sunlight barely filtered through it. But it was one of those days when distance is hard to judge, the sea one dead gray-green, with no flash or change in color, and nothing to tell whether the horizon was five miles off or twenty—nothing but the white sails of the approaching vessel, and occasionally a sight of the dark hull lifting underneath the canvas.

We were holding our own quite well, with perhaps a slight gaining on the pursuer, for such she had become, when the fog began to lower, or better, we ran into it. It thickened, and soon we could see nothing but the heaving water fading into a gray wall at a distance of a few hundred feet.

We took in our kites, and squaring the yards, changed our course to the northward. The interest was less intense now, owing to the other vessel being out of sight, and Captain Temple's evident intention was to give her the slip and let her pass to the southward of us. For two hours we sailed on. It had grown lighter overhead, as if all the clouds had settled down upon us; but occasionally we caught a glimpse of sunlight and blue sky.

I lay on my back against the bowsprit with my hands under my head. I was thinking of the strange life that I had led, and wondering what my uncle thought of my strange disappearance. Why had old Gaston pursued me to Stonington, and what a lugubrious figure he had presented standing there on the dock in that strange head-gear! Of course this brought me to thinking of Mary also, and I put my hand inside the bosom of my shirt. There was the rose that she had given me, and that I had carefully pinned in a wrapping of strong paper. But my thoughts were interrupted by a sudden commotion. A man who had been aloft for some reason or other, disentangling the color halyards, which had fouled the main-truck, if I remember right, suddenly gave a shout.

"Sail, ho, to windward!" he cried. And never have I seen a man get to deck so quickly. He jumped the last twelve feet off the ratlines to the deck, and ran aft. Temple and Mr. Edmundson came forward to meet him. What he said was heard distinctly.

"I can make out the topsails of a vessel above the fog, sir, not much above a mile to windward. She's bearing down upon us."

The way that Captain Temple tripped aloft showed that he was a topman, and one of the best. Edmundson, although a larger man, was not far behind them. And all hands watched them make

their way to cross-trees and swarm up higher. Then we could see they were pointing. Quickly they descended to the deck. Mr. Spencer, and Bullard, and the prize-masters had all come on deck. The crew also were gathered amidships.

"It's the English frigate," said Temple, in a whisper. (As I was standing close by I caught the words distinctly.) "She must have us in sight from aloft. Our top-gallant-masts are plain to view. Ecod, we'll fool them, though," he cried, "if this fog holds."

[TO BE CONTINUED.]

INTERIOR OF A SIBERIAN SCHOOL-ROOM.

THE SCHOOLBOY OF SIBERIA.

BY W. H. JACKSON.

The word Siberia recalls a broad yellow space across the map of northern Asia, with a dot here and there for a town with an unpronounceable name; and that is about all any of us knew of Siberia when your father and I were boys. But we are beginning to learn better, and the person old or young who now speaks of that country as a barren stretch of forests and marshes, where the people wear furs most of the time, and live mainly on seal-blubber, shows himself far behind the times.

STARTING OFF FOR A HOLIDAY.

I must confess, however, that the schools of Siberia are a little ahead of what I expected to see when I made a flying trip across the country last year. My journey was from the Pacific coast to Russia, and, in winter, by more than 3000 miles of sledge travel. It extended from Habarovsk, at the junction of the Amoor and Ussuri rivers, northeast of Peking, to the city of Krasnoyarsk, which at that time was the terminus of the railway which the Russian government is rapidly building from Moscow to the Pacific coast. This route led me through the principal cities of Siberia, and I was able to stop in most of them a few days, and thus to see many places and things of interest. Many of these cities are large and handsome towns; and as all lie in the southern part of the country, where the climate and soil are much like those of eastern Canada, they are surrounded by wide farming tracts, lumbering districts, and mines, and have a trade that reaches to great distances. These are old towns, too, for it must not be forgotten that Siberia has been growing civilized during 250 years, or about as long as the United States itself, and they are often populous also, since Irkootsk, where the Governor-General of Western Siberia lives, has about 80,000 people; Tomsk, the university town, has 30,000; Blagovestschensk, the largest city in Eastern Siberia, 40,000; and half a dozen others 10,000 or 12,000 more. They have water-works, electric lights, police and fire departments, theatres, and all the rest that belongs to a wide-awake town; but they are proudest of their schools and the institutions of religion and public charity.

THE RING GAME AND OPEN-AIR GYMNASIUM.

In every city the central school-house, or gymnasium, as it is called, is one of the largest, most costly buildings, and often is surrounded by fine grounds, while within it are the best appliances that can be had. In many of them, for example, each pupil has a little desk to himself; and these are adjustable, and fitted to him, so that the short-legged youngster may have a low seat, while his next neighbor, who may be tall and thin, enjoys a higher one. This is more than most American schools can show. The walls are covered with blackboards, maps, and pictures, and always, at least in the principal rooms, there is a portrait of the Emperor, whom the Russian people often speak of as their Little Father, meaning he is next in their love and respect to the Great Father in heaven. You will notice these and some other things in the illustrations of one of the school-rooms in Krasnoyarsk, which, as well as the other pictures, has been made from a photograph taken by one of the teachers there.

Several other things are noticeable in that scene. You will observe that the right-hand corner is cut off, as if by a chimney; but this is the stove—the chimney being above it. The Russian stove is a small chamber built up of bricks, in the base of which is a fire-box, whose door in this case is hidden by the blackboard. A rousing wood fire is built in the early morning, then the doors are closed, and the dampers so regulated that the heat from the mass of coals permeates the brick walls, which diffuse a genial warmth throughout the room for the rest of the day.

HOT TEA FROM THE SAMOVAR AT A PICNIC.

In the left-hand corner is hung the *ikon*, with its ever-burning lamp, found in every Russian house or public room, great or small, and which usually consists of one or more framed tablets that contain carvings or paintings of the head of Christ, with perhaps other subjects relating to the Saviour. It is the sacred symbol of religion in the Russian (or Greek) Church, like the crucifix in

the Roman Church. Their religious duties are never forgotten by the Siberians, and form an important part of the school life. Each school has a chapel—often richly decorated; and to it is attached a chaplain or priest, who holds religious services there every morning and gives instruction in sacred subjects. One of these priests is sitting at the back of this room, as you may see by his robe and his long hair, parted in the middle, and his golden cross; these are the signs of his office. He has a kindly face, and is, no doubt, the friend of every boy in the establishment.

Next to him is seated the principal—a hearty-looking man, dressed, as usual, in military uniform—and other visitors, for this is evidently an examination day. A teacher stands at the blackboard, and perhaps has asked a question which the lad before him has been unable to answer, for he has turned to another boy, who has risen at his desk as though to give the needed reply. One need not go outside our Yankee school-rooms to make a similar picture any day; but he would never see in this country the *abacus*, which is used all over Siberia, China, and Japan by pupils and teachers in their arithmetic lessons, and by merchants in their stores, instead of the pencil and paper with which we do sums too large for head-work. It is a very ancient device, and the boys who went to school in Rome before Cæsar wrote that all Gaul was divided into three parts, or Virgil declared "*Arma virumque cano*," learned their multiplication table by the help of its sliding balls.

THE SKATING-POND.

The military rule that governs all Russia extends to the schools and colleges. They are free public schools, almost as fully as with us, and are attended by the children of the peasants and poor townspeople as well as by the sons of government officials and rich merchants, who later are to go to the university at Tomsk, or perhaps to Russia, for their college course. But here, though some are nobles by birth and others are mere peasants, all are treated exactly alike, and all dress in a uniform closely copied from that of the army. Even the girls—who always have separate schools from the boys—wear a simple regulation dress, so that there is no heart-burning in little Anna, from the cottage in the back street, because little Lady Anna, from the great house on the square, has a fine dress. The teachers are all regarded as officers of the government, and wear a military uniform. The school is drilled in tactics every day, and conducts all its exercises after military models, training its boys into soldierly young men. Even their play is mixed up with this, as you see in the picture of the ring game, where an officer wearing his sword stands in the centre.

The uniform is not so pretty as that worn by the cadets of our own military schools, and it is comical to see a little chap, with a round, roguish face under his flat cap, wearing big boots, and a gray overcoat belted about him with skirts long enough to touch the ground; but when he has earned the rank of corporal or sergeant in his school battalion, and feels the marks of his rank on his collar, he struts about as proud as a peacock.

Gymnastics are cultivated everywhere, and each school has a large hall devoted to calisthenics, and to exercises upon the bars, ladders, vaulting-horse, swinging-rings, trapeze, etc.; while many schools have out-of-door apparatus to be used in warm weather, such as that which appears in one of the illustrations. Everybody must go through these exercises, and some excel greatly in them, as you would expect of the sons of Cossacks, as many of them are.

Holidays are much more numerous than with us, and on these school is suspended, and parades and marches take their place. Then the school assembles, "company front," on the play-ground. All the principals, teachers, and drill-masters are here in full uniform; a band is borrowed from the garrison post, and after a few evolutions the young regiment marches away, to stirring drum and bugle notes, to some rural grove, where they have competition drills and athletic games, and then break ranks for a frolic. Lunch-time brings them all to headquarters at the roll of the drum, when every young soldier winds up with tumblers of weak tea, the hot water coming from the great brass urn, called a *samovar*, which is never far from a Russian gathering of any kind at any time of year.

Christmas in Siberia is the great day of the year for the youngsters—nowhere greater—and the soldier lads and quaint, gray girls look forward to it for weeks as they do elsewhere. I happened to be in Chita, the capital of the trans-Baikal province, at Christmas, and was invited to one of the festivals. Imagine a large and lofty room, where three or four hundred children were packed in a dense circle around a large Christmas tree ablaze with candles and loaded with good things. Outside of this circle were as many older persons as could find room—rich and poor, noble and simple—the army officer in his gold-embroidered coat jostling the peasant in sheepskin, and the grand dame in silk and sables beside the plain peasant mother, all equal in their happy interest as fathers and mothers. The exercises opened with the national anthem, led by the priests, who are very successful in teaching the children those choral songs so common and enjoyable in Russia. Dialogues and recitations followed, sometimes by little tots, and after that came games and dances—especially that curious, active, national dance, a sort of quadrille, performed by quaint little couples in uniform, with immense zest. By this time everybody was moving about, and all who wished, old and young, began waltzing to the music of the soldier band, the Governor himself, gorgeous with gold lace and orders, taking out one shy little maiden after another to spin about the polished floor. At last it was time to stop, and then everybody stood still while the children sang a final soul-stirring patriotic song to the accompaniment of blazing red lights, the older ones joining in the chorus and ending each refrain with a roar of "*h'ras!*"

THE CROWN OF AN AMERICAN QUEEN.

BY SALLY NELSON ROBINS.

In the age when America was but a name and Virginia only a hamlet, there was a dusky queen who wore a silver crown by order of his most sacred Majesty King Charles II., King of England, Scotland, France, Ireland, and Virginia.

There are few distinct Indian personalities. Powhatan, Pocahontas, Opechancanough, Totopotomoi and his wife the Queen of the Pamunkeys, are savage heroes which sentinel the seventeenth century; they all belonged to the Pamunkey tribe of the Great Powhatan Confederacy, the most powerful Indian combination that ever existed.

When the boisterous and heroic Nathaniel Bacon was in the flush of his wonderful success, and had brought his followers to Jamestown, he demanded of the Governor redress for Indian depredations and outrages. When the assembly in council was sitting, the Queen of the Pamunkeys came in, leading her son by the hand. She came to tell of grievances also. She wore a dress of black and white wampum peake and a mantle of deer-skin, "cut in a frence" six inches from the outer edge. It fell loosely from her shoulders to her feet. On her head was a crown of "purple bead of shell, drilled." She was a beautiful woman, old chronicles tell us, and she walked in with a proud but aggrieved countenance.

She sat down in the midst of the assembly, listening eagerly to the arguments for the suppression and, if need be, the extinction of her race. And she remembered Totopotomoi bleeding for these people who would not recognize her rights. She arose and made a speech in her own tongue, eloquent with gesticulation; the refrain of it was a mad wail: "Totopotomoi chepiak! Totopotomoi chepiak!" (*i.e.*, Totopotomoi dead).

Colonel Hill the younger, touched a fellow-member on the shoulder, and whispered: "What she says is true. Totopotomoi fought with my father, and fell with his warriors."

But the assembly would not listen to the poor suffering Queen. They wanted more men to fight more battles, and the Queen of the Pamunkeys must furnish her quota.

"How many men will you furnish?" asked Nathaniel Bacon. "How many will you give to fight and subdue the treacherous tribes which threaten our peace?"

The Queen was silent. She remembered her husband and his slain braves. She had fears for her son, and she would not speak.

"How many?" asked Bacon again.

The poor Queen had her head turned away, and bowed.

"How many?" demanded the famous rebel again.

Then she slowly turned her lovely face, and softly whispered, "Six."

Her answer infuriated Bacon, who considered the number contemptible. "How many more?" again he asked.

The Queen gave him a glance of indignant hate, and haughtily answered, "Twelve." Then she gathered her robes about her, and majestically left the room.

Once again do we see the Queen of the Pamunkeys, and now in fear and adversity. Bacon in his mad career destroyed the Pamunkey settlement—the same tribe which had so nobly assisted the English.

The poor Queen, terrified, fled far into the forest, accompanied by "onely a little Indian boy." Her old nurse followed her, but was captured. Bacon ordered the old woman to guide him to a certain point, but she, full of revenge, led him in an opposite direction, whereupon the rebel ordered her to be knocked in the head.

The Queen wandered about almost crazy, and at last determined to return and throw herself upon Bacon's mercy; but as she was rushing towards her desolated wigwam she came upon the body of her murdered nurse, which so affrighted her that she ran back into the wilderness, where she remained "fourteen daies without food, and would have perished but that she gnawed on the legg of a terrapin which the little Indian boy brought her."

So this Queen in history has but a few bold touches, but they pass her down as a martyr, in consequence of which, and for what her husband did, Charles II. bestowed upon her a silver crown, with the lion of England, the lilies of France, and the harp of Ireland engraved thereon.

Savages are not averse to the baubles of civilization, and the crown which their Queen wore was a blessed treasure to her tribe for a hundred years after the Queen was dead.

The Pamunkey tribe, or a pitiful remnant of them, still dwell in Virginia, on the river which bears their name. They have a chief and their own government. Annually they send tribute of fish and game and Indian handiwork to the Governor of Virginia. They are weakening physically, and pray for new blood from the Western reservation.

Once they started for the West, carrying their best treasure, the silver crown. They came to the plantation of Mr. Morson, at Falmouth, and there bad weather and sickness made them halt. Mr. Morson attended to their physical wants, and allowed them to pitch their tents upon his land until their distress abated.

"What do we owe you?" asked the chief, when they had decided to return to their former Virginia reservation.

"Nothing," said Mr. Morson. Perhaps he remembered Totopotomoi and his sorrowing Queen.

"Then we will give you what we value most," and the chief presented to Mr. Morson the crown of the Queen of the Pamunkeys. For three generations it staid in the Morson family, but lately it has been purchased by the Association for the Preservation of Virginia Antiquities.

**THE GIFT OF KING CHARLES TO
THE QUEEN.**

The crown is really a frontlet, and the Queen of the Pamunkeys wore it upon her brow surmounted by a red velvet cap; the cap has long ago been entirely destroyed by moths; two silver chains bound the frontlet to the head.

The All-New-York Interscholastic Football Team for 1896 is as follows:

HAROLD HASBROUCK, <i>Berkeley</i>	left end.
JEREMIAH MANNING, <i>De La Salle</i>	left tackle.
B. P. KINNEY, <i>St. Paul's</i>	left guard.
W. B. BOORUM, JUN., <i>Poly. Prep.</i>	centre.
G. H. MILLER, <i>De La Salle</i>	right guard.
MARSHALL PAGE, <i>Trinity</i>	right tackle.
D. P. WHITE, <i>St. Paul's</i>	right end.
T. B. TAYLOR, <i>Trinity</i>	quarter-back.
W. DICKERSON, JUN., <i>B'klyn High</i>	half-back.
J. D. TILFORD, JUN., <i>De La Salle</i>	r. h.-b.
S. L. M. STARR, <i>St. Paul's</i>	full-back.

**HAROLD
HASBROUCK,
End.**

**B. P. KINNEY,
Guard.**

W. B. BOORUM, JUN.,
Centre.

G. H. MILLER,
Guard.

D. P. WHITE,
End.

S. L. M. STARR,
Full-back and
Captain.

**WALTER
DICKERSON,
JUN., Half-back.**

**JEREMIAH
MANNING, Tackle.**

**T. B. TAYLOR,
Quarter-back.**

**MARSHALL
PAGE, Tackle.**

The selection of an All-New-York Football team this year is not an easy task. There is a wealth of material to choose from, but the very fact of there being so many players of almost equal merit makes the task all the harder. The season just closed has been a remarkable one in the history of interscholastic football both in New York and Brooklyn, and the contest for the championship of both cities has been a most stubborn one. The teams have shown marked improvement in their knowledge of the game and the variety and execution of their plays, and the boys have shown an

**J. D. TILFORD,
Half-back.**

aptitude for the sport that gives great promise for the future. The team selected is a remarkably heavy one, and under proper coaching and training would undoubtedly put up a magnificent game against any college eleven.

Hasbrouck of Berkeley School is undoubtedly entitled to the position of left end. He weighs 177 pounds, is a very fast runner, a sure tackler, and strong at breaking up interference. He played on the '93, '94, and '95 teams, and understands his position thoroughly. He gets down the field under kicks with remarkable speed, and rarely, if ever, misses a tackle. He is not liable to be easily hurt, and only once during the season has he been injured painfully, his injury consisting of the dislocation of a shoulder. He captained the Berkeley team this year, and would undoubtedly have turned out a far stronger team had he not been hampered by outside influences.

At left tackle Manning of De La Salle seems to be the best choice. He weighs 176 pounds, is a very fast runner, a hard tackler, and a sure ground-gainer when the ball is given to him. A remarkably powerful fellow, he rarely is injured, and has played the entire season through, improving with every game. He breaks through his opponent with great fierceness, and goes at interference with a determination that is simply irresistible.

Kinney of St. Paul's is thoroughly able to take care of the position of right guard. He weighs 187½ pounds, is a player of great strength and courage, breaks through his man fiercely and with determination, and added to his ability to block hard is the qualification of an able tackler. He has played two seasons on the St. Paul's team, and is a steady, reliable player that makes his presence felt in every game. He runs well with the ball, gets his head low, and carries his tackler along with him whenever he is met.

At centre, Boorum of Brooklyn Poly. Prep. could easily handle any man that has played that position in the two interscholastic leagues this season. He weighs 170 pounds, puts the ball in play with accuracy and precision, and blocks his man strongly and surely. He is a tower of strength in blocking centre plays, and has no fear of the strongest kind of interference.

At right guard I place Miller of De La Salle, who formerly played on the Peekskill Military Academy. Miller weighs 185 pounds, and is one of the strongest, fiercest, and most determined players of the Interscholastic League to-day. He is a little over six feet in height, and built proportionately. His strong feature is in his guards'-back play, in which he smashes the opponents' line wide open for his backs with the ball. He is also good at tackling and breaking through the line of his opponents, and from the beginning to the end of a game he is constantly at his opponent, and works and worries him off his feet. Add to these qualities the fact that he runs well with the ball, strong and hard, and we have a man for the position who certainly will have no trouble in making a college team.

Page of Trinity has been selected for the position of right tackle. He has a weight of 174 pounds, and his ability to run with the ball has won for him this position, as there are no other men playing the position to-day who can combine these qualities so well as himself. Hoffman of Cutler School, however, who has been playing guard, might be a better man for the position, but as I have been selecting men for positions in which they have actually played, I am compelled to give this tackle to Page.

White of St. Paul's, although he weighs only 144 pounds, has earned the position of right end. He plays it fearlessly, and with a dash and spirit that have attracted attention wherever his team has

appeared on the grid-iron this year. His defence is admirable, and his offence all that could be desired. He is a sure tackler, a swift runner, and fast down the field on kicks and punts, and the position of right end will be well taken care of in his hands.

At quarter-back the contest is a close one between Taylor of Trinity and Blout of St. Paul's. Both are ideal in their position, but of late Blout has fallen off considerably in his passing, while Taylor improves with every game that is played. This fact alone gives the position to Taylor. He weighs 148 pounds, and gets into the interference for his runner with the same accuracy and swiftness with which he gets the ball to his man. He strikes his opponent low with the shoulder, and hard, and almost invariably puts the tackler out if he has the opportunity to do so. He also runs well with the ball himself, when it is given to him from one of the backs on a pass, and as a tackler he has few equals in the Interscholastic League to-day.

At left half-back the choice falls upon Dickerson of Brooklyn High-School. He weighs 174 pounds. He was Captain of his team this year, and ran it in a masterly manner. His line-bucking is a strong feature of his play. He meets the line low and hard, and never ceases to work forward with the ball until he is absolutely down with the team on top of him. He is also good at punting, and has made some remarkable kicks this year.

At right half I place Tilford, the Captain of the De La Salle team, which won the New York Interscholastic championship this year. Although a light man, weighing only 136 pounds, his play this season has been of such a dashing and brilliant nature that he has displaced all other aspirants for the position. Strange as it may seem, he is the equal of any half-back to-day in breaking the line, and is a very fast runner, sure ground-gainer, and strong at tackling.

Sidney Starr, of St. Paul's School, has been selected for the position of full-back. He weighs 175 pounds, and probably there are few men who can excel him in interfering for the runner on end plays, or in backing him up when bucking the line. Starr is also a kicker of more than average ability. He gets his punts off quickly without any hesitation, and has the faculty of putting a twist on his punts that makes it very hard for the opposing backs to handle them accurately. As Captain of the St. Paul's team this year, champions of the Brooklyn Interscholastic League, he has run his team with great judgment and skill, and is entitled to much credit for the successful manner in which he carried them all through the season.

Although I give him the position of full-back, after a careful consideration of his qualifications, I am forced to state that the position would have fallen to Franklin Bien, Jun., of Berkeley, were it not for the fact that Bien's playing this year has been greatly handicapped by the injury he received early in the season during the game between Berkeley School and St. Paul's at Garden City. Bien is the equal of Starr in his all-round work, but his liability to injury in a game makes him slightly timid in his work, and takes away the dash and the spirit and determination that characterized him during the preceding season. For this reason Starr gets the position, and for this reason alone.

Bien is entitled to a position as first substitute full-back. As substitute guards I would name Gilson of Berkeley, Rafter of De La Salle. As substitute guard and tackle, Hoffman of Cutler. As substitute ends, Bennett of De La Salle and Loraine of St. Paul's; and as substitute centre, Taves of Trinity.

This All-New-York Eleven makes up a very heavy team. The line especially averages a good weight, and under proper coaching ought to be able to stand up against a team of older players with credit to itself. With such a line as this in front of them, the two plunging backs, Starr and Tilford, ought to be able to make big gains through any opponents, and, on the whole, I think that if the New York schools should send this team to represent them against any other combination of

eleven men, they could feel perfectly confident that their side of the field would be well taken care of.

The All-Chicago Interscholastic Football Team for 1896 is as follows:

FRANK LINDEN, <i>Hyde Park H.-S.</i>	left end.
WILLIAM PRENTISS, <i>Evanston H.-S.</i>	left tackle.
WILLIAM MITCHELL, <i>Evanston H.-S.</i>	left guard.
GORDON MACKAY, <i>Hyde Park H.-S.</i>	centre.
GUNNAR GRAM, <i>Lake View H.-S.</i>	right guard.
GUY KNICKERBOCKER, <i>Hyde Park H.-S.</i>	right tackle.
LYNN SCHOELLENBURGER, <i>Englewood H.-S.</i>	right end.
WILLIAM TALCOTT, <i>Englewood H.-S.</i>	quarter-back.
CLAYTON TEETZEL, <i>Englewood H.-S.</i>	left half-back.
JAMES HENRY, <i>Englewood H.-S.</i>	right half-back.
D. P. TRUDE, <i>Hyde Park H.-S.</i>	full-back.

**FRANK LINDEN,
Left End.**

**CLAYTON
TEETZEL, Left
Half-back.**

**GORDON
MACKAY, Centre.**

**JAMES HENRY,
Right Half-back.**

**LYNN
SCHOELLENBUR
GER, Right End.**

**D. P. TRUDE,
Full-back.**

**GUY
KNICKERBOCKE
R, Right Tackle.**

**WILLIAM MITCHELL,
Left Guard.**

**WILLIAM PRENTISS,
JUN., Left Tackle.**

**GUNNAR GRAM, Right
Guard.**

In choosing the All-Chicago eleven from among the best players in the Cook County High-School Football League, the principal difficulty has been to attempt a consideration of all the players who might be candidates, and to be equally just toward those who played on weak teams, where they could naturally not show their value to such advantage as their fellows on stronger elevens. The task is rendered all the more difficult on account of the many games that were protested and postponed. However, taking all things into consideration, there seems to be little doubt that the eleven men above named would form the best eleven to represent Cook County schools.

For captain of the eleven, Talcott, quarter-back of the Englewood High-School, is the best man. He is as capable of bringing out the greatest results from a team under his command as any one. He is a brainy player, a general who uses good sound sense, and whose forethought is shown in every signal he gives. He has coolness combined with quickness, and is an indefatigable worker.

The best all-round player that has turned up in Chicago this year is Clayton Teetzel, the left half-back of the champion Englewood team. He is a man of experience, and knows the game thoroughly. Teetzel is a sprinter, and has made many remarkable runs on the field this year, and these runs have resulted from head-work rather than accident. He is an excellent dodger, runs hard, guards himself well, and bucks the line low. He is a sure tackler, seldom letting a man pass him within reach.

James Henry, of Englewood, deserves the position of right half-back on the All-Chicago team. While Teetzel is a dodger and wriggler, Henry is a steady and sure line-bucker. He cannot run so fast as Teetzel, but for short gains through the line he has no superior in Cook County. He follows his interference well, and tackles hard, and is not liable to injury. Another very fast runner is Trude of Hyde Park H.-S., who ranks as the best of the full-backs. In line-bucking he is as sure of a gain as any man on this team. There has been but little kicking in the games this fall, but Trude has shown himself to be capable of punting with the best of them. He is quick to handle the ball, and knows how to send it down the field.

For left end I should choose Frank Linden, of Hyde Park, as he has done the best work this year in that position. He is one of the fastest men in the school, and always gets off with the ball. He is a hard tackler, and attends strictly to his business. Prentiss of Evanston will take care of left tackle. He was one of the surest men on his team, frequently carrying the ball for good gains. He has the knack of breaking through and nailing his man behind the line. He also possesses unusual power in getting his opponent out of the way or in blocking him on the defence. Gordon Mackay, who played centre for Hyde Park, is the quickest and snappiest man for that position. He gets into the play well, tackles fairly, and rarely lets his man through, although he frequently breaks in himself.

Guy Knickerbocker, of Hyde Park, should go to right tackle. With Linden, Trude, and Mackay he played on the champion Hyde Park team of 1895, and consequently may be ranked as a player of some experience. He is aggressive, he knows how to handle his man and keep him guessing, and he blocks well; he weighs 179 pounds, and by his weight partially overcomes his principal fault of not running low enough.

Right end should be taken care of by Schoellenburger of Englewood. He is the heaviest player for the position, but he is fairly quick, and seldom allows a gain around his end. He is unusually good at breaking up interference, carries the ball well, and seldom allows the runner to get outside of him. If Freedlander, the captain of the North Division team, had played this year as he did last, I should have given him the position, but his work has fallen off, and he may now only rank as substitute.

Of all the difficulties of choice for this eleven, the selection of guards seems to be the greatest. There are four players of nearly equal rank, but taking everything into consideration, Mitchell of Evanston and Gram of Lake View seem to have the best claims for the All-Chicago team. Mitchell

**WILLIAM
TALCOTT,
Quarter-back.**

is the cleverest of all in running with the ball, and he knows his defensive work perfectly. Gram does the best offensive work. He is rather light, but exceedingly quick, and takes advantage of every opportunity offered. In defensive work Dowd of Englewood or Eberling of Evanston may equal him, but they do not excel.

The other substitutes of this team are Orchard of Evanston at quarter-back; Johnson and Becker, of North Division, half-backs; Miller of Hyde Park and Sutler of Lake View, tackles.

SHADY SIDE ACADEMY (PITTSBURG) FOOTBALL TEAM.

The Shady Side Academy Football team of Pittsburg finished the season with five victories and two defeats to its credit. This record places them second among the Pittsburg schools, with Kiskiminetas first. At the opening of the season things did not look very bright, as there were several important positions to fill and a scarcity of material. In the first game the team played very fast and snappy football, but against Braddock High-School the work was poor, and the coach was somewhat discouraged. However, the eleven showed some improvement when they met Pittsburg High-School, and easily defeated them.

In the game with Kiskiminetas the team was in poor condition, and was easily defeated; but when Kiskiminetas played the return game, both teams were in good condition, and Kiskiminetas again won. In the second contest with Pittsburg High-School both teams showed improvement over their form in the first game, and it was only after a hard straggle that Shady Side won, 4 to 0.

As to the best playing on the team, perhaps McConnel should be mentioned first. He was the best tackler on the team, and demonstrated this fact a number of times by the way he prevented opponents from scoring, and his interference was also good. He played his position at quarter-back better than any of the other quarter-backs among the schools. Scheldecker and Kirke were both hard tacklers, and the former was the best man in the line to run with the ball.

The Brooklyn Association has begun early to prepare for the baseball season, and the baseball committee has completed the schedule for the games that must decide the championship next spring. Unless something turns up to modify the schedule, it will be played as follows:

April 28—Adelphi vs. Brooklyn Latin.

May 1—Brooklyn High vs. Pratt, and Poly. Prep. vs. Adelphi.

May 5—Adelphi vs. Pratt, Brooklyn High vs. Brooklyn Latin, and Poly. Prep. vs. St. Paul.

May 8—Brooklyn Latin vs. Pratt, St. Paul vs. Adelphi, and Brooklyn High vs. Poly. Prep.

May 12—Pratt vs. Poly. Prep., and St. Paul vs. Brooklyn High.

May 15—St. Paul vs. Pratt, Poly. Prep. vs. Brooklyn Latin, and Adelphi vs. Brooklyn High.

The All-Boston Interscholastic Football Team will be announced next week.

GRADUATE.

THE

ADVERTISEMENTS.

The great popularity and general use of the Royal Baking Powder attest its superiority.

It is absolutely pure and wholesome.

It is combined from the most approved and healthful ingredients.

It makes the finest flavored, most tender, delicious, and wholesome food.

It has greater leavening strength than any other baking powder, and is therefore the most economical.

It never loses its strength, but will keep fresh and of full leavening power until used.

It acts slowly in the dough, so that none of its strength is lost before the baking is completed.

It makes food that will keep sweet, moist, and fresh longer, or that may be eaten hot and fresh with impunity.

ROYAL BAKING POWDER CO., NEW YORK.

QUESTIONS FOR YOUNG MEN.

ON SMOKING.

Perhaps this is a dangerous subject for any one to touch upon, and yet there are a few things still to be said on the subject of smoking to which any respectable person should be willing to listen. Many a young man does not understand why his parents do not wish him to smoke, still less why he is told by these persons that it is wicked or immoral or wrong for him to smoke. As a matter of fact smoking in itself is neither wrong nor immoral nor wicked. To some people it is physically injurious, but they soon find that out, and are obliged by their doctors to give it up. If it is not in any way injurious to you, or to me, or to another person, there is no reason why we should not smoke, except that if you are fond of out-door exercise, if you have an ambition to get on an athletic team, if you look forward to college days when you hope to be a member of some class or varsity team, it is wiser for your own interest that you should not smoke. And the reason is not far to seek.

When a man has been running and breathes hard he is said to be "winded." That is merely a term, however. The fact of the case is that the action of the heart is increased. This sends the blood through his body much faster than usual, and he is obliged to draw air much more frequently into his lungs in order to do the extra work of purifying this blood which moves so much faster than usual. When you smoke, the nicotine in the tobacco has an effect on your nerves, which in turn affects the heart, not at all seriously perhaps, but, at the same time, if you run shortly after smoking, there is still more exaggerated action in the heart, and this requires still quicker breathing. Hence trainers say that a man who smokes injures his wind.

Now it is a law of athletic training that one cannot really get into condition in a month or two. To prepare for a football game on Thanksgiving, one must begin the 1st of December the year before—not the 1st of October of that year. In other words, if you wish to be a member of a 'varsity team you must keep yourself more or less in training not only during your four years at college, but during the years preceding your college course. As a result any sensible person will say that although smoking may be in no way harmful in itself, it is wiser and more to your own interest, if you have any out-door or in-door athletic ambitions, not to smoke until those ambitions are satisfied.

Then there is another side to smoking. A habit of any kind is a very difficult thing to give up. If you form a habit of taking a cold bath every morning, it is hard to break it. If you form a habit of reading only the best books, it is almost impossible to read anything else. If you form a habit of drinking whiskey, it is quite as difficult, but not much more so, to break that. In like manner the habit of smoking is a difficult thing to break up. I do not believe it is any easier to get into the habit of smoking than it is to get into the habit of taking a cold bath every morning. Each is a habit, and only becomes injurious, and then *does* become injurious, when it grows stronger than your own will. Yet the cold bath may not be healthy any more than is the smoking. Therefore if you have any ambition of any kind to keep yourself in physical condition do not smoke, or do anything that will injure your physical condition. If, however, you decide to take up smoking for one reason or another if it does not injure you physically, the smoking itself may be perfectly right and proper. When, however, you grow to feel that at certain times in the day you *must* smoke, then the thing is bad, and should be stopped at once. In other words, smoking is not an offence against the Bible, as

some people seem to think, but it may, and often is, an offence against health. Whenever health is endangered by it, therefore, keep clear of it.

THE STORY OF THE ARMY MULE'S LAST KICK.

There was an experiment tried at a Western fort many years ago, the results of which were never recorded at the War Department. The story is somewhat as follows:

One windy afternoon the Colonel, a fat pudgy little fellow, but a capital Indian-fighter, one of his captains, a long, lanky New-Englander, with whiskers and a drawl, and one of the sergeants were conversing together, every now and then glancing furtively at a solitary mule that was silently wearing the grass off the earth with his mouth.

"Waal, Colonel," drawled the Captain, "I like your scheme, and I reckon I'd try—" But just then the mule reached out with one of his hind legs in the direction of the talker in such an exceedingly suggestive manner that the Captain hastily backed into the Colonel. The Sergeant prevented the two men of war from falling by putting his shoulder to them, which position made the three look like an Egyptian pyramid, minus the sphinx—unless you included the mule for that purpose.

The Colonel's idea was that gun-carriages were useless in Indian fights, and if a howitzer were strapped upon an army mule's back, with the muzzle towards the tail, and loaded with ball-cartridge, the results that would accrue would be disastrous for the Indians.

"Waal," again drawled the Captain, with a wary look towards the mule, "let's experiment." And they did. They got a howitzer tied on that mule, who remained suspiciously quiet, looking steadily at the horizon, and they placed a time fuse in position, and then led the mule out on a bluff in front of a target. The three experimenters invited a number of brother officers to the scene, and when all was ready the pudgy Colonel lit the long fuse, and retired to the group of spectators.

The unruffled mule stood steady, gazing at the vanishing-point in the perspective, until the sputtering of the fuse aroused his curiosity, and he slowly turned his head and inquiringly watched it sputter. A little thing like that shouldn't bother an army mule. But his turning bothered the spectators; for as he did so, the muzzle of the howitzer began to describe sundry sweeps in all directions, like a telescope searching for a comet or a lost star. The mule grew alarmed, and betrayed his obstinate nature as he absolutely refused to stand still, and gathering his four legs together in a bunch, he began making what seemed one thousand revolutions a minute; and there was that loaded howitzer threatening death at all points of the compass! In the mad rush to reach safety that took place before that dancing mule a stampeding herd could have found points. The pudgy Colonel was stuck between the bars of a rail fence, and all that one could see was his fat legs kicking towards the sky. As for the lanky New-England Captain, he essayed the climbing of a tree, regardless of his country's uniform, with the result that what he left on the bark looked like a patched quilt, with stray bits of regimentals and bunches of whiskers. He was having a hard time keeping the trunk of the tree between himself and the muzzle of the howitzer. The rest were rapidly losing themselves in every direction, seeking cover as if a pack of Indians had hailed down upon them.

The gun went off at last, and, alas! the mule kicked his final—or else the gun kicked it for him, for it knocked him over the bluff to his grave. As for the ball, after taking a chip out of the Captain's tree trunk, and scraping the top rail of the Colonel's fence, it danced along and careened through the windows of the Colonel's headquarters, cutting a swath in the room like the path of a cyclone, then wandered out through the opposite partition to a yard in the rear, and after playfully lopping a proud rooster's astonished head, it brought up with a smash against the kitchen chimney,

completely wrecking that smoke-carrier and the dinner it had smoked for, throwing the cook into a fit, for which she is still claiming a pension. For a long time mules were disliked on that frontier post.

Any questions in regard to photograph matters will be willingly answered by the Editor of this column, and we should be glad to hear from any of our club who can make helpful suggestions.

HINTS ON RETOUCHING.

I.—APPARATUS AND MATERIALS.

The apparatus and materials required for retouching negatives are an easel, or rest, for the negative, a few pencils, a sable brush, two cakes of moist water-color, and a little retouching varnish.

Retouching-frames may be bought of dealers in photographic supplies; but one which may be made at home, at a very small expense and in a short time, answers every purpose of the more expensive apparatus.

**T T, Table; E E, Edge of board; S S, Support;
F, Fastener.**

Take a piece of half-inch board twenty inches long and fourteen inches wide, and cut an opening in the centre just large enough to admit the largest size negative used by the amateur. Round the edges of this opening tack narrow strips of wood—cigar-boxes make about the right thickness—allowing them to project over enough to hold the negative after the fashion of a glass in a picture-frame. When a smaller size negative is used it is placed in a kit, and the kit

fastened in the opening. Next take two pieces of wood twelve inches long, two inches wide, and half an inch thick, and attach them to one end of the board at the corners by

hinges. At each side of the board fasten by a small screw, so that they may be moved easily, a small strip of wood having in one end a small hook. In the outside edge of each support fix a small staple or screw-eye, and when the board is wanted for use open the supports, hook the strips of wood into the staples, set the frame on a table, and you have as firm and solid a retouching easel as can be desired. The accompanying diagram will make the explanation clear to any one.

Three or four of Faber's pencils, varying in softness from HHH to HHHHHH, will be needed. Cut them in long slender points, leaving at least half an inch of lead at the end free from wood. They must be ground to almost needle sharpness. A handy device for renewing the point when it becomes dulled is to tack a piece of fine sand-paper to a small block, and use it for rubbing down the superfluous lead.

Two cakes of water-color are convenient, though they are not always used. Indigo blue and lamp-black in the moist colors are considered the best for this purpose. A very soft sable brush with a fine point is used to apply the paint. This brush must not be very long, but should be of medium thickness.

Retouching fluid or varnish may be bought ready prepared, or it may be made according to either of the following formulas:

Sandarach $\frac{1}{4}$ oz.

Alcohol $1\frac{1}{2}$ oz.

Castor-oil 20 grs.

Put the gum-sandarach in the alcohol and shake till thoroughly dissolved, then add the castor-oil. Shake well before using.

Gum-dammar 35 grs.

Yellow resin 3 drms.

Oil of turpentine 20 oz.

A simple retouching varnish is made by adding dammar gum to turpentine in the proportion of 40 grains of the gum to 1 oz. of turpentine, but the addition of the resin as in the last formula seems to give a better grain to the negative.

CONSTANT READER asks if there is a solution for making green prints, and asks what is the matter with red prints, made by formula given in the Camera Club, which instead of being red, are a dirty brick color. Directions for green tones were given in No. 862, May 5, 1896.

SIR KNIGHT B. A. PORTER asks how to make carbon prints, and says he would like to learn photography in some studio, and asks what course to pursue to obtain a position. Directions for making carbon prints have not been given in this column. A paper on carbon-printing is prepared, and will appear after the

holidays. Go to some first-class photographer and state what you wish to do. Many photographers take boys who wish to learn the art of photography and give them instruction, in payment for their services while learning. The rudiments are easily mastered, but perfection comes only by long and patient labor.

FRED. J. asks how to join the Camera Club; if the "Vive" is a good camera for beginners; and if the pictures made with it may be entered in the ROUND TABLE contest. Send name and address to the ROUND TABLE, stating your wish to become a member of the Camera Club, and your name will be enrolled on the books and a certificate sent you. Yes, to the other questions.

SIR KNIGHT RAYMOND E. REYNOLDS asks if the Bullet is a good camera. The Bullet does excellent work for a small camera.

SIR KNIGHT GEORGE FULLER asks if the Premo, Sr., is a good camera, or if he could get a better camera of some other make for the same price. The Premo is an excellent camera, and has been on the market long enough to have its merits tested. A Premo was given as one of the prizes in our competition two years ago, and the winner is very much pleased with it. Each make of camera has some special feature to recommend it. You would doubtless be entirely satisfied with the Premo, and the price is about the same for all cameras of the size named.

THE BULL AND THE GOVERNMENT PAPERS.

Here is a comical adventure that some members of an English ordnance survey met with while touring in the south of Scotland. In the prosecution of their calling they entered a field belonging to a crusty old farmer. Seeing the strangers looking about in a way he could not understand, the farmer approached.

"What are ye loitering in the field for?"

"Oh, we have a right to go anywhere," returned one of the company. "We are surveying, and here are our government papers."

"Paper here or paper there," returned the farmer, "oot ye gang oot o' my field."

"No, we sha'n't," returned the man, "and you are rendering yourself liable to prosecution for interrupting us."

The farmer said no more, but went over to his shed, which opened into the field, and let out a vicious bull. The bull no sooner saw the redcoats than he went for them in full career. The surveyors snatched up their theodolite and flew for their lives, while the old farmer, in great glee, yelled after them:

"What are ye running for? Can ye no show the bull yer government papers?"

A Dog that Knew a Tune.

Does your dog know a tune? In Trenton, New Jersey, two famous dogs are owned. One is said to be worth \$200. Some months ago both were stolen. All attempts to find them were in vain, and money rewards proved unavailing. Recently the owner went to a barn where he thought they might be. He whistled, but got no response. He was just leaving the premises when he recalled that one of the dogs always showed unusual life and joy whenever he whistled the tune, popular years ago, under the title "Captain Jinks," who belonged to certain marines. He whistled this tune at a venture, and was at once rewarded by a vigorous whine which he readily recognized. The dog knew the tune, and the result was the recovery by the owner of his two valuable dogs, and the arrest of the thief who had stolen them.

The Largest Lens.

The largest telescopic lens ever made has just been completed in Cambridgeport, Massachusetts. It cost \$100,000, and is the property of the Chicago University, for use in the observatory on Lake Geneva, Wisconsin. This lens is the greatest work of its kind ever undertaken in the world. Day and night, not a single minute has the lens been neglected. Every precaution was taken to insure its safety from damage, and now that the work is finished, it only remains to carefully ship it to its destination.

Once it safely arrives at Lake Geneva, the huge lens will be placed in the telescope of what is known as the Yerkes Observatory. The dome of the observatory is 110 feet high and ninety feet in diameter. Its weight is about 200 tons. It revolves on twenty-six sets of ball-bearing wheels, and is worked by electricity. Beneath the dome is a marble floor hung with counter-balance weights. This floor, ponderous as it appears, can be raised or lowered twenty-five feet, at the will of the observer, by the simple turning of a lever.

The Tables on Cabby.

One night, after Parliament adjourned, the new Archbishop of Canterbury, then Bishop of London, was driven to his home, Fulham Palace, by a cabby who, noting

what a distinguished passenger he had, undertook to get from him a big fee. Determined not to be taken advantage of, Bishop Temple tendered the exact legal fare, two shillings, and refused to add even a modest tip.

Cabby did not protest. He tried flattery. He knew that most bishops of London had reason to expect promotion to Canterbury in the event of a vacancy in the primacy of all England. So he said, in a begging and martyrlike tone:

"Do you think the Archbishop of Canterbury, with his big salary, ought to ask a poor cabby to drive all the way to Fulham late at night, and then give him the pittance of two shillings only?"

"Decidedly not," returned the Bishop. "The Archbishop of Canterbury lives at Lambeth Palace, and the cab fare from Westminster to Lambeth is not two shillings, but only one shilling. Good-night."

From a Student in Adelaide.

I am a student in the University of Adelaide. One of our professors is Dr Stirling, who is much interested in Central Australian discovery. A short time since he told us some facts about an investigation he helped to make in connection with an exploring party, two or three years ago. Perhaps it will interest American readers, for I read that in your country there was a race of people who lived there before Europeans came. That race is dying out, is it not? The Australian aborigines are, at any rate. Here is the account related by Dr. Stirling, as I copied it in my note-book. He read it from a circular sent out by a scientific society, but he helped to prepare the circular, and he has helped also to explore some parts of unknown Australia.

"The present inhabitant of Australian wilds is a descendant of a stone age. He still fashions his spear from flint. History he knows none. He has no traditions even, and a poorer and more meagre language than any savage known even in Africa. He is a savage brute in the form of a man. He is jolly, laughs much, has a good eye, and has never yet been known to wash. He has no private ownership of land, save the dirt on his own body. He does not till the soil, but lives on roots and game. He lives in a climate that affords a 15° Fah. temperature, yet he never uses the skins of animals for clothing and rarely makes a fire. He goes about perfectly nude, and eats his food raw. He has no religious belief whatever, and has little or no sense of honor or of truth. Attempts to civilize him prove disastrous failures. He is being 'civilized' off the face of the earth, I am sorry to say, and soon only his flints will remain. I hope this will interest you."

. B. VAN BRAAGEN.

DELAIDE.

It is of much interest. Please tell us about the University of Adelaide.

Kinks.

No. 59.—FOR YOUNG MATHEMATICIANS.

We once knew a professor at college who declared that when a pupil had mastered addition he had mastered half of arithmetic. To prove his assertion he gave this: Put down one hundred, then one, then five, then one, and then one hundred. What is the result? "207," some one said. Was that right?

No. 60.—A RIDDLE.

I'm part of a city, and part of a ghost;
I'm part of a little, and part of the most;
I'm part of astrology, part of the light.
Part of the battle as well as the fight.
With murder, however, I've nothing to do;
I shun all that's wicked, though not what's untrue.
In fathers and mothers I'm sure to be found;
In sisters and brothers I also abound.
I'm crossed in affection as well as in wealth;
I'm always with doctors, yet always in health.
I know naught of hunger, but suffer with thirst,
And I'm found with the best as well as the worst.

1. Spherical bodies.
 2. To decamp.
 3. To go beyond the limit.
 4. A fish allied to the carp.
 5. A Judean town.
 6. Dull.
-

Questions and Answers.

Harold W. Jansen asks where mica comes from, saying he is interested in it because he and his sister fell to wondering about it while watching the tinsmith put up their coal-stove for the winter. Mica comes chiefly from North Carolina, and is found there in all sorts of blocks of various thicknesses and shapes, which can be split and resplit almost without limit, until it becomes the transparent pane of commerce.

The material is imbedded or scattered through the feldspar with which the surrounding mountains are covered. The veins are found between walls of slate. It is blasted from the surrounding rock by means of dynamite, and is freed from all impure matter by miners with chisel and pick. From the mines it is taken directly to the shops, where it is split into thin sheets and trimmed into regular forms, which are then ready for the market, the price varying according to the size of the sheets.

The average size will fit an ordinary parlor heater. In rare instances, sheets as large as twenty-four by eighteen inches are found; but there is seldom or never a demand for mica of this size, so the sheets have to be cut down.

A. W. A.: Fish are sensitive about the nose. They are also able to feel a shock in adjacent water. If a fish be buried in sand till only his tail be left exposed, a slight tap on any part of the tail will excite the fish and cause it to free itself, or attempt to do so. Salmon have been known to wear their snouts to the bone and their tails entirely away at digging in the sand and stones for a nest in which to spawn. This and other facts go to prove that fish, in spite of their sensitiveness about the nose and tail, do not feel pain, as from a hook in their gills or even in their stomachs. Fish that have been torn by a hook will often grab for a second bait, showing an inclination to feed, which they would scarcely do if suffering acute pain.

J. W. Anderson asks how fast the fastest bird is able to fly, and how high wild-geese are when one sees them in the form of an old-fashioned drag in the air above. The fastest flying bird is said to be the Virginia plover, which has been known to fly 225 miles per hour; but wild-geese, Baltimore orioles, and other migrants rarely average more than fifty miles per day. The height of the geese is sometimes as great as 10,000 feet, but ordinarily they fly about 4000 feet above the earth.—We regret the necessity of informing our old-time friend, C. Roy Baker, of Ohio, that we do not publish exchanges of bicycles, etc., and have no exchange column.—Leo Rehbinder: 844 Chapter charters have been granted, but many of the Chapters weary of well-doing.

But our injunction has ever been to maintain your society as long as it yielded pleasure, and when it ceases to do so, disband it. The Order is a very large one, but we have no figures at hand of other orders. Ask your bookseller for titles of stories other than those published in this paper—S. B.: Address Thomas A. Edison, at Menlo Park, N. J.

"F. A. H." asks where he can learn mechanical draughting. At the Pratt Institute. The pay for beginners is small, say \$6 per week. Apply to some draughtsmen for average rate of wages.—Edgar S. Pitkin asks about entrance to the Naval Academy at Annapolis. We have answered this question so many times that we fear old readers will tire reading of it. But we assure them that many want the information, and that to furnish helpful information is the purpose of this department. Sir Edgar should apply to his member of Congress for appointment, but he can learn when there will be a vacancy in his district by writing to the Secretary of the Navy, Washington. The age limit is fifteen to twenty. The appointment is from each Congressional district. There is doubtless a man at the academy now from your district. If so, when he goes out another will be taken in. The examination is very strict and difficult, but covers chiefly the common branches. The Secretary of the Navy will give exact information if a vacancy is to occur within a year. The conditions are too long to print here. The Congressman who makes the appointment generally has a preliminary examination, but it counts for nothing at Annapolis, and is usually found to be a very unsatisfactory way to select a man for the cadetship. An alternate is named. Both go to Annapolis and take the examination. If the appointee fails—and generally one-half fail—the alternate goes in, provided he passes.

Charles R. Botsford, 55 Liberty Street, New York, wants to belong to some amateur photograph club. Will the secretary of any such club desiring a bright member, either active or corresponding, write him?—John Desmond asks if the cruisers off the Cuban coast burn hard or soft coal. We presume his query is prompted by the fact that soft coal makes a black smoke that can be seen a long distance, because it ascends high above the water the instant it leaves the smoke-stack. When the Cuban trouble first began, the Spanish cruisers burned Cuban coal, and their smoke was seen plainly. The Spaniards noticed, however, that the vessels used by the insurgents to convey ammunition from Florida made almost no smoke at all. They inquired the reason, and soon began sending to Philadelphia for anthracite coal. So now the Spanish cruisers burn hard coal, and do not show themselves to the enemy hours before the hulls of their ships heave into view.

A decorative rectangular frame with intricate scrollwork and floral patterns. Inside the frame, the word "STAMPS" is written in a large, bold, serif font, centered horizontally and vertically.

STAMPS

This Department is conducted in the interest of stamp and coin collectors, and the Editor will be pleased to answer any question on these subjects so far as possible. Correspondents should address Editor Stamp Department.

The readers of the ROUND TABLE Stamp Column who intend going to Europe next summer will find the London Philatelic Exhibition very interesting. The exhibition opens July 22, and closes August 5. The stamps will be exhibited in classes: 1. Stamps of Great Britain; 2. Of British colonies; 3. Of Europe; 4. Of Asia and Africa; 5. Of America, etc. Each of these classes will be subdivided, and twelve gold, forty-three silver, and forty-eight bronze medals will be awarded to the best collections. In addition as special prizes, nine gold, nineteen silver, and ten bronze medals; besides a large number of additional medals and other prizes are offered by individual members for special exhibits. A few of the leading collectors in America intend competing for some of the prizes. It is estimated that stamps to the value of \$2,000,000 will be on exhibition.

F. LOWE.—I congratulate you on the possession of the Tobago one shilling, in color of the sixpence. I referred to this stamp in the ROUND TABLE for November 10, and erroneously stated that the stamp was the first of a new issue. It turns out to be an error of the first water. It is quoted at all kinds of prices, from \$5 upward. The chances are that a large block of them is in the hands of insiders. If so, \$5 is a fair price.

W. W. STOCKTON.—The word Cave on your Ceylon stamp is a portion of the name of a firm. It is frequently found on stamps of the Straits Settlements.

E. LEROY POND, Terryville, Conn., wants to exchange U. S. stamps for those of Siam, Salvador, China, etc.

A. H. GREEN.—The English shilling is worth face only. I hope you will enjoy the next 892 numbers of the ROUND TABLE as much as you have the 892 numbers already published.

F. MIKELSKY.—Apply to any dealer for onion-skin hinges. They cost 15c. per 1000.

J. A. HALL.—The U. S. charge 8c. for registering a letter, and if such letter is lost while in the hands of the post-office officials the U. S. will not recoup the loss. In Europe the various governments make allowance on letters lost by them. For instance, in England, by paying 4c. in addition to the ordinary postage, the sender of a letter lost in transmission can collect from the government \$25. By paying 6c. in addition to the postage, an allowance of \$50 is made if the letter is lost. Each 2c. in addition increases the amount \$25.

J. H. OTRIEH.—Russian locals are collected by a very few persons in this country. One of these collectors tells me that some of the rare Russian locals command as much as \$100 and more. The common varieties, however, have very little value.

F. M.—I cannot give addresses in this column. Write to any of the dealers who advertise in the ROUND TABLE.

S. HELLER.—You can buy 1000 different stamps in a packet for \$10, or 1500 for \$25. I do not know of any larger packets, but think one with 2000 stamps would cost at least \$50 or \$60.

B. STOW.—The Mr. Frederick Hill who has just died at the age of ninety-four was a brother of Rowland Hill. He was connected with the London post-office for many years, and was pensioned in the year 1876.

A. W. SPENCER.—The Alsace-Lorraine stamps were used by the German post-offices in France during the war of 1870. The earliest dated stamp known is September 6, 1870.

E. F. HERRE.—The only rare small cent is the 1856 flying eagle. All the others are very common. The 1817 penny is worth 20c.

E. M. GEARHART.—The Olympian stamps can be bought of any dealer at double face value, unused, and at 1c to 25c. each, according to denomination if used. There are so many varieties of the Confederate stamps that I cannot give any more definite answer, until after examination. As millions of complete sheets were in the Southern post-offices at the time the civil war ended, they are very common with the exception of a few varieties. Neither the watermarked or the unwatermarked U. S. stamps of the present issue will ever be rare or even scarce, with the possible exception of the dollar stamps. The late issues of the U. S. envelopes are distinguished by the water-mark and the shape.

IVORY SOAP

IT FLOATS

No other soap is found in so many homes.

THE PROCTER & GAMBLE CO. CIN'TI.

Some Popular Books

"Harper's Round Table" for 1896

Volume XVII. With 1276 Pages, and about 1200 Illustrations. 4to, Cloth, Ornamental, \$3.50.

It is doubtful if any other book issued at this holiday season contains so many stories for young readers as this volume.—*San Francisco Chronicle*.

The book is one which is sure to delight all the children.—*Detroit Free Press*.

A pronounced success as an educational means of great value.—*Pittsburg Chronicle-Telegraph*.

A Virginia Cavalier

A Story of the Boyhood of George Washington. By MOLLY ELLIOT SEAWELL.
Illustrated. Post 8vo, Cloth, Ornamental, \$1.50.

An absorbing tale.—*Philadelphia Bulletin*.

Rick Dale

A Story of the Northwest Coast. By KIRK MUNROE. Illustrated by W. A. ROGERS. Post 8vo, Cloth, Ornamental, \$1.25.

A "capital story."—*Book Buyer*, N. Y.

Naval Actions of the War of 1812

By JAMES BARNES. With 21 Full-page Illustrations by CARLTON T. CHAPMAN, printed in color, and 12 Reproductions of Medals. 8vo, Cloth, Ornamental, Deckel Edges and Gilt Top, \$4.50.

Brimful of adventure, hardihood, and patriotism.—*Philadelphia Ledger*.

The Ship's Company

And Other Sea People. By J. D. JERROLD KELLEY, Lieutenant-Commander U.S.N. Copiously Illustrated. 8vo, Cloth, Ornamental, \$2.50.

A great storehouse of charm.—*Boston Transcript*.

The Dwarfs' Tailor

And Other Fairy Tales. Collected by ZOE DANA UNDERHILL. With 12 Illustrations. Post 8vo, Cloth, Ornamental, \$1.75.

The twenty-two tales form a cosmopolitan array that cannot fail to delight young readers.—*Chicago Tribune*.

For King or Country

A Story of the American Revolution. By JAMES BARNES. Illustrated. Post 8vo, Cloth, Ornamental, \$1.50.

A manly, straightaway narrative, with the adventures of a reasonable, practicable kind.—*Life*, N. Y.

Tommy Toddles

By ALBERT LEE. Illustrated by PETER S. NEWELL. Square 16mo, Cloth, Ornamental, \$1.25.

Every child in the land should have this book.—*Interior*, Chicago.

Shakespeare the Boy

With Sketches of the Home and School Life, the Games and Sports, the Manners, Customs, and Folk-lore of the Time. By WILLIAM J. ROLFE, Litt.D., Editor of "Rolfe's English Classics," etc. Illustrated. Post 8vo, Cloth, \$1.25.

At once fascinating and instructive, and will be found as readable by the elders as by the youth.—*Watchman*, Boston.

HARPER & BROTHERS, Publishers, New York

MY LITTLE POET

My little poet one spring day
Walked out along the country

way;

His heart was light and merry.
He wisely said, "'Twere best I

bring

Along with me, prepared to sing,
My rhyming dictionary."

book

laughed, and said:

oceans!"

My little poet's arm I took,
And asked if he'd within his

A word to rhyme with *notions*;
He shook his little curly head,
And arched his brows, and

"Oh yes, indeed! There's

J

. R. CONNER.

He was a Southern local politician running for office, and believed in making a thorough canvass in person. One day he was addressing a crowd of negro voters who had turned out to greet him, when he caught sight of a gray-wooled old man on the outskirts of the crowd. The old uncle had a rusty sword with him, and the orator thought he saw his opportunity to catch the negro vote.

"There," he cried, pointing to the apparent veteran, "that gentleman over there illustrates the bravery of your race. Men of his merit I admire. Brave men of your race should be upheld; their dignity should be maintained. And were I in office, I would fight for you the same as that aged hero fought for us. Look at him. There he

stands to-day with his trusty sword, the weapon that he drew in defence of his country. What better example could—"

Broad smiles that threatened to divide the faces of that colored crowd had been spreading during the latter part of the orator's harangue; but when the old darky broke in with, "'Deed, massa, youse am right 'bout dat sword bein' drawn, but Ise done drawed it in a raffle," it completely broke up the meeting.

ANOTHER QUESTION.

"I hate to bother you, Pop; but, really, I'd like to know—"

"Well, what?"

"How it happens that baby fish don't get drowned before they've learned to swim?"

WHAT SHE WANTED.

Sallie was helping herself rather copiously to the preserves, when her aunt said, "Oh, Sallie, not too much, dear. You don't want too much, do you?"

"Yeth, I does," said Sallie, "and more too. I want three much!"

PROVED.

"Bah!" cried Bobbie. "The idea of saying the world's round! I know better."

"Oh, you do, eh?" said his uncle. "And how do you know better?"

"It stands to reason," said Bobbie, "if it was round, the ocean wouldn't stay on it, but go sloshing down it into space."

MERELY AN IDEA.

"Pop," said Willie, "I don't see why, if when you've got toothache you go and have your tooth pulled, it wouldn't be a good thing when your head aches to go and get your hair pulled."

Up to this hour Pop has not been able to explain.

ANOTHER QUESTION.

"Pop," said Willie, "why is it called a gymnasium?"

"Why? Why, because that's its name—ah—"

"Yes, I know that," said Willie, "but why didn't they call it a Tomnasium or a Bobnasium, eh?"

AN OBSERVANT YOUTH.

"Now, Bobbie," said the teacher, "spell pipe."

"P-I-P-E," said Bobbie.

"That's right. And now tell me something about pipes. What do people do with them?"

"Well," said Bobbie, thoughtfully, "boys blow bubbles with 'em; plumbers put 'em in; Scotchmen blow music out of 'em; and men like Pa smoke 'em. It all depends on the kind of pipes you want me to tell you about."

A YOUTHFUL OBSERVER.

"Dear me, Robbie," said his mother, "do you want to be a baby all your life? Do behave yourself."

"I wouldn't mind, Mamma," said Robbie. "All the baby does is laugh and squawk and get waited on. Seems to me that's rather pleasant."

AN OPINION.

does,

I don't know what my Daddy

But I've a sort of whim
That when I get to be a man
I'd like to be like him!

For he's the finest chum I have.
It doesn't matter what
He does to me, I think he's best
Of all the friends I've got!

hand

Why, even when he takes his

And spans me, and I cry,
I cannot truly help but see
A look in Daddy's eye

doesn't spare

Which shows me, though he

My feelings with his hand,
He loves me more than anything
That lives on sea or land.

And so I say if sometimes I
Have little boys like his,
I hope that I'll be to them as
To me my Daddy is!

J

JOHN KENDRICK BANGS.

*** END OF THE PROJECT GUTENBERG EBOOK HARPER'S
ROUND TABLE, DECEMBER 29, 1896 ***

Updated editions will replace the previous one—the old editions will be renamed.

Creating the works from print editions not protected by U.S. copyright law means that no one owns a United States copyright in these works, so the Foundation (and you!) can copy and distribute it in the United States without permission and without paying copyright royalties. Special rules, set forth in the General Terms of Use part of this license, apply to copying and distributing Project Gutenberg™ electronic works to protect the PROJECT GUTENBERG™ concept and trademark. Project Gutenberg is a registered trademark, and may not be used if you charge for an eBook, except by following the terms of the trademark license, including paying royalties for use of the Project Gutenberg trademark. If you do not charge anything for copies of this eBook, complying with the trademark license is very easy. You may use this eBook for nearly any purpose such as creation of derivative works, reports, performances and research. Project Gutenberg eBooks may be modified and printed and given away—you may do practically ANYTHING in the United States with eBooks not protected by U.S. copyright law. Redistribution is subject to the trademark license, especially commercial redistribution.

START: FULL LICENSE

THE FULL PROJECT GUTENBERG™ LICENSE

PLEASE READ THIS BEFORE YOU DISTRIBUTE OR USE THIS WORK

To protect the Project Gutenberg™ mission of promoting the free distribution of electronic works, by using or distributing this work (or any other work associated in any way with the phrase “Project Gutenberg”), you agree to comply with all the terms of the Full Project Gutenberg License available with this file or online at www.gutenberg.org/license.

Section 1. General Terms of Use and Redistributing Project Gutenberg electronic works

1.A. By reading or using any part of this Project Gutenberg electronic work, you indicate that you have read, understand, agree to and accept all the terms of this license and intellectual property (trademark/copyright) agreement. If you do not agree to abide by all the terms of this agreement, you must cease using and return or destroy all copies of Project Gutenberg electronic works in your possession. If you paid a fee for obtaining a copy of or access to a Project Gutenberg electronic work and you do not agree to be bound by the terms of this agreement, you may obtain a refund from the person or entity to whom you paid the fee as set forth in paragraph 1.E.8.

1.B. “Project Gutenberg” is a registered trademark. It may only be used on or associated in any way with an electronic work by people who agree to be bound by the terms of this agreement. There are a few things that you can do with most Project Gutenberg electronic works even without complying with the full terms of this agreement. See paragraph 1.C below. There are a lot of things you can do with Project Gutenberg electronic works if you follow the terms of this agreement and help preserve free future access to Project Gutenberg electronic works. See paragraph 1.E below.

1.C. The Project Gutenberg Literary Archive Foundation (“the Foundation” or PGLAF), owns a compilation copyright in the

collection of Project Gutenberg electronic works. Nearly all the individual works in the collection are in the public domain in the United States. If an individual work is unprotected by copyright law in the United States and you are located in the United States, we do not claim a right to prevent you from copying, distributing, performing, displaying or creating derivative works based on the work as long as all references to Project Gutenberg are removed. Of course, we hope that you will support the Project Gutenberg mission of promoting free access to electronic works by freely sharing Project Gutenberg works in compliance with the terms of this agreement for keeping the Project Gutenberg name associated with the work. You can easily comply with the terms of this agreement by keeping this work in the same format with its attached full Project Gutenberg License when you share it without charge with others.

1.D. The copyright laws of the place where you are located also govern what you can do with this work. Copyright laws in most countries are in a constant state of change. If you are outside the United States, check the laws of your country in addition to the terms of this agreement before downloading, copying, displaying, performing, distributing or creating derivative works based on this work or any other Project Gutenberg work. The Foundation makes no representations concerning the copyright status of any work in any country other than the United States.

1.E. Unless you have removed all references to Project Gutenberg:

1.E.1. The following sentence, with active links to, or other immediate access to, the full Project Gutenberg License must appear prominently whenever any copy of a Project Gutenberg work (any work on which the phrase “Project Gutenberg” appears, or with which the phrase “Project Gutenberg” is associated) is accessed, displayed, performed, viewed, copied or distributed:

This eBook is for the use of anyone anywhere in the United States and most other parts of the world at no cost and with almost no restrictions whatsoever. You may copy it, give it away or re-use it under the terms of the Project Gutenberg™ License included with

this eBook or online at www.gutenberg.org. If you are not located in the United States, you will have to check the laws of the country where you are located before using this eBook.

1.E.2. If an individual Project Gutenberg electronic work is derived from texts not protected by U.S. copyright law (does not contain a notice indicating that it is posted with permission of the copyright holder), the work can be copied and distributed to anyone in the United States without paying any fees or charges. If you are redistributing or providing access to a work with the phrase “Project Gutenberg” associated with or appearing on the work, you must comply either with the requirements of paragraphs 1.E.1 through 1.E.7 or obtain permission for the use of the work and the Project Gutenberg trademark as set forth in paragraphs 1.E.8 or 1.E.9.

1.E.3. If an individual Project Gutenberg electronic work is posted with the permission of the copyright holder, your use and distribution must comply with both paragraphs 1.E.1 through 1.E.7 and any additional terms imposed by the copyright holder. Additional terms will be linked to the Project Gutenberg License for all works posted with the permission of the copyright holder found at the beginning of this work.

1.E.4. Do not unlink or detach or remove the full Project Gutenberg License terms from this work, or any files containing a part of this work or any other work associated with Project Gutenberg.

1.E.5. Do not copy, display, perform, distribute or redistribute this electronic work, or any part of this electronic work, without prominently displaying the sentence set forth in paragraph 1.E.1 with active links or immediate access to the full terms of the Project Gutenberg License.

1.E.6. You may convert to and distribute this work in any binary, compressed, marked up, nonproprietary or proprietary form, including any word processing or hypertext form. However, if you provide access to or distribute copies of a Project Gutenberg work in a format other than “Plain Vanilla ASCII” or other format used in the official

version posted on the official Project Gutenberg website (www.gutenberg.org), you must, at no additional cost, fee or expense to the user, provide a copy, a means of exporting a copy, or a means of obtaining a copy upon request, of the work in its original “Plain Vanilla ASCII” or other form. Any alternate format must include the full Project Gutenberg License as specified in paragraph 1.E.1.

1.E.7. Do not charge a fee for access to, viewing, displaying, performing, copying or distributing any Project Gutenberg works unless you comply with paragraph 1.E.8 or 1.E.9.

1.E.8. You may charge a reasonable fee for copies of or providing access to or distributing Project Gutenberg electronic works provided that:

- You pay a royalty fee of 20% of the gross profits you derive from the use of Project Gutenberg works calculated using the method you already use to calculate your applicable taxes. The fee is owed to the owner of the Project Gutenberg trademark, but he has agreed to donate royalties under this paragraph to the Project Gutenberg Literary Archive Foundation. Royalty payments must be paid within 60 days following each date on which you prepare (or are legally required to prepare) your periodic tax returns. Royalty payments should be clearly marked as such and sent to the Project Gutenberg Literary Archive Foundation at the address specified in Section 4, “Information about donations to the Project Gutenberg Literary Archive Foundation.”
- You provide a full refund of any money paid by a user who notifies you in writing (or by e-mail) within 30 days of receipt that s/he does not agree to the terms of the full Project Gutenberg™ License. You must require such a user to return or destroy all copies of the works possessed in a physical medium and discontinue all use of and all access to other copies of Project Gutenberg™ works.
- You provide, in accordance with paragraph 1.F.3, a full refund of any money paid for a work or a replacement copy, if a defect in the electronic work is discovered and reported to you within 90 days of receipt of the work.

- You comply with all other terms of this agreement for free distribution of Project Gutenberg™ works.

1.E.9. If you wish to charge a fee or distribute a Project Gutenberg™ electronic work or group of works on different terms than are set forth in this agreement, you must obtain permission in writing from the Project Gutenberg Literary Archive Foundation, the manager of the Project Gutenberg™ trademark. Contact the Foundation as set forth in Section 3 below.

1.F.

1.F.1. Project Gutenberg volunteers and employees expend considerable effort to identify, do copyright research on, transcribe and proofread works not protected by U.S. copyright law in creating the Project Gutenberg™ collection. Despite these efforts, Project Gutenberg™ electronic works, and the medium on which they may be stored, may contain “Defects,” such as, but not limited to, incomplete, inaccurate or corrupt data, transcription errors, a copyright or other intellectual property infringement, a defective or damaged disk or other medium, a computer virus, or computer codes that damage or cannot be read by your equipment.

1.F.2. LIMITED WARRANTY, DISCLAIMER OF DAMAGES - Except for the “Right of Replacement or Refund” described in paragraph 1.F.3, the Project Gutenberg Literary Archive Foundation, the owner of the Project Gutenberg™ trademark, and any other party distributing a Project Gutenberg™ electronic work under this agreement, disclaim all liability to you for damages, costs and expenses, including legal fees. YOU AGREE THAT YOU HAVE NO REMEDIES FOR NEGLIGENCE, STRICT LIABILITY, BREACH OF WARRANTY OR BREACH OF CONTRACT EXCEPT THOSE PROVIDED IN PARAGRAPH 1.F.3. YOU AGREE THAT THE FOUNDATION, THE TRADEMARK OWNER, AND ANY DISTRIBUTOR UNDER THIS AGREEMENT WILL NOT BE LIABLE TO YOU FOR ACTUAL, DIRECT, INDIRECT, CONSEQUENTIAL, PUNITIVE OR INCIDENTAL DAMAGES

EVEN IF YOU GIVE NOTICE OF THE POSSIBILITY OF SUCH DAMAGE.

1.F.3. LIMITED RIGHT OF REPLACEMENT OR REFUND - If you discover a defect in this electronic work within 90 days of receiving it, you can receive a refund of the money (if any) you paid for it by sending a written explanation to the person you received the work from. If you received the work on a physical medium, you must return the medium with your written explanation. The person or entity that provided you with the defective work may elect to provide a replacement copy in lieu of a refund. If you received the work electronically, the person or entity providing it to you may choose to give you a second opportunity to receive the work electronically in lieu of a refund. If the second copy is also defective, you may demand a refund in writing without further opportunities to fix the problem.

1.F.4. Except for the limited right of replacement or refund set forth in paragraph 1.F.3, this work is provided to you 'AS-IS', WITH NO OTHER WARRANTIES OF ANY KIND, EXPRESS OR IMPLIED, INCLUDING BUT NOT LIMITED TO WARRANTIES OF MERCHANTABILITY OR FITNESS FOR ANY PURPOSE.

1.F.5. Some states do not allow disclaimers of certain implied warranties or the exclusion or limitation of certain types of damages. If any disclaimer or limitation set forth in this agreement violates the law of the state applicable to this agreement, the agreement shall be interpreted to make the maximum disclaimer or limitation permitted by the applicable state law. The invalidity or unenforceability of any provision of this agreement shall not void the remaining provisions.

1.F.6. INDEMNITY - You agree to indemnify and hold the Foundation, the trademark owner, any agent or employee of the Foundation, anyone providing copies of Project Gutenberg™ electronic works in accordance with this agreement, and any volunteers associated with the production, promotion and distribution of Project Gutenberg™ electronic works, harmless from all liability, costs and expenses, including legal fees, that arise directly or indirectly from any of the following which you do or cause to occur: (a)

distribution of this or any Project Gutenberg work, (b) alteration, modification, or additions or deletions to any Project Gutenberg work, and (c) any Defect you cause.

Section 2. Information about the Mission of Project Gutenberg

Project Gutenberg is synonymous with the free distribution of electronic works in formats readable by the widest variety of computers including obsolete, old, middle-aged and new computers. It exists because of the efforts of hundreds of volunteers and donations from people in all walks of life.

Volunteers and financial support to provide volunteers with the assistance they need are critical to reaching Project Gutenberg's goals and ensuring that the Project Gutenberg collection will remain freely available for generations to come. In 2001, the Project Gutenberg Literary Archive Foundation was created to provide a secure and permanent future for Project Gutenberg and future generations. To learn more about the Project Gutenberg Literary Archive Foundation and how your efforts and donations can help, see Sections 3 and 4 and the Foundation information page at www.gutenberg.org.

Section 3. Information about the Project Gutenberg Literary Archive Foundation

The Project Gutenberg Literary Archive Foundation is a non-profit 501(c)(3) educational corporation organized under the laws of the state of Mississippi and granted tax exempt status by the Internal Revenue Service. The Foundation's EIN or federal tax identification number is 64-6221541. Contributions to the Project Gutenberg Literary Archive Foundation are tax deductible to the full extent permitted by U.S. federal laws and your state's laws.

The Foundation's business office is located at 41 Watchung Plaza #516, Montclair NJ 07042, USA, +1 (862) 621-9288. Email contact

links and up to date contact information can be found at the Foundation's website and official page at www.gutenberg.org/contact

Section 4. Information about Donations to the Project Gutenberg Literary Archive Foundation

Project Gutenberg™ depends upon and cannot survive without widespread public support and donations to carry out its mission of increasing the number of public domain and licensed works that can be freely distributed in machine-readable form accessible by the widest array of equipment including outdated equipment. Many small donations (\$1 to \$5,000) are particularly important to maintaining tax exempt status with the IRS.

The Foundation is committed to complying with the laws regulating charities and charitable donations in all 50 states of the United States. Compliance requirements are not uniform and it takes a considerable effort, much paperwork and many fees to meet and keep up with these requirements. We do not solicit donations in locations where we have not received written confirmation of compliance. To SEND DONATIONS or determine the status of compliance for any particular state visit www.gutenberg.org/donate.

While we cannot and do not solicit contributions from states where we have not met the solicitation requirements, we know of no prohibition against accepting unsolicited donations from donors in such states who approach us with offers to donate.

International donations are gratefully accepted, but we cannot make any statements concerning tax treatment of donations received from outside the United States. U.S. laws alone swamp our small staff.

Please check the Project Gutenberg web pages for current donation methods and addresses. Donations are accepted in a number of other ways including checks, online payments and credit card donations. To donate, please visit: www.gutenberg.org/donate.

Section 5. General Information About Project Gutenberg electronic works

Professor Michael S. Hart was the originator of the Project Gutenberg concept of a library of electronic works that could be freely shared with anyone. For forty years, he produced and distributed Project Gutenberg eBooks with only a loose network of volunteer support.

Project Gutenberg eBooks are often created from several printed editions, all of which are confirmed as not protected by copyright in the U.S. unless a copyright notice is included. Thus, we do not necessarily keep eBooks in compliance with any particular paper edition.

Most people start at our website which has the main PG search facility: www.gutenberg.org.

This website includes information about Project Gutenberg, including how to make donations to the Project Gutenberg Literary Archive Foundation, how to help produce our new eBooks, and how to subscribe to our email newsletter to hear about new eBooks.
