------------	-------------------------	---------

Mississippi Valley Migration.

NOTE.—The stations and observers, to which these numbers refer, are given in the O. and O. for April.

A group of entirely different habits and of comparatively rare occurrence is composed of the Cape May Warbler, (*P. tigrina*,) Bay-breasted Warbler, (*D. castanea*,) and the Connecticut Warbler, (*O. agilis*.) These all leave the United States to winter, and pass entirely beyond it to breed; at least, we know the first two do so, and it is generally supposed that the last does also, although its nest and eggs have never yet been found. No. (30) was the only observer who saw the first two, and he found the Cape May Warbler on the 2d of May, and the Bay-breasted for the first time May 3d, and the last time both male and female were seen on the 21st of that month. Both (30) and (52) observed the Connecticut Warbler, which is the rarest regular migrant in the Mississippi Valley, during the Spring, and on the Fall return seems to shun its Spring course and passes southward through New England. No. (30) saw it on 5-14, 5-18 and the last one 5-24, while (52) procured his first specimen 5-26, and saw it three times afterward, the last being 5-29. Different in habits from the rest of their Warbler brethren are the Warbler Thrushes, the Golden-crowned Thrush, or Oven-bird, (*S. auricapillus*,) the Small-billed Water Thrush, (*S. nævius*,) and the Large-billed Water Thrush, (*S. motacilla*.) Their ranges differ widely. The bulk of all of them winter beyond our limits, though a few of the first remain in Florida, and numbers of the second are scattered over all the Southern States and occasionally as far north as Southern Illinois. But while the first two breed over all the Mississippi Valley, the last breeds regularly only to Middle and Northern Illinois and sometimes as far north as Southern Minnesota. The first Golden-crowns reached (30) 4-17, and passing north with medium speed (38) found them about 4-26, (52) 4-28, and (51) on 5-5, while farther west, like the other Warblers, they were somewhat later, appearing at (21) on 5-5, and (45) on 5-6. No. (30) found a nest 5-15, with three eggs and a Cowbird's, while only three days before they were just beginning to be

common at (52), and the height of the season was not until 5-19. The Large-billed was the earliest of the three to migrate, arriving at Southern and Central Illinois about the 10th of April, and at (21) on the 14th, but after that, moving rather slowly, reached its usual northern limit at (41) on 5-10. It will be convenient to study five more Warblers together, not because they migrate at the same time, but because their places of wintering and breeding are the same, and their habits, during migration and even the general appearance of some of them, are alike. He must have sharp eyes who can recognize at sight, while in the trees, the Nashville Warbler, (*H. ruficapilla*), the Orange-crowned Warbler, (*H. celata*), and the Tennessee Warbler, (*H. peregrina*;) while the Black-capped Yellow and the Canadian Fly-catching Warblers, (*M. pusillus*) and (*M. canadensis*), share with them a liking for low shrubs, and are not uncommonly found with them.

The first three spend the Winter in the Southern States and the last two 82 withdraw entirely from our country. All nest regularly in British America and more or less frequently in the northern tier of States. The Nashville Warbler was seen by (30) only on 5-2, and by (52) for the first time 5-10. Only five birds were seen before 5-19, then they were more common for a few days and the last left 5-26. The Orange-crowned is comparatively rare east of the Mississippi River. It does occur in both Illinois and Wisconsin, but was not seen this year by either (30) or (52.) The only note is from (57) of one seen 5-14, but it migrates at the same time or a little earlier than the Nashville and Tennessee and is sometimes found in their company. The Tennessee Warbler is much more common. Indeed, the banks of Mississippi seem to be its favorite Spring route. They reached (30) 4-25 and (21) 5-14. They were very numerous at (30) from 5-3 to 5-18. By 5-24 the last one was gone. No. (52) found some females 5-17, but no males until 5-22. The other two Warblers are among the last to migrate, and their passage is usually rather rapid. The Black-capped Yellow reached (21) on 5-8, (30) 5-9, and were most numerous there 5-14 to 5-18, the last one leaving 5-21. At (52) one was seen 5-12, and no more until 5-20. The height of the season was 5-21, and the last one 5-29. The Canadian Fly-catching Warbler was observed only at (52,) where it appeared 5-14 and left 5-24, and at (52) where the first one was seen 5-24 and the last 5-29. Nearly all the rest of the Warblers can be considered together. They are the Blue-winged Yellow, (*H. pinus*), the Golden-winged, (*H. chrysoptera*), the Blue Yellow-backed, (*P.*

americana,) the Cerulean, (*D. Cærulea*,) and the Mourning Warbler, (*G. philadelphia*.) But few notes have been contributed on these species, which are as a whole, rather southerly. All are handsome and one, the Blue Yellow-backed, is the smallest of our Warblers. All winter beyond our borders except a few of the Blue-winged Yellow and the Blue Yellow-backed, that linger behind in Florida. The Blue-winged Yellow and the Golden-winged breed regularly from the Gulf to Northern Illinois, and casually to Minnesota, and a few of the latter to British America. They were seen only by (30) who found a few of the former in song 4-17, and of the latter, which is not common anywhere, a fine male in song was seen 5-2, and both male and female were seen on the 14th and 15th of May. The Blue Yellow-backed made its appearance at (30) 4-17, and remains to breed, from a little south of St. Louis to British America. It reached (41) 5-3. No. (52) saw it the next day, and the next day it was (57.) The Cerulean Warbler, although breeding over the whole of the Mississippi Valley was seen only by (35) who reports it on 4-11. Among the rather rare Warblers may be counted the Mourning Warbler, whose retiring habits make it difficult to find at any place. It breeds regularly to Southern Wisconsin, and occasionally to Middle Minnesota. It was first seen by (30) 5-16 and three days later at (52) where for the species it was quite abundant, having been seen more than a dozen times in as many different places.

There remains to be treated only three Warblers, and those all well known. They are the Chestnut-sided Warbler, (*D. pennsylvanica*,) the Black and White Creeper, (*M. varia*,) and the Maryland Yellow-throat, (*G. trichas*.) Of these the first entirely leaves the United States for the Winter; the second almost follows its example, a few remaining in Florida and some may remain even farther north, as (13) found it in December; but the last is a common Winter resident of all the Southern States. While the first does not stop to nest until Northern Illinois is reached, the other two nest from the Gulf northward. All three reach British America.

The Chestnut-sided Warbler reached (30) on 4-27, when an old male was seen, but no more until 5-2. About the middle of the month it was 83 most numerous, and the last one left 5-24. At (43) it came 5-5 and four days later at (44.) In the timber they moved a little faster and appeared at (52) 5-7. The bulk of the males came 5-12, followed on the 17th by the

females, the species then being at its height; two days later, on the 19th, nearly all left. A few remained to breed—about four to six pairs in as many square miles. One nest was found and the birds seen during all the month of June. Passing north (57) found them May 17, and (60) May 20, but as usual on the prairie (56) did not see them until later—May 24.

The Black and White Creeper migrated somewhat earlier. No. (35) found them for the first time on 4-10 and the next day they were quite numerous. On 4-14 the first arrived at (21,) being almost the only Warbler which was seen there before it was at (30,) at which place it did not appear until fifteen days later, on 4-29. After this they traveled faster, appearing at (41) and (52) on 5-3; at (51) and (57) on 5-7; and at (60) on 5-9. No. (45) found his first one 5-6. At both (30) and (52) they were numerous 5-5, but the height of the season at (52) was not until 5-12. The Maryland Yellow-throat was found by (13) all through the Winter, but though remaining so much farther north than most Warblers, it was no earlier in its migration. A few males came to (30) 4-17, and to (38) 4-29. No. (21) reports them 5-3; four days later (57) saw them and they reached (60) 5-12, and (56) 5-20. Some other dates, as for instance, (35) the first one on 4-30, (41) the first 5-8, and the first at (52) on 5-12, may be taken as later than the facts of the case, owing to the retiring habits of the bird and its not being sought in the marshy spots it usually frequents. At (30) 5-1 was the height of the season and four days later the transient visitors departed.—*W. W. Cooke, Ripon, Wisconsin.*

Ruby-Crowned Kinglet.

Found one set of eight slightly incubated eggs, immaculate, 58×40 , 57×43 , 54×43 , 54×43 , 54×43 , 53×42 , 55×43 , 53×49 . Nest on a low pine, in a clearing that had grown up to underbrush, three or four feet from the ground. It was pendant (contrary to Dr. Coues' Bds. of Colo. Val.) from the under side of some small branches that inclined downward and about four inches from the stem. It is much the shape of a "R. R. lunch station" coffee cup, but longer and flattened at the bottom, mainly of green moss interwoven with the fibrous outer covering of plants. This fibre also holding it to the twigs. A very few fine straws are woven into the lower end. The cavity is quite deep for its width, lined with soft shreds of burlaps and re-lined with soft feathers. Altogether it is a very soft concern. Outer height 6 inches, diameter 4 inches, inner depth $2\frac{1}{2}$ inches, diameter $1\frac{3}{4}$ inches. Am sure of its identity, as I stood some time with my face close to the parent on the nest. While I was packing the nest and eggs the parents were hopping about, uttering their loud cherp, cherp, cherp, cherup, that seemed to be of too much force and volume for so tiny a creature. Right here let me make a correction to my mass of mistakes in the February O. and O. I am not positive of ever seeing but one pair of Yellow-crowned Kinglets anywhere near here. Last year a pair of them alighted near me while at Murphy, and I took it for granted that they were all Yellow-crowns. This season I have paid considerable attention to the Kinglets, but have failed to see anything but Ruby-crowns, which are quite numerous in this locality.

August 1, watched a pair of Kinglets carrying food to their young, and soon discovered their nest in the top of a slender pine about forty feet up. Climbed up, but the top was so small it would not bear my weight. So I waited till the young had flown and then felled the tree. This nest, also, is pensile but not exactly like the other. It is suspended from small twigs and connected to the stem by small fibers caught to the rough bark. It is of moss, fine grass, plant fiber, very small rootlets, and a few

feathers loosely woven and lined with soft feathers. Outer diameter $3\frac{1}{2}$ inches, height $4\frac{1}{2}$ inches, inner diameter 2 inches, depth $2\frac{1}{2}$ inches.

It is amusing to note their antics when a Jay happens in the vicinity of their nest. I have often been attracted some distance by their constant chirp, and find them fluttering around some sedate looking Jay, bent on obtaining its breakfast, and at short intervals pouncing down on its back as if to impress upon him their importance. In a corner of the timber near my shanty I have witnessed these proceedings several times, and it is a strong indication that their nest is not far away.—*D. D. Stone, Hancock, Colorado.*

Short-eared Owl.

This little owl, so far as my observation has extended, seems peculiar to the coast, where among the reeds and thick marshes of the shores and neighboring islands it finds a covert from the noisy world. Having found such a place they, unlike all other New England owls, build in colonies. A locality not far from here has been from my earliest recollection a breeding place for these owls. The situation is most desirable, being a meadow or flat level with the coast, over which the tide completely flows, but leaves it entirely dry when it recedes. This meadow is covered with a coarse grass and surrounded by tall brakes and reeds. In these latter they gather together the remains of last year's frost-bitten reeds and place them in a promiscuous heap on a tussock. This is afterward hollowed out and the set of eggs is then laid. Six is the largest number I ever found, with the exception of one nest, in which I found ten; but these were laid by two females who sat together on the same nest in perfect harmony. Incubation was difficult to determine, but I cannot make it out to be more than twenty-one days. If any of your readers would be kind enough to give me the exact time it would be gratefully received. No owl is more interesting to watch. Take some dark, cloudy day in May or June, repair to their haunts and they will be found lightly skimming over the surface of the ground seeking for food left by the receding tide, or again diligently searching the immediate upland for any unwary mouse. Or watch them again in the deepening twilight, as silently, without a single note, they flit past, seeming but a passing thought or fanciful vision, until you hear from the shore the shrill cry of a Tern or Sandpiper in his talons; then you awaken to the fact that it is a rapacious bird acting well its part in nature's great drama, "The Survival of the Fittest."—*F. H. Carpenter, Rehobeth, Mass.*

CLARKE'S CROW IN SOUTHEASTERN DAKOTA.

A few days ago a farmer called my attention to two, to him, strange birds eating corn in his hog pasture. I borrowed his gun loaded with buckshot, and to my surprise found the victim to be a Clarke's crow. Now the question is, what did these two strangers want here in a country so unsuited to their wants and habits? Their nearest habitat from here is 400 miles off in a bee line in the Black Hills, where they are not uncommon.—*G. Ayersborg, Vermillion, Dakota.*

AUGUST O. and O.

J. N. Clark is a little incredulous about the nesting of the Greater Yellow Legs in New Jersey, saying they are abundant during migration at Saybrook, Conn. The Pigeon Hawk's nest in Delaware and the cross-bills on Long Island are equally surprising to him.

CORRECTION.

In Mr. F. H. C.'s article on the Great-horned Owl, in place of two little "Buteos" read two little Bubos, &c.

Plain English

“We desire not the prostration of science, but we would strip from it the robe of omnipotence improperly assumed, and

That cold, repulsive skeleton anew would dress,
Then warm it into life and loveliness.”—*Prof. Hosford.*

Is not always pleasant but it is sometimes necessary to bring us to our senses, and we have a small dose of it which we will administer sugar-coated in behalf of the little fellows that are growing up and will soon be among us giving us old stagers ideas of observations we never dreamed of.

Some years ago there was an ornithological association formed in Cambridge, Mass., which has not accomplished the task it set out to do, and for several reasons—1st. It has been too exclusive—too much of the Pharisee order—it has ignored the “bone and sinew” of our beautiful science, and it could not see its own wood. 2d. It has hung out false colors. It advertised year after year that it was the “only, &c.,” until we gently reminded them that the world would notice it when the sign was taken in. 3d. It has announced as its editors, Prof. S. F. Baird and Dr. Elliott Coues. We, as a corresponding member, have ventured to protest against this deception. We were told that Prof. Baird would not like it if his name was removed, and that it had a good effect abroad, &c., &c. One member informed us that “*all*” the proof was submitted to Dr. Coues. We cannot contradict this, but outsiders don’t believe it, and all of this is a load that the Nuttall Club has failed to carry to its destination. A meeting of the most exclusive kind has recently been held in New York. And this convention of scientists have named their new society “The American Ornithological Union.” The mistake is, it is not American, and it is formed too much on the principle of our city social clubs where each member carries a Yale key. It won’t work in science, gentlemen; all nature belongs to all men. You sadly mistake the importance of this mission. It matters little what you call him, the Blue Jay screams just as loud for rich and poor, for boy and man alike.

It is a mystery to us why the names of our birds should be such a bone of contention. It always reminds us of a lawyer discovering during a trial a nice point of law and forgetting that he has a client to look after. We are told that great harmony prevailed and that the disturbing element that has existed so long in our science has calmed down like a bright May morning.

Boston has six members while the State of Yale and Dr. Wood, Coe, Sage and Clark were ignored. R. I. was too small to be remembered; all birds passing through R. I. will be expected to stop at Cambridge and register, and yet the State of Rhode Island is big enough to hold our friend Jencks, and occasionally a rare bird gets one wing over the State. There were six members from Mass., four from Washington, seven from New York, one each from Oregon, Louisiana, Iowa, and Maine, two from Canada, and J. M. Wheaton from Ohio, whose last work should be read by all seeking advanced knowledge. Prof. Maynard seems to have been overlooked, and yet he was studying bird life when many of the present members were toddling around in petticoats. We do not agree with Maynard, but we recognize his right all the same, and fortunately no Union can curtail that right. We are sorry to say he is not well and will winter in the tropics, and as the Union is not represented south of New York the birds will not have heard of it. This purely American? Union did not consider the editor of this paper and all his correspondents as worthy of a seat in the gallery even—but we believe some of them were elected corresponding members, which means that they will be allowed to study bird life and send their notes to some member who will condescend to assume the honor of editing, and yet the birds come and go with the season.

The convention was unique. It brought together a remarkable body of men that nothing else could have done. There was Prof. S. F. Baird, who to 86 our regret and great loss gave up his first love and went a fishing.

There was that model scientist Geo. N. Laurence, not “American,” but of the world. The learned Allen from Cambridge was there who gives us the technical “straight.” The Doctors were there in force. Dr. Shufeldt from La., who commences to study our game birds just where we like to leave them. Dr. J. B. Holden and Dr. A. K. Fisher, Sing Sing, N. Y., who reads the O. and O. and of course keeps posted, and Dr. Edgar A. Mearns of Highland Falls, N. Y., who wrote a good thing on the Birds of N. Y., and forgot to

send a copy to this office. Dr. C. Hart Merriam was there a moving spirit. His style and accuracy will tell in the secretary's chair. The hard working Dr. Elliott Coues was there, whose graceful pen and kindness of heart has led him to endorse men who were n. g. in the science. Brewster of Cambridge, Purdie from under the gilded dome, and Chamberlain from over the border was there, and many others not well known to us as they are not advanced enough in ornithology to read the latest news from the bird world in the O. and O.

Robert Ridgway, who has so carefully corrected the errors in O. and O., was there. The boys in the west noticing this trait have honored a newly formed club with his name; and may its constitution be like the science it advocates, broad enough to admit all honest workers on this continent. The ornithologist and oologist of this generation, Capt. Chas. E. Bendire, left Fort Klamah, Oregon, on receipt of notice of the meeting, and reached New York at 7 a. m. on the morning of the day of the meeting. While others are wasting valuable time over the name of a bird, the Captain has been raking in the birds and eggs to an extent little thought of. Although stationed in the wilderness he is better posted on eastern collections than any other man. The following officers were elected: Pres. J. A. Allen; Vice Pres., Dr. Elliott Coues and Robert Ridgway; Sec. and Treas., Dr. C. Hart Merriam, Locust Grove, N. Y.

NATURE is truth. SCIENCE is a method of describing nature with the pen. ART is nature transferred to canvas by mechanical means. Science and art are necessary to bring nature to our firesides regardless of nature's wars outside, and also to teach the student who is not endowed with the faculties of observation.

DOWNY WOODPECKER.

Late in October, 1882, a Downy Woodpecker excavated a hole in an old cherry tree, near a much used door in my yard, of the size and shape of its usual nest, and occupied it nightly for more than six weeks. In April following a pair of Bluebirds took possession and reared two broods of five birds each; but now, October 2d, '83, the Woodpecker has occupied his old

quarters for several nights and frequents the locality during the day. This habit of the Downy in making a winter home is a new one to me.—*John M. Howey, Canandaigua, N. Y.*

LEAST BITTERN.

While collecting on a large marshy meadow in this vicinity on June 10th, 1883, I started a Least Bittern from a clump of flags. Thinking there might be a nest there, I commenced searching and soon found it. It was a mere hollow in a bunch of matted flags scantily lined with water grass, and contained two fresh laid eggs. In shape and size they resembled eggs of the Yellow-billed Cuckoo. In color they were of pale blue, almost white. Fearing other collectors might find them I took them, though probably not a complete set. I also secured the bird. I afterwards secured three more finely plumaged males on the same meadows, which are now in my cabinet.—*Charles H. Neff, Portland, Conn.*

Nests and Eggs of the Birds of Ohio is delayed for want of fresh nests and eggs to draw. This is a work of sterling merit.

The Hawks of '83.

The first March walks in the woods showed that many of the old hawks' nests were "winter killed?" Weakened and disintegrated by the action of the constant snow and ice, they had been tumbled from the trees by the last fierce breath of winter. So at the outset it was clear that to secure the annual complement of eggs would involve wider and closer search than usual. Though shadowing them closely, I was finally baffled as to the nesting-places of several pairs of these evicted hawks, and the season's work gave but eighty eggs against over 100 for the year before. Still the hawks were as common as ever and will continue so, doubtless, as long as their chief quarry the red squirrel is so abundant here. In this series the sets of Red-tailed were all in pairs, and the Red-shouldered all in trios—the Red-tailed of course being larger and less showily marked. In average sets of *borealis* one egg will be plain and the other nearly so, while in a large series of Red-shouldered there will be some half dozen types constantly recurring, many gradations, and a few sets of absolute brilliancy. Though the season was cold and late, the Red-tailed bred as early as usual, while its congener showed itself as heretofore affected by extreme weather in the breeding season.

In blowing the incubated eggs of *B. lineatus*, three sets were found which held one stale egg each. It is not clear that cold or wet caused this, but it is true that a wet season makes the Buteo's eggs dull and nest-stained. A single heavy rain, occurring when the clutch is just laid, affects their brightness and beauty. And full sets suffer by comparison with single eggs taken when laid, as every day of exposure fades all hawk's eggs. So the series of '83 is uninteresting and dull as a whole, while '82, which was a dry season, presents a uniformly showy lot. To remove nest-stains is not easy. If freshly laid the markings will at once wash out of the eggs of Fish Hawks and Buteos, so the corner of a damp cloth only should be used on the plain surface between the markings. Dr. Wood says soap and water are cheap and should be freely used. But as eggshells are porous, soap is at

once absorbed in the shell and afterwards when heated comes out over the surface in yellow, waxy exudations.

The Buteo's eggs of this season were all from the old haunts of last year, and presumably most of them were from hawks' which had been often robbed. I also took sets of Cooper's Hawks and Marsh Hawks from old birds grown wary by the loss of many clutches. Tuesday, June 26, I took a set of three bright eggs of Sharp-shinned Hawk from a new nest in a secluded swamp after leaving them vainly seven days for a larger set. A pair of Sharp-shinned with unfledged young were shot in a hemlock clump within the city limits, in July this year, by milkmen, who nailed the hapless family on the side of a barn as scare-crows. Now, if I had only gone through the grove in June, as I always have done in former years, the old birds might be alive to-day, and my collection the richer by one more set of Sharp-shinned hawk's eggs.—*J. M. W., Norwich, Conn.*

DOWNY WOODPECKER.

Late in October, 1882, a Downy Woodpecker excavated a hole in an old cherry tree, near a much used door in my yard, of the size and shape of its usual nest, and occupied it nightly for more than six weeks. In April following a pair of Bluebirds took possession and reared two broods of five birds each; but now, October 2d, '83, the Woodpecker has occupied his old quarters for several nights, and frequents the locality during the day. This habit of the Downy in making a winter home is a new one to me.—*John M. Howey, Canandaigua, N. Y.*

Baltimore Oriole.

On looking over some of the back numbers of the O. and O., I noticed a query as to the adaptability of the Baltimore Oriole (*Icterus galbula*) to cage life. I happen to be in a position to answer that, when taken young, and when a reasonable amount of care is bestowed on it, it makes an excellent cage bird. I know of one which was taken from the nest in July, 1879, and he is apparently as healthy and happy as any of his confreres, who are in the full enjoyment of their liberty. He is quite tame, and very fond of his mistress, and he shows his affection plainly by his manner when she approaches his cage. He will eat almost anything, but he is particularly fond of hard boiled egg, bread and finely chopped meat. He has also a great partiality for fresh fruit; but if that cannot be obtained, he takes very kindly to any kind of preserves, as a substitute. He will eat all kinds of bird-seed, if previously bruised with a rolling-pin, but not otherwise. He has never known an hour's illness; his song is as loud, clear and varied as that of any Oriole I have ever heard, and he sings continually. During our long and severe Winter great care is necessary to prevent the Orioles suffering from the cold, and for this reason an old shawl is thrown over his cage every evening, and removed in the morning. He has got so used to this that during the cold weather he watches for the shawl every night, and refuses to go to sleep without it. But the most remarkable thing about him is that he is in beautiful plumage, with not a feather soiled or broken, although his cage is not a particularly large one.—*W. L. Scott, Ottawa, Canada.*

ROSE-BREASTED GROSBEAK.

Dec. 21, 1882, Jack sang his full notes for the first time; on the 26th sang his canary notes, while bunched up like a sick bird, as usual; sang several times through January, and soon got into his full notes, and sang as loud as ever, it being his fifth year. July 6, when in his prime, he was stolen from his cage on the piazza. We found him in a bird store in the city and bought

him back. It was a severe strain on him; he was not so lively afterward, but sang up to October. To-day, Nov. 22, 1883, he is in as fine condition as he ever was, but not in song. He will consume nearly his full weight in celery each day, besides his regular feed.

NATURE is truth. SCIENCE is a method of describing nature with the pen. ART is nature transferred to canvas by mechanical means. Science and art are necessary to bring nature to our firesides regardless of nature's wars outside, and also to teach the student who is not endowed with the facilities of observation.

A NEW SPECIES OF OSTRICH.

Dr. Reichenow, the ornithologist of the Berlin Museum, describes a new ostrich, under the name of *Struthio molybdophanes*. A living example is in the Zoological Gardens at Berlin. The habitat of this species is stated to be the deserts of Somali Land and the Western Galla Country, extending on the east coast of Africa from 10 deg. N. lat. to the Equator.—*Land and Water*.

LEAST BITTERN.

While collecting on a large marshy meadow in this vicinity on June 10th, 1883, I started a Least Bittern from a clump of flags. Thinking there might be a nest there, I commenced searching and soon found it. It was a mere hollow in a bunch of matted flags scantily lined with water grass, and contained two fresh laid eggs. In shape and size they resembled eggs of the Yellow-billed Cuckoo. In color they were of pale blue, almost white. Fearing other collectors might find them, I took them, though probably not a complete set. I also secured the bird. I afterwards secured three more finely plumaged males on the same meadows, which are now in my cabinet.—*Charles H. Neff, Portland, Conn.*

GREAT BLUE HERON.

I had the good fortune to shoot a specimen on Nov. 7.—*L. R. Rich, Saratoga, N. Y.*

87

“Monkey-Faced Owls.”

Enclosed please find a photograph of a pair of Owls which have been on exhibition here for two or three weeks. The owner says they are the only pair in the United States of North America, and are native birds of Tartary. The photo is a very fair representation. He calls them “Monkey-faced Owls.” The bill proper is very small, but the mouth extends almost to the eyes. Eyes as near as I could see were very small. Iris dark hazel. Back dark brown, marked very finely, breast speckled with brown, bill blackish, crown finely mottled, no tufts, tarsi long. Two pair were taken at the fort at St. Augustine, Florida, last February. One pair was bought for some scientific institute in Ohio but escaped. P. T. Barnum, the man says, offered him \$500 but he refused.

If they are American birds they are a cross of Barn Owl and something else.
—*W. P. Tarrant, Saratoga.*

A specimen of the “Monkey-faced Owl,” a rare bird, was recently captured by Captain Pitts, of Orlando, Fla., in the Everglades. It is described as being somewhat smaller than the Hooting Owl. The plumage has the soft, furry texture of the owl family, but a tinge of orange enters into the color. The head and face are those of a baboon, the face being white, while the eyes are much smaller than those of an owl of the same size, coal-black and somewhat almond-shaped, opening and closing with lids like those of an animal. In fact, they more nearly resemble the eyes of an otter than a bird.—*Ed.*

Interesting Notes.

The article in September O. and O. about Flying Squirrels reminded me of my experience with a tame Gray Squirrel that I had last year. I had a number of stuffed birds standing on the mantel in my room, unprotected. The *Sciurus* had the run of the room, and one day took it into his head to gnaw off the bills of every bird he could find. He must have eaten them, for I could find no trace of them anywhere, and I was afraid at first he had poisoned himself, but no evil effects followed. One day while out collecting I saw a Kingbird engaged in a fight with a Great-crested Flycatcher, and in a few moments the latter fell to the ground completely exhausted, and probably injured internally, as I could find no marks on it except a badly bunged eye. I took it home and placed it in a cage open at the top, and after a few minutes absence, returned just in time to find that Master *Sciurus* had climbed into the cage, killed the bird and was engaged in gnawing its bill, ruining its value as a specimen, for which I had intended it. After that I was careful to leave no birds where he could get at them.

In the summer of last year I found a nest which I have never been able to identify, as no bird was near. It was in New Castle Co., Del., and was placed in the centre of a clump of hazel bushes, growing in a swamp, so that I had to wade at least fifty yards before reaching it. It resembled a Wood Thrush's nest, being built of mud, but was an inch deeper than any nest of that kind I ever saw. The diameter was about the same. It was placed about two feet above the water and contained four eggs, much like a runt Catbird's egg, and of a dark blue color, with a slight greenish cast. The latter is hardly distinguishable when placed beside a Catbird's egg. Now can any reader of O. and O. tell me what bird it belongs to? It was not a case of a Catbird laying in an old nest, for I had been through that same thicket several times before, and would have seen it. If any one can cite an instance of a Catbird building a mud nest, that may solve the question, and the slight differences in size, shape and color might be passed over as accidental. In visiting a colony of Purple Grackles I found another curious set. There is no

doubt of their identity for I saw the female on the nest, which was a common P. G's nest. There were four eggs; three of them dark brown, scratched, mottled and blotched all over with darker brown. The fourth was a light olive green, with large blotches of light brown or bronze. There were no scratches of any kind on this egg and all the colors were very light, though entirely different from a normal Grackle egg, as well as from the other three. An experienced collector to whom I showed one of the dark eggs (without telling its history) pronounced it a Nighthawk's (*Chordeiles popetue*) egg. I don't suppose this is a new species, but it certainly is a curious freak of nature.

I would like to correct a couple of the printer's errors in my note on the Pigeon Hawk's nest in O. and O. for September. The date, "March 2" should read "March 22," and in the sentence "marked unevenly with five dots of reddish brown" read "fine dots."—*Charles D. Gibson, Renovo, Pennsylvania.*

A SURPRISED BLUEJAY.

At the back end of my store, and just outside of a window, is a box on which we mix the dough to feed the chicks. On Sunday morning when I shaved myself I took my mirror to the window so I could have a good light. Just as I finished my work I noticed an old Bluejay drop down on the box and begin eating the dough from the pan of chicken feed. As I was on the opposite side of the glass it did not see me. I looked at it for a moment and then "for fun" turned the mirror around so the glass would face the bird. It was just taking a mouthful of dough as it looked up and saw, as it supposed, another Jay with its mouthful also. It seemed greatly astonished and failed to swallow its food for some time, but soon did so, and then in Bluejay style "bowed," as much as to say "good morning, sir." As a matter of course the glass made the other Jay bow also, and the next salutation was "kechunk! kechunk!" I suppose that is Jay language, but I do not understand it. Then it proceeded to fill its mouth full of dough again and its shadow did the same. This seemed to anger it very much, and after giving one Bluejay war-whoop, it flew against the glass. Its astonished look at the result of its attack was laughable. The first thing it did was to retreat to the farther side of the

box, and from there eye the antagonist. After gazing for some time its hunger overcome it and it took another mouthful, "as did its shadow." The Jay stopped with full mouth, turned its head first one way then the other, and finally hopped around the glass and stood face to face with me. Our faces were not more than six inches apart, and I never expect to see a more astonished look than was in its eyes just then. But one look was enough; and after another big Jay yell it made as good time from there as a Bluejay ever made, I guess; and my dough has remained undisturbed ever since.—S. H. N., McLeanborough, Ill., in *Germantown Telegraph*.

RIDGWAY ORNITHOLOGICAL CLUB.

A meeting of the Ornithologists of Chicago was held on Friday, September 7, and an organization effected. The society adopted the name of The Ridgway Ornithological Club of Chicago, in honor of Mr. Robert Ridgway, Curator of Ornithology at the United States National Museum. A constitution and by-laws were adopted, and officers were duly elected as follows: President, Dr. J. W. Velie; Vice-President and Treasurer, George F. Morcom; Secretary, H. K. Coale; Curator, Joseph L. Hancock; Librarian, F. L. Rice.

Transcriber's Notes

- Silently corrected a few typos.
- Retained publication information from the printed edition: this eBook is public-domain in the country of publication.
- Several paragraph-length notices are duplicated on different pages in the printed text.
- Page numbers are duplicated in the printed text; in the eBook, added an alphabetic character to keep page numbers duplicate.
- In the text versions only, text in italics is delimited by _underscores_.

*** END OF THE PROJECT GUTENBERG EBOOK THE
ORNITHOLOGIST AND OÖLOGIST. VOL. VIII, NO. 11, NOVEMBER,
1883 ***

Updated editions will replace the previous one—the old editions will be renamed.

Creating the works from print editions not protected by U.S. copyright law means that no one owns a United States copyright in these works, so the Foundation (and you!) can copy and distribute it in the United States without permission and without paying copyright royalties. Special rules, set forth in the General Terms of Use part of this license, apply to copying and distributing Project Gutenberg™ electronic works to protect the PROJECT GUTENBERG™ concept and trademark. Project Gutenberg is a registered trademark, and may not be used if you charge for an eBook, except by following the terms of the trademark license, including paying royalties for use of the Project Gutenberg trademark. If you do not charge anything for copies of this eBook, complying with the trademark license is very easy. You may use this eBook for nearly any purpose such as creation of derivative works, reports, performances and research. Project Gutenberg eBooks may be modified and printed and given away—you may do practically ANYTHING in the United States with eBooks not protected by U.S. copyright law. Redistribution is subject to the trademark license, especially commercial redistribution.

START: FULL LICENSE

THE FULL PROJECT GUTENBERG™ LICENSE

PLEASE READ THIS BEFORE YOU DISTRIBUTE OR USE THIS WORK

To protect the Project Gutenberg™ mission of promoting the free distribution of electronic works, by using or distributing this work (or any other work associated in any way with the phrase “Project Gutenberg”), you agree to comply with all the terms of the Full Project Gutenberg License available with this file or online at www.gutenberg.org/license.

Section 1. General Terms of Use and Redistributing Project Gutenberg electronic works

1.A. By reading or using any part of this Project Gutenberg electronic work, you indicate that you have read, understand, agree to and accept all the terms of this license and intellectual property (trademark/copyright) agreement. If you do not agree to abide by all the terms of this agreement, you must cease using and return or destroy all copies of Project Gutenberg electronic works in your possession. If you paid a fee for obtaining a copy of or access to a Project Gutenberg electronic work and you do not agree to be bound by the terms of this agreement, you may obtain a refund from the person or entity to whom you paid the fee as set forth in paragraph 1.E.8.

1.B. “Project Gutenberg” is a registered trademark. It may only be used on or associated in any way with an electronic work by people who agree to be bound by the terms of this agreement. There are a few things that you can do with most Project Gutenberg electronic works even without complying with the full terms of this agreement. See paragraph 1.C below. There are a lot of things you can do with Project Gutenberg electronic works if you follow the terms of this agreement and help preserve free future access to Project Gutenberg electronic works. See paragraph 1.E below.

1.C. The Project Gutenberg Literary Archive Foundation (“the Foundation” or PGLAF), owns a compilation copyright in the collection of Project Gutenberg electronic works. Nearly all the individual works in the collection are in the public domain in the United States. If an individual work is unprotected by copyright law in the United States and you are

located in the United States, we do not claim a right to prevent you from copying, distributing, performing, displaying or creating derivative works based on the work as long as all references to Project Gutenberg are removed. Of course, we hope that you will support the Project Gutenberg mission of promoting free access to electronic works by freely sharing Project Gutenberg works in compliance with the terms of this agreement for keeping the Project Gutenberg name associated with the work. You can easily comply with the terms of this agreement by keeping this work in the same format with its attached full Project Gutenberg License when you share it without charge with others.

1.D. The copyright laws of the place where you are located also govern what you can do with this work. Copyright laws in most countries are in a constant state of change. If you are outside the United States, check the laws of your country in addition to the terms of this agreement before downloading, copying, displaying, performing, distributing or creating derivative works based on this work or any other Project Gutenberg work. The Foundation makes no representations concerning the copyright status of any work in any country other than the United States.

1.E. Unless you have removed all references to Project Gutenberg:

1.E.1. The following sentence, with active links to, or other immediate access to, the full Project Gutenberg License must appear prominently whenever any copy of a Project Gutenberg work (any work on which the phrase “Project Gutenberg” appears, or with which the phrase “Project Gutenberg” is associated) is accessed, displayed, performed, viewed, copied or distributed:

This eBook is for the use of anyone anywhere in the United States and most other parts of the world at no cost and with almost no restrictions whatsoever. You may copy it, give it away or re-use it under the terms of the Project Gutenberg™ License included with this eBook or online at www.gutenberg.org. If you are not located in the United States, you will have to check the laws of the country where you are located before using this eBook.

1.E.2. If an individual Project Gutenberg electronic work is derived from texts not protected by U.S. copyright law (does not contain a notice indicating that it is posted with permission of the copyright holder), the work can be copied and distributed to anyone in the United States without paying any fees or charges. If you are redistributing or providing access to a work with the phrase “Project Gutenberg” associated with or appearing on the work, you must comply either with the requirements of paragraphs 1.E.1 through 1.E.7 or obtain permission for the use of the work and the Project Gutenberg trademark as set forth in paragraphs 1.E.8 or 1.E.9.

1.E.3. If an individual Project Gutenberg electronic work is posted with the permission of the copyright holder, your use and distribution must comply with both paragraphs 1.E.1 through 1.E.7 and any additional terms imposed by the copyright holder. Additional terms will be linked to the Project Gutenberg License for all works posted with the permission of the copyright holder found at the beginning of this work.

1.E.4. Do not unlink or detach or remove the full Project Gutenberg License terms from this work, or any files containing a part of this work or any other work associated with Project Gutenberg.

1.E.5. Do not copy, display, perform, distribute or redistribute this electronic work, or any part of this electronic work, without prominently displaying the sentence set forth in paragraph 1.E.1 with active links or immediate access to the full terms of the Project Gutenberg License.

1.E.6. You may convert to and distribute this work in any binary, compressed, marked up, nonproprietary or proprietary form, including any word processing or hypertext form. However, if you provide access to or distribute copies of a Project Gutenberg work in a format other than “Plain Vanilla ASCII” or other format used in the official version posted on the official Project Gutenberg website (www.gutenberg.org), you must, at no additional cost, fee or expense to the user, provide a copy, a means of exporting a copy, or a means of obtaining a copy upon request, of the work in its original “Plain Vanilla ASCII” or other form. Any alternate format must include the full Project Gutenberg License as specified in paragraph 1.E.1.

1.E.7. Do not charge a fee for access to, viewing, displaying, performing, copying or distributing any Project Gutenberg works unless you comply with paragraph 1.E.8 or 1.E.9.

1.E.8. You may charge a reasonable fee for copies of or providing access to or distributing Project Gutenberg electronic works provided that:

- You pay a royalty fee of 20% of the gross profits you derive from the use of Project Gutenberg works calculated using the method you already use to calculate your applicable taxes. The fee is owed to the owner of the Project Gutenberg trademark, but he has agreed to donate royalties under this paragraph to the Project Gutenberg Literary Archive Foundation. Royalty payments must be paid within 60 days following each date on which you prepare (or are legally required to prepare) your periodic tax returns. Royalty payments should be clearly marked as such and sent to the Project Gutenberg Literary Archive Foundation at the address specified in Section 4, “Information about donations to the Project Gutenberg Literary Archive Foundation.”
- You provide a full refund of any money paid by a user who notifies you in writing (or by e-mail) within 30 days of receipt that s/he does not agree to the terms of the full Project Gutenberg™ License. You must require such a user to return or destroy all copies of the works possessed in a physical medium and discontinue all use of and all access to other copies of Project Gutenberg™ works.
- You provide, in accordance with paragraph 1.F.3, a full refund of any money paid for a work or a replacement copy, if a defect in the electronic work is discovered and reported to you within 90 days of receipt of the work.
- You comply with all other terms of this agreement for free distribution of Project Gutenberg™ works.

1.E.9. If you wish to charge a fee or distribute a Project Gutenberg™ electronic work or group of works on different terms than are set forth in this agreement, you must obtain permission in writing from the Project Gutenberg Literary Archive Foundation, the manager of the Project

Gutenberg™ trademark. Contact the Foundation as set forth in Section 3 below.

1.F.

1.F.1. Project Gutenberg volunteers and employees expend considerable effort to identify, do copyright research on, transcribe and proofread works not protected by U.S. copyright law in creating the Project Gutenberg™ collection. Despite these efforts, Project Gutenberg™ electronic works, and the medium on which they may be stored, may contain “Defects,” such as, but not limited to, incomplete, inaccurate or corrupt data, transcription errors, a copyright or other intellectual property infringement, a defective or damaged disk or other medium, a computer virus, or computer codes that damage or cannot be read by your equipment.

1.F.2. LIMITED WARRANTY, DISCLAIMER OF DAMAGES - Except for the “Right of Replacement or Refund” described in paragraph 1.F.3, the Project Gutenberg Literary Archive Foundation, the owner of the Project Gutenberg™ trademark, and any other party distributing a Project Gutenberg™ electronic work under this agreement, disclaim all liability to you for damages, costs and expenses, including legal fees. YOU AGREE THAT YOU HAVE NO REMEDIES FOR NEGLIGENCE, STRICT LIABILITY, BREACH OF WARRANTY OR BREACH OF CONTRACT EXCEPT THOSE PROVIDED IN PARAGRAPH 1.F.3. YOU AGREE THAT THE FOUNDATION, THE TRADEMARK OWNER, AND ANY DISTRIBUTOR UNDER THIS AGREEMENT WILL NOT BE LIABLE TO YOU FOR ACTUAL, DIRECT, INDIRECT, CONSEQUENTIAL, PUNITIVE OR INCIDENTAL DAMAGES EVEN IF YOU GIVE NOTICE OF THE POSSIBILITY OF SUCH DAMAGE.

1.F.3. LIMITED RIGHT OF REPLACEMENT OR REFUND - If you discover a defect in this electronic work within 90 days of receiving it, you can receive a refund of the money (if any) you paid for it by sending a written explanation to the person you received the work from. If you received the work on a physical medium, you must return the medium with your written explanation. The person or entity that provided you with the defective work may elect to provide a replacement copy in lieu of a refund. If you received the work electronically, the person or entity providing it to

you may choose to give you a second opportunity to receive the work electronically in lieu of a refund. If the second copy is also defective, you may demand a refund in writing without further opportunities to fix the problem.

1.F.4. Except for the limited right of replacement or refund set forth in paragraph 1.F.3, this work is provided to you 'AS-IS', WITH NO OTHER WARRANTIES OF ANY KIND, EXPRESS OR IMPLIED, INCLUDING BUT NOT LIMITED TO WARRANTIES OF MERCHANTABILITY OR FITNESS FOR ANY PURPOSE.

1.F.5. Some states do not allow disclaimers of certain implied warranties or the exclusion or limitation of certain types of damages. If any disclaimer or limitation set forth in this agreement violates the law of the state applicable to this agreement, the agreement shall be interpreted to make the maximum disclaimer or limitation permitted by the applicable state law. The invalidity or unenforceability of any provision of this agreement shall not void the remaining provisions.

1.F.6. INDEMNITY - You agree to indemnify and hold the Foundation, the trademark owner, any agent or employee of the Foundation, anyone providing copies of Project Gutenberg™ electronic works in accordance with this agreement, and any volunteers associated with the production, promotion and distribution of Project Gutenberg™ electronic works, harmless from all liability, costs and expenses, including legal fees, that arise directly or indirectly from any of the following which you do or cause to occur: (a) distribution of this or any Project Gutenberg work, (b) alteration, modification, or additions or deletions to any Project Gutenberg work, and (c) any Defect you cause.

Section 2. Information about the Mission of Project Gutenberg

Project Gutenberg is synonymous with the free distribution of electronic works in formats readable by the widest variety of computers including obsolete, old, middle-aged and new computers. It exists because of the

efforts of hundreds of volunteers and donations from people in all walks of life.

Volunteers and financial support to provide volunteers with the assistance they need are critical to reaching Project Gutenberg's goals and ensuring that the Project Gutenberg collection will remain freely available for generations to come. In 2001, the Project Gutenberg Literary Archive Foundation was created to provide a secure and permanent future for Project Gutenberg and future generations. To learn more about the Project Gutenberg Literary Archive Foundation and how your efforts and donations can help, see Sections 3 and 4 and the Foundation information page at www.gutenberg.org.

Section 3. Information about the Project Gutenberg Literary Archive Foundation

The Project Gutenberg Literary Archive Foundation is a non-profit 501(c)(3) educational corporation organized under the laws of the state of Mississippi and granted tax exempt status by the Internal Revenue Service. The Foundation's EIN or federal tax identification number is 64-6221541. Contributions to the Project Gutenberg Literary Archive Foundation are tax deductible to the full extent permitted by U.S. federal laws and your state's laws.

The Foundation's business office is located at 41 Watchung Plaza #516, Montclair NJ 07042, USA, +1 (862) 621-9288. Email contact links and up to date contact information can be found at the Foundation's website and official page at www.gutenberg.org/contact

Section 4. Information about Donations to the Project Gutenberg Literary Archive Foundation

Project Gutenberg™ depends upon and cannot survive without widespread public support and donations to carry out its mission of increasing the number of public domain and licensed works that can be freely distributed in machine-readable form accessible by the widest array of equipment

including outdated equipment. Many small donations (\$1 to \$5,000) are particularly important to maintaining tax exempt status with the IRS.

The Foundation is committed to complying with the laws regulating charities and charitable donations in all 50 states of the United States. Compliance requirements are not uniform and it takes a considerable effort, much paperwork and many fees to meet and keep up with these requirements. We do not solicit donations in locations where we have not received written confirmation of compliance. To SEND DONATIONS or determine the status of compliance for any particular state visit www.gutenberg.org/donate.

While we cannot and do not solicit contributions from states where we have not met the solicitation requirements, we know of no prohibition against accepting unsolicited donations from donors in such states who approach us with offers to donate.

International donations are gratefully accepted, but we cannot make any statements concerning tax treatment of donations received from outside the United States. U.S. laws alone swamp our small staff.

Please check the Project Gutenberg web pages for current donation methods and addresses. Donations are accepted in a number of other ways including checks, online payments and credit card donations. To donate, please visit: www.gutenberg.org/donate.

Section 5. General Information About Project Gutenberg electronic works

Professor Michael S. Hart was the originator of the Project Gutenberg concept of a library of electronic works that could be freely shared with anyone. For forty years, he produced and distributed Project Gutenberg eBooks with only a loose network of volunteer support.

Project Gutenberg eBooks are often created from several printed editions, all of which are confirmed as not protected by copyright in the U.S. unless a

copyright notice is included. Thus, we do not necessarily keep eBooks in compliance with any particular paper edition.

Most people start at our website which has the main PG search facility:
www.gutenberg.org.

This website includes information about Project Gutenberg, including how to make donations to the Project Gutenberg Literary Archive Foundation, how to help produce our new eBooks, and how to subscribe to our email newsletter to hear about new eBooks.
