What's New

- Country information has been updated as of 18 December 2003.
- For Rank Order pages and downloadable, tab-delimited rank-order files, a Rank Order page for Highways has been added.

- Entries for Natural Gas - production, Natural Gas - consumption, Natural Gas - exports, and Natural Gas - imports have been added to the Economy category of each country.

The World Factbook 2003 printed version provides a "snapshot" of the world as of 1 January 2003.

Guide to Rank Order Pages

Rank Order pages are presorted lists of data from selected Factbook data fields. Rank Order pages are generally given in descending order - highest

to lowest - such as Population and Area. The two exceptions are Unemployment Rate and Inflation Rate, which are in ascending - lowest to highest - order. Rank Order pages are available for the following 34 fields in six of the nine Factbook categories.

Geography

Area - total

People

Population

Birth rate

Death rate

Infant mortality rate

Life expectancy at birth - total

Total fertility rate

HIV/AIDS - adult prevalence rate

HIV/AIDS - people living with HIV/AIDS

HIV/AIDS - deaths

Highways - total

Military

Military expenditures - dollar figure

Military expenditures - percent of GDP

Factbook fields with Rank Order pages are easily identified with a small bar chart icon to the right of the data field title.

Not all Rank Order pages include the same number of entries because information for a particular field is not available for all countries. In addition, not all data fields are suitable for displaying as Rank Order pages, such as those containing textual information. Textual information is more readily viewed by clicking on the Field Listing icon next to the Data field title. The other icon next to the data field title provides the definition of the field.

All of the 'Rank Order' pages can be downloaded as tab-delimited data files and can be opened in other applications such as spreadsheets and databases. To save a Rank Order page in a spreadsheet, first click on the 'Download Datafile' choice above the Rank Order page you selected; then, at the top of your browser window, click on 'File' and 'Save As'. After saving the file, open the spreadsheet, find the saved file, and 'Open' it.

Additional Rank Order pages being considered for future updates of the Factbook Web site include:

- Median age
- Literacy
- Population below the poverty line
- Highways
- Waterways
- Airports

Notes and Definitions

In addition to the updated information, The World Factbook printed version features seven new entries. In the People category, an entry has been added for Median age. In the Economy category, entries have been added for Oil - production, Oil - consumption, Oil - exports, Oil - imports, Oil - proved reserves, and Natural gas - proved reserves. The web site version features four additional entries: Natural gas - production, Natural

gas - consumption, Natural gas - exports, and Natural gas - imports. Revision of some individual country maps, first introduced in the 2001 edition, is continued in this edition. The revised maps include elevation extremes and a partial geographic grid. Several regional maps have also been updated to reflect boundary changes and place name spelling changes.

Abbreviations This information is included in Appendix A: Abbreviations, which includes all abbreviations and acronyms used in the Factbook, with their expansions.

Acronyms An acronym is an abbreviation coined from the initial letter of each successive word in a term or phrase. In general, an acronym made up solely from the first letter of the major words in the expanded form is rendered in all capital letters (NATO from North Atlantic Treaty Organization; an exception would be ASEAN for Association of Southeast Asian Nations). In general, an acronym made up of more than the first letter of the major words in the expanded form is rendered with only an initial capital letter (Comsat from Communications Satellite Corporation; an exception would be NAM from Nonaligned Movement). Hybrid forms are sometimes used to distinguish between initially identical terms (WTO: WTrO for World Trade Organization and WToO for World Tourism Organization).

Administrative divisions This entry generally gives the numbers, designatory terms, and first- order administrative divisions as approved by the US Board on Geographic Names (BGN). Changes that have been reported but not yet acted on by BGN are noted.

Age structure This entry provides the distribution of the population according to age. Information is included by sex and age group (0-14 years,

15-64 years, 65 years and over). The age structure of a population affects a nation's key socioeconomic issues. Countries with young populations (high percentage under age 15) need to invest more in schools, while countries with older populations (high percentage ages 65 and over) need to invest more in the health sector. The age structure can also be used to help predict potential political issues. For example, the rapid growth of a young adult population unable to find employment can lead to unrest.

Agriculture - products This entry is a rank ordering of major crops and products starting with the most important.

Airports This entry gives the total number of airports. The runway(s) may be paved (concrete or asphalt surfaces) or unpaved (grass, dirt, sand, or gravel surfaces), but must be usable. Not all airports have facilities for refueling, maintenance, or air traffic control.

Airports - with paved runways This entry gives the total number of airports with paved runways (concrete or asphalt surfaces). For airports with more than one runway, only the longest runway is included according to the following five groups - (1) over 3,047 m, (2) 2,438 to 3,047 m, (3) 1,524 to 2,437 m, (4) 914 to 1,523 m, and (5) under 914 m. Only airports with usable runways are included in this listing. Not all airports have facilities for refueling, maintenance, or air traffic control.

Airports - with unpaved runways This entry gives the total number of airports with unpaved runways (grass, dirt, sand, or gravel surfaces) by length. For airports with more than one runway, only the longest runway is included according to the following five groups - (1) over 3,047 m, (2) 2,438 to 3,047 m, (3) 1,524 to 2,437 m, (4) 914 to 1,523 m, and (5) under 914 m. Only airports with usable runways are included in this listing. Not all airports have facilities for refueling, maintenance, or air traffic control

Appendixes

This section includes Factbook-related material by topic.

Area This entry includes three subfields. Total area is the sum of all land and water areas delimited by international boundaries and/or coastlines. Land area is the aggregate of all surfaces delimited by international boundaries and/or coastlines, excluding inland water bodies (lakes, reservoirs, rivers). Water area is the sum of all water surfaces delimited by international boundaries and/or coastlines, including inland water bodies (lakes, reservoirs, rivers).

Area - comparative This entry provides an area comparison based on total area equivalents. Most entities are compared with the entire US or one of the 50 states based on area measurements (1990 revised) provided by the US Bureau of the Census. The smaller entities are compared with Washington, DC (178 sq km, 69 sq mi) or The Mall in Washington, DC (0.59 sq km, 0.23 sq mi, 146 acres).

Background This entry usually highlights major historic events and current issues and may include a statement about one or two key future trends.

Birth rate This entry gives the average annual number of births during a year per 1,000 persons in the population at midyear; also known as crude birth rate. The birth rate is usually the dominant factor in determining the rate of population growth. It depends on both the level of fertility and the age structure of the population.

Budget This entry includes revenues, total expenditures, and capital expenditures. These figures are calculated on an exchange rate basis, i.e., not in purchasing power parity (PPP) terms

Capital

This entry gives the location of the seat of government.

Climate This entry includes a brief description of typical weather regimes throughout the year.

Coastline This entry gives the total length of the boundary between the land area (including islands) and the sea.

Communications This category deals with the means of exchanging information and includes the telephone, radio, television, and Internet service provider entries.

Communications - note This entry includes miscellaneous communications information of significance not included elsewhere.

Constitution This entry includes the dates of adoption, revisions, and major amendments.

Country data codes see Data codes

Country map Most versions of the Factbook provide a country map in color. The maps were produced from the best information available at the time of preparation. Names and/or boundaries may have changed subsequently.

Country name This entry includes all forms of the country's name approved by the US Board on Geographic Names (Italy is used as an example): conventional long form (Italian Republic), conventional short form (Italy), local long form (Repubblica Italiana), local short form (Italia), former (Kingdom of Italy), as well as the abbreviation. Also see the Terminology note.

Currency This entry identifies the national medium of exchange and its basic subunit.

Crude oil

See "Oil" entries

Currency code

This entry gives the International Organization for Standardization (ISO) 4217 alphabetic currency code for each country.

Data codes This information is presented in Appendix D: Cross-Reference List of Country Data Codes and Appendix E: Cross-Reference List of Hydrographic Data Codes. This appendix includes the US Government approved Federal Information Processing Standards (FIPS) codes, the International Organization for Standardization (ISO) codes, and Internet codes for land entities. The appendix also includes the International Hydrographic Organization (IHO) codes, Aeronautical Chart and Information Center (ACIC; now a part of the National Imagery and Mapping Agency or NIMA) codes, and Defense Intelligence Agency (DIA) codes for hydrographic entities. The US Government has not yet approved a standard for hydrographic data codes similar to the FIPS 10-4 standard for country data codes.

Date of information In general, information available as of 1 January 2003 was used in the preparation of this edition.

Death rate This entry gives the average annual number of deaths during a year per 1,000 population at midyear; also known as crude death rate. The death rate, while only a rough indicator of the mortality situation in a country, accurately indicates the current mortality impact on population growth. This indicator is significantly affected by age distribution, and most countries will eventually show a rise in the overall death rate, in spite of

continued decline in mortality at all ages, as declining fertility results in an aging population.

Debt - external This entry gives the total public and private debt owed to nonresidents repayable in foreign currency, goods, or services.

Dependency status This entry describes the formal relationship between a particular nonindependent entity and an independent state.

Dependent areas This entry contains an alphabetical listing of all nonindependent entities associated in some way with a particular independent state.

Diplomatic representation The US Government has diplomatic relations with 185 independent states, including 183 of the 189 UN members (excluded UN members are Bhutan, Cuba, Iran, Iraq, North Korea, and the US itself). In addition, the US has diplomatic relations with 1 independent state that is not in the UN - Holy See.

Diplomatic representation in the US This entry includes the chief of mission, chancery, telephone, FAX, consulate general locations, and consulate locations.

Diplomatic representation from the US This entry includes the chief of mission, embassy address, mailing address, telephone number, FAX number, branch office locations, consulate general locations, and consulate locations.

Disputes - international This entry includes a wide variety of situations that range from traditional bilateral boundary disputes to unilateral claims of one sort or another. Information regarding disputes over international terrestrial and maritime boundaries has been reviewed by the US

Department of State. References to other situations involving borders or frontiers may also be included, such as resource disputes, geopolitical questions, or irredentist issues; however, inclusion does not necessarily constitute official acceptance or recognition by the US Government.

Distribution of family income - Gini index This index measures the degree of inequality in the distribution of family income in a country. The index is calculated from the Lorenz curve, in which cumulative family income is plotted against the number of families arranged from the poorest to the richest. The index is the ratio of (a) the area between a country's Lorenz curve and the 45 degree helping line to (b) the entire triangular area under the 45 degree line. The more nearly equal a country's income distribution, the closer its Lorenz curve to the 45-degree line and the lower its Gini index, e.g., a Scandinavian country with an index of 25. The more unequal a country's income distribution, the farther its Lorenz curve from the 45-degree line and the higher its Gini index, e.g., a Sub-Saharan country with an index of 50. If income were distributed with perfect equality, the Lorenz curve would coincide with the 45 degree line and the index would be zero; if income were distributed with perfect inequality, the Lorenz curve would coincide with the horizontal axis and the right vertical axis and the index would be 100.

Economic aid - donor This entry refers to net official development assistance (ODA) from Organization for Economic Cooperation and Development (OECD) nations to developing countries and multilateral organizations. ODA is defined as financial assistance that is concessional in character, has the main objective to promote economic development and welfare of the less developed countries (LDCs), and contains a grant element of at least 25%. The entry does not cover other official flows (OOF) or private flows.

Economic aid - recipient This entry, which is subject to major problems of definition and statistical coverage, refers to the net inflow of Official Development Finance (ODF) to recipient countries. The figure includes assistance from the World Bank, the IMF, and other international organizations and from individual nation donors. Formal commitments of aid are included in the data. Omitted from the data are grants by private organizations. Aid comes in various forms including outright grants and loans. The entry thus is the difference between new inflows and repayments.

Economy This category includes the entries dealing with the size, development, and management of productive resources, i.e., land, labor, and capital.

Economy - overview This entry briefly describes the type of economy, including the degree of market orientation, the level of economic development, the most important natural resources, and the unique areas of specialization. It also characterizes major economic events and policy changes in the most recent 12 months and may include a statement about one or two key future macroeconomic trends.

Electricity - consumption This entry consists of total electricity generated annually plus imports and minus exports, expressed in kilowatt-hours. The discrepancy between the amount of electricity generated and/or imported and the amount consumed and/or exported is accounted for as loss in transmission and distribution.

Electricity - exports

This entry is the total exported electricity in kilowatt-hours.

Electricity - imports

This entry is the total imported electricity in kilowatt-hours.

Electricity - production This entry is the annual electricity generated expressed in kilowatt- hours. The discrepancy between the amount of electricity generated and/or imported and the amount consumed and/or exported is accounted for as loss in transmission and distribution.

Electricity - production by source This entry states the percentage share of electricity generated from each energy source. These are fossil fuel, hydro, nuclear, and other (solar, geothermal, and wind).

Elevation extremes

This entry includes both the highest point and the lowest point.

Entities Some of the independent states, dependencies, areas of special sovereignty, and governments included in this publication are not independent, and others are not officially recognized by the US Government. "Independent state" refers to a people politically organized into a sovereign state with a definite territory. "Dependencies" and "areas of special sovereignty" refer to a broad category of political entities that are associated in some way with an independent state. "Country" names used in the table of contents or for page headings are usually the short-form names as approved by the US Board on Geographic Names and may include independent states, dependencies, and areas of special sovereignty, or other geographic entities. There are a total of 268 separate geographic entities in The World Factbook that may be categorized as follows:

Environment - current issues This entry lists the most pressing and important environmental problems. The following terms and abbreviations are used throughout the entry: acidification - the lowering of soil and water

pH due to acid precipitation and deposition usually through precipitation; this process disrupts ecosystem nutrient flows and may kill freshwater fish and plants dependent on more neutral or alkaline conditions (see acid rain). acid rain - characterized as containing harmful levels of sulfur dioxide or nitrogen oxide; acid rain is damaging and potentially deadly to the earth's fragile ecosystems; acidity is measured using the pH scale where 7 is neutral, values greater than 7 are considered alkaline, and values below 5.6 are considered acid precipitation; note - a pH of 2.4 (the acidity of vinegar) has been measured in rainfall in New England. aerosol - a collection of airborne particles dispersed in a gas, smoke, or fog. afforestation - converting a bare or agricultural space by planting trees and plants; reforestation involves replanting trees on areas that have been cut or destroyed by fire. asbestos - a naturally occurring soft fibrous mineral commonly used in fireproofing materials and considered to be highly carcinogenic in particulate form. biodiversity - also biological diversity; the relative number of species, diverse in form and function, at the genetic, organism, community, and ecosystem level; loss of biodiversity reduces an ecosystem's ability to recover from natural or man-induced disruption. bio-indicators - a plant or animal species whose presence, abundance, and health reveal the general condition of its habitat. biomass - the total weight or volume of living matter in a given area or volume. carbon cycle - the term used to describe the exchange of carbon (in various forms, e.g., as carbon dioxide) between the atmosphere, ocean, terrestrial biosphere, and geological deposits. catchments - assemblages used to capture and retain rainwater and runoff; an important water management technique in areas with limited freshwater resources, such as Gibraltar. DDT (dichloro-diphenyl-trichloro-ethane) - a colorless, odorless insecticide that has toxic effects on most animals; the use of DDT was banned in the US in 1972. defoliants - chemicals which cause plants to lose their leaves artificially; often used in agricultural practices for weed control, and may have

detrimental impacts on human and ecosystem health. deforestation - the destruction of vast areas of forest (e.g., unsustainable forestry practices, agricultural and range land clearing, and the over exploitation of wood products for use as fuel) without planting new growth. desertification - the spread of desert-like conditions in arid or semi-arid areas, due to overgrazing, loss of agriculturally productive soils, or climate change. dredging - the practice of deepening an existing waterway; also, a technique used for collecting bottom-dwelling marine organisms (e.g., shellfish) or harvesting coral, often causing significant destruction of reef and ocean-floor ecosystems. drift-net fishing - done with a net, miles in extent, that is generally anchored to a boat and left to float with the tide; often results in an over harvesting and waste of large populations of non- commercial marine species (by-catch) by its effect of "sweeping the ocean clean". ecosystems - ecological units comprised of complex communities of organisms and their specific environments. effluents - waste materials, such as smoke, sewage, or industrial waste, which are released into the environment, subsequently polluting it. endangered species - a species that is threatened with extinction either by direct hunting or habitat destruction. freshwater - water with very low soluble mineral content; sources include lakes, streams, rivers, glaciers, and underground aquifers. greenhouse gas - a gas that "traps" infrared radiation in the lower atmosphere causing surface warming; water vapor, carbon dioxide, nitrous oxide, methane, hydrofluorocarbons, and ozone are the primary greenhouse gases in the Earth's atmosphere. groundwater - water sources found below the surface of the earth often in naturally occurring reservoirs in permeable rock strata; the source for wells and natural springs. Highlands Water Project - a series of dams constructed jointly by Lesotho and South Africa to redirect Lesotho's abundant water supply into a rapidly growing area in South Africa; while it is the largest infrastructure project in southern Africa, it is also the most costly and controversial; objections to the project include claims that it

forces people from their homes, submerges farmlands, and squanders economic resources. Inuit Circumpolar Conference (ICC) - represents the 125,000 Inuits of Russia, Alaska, Canada, and Greenland in international environmental issues; a panel convenes every three years to determine the focus of the ICC; the most current concerns are long-range transport of pollutants, sustainable development, and climate change. metallurgical plants - industries which specialize in the science, technology, and processing of metals; these plants produce highly concentrated and toxic wastes which can contribute to pollution of ground water and air when not properly disposed. noxious substances - injurious, very harmful to living beings. overgrazing - the grazing of animals on plant material faster than it can naturally regrow leading to the permanent loss of plant cover, a common effect of too many animals grazing limited range land. ozone shield - a layer of the atmosphere composed of ozone gas (O₃) that resides approximately 25 miles above the Earth's surface and absorbs solar ultraviolet radiation that can be harmful to living organisms. poaching - the illegal killing of animals or fish, a great concern with respect to endangered or threatened species. pollution - the contamination of a healthy environment by man-made waste. potable water - water that is drinkable, safe to be consumed. salination - the process through which fresh (drinkable) water becomes salt (undrinkable) water; hence, desalination is the reverse process; also involves the accumulation of salts in topsoil caused by evaporation of excessive irrigation water, a process that can eventually render soil incapable of supporting crops. siltation - occurs when water channels and reservoirs become clotted with silt and mud, a side effect of deforestation and soil erosion. slash-and-burn agriculture - a rotating cultivation technique in which trees are cut down and burned in order to clear land for temporary agriculture; the land is used until its productivity declines at which point a new plot is selected and the process repeats; this practice is sustainable while population levels are low and time

is permitted for regrowth of natural vegetation; conversely, where these conditions do not exist, the practice can have disastrous consequences for the environment . soil degradation - damage to the land's productive capacity because of poor agricultural practices such as the excessive use of pesticides or fertilizers, soil compaction from heavy equipment, or erosion of topsoil, eventually resulting in reduced ability to produce agricultural products. soil erosion - the removal of soil by the action of water or wind, compounded by poor agricultural practices, deforestation, overgrazing, and desertification. ultraviolet (UV) radiation - a portion of the electromagnetic energy emitted by the sun and naturally filtered in the upper atmosphere by the ozone layer; UV radiation can be harmful to living organisms and has been linked to increasing rates of skin cancer in humans. water-borne diseases - those in which the bacteria survive in, and is transmitted through, water; always a serious threat in areas with an untreated water supply.

Environment - international agreements This entry separates country participation in international environmental agreements into two levels - party to and signed but not ratified. Agreements are listed in alphabetical order by the abbreviated form of the full name.

Environmental agreements This information is presented in Appendix C: Selected International Environmental Agreements, which includes the name, abbreviation, date opened for signature, date entered into force, objective, and parties by category.

Ethnic groups This entry provides a rank ordering of ethnic groups starting with the largest and normally includes the percent of total population.

Exchange rates This entry provides the official value of a country's monetary unit at a given date or over a given period of time, as expressed in

units of local currency per US dollar and as determined by international market forces or official fiat.

Executive branch This entry includes several subfields. **Chief of state** includes the name and title of the titular leader of the country who represents the state at official and ceremonial functions but may not be involved with the day-to-day activities of the government. **Head of government** includes the name and title of the top administrative leader who is designated to manage the day-to-day activities of the government. For example, in the UK, the monarch is the chief of state, and the prime minister is the head of government. In the US, the president is both the chief of state and the head of government. **Cabinet** includes the official name for this body of high-ranking advisers and the method for selection of members. **Elections** includes the nature of election process or accession to power, date of the last election, and date of the next election. **Election results** includes the percent of vote for each candidate in the last election.

Exports This entry provides the total US dollar amount of exports on an f.o.b. (free on board) basis.

Exports - commodities This entry provides a rank ordering of exported products starting with the most important; it sometimes includes the percent of total dollar value.

Exports - partners This entry provides a rank ordering of trading partners starting with the most important; it sometimes includes the percent of total dollar value.

Fiscal year This entry identifies the beginning and ending months for a country's accounting period of 12 months, which often is the calendar year but which may begin in any month. All yearly references are for the calendar year (CY) unless indicated as a noncalendar fiscal year (FY).

Flag description This entry provides a written flag description produced from actual flags or the best information available at the time the entry was written. The flags of independent states are used by their dependencies unless there is an officially recognized local flag. Some disputed and other areas do not have flags.

Flag graphic Most versions of the Factbook include a color flag at the beginning of the country profile. The flag graphics were produced from actual flags or the best information available at the time of preparation. The flags of independent states are used by their dependencies unless there is an officially recognized local flag. Some disputed and other areas do not have flags.

GDP This entry gives the gross domestic product (GDP) or value of all final goods and services produced within a nation in a given year. GDP dollar estimates in the Factbook are derived from purchasing power parity (PPP) calculations. See the note on GDP methodology for more information.

GDP methodology In the Economy section, GDP dollar estimates for all countries are derived from purchasing power parity (PPP) calculations rather than from conversions at official currency exchange rates. The PPP method involves the use of standardized international dollar price weights, which are applied to the quantities of final goods and services produced in a given economy. The data derived from the PPP method provide the best available starting point for comparisons of economic strength and well-being between countries. The division of a GDP estimate in domestic currency by the corresponding PPP estimate in dollars gives the PPP conversion rate. Whereas PPP estimates for OECD countries are quite reliable, PPP estimates for developing countries are often rough approximations. Most of the GDP estimates are based on extrapolation of

PPP numbers published by the UN International Comparison Program (UNICP) and by Professors Robert Summers and Alan Heston of the University of Pennsylvania and their colleagues. In contrast, the currency exchange rate method involves a variety of international and domestic financial forces that often have little relation to domestic output. In developing countries with weak currencies the exchange rate estimate of GDP in dollars is typically one-fourth to one-half the PPP estimate. Furthermore, exchange rates may suddenly go up or down by 10% or more because of market forces or official fiat whereas real output has remained unchanged. On 12 January 1994, for example, the 14 countries of the African Financial Community (whose currencies are tied to the French franc) devalued their currencies by 50%. This move, of course, did not cut the real output of these countries by half. One important caution: the proportion of, say, defense expenditures as a percentage of GDP in local currency accounts may differ substantially from the proportion when GDP accounts are expressed in PPP terms, as, for example, when an observer tries to estimate the dollar level of Russian or Japanese military expenditures. Note: the numbers for GDP and other economic data can not be chained together from successive volumes of the Factbook because of changes in the US dollar measuring rod, revisions of data by statistical agencies, use of new or different sources of information, and changes in national statistical methods and practices.

GDP - composition by sector This entry gives the percentage contribution of agriculture, industry, and services to total GDP.

GDP - per capita This entry shows GDP on a purchasing power parity basis divided by population as of 1 July for the same year.

GDP - real growth rate This entry gives GDP growth on an annual basis adjusted for inflation and expressed as a percent.

Geographic coordinates This entry includes rounded latitude and longitude figures for the purpose of finding the approximate geographic center of an entity and is based on the Gazetteer of Conventional Names, Third Edition, August 1988, US Board on Geographic Names and on other sources.

Geographic names This information is presented in Appendix F: Cross-Reference List of Geographic Names. It includes a listing of various alternate names, former names, local names, and regional names referenced to one or more related Factbook entries. Spellings are normally, but not always, those approved by the US Board on Geographic Names (BGN). Alternate names and additional information are included in parentheses.

Geography This category includes the entries dealing with the natural environment and the effects of human activity.

Geography - note This entry includes miscellaneous geographic information of significance not included elsewhere.

GNP Gross national product (GNP) is the value of all final goods and services produced within a nation in a given year, plus income earned by its citizens abroad, minus income earned by foreigners from domestic production. The Factbook, following current practice, uses GDP rather than GNP to measure national production. However, the user must realize that in certain countries net remittances from citizens working abroad may be important to national well-being.

Government This category includes the entries dealing with the system for the adoption and administration of public policy.

Government type This entry gives the basic form of government (e.g., republic, constitutional monarchy, federal republic, parliamentary

democracy, military dictatorship).

Government - note This entry includes miscellaneous government information of significance not included elsewhere.

Gross domestic product see GDP

Gross national product see GNP

Gross world product see GWP

GWP This entry gives the gross world product (GWP) or aggregate value of all final goods and services produced worldwide in a given year.

Heliports This entry gives the total number of established helicopter takeoff and landing sites (which may or may not have fuel or other services).

Highways This entry states the total length of the highway system and the length of the paved and unpaved parts.

HIV/AIDS - adult prevalence rate This entry gives an estimate of the percentage of adults (aged 15-49) living with HIV/AIDS. The adult prevalence rate is calculated by dividing the estimated number of adults living with HIV/AIDS at yearend by the total adult population at yearend.

HIV/AIDS - deaths This entry gives an estimate of the number of adults and children who died of AIDS during a given calendar year.

HIV/AIDS - people living with HIV/AIDS This entry gives an estimate of all people (adults and children) alive at yearend with HIV infection, whether or not they have developed symptoms of AIDS.

Household income or consumption by percentage share Data on household income or consumption come from household surveys, the results adjusted for household size. Nations use different standards and procedures in collecting and adjusting the data. Surveys based on income will normally show a more unequal distribution than surveys based on consumption. The quality of surveys is improving with time, yet caution is still necessary in making inter-country comparisons.

Hydrographic data codes see Data codes

Illicit drugs This entry gives information on the five categories of illicit drugs - narcotics, stimulants, depressants (sedatives), hallucinogens, and cannabis. These categories include many drugs legally produced and prescribed by doctors as well as those illegally produced and sold outside of medical channels. Cannabis (*Cannabis sativa*) is the common hemp plant, which provides hallucinogens with some sedative properties, and includes marijuana (pot, Acapulco gold, grass, reefer), tetrahydrocannabinol (THC, Marinol), hashish (hash), and hashish oil (hash oil). Coca (mostly *Erythroxylum coca*) is a bush with leaves that contain the stimulant used to make cocaine. Coca is not to be confused with cocoa, which comes from cacao seeds and is used in making chocolate, cocoa, and cocoa butter. Cocaine is a stimulant derived from the leaves of the coca bush. Depressants (sedatives) are drugs that reduce tension and anxiety and include chloral hydrate, barbiturates (Amytal, Nembutal, Seconal, phenobarbital), benzodiazepines (Librium, Valium), methaqualone (Quaalude), glutethimide (Doriden), and others (Equanil, Placidyl, Valmid). Drugs are any chemical substances that effect a physical, mental, emotional, or behavioral change in an individual. Drug abuse is the use of any licit or illicit chemical substance that results in physical, mental, emotional, or behavioral impairment in an individual. Hallucinogens are drugs that affect sensation, thinking, self-awareness, and emotion. Hallucinogens include

LSD (acid, microdot), mescaline and peyote (mexc, buttons, cactus), amphetamine variants (PMA, STP, DOB), phencyclidine (PCP, angel dust, hog), phencyclidine analogues (PCE, PCPy, TCP), and others (psilocybin, psilocyn). Hashish is the resinous exudate of the cannabis or hemp plant (*Cannabis sativa*). Heroin is a semisynthetic derivative of morphine. Mandrax is a trade name for methaqualone, a pharmaceutical depressant. Marijuana is the dried leaf of the cannabis or hemp plant (*Cannabis sativa*). Methaqualone is a pharmaceutical depressant, referred to as mandrax in Southwest Asia and Africa. Narcotics are drugs that relieve pain, often induce sleep, and refer to opium, opium derivatives, and synthetic substitutes. Natural narcotics include opium (paregoric, parepectolin), morphine (MS-Contin, Roxanol), codeine (Tylenol with codeine, Empirin with codeine, Robitussin AC), and thebaine. Semisynthetic narcotics include heroin (horse, smack), and hydromorphone (Dilaudid). Synthetic narcotics include meperidine or Pethidine (Demerol, Mepergan), methadone (Dolophine, Methadose), and others (Darvon, Lomotil). Opium is the brown, gummy exudate of the incised, unripe seedpod of the opium poppy. Opium poppy (*Papaver somniferum*) is the source for the natural and semisynthetic narcotics. Poppy straw concentrate is the alkaloid derived from the mature, dried opium poppy. Qat (kat, khat) is a stimulant from the buds or leaves of *Catha edulis* that is chewed or drunk as tea. Quaaludes is the North American slang term for methaqualone, a pharmaceutical depressant. Stimulants are drugs that relieve mild depression, increase energy and activity, and include cocaine (coke, snow, crack), amphetamines (Desoxyn, Dexedrine), ephedrine, ecstasy (clarity, essence, doctor, Adam), phenmetrazine (Preludin), methylphenidate (Ritalin), and others (Cylert, Sanorex, Tenuate).

Imports This entry provides the total US dollar amount of imports on a c.i.f. (cost, insurance, and freight) or f.o.b. (free on board) basis.

Imports - commodities This entry provides a rank ordering of imported products starting with the most important; it sometimes includes the percent of total dollar value.

Imports - partners This entry provides a rank ordering of trading partners starting with the most important; it sometimes includes the percent of total dollar value.

Independence For most countries, this entry gives the date that sovereignty was achieved and from which nation, empire, or trusteeship. For the other countries, the date given may not represent "independence" in the strict sense, but rather some significant nationhood event such as the traditional founding date or the date of unification, federation, confederation, establishment, fundamental change in the form of government, or state succession. Dependent areas include the notation "none" followed by the nature of their dependency status. Also see the Terminology note.

Industrial production growth rate This entry gives the annual percentage increase in industrial production (includes manufacturing, mining, and construction).

Industries This entry provides a rank ordering of industries starting with the largest by value of annual output.

Infant mortality rate This entry gives the number of deaths of infants under one year old in a given year per 1,000 live births in the same year. This rate is often used as an indicator of the level of health in a country.

Inflation rate (consumer prices) This entry furnishes the annual percent change in consumer prices compared with the previous year's consumer prices.

Internet country code

This entry includes the two-letter codes maintained by the International Organization for Standardization (ISO) in the ISO 3166 Alpha-2 list and used by the Internet Assigned Numbers Authority (IANA) to establish country-coded top-level domains (ccTLDs).

Internet Service Providers (ISPs)

This entry supplies the number of Internet Service Providers within a country. An ISP is defined as a company that provides access to the Internet.

Internet users This entry gives the number of users within a country that access the Internet. Statistics vary from country to country and may include users who access the Internet at least several times a week to those who access it only once within a period of several months.

International disputes see Disputes - international

International organization participation This entry lists in alphabetical order by abbreviation those international organizations in which the subject country is a member or participates in some other way.

International organizations

This information is presented in Appendix B: International Organizations and Groups which includes the name, abbreviation, date established, aim, and members by category.

Introduction

This category includes one entry, Background.

Irrigated land This entry gives the number of square kilometers of land area that is artificially supplied with water.

Judicial branch This entry contains the name(s) of the highest court(s) and a brief description of the selection process for members.

Labor force

This entry contains the total labor force figure.

Labor force - by occupation This entry contains a rank ordering of component parts of the labor force by occupation.

Land boundaries This entry contains the total length of all land boundaries and the individual lengths for each of the contiguous border countries.

Land use This entry contains the percentage shares of total land area for three different types of land use: arable land - land cultivated for crops that are replanted after each harvest like wheat, maize, and rice; permanent crops - land cultivated for crops that are not replanted after each harvest like citrus, coffee, and rubber; includes land under flowering shrubs, fruit trees, nut trees, and vines, but excludes land under trees grown for wood or timber; other - any land not arable or under permanent crops; includes permanent meadows and pastures, forests and woodlands, built-on areas, roads, barren land, etc.

Languages This entry provides a rank ordering of languages starting with the largest and sometimes includes the percent of total population speaking that language.

Legal system

This entry contains a brief description of the legal system's historical roots, role in government, and acceptance of International Court of Justice (ICJ) jurisdiction.

Legislative branch This entry contains information on the structure (unicameral, bicameral, tricameral), formal name, number of seats, and term of office. **Elections** includes the nature of election process or accession to power, date of the last election, and date of the next election. **Election results** includes the percent of vote and/or number of seats held by each party in the last election.

Life expectancy at birth This entry contains the average number of years to be lived by a group of people born in the same year, if mortality at each age remains constant in the future. The entry includes total population as well as the male and female components. Life expectancy at birth is also a measure of overall quality of life in a country and summarizes the mortality at all ages. It can also be thought of as indicating the potential return on investment in human capital and is necessary for the calculation of various actuarial measures.

Literacy This entry includes a definition of literacy and Census Bureau percentages for the total population, males, and females. There are no universal definitions and standards of literacy. Unless otherwise specified, all rates are based on the most common definition - the ability to read and write at a specified age. Detailing the standards that individual countries use to assess the ability to read and write is beyond the scope of the Factbook. Information on literacy, while not a perfect measure of educational results, is probably the most easily available and valid for international comparisons. Low levels of literacy, and education in general, can impede the economic development of a country in the current rapidly changing, technology-driven world.

Location This entry identifies the country's regional location, neighboring countries, and adjacent bodies of water.

Map references This entry includes the name of the Factbook reference map on which a country may be found. The entry on Geographic coordinates may be helpful in finding some smaller countries.

Maritime claims This entry includes the following claims, the definitions of which are excerpted from the Law of the Sea (LOS) Convention, which alone contains the full and definitive descriptions: contiguous zone - according to the LOS Convention (Article 33), this is a zone contiguous to a coastal State's territorial sea, over which it may exercise the control necessary to: prevent infringement of its customs, fiscal, immigration, or sanitary laws and regulations within its territory or territorial sea; punish infringement of the above laws and regulations committed within its territory or territorial sea; the contiguous zone may not extend beyond 24 nautical miles from the baselines from which the breadth of the territorial sea is measured (e.g. the US has claimed a 12-mile contiguous zone in addition to its 12-mile territorial sea) continental shelf - the LOS Convention (Article 76) defines the continental shelf of a coastal State as comprising the seabed and subsoil of the submarine areas that extend beyond its territorial sea throughout the natural prolongation of its land territory to the outer edge of the continental margin, or to a distance of 200 nautical miles from the baselines from which the breadth of the territorial sea is measured where the outer edge of the continental margin does not extend up to that distance; the continental margin comprises the submerged prolongation of the landmass of the coastal State, and consists of the seabed and subsoil of the shelf, the slope and the rise; it does not include the deep ocean floor with its oceanic ridges or the subsoil thereof exclusive economic zone (EEZ) - the LOS Convention (Part V) defines the EEZ as a zone beyond and adjacent to the territorial sea in which a coastal State has: sovereign rights for the purpose of exploring and exploiting, conserving and managing the natural resources, whether living or non-living, of the waters superjacent to the seabed and of the seabed and its subsoil, and with regard

to other activities for the economic exploitation and exploration of the zone, such as the production of energy from the water, currents, and winds; jurisdiction with regard to the establishment and use of artificial islands, installations, and structures; marine scientific research; the protection and preservation of the marine environment; the outer limit of the exclusive economic zone shall not exceed 200 nautical miles from the baselines from which the breadth of the territorial sea is measured exclusive fishing zone - while this term is not used in the LOS Convention, some States (e.g. the United Kingdom) have chosen not to claim an EEZ, but rather to claim jurisdiction over the living resources off their coast; in such cases, the term exclusive fishing zone is often used territorial sea - the sovereignty of a coastal State extends beyond its land territory and internal waters to an adjacent belt of sea, described as the territorial sea in the LOS Convention (Part II); this sovereignty extends to the air space over the territorial sea as well as its underlying seabed and subsoil; every State has the right to establish the breadth of its territorial sea up to a limit not exceeding 12 nautical miles

Median Age This entry is the age that divides a population into two numerically equal groups; that is, half the people are younger than this age and half are older. It is a single index that summarizes the age distribution of a population. Currently, the median age ranges from a low of about 15 in Uganda and Gaza Strip to 40 or more in several European countries and Japan. See the entry for "Age structure" for the importance of a younger versus an older age structure and, by implication, a lower versus a higher median age.

Merchant marine Merchant marine may be defined as all ships engaged in the carriage of goods; or all commercial vessels (as opposed to all nonmilitary ships), which excludes tugs, fishing vessels, offshore oil rigs, etc.; or a grouping of merchant ships by nationality or register. This entry

contains information in two subfields - total and ships by type. Total includes the total number of ships (1,000 GRT or over), total DWT for those ships, and total GRT for those ships. DWT or dead weight tonnage is the total weight of cargo, plus bunkers, stores, etc. that a ship can carry when immersed to the appropriate load line. GRT or gross register tonnage is a figure obtained by measuring the entire sheltered volume of the ship available for cargo and passengers and converting it to tons on the basis of 100 cubic feet per ton; there is no stable relationship between GRT and DWT. Ships by type includes a listing of barge carriers, bulk cargo ships, cargo ships, chemical tankers, combination bulk carriers, combination ore/oil carriers, container ships, liquefied gas tankers, livestock carriers, multifunctional large-load carriers, petroleum tankers, passenger ships, passenger/cargo ships, railcar carriers, refrigerated cargo ships, roll-on/roll-off cargo ships, short-sea passenger ships, specialized tankers, and vehicle carriers. A captive register is a register of ships maintained by a territory, possession, or colony primarily or exclusively for the use of ships owned in the parent country; it is also referred to as an offshore register, the offshore equivalent of an internal register. Ships on a captive register will fly the same flag as the parent country, or a local variant of it, but will be subject to the maritime laws and taxation rules of the offshore territory. Although the nature of a captive register makes it especially desirable for ships owned in the parent country, just as in the internal register, the ships may also be owned abroad. The captive register then acts as a flag of convenience register, except that it is not the register of an independent state. A flag of convenience register is a national register offering registration to a merchant ship not owned in the flag state. The major flags of convenience (FOC) attract ships to their registers by virtue of low fees, low or nonexistent taxation of profits, and liberal manning requirements. True FOC registers are characterized by having relatively few of the registered ships actually owned in the flag state. Thus, while virtually any flag can be used for ships

under a given set of circumstances, an FOC register is one where the majority of the merchant fleet is owned abroad. It is also referred to as an open register. A flag state is the nation in which a ship is registered and which holds legal jurisdiction over operation of the ship, whether at home or abroad. Maritime legislation of the flag state determines how a ship is crewed and taxed and whether a foreign-owned ship may be placed on the register. An internal register is a register of ships maintained as a subset of a national register. Ships on the internal register fly the national flag and have that nationality but are subject to a separate set of maritime rules from those on the main national register. These differences usually include lower taxation of profits, use of foreign nationals as crewmembers, and, usually, ownership outside the flag state (when it functions as an FOC register). The Norwegian International Ship Register and Danish International Ship Register are the most notable examples of an internal register. Both have been instrumental in stemming flight from the national flag to flags of convenience and in attracting foreign-owned ships to the Norwegian and Danish flags. A merchant ship is a vessel that carries goods against payment of freight; it is commonly used to denote any nonmilitary ship but accurately restricted to commercial vessels only. A register is the record of a ship's ownership and nationality as listed with the maritime authorities of a country; also, it is the compendium of such individual ships' registrations. Registration of a ship provides it with a nationality and makes it subject to the laws of the country in which registered (the flag state) regardless of the nationality of the ship's ultimate owner.

Military This category includes the entries dealing with a country's military structure, manpower, and expenditures.

Military branches This entry lists the names of the ground, naval, air, marine, and other defense or security forces.

Military expenditures - dollar figure This entry gives current military expenditures in US dollars; the figure is calculated by multiplying the estimated defense spending in percentage terms by the gross domestic product (GDP) calculated on an exchange rate basis not purchasing power parity (PPP) terms. Dollar figures for military expenditures should be treated with caution because of different price patterns and accounting methods among nations, as well as wide variations in the strength of their currencies.

Military expenditures - percent of GDP This entry gives current military expenditures as an estimated percent of gross domestic product (GDP).

Military manpower - availability This entry gives the total numbers of males and females age 15-49 and assumes that every individual is fit to serve.

Military manpower - fit for military service This entry gives the number of males and females age 15-49 fit for military service. This is a more refined measure of potential military manpower availability which tries to correct for the health situation in the country and reduces the maximum potential number to a more realistic estimate of the actual number fit to serve.

Military manpower - military age This entry gives the minimum age at which an individual may volunteer for military service or be subject to conscription.

Military manpower - reaching military age annually This entry gives the number of draft-age males and females entering the military manpower pool in any given year and is a measure of the availability of draft-age young adults.

Military - note This entry includes miscellaneous military information of significance not included elsewhere.

Money figures All money figures are expressed in contemporaneous US dollars unless otherwise indicated.

National holiday This entry gives the primary national day of celebration - usually independence day.

Nationality This entry provides the identifying terms for citizens - noun and adjective.

Natural Gas - consumption This entry is the total quantity of natural gas consumed in cubic meters. The discrepancy between the quantity of natural gas produced and/or imported and the quantity consumed and/or exported is due to the omission of stock changes and other complicating factors.

Natural Gas - exports This entry is the total quantity of natural gas exported in cubic meters.

Natural Gas - imports This entry is the total quantity of natural gas imported in cubic meters.

Natural Gas - production This entry is the total quantity of natural gas produced in cubic meters. The discrepancy between the quantity of natural gas produced and/or imported and the quantity consumed and/or exported is due to the omission of stock changes and other complicating factors.

Natural Gas - proved reserves This entry is the stock of proved reserves of natural gas in cubic meters (cu. m.). Proved reserves are those quantities of natural gas, which, by analysis of geological and engineering data, can be estimated with a high degree of confidence to be commercially recoverable

from a given date forward, from known reservoirs and under current economic conditions.

Natural hazards

This entry lists potential natural disasters.

Natural resources This entry lists a country's mineral, petroleum, hydropower, and other resources of commercial importance.

Net migration rate This entry includes the figure for the difference between the number of persons entering and leaving a country during the year per 1,000 persons (based on midyear population). An excess of persons entering the country is referred to as net immigration (e.g., 3.56 migrants/1,000 population); an excess of persons leaving the country as net emigration (e.g., -9.26 migrants/1,000 population). The net migration rate indicates the contribution of migration to the overall level of population change. High levels of migration can cause problems such as increasing unemployment and potential ethnic strife (if people are coming in) or a reduction in the labor force, perhaps in certain key sectors (if people are leaving).

Oil - consumption This entry is the total oil consumed in barrels per day (bbl/day). The discrepancy between the amount of oil produced and/or imported and the amount consumed and/or exported is due to the omission of stock changes, refinery gains, and other complicating factors.

Oil - exports This entry is the total oil exported in barrels per day (bbl/day), including both crude oil and oil products.

Oil - imports This entry is the total oil imported in barrels per day (bbl/day), including both crude oil and oil products.

Oil - production This entry is the total oil produced in barrels per day (bbl/day). The discrepancy between the amount of oil produced and/or imported and the amount consumed and/or exported is due to the omission of stock changes, refinery gains, and other complicating factors.

Oil - proved reserves This entry is the stock of proved reserves of crude oil in barrels (bbl). Proved reserves are those quantities of petroleum which, by analysis of geological and engineering data, can be estimated with a high degree of confidence to be commercially recoverable from a given date forward, from known reservoirs and under current economic conditions.

People This category includes the entries dealing with the characteristics of the people and their society.

People - note This entry includes miscellaneous demographic information of significance not included elsewhere.

Personal Names - Capitalization The Factbook uses all uppercase letters for personal names by which the subject is usually referred to in various media. An example is President Vicente FOX Quesada of Mexico. Members of royal families are usually referred by other than their family name (King and Prime Minister FAHD bin Abd al-Aziz Al Saud of Saudi Arabia, Queen BEATRIX of the Netherlands, or King PHUMIPHON Adunyadet of Thailand). Some Asians are referred to by the first element of their name - also their surname, such as President NO Muh-hyun of South Korea.

Personal Names - Spelling The romanization of personal names in the Factbook normally follows the same transliteration system used by the US Board on Geographic Names for spelling place names. At times, however, a foreign leader expressly indicates a preference for, or the media or official documents regularly use, a romanized spelling that differs from the

transliteration derived from the US Government standard. In such cases, the Factbook uses the alternative spelling.

Personal Names - Titles The Factbook capitalizes any valid title (or short form of it) immediately preceding a person's name. A title standing alone is lowercased. Examples: President PUTIN and President BUSH are chiefs of state. In Russia, the president is chief of state and the premier is the head of the government, while in the US, the president is both chief of state and head of government.

Petroleum

See "Oil" entries

Petroleum products

See "Oil" entries

Pipelines This entry gives the lengths and types of pipelines for transporting products like natural gas, crude oil, or petroleum products.

Political parties and leaders This entry includes a listing of significant political organizations and their leaders.

Political pressure groups and leaders This entry includes a listing of organizations with leaders involved in politics, but not standing for legislative election.

Population This entry gives an estimate from the US Bureau of the Census based on statistics from population censuses, vital statistics registration systems, or sample surveys pertaining to the recent past and on assumptions about future trends. The total population presents one overall measure of the potential impact of the country on the world and within its region. Note: starting with the 1993 Factbook, demographic estimates for

some countries (mostly African) have explicitly taken into account the effects of the growing impact of the HIV/AIDS epidemic. These countries are currently: The Bahamas, Benin, Botswana, Brazil, Burkina Faso, Burma, Burundi, Cambodia, Cameroon, Central African Republic, Democratic Republic of the Congo, Republic of the Congo, Cote d'Ivoire, Ethiopia, Gabon, Ghana, Guyana, Haiti, Honduras, Kenya, Lesotho, Malawi, Mozambique, Namibia, Nigeria, Rwanda, South Africa, Swaziland, Tanzania, Thailand, Togo, Uganda, Zambia, and Zimbabwe.

Population below poverty line National estimates of the percentage of the population lying below the poverty line are based on surveys of sub-groups, with the results weighted by the number of people in each group. Definitions of poverty vary considerably among nations. For example, rich nations generally employ more generous standards of poverty than poor nations.

Population growth rate The average annual percent change in the population, resulting from a surplus (or deficit) of births over deaths and the balance of migrants entering and leaving a country. The rate may be positive or negative. The growth rate is a factor in determining how great a burden would be imposed on a country by the changing needs of its people for infrastructure (e.g., schools, hospitals, housing, roads), resources (e.g., food, water, electricity), and jobs. Rapid population growth can be seen as threatening by neighboring countries.

Ports and harbors This entry lists the major ports and harbors selected on the basis of overall importance to each country. This is determined by evaluating a number of factors (e.g., dollar value of goods handled, gross tonnage, facilities, military significance).

Radio broadcast stations This entry includes the total number of AM, FM, and shortwave broadcast stations.

Railways This entry states the total route length of the railway network and of its component parts by gauge: broad, dual, narrow, standard, and other.

Reference maps

This section includes world and regional maps.

Religions This entry includes a rank ordering of religions by adherents starting with the largest group and sometimes includes the percent of total population.

Sex ratio This entry includes the number of males for each female in five age groups - at birth, under 15 years, 15-64 years, 65 years and over, and for the total population. Sex ratio at birth has recently emerged as an indicator of certain kinds of sex discrimination in some countries. For instance, high sex ratios at birth in some Asian countries are now attributed to sex-selective abortion and infanticide due to a strong preference for sons. This will affect future marriage patterns and fertility patterns. Eventually it could cause unrest among young adult males who are unable to find partners.

Suffrage This entry gives the age at enfranchisement and whether the right to vote is universal or restricted.

Telephone numbers All telephone numbers in the Factbook consist of the country code in brackets, the city or area code (where required) in parentheses, and the local number. The one component that is not presented is the international access code, which varies from country to country. For example, an international direct dial telephone call placed from the US to Madrid, Spain, would be as follows:

011 [34] (1) 577-xxxx, where

011 is the international access code for station-to-station calls;

01 is for calls other than station-to-station calls,
[34] is the country code for Spain,
(1) is the city code for Madrid,
577 is the local exchange, and
xxxx is the local telephone number.

An international direct dial telephone call placed from another country to the US would be as follows:

international access code + [1] (202) 939-xxxx, where
[1] is the country code for the US,
(202) is the area code for Washington, DC,
939 is the local exchange, and
xxxx is the local telephone number.

Telephone system This entry includes a brief characterization of the system with details on the domestic and international components. The following terms and abbreviations are used throughout the entry:

Africa ONE - a fiber-optic submarine cable link encircling the continent of Africa. Arabsat - Arab Satellite Communications Organization (Riyadh, Saudi Arabia). Autodin - Automatic Digital Network (US Department of Defense). CB - citizen's band mobile radio communications. cellular telephone system - the telephones in this system are radio transceivers, with each instrument having its own private radio frequency and sufficient radiated power to reach the booster station in its area (cell), from which the telephone signal is fed to a telephone exchange. Central American Microwave System - a trunk microwave radio relay system that links the countries of Central America and Mexico with each other. coaxial cable - a multichannel communication cable consisting of a central conducting wire, surrounded by and insulated from a cylindrical conducting shell; a large number of telephone channels can be made available within the insulated

space by the use of a large number of carrier frequencies. Comsat - Communications Satellite Corporation (US). DSN - Defense Switched Network (formerly Automatic Voice Network or Autovon); basic general-purpose, switched voice network of the Defense Communications System (US Department of Defense). Eutelsat - European Telecommunications Satellite Organization (Paris). fiber-optic cable - a multichannel communications cable using a thread of optical glass fibers as a transmission medium in which the signal (voice, video, etc.) is in the form of a coded pulse of light. GSM - a global system for mobile (cellular) communications devised by the Groupe Special Mobile of the pan-European standardization organization, Conference Europeenne des Posts et Telecommunications (CEPT) in 1982. HF - high frequency; any radio frequency in the 3,000- to 30,000- kHz range. Inmarsat - International Mobile Satellite Organization (London); provider of global mobile satellite communications for commercial, distress, and safety applications at sea, in the air, and on land. Intelsat - International Telecommunications Satellite Organization (Washington, DC). Intersputnik - International Organization of Space Communications (Moscow); first established in the former Soviet Union and the East European countries, it is now marketing its services worldwide with earth stations in North America, Africa, and East Asia. landline - communication wire or cable of any sort that is installed on poles or buried in the ground. Marecs - Maritime European Communications Satellite used in the Inmarsat system on lease from the European Space Agency. Marisat - satellites of the Comsat Corporation that participate in the Inmarsat system. Medarabtel - the Middle East Telecommunications Project of the International Telecommunications Union (ITU) providing a modern telecommunications network, primarily by microwave radio relay, linking Algeria, Djibouti, Egypt, Jordan, Libya, Morocco, Saudi Arabia, Somalia, Sudan, Syria, Tunisia, and Yemen; it was initially started in Morocco in 1970 by the Arab Telecommunications Union (ATU) and was

known at that time as the Middle East Mediterranean Telecommunications Network. microwave radio relay - transmission of long distance telephone calls and television programs by highly directional radio microwaves that are received and sent on from one booster station to another on an optical path. NMT - Nordic Mobile Telephone; an analog cellular telephone system that was developed jointly by the national telecommunications authorities of the Nordic countries (Denmark, Finland, Iceland, Norway, and Sweden). Orbita - a Russian television service; also the trade name of a packet-switched digital telephone network. radiotelephone communications - the two-way transmission and reception of sounds by broadcast radio on authorized frequencies using telephone handsets. PanAmSat - PanAmSat Corporation (Greenwich, CT). satellite communication system - a communication system consisting of two or more earth stations and at least one satellite that provide long distance transmission of voice, data, and television; the system usually serves as a trunk connection between telephone exchanges; if the earth stations are in the same country, it is a domestic system. satellite earth station - a communications facility with a microwave radio transmitting and receiving antenna and required receiving and transmitting equipment for communicating with satellites. satellite link - a radio connection between a satellite and an earth station permitting communication between them, either one-way (down link from satellite to earth station - television receive-only transmission) or two-way (telephone channels). SHF - super high frequency; any radio frequency in the 3,000- to 30,000-MHz range. shortwave - radio frequencies (from 1.605 to 30 MHz) that fall above the commercial broadcast band and are used for communication over long distances. Solidaridad - geosynchronous satellites in Mexico's system of international telecommunications in the Western Hemisphere. Statsionar - Russia's geostationary system for satellite telecommunications. submarine cable - a cable designed for service under water. TAT - Trans-Atlantic Telephone; any of a number of high-capacity

submarine coaxial telephone cables linking Europe with North America. telefax - facsimile service between subscriber stations via the public switched telephone network or the international Datel network. telegraph - a telecommunications system designed for unmodulated electric impulse transmission. telex - a communication service involving teletypewriters connected by wire through automatic exchanges. tropospheric scatter - a form of microwave radio transmission in which the troposphere is used to scatter and reflect a fraction of the incident radio waves back to earth; powerful, highly directional antennas are used to transmit and receive the microwave signals; reliable over-the-horizon communications are realized for distances up to 600 miles in a single hop; additional hops can extend the range of this system for very long distances. trunk network - a network of switching centers, connected by multichannel trunk lines. UHF - ultra high frequency; any radio frequency in the 300- to 3,000-MHz range. VHF - very high frequency; any radio frequency in the 30- to 300- MHz range.

Telephones - main lines in use

This entry gives the total number of main telephone lines in use.

Telephones - mobile cellular

This entry gives the total number of mobile cellular telephones in use.

Television - broadcast stations This entry gives the total number of separate broadcast stations plus any repeater stations.

Terminology Due to the highly structured nature of the Factbook database, some collective generic terms have to be used. For example, the word Country in the Country name entry refers to a wide variety of dependencies, areas of special sovereignty, uninhabited islands, and other entities in addition to the traditional countries or independent states. Military is also used as an umbrella term for various civil defense, security, and defense activities in many entries. The Independence entry includes the

usual colonial independence dates and former ruling states as well as other significant nationhood dates such as the traditional founding date or the date of unification, federation, confederation, establishment, or state succession that are not strictly independence dates. Dependent areas have the nature of their dependency status noted in this same entry.

Terrain

This entry contains a brief description of the topography.

Total fertility rate This entry gives a figure for the average number of children that would be born per woman if all women lived to the end of their childbearing years and bore children according to a given fertility rate at each age. The total fertility rate is a more direct measure of the level of fertility than the crude birth rate, since it refers to births per woman. This indicator shows the potential for population growth in the country. High rates will also place some limits on the labor force participation rates for women. Large numbers of children born to women indicate large family sizes that might limit the ability of the families to feed and educate their children.

Transnational Issues This category includes only two entries at the present time - Disputes - international and Illicit drugs - that deal with current issues going beyond national boundaries.

Transportation This category includes the entries dealing with the means for movement of people and goods.

Transportation - note This entry includes miscellaneous transportation information of significance not included elsewhere.

Unemployment rate This entry contains the percent of the labor force that is without jobs. Substantial underemployment might be noted.

Waterways This entry gives the total length and individual names of navigable rivers, canals, and other inland bodies of water.

Years All year references are for the calendar year (CY) unless indicated as fiscal year (FY). The calendar year is an accounting period of 12 months from 1 January to 31 December. The fiscal year is an accounting period of 12 months other than 1 January to 31 December.

Note: Information for the US and US dependencies was compiled from material in the public domain and does not represent Intelligence Community estimates.

A Brief History of Basic Intelligence and The World Factbook

The Intelligence Cycle is the process by which information is acquired, converted into intelligence, and made available to policymakers. Information is raw data from any source, data that may be fragmentary, contradictory, unreliable, ambiguous, deceptive, or wrong. Intelligence is information that has been collected, integrated, evaluated, analyzed, and interpreted. Finished intelligence is the final product of the Intelligence Cycle ready to be delivered to the policymaker.

The three types of finished intelligence are: basic, current, and estimative. Basic intelligence provides the fundamental and factual reference material on a country or issue. Current intelligence reports on new developments. Estimative intelligence judges probable outcomes. The three are mutually supportive: basic intelligence is the foundation on which the other two are constructed; current intelligence continually updates the inventory of knowledge; and estimative intelligence revises overall interpretations of country and issue prospects for guidance of basic and current intelligence. The World Factbook, The President's Daily Brief, and the National Intelligence Estimates are examples of the three types of finished intelligence.

The United States has carried on foreign intelligence activities since the days of George Washington but only since World War II have they been coordinated on a government-wide basis. Three programs have highlighted the development of coordinated basic intelligence since that time: (1) the Joint Army Navy Intelligence Studies (JANIS), (2) the National Intelligence Survey (NIS), and (3) The World Factbook.

During World War II, intelligence consumers realized that the production of basic intelligence by different components of the US Government resulted in a great duplication of effort and conflicting information. The Japanese attack on Pearl Harbor in 1941 brought home to leaders in Congress and the executive branch the need for integrating departmental reports to national policymakers. Detailed and coordinated information was needed not only on such major powers as Germany and Japan, but also on places of little previous interest. In the Pacific Theater, for example, the Navy and Marines had to launch amphibious operations against many islands about which information was unconfirmed or nonexistent. Intelligence authorities resolved that the United States should never again be caught unprepared.

In 1943, Gen. George B. Strong (G-2), Adm. H. C. Train (Office of Naval Intelligence - ONI), and Gen. William J. Donovan (Director of the Office of Strategic Services - OSS) decided that a joint effort should be initiated. A steering committee was appointed on 27 April 1943 that recommended the formation of a Joint Intelligence Study Publishing Board to assemble, edit, coordinate, and publish the Joint Army Navy Intelligence Studies (JANIS). JANIS was the first interdepartmental basic intelligence program to fulfill the needs of the US Government for an authoritative and coordinated appraisal of strategic basic intelligence. Between April 1943 and July 1947, the board published 34 JANIS studies. JANIS performed well in the war effort, and numerous letters of commendation were received, including a statement from Adm. Forrest Sherman, Chief of Staff, Pacific Ocean Areas, which said, "JANIS has become the indispensable reference work for the shore-based planners."

The need for more comprehensive basic intelligence in the postwar world was well expressed in 1946 by George S. Pettee, a noted author on national security. He wrote in *The Future of American Secret Intelligence* (Infantry Journal Press, 1946, page 46) that world leadership in peace requires even more elaborate intelligence than in war. "The conduct of peace involves all countries, all human activities - not just the enemy and his war production."

The Central Intelligence Agency was established on 26 July 1947 and officially began operating on 18 September 1947. Effective 1 October 1947, the Director of Central Intelligence assumed operational responsibility for JANIS. On 13 January 1948, the National Security Council issued Intelligence Directive (NSCID) No. 3, which authorized the National Intelligence Survey (NIS) program as a peacetime replacement for the wartime JANIS program. Before adequate NIS country sections could be produced, government agencies had to develop more comprehensive gazetteers and better maps. The US Board on Geographic Names (BGN)

compiled the names; the Department of the Interior produced the gazetteers; and CIA produced the maps.

The Hoover Commission's Clark Committee, set up in 1954 to study the structure and administration of the CIA, reported to Congress in 1955 that: "The National Intelligence Survey is an invaluable publication which provides the essential elements of basic intelligence on all areas of the world. There will always be a continuing requirement for keeping the Survey up-to-date." The Factbook was created as an annual summary and update to the encyclopedic NIS studies. The first classified Factbook was published in August 1962, and the first unclassified version was published in June 1971. The NIS program was terminated in 1973 except for the Factbook, map, and gazetteer components. The 1975 Factbook was the first to be made available to the public with sales through the US Government Printing Office (GPO). The Factbook was first made available on the Internet in June 1997. The year 2003 marks the 56th anniversary of the establishment of the Central Intelligence Agency and the 60th year of continuous basic intelligence support to the US Government by The World Factbook and its two predecessor programs.

Contributors and Copyright Information

In general, information available as of 1 January 2003 was used in the preparation of this edition.

The World Factbook is prepared by the Central Intelligence Agency for the use of US Government officials, and the style, format, coverage, and content are designed to meet their specific requirements. Information is provided by Antarctic Information Program (National Science Foundation), Bureau of the Census (Department of Commerce), Bureau of Labor Statistics (Department of Labor), Central Intelligence Agency, Council of Managers of National Antarctic Programs, Defense Intelligence Agency (Department of Defense), Department of State, Fish and Wildlife Service (Department of the Interior), Maritime Administration (Department of Transportation), National Imagery and Mapping Agency (Department of Defense), Naval Facilities Engineering Command (Department of Defense), Office of Insular Affairs (Department of the Interior), Office of Naval Intelligence (Department of Defense), US Board on Geographic Names (Department of the Interior), US Transportation Command (Department of Defense), and other public and private sources.

The Factbook is in the public domain. Accordingly, it may be copied freely without permission of the Central Intelligence Agency (CIA). The official seal of the CIA, however, may NOT be copied without permission as required by the CIA Act of 1949 (50 U.S.C. section 403m). Misuse of the official seal of the CIA could result in civil and criminal penalties.

Frequently Asked Questions (FAQs)

The World Factbook staff thanks you for your comments, suggestions, updates, kudos, and corrections over the past years. The willingness of readers from around the world to share their observations and specialized knowledge is very helpful as we try to produce the best possible publications. Please feel free to continue to write and e-mail us. At least two Factbook staffers review every item. The sheer volume of correspondence precludes detailed personal replies, but we sincerely appreciate your time and interest in the Factbook. If you include your e-mail address we will at least acknowledge your note. Thank you again.

Answers to many frequently asked questions (FAQs) are explained in the Notes and Definitions section in The World Factbook. Please review this section to see if your question is already answered there. In addition, we have compiled the following list of FAQs to answer other common questions. Select from the following categories to narrow your search:

Policies and Procedures

Technical

General

Can you provide additional information for a specific country?

The staff cannot provide data beyond what appears in The World Factbook. The format and information in the Factbook are tailored to the specific requirements of US Government officials and content is focused on their current and anticipated needs. The staff welcomes suggestions for new entries.

How often is The World Factbook updated?

Formerly our Web site (and the published Factbook) were only updated annually. Beginning in November 2001 we instituted a new system of more frequent online updates.

The annual printed version of the Factbook is usually released about midyear. US Government officials may obtain information about Factbook availability from their own organizations or through liaison channels to the CIA. Other users may obtain sales information through the following channels:

Can I use some or all of The World Factbook for my Web site (book, research project, homework, etc.)?

The World Factbook is in the public domain and may be used freely by anyone at anytime without seeking permission. However, US Code prohibits use of the CIA seal in a manner which implies that the CIA approved, endorsed, or authorized such use. If you have any questions about your intended use, you should consult with legal counsel. Further information on The World Factbook's use is described on the Contributors and Copyright Information page. As a courtesy, please cite The World Factbook when used.

Why doesn't The World Factbook include information on states, departments, provinces, the European Union, etc., in the country format?

The World Factbook provides national-level information on countries, territories, and dependencies, but not on subnational administrative units within a country or supranational entities like the European Union. A good encyclopedia should provide state/province-level information.

Is it possible to access older editions of The World Factbook to do comparative research and trend analysis?

Only the current version is available for browsing on the CIA Web site. The year 2000 and 2001 editions are available for download. In the future, the staff hopes to post electronic versions of The World Factbook as far back as 1986. Hardcopy editions for earlier years are available from libraries.

Would it be possible to set up a partnership or collaboration between the producers of The World Factbook and other organizations or individuals?

The World Factbook does not partner with other organizations or individuals, but we do welcome comments and suggestions that such groups or persons choose to provide.

Geography

I can't find a geographic name for a particular country. Why not?

The World Factbook is not a gazetteer (a dictionary or index of places, usually with descriptive or statistical information) and cannot provide more than the names of the administrative divisions (in the Government category) and major cities/towns (on the country maps). Our expanded Cross-Reference List of Geographic Names, however, includes many of the world's major geographic features as well as historic (former) names of countries and cities mentioned in The World Factbook.

Why is Taiwan listed out of alphabetical order at the end of the Factbook entries?

Taiwan is listed after the regular entries because even though the mainland People's Republic of China claims Taiwan, elected Taiwanese authorities de facto administer the island and reject mainland sovereignty claims. With the establishment of diplomatic relations with China on January 1, 1979, the US Government recognized the People's Republic of China as the sole legal government of China, acknowledging the Chinese position that there is only one China and that Taiwan is part of China.

Since we have an ambassador who represents the US at the Vatican, why is this entity not listed in the Factbook?

Vatican City is found under Holy See. The term "Holy See" refers to the authority, jurisdiction, and sovereignty vested in the Pope and his advisors

to direct the worldwide Catholic Church. The Holy See has a legal personality that allows it to enter into treaties as the juridical equal of a state and to send and receive diplomatic representatives. Vatican City, created in 1929 to administer properties belonging to the Holy See in Rome, is recognized under international law as a sovereign state, but it does not send or receive diplomatic representatives. Consequently, Holy See is included as a Factbook entry, with Vatican City cross-referenced in the Geographic Names appendix.

Why are the Golan Heights not shown as part of Israel or Northern Cyprus with Turkey?

Territorial occupations/annexations not recognized by the United States Government are not shown on US Government maps.

Why don't you include information on entities such as Tibet, Kashmir, or Kosovo?

The World Factbook provides information on the administrative divisions of a country as recommended by the United States Board on Geographic Names (BGN). The BGN is a component of the US Government that develops policies, principles, and procedures governing the spelling, use, and application of geographic names—domestic, foreign, Antarctic, and undersea. Its decisions enable all departments and agencies of the US Government to have access to uniform names of geographic features.

Also included in the Factbook are entries on parts of the world whose status has not yet been resolved (e.g., West Bank, Spratly Islands). Specific regions within a country or areas in dispute among countries are not covered.

Spelling and Pronunciation

Why is the spelling of proper names such as rulers, presidents, and prime ministers in The World Factbook different than their spelling in my country?

The Factbook staff applies the names and spellings from the Chiefs of State link on the CIA Web site. The World Factbook is prepared using the standard American English computer keyboard and does not use any special characters, symbols, or most diacritical markings in its spellings. Surnames are always spelled with capital letters; they may appear first in some cultures.

The spelling of geographic names, features, cities, administrative divisions, etc. in the Factbook differs from those used in my country. Why is this?

The United States Board on Geographic Names (BGN) recommends and approves names and spellings. The BGN is the component of the United States Government that develops policies, principles, and procedures governing the spelling, use, and application of geographic names—domestic, foreign, Antarctic, and undersea. Its decisions enable all departments and agencies of the US Government to use uniform names of geographic features. (A note is usually included where changes may have occurred but have not yet been approved by the BGN). The World Factbook is prepared using the standard American English computer keyboard and does not use any special characters, symbols, or most diacritical markings in its spellings.

Why doesn't The World Factbook include pronunciations of country or leader names?

There are too many variations in pronunciation among English-speaking countries, not to mention English renditions of non-English names, for pronunciations to be included. American English pronunciations are included for some countries like Qatar and Kiribati.

Why is the name of the Labour party misspelled?
When American and British spellings of common English words differ, The World Factbook always uses the American spelling, even when these common words form part of a proper name in British English.

Policies and Procedures

What is The World Factbook's source for a specific subject field?

The Factbook staff uses many different sources to publish what we judge are the most reliable and consistent data for any particular category. Space considerations preclude a listing of these various sources.

The names of some geographic features provided in the Factbook differ from those used in other publications. For example, in Asia the Factbook has Burma as the country name, but in other publications Myanmar is used; also, the Factbook uses Sea of Japan whereas other publications label it East Sea. What is your policy on naming geographic features?

The Factbook staff follows the guidance of the United States Board on Geographic Names (BGN). The BGN is the component of the United States Government that develops policies, principles, and procedures governing the spelling, use, and application of geographic names—domestic, foreign, Antarctic, and undersea. Its decisions enable all departments and agencies of the US Government to have access to uniform names of geographic

features. The position of the BGN is that the names Burma and Sea of Japan be used in official US Government maps and publications.

Why is most of the statistical information in the Factbook given in metric units, rather than the units standard to US measure?

US Federal agencies are required by the Metric Conversion Act of 1975 (Public Law 94-168) and by Executive Order 12770 of July 1991 to use the International System of Units, commonly referred to as the metric system or SI. In addition, the metric system is used by over 95 percent of the world's population.

Why don't you include information on minimum and maximum temperature extremes?

The Factbook staff judges that this information would only be useful for some (generally smaller) countries. Larger countries can have large temperature extremes that do not represent the landmass as a whole. In the future, such a category may be adopted listing the extremes, but also adding a normal temperature range found throughout most of a country's territory.

What information sources are used for the country flags?

Flag designs used in The World Factbook are those recognized by the protocol office of the US Department of State.

Why do your GDP (Gross Domestic Product) statistics differ from other sources?

GDP dollar estimates in The World Factbook are derived from purchasing power parity (PPP) calculations. See the Notes and Definitions section on GDP methodology for more information.

On the CIA Web site, Chiefs of State is updated weekly, but the last update for the Factbook was an earlier date. Why the discrepancy?

Although Chiefs of State and The World Factbook both appear on the CIA Web site, they are produced and updated by separate staffs. Chiefs of State includes fewer countries but more leaders, and is updated more frequently than The World Factbook, which has a much larger database, and includes all countries.

Some percentage distributions do not add to 100. Why not?

Because of rounding, percentage distributions do not always add precisely to 100%. Rounding of numbers always results in a loss of precision—i.e., error. This error becomes apparent when percentage data are totaled, as the following two examples show:

Original Data Rounded to whole integer

Example 1 43.2 43

30.4 30

26.4 26

—— —

100.0 99

Example 2 42.8 43

31.6 32

25.6 26

—— —

100.0 101

When this occurs, we do not force the numbers to add exactly to 100, because doing so would introduce additional error into the distribution.

What rounding convention does The World Factbook use?

In deciding on the number of digits to present, the Factbook staff assesses the accuracy of the original data and the needs of US Government officials. All of the economic data are processed by computer—either at the source or by the Factbook staff. The economic data presented in The Factbook, therefore, follow the rounding convention used by virtually all numerical software applications, namely, any digit followed by a "5" is rounded up to the next higher digit, no matter whether the original digit is even or odd. Thus, for example, when rounded to the nearest integer, 2.5 becomes 3, rather than 2, as occurred in some pre-computer rounding systems.

Technical

Does The World Factbook comply with Section 508 of the Rehabilitation Act regarding accessibility of Web pages?

The World Factbook home page has a link entitled "Text/Low Bandwidth Version." The country data in the text version is fully accessible. We believe The World Factbook is compliant with the Section 508 law in both fact and spirit. If you are experiencing difficulty, please use our comment form to provide us details of the specific problem you are experiencing and the assistive software and/or hardware that you are using so that we can work with our technical support staff to find and implement a solution. We welcome visitors' suggestions to improve accessibility of The World Factbook and the CIA Web site.

I am using the Factbook online and it is not working. What is wrong?

Hundreds of "Factbook" look-alikes exist on the Internet. The Factbook site at: www.cia.gov is the only official site.

When I attempt to download a PDF (Portable Document Format) map file (or some other map) the file has no image. Can you fix this?

Some of the files on The World Factbook Web site are large and could take several minutes to download on a dial-up connection. The screen might be blank during the download process.

When I open a map on The World Factbook site, it is fuzzy or granular, or too big or too small. Why?

Adjusting the resolution setting on your monitor should correct this problem.

Is The World Factbook country data available in machine-readable format? All I can find is HTML, but I'm looking for simple tabular data.

The Factbook Web site now features "Rank Order" pages for selected Factbook entries. "Rank Order" pages are available for those data fields identified with a small bar chart icon located next to the title of the data entry. In addition, all of the "Rank Order" pages can be downloaded as tab-delimited data files that can be opened in other applications such as spreadsheets and databases.

Introduction Afghanistan

Background:

Afghanistan's recent history is characterized by war and civil unrest. The Soviet Union invaded in 1979, but was forced to withdraw 10 years later by anti-Communist mujahidin forces supplied and trained by the US, Saudi Arabia, Pakistan, and others. Fighting subsequently continued among the various mujahidin factions, giving rise to a state of warlordism that eventually spawned the Taliban. Backed by foreign sponsors, the Taliban developed as a political force and eventually seized power. The Taliban were able to capture most of the country, aside from Northern Alliance strongholds primarily in the northeast, until US and allied military action in support of the opposition following the 11 September 2001 terrorist attacks forced the group's downfall. In late 2001, major leaders from the Afghan opposition groups and diaspora met in Bonn, Germany, and agreed on a plan for the formulation of a new government structure that resulted in the inauguration of Hamid KARZAI as Chairman of the Afghan Interim Authority (AIA) on 22 December 2001. The AIA held a nationwide Loya Jirga (Grand Assembly) in June 2002, and KARZAI was elected President by secret ballot of the Transitional Islamic State of Afghanistan (TISA). The Transitional Authority has an 18-month mandate to hold a nationwide Loya Jirga to adopt a constitution and a 24-month mandate to hold nationwide elections. In December 2002, the TISA marked the one-year anniversary of the fall of the Taliban. In addition to occasionally violent political jockeying and ongoing military action to root out remaining terrorists and Taliban elements, the country suffers from enormous poverty, a crumbling infrastructure, and widespread land mines.

Economy Afghanistan

Economy - overview:

Afghanistan is an extremely poor, landlocked country, highly dependent on foreign aid, farming and livestock raising (sheep and goats), and trade with neighboring countries. Economic considerations have played second fiddle to political and military upheavals during more than two decades of war, including the nearly 10-year Soviet military occupation (which ended 15 February 1989). During that conflict, one-third of the population fled the country, with Pakistan and Iran sheltering a combined peak of 4 to 6 million

refugees. Gross domestic product has fallen substantially over the past 20 years because of the loss of labor and capital and the disruption of trade and transport; severe drought added to the nation's difficulties in 1998-2002. The majority of the population continues to suffer from insufficient food, clothing, housing, and medical care, and a dearth of jobs, problems exacerbated by political uncertainties and the general level of lawlessness. International efforts to rebuild Afghanistan were addressed at the Tokyo Donors Conference for Afghan Reconstruction in January 2002, when \$4.5 billion was pledged, \$1.7 billion for 2002. Of that approximately \$900 million was directed to humanitarian aid - food, clothing, and shelter - and another \$90 million for the Afghan Transitional Authority. Further World Bank and other aid came in 2003. Priority areas for reconstruction include upgrading education, health, and sanitation facilities; providing income generating opportunities; enhancing administrative and security arrangements, especially in regional areas; developing the agricultural sector; rebuilding transportation, energy, and telecommunication infrastructure; and reabsorbing 2 million returning refugees. The replacement of the opium trade - which may account for one-third of GDP - and the search for oil and gas resources in the northern region are two major long-term issues.

isolating terrain and close ties among Pashtuns in Pakistan make
cross-border activities difficult to control; prolonged regional
drought strains water-sharing arrangements for Amu Darya and Helmand
River states

Illicit drugs:
world's largest producer of opium; cultivation of opium poppy -
used to make heroin - expanded to 30,750 hectares in 2002, despite
eradication; potential opium production of 1,278 metric tons; source
of hashish; many narcotics-processing labs throughout the country;
drug trade source of instability and some government groups profit
from the trade; 80-90% of the heroin consumed in Europe comes from
Afghan opium; vulnerable to narcotics money laundering through the
hawala system

Introduction Albania

Background:

Between 1990 and 1992 Albania ended 46 years of xenophobic Communist rule and established a multiparty democracy. The transition has proven difficult as corrupt governments have tried to deal with high unemployment, a dilapidated infrastructure, widespread gangsterism, and disruptive political opponents. International observers judged legislative elections in 2001 to be acceptable and a step toward democratic development, but identified serious deficiencies that should be addressed through reforms in the Albanian electoral code.

Economy Albania

Economy - overview:

Poor and backward by European standards, Albania is making the difficult transition to a more modern open-market economy. The government has taken measures to curb violent crime and to spur economic activity and trade. The economy is bolstered by remittances from abroad of \$400-\$600 million annually, mostly from Greece and Italy; this helps offset the sizable trade deficit. Agriculture, which accounts for half of GDP, is held back because of frequent drought and the need to modernize equipment and consolidate small plots of land. Severe energy shortages are forcing small firms out of business, increasing unemployment, scaring off foreign investors, and spurring inflation. The government plans to boost energy imports to relieve the shortages. In addition, the government is moving to improve the poor national road network, a long-standing barrier to sustained economic growth.

Introduction Algeria

Background:

After a century of rule by France, Algeria became independent in 1962. The surprising first round success of the fundamentalist FIS (Islamic Salvation Front) party in the December 1991 balloting caused the army to intervene, crack down on the FIS, and postpone the subsequent elections. The fundamentalist response has resulted in a continuous low-grade civil conflict with the secular state apparatus, which nonetheless has allowed elections featuring pro-government and moderate religious-based parties. The FIS's armed wing, the Islamic Salvation Army, disbanded in January 2000 and many armed militants of other groups surrendered under an amnesty program designed to promote national reconciliation. Nevertheless, small numbers of armed militants persist in confronting government forces and carrying out isolated attacks on villages and other types of terrorist attacks. Other concerns include Berber unrest, large-scale unemployment, a shortage of housing, and the need to diversify the petroleum-based economy.

Economy Algeria

Economy - overview:

The hydrocarbons sector is the backbone of the economy, accounting for roughly 60% of budget revenues, 30% of GDP, and over 95% of export earnings. Algeria has the fifth-largest reserves of natural gas in the world and is the second-largest gas exporter; it ranks 14th in oil reserves. Algeria's financial and economic indicators improved during the mid-1990s, in part because of policy reforms supported by the IMF and debt rescheduling from the Paris Club. Algeria's finances in 2000-03 benefited from substantial trade surpluses, record foreign exchange reserves, and reductions in foreign debt. Real GDP has risen due to higher oil output and increased government spending. The government's continued efforts to diversify the economy by attracting foreign and domestic investment outside the energy sector, however, has had little success in reducing high unemployment and improving living standards.

@American Samoa

Introduction American Samoa

Background:

Settled as early as 1000 B.C., Samoa was "discovered" by European explorers in the 18th century. International rivalries in the latter

half of the 19th century were settled by an 1899 treaty in which Germany and the US divided the Samoan archipelago. The US formally occupied its portion - a smaller group of eastern islands with the excellent harbor of Pago Pago - the following year.

Economy American Samoa

Economy - overview:

This is a traditional Polynesian economy in which more than 90% of the land is communally owned. Economic activity is strongly linked to the US, with which American Samoa conducts most of its foreign trade. Tuna fishing and tuna processing plants are the backbone of

the private sector, with canned tuna the primary export. Transfers from the US Government add substantially to American Samoa's economic well-being. Attempts by the government to develop a larger and broader economy are restrained by Samoa's remote location, its limited transportation, and its devastating hurricanes. Tourism, a developing sector, has been held back by the recurring financial difficulties in East Asia.

@Andorra

Introduction Andorra

Background:

For 715 years, from 1278 to 1993, Andorrans lived under a unique co-principality, ruled by the French chief of state and the Spanish bishop of Urgel. In 1993, this feudal system was modified with the titular heads of state retained, but the government transformed into a parliamentary democracy. Long isolated and impoverished, mountainous Andorra achieved considerable prosperity since World War II through its tourist industry. Many immigrants (legal and illegal) are attracted to the thriving economy with its lack of income taxes.

Economy Andorra

Economy - overview:

Tourism, the mainstay of Andorra's tiny, well-to-do economy, accounts for roughly 80% of GDP. An estimated 9 million tourists visit annually, attracted by Andorra's duty-free status and by its summer and winter resorts. Andorra's comparative advantage has recently eroded as the economies of neighboring France and Spain have been opened up, providing broader availability of goods and lower tariffs. The banking sector, with its "tax haven" status, also contributes substantially to the economy. Agricultural production is limited - only 2% of the land is arable - and most food has to be imported. The principal livestock activity is sheep raising. Manufacturing output consists mainly of cigarettes, cigars, and furniture. Andorra is a member of the EU Customs Union and is treated as an EU member for trade in manufactured goods (no tariffs) and as a non-EU member for agricultural products.

@Angola

Introduction Angola

Background:

Civil war has been the norm in Angola since independence from Portugal in 1975. A 1994 peace accord between the government and the National Union for the Total Independence of Angola (UNITA) provided for the integration of former UNITA insurgents into the government and armed forces. A national unity government was installed in April of 1997, but serious fighting resumed in late 1998, rendering hundreds of thousands of people homeless. Up to 1.5 million lives may have been lost in fighting over the past quarter century. The death of insurgent leader Jonas SAVIMBI in 2002 and a subsequent cease-fire with UNITA may bode well for the country.

Economy Angola

Economy - overview:

Angola has been an economy in disarray because of a quarter century of nearly continuous warfare. An apparently durable peace was established after the death of rebel leader Jonas SAVIMBI on February 22, 2002, but consequences from the conflict continue including the impact of wide-spread land mines. Subsistence agriculture provides the main livelihood for 85% of the population. Oil production and the supporting activities are vital to the economy, contributing about 45% to GDP and more than half of exports. Much of the country's food must still be imported. To fully take advantage of its rich natural resources - gold, diamonds, extensive forests, Atlantic fisheries, and large oil deposits - Angola will need to continue reforming government policies. While Angola made progress in bringing inflation down further, from 325% in 2000 to about 106% in 2002, the government has failed to make sufficient progress on reforms recommended by the IMF such as increasing foreign exchange reserves and promoting greater transparency in government spending. Increased oil production should bring about 6% GDP growth in 2003.

@Anguilla

Introduction Anguilla

Background:

Colonized by English settlers from Saint Kitts in 1650, Anguilla was administered by Great Britain until the early 19th century, when the island - against the wishes of the inhabitants - was incorporated into a single British dependency, along with Saint Kitts and Nevis. Several attempts at separation failed. In 1971, two years after a revolt, Anguilla was finally allowed to secede; this arrangement was formally recognized in 1980, with Anguilla becoming a separate British dependency.

Economy Anguilla

Economy - overview:

Anguilla has few natural resources, and the economy depends heavily on luxury tourism, offshore banking, lobster fishing, and

remittances from emigrants. Increased activity in the tourism industry, which has spurred the growth of the construction sector, has contributed to economic growth. Anguillan officials have put substantial effort into developing the offshore financial sector, which is small, but growing. In the medium term, prospects for the economy will depend largely on the tourism sector and, therefore, on revived income growth in the industrialized nations as well as on favorable weather conditions.

Introduction Antarctica

Background:

Speculation over the existence of a "southern land" was not confirmed until the early 1820s when British and American commercial operators and British and Russian national expeditions began exploring the Antarctic Peninsula region and other areas south of the Antarctic Circle. Not until 1840 was it established that

Antarctica was indeed a continent and not just a group of islands. Several exploration "firsts" were achieved in the early 20th century. Following World War II, there was an upsurge in scientific research on the continent. A number of countries have set up year-round research stations on Antarctica. Seven have made territorial claims, but no other country recognizes these claims. In order to form a legal framework for the activities of nations on the continent, an Antarctic Treaty was negotiated that neither denies nor gives recognition to existing territorial claims; signed in 1959, it entered into force in 1961.

Geography Antarctica

Location:

Antarctic Region

Area:

total: 14 million sq km

note: fifth-largest continent, following Asia, Africa, North America, and South America, but larger than Australia and the subcontinent of Europe

land: 14 million sq km (280,000 sq km ice-free, 13.72 million sq km ice-covered) (est.)

Area - comparative:

slightly less than 1.5 times the size of the US

Land boundaries: 0 km note: see entry on International disputes

Coastline:

17,968 km

Maritime claims:

none; 20 of 27 Antarctic consultative nations have made no claims to Antarctic territory (although Russia and the US have reserved the right to do so) and do not recognize the claims of the other nations; also see the Disputes - international entry

Climate:

severe low temperatures vary with latitude, elevation, and distance from the ocean; East Antarctica is colder than West Antarctica because of its higher elevation; Antarctic Peninsula has the most moderate climate; higher temperatures occur in January along the coast and average slightly below freezing

Terrain:

about 98% thick continental ice sheet and 2% barren rock, with average elevations between 2,000 and 4,000 meters; mountain ranges up to nearly 5,000 meters; ice-free coastal areas include parts of southern Victoria Land, Wilkes Land, the Antarctic Peninsula area, and parts of Ross Island on McMurdo Sound; glaciers form ice shelves along about half of the coastline, and floating ice shelves constitute 11% of the area of the continent

Elevation extremes:

lowest point: Bentley Subglacial Trench -2,555 m

highest point: Vinson Massif 4,897 m

note: the lowest known land point in Antarctica is hidden in the Bentley Subglacial Trench; at its surface is the deepest ice yet discovered and the world's lowest elevation not under seawater

Natural resources:

iron ore, chromium, copper, gold, nickel, platinum and other minerals, and coal and hydrocarbons have been found in small uncommercial quantities; none presently exploited; krill, finfish, and crab have been taken by commercial fisheries

Land use: arable land: 0% permanent crops: 0% other: 100% (ice 98%, barren rock 2%) (1998 est.)

Irrigated land:

0 sq km (1998 est.)

Natural hazards:

katabatic (gravity-driven) winds blow coastward from the high interior; frequent blizzards form near the foot of the plateau; cyclonic storms form over the ocean and move clockwise along the coast; volcanism on Deception Island and isolated areas of West Antarctica; other seismic activity rare and weak; large icebergs may calve from ice shelf

Environment - current issues:

in 1998, NASA satellite data showed that the antarctic ozone hole was the largest on record, covering 27 million square kilometers; researchers in 1997 found that increased ultraviolet light coming through the hole damages the DNA of icefish, an antarctic fish lacking hemoglobin; ozone depletion earlier was shown to harm

one-celled antarctic marine plants; in 2002, significant areas of ice shelves disintegrated in response to regional warming

Geography - note:

the coldest, windiest, highest (on average), and driest continent; during summer, more solar radiation reaches the surface at the South Pole than is received at the Equator in an equivalent period; mostly uninhabitable

People Antarctica

Population:

no indigenous inhabitants, but there are seasonally staffed research stations

note: approximately 27 nations, all signatory to the Antarctic Treaty, send personnel to perform seasonal (summer) and year-round research on the continent and in its surrounding oceans; the population of persons doing and supporting science on the continent and its nearby islands south of 60 degrees south latitude (the region covered by the Antarctic Treaty) varies from approximately 4,000 in summer to 1,000 in winter; in addition, approximately 1,000 personnel including ship's crew and scientists doing onboard research are present in the waters of the treaty region; summer (January) population - 3,687 total; Argentina 302, Australia 201, Belgium 13, Brazil 80, Bulgaria 16, Chile 352, China 70, Finland 11, France 100, Germany 51, India 60, Italy 106, Japan 136, South Korea 14, Netherlands 10, NZ 60, Norway 40, Peru 28, Poland 70, Russia 254, South Africa 80, Spain 43, Sweden 20, UK 192, US 1,378 (1998-99); winter (July) population - 964 total; Argentina 165, Australia 75, Brazil 12, Chile 129, China 33, France 33, Germany 9, India 25, Japan 40, South Korea 14, NZ 10, Poland 20, Russia 102,

South Africa 10, UK 39, US 248 (1998-99); year-round stations - 42 total; Argentina 6, Australia 4, Brazil 1, Chile 4, China 2, Finland 1, France 1, Germany 1, India 1, Italy 1, Japan 1, South Korea 1, NZ 1, Norway 1, Poland 1, Russia 6, South Africa 1, Spain 1, Ukraine 1, UK 2, US 3, Uruguay 1 (1998-99); summer-only stations - 32 total; Argentina 3, Australia 4, Bulgaria 1, Chile 7, Germany 1, India 1, Japan 3, NZ 1, Peru 1, Russia 3, Sweden 2, UK 5 (1998-99); in addition, during the austral summer some nations have numerous occupied locations such as tent camps, summer-long temporary facilities, and mobile traverses in support of research (July 2003 est.)

Government type: Antarctic Treaty Summary - the Antarctic Treaty, signed on 1 December 1959 and entered into force on 23 June 1961, establishes the legal framework for the management of Antarctica. The 24th Antarctic Treaty Consultative Meeting was held in Russia in July 2001. At the end of 2001, there were 45 treaty member nations: 27 consultative and 18 non-consultative. Consultative (voting) members include the seven nations that claim portions of Antarctica as national territory (some claims overlap) and 20 nonclaimant nations. The US and Russia have reserved the right to make claims. The US does not recognize the claims of others. Antarctica is administered through meetings of the consultative member nations. Decisions from these meetings are carried out by these member nations (within their areas) in accordance with their own national laws. The year in parentheses indicates when an acceding nation was voted to full consultative (voting) status, while no date indicates the country was an

original 1959 treaty signatory. Claimant nations are - Argentina, Australia, Chile, France, New Zealand, Norway, and the UK. Nonclaimant consultative nations are - Belgium, Brazil (1983), Bulgaria (1998) China (1985), Ecuador (1990), Finland (1989), Germany (1981), India (1983), Italy (1987), Japan, South Korea (1989), Netherlands (1990), Peru (1989), Poland (1977), Russia, South Africa, Spain (1988), Sweden (1988), Uruguay (1985), and the US. Non-consultative (nonvoting) members, with year of accession in parentheses, are - Austria (1987), Canada (1988), Colombia (1989), Cuba (1984), Czech Republic (1993), Denmark (1965), Estonia (2001), Greece (1987), Guatemala (1991), Hungary (1984), North Korea (1987), Papua New Guinea (1981), Romania (1971), Slovakia (1993), Switzerland (1990), Turkey (1995), Ukraine (1992), and Venezuela (1999). Article 1 - area to be used for peaceful purposes only; military activity, such as weapons testing, is prohibited, but military personnel and equipment may be used for scientific research or any other peaceful purpose; Article 2 - freedom of scientific investigation and cooperation shall continue; Article 3 - free exchange of information and personnel, cooperation with the UN and other international agencies; Article 4 - does not recognize, dispute, or establish territorial claims and no new claims shall be asserted while the treaty is in force; Article 5 - prohibits nuclear explosions or disposal of radioactive wastes; Article 6 - includes under the treaty all land and ice shelves south of 60 degrees 00 minutes south and reserves high seas rights; Article 7 - treaty-state observers have free access, including aerial observation, to any area and may inspect all stations, installations, and equipment; advance notice of all expeditions and of the introduction of military personnel must be given; Article 8 - allows for jurisdiction over observers and scientists by their own states; Article 9 - frequent consultative meetings take place among member nations; Article 10 - treaty states will discourage activities by any country in Antarctica that are contrary to the treaty; Article 11 - disputes to be settled peacefully by

the parties concerned or, ultimately, by the ICJ; Articles 12, 13, 14 - deal with upholding, interpreting, and amending the treaty among involved nations. Other agreements - some 200 recommendations adopted at treaty consultative meetings and ratified by governments include - Agreed Measures for Fauna and Flora (1964) which were later incorporated into the Environmental Protocol; Convention for the Conservation of Antarctic Seals (1972); Convention on the Conservation of Antarctic Marine Living Resources (1980); a mineral resources agreement was signed in 1988 but remains unratified; the Protocol on Environmental Protection to the Antarctic Treaty was signed 4 October 1991 and entered into force 14 January 1998; this agreement provides for the protection of the Antarctic environment through five specific annexes: 1) marine pollution, 2) fauna and flora, 3) environmental impact assessments, 4) waste management, and 5) protected area management; it prohibits all activities relating to mineral resources except scientific research.

Legal system:

Antarctica is administered through meetings of the consultative member nations. Decisions from these meetings are carried out by these member nations (within their areas) in accordance with their own national laws. US law, including certain criminal offenses by or against US nationals, such as murder, may apply extra-territorially. Some US laws directly apply to Antarctica. For example, the Antarctic Conservation Act, 16 U.S.C. section 2401 et seq., provides civil and criminal penalties for the following activities, unless authorized by regulation of statute: the taking of native mammals or birds; the introduction of nonindigenous plants and animals; entry into specially protected areas; the discharge or disposal of pollutants; and the importation into the US of certain items from Antarctica. Violation of the Antarctic Conservation Act carries penalties of up to \$10,000 in fines and one year in prison. The

National Science Foundation and Department of Justice share enforcement responsibilities. Public Law 95-541, the US Antarctic Conservation Act of 1978, as amended in 1996, requires expeditions from the US to Antarctica to notify, in advance, the Office of Oceans, Room 5805, Department of State, Washington, DC 20520, which reports such plans to other nations as required by the Antarctic Treaty. For more information, contact Permit Office, Office of Polar Programs, National Science Foundation, Arlington, Virginia 22230; telephone: (703) 292-8030, or visit their website at www.nsf.gov.

Economy Antarctica

Economy - overview:

Fishing off the coast and tourism, both based abroad, account for the limited economic activity. Antarctic fisheries in 2000-01 (1 July-30 June) reported landing 112,934 metric tons. Unregulated fishing, particularly of tooth fish, is a serious problem. Allegedly illegal fishing in antarctic waters in 1998 resulted in the seizure (by France and Australia) of at least eight fishing ships. The Convention on the Conservation of Antarctic Marine Living Resources determines the recommended catch limits for marine species. A total of 12,248 tourists visited in the 2000-01 antarctic summer, down from the 14,762 who visited the previous year. Nearly all of them were passengers on 21 commercial (nongovernmental) ships and several yachts that made trips during the summer. Most tourist trips lasted approximately two weeks.

Transportation Antarctica

Ports and harbors:

there are no developed ports and harbors in Antarctica; most coastal stations have offshore anchorages, and supplies are transferred from ship to shore by small boats, barges, and helicopters; a few stations have a basic wharf facility; US coastal stations include McMurdo (77 51 S, 166 40 E), Palmer (64 43 S, 64 03 W); government use only except by permit (see Permit Office under "Legal System"); all ships at port are subject to inspection in accordance with Article 7, Antarctic Treaty; offshore anchorage is sparse and intermittent

Airports:

30

note: 30 stations, operated by 16 national governments party to the Antarctic Treaty, have aircraft landing facilities for either helicopters and/or fixed-wing aircraft; commercial enterprises operate two additional aircraft landing facilities; helicopter pads are available at 27 stations; runways at 15 locations are gravel, sea-ice, blue-ice, or compacted snow suitable for landing wheeled, fixed-wing aircraft; of these, 1 is greater than 3 km in length, 6 are between 2 km and 3 km in length, 3 are between 1 km and 2 km in length, 3 are less than 1 km in length, and 2 are of unknown length; snow surface skiways, limited to use by ski-equipped, fixed-wing aircraft, are available at another 15 locations; of these, 4 are greater than 3 km in length, 3 are between 2 km and 3 km in length, 2 are between 1 km and 2 km in length, 2 are less than 1 km in length, and 4 are of unknown length; aircraft landing facilities generally subject to severe restrictions and limitations resulting

from extreme seasonal and geographic conditions; aircraft landing facilities do not meet ICAO standards; advance approval from the respective governmental or nongovernmental operating organization required for landing; landed aircraft are subject to inspection in accordance with Article 7, Antarctic Treaty (2002)

Heliports: 27 stations have helicopter landing facilities (helipads) (2002)

Military Antarctica

Military - note:

the Antarctic Treaty prohibits any measures of a military nature, such as the establishment of military bases and fortifications, the carrying out of military maneuvers, or the testing of any type of weapon; it permits the use of military personnel or equipment for scientific research or for any other peaceful purposes

Transnational Issues Antarctica

Disputes - international:

Antarctic Treaty freezes claims (see Antarctic Treaty Summary in Government type entry); sections (some overlapping) claimed by Argentina, Australia, Chile, France, NZ, Norway, and UK; the US and most other states do not recognize the territorial claims of other states and have made no claims themselves (the US and Russia reserve the right to do so); no claims have been made in the sector between 90 degrees west and 150 degrees west; several states with land claims in Antarctica have expressed their intention to submit data

to the UN Commission on the Limits of the Continental Shelf to extend their continental shelf claims to adjoining undersea ridges

@Antigua and Barbuda

Introduction Antigua and Barbuda

Background:

The Siboney were the first to inhabit the islands of Antigua and Barbuda in 2400 B.C., but Arawak and Carib Indians populated the islands when Columbus landed on his second voyage in 1493. Early settlements by the Spanish and French were succeeded by the English who formed a colony in 1667. Slavery, established to run the sugar plantations on Antigua, was abolished in 1834. The islands became an independent state within the British Commonwealth of Nations in 1981.

Economy Antigua and Barbuda

Economy - overview:

Tourism continues to dominate the economy, accounting for more than half of GDP. Weak tourist arrival numbers since early 2000 have slowed the economy, however, and pressed the government into a tight fiscal corner. The dual-island nation's agricultural production is focused on the domestic market and constrained by a limited water supply and a labor shortage stemming from the lure of higher wages in tourism and construction. Manufacturing comprises enclave-type assembly for export with major products being bedding, handicrafts, and electronic components. Prospects for economic growth in the medium term will continue to depend on income growth in the industrialized world, especially in the US, which accounts for slightly more than one-third of tourist arrivals.

@Arctic Ocean

Introduction Arctic Ocean

Background:

The Arctic Ocean is the smallest of the world's five oceans (after the Pacific Ocean, Atlantic Ocean, Indian Ocean, and the recently delimited Southern Ocean). The Northwest Passage (US and Canada) and Northern Sea Route (Norway and Russia) are two important seasonal

waterways. A sparse network of air, ocean, river, and land routes circumscribes the Arctic Ocean.

Geography Arctic Ocean

Location:

body of water between Europe, Asia, and North America, mostly north of the Arctic Circle

Geographic coordinates:

90 00 N, 0 00 E

Map references:

Arctic Region

Area:

total: 14.056 million sq km

note: includes Baffin Bay, Barents Sea, Beaufort Sea, Chukchi Sea, East Siberian Sea, Greenland Sea, Hudson Bay, Hudson Strait, Kara Sea, Laptev Sea, Northwest Passage, and other tributary water bodies

Area - comparative:

slightly less than 1.5 times the size of the US

Coastline:

45,389 km

Climate:

polar climate characterized by persistent cold and relatively narrow annual temperature ranges; winters characterized by continuous darkness, cold and stable weather conditions, and clear

skies; summers characterized by continuous daylight, damp and foggy weather, and weak cyclones with rain or snow

Terrain:

central surface covered by a perennial drifting polar icepack that averages about 3 meters in thickness, although pressure ridges may be three times that size; clockwise drift pattern in the Beaufort Gyral Stream, but nearly straight-line movement from the New Siberian Islands (Russia) to Denmark Strait (between Greenland and Iceland); the icepack is surrounded by open seas during the summer, but more than doubles in size during the winter and extends to the encircling landmasses; the ocean floor is about 50% continental shelf (highest percentage of any ocean) with the remainder a central basin interrupted by three submarine ridges (Alpha Cordillera, Nansen Cordillera, and Lomonosov Ridge)

Elevation extremes:

lowest point: Fram Basin -4,665 m

highest point: sea level 0 m

Natural resources:

sand and gravel aggregates, placer deposits, polymetallic nodules, oil and gas fields, fish, marine mammals (seals and whales)

Natural hazards:

ice islands occasionally break away from northern Ellesmere Island; icebergs calved from glaciers in western Greenland and extreme northeastern Canada; permafrost in islands; virtually ice locked from October to June; ships subject to superstructure icing from October to May

Environment - current issues:

endangered marine species include walruses and whales; fragile ecosystem slow to change and slow to recover from disruptions or damage; thinning polar icepack

Geography - note:

major chokepoint is the southern Chukchi Sea (northern access to the Pacific Ocean via the Bering Strait); strategic location between North America and Russia; shortest marine link between the extremes of eastern and western Russia; floating research stations operated by the US and Russia; maximum snow cover in March or April about 20 to 50 centimeters over the frozen ocean; snow cover lasts about 10 months

Economy Arctic Ocean

Economy - overview:

Economic activity is limited to the exploitation of natural resources, including petroleum, natural gas, fish, and seals.

Transportation Arctic Ocean

Ports and harbors:

Churchill (Canada), Murmansk (Russia), Prudhoe Bay (US)

Transportation - note:

sparse network of air, ocean, river, and land routes; the Northwest Passage (North America) and Northern Sea Route (Eurasia) are important seasonal waterways

Transnational Issues Arctic Ocean

Disputes - international: some maritime disputes (see littoral states)

@Argentina

Introduction Argentina

Background:

Following independence from Spain in 1816, Argentina experienced periods of internal political conflict between conservatives and liberals and between civilian and military factions. After World War II, a long period of Peronist authoritarian rule and interference in subsequent governments was followed by a military junta that took power in 1976. Democracy returned in 1983, and numerous elections since then have underscored Argentina's progress in democratic consolidation.

Geography Argentina

Location:

Economy Argentina

Economy - overview:

Argentina benefits from rich natural resources, a highly literate population, an export-oriented agricultural sector, and a diversified industrial base. Over the past decade, however, the country has suffered recurring economic problems of inflation, external debt, capital flight, and budget deficits. Growth in 2000 was a negative 0.8%, as both domestic and foreign investors remained skeptical of the government's ability to pay debts and maintain the peso's fixed exchange rate with the US dollar. The economic situation worsened in 2001 with the widening of spreads on Argentine bonds, massive withdrawals from the banks, and a further decline in consumer and investor confidence. Government efforts to achieve a "zero deficit," to stabilize the banking system, and to restore economic growth proved inadequate in the face of the mounting economic problems. The peso's peg to the dollar was abandoned in January 2002, and the peso was floated in February; the exchange rate plunged and inflation picked up rapidly, but by mid-2002 the economy had stabilized, albeit at a lower level. Strong demand for the peso compelled the Central Bank to intervene in foreign exchange markets to curb its appreciation in early 2003. Led by record

exports, the economy began to recover with output up 5.5% in 2003, unemployment falling, and inflation sliced to 4.2% at year-end.

incidents persist since 1992 oil discovery; territorial claim in Antarctica partially overlaps UK and Chilean claims (see Antarctic disputes); unruly region at convergence of Argentina-Brazil-Paraguay borders is locus of money laundering, smuggling, arms and drug trafficking, and harbors Islamist militants; uncontested dispute between Brazil and Uruguay over Braziliera Island in the Quarai/Cuareim leaves the tripoint with Argentina in question

Illicit drugs:

used as a transshipment country for cocaine headed for Europe and the US; some money-laundering activity, especially in the Tri-Border Area; domestic consumption of drugs in urban centers is increasing

@Armenia

Introduction Armenia

Background:

Armenia prides itself on being the first nation to formally adopt Christianity (early 4th century). Despite periods of autonomy, over the centuries Armenia came under the sway of various empires

including the Roman, Byzantine, Arab, Persian, and Ottoman. It was incorporated into Russia in 1828 and the USSR in 1920. Armenian leaders remain preoccupied by the long conflict with Muslim Azerbaijan over Nagorno-Karabakh, a primarily Armenian-populated region, assigned to Soviet Azerbaijan in the 1920s by Moscow. Armenia and Azerbaijan began fighting over the area in 1988; the struggle escalated after both countries attained independence from the Soviet Union in 1991. By May 1994, when a cease-fire took hold, Armenian forces held not only Nagorno-Karabakh but also a significant portion of Azerbaijan proper. The economies of both sides have been hurt by their inability to make substantial progress toward a peaceful resolution.

Economy Armenia

Economy - overview:

Under the old Soviet central planning system, Armenia had developed a modern industrial sector, supplying machine tools, textiles, and other manufactured goods to sister republics in exchange for raw materials and energy. Since the implosion of the USSR in December 1991, Armenia has switched to small-scale agriculture away from the large agroindustrial complexes of the Soviet era. The agricultural sector has long-term needs for more investment and updated technology. The privatization of industry has been at a slower pace, but has been given renewed emphasis by the current administration. Armenia is a food importer, and its mineral deposits (copper, gold, bauxite) are small. The ongoing conflict with Azerbaijan over the ethnic Armenian-dominated region of Nagorno-Karabakh and the breakup of the centrally directed economic system of the former Soviet Union contributed to a severe economic decline in the early 1990s. By 1994, however, the Armenian Government had launched an ambitious IMF-sponsored economic program that has resulted in positive growth rates in 1995-2003. Armenia also has managed to slash inflation, stabilize the local currency (the dram), and privatize most small- and medium-sized enterprises. The chronic energy shortages Armenia suffered in the early and mid-1990s have been offset by the energy supplied by one of its nuclear power plants at Metsamor. Armenia is now a net energy exporter, although it does not have sufficient generating capacity to replace Metsamor, which is under international pressure to close. The electricity distribution system was privatized in 2002. Armenia's severe trade imbalance has been offset somewhat by international aid, domestic restructuring of the economy, and foreign direct investment. Economic ties with Russia remain close, especially in the energy sector.

@Aruba

Introduction Aruba

Background:

Discovered and claimed for Spain in 1499, Aruba was acquired by the

Dutch in 1636. The island's economy has been dominated by three main industries. A 19th century gold rush was followed by prosperity brought on by the opening in 1924 of an oil refinery. The last decades of the 20th century saw a boom in the tourism industry. Aruba seceded from the Netherlands Antilles in 1986 and became a separate, autonomous member of the Kingdom of the Netherlands. Movement toward full independence was halted at Aruba's request in 1990.

Economy Aruba

Economy - overview:

Tourism is the mainstay of the small, open Aruban economy, with offshore banking and oil refining and storage also important. The rapid growth of the tourism sector over the last decade has resulted in a substantial expansion of other activities. Construction has boomed, with hotel capacity five times the 1985 level. In addition, the reopening of the country's oil refinery in 1993, a major source of employment and foreign exchange earnings, has further spurred growth. Aruba's small labor force and low unemployment rate have led to a large number of unfilled job vacancies, despite sharp rises in wage rates in recent years. Tourist arrivals have declined in the aftermath of the 11 September 2001 terrorist attacks on the US. The government now must deal with a budget deficit and a negative trade balance.

@Atlantic Ocean

Introduction Atlantic Ocean

Background:

The Atlantic Ocean is the second largest of the world's five oceans (after the Pacific Ocean, but larger than the Indian Ocean, Southern Ocean, and Arctic Ocean). The Kiel Canal (Germany), Oresund (Denmark-Sweden), Bosphorus (Turkey), Strait of Gibraltar (Morocco-Spain), and the Saint Lawrence Seaway (Canada-US) are important strategic access waterways.

Geography Atlantic Ocean

Location:

body of water between Africa, Europe, the Southern Ocean, and the Western Hemisphere

Geographic coordinates:

0 00 N, 25 00 W

Map references:

Political Map of the World

Area:

total: 76.762 million sq km

note: includes Baltic Sea, Black Sea, Caribbean Sea, Davis Strait, Denmark Strait, part of the Drake Passage, Gulf of Mexico, Labrador Sea, Mediterranean Sea, North Sea, Norwegian Sea, almost all of the Scotia Sea, and other tributary water bodies

Area - comparative:

slightly less than 6.5 times the size of the US

Coastline:

111,866 km

Climate:

tropical cyclones (hurricanes) develop off the coast of Africa near Cape Verde and move westward into the Caribbean Sea; hurricanes can occur from May to December, but are most frequent from August to November

Terrain:

surface usually covered with sea ice in Labrador Sea, Denmark Strait, and coastal portions of the Baltic Sea from October to June; clockwise warm-water gyre (broad, circular system of currents) in the northern Atlantic, counterclockwise warm-water gyre in the southern Atlantic; the ocean floor is dominated by the Mid-Atlantic Ridge, a rugged north-south centerline for the entire Atlantic basin

Elevation extremes:

lowest point: Milwaukee Deep in the Puerto Rico Trench -8,605 m

highest point: sea level 0 m

Natural resources:

oil and gas fields, fish, marine mammals (seals and whales), sand and gravel aggregates, placer deposits, polymetallic nodules, precious stones

Natural hazards:

icebergs common in Davis Strait, Denmark Strait, and the northwestern Atlantic Ocean from February to August and have been spotted as far south as Bermuda and the Madeira Islands; ships subject to superstructure icing in extreme northern Atlantic from October to May; persistent fog can be a maritime hazard from May to September; hurricanes (May to December)

Environment - current issues:

endangered marine species include the manatee, seals, sea lions, turtles, and whales; drift net fishing is hastening the decline of fish stocks and contributing to international disputes; municipal sludge pollution off eastern US, southern Brazil, and eastern Argentina; oil pollution in Caribbean Sea, Gulf of Mexico, Lake Maracaibo, Mediterranean Sea, and North Sea; industrial waste and municipal sewage pollution in Baltic Sea, North Sea, and Mediterranean Sea

Geography - note:

major chokepoints include the Dardanelles, Strait of Gibraltar, access to the Panama and Suez Canals; strategic straits include the Strait of Dover, Straits of Florida, Mona Passage, The Sound

(Oresund), and Windward Passage; the Equator divides the Atlantic Ocean into the North Atlantic Ocean and South Atlantic Ocean

Economy Atlantic Ocean

Economy - overview:

The Atlantic Ocean provides some of the world's most heavily trafficked sea routes, between and within the Eastern and Western Hemispheres. Other economic activity includes the exploitation of natural resources, e.g., fishing, the dredging of aragonite sands (The Bahamas), and production of crude oil and natural gas (Caribbean Sea, Gulf of Mexico, and North Sea).

Transportation Atlantic Ocean

Ports and harbors:

Alexandria (Egypt), Algiers (Algeria), Antwerp (Belgium), Barcelona (Spain), Buenos Aires (Argentina), Casablanca (Morocco), Colon (Panama), Copenhagen (Denmark), Dakar (Senegal), Gdansk (Poland), Hamburg (Germany), Helsinki (Finland), Las Palmas (Canary Islands, Spain), Le Havre (France), Lisbon (Portugal), London (UK), Marseille (France), Montevideo (Uruguay), Montreal (Canada), Naples (Italy), New Orleans (US), New York (US), Oran (Algeria), Oslo (Norway), Peiraiefs or Piraeus (Greece), Rio de Janeiro (Brazil), Rotterdam (Netherlands), Saint Petersburg (Russia), Stockholm (Sweden)

Transportation - note:

Kiel Canal and Saint Lawrence Seaway are two important waterways;

significant domestic commercial and recreational use of Intracoastal Waterway on central and south Atlantic seaboard and Gulf of Mexico coast of US

Transnational Issues Atlantic Ocean

Disputes - international: some maritime disputes (see littoral states)

@Australia

Introduction Australia

Background:

Australia became a commonwealth of the British Empire in 1901. It was able to take advantage of its natural resources to rapidly develop its agricultural and manufacturing industries and to make a major contribution to the British effort in World Wars I and II. Long-term concerns include pollution, particularly depletion of the ozone layer, and management and conservation of coastal areas, especially the Great Barrier Reef. A referendum to change

Australia's status, from a commonwealth headed by the British monarch to a republic, was defeated in 1999.

Economy Australia

Economy - overview:

Australia has a prosperous Western-style capitalist economy, with a per capita GDP on par with the four dominant West European economies. Rising output in the domestic economy has been offsetting the global slump, and business and consumer confidence remains robust. Australia's emphasis on reforms is another key factor behind the economy's strength. The stagnant economic conditions in major export partners and the impact of the worst drought in 100 years cast a shadow over prospects for 2003.

Introduction Austria

Background:

Once the center of power for the large Austro-Hungarian Empire, Austria was reduced to a small republic after its defeat in World War I. Following annexation by Nazi Germany in 1938 and subsequent occupation by the victorious Allies in 1945, Austria's status remained unclear for a decade. A State Treaty signed in 1955 ended the occupation, recognized Austria's independence, and forbade unification with Germany. A constitutional law that same year declared the country's "perpetual neutrality" as a condition for Soviet military withdrawal. This neutrality, once ingrained as part of the Austrian cultural identity, has been called into question since the Soviet collapse of 1991 and Austria's entry into the European Union in 1995. A prosperous country, Austria entered the European Monetary Union in 1999.

Economy Austria

Economy - overview:
Austria, with its well-developed market economy and high standard of living, is closely tied to other EU economies, especially Germany's. Membership in the EU has drawn an influx of foreign investors attracted by Austria's access to the single European market and proximity to EU aspirant economies. Slowing growth in Germany and elsewhere in the world held the economy to only 1.2% growth in 2001, 0.6% in 2002, and 0.8% in 2003.. To meet increased competition from both EU and Central European countries, Austria will need to emphasize knowledge-based sectors of the economy, continue to deregulate the service sector, and lower its tax burden. A key issue is the encouragement of much greater participation in the labor market by its ageing population.

Introduction Azerbaijan

Background:

Azerbaijan - a nation with a Turkic and majority-Muslim population - regained its independence after the collapse of the Soviet Union in 1991. Despite a 1994 cease-fire, Azerbaijan has yet to resolve its conflict with Armenia over the Azerbaijani Nagorno-Karabakh enclave (largely Armenian populated). Azerbaijan has lost 16% of its territory and must support some 800,000 refugees and internally displaced persons as a result of the conflict. Corruption is ubiquitous and the promise of widespread wealth from Azerbaijan's undeveloped petroleum resources remains largely unfulfilled.

Geography Azerbaijan

Location:

Southwestern Asia, bordering the Caspian Sea, between Iran and Russia, with a small European portion north of the Caucasus range

Geographic coordinates:

40 30 N, 47 30 E

Map references:

Asia

Area:

total: 86,600 sq km

note: includes the exclave of Naxcivan Autonomous Republic and the Nagorno-Karabakh region; the region's autonomy was abolished by

Azerbaijani Supreme Soviet on 26 November 1991

water: 500 sq km

land: 86,100 sq km

Area - comparative:

slightly smaller than Maine

Land boundaries:

total: 2,013 km

border countries: Armenia (with Azerbaijan-proper) 566 km, Armenia (with Azerbaijan-Naxcivan exclave) 221 km, Georgia 322 km, Iran (with Azerbaijan-proper) 432 km, Iran (with Azerbaijan-Naxcivan exclave) 179 km, Russia 284 km, Turkey 9 km

Coastline:

0 km (landlocked); note - Azerbaijan borders the Caspian Sea (800 km, est.)

Maritime claims:

none (landlocked)

Climate:

dry, semiarid steppe

Terrain:

large, flat Kur-Araz Ovaligi (Kura-Araks Lowland) (much of it below sea level) with Great Caucasus Mountains to the north, Qarabag Yaylasi (Karabakh Upland) in west; Baku lies on Abseron Yasaqligi (Apsheron Peninsula) that juts into Caspian Sea

Elevation extremes: lowest point: Caspian Sea -28 m highest point: Bazarduzu Dagi 4,485 m

Natural resources: petroleum, natural gas, iron ore, nonferrous metals, alumina

Land use: arable land: 19.31% permanent crops: 3.04% other: 77.65% (1998 est.)

Irrigated land:
14,550 sq km (1998 est.)

Natural hazards:
droughts

Environment - current issues:
local scientists consider the Abseron Yasaqligi (Apsheeron Peninsula) (including Baku and Sumqayit) and the Caspian Sea to be the ecologically most devastated area in the world because of severe air, soil, and water pollution; soil pollution results from oil spills, from the use of DDT as a pesticide, and from toxic defoliants used in the production of cotton

Environment - international agreements:
party to: Biodiversity, Climate Change, Climate Change-Kyoto Protocol, Desertification, Endangered Species, Hazardous Wastes, Marine Dumping, Ozone Layer Protection, Wetlands
signed, but not ratified: none of the selected agreements

Geography - note:
both the main area of the country and the Naxcivan exclave are landlocked

Economy Azerbaijan

Economy - overview:

Azerbaijan's number one export is oil. Azerbaijan's oil production declined through 1997 but has registered an increase every year since. Negotiation of production-sharing arrangements (PSAs) with foreign firms, which have thus far committed \$60 billion to long-term oilfield development, should generate the funds needed to spur future industrial development. Oil production under the first of these PSAs, with the Azerbaijan International Operating Company,

began in November 1997. Azerbaijan shares all the formidable problems of the former Soviet republics in making the transition from a command to a market economy, but its considerable energy resources brighten its long-term prospects. Baku has only recently begun making progress on economic reform, and old economic ties and structures are slowly being replaced. One obstacle to economic progress is the need for stepped up foreign investment in the non-energy sector. A second obstacle is the continuing conflict with Armenia over the Nagorno-Karabakh region. Trade with Russia and the other former Soviet republics is declining in importance while trade is building with Turkey and the nations of Europe. Long-term prospects will depend on world oil prices, the location of new pipelines in the region, and Azerbaijan's ability to manage its oil wealth.

@Bahamas, The

Introduction Bahamas, The

Background:

Arawak Indians inhabited the islands when Christopher Columbus first set foot in the New World on San Salvador in 1492. British settlement of the islands began in 1647; the islands became a colony in 1783. Since attaining independence from the UK in 1973, The Bahamas have prospered through tourism and international banking and investment management. Because of its geography, the country is a major transshipment point for illegal drugs, particularly shipments to the US, and its territory is used for smuggling illegal migrants into the US.

Economy Bahamas, The

Economy - overview:

The Bahamas is a stable, developing nation with an economy heavily dependent on tourism and offshore banking. Tourism alone accounts for more than 60% of GDP and directly or indirectly employs half of the archipelago's labor force. Steady growth in tourism receipts and a boom in construction of new hotels, resorts, and residences had led to solid GDP growth in recent years, but the slowdown in the US economy and the attacks of 11 September 2001 held back growth in these sectors in 2002. Manufacturing and agriculture together contribute approximately a tenth of GDP and show little growth, despite government incentives aimed at those sectors. Overall growth prospects in the short run rest heavily on the fortunes of the tourism sector, which depends on growth in the US, the source of most of the visitors.

@Bahrain

Introduction Bahrain

Background:
Bahrain's small size and central location among Persian Gulf

countries require it to play a delicate balancing act in foreign affairs among its larger neighbors. Facing declining oil reserves, Bahrain has turned to petroleum processing and refining and has transformed itself into an international banking center. The new amir, installed in 1999, has pushed economic and political reforms and has worked to improve relations with the Shi'a community. In February 2001, Bahraini voters approved a referendum on the National Action Charter - the centerpiece of the amir's political liberalization program. In February 2002, Amir HAMAD bin Isa Al Khalifa proclaimed himself king. In October 2002, Bahrainis elected members of the lower house of Bahrain's reconstituted bicameral legislature, the National Assembly.

Economy Bahrain

Economy - overview:

In Bahrain, petroleum production and refining account for about 60% of export receipts, 60% of government revenues, and 30% of GDP. With its highly developed communication and transport facilities, Bahrain is home to numerous multinational firms with business in the Gulf. Bahrain is dependent on Saudi Arabia for oil granted as aid. A large share of exports consists of petroleum products made from refining imported crude. Construction proceeds on several major industrial projects. Unemployment, especially among the young, and the depletion of oil and underground water resources are major long-term economic problems.

@Baker Island

Introduction Baker Island

Background:

The US took possession of the island in 1857, and its guano deposits were mined by US and British companies during the second half of the 19th century. In 1935, a short-lived attempt at colonization was begun on this island - as well as on nearby Howland Island - but was disrupted by World War II and thereafter abandoned. Presently the island is a National Wildlife Refuge run by the US Department of the Interior; a day beacon is situated near the middle of the west coast.

@Bangladesh

Introduction Bangladesh

Background:

Bangladesh came into existence in 1971 when Bengali East Pakistan seceded from its union with West Pakistan. About a third of this extremely poor country floods annually during the monsoon rainy season, hampering economic development.

Geography Bangladesh

Location:

Southern Asia, bordering the Bay of Bengal, between Burma and India

Geographic coordinates:

24 00 N, 90 00 E

Map references:

Asia

Area:

total: 144,000 sq km

land: 133,910 sq km

water: 10,090 sq km

Area - comparative:

slightly smaller than Iowa

Land boundaries: total: 4,246 km border countries: Burma 193 km, India 4,053 km

Coastline:

580 km

Maritime claims:

contiguous zone: 18 NM

territorial sea: 12 NM

continental shelf: up to the outer limits of the continental margin

exclusive economic zone: 200 NM

Climate:

tropical; mild winter (October to March); hot, humid summer (March to June); humid, warm rainy monsoon (June to October)

Terrain:

mostly flat alluvial plain; hilly in southeast

Elevation extremes: lowest point: Indian Ocean 0 m highest point: Keokradong 1,230 m

Land use: arable land: 60.7% permanent crops: 2.61% other: 36.69% (1998 est.)

Irrigated land:
38,440 sq km (1998 est.)

Natural hazards:
droughts, cyclones; much of the country routinely inundated during the summer monsoon season

Environment - current issues:
many people are landless and forced to live on and cultivate flood-prone land; water-borne diseases prevalent in surface water; water pollution, especially of fishing areas, results from the use of commercial pesticides; ground water contaminated by naturally occurring arsenic; intermittent water shortages because of falling water tables in the northern and central parts of the country; soil degradation and erosion; deforestation; severe overpopulation

Environment - international agreements:
party to: Biodiversity, Climate Change, Climate Change-Kyoto Protocol, Desertification, Endangered Species, Environmental Modification, Hazardous Wastes, Law of the Sea, Nuclear Test Ban, Ozone Layer Protection, Wetlands
signed, but not ratified: none of the selected agreements

Geography - note:

most of the country is situated on deltas of large rivers flowing from the Himalayas: the Ganges unites with the Jamuna (main channel of the Brahmaputra) and later joins the Meghna to eventually empty into the Bay of Bengal

Economy Bangladesh

Economy - overview:

Despite sustained domestic and international efforts to improve economic and demographic prospects, Bangladesh remains a poor, overpopulated, and ill-governed nation. Although half of GDP is generated through the service sector, nearly two-thirds of Bangladeshis are employed in the agriculture sector, with rice as the single-most-important product. Major impediments to growth include frequent cyclones and floods, inefficient state-owned enterprises, inadequate port facilities, a rapidly growing labor force that cannot be absorbed by agriculture, delays in exploiting energy resources (natural gas), insufficient power supplies, and slow implementation of economic reforms. Economic reform is stalled in many instances by political infighting and corruption at all levels of government. Progress also has been blocked by opposition from the bureaucracy, public sector unions, and other vested interest groups. The BNP government, led by Prime Minister Khaleda ZIA, has the parliamentary strength to push through needed reforms,

but the party's political will to do so has been lacking in key areas.

@Barbados

Introduction Barbados

Background:

The island was uninhabited when first settled by the British in 1627. Slaves worked the sugar plantations established on the island until 1834 when slavery was abolished. The economy remained heavily dependent on sugar, rum, and molasses production through most of the 20th century. The gradual introduction of social and political reforms in the 1940s and 1950s led to complete independence from the UK in 1966. In the 1990s, tourism and manufacturing surpassed the sugar industry in economic importance.

Economy Barbados

Economy - overview:

Historically, the Barbadian economy had been dependent on sugarcane cultivation and related activities, but production in recent years has diversified into manufacturing and tourism. Offshore finance and information services are important foreign exchange earners, and there is also a light-manufacturing sector. The government continues its efforts to reduce unemployment, to encourage direct foreign

investment, and to privatize remaining state-owned enterprises. The economy contracted in 2002 mainly due to a 3% decline in tourism. Growth should be positive in 2003, the precise level largely dependent on economic conditions in the US and Europe.

Introduction Belarus

Background:

After seven decades as a constituent republic of the USSR, Belarus attained its independence in 1991. It has retained closer political and economic ties to Russia than any of the other former Soviet republics. Belarus and Russia signed a treaty on a two-state union on 8 December 1999 envisioning greater political and economic integration. Although Belarus agreed to a framework to carry out the accord, serious implementation has yet to take place.

Economy Belarus

Economy - overview:

Belarus has seen little structural reform since 1995, when

President LUKASHENKO launched the country on the path of "market socialism." In keeping with this policy, LUKASHENKO reimposed administrative controls over prices and currency exchange rates and expanded the state's right to intervene in the management of private enterprise. In addition to the burdens imposed by high inflation and persistent trade deficits, businesses have been subject to pressure on the part of central and local governments, e.g., arbitrary changes in regulations, numerous rigorous inspections, retroactive application of new business regulations, and arrests of "disruptive" businessmen and factory owners. A wide range of redistributive policies has helped those at the bottom of the ladder. Close relations with Russia, possibly leading to reunion, color the pattern of economic developments. For the time being, Belarus remains self-isolated from the West and its open-market economies.

Introduction Belgium

Background:

Belgium became independent from the Netherlands in 1830 and was occupied by Germany during World Wars I and II. It has prospered in the past half century as a modern, technologically advanced European state and member of NATO and the EU. Tensions between the Dutch-speaking Flemings of the north and the French-speaking Walloons of the south have led in recent years to constitutional amendments granting these regions formal recognition and autonomy.

Economy Belgium

Economy - overview:

This modern private enterprise economy has capitalized on its central geographic location, highly developed transport network, and diversified industrial and commercial base. Industry is concentrated mainly in the populous Flemish area in the north. With few natural resources, Belgium must import substantial quantities of raw materials and export a large volume of manufactures, making its economy unusually dependent on the state of world markets. Roughly three-quarters of its trade is with other EU countries. Public debt is about 100% of GDP, and the government has succeeded in balancing its budget. Belgium, together with 11 of its EU partners, began circulating the euro currency in January 2002. Economic growth in 2001-03 dropped sharply due to the global economic slowdown. Prospects for 2004 again depend largely on recovery in the EU and the US.

Introduction Belize

Background:

Territorial disputes between the UK and Guatemala delayed the independence of Belize (formerly British Honduras) until 1981. Guatemala refused to recognize the new nation until 1992. Tourism has become the mainstay of the economy. The country remains plagued by high unemployment, growing involvement in the South American drug trade, and increased urban crime.

Economy Belize

Economy - overview:

In this small, essentially private enterprise economy the tourism industry is the number one foreign exchange earner followed by cane sugar, citrus, marine products, bananas, and garments. The government's expansionary monetary and fiscal policies, initiated in September 1998, led to GDP growth of 6.5% in 1999, 10.8% in 2000, 4.6% in 2001, and 3.7% in 2002. Major concerns continue to be the sizable trade deficit and foreign debt. A key short-term objective remains the reduction of poverty with the help of international donors.

Introduction Benin

Background:

Present day Benin was the site of Dahomey, a prominent West African kingdom that rose in the 15th century. The territory became a French Colony in 1872 and achieved independence on 1 August 1960, as the Republic of Benin. A succession of military governments ended in 1972 with the rise to power of Mathieu KEREKOU and the establishment of a government based on Marxist-Leninist principles. A move to representative government began in 1989. Two years later, free elections ushered in former Prime Minister Nicephore SOGLO as president, marking the first successful transfer of power in Africa from a dictatorship to a democracy. KEREKOU was returned to power by

elections held in 1996 and 2001, though some irregularities were alleged.

Economy Benin

Economy - overview:

The economy of Benin remains underdeveloped and dependent on subsistence agriculture, cotton production, and regional trade. Growth in real output has averaged a stable 5% in the past six years, but rapid population rise has offset much of this increase. Inflation has subsided over the past several years. In order to raise growth still further, Benin plans to attract more foreign investment, place more emphasis on tourism, facilitate the development of new food processing systems and agricultural products, and encourage new information and communication technology. The 2001 privatization policy should continue in telecommunications, water, electricity, and agriculture in spite of initial government reluctance. The Paris Club and bilateral creditors have eased the external debt situation, while pressing for speeded-up structural reforms.

@Bermuda

Introduction Bermuda

Background:

Bermuda was first settled in 1609 by shipwrecked English colonists headed for Virginia. Tourism to the island to escape North American winters first developed in Victorian times. Tourism continues to be important to the island's economy, although international business has overtaken it in recent years. Bermuda has developed into a highly successful offshore financial center. A referendum on independence was soundly defeated in 1995.

Economy Bermuda

Economy - overview:

Bermuda enjoys one of the highest per capita incomes in the world, with its economy primarily based on providing financial services for international business and luxury facilities for tourists. The effects of 11 September 2001 have had both positive and negative ramifications for Bermuda. On the positive side, a number of new reinsurance companies have located on the island, contributing to the expansion of an already robust international business sector. On the negative side, Bermuda's tourism industry - which derives over 80% of its visitors from the US - has been severely hit as American tourists have chosen not to travel. Tourism rebounded somewhat in 2002, but remains below the pre-11 September level. Most capital equipment and food must be imported. Bermuda's industrial sector is small, although construction continues to be important. Agriculture is limited, only 6% of the land being arable.

@Bhutan

Introduction Bhutan

Background:

In 1865, Britain and Bhutan signed the Treaty of Sinchulu, under which Bhutan would receive an annual subsidy in exchange for ceding some border land. Under British influence, a monarchy was set up in 1907; three years later, a treaty was signed whereby the British agreed not to interfere in Bhutanese internal affairs and Bhutan allowed Britain to direct its foreign affairs. This role was assumed by independent India after 1947. Two years later, a formal Indo-Bhutanese accord returned the areas of Bhutan annexed by the British, formalized the annual subsidies the country received, and defined India's responsibilities in defense and foreign relations. A refugee issue of some 100,000 Bhutanese in Nepal remains unresolved; 90% of the refugees are housed in seven United Nations Office of the High Commissioner for Refugees (UNHCR) camps. Maoist Assamese separatists from India, who have established themselves in the southeast portion of Bhutan, have drawn Indian cross-border incursions.

Economy Bhutan

Economy - overview:

The economy, one of the world's smallest and least developed, is based on agriculture and forestry, providing the main livelihood for more than 90% of the population. Agriculture consists largely of subsistence farming and animal husbandry. Rugged mountains dominate the terrain and make the building of roads and other infrastructure difficult and expensive. The economy is closely aligned with India's through strong trade and monetary links and dependence on India's financial assistance. The industrial sector is technologically backward, with most production of the cottage industry type. Most development projects, such as road construction, rely on Indian migrant labor. Bhutan's hydropower potential and its attraction for tourists are key resources. The government has made some progress in expanding the nation's productive base and improving social welfare. Model education, social, and environment programs are underway with support from multilateral development organizations. Each economic program takes into account the government's desire to protect the country's environment and cultural traditions. Detailed controls and uncertain policies in areas like industrial licensing, trade, labor, and finance continue to hamper foreign investment.

Introduction Bolivia

Background:
Bolivia, named after independence fighter Simon BOLIVAR, broke away from Spanish rule in 1825; much of its subsequent history has consisted of a series of nearly 200 coups and counter-coups. Comparatively democratic civilian rule was established in the 1980s, but leaders have faced difficult problems of deep-seated poverty,

social unrest, and drug production. Current goals include attracting foreign investment, strengthening the educational system, resolving disputes with coca growers over Bolivia's counterdrug efforts, continuing the privatization program, and waging an anticorruption campaign.

Economy Bolivia

Economy - overview:

Bolivia, long one of the poorest and least developed Latin American countries, made considerable progress in the 1990s toward the development of a market-oriented economy. Successes under President

SANCHEZ DE LOZADA (1993-97) included the signing of a free trade agreement with Mexico and becoming an associate member of the Southern Cone Common Market (Mercosur), as well as the privatization of the state airline, telephone company, railroad, electric power company, and oil company. Growth slowed in 1999, in part due to tight government budget policies, which limited needed appropriations for anti-poverty programs, and the fallout from the Asian financial crisis. In 2000, major civil disturbances held down growth to 2.5%. Bolivia's GDP failed to grow in 2001 due to the global slowdown and laggard domestic activity. Growth picked up slightly in 2002, but the first quarter of 2003 saw extensive civil riots and looting and loss of confidence in the government. Bolivia will remain highly dependent on foreign aid unless and until it can develop its substantial natural resources.

@Bosnia and Herzegovina

Introduction Bosnia and Herzegovina

Background:

Bosnia and Herzegovina's declaration of sovereignty in October 1991, was followed by a declaration of independence from the former Yugoslavia on 3 March 1992 after a referendum boycotted by ethnic Serbs. The Bosnian Serbs - supported by neighboring Serbia and

Montenegro - responded with armed resistance aimed at partitioning the republic along ethnic lines and joining Serb-held areas to form a "greater Serbia." In March 1994, Bosniaks and Croats reduced the number of warring factions from three to two by signing an agreement creating a joint Bosniak/Croat Federation of Bosnia and Herzegovina. On 21 November 1995, in Dayton, Ohio, the warring parties initialed a peace agreement that brought to a halt three years of interethnic civil strife (the final agreement was signed in Paris on 14 December 1995). The Dayton Agreement retained Bosnia and Herzegovina's international boundaries and created a joint multi-ethnic and democratic government. This national government was charged with conducting foreign, economic, and fiscal policy. Also recognized was a second tier of government comprised of two entities roughly equal in size: the Bosniak/Croat Federation of Bosnia and Herzegovina and the Bosnian Serb-led Republika Srpska (RS). The Federation and RS governments were charged with overseeing internal functions. In 1995-96, a NATO-led international peacekeeping force (IFOR) of 60,000 troops served in Bosnia to implement and monitor the military aspects of the agreement. IFOR was succeeded by a smaller, NATO-led Stabilization Force (SFOR) whose mission is to deter renewed hostilities. SFOR remains in place although troop levels were reduced to approximately 12,000 by the close of 2002.

Government - note:
The Dayton Agreement, signed in Paris on 14 December 1995, retained Bosnia and Herzegovina's exterior border and created a joint multi-ethnic and democratic government. This national government - based on proportional representation similar to that which existed in the former socialist regime - is charged with conducting foreign, economic, and fiscal policy. The Dayton Agreement also recognized a second tier of government, comprised of two entities - a joint

Bosniak/Croat Federation of Bosnia and Herzegovina and the Bosnian Serb Republika Srpska (RS) - each presiding over roughly one-half the territory. The Federation and RS governments are charged with overseeing internal functions. The Bosniak/Croat Federation is further divided into 10 cantons. The Dayton Agreement established the Office of the High Representative (OHR) to oversee the implementation of the civilian aspects of the agreement.

Economy Bosnia and Herzegovina

Economy - overview:

Bosnia and Herzegovina ranked next to The Former Yugoslav Republic of Macedonia as the poorest republic in the old Yugoslav federation. Although agriculture is almost all in private hands, farms are small and inefficient, and the republic traditionally is a net importer of food. Industry has been greatly overstaffed, one reflection of the socialist economic structure of Yugoslavia. TITO had pushed the development of military industries in the republic with the result that Bosnia hosted a number of Yugoslavia's defense plants. The bitter interethnic warfare in Bosnia caused production to plummet by 80% from 1990 to 1995, unemployment to soar, and human misery to multiply. With an uneasy peace in place, output recovered in 1996-99 at high percentage rates from a low base; but output growth slowed in 2000-02. GDP remains far below the 1990 level. Economic data are of limited use because, although both entities issue figures, national-level statistics are limited. Moreover, official data do not capture the large share of black market activity. The marka - the national currency introduced in 1998 - is now pegged to the euro, and the Central Bank of Bosnia and Herzegovina has dramatically increased its reserve holdings. Implementation of

privatization, however, has been slow, and local entities only reluctantly support national-level institutions. Banking reform accelerated in 2001 as all the Communist-era payments bureaus were shut down. The country receives substantial amounts of reconstruction assistance and humanitarian aid from the international community but will have to prepare for an era of declining assistance.

Introduction Botswana

Background:

Formerly the British protectorate of Bechuanaland, Botswana adopted its new name upon independence in 1966. Four decades of uninterrupted civilian leadership, progressive social policies, and significant capital investment have created one of the most dynamic economies in Africa. Mineral extraction, principally diamond mining, dominates economic activity, though tourism is a growing sector due to the country's conservation practices and extensive nature preserves. Botswana has the world's highest known rate of HIV/AIDS infection, but also one of Africa's most progressive and comprehensive programs for dealing with the disease.

Economy Botswana

Economy - overview:

Botswana has maintained one of the world's highest growth rates since independence in 1966. Through fiscal discipline and sound management, Botswana has transformed itself from one of the poorest countries in the world to a middle-income country with a per capita GDP of \$9,500 in 2002. Two major investment services rank Botswana as the best credit risk in Africa. Diamond mining has fueled much of the expansion and currently accounts for more than one-third of GDP and for nine-tenths of export earnings. Tourism, subsistence farming, and cattle raising are other key sectors. On the downside, the government must deal with high rates of unemployment and poverty. Unemployment officially is 21%, but unofficial estimates place it closer to 40%. HIV/AIDS infection rates are the highest in the world and threaten Botswana's impressive economic gains. Long-term prospects are overshadowed by the prospects of a leveling off in diamond mining production.

@Bouvet Island

Introduction Bouvet Island

Background:

This uninhabited volcanic island is almost entirely covered by glaciers and is difficult to approach. It was discovered in 1739 by a French naval officer after whom the island was named. No claim was made until 1825, when the British flag was raised. In 1928, the UK waived its claim in favor of Norway, which had occupied the island the previous year. In 1971, Bouvet Island and the adjacent territorial waters were designated a nature reserve. Since 1977, Norway has run an automated meteorological station on the island.

@Brazil

Introduction Brazil

Background:

Following three centuries under the rule of Portugal, Brazil became an independent nation in 1822. By far the largest and most populous country in South America, Brazil has overcome more than half a century of military intervention in the governance of the country to pursue industrial and agricultural growth and development of the interior. Exploiting vast natural resources and a large labor pool, Brazil is today South America's leading economic power and a regional leader. Highly unequal income distribution remains a pressing problem.

Geography Brazil

Location:

Eastern South America, bordering the Atlantic Ocean

Geographic coordinates:

10 00 S, 55 00 W

Map references:

South America

Area:

total: 8,511,965 sq km

land: 8,456,510 sq km

note: includes Arquipelago de Fernando de Noronha, Atol das Rocas, Ilha da Trindade, Ilhas Martin Vaz, and Penedos de Sao Pedro e Sao Paulo

water: 55,455 sq km

Area - comparative:
slightly smaller than the US

Economy Brazil

Economy - overview:

Possessing large and well-developed agricultural, mining, manufacturing, and service sectors, Brazil's economy outweighs that of all other South American countries and is expanding its presence in world markets. The maintenance of large current account deficits

via capital account surpluses became problematic as investors became more risk averse to emerging markets as a consequence of the Asian financial crisis in 1997 and the Russian bond default in August 1998. After crafting a fiscal adjustment program and pledging progress on structural reform, Brazil received a \$41.5 billion IMF-led international support program in November 1998. In January 1999, the Brazilian Central Bank announced that the real would no longer be pegged to the US dollar. The consequent devaluation helped moderate the downturn in economic growth in 1999, and the country posted moderate GDP growth in 2000. Economic growth slowed considerably in 2001-03 - to less than 2% - because of a slowdown in major markets and the hiking of interest rates by the Central Bank to combat inflationary pressures. New president DA SILVA, who took office 1 January 2003, has given priority to reforming the complex tax code, trimming the overblown civil service pension system, and continuing the fight against inflation.

@British Indian Ocean Territory

Introduction British Indian Ocean Territory

Background:

Established as a territory of the UK in 1965, a number of the British Indian Ocean Territory (BIOT) islands were transferred to the Seychelles when it attained independence in 1976. Subsequently, BIOT has consisted only of the six main island groups comprising the Chagos Archipelago. The largest and most southerly of the islands, Diego Garcia, contains a joint UK-US naval support facility. All of the remaining islands are uninhabited. Former agricultural workers, earlier residents in the islands, were relocated primarily to Mauritius but also to the Seychelles, between 1967 and 1973. In 2000, a British High Court ruling invalidated the local immigration order that had excluded them from the archipelago, but upheld the special military status of Diego Garcia.

Economy British Indian Ocean Territory

Economy - overview:

All economic activity is concentrated on the largest island of

Diego Garcia, where joint UK-US defense facilities are located.

Construction projects and various services needed to support the

military installations are done by military and contract employees from the UK, Mauritius, the Philippines, and the US. There are no industrial or agricultural activities on the islands. When the Ilois return, they plan to reestablish sugarcane production and fishing.

Economy British Virgin Islands

Economy - overview:

The economy, one of the most stable and prosperous in the

Caribbean, is highly dependent on tourism, generating an estimated 45% of the national income. An estimated 350,000 tourists, mainly from the US, visited the islands in 1998. Tourism suffered in 2002 because of the lackluster US economy. In the mid-1980s, the government began offering offshore registration to companies wishing to incorporate in the islands, and incorporation fees now generate substantial revenues. Roughly 400,000 companies were on the offshore registry by yearend 2000. The adoption of a comprehensive insurance law in late 1994, which provides a blanket of confidentiality with regulated statutory gateways for investigation of criminal offenses, is expected to make the British Virgin Islands even more attractive to international business. Livestock raising is the most important agricultural activity; poor soils limit the islands' ability to meet domestic food requirements. Because of traditionally close links with the US Virgin Islands, the British Virgin Islands has used the dollar as its currency since 1959.

Introduction Brunei

Background:
The Sultanate of Brunei's influence peaked between the 15th and 17th centuries when its control extended over coastal areas of northwest Borneo and the southern Philippines. Brunei subsequently entered a period of decline brought on by internal strife over royal succession, colonial expansion of European powers, and piracy. In 1888, Brunei became a British protectorate; independence was achieved in 1984. The same family has ruled Brunei for over six centuries. Brunei benefits from extensive petroleum and natural gas

fields, the source of one of the highest per capita GDPs in the developing world.

Economy Brunei

Economy - overview:

This small, wealthy economy encompasses a mixture of foreign and domestic entrepreneurship, government regulation, welfare measures, and village tradition. Crude oil and natural gas production account for nearly half of GDP. Per capita GDP is far above most other Third World countries, and substantial income from overseas investment supplements income from domestic production. The government provides for all medical services and subsidizes rice and housing. Brunei's leaders are concerned that steadily increased integration in the world economy will undermine internal social cohesion, although it became a more prominent player by serving as chairman for the 2000

APEC (Asian Pacific Economic Cooperation) forum. Plans for the future include upgrading the labor force, reducing unemployment, strengthening the banking and tourist sectors, and, in general, further widening the economic base beyond oil and gas.

Transnational Issues Brunei

Disputes - international:

Involved in dispute over the Spratly Islands with China, Malaysia, Philippines, Taiwan, and Vietnam; Brunei established an exclusive economic fishing zone encompassing Louisa Reef in southern Spratly Islands in 1984 but makes no public territorial claim to the offshore reefs; claimants in November 2002 signed the "Declaration on the Conduct of Parties in the South China Sea", a mechanism to ease tension but which fell short of a legally binding "code of conduct"

Illicit drugs:

drug trafficking and illegally importing controlled substances are serious offenses in Brunei and carry a mandatory death penalty

@Bulgaria

Introduction Bulgaria

Background:

The Bulgars, a Central Asian Turkic tribe, merged with the local Slavic inhabitants in the late 7th century to form the first Bulgarian state. In succeeding centuries, Bulgaria struggled with the Byzantine Empire to assert its place in the Balkans, but by the end of the 14th century the country was overrun by the Ottoman Turks. Bulgaria regained its independence in 1878, but having fought on the losing side in both World Wars, it fell within the Soviet sphere of influence and became a People's Republic in 1946. Communist domination ended in 1990, when Bulgaria held its first multiparty election since World War II and began the contentious process of moving toward political democracy and a market economy while combating inflation, unemployment, corruption, and crime. Today, reforms and democratization keep Bulgaria on a path toward eventual integration into NATO and the EU - with which it began accession negotiations in 2000.

Economy Bulgaria

Economy - overview:

Bulgaria, a former communist country striving to enter the European Union, has experienced macroeconomic stability and strong growth since a major economic downturn in 1996 led to the fall of the then socialist government. As a result, the government became committed to economic reform and responsible fiscal planning. A \$300 million stand-by agreement negotiated with the IMF at the end of 2001 has supported government efforts to overcome high rates of poverty and unemployment.

@Burkina Faso

Introduction Burkina Faso

Background:

Independence from France came to Burkina Faso (formerly Upper Volta) in 1960. Repeated military coups during the 1970s and 1980s were followed by multiparty elections in the early 1990s. Burkina Faso's high population density and limited natural resources result in poor economic prospects for the majority of its citizens. Every year, several hundred thousand seasonal farm workers seek employment in Cote d'Ivoire and Ghana and are adversely affected by instability in those regions.

Economy Burkina Faso

Economy - overview:
One of the poorest countries in the world, landlocked Burkina Faso
has few natural resources, a fragile soil, and a highly unequal
distribution of income. About 90% of the population is engaged in
(mainly subsistence) agriculture, which is vulnerable to variations

in rainfall. Industry remains dominated by unprofitable government-controlled corporations. Following the African franc currency devaluation in January 1994 the government updated its development program in conjunction with international agencies, and exports and economic growth have increased. Maintenance of macroeconomic progress depends on continued low inflation, reduction in the trade deficit, and reforms designed to encourage private investment. The internal crisis in neighboring Cote d'Ivoire continues to hurt trade and industrial prospects and deepens the need for international assistance.

@Burma

Introduction Burma

Background:
Britain conquered Burma over a period of 62 years (1824-1886) and

incorporated it into its Indian Empire. Burma was administered as a province of India until 1937 when it became a separate, self-governing colony; independence outside of the Commonwealth was attained in 1948. Gen. NE WIN dominated the government from 1962 to 1988, first as military ruler, then as president, and later as political kingmaker. Despite multiparty elections in 1990 that resulted in the main opposition party winning a decisive victory, the ruling military junta refused to hand over power. Key opposition leader and Nobel Peace Prize recipient AUNG SAN SUU KYI, under house arrest from 1989 to 1995, was again placed under house detention from September 2000 to May 2002 and again in May 2003; her supporters are routinely harassed or jailed.

Economy Burma

Economy - overview:

Burma is a resource-rich country that suffers from abject rural poverty. The military regime took steps in the early 1990s to liberalize the economy after decades of failure under the "Burmese Way to Socialism", but those efforts have since stalled. Burma has been unable to achieve monetary or fiscal stability, resulting in an economy that suffers from serious macroeconomic imbalances - including a steep inflation rate and an official exchange rate that overvalues the Burmese kyat by more than 100 times the market rate. In addition, most overseas development assistance ceased after the junta suppressed the democracy movement in 1988 and subsequently ignored the results of the 1990 election. Burma is data poor, and official statistics are often dated and inaccurate. Published estimates of Burma's foreign trade are greatly understated because of the size of the black market and border trade - often estimated to be one to two times the official economy.

@Burundi

Introduction Burundi

Background:

Burundi's first democratically elected president was assassinated in October 1993 after only four months in office. Since then, some 200,000 Burundians have perished in widespread, often intense ethnic violence between Hutu and Tutsi factions. Hundreds of thousands have been internally displaced or have become refugees in neighboring

countries. Burundi troops, seeking to secure their borders, intervened in the conflict in the Democratic Republic of the Congo in 1998. More recently, many of these troops have been redeployed back to Burundi to deal with periodic upsurges in rebel activity. A new transitional government, inaugurated on 1 November 2001, was to be the first step toward holding national elections in three years. While the Government of Burundi signed a cease-fire agreement in December 2002 with three of Burundi's four Hutu rebel groups, implementation of the agreement has been problematic and one rebel group refuses to sign on, clouding prospects for a sustainable peace.

Economy Burundi

Economy - overview:

Burundi is a landlocked, resource-poor country with an underdeveloped manufacturing sector. The economy is predominantly agricultural with roughly 90% of the population dependent on subsistence agriculture. Economic growth depends on coffee and tea exports, which account for 90% of foreign exchange earnings. The ability to pay for imports, therefore, rests primarily on weather conditions and international coffee and tea prices. The Tutsi minority, 14% of the population, dominates the government and the coffee trade at the expense of the Hutu majority, 85% of the population. Since October 1993 an ethnic-based war has resulted in the death of over 200,000 persons, sent 800,000 refugees into Tanzania, and displaced 525,000 others internally. Doubts about the prospects for sustainable peace continue to impede development. Only one in two children go to school, and approximately one in ten adults has HIV/AIDS. Food, medicine, and electricity remain in short supply.

Introduction Cambodia

Background:

Following a five-year struggle, Communist Khmer Rouge forces captured Phnom Penh in 1975 and ordered the evacuation of all cities and towns; over 1 million displaced people died from execution or enforced hardships. A 1978 Vietnamese invasion drove the Khmer Rouge into the countryside and touched off almost 20 years of fighting. UN-sponsored elections in 1993 helped restore some semblance of

normalcy as did the rapid diminishment of the Khmer Rouge in the mid-1990s. A coalition government, formed after national elections in 1998, brought renewed political stability and the surrender of remaining Khmer Rouge forces in 1998.

Economy Cambodia

Economy - overview:
Cambodia's economy slowed dramatically in 1997-1998 due to the regional economic crisis, civil violence, and political infighting. Foreign investment and tourism fell off. In 1999, the first full year of peace in 30 years, progress was made on economic reforms and growth resumed at 5.0%. Despite severe flooding, GDP grew at 5.0% in 2000, 6.3% in 2001, and 5.2% in 2002. Tourism was Cambodia's fastest growing industry, with arrivals up 34% in 2000 and up another 40% in 2001 before the September 11, 2001 terrorist attacks in the US. Even given these stout growth estimates, the long-term development of the economy after decades of war remains a daunting challenge. The population lacks education and productive skills, particularly in the poverty-ridden countryside, which suffers from an almost total

lack of basic infrastructure. Fear of renewed political instability and corruption within the government discourage foreign investment and delay foreign aid. The government is addressing these issues with assistance from bilateral and multilateral donors.

Introduction Cameroon

Background:

The former French Cameroon and part of British Cameroon merged in 1961 to form the present country. Cameroon has generally enjoyed stability, which has permitted the development of agriculture, roads, and railways, as well as a petroleum industry. Despite movement toward democratic reform, political power remains firmly in the hands of an ethnic oligarchy.

Geography Cameroon

Location:

Western Africa, bordering the Bight of Biafra, between Equatorial Guinea and Nigeria

Economy Cameroon

Economy - overview:

Because of its oil resources and favorable agricultural conditions, Cameroon has one of the best-endowed primary commodity economies in sub-Saharan Africa. Still, it faces many of the serious problems facing other underdeveloped countries, such as a top-heavy civil service and a generally unfavorable climate for business enterprise. Since 1990, the government has embarked on various IMF and World Bank programs designed to spur business investment, increase efficiency in agriculture, improve trade, and recapitalize the nation's banks. In June 2000, the government completed an IMF-sponsored, three-year structural adjustment program; however, the IMF is pressing for more reforms, including increased budget transparency, privatization, and poverty reduction programs. International oil and cocoa prices have considerable impact on the economy.

Introduction Canada

Background:

A land of vast distances and rich natural resources, Canada became a self-governing dominion in 1867 while retaining ties to the British crown. Economically and technologically the nation has developed in parallel with the US, its neighbor to the south across an unfortified border. Its paramount political problem continues to be the relationship of the province of Quebec, with its French-speaking residents and unique culture, to the remainder of the country.

Geography Canada

Location:

Northern North America, bordering the North Atlantic Ocean on the east, North Pacific Ocean on the west, and the Arctic Ocean on the north, north of the conterminous US

Economy Canada

Economy - overview:
As an affluent, high-tech industrial society, Canada today closely
resembles the US in its market-oriented economic system, pattern of
production, and high living standards. Since World War II, the
impressive growth of the manufacturing, mining, and service sectors
has transformed the nation from a largely rural economy into one
primarily industrial and urban. The 1989 US-Canada Free Trade
Agreement (FTA) and the 1994 North American Free Trade Agreement
(NAFTA) (which includes Mexico) touched off a dramatic increase in
trade and economic integration with the US. As a result of the close
cross-border relationship, the economic sluggishness in the United
States in 2001-02 had a negative impact on the Canadian economy.
Real growth averaged nearly 3% during 1993-2000, but declined in
2001, with moderate recovery in 2002. Unemployment is up, with
contraction in the manufacturing and natural resource sectors.

Nevertheless, given its great natural resources, skilled labor force, and modern capital plant Canada enjoys solid economic prospects. Two shadows loom, the first being the continuing constitutional impasse between English- and French-speaking areas, which has been raising the specter of a split in the federation. Another long-term concern is the flow south to the US of professionals lured by higher pay, lower taxes, and the immense high-tech infrastructure. A key strength in the economy is the substantial trade surplus.

Introduction Cape Verde

Background:

The uninhabited islands were discovered and colonized by the Portuguese in the 15th century; they subsequently became a trading center for African slaves and later an important coaling and resupply stop for whaling and transatlantic shipping. Following independence in 1975, and a tentative interest in unification with Guinea-Bissau, a one-party system was established and maintained until multi-party elections were held in 1990. Cape Verde continues to exhibit one of Africa's most stable democratic governments. Repeated droughts during the second half of the 20th century caused significant hardship and prompted heavy emigration. As a result,

Cape Verde's expatriate population is greater than its domestic one.
Most Cape Verdeans have both African and Portuguese antecedents.

Economy Cape Verde

Economy - overview:

This island economy suffers from a poor natural resource base, including serious water shortages exacerbated by cycles of long-term

drought. The economy is service-oriented, with commerce, transport, tourism, and public services accounting for 72% of GDP. Although nearly 70% of the population lives in rural areas, the share of agriculture in GDP in 2001 was only 11%, of which fishing accounts for 1.5%. About 82% of food must be imported. The fishing potential, mostly lobster and tuna, is not fully exploited. Cape Verde annually runs a high trade deficit, financed by foreign aid and remittances from emigrants; remittances supplement GDP by more than 20%. Economic reforms are aimed at developing the private sector and attracting foreign investment to diversify the economy. Prospects for 2003 depend heavily on the maintenance of aid flows, tourism, remittances, and the momentum of the government's development program.

With no direct taxation, the islands are a thriving offshore financial center. More than 40,000 companies were registered in the Cayman Islands as of 1998, including almost 600 banks and trust

companies; banking assets exceed \$500 billion. A stock exchange was opened in 1997. Tourism is also a mainstay, accounting for about 70% of GDP and 75% of foreign currency earnings. The tourist industry is aimed at the luxury market and caters mainly to visitors from North America. Total tourist arrivals exceeded 1.2 million in 1997, with 600,000 from the US. About 90% of the islands' food and consumer goods must be imported. The Caymanians enjoy one of the highest outputs per capita and one of the highest standards of living in the world.

@Central African Republic

Introduction Central African Republic

Background:

The former French colony of Ubangi-Shari became the Central African Republic upon independence in 1960. After three tumultuous decades of misrule - mostly by military governments - civilian rule was established in 1993 and lasted for one decade. In March 2003 a military coup deposed the civilian government of President Ange-Felix PATASSE and has since established a new government.

Economy Central African Republic

Economy - overview:

Subsistence agriculture, together with forestry, remains the backbone of the economy of the Central African Republic (CAR), with more than 70% of the population living in outlying areas. The agricultural sector generates half of GDP. Timber has accounted for about 16% of export earnings and the diamond industry for 54%. Important constraints to economic development include the CAR's landlocked position, a poor transportation system, a largely unskilled work force, and a legacy of misdirected macroeconomic policies. Factional fighting between the government and its opponents remains a drag on economic revitalization, with GDP growth likely to be no more than 1.3% in 2003. Distribution of income is extraordinarily unequal. Grants from France and the international community can only partially meet humanitarian needs.

Introduction Chad

Background:

Chad, part of France's African holdings until 1960, endured three decades of ethnic warfare as well as invasions by Libya before a semblance of peace was finally restored in 1990. The government eventually suppressed or came to terms with most political-military groups, settled a territorial dispute with Libya on terms favorable to Chad, drafted a democratic constitution, and held multiparty presidential and National Assembly elections in 1996 and 1997, respectively. In 1998, a new rebellion broke out in northern Chad, which continued to escalate throughout 2000. A peace agreement, signed in January 2002 between the government and the rebels, provides for the demobilization of the rebels and their reintegration into the political system. Despite movement toward democratic reform, power remains in the hands of a northern ethnic oligarchy.

Economy Chad

Economy - overview:

Chad's primarily agricultural economy will continue to be boosted
by major oilfield and pipeline projects that began in 2000. Over 80%
of Chad's population relies on subsistence farming and stock raising
for its livelihood. Cotton, cattle, and gum arabic provide the bulk
of Chad's export earnings, but Chad will begin to export oil in
2004. Chad's economy has long been handicapped by its landlocked
position, high energy costs, and a history of instability. Chad
relies on foreign assistance and foreign capital for most public and
private sector investment projects. A consortium led by two US
companies has been investing \$3.7 billion to develop oil reserves
estimated at 1 billion barrels in southern Chad. Oil production is
scheduled to come on stream in late 2003.

Introduction Chile

Background:

A three-year-old Marxist government was overthrown in 1973 by a dictatorial military regime led by Augusto PINOCHET, who ruled until a freely elected president was installed in 1990. Sound economic policies, first implemented by the PINOCHET dictatorship, led to unprecedented growth in 1991-97 and have helped secure the country's commitment to democratic and representative government.

Economy Chile

Economy - overview:
Chile has a market-oriented economy characterized by a high level of foreign trade. During the early 1990s, Chile's reputation as a role model for economic reform was strengthened when the democratic government of Patricio AYLWIN - which took over from the military in 1990 - deepened the economic reform initiated by the military government. Growth in real GDP averaged 8% during 1991-97, but fell to half that level in 1998 because of tight monetary policies implemented to keep the current account deficit in check and because of lower export earnings - the latter a product of the global

financial crisis. A severe drought exacerbated the recession in 1999, reducing crop yields and causing hydroelectric shortfalls and electricity rationing, and Chile experienced negative economic growth for the first time in more than 15 years. Despite the effects of the recession, Chile maintained its reputation for strong financial institutions and sound policy that have given it the strongest sovereign bond rating in South America. By the end of 1999, exports and economic activity had begun to recover, and growth rebounded to 4.4% in 2000. Growth fell back to 2.8% in 2001 and 1.8% in 2002, largely due to lackluster global growth and the devaluation of the Argentine peso. Unemployment remains stubbornly high, putting pressure on President LAGOS to improve living standards. One bright spot was the signing of a free trade agreement with the US, which will take effect on 1 January 2004.

Illicit drugs:

a growing transshipment country for cocaine destined for the US and Europe; economic prosperity and increasing trade have made Chile more attractive to traffickers seeking to launder drug profits, especially through the Iquique Free Trade Zone; imported precursors passed on to Bolivia; domestic cocaine consumption is rising

Introduction China

Background:

For centuries China stood as a leading civilization, outpacing the rest of the world in the arts and sciences. But in the 19th and early 20th centuries, China was beset by civil unrest, major famines, military defeats, and foreign occupation. After World War II, the Communists under MAO Zedong established a dictatorship that, while ensuring China's sovereignty, imposed strict controls over everyday life and cost the lives of tens of millions of people. After 1978, his successor DENG Xiaoping gradually introduced market-oriented reforms and decentralized economic decision-making. Output quadrupled by 2000. Political controls remain tight while economic controls continue to be relaxed.

Economy China

Economy - overview: In late 1978 the Chinese leadership began moving the economy from a sluggish, Soviet-style centrally planned economy to a more market-oriented system. Whereas the system operates within a political framework of strict Communist control, the economic influence of non-state organizations and individual citizens has been steadily increasing. The authorities switched to a system of household and village responsibility in agriculture in place of the old collectivization, increased the authority of local officials and plant managers in industry, permitted a wide variety of small-scale enterprises in services and light manufacturing, and opened the economy to increased foreign trade and investment. The result has been a quadrupling of GDP since 1978. In 2003, with its 1.3 billion people but a GDP of just \$5,000 per capita, China stood as the second-largest economy in the world after the US (measured on a purchasing power parity basis). Agriculture and industry have posted major gains, especially in coastal areas near Hong Kong and opposite Taiwan, where foreign investment has

helped spur output of both domestic and export goods. The leadership, however, often has experienced - as a result of its hybrid system - the worst results of socialism (bureaucracy and lassitude) and of capitalism (windfall gains and growing income disparities). China thus has periodically backtracked, retightening central controls at intervals. The government has struggled to (a) collect revenues due from provinces, businesses, and individuals; (b) reduce corruption and other economic crimes; and (c) keep afloat the large state-owned enterprises, many of which had been shielded from competition by subsidies and had been losing the ability to pay full wages and pensions. From 80 to 120 million surplus rural workers are adrift between the villages and the cities, many subsisting through part-time low-paying jobs. Popular resistance, changes in central policy, and loss of authority by rural cadres have weakened China's population control program, which is essential to maintaining long-term growth in living standards. Another long-term threat to growth is the deterioration in the environment, notably air pollution, soil erosion, and the steady fall of the water table especially in the north. China continues to lose arable land because of erosion and economic development. Beijing says it will intensify efforts to stimulate growth through spending on infrastructure - such as water control and power grids - and poverty relief and through rural tax reform aimed at eliminating arbitrary local levies on farmers. Accession to the World Trade Organization helps strengthen China's ability to maintain strong growth rates but at the same time puts additional pressure on the hybrid system of strong political controls and growing market influences. China has benefited from a huge expansion in computer internet use. Foreign investment remains a strong element in China's remarkable economic growth.

@Christmas Island

Introduction Christmas Island

Background:

Named in 1643 for the day of its discovery, the island was annexed and settlement was begun by the UK in 1888. Phosphate mining began in the 1890s. The UK transferred sovereignty to Australia in 1958. Almost two-thirds of the island has been declared a national park.

@Clipperton Island

Introduction Clipperton Island

Background:

This isolated island was named for John CLIPPERTON, a pirate who made it his hideout early in the 18th century. Annexed by France in 1855, it was seized by Mexico in 1897. Arbitration eventually awarded the island to France, which took possession in 1935.

@Cocos (Keeling) Islands

Introduction Cocos (Keeling) Islands

Background:

There are 27 coral islands in the group. Captain William Keeling discovered the islands in 1609, but they remained uninhabited until the 19th century. Annexed by the UK in 1857, they were transferred to the Australian Government in 1955. The population on the two inhabited islands generally is split between the ethnic Europeans on West Island and the ethnic Malays on Home Island.

@Colombia

Introduction Colombia

Background:

Colombia was one of the three countries that emerged from the collapse of Gran Colombia in 1830 (the others being Ecuador and Venezuela). A 40-year insurgent campaign to overthrow the Colombian Government escalated during the 1990s, undergirded in part by funds from the drug trade. Although the violence is deadly and large swaths of the countryside are under guerrilla influence, the movement lacks the military strength or popular support necessary to overthrow the government. An anti-insurgent army of paramilitaries has grown to be several thousand strong in recent years, challenging the insurgents for control of territory and illicit industries such as the drug trade and the government's ability to exert its dominion over rural areas. While Bogota steps up efforts to reassert government control throughout the country, neighboring countries worry about the violence spilling over their borders.

Economy Colombia

Economy - overview:

Colombia's economy suffers from weak domestic and foreign demand, austere government budgets, and serious internal armed conflict. Other economic problems facing the new president URIBE range from reforming the pension system to reducing high unemployment. Two of Colombia's leading exports, oil and coffee, face an uncertain future; new exploration is needed to offset declining oil production, while coffee harvests and prices are depressed. Colombian business leaders are calling for greater progress in solving the conflict with insurgent groups. On the positive side, several international financial institutions have praised the economic reforms introduced by President URIBE and have pledged enough funding to cover Colombia's debt servicing costs in 2003.

@Comoros

Introduction Comoros

Background:

Unstable Comoros has endured 19 coups or attempted coups since

gaining independence from France in 1975. In 1997, the islands of Anjouan and Moheli declared their independence from Comoros. In 1999, military chief Col. AZALI seized power. He pledged to resolve the secessionist crisis through a confederal arrangement named the 2000 Fomboni Accord. In December 2001, voters approved a new constitution and presidential elections took place in the spring of 2002. Each island in the archipelago elected its own president and a new union president was sworn in on May 26, 2002.

Economy Comoros

Economy - overview:

One of the world's poorest countries, Comoros is made up of three islands that have inadequate transportation links, a young and rapidly increasing population, and few natural resources. The low educational level of the labor force contributes to a subsistence level of economic activity, high unemployment, and a heavy dependence on foreign grants and technical assistance. Agriculture, including fishing, hunting, and forestry, contributes 40% to GDP, employs 80% of the labor force, and provides most of the exports. The country is not self-sufficient in food production; rice, the main staple, accounts for the bulk of imports. The government - which is hampered by internal political disputes - is struggling to upgrade education and technical training, to privatize commercial and industrial enterprises, to improve health services, to diversify exports, to promote tourism, and to reduce the high population growth rate. Increased foreign support is essential if the goal of 4% annual GDP growth is to be met. Remittances from 150,000 Comorans abroad help supplement GDP.

@Congo, Democratic Republic of the

Introduction Congo, Democratic Republic of the

Background:

Since 1997, the Democratic Republic of the Congo (DROC; formerly called Zaire) has been rent by ethnic strife and civil war, touched off by a massive inflow in 1994 of refugees from the fighting in Rwanda and Burundi. The government of former president MOBUTU Sese

Seko was toppled by a rebellion led by Laurent KABILA in May 1997; his regime was subsequently challenged by a Rwanda- and Uganda-backed rebellion in August 1998. Troops from Zimbabwe, Angola, Namibia, Chad, and Sudan intervened to support the Kinshasa regime. A cease-fire was signed on 10 July 1999 by the DROC, Zimbabwe, Angola, Uganda, Namibia, Rwanda, and Congolese armed rebel

groups, but sporadic fighting continued. KABILA was assassinated on 16 January 2001 and his son Joseph KABILA was named head of state ten days later. In October 2002, the new president was successful in getting occupying Rwandan forces to withdraw from eastern Congo; two months later, an agreement was signed by all remaining warring parties to end the fighting and set up a government of national unity.

Economy Congo, Democratic Republic of the

Economy - overview:

The economy of the Democratic Republic of the Congo - a nation endowed with vast potential wealth - has declined drastically since the mid-1980s. The war, which began in August 1998, has dramatically reduced national output and government revenue, has increased external debt, and has resulted in the deaths from war, famine, and disease of perhaps 3.5 million people. Foreign businesses have curtailed operations due to uncertainty about the outcome of the conflict, lack of infrastructure, and the difficult operating environment. The war has intensified the impact of such basic problems as an uncertain legal framework, corruption, inflation, and lack of openness in government economic policy and financial operations. Conditions improved in late 2002 with the withdrawal of a large portion of the invading foreign troops. A number of IMF and World Bank missions have met with the government to help it develop a coherent economic plan, and President KABILA has begun

implementing reforms. Much economic activity lies outside the GDP data.

Transnational Issues Congo, Democratic Republic of the

Disputes - international:

Democratic Republic of the Congo is in the grip of a civil war that has drawn in military forces from neighboring states, with Uganda and Rwanda supporting the rebel movements that occupy much of the eastern portion of the state - Tutsi, Hutu, Lendu, Hema and other conflicting ethnic groups, political rebels, and various government forces continue fighting in Great Lakes region, transcending the boundaries of Burundi, Democratic Republic of the Congo, Rwanda, and Uganda - heads of the Great Lakes states pledge to end conflict, but localized violence continues despite UN peacekeeping efforts; most of the Congo River boundary with the Republic of the Congo is indefinite (no agreement has been reached on the division of the river or its islands, except in the Pool Malebo/Stanley Pool area)

Illicit drugs:
illicit producer of cannabis, mostly for domestic consumption;
while rampant corruption and inadequate supervision leaves the
banking system vulnerable to money laundering, the lack of a
well-developed financial system limits the country's utility as a
money-laundering center

@Congo, Republic of the

Introduction Congo, Republic of the

Background:

Upon independence in 1960, the former French region of Middle Congo became the Republic of the Congo. A quarter century of experimentation with Marxism was abandoned in 1990 and a democratically elected government installed in 1992. A brief civil war in 1997 restored former Marxist President SASSOU-NGUESSO, but ushered in a period of ethnically based unrest. Southern-based rebel groups agreed to a final peace accord in March 2003. The Republic of

Congo is one of Africa's largest petroleum producers with significant potential for offshore development.

Economy Congo, Republic of the

Economy - overview:

The economy is a mixture of village agriculture and handicrafts, an
industrial sector based largely on oil, support services, and a
government characterized by budget problems and overstaffing. Oil

has supplanted forestry as the mainstay of the economy, providing a major share of government revenues and exports. In the early 1980s, rapidly rising oil revenues enabled the government to finance large-scale development projects with GDP growth averaging 5% annually, one of the highest rates in Africa. The government has mortgaged a substantial portion of its oil earnings, contributing to a shortage of revenues. The 12 January 1994 devaluation of Franc Zone currencies by 50% resulted in inflation of 61% in 1994, but inflation has subsided since. Economic reform efforts continued with the support of international organizations, notably the World Bank and the IMF. The reform program came to a halt in June 1997 when civil war erupted. Denis SASSOU-NGUESSO, who returned to power when

the war ended in October 1997, publicly expressed interest in moving forward on economic reforms and privatization and in renewing cooperation with international financial institutions. However, economic progress was badly hurt by slumping oil prices and the resumption of armed conflict in December 1998, which worsened the republic's budget deficit. The current administration presides over an uneasy internal peace and faces difficult economic problems of stimulating recovery and reducing poverty.

@Cook Islands

Introduction Cook Islands

Background:

Named after Captain Cook, who sighted them in 1770, the islands became a British protectorate in 1888. By 1900, administrative control was transferred to New Zealand; in 1965 residents chose self-government in free association with New Zealand. The emigration of skilled workers to New Zealand and government deficits are continuing problems.

Economy Cook Islands

Economy - overview:

Like many other South Pacific island nations, the Cook Islands' economic development is hindered by the isolation of the country from foreign markets, the limited size of domestic markets, lack of natural resources, periodic devastation from natural disasters, and inadequate infrastructure. Agriculture provides the economic base with major exports made up of copra and citrus fruit. Manufacturing activities are limited to fruit processing, clothing, and handicrafts. Trade deficits are offset by remittances from emigrants and by foreign aid, overwhelmingly from New Zealand. In the 1980s and 1990s, the country lived beyond its means, maintaining a bloated public service and accumulating a large foreign debt. Subsequent reforms, including the sale of state assets, the strengthening of economic management, the encouragement of tourism, and a debt restructuring agreement, have rekindled investment and growth.

Economy Costa Rica

Economy - overview:

Costa Rica's basically stable economy depends on tourism, agriculture, and electronics exports. Poverty has been substantially reduced over the past 15 years, and a strong social safety net has been put into place. At the same time, distribution of income remains severely unequal. Foreign investors remain attracted by the country's political stability and high education levels, and tourism continues to bring in foreign exchange. However, traditional export sectors have not kept pace. Low coffee prices and an overabundance of bananas have hurt the agricultural sector. The government continues to grapple with its large deficit and massive internal debt, with the need to modernize the state-owned electricity and telecommunications sector, and with the problem of bringing down inflation.

@Cote d'Ivoire

Introduction Cote d'Ivoire

Background:

Close ties to France since independence in 1960, the development of cocoa production for export, and foreign investment made Cote d'Ivoire one of the most prosperous of the tropical African states, but did not protect it from political turmoil. On 25 December 1999, a military coup - the first ever in Cote d'Ivoire's history - overthrew the government led by President Henri Konan BEDIE. Junta leader Robert GUEI held elections in late 2000, but excluded prominent opposition leader Alassane OUATTARA, blatantly rigged the polling results, and declared himself winner. Popular protest forced GUEI to step aside and brought runner-up Laurent GBAGBO into power. GBAGBO spent his first two years in office trying to consolidate power to strengthen his weak mandate, but he was unable to appease his opponents, who launched a failed coup attempt in September 2002. Rebel forces claimed the northern half of the country and in January 2003 were granted ministerial positions in a unity government. However, the central government has yet to exert control over the

northern regions and tension remains high between GBAGBO and rebel leaders. Several thousand French and West African troops remain in Cote d'Ivoire to maintain peace and help implement the peace accords.

Economy Cote d'Ivoire

Economy - overview:

Cote d'Ivoire is among the world's largest producers and exporters of coffee, cocoa beans, and palm oil. Consequently, the economy is highly sensitive to fluctuations in international prices for these products and to weather conditions. Despite government attempts to diversify the economy, it is still largely dependent on agriculture and related activities, which engage roughly 68% of the population. After several years of lagging performance, the Ivorian economy began a comeback in 1994, due to the 50% devaluation of the CFA franc and improved prices for cocoa and coffee, growth in nontraditional primary exports such as pineapples and rubber, limited trade and banking liberalization, offshore oil and gas discoveries, and generous external financing and debt rescheduling by multilateral lenders and France. Moreover, government adherence to donor-mandated reforms led to a jump in growth to 5% annually during 1996-99. Growth was negative in 2000-02 because of the difficulty of meeting the conditions of international donors, continued low prices of key exports, and severe civil war fighting.

Transnational Issues Cote d'Ivoire

Disputes - international:

rebel fighting extended to neighboring states and has driven out
nationals and foreign workers to nearby countries; the Ivorian
Government accuses Burkina Faso and Liberia of supporting Ivorian
rebels

Illicit drugs:

illicit producer of cannabis, mostly for local consumption;

transshipment point for Southwest and Southeast Asian heroin to Europe and occasionally to the US, and for Latin American cocaine destined for Europe and South Africa; while rampant corruption and inadequate supervision leave the banking system vulnerable to money laundering, the lack of a developed financial system limits the country's utility as a major money-laundering center

Introduction Croatia

Background:

In 1918, the Croats, Serbs, and Slovenes formed a kingdom known after 1929 as Yugoslavia. Following World War II, Yugoslavia became a federal independent Communist state under the strong hand of Marshal TITO. Although Croatia declared its independence from Yugoslavia in 1991, it took four years of sporadic, but often bitter, fighting before occupying Serb armies were mostly cleared from Croatian lands. Under UN supervision, the last Serb-held enclave in eastern Slavonia was returned to Croatia in 1998.

Economy Croatia

Economy - overview:

Before the dissolution of Yugoslavia, the Republic of Croatia, after Slovenia, was the most prosperous and industrialized area, with a per capita output perhaps one-third above the Yugoslav average. The economy emerged from its mild recession in 2000 with tourism the main factor, but massive structural unemployment remains a key negative element. The government's failure to press the economic reforms needed to spur growth is largely the result of coalition politics and public resistance, particularly from the trade unions. Opponents fear reforms would cut jobs, wages, and social benefits. The government has a heavy backload of civil cases, many involving tenure land. The country is likely to experience only moderate growth without disciplined fiscal and structural reform.

Introduction Cuba

Background:

Fidel CASTRO led a rebel army to victory in 1959; his iron rule has held the country together since then. Cuba's Communist revolution, with Soviet support, was exported throughout Latin America and Africa during the 1960s, 1970s, and 1980s. The country is now slowly recovering from a severe economic recession in 1990, following the withdrawal of former Soviet subsidies, worth \$4 billion to \$6 billion annually. Cuba portrays its difficulties as the result of the US embargo in place since 1961. Illicit migration to the US - using homemade rafts, alien smugglers, or falsified visas - is a continuing problem. Some 2,500 Cubans attempted the crossing of the Straits of Florida in 2002; the US Coast Guard apprehended about 60% of the individuals.

Economy Cuba

Economy - overview:

The government continues to balance the need for economic loosening against a desire for firm political control. It has undertaken limited reforms in recent years to increase enterprise efficiency and alleviate serious shortages of food, consumer goods, and services but is unlikely to implement extensive changes. A major feature of the economy is the dichotomy between relatively efficient export enclaves and inefficient domestic sectors. The average Cuban's standard of living remains at a lower level than before the severe economic depression of the early 1990s, which was caused by the loss of Soviet aid and domestic inefficiencies. High oil import prices, recessions in key export markets, damage from Hurricanes Isidore and Lili, and the tourist slump after 11 September 2001 hampered growth in 2002.

Introduction Cyprus

Background:

Independence from the UK was approved in 1960, with constitutional guarantees by the Greek Cypriot majority to the Turkish Cypriot minority. In 1974, a Greek-sponsored attempt to seize the government was met by military intervention from Turkey, which soon controlled almost 40% of the island. In 1983, the Turkish-held area declared itself the "Turkish Republic of Northern Cyprus," but it is recognized only by Turkey. UN-led direct talks between the two sides to reach a comprehensive settlement to the division of the island began in January 2002.

Economy Cyprus

Economy - overview:

The Greek Cypriot economy is prosperous but highly susceptible to external shocks. Erratic growth rates over the past decade reflect the economy's vulnerability to swings in tourist arrivals, caused by political instability in the region and fluctuations in economic conditions in Western Europe. Economic policy is focused on meeting the criteria for admission to the EU. As in the Turkish sector, water shortages are a perennial problem; a few desalination plants are now online. The Turkish Cypriot economy has roughly one-third of the per capita GDP of the south. Because it is recognized only by Turkey, it has had much difficulty arranging foreign financing and investment. It remains heavily dependent on agriculture and government service, which together employ about half of the work force. To compensate for the economy's weakness, Turkey provides grants and loans to support economic development. Ankara provided \$200 million in 2002 and pledged \$450 million for the 2003-05

period. Future events throughout the island will be highly influenced by the outcome of negotiations on the UN-sponsored agreement to unite the Greek and Turkish areas and by the arrangements under which the island joins the EU.

@Czech Republic

Introduction Czech Republic

Background:

Following the First World War, the closely related Czechs and Slovaks of the former Austro-Hungarian Empire merged to form Czechoslovakia. During the interwar years, the new country's leaders were frequently preoccupied with meeting the demands of other ethnic

minorities within the republic, most notably the Sudeten Germans and the Ruthenians (Ukrainians). After World War II, a truncated Czechoslovakia fell within the Soviet sphere of influence. In 1968, an invasion by Warsaw Pact troops ended the efforts of the country's leaders to liberalize Communist party rule and create "socialism with a human face." Anti-Soviet demonstrations the following year ushered in a period of harsh repression. With the collapse of Soviet authority in 1989, Czechoslovakia regained its freedom through a peaceful "Velvet Revolution." On 1 January 1993, the country underwent a "velvet divorce" into its two national components, the Czech Republic and Slovakia. Now a member of NATO, the Czech Republic has moved toward integration in world markets, a development that poses both opportunities and risks. In December 2002, the Czech Republic was invited to join the European Union (EU). It is expected that the Czech Republic will accede to the EU in 2004.

Economy Czech Republic

Economy - overview:

One of the most stable and prosperous of the post-Communist states, the Czech Republic has been recovering from recession since mid-1999. Growth in 2000-03 was supported by exports to the EU, primarily to Germany, and a near doubling of foreign direct investment. Domestic demand is playing an ever more important role in underpinning growth as interest rates drop and the availability of credit cards and mortgages increases. High current account deficits - averaging around 5% of GDP in the last several years - could be a persistent problem. Inflation is under control. The EU

put the Czech Republic just behind Poland and Hungary in preparations for accession, which will give further impetus and direction to structural reform. Moves to complete banking, telecommunications, and energy privatization will encourage additional foreign investment, while intensified restructuring among large enterprises and banks and improvements in the financial sector should strengthen output growth. But revival in the European economies remains essential to stepped-up growth.

Introduction Denmark

Background:

Once the seat of Viking raiders and later a major north European power, Denmark has evolved into a modern, prosperous nation that is participating in the general political and economic integration of Europe. It joined NATO in 1949 and the EEC (now the EU) in 1973. However, the country has opted out of certain elements of the European Union's Maastricht Treaty, including the European Economic and Monetary Union (EMU) and issues concerning certain justice and home affairs.

Economy Denmark

Economy - overview:

This thoroughly modern market economy features high-tech agriculture, up-to-date small-scale and corporate industry, extensive government welfare measures, comfortable living standards, a stable currency, and high dependence on foreign trade. Denmark is a net exporter of food and energy and enjoys a comfortable balance of payments surplus. Government objectives include streamlining the bureaucracy and further privatization of state assets. The government has been successful in meeting, and even exceeding, the economic convergence criteria for participating in the third phase (a common European currency) of the European Economic and Monetary

Union (EMU), but Denmark has decided not to join the 12 other EU members in the euro; even so, the Danish Krone remains pegged to the euro. Given the sluggish state of the European economy, growth in 2003 was a mere 1.1%.

Introduction Djibouti

Background:

The French Territory of the Afars and the Issas became Djibouti in 1977. Hassan Gouled APTIDON installed an authoritarian one-party state and proceeded to serve three consecutive six-year terms as president. Unrest among the Afars minority during the 1990's led to multi-party elections resulting in President Ismail Omar GUELLEH attaining office in May 1999. A peace accord in 2001 ended the final phases of a ten-year uprising by Afar rebels. Djibouti occupies a very strategic geographic location at the mouth of the Red Sea and serves as an important transshipment location for goods entering and leaving the east African highlands. GUELLEH favors close ties to France, which maintains a significant military presence in the country.

Economy Djibouti

Economy - overview:

The economy is based on service activities connected with the country's strategic location and status as a free trade zone in northeast Africa. Two-thirds of the inhabitants live in the capital city, the remainder being mostly nomadic herders. Scanty rainfall limits crop production to fruits and vegetables, and most food must be imported. Djibouti provides services as both a transit port for the region and an international transshipment and refueling center. It has few natural resources and little industry. The nation is, therefore, heavily dependent on foreign assistance to help support its balance of payments and to finance development projects. An unemployment rate of 50% continues to be a major problem. Inflation is not a concern, however, because of the fixed tie of the franc to the US dollar. Per capita consumption dropped an estimated 35% over the last seven years because of recession, civil war, and a high population growth rate (including immigrants and refugees). Faced

with a multitude of economic difficulties, the government has fallen in arrears on long-term external debt and has been struggling to meet the stipulations of foreign aid donors. Another factor limiting growth is the negative impact on port activity now that Ethiopia has more trade route options.

Introduction Dominica

Background:

Dominica was the last of the Caribbean islands to be colonized by Europeans, due chiefly to the fierce resistance of the native Caribs. France ceded possession to Great Britain in 1763, which made the island a colony in 1805. In 1980, two years after independence, Dominica's fortunes improved when a corrupt and tyrannical administration was replaced by that of Mary Eugenia CHARLES, the first female prime minister in the Caribbean, who remained in office for 15 years. Some 3,000 Carib Indians still living on Dominica are the only pre-Columbian population remaining in the eastern Caribbean.

Economy Dominica

Economy - overview:

The Dominican economy depends on agriculture, primarily bananas,
and remains highly vulnerable to climatic conditions and
international economic developments. Hurricane Luis devastated the
country's banana crop in 1995 after tropical storms wiped out a
quarter of the 1994 crop. The economy subsequently has been fueled

by increases in construction, soap production, and tourist arrivals. Development of the tourism industry remains difficult however, because of the rugged coastline, lack of beaches, and the absence of an international airport. Economic growth is sluggish, and unemployment is greater than 20%. The government has been attempting to develop an offshore financial sector in order to diversify the island's production base.

@Dominican Republic

Introduction Dominican Republic

Background:

Explored and claimed by Columbus on his first voyage in 1492, the island of Hispaniola became a springboard for Spanish conquest of the Caribbean and the American mainland. In 1697, Spain recognized French dominion over the western third of the island, which in 1804 became Haiti. The remainder of the island, by then known as Santo Domingo, sought to gain its own independence in 1821, but was conquered and ruled by the Haitians for 22 years; it finally attained independence as the Dominican Republic in 1844. A legacy of unsettled, mostly non-representative, rule for much of its subsequent history was brought to an end in 1966 when Joaquin BALAGUER became president. He maintained a tight grip on power for most of the next 30 years when international reaction to flawed

elections forced him to curtail his term in 1996. Since then, regular competitive elections have been held in which opposition candidates have won the presidency. The Dominican economy has had one of the fastest growth rates in the hemisphere over the past decade.

Economy Dominican Republic

Economy - overview:

The Dominican Republic's economy experienced dramatic growth over the last decade, even though the economy was hit hard by Hurricane Georges in 1998. Although the country has long been viewed primarily as an exporter of sugar, coffee, and tobacco, in recent years the service sector has overtaken agriculture as the economy's largest employer, due to growth in tourism and free trade zones. The country suffers from marked income inequality; the poorest half of the population receives less than one-fifth of GNP, while the richest 10% enjoy nearly 40% of national income. Growth probably will slow in 2003 with reduced tourism and expected low growth in the US economy, the source of 87% of export revenues.

@East Timor

Introduction East Timor

Background:
The Portuguese colony of Timor declared itself independent from

Portugal on 28 November 1975 and was invaded and occupied by Indonesian forces nine days later. It was incorporated into Indonesia in July 1976 as the province of East Timor. A campaign of pacification followed over the next two decades, during which an estimated 100,000 to 250,000 individuals lost their lives. On 30 August 1999, in a UN-supervised popular referendum, the people of East Timor voted for independence from Indonesia. During 1999-2001, pro-integrationist militias - supported by Indonesia - conducted indiscriminate violence. On 20 May 2002, East Timor was internationally recognized as an independent state and the world's newest democracy.

Economy East Timor

Economy - overview:
In late 1999, about 70% of the economic infrastructure of East
Timor was laid waste by Indonesian troops and anti-independence
militias, and 260,000 people fled westward. Over the next three
years, however, a massive international program, manned by 5,000
peacekeepers (8,000 at peak) and 1,300 police officers, led to
substantial reconstruction in both urban and rural areas. By
mid-2002, all but about 50,000 of the refugees had returned. The
country faces great challenges in continuing the rebuilding of
infrastructure and the strengthening of the infant civil
administration. One promising long-term project is the planned
development of oil resources in nearby waters.

Ecuador has substantial oil resources and rich agricultural areas. Because the country exports primary products such as oil, bananas, and shrimp, fluctuations in world market prices can have a substantial domestic impact. Ecuador joined the World Trade Organization (WTrO) in 1996, but has failed to comply with many of its accession commitments. The aftermath of El Nino and depressed oil market of 1997-98 drove Ecuador's economy into a free-fall in 1999. The beginning of 1999 saw the banking sector collapse, which helped precipitate an unprecedented default on external loans later that year. Continued economic instability drove a 70% depreciation of the currency throughout 1999, which forced a desperate government to "dollarize" the currency regime in 2000. The move stabilized the currency, but did not stave off the ouster of the government. Gustavo NOBOA, who assumed the presidency in January 2000, has managed to pass substantial economic reforms and mend relations with international financial institutions. Ecuador completed its first standby agreement since 1986 when the IMF Board approved a 10 December 2001 disbursement of \$96 million, the final installment of a \$300 million standby credit agreement. In February 2003, newly installed president Lucio GUTIERREZ faced a budget gap and massive foreign debt. He has pledged to use oil revenues to pay off debt and is seeking additional IMF support.

Introduction Egypt

Background:

The regularity and richness of the annual Nile River flood, coupled with semi-isolation provided by deserts to the east and west, allowed for the development of one of the world's great civilizations. A unified kingdom arose circa 3200 B.C. and a series of dynasties ruled in Egypt for the next three millennia. The last native dynasty fell to the Persians in 341 B.C., who in turn were replaced by the Greeks, Romans, and Byzantines. It was the Arabs who introduced Islam and the Arabic language in the 7th century and who ruled for the next six centuries. A local military caste, the Mamluks took control about 1250 and continued to govern after the conquest of Egypt by the Ottoman Turks in 1517. Following the

completion of the Suez Canal in 1869, Egypt became an important world transportation hub, but also fell heavily into debt. Ostensibly to protect its investments, Britain seized control of Egypt's government in 1882, but nominal allegiance to the Ottoman Empire continued until 1914. Partially independent from the UK in 1922, Egypt acquired full sovereignty following World War II. The completion of the Aswan High Dam in 1971 and the resultant Lake Nasser have altered the time-honored place of the Nile River in the agriculture and ecology of Egypt. A rapidly growing population (the largest in the Arab world), limited arable land, and dependence on the Nile all continue to overtax resources and stress society. The government has struggled to ready the economy for the new millennium through economic reform and massive investment in communications and physical infrastructure.

Economy Egypt

Economy - overview:

Egypt improved its macroeconomic performance throughout most of the last decade by following IMF advice on fiscal, monetary, and structural reform policies. As a result, Egypt managed to tame inflation, slash budget deficits, and attract more foreign investment. In the past four years, however, the pace of reform has slackened, and excessive spending on national infrastructure projects has widened budget deficits again. Lower foreign exchange earnings since 1998 resulted in pressure on the Egyptian pound and periodic dollar shortages. Monetary pressures have increased since 11 September 2001 because of declines in tourism and Suez Canal tolls, and Egypt has devalued the pound several times in the past year. The development of a gas export market is a major bright spot for future growth prospects. In the short term, regional tensions

will continue to affect tourism and hold back prospects for economic expansion.

Introduction El Salvador

Background:

El Salvador achieved independence from Spain in 1821 and from the Central American Federation in 1839. A 12-year civil war, which cost about 75,000 lives, was brought to a close in 1992 when the government and leftist rebels signed a treaty that provided for military and political reforms.

Economy El Salvador

Economy - overview:

In recent years, this Central American economy has been suffering from a weak tax collection system, factory closings, the aftermaths of Hurricane Mitch of 1998 and the devastating earthquakes of early 2001, and weak world coffee prices. On the bright side, inflation has fallen to single digit levels, and total exports have grown substantially. The trade deficit has been offset by annual remittances of almost \$2 billion from Salvadorans living abroad and by external aid. The US dollar is now the legal tender. Because competitor countries have fluctuating exchange rates, El Salvador must face the challenge of raising productivity and lowering costs.

@Equatorial Guinea

Introduction Equatorial Guinea

Background:

Equatorial Guinea gained independence in 1968 after 190 years of Spanish rule. President OBIANG NGUEM MBASOGO has ruled the tiny

country, composed of a mainland portion plus five inhabited islands and one of the smallest countries on the African continent, since he seized power in a coup in 1979. Although nominally a constitutional democracy since 1991, the 1996 and 2002 presidential elections - as well as the 1999 legislative elections - were widely seen as being flawed.

Economy Equatorial Guinea

Economy - overview:

The discovery and exploitation of large oil reserves have contributed to dramatic economic growth in recent years. Forestry, farming, and fishing are also major components of GDP. Subsistence farming predominates. Although pre-independence Equatorial Guinea counted on cocoa production for hard currency earnings, the neglect of the rural economy under successive regimes has diminished potential for agriculture-led growth (the government has stated its intention to reinvest some oil revenue into agriculture). A number of aid programs sponsored by the World Bank and the IMF have been cut off since 1993 because of corruption and mismanagement. No longer eligible for concessional financing because of large oil revenues, the government has been unsuccessfully trying to agree on a "shadow" fiscal management program with the World Bank and IMF. Businesses, for the most part, are owned by government officials and their family members. Undeveloped natural resources include titanium, iron ore, manganese, uranium, and alluvial gold. Growth will remain strong in 2003, led by oil.

@Eritrea

Introduction Eritrea

Background:

Eritrea was awarded to Ethiopia in 1952 as part of a federation. Ethiopia's annexation of Eritrea as a province 10 years later sparked a 30-year struggle for independence that ended in 1991 with Eritrean rebels defeating governmental forces; independence was overwhelmingly approved in a 1993 referendum. A two-and-a-half-year border war with Ethiopia that erupted in 1998 ended under UN auspices on 12 December 2000. Eritrea currently hosts a UN peacekeeping operation that is monitoring the border region. An international commission, organized to resolve the border dispute, posted its findings in 2002 but final demarcation is on hold due to Ethiopian objections.

constitution, 75 members of the PFDJ Central Committee (the old
Central Committee of the EPLF), 60 members of the 527-member
Constituent Assembly, that had been established in 1997 to discuss
and ratify the new constitution, and 15 representatives of Eritreans
living abroad were formed into a Transitional National Assembly to
serve as the country's legislative body until countrywide elections
to a National Assembly were held; although only 75 of 150 members of
the Transitional National Assembly were elected, the constitution
stipulates that once past the transition stage, all members of the
National Assembly will be elected by secret ballot of all eligible
voters; National Assembly elections scheduled for December 2001 were
postponed indefinitely

Judicial branch:

Economy Eritrea

Economy - overview:
Since independence from Ethiopia on 24 May 1993, Eritrea has faced the economic problems of a small, desperately poor country. Like the economies of many African nations, the economy is largely based on subsistence agriculture, with 80% of the population involved in farming and herding. The Ethiopian-Eritrea war in 1998-2000 severely hurt Eritrea's economy. GDP growth fell to zero in 1999 and to -1% in 2000. The May 2000 Ethiopian offensive into northern Eritrea caused some \$600 million in property damage and loss, including losses of \$225 million in livestock and 55,000 homes. The attack prevented planting of crops in Eritrea's most productive region, causing food production to drop by 62%. Even during the war, Eritrea developed its transportation infrastructure, asphaltting new roads, improving its ports, and repairing war damaged roads and bridges. Since the war ended, the government has maintained a firm grip on the economy, expanding the use of the military and party-owned

businesses to complete Eritrea's development agenda. Erratic rainfall and the delayed demobilization of agriculturalists from the military kept cereal production well below normal, holding down growth in 2002. Eritrea's economic future depends upon its ability to master social problems such as illiteracy, unemployment, and low skills, and to open its economy to private enterprise so the diaspora's money and expertise can foster economic growth.

Introduction Estonia

Background:

After centuries of Danish, Swedish, German, and Russian rule, Estonia attained independence in 1918. Forcibly incorporated into the USSR in 1940, it regained its freedom in 1991, with the collapse of the Soviet Union. Since the last Russian troops left in 1994, Estonia has been free to promote economic and political ties with Western Europe. Estonia received invitations to join NATO and the EU in 2002.

Economy Estonia

Economy - overview:

Estonia, as a new member of the World Trade Organization, is steadily moving toward a modern market economy with increasing ties to the West, including the pegging of its currency to the euro. The economy benefits from strong electronics and telecoms sectors. A major goal is accession to the EU, possibly by 2004. The economy is greatly influenced by developments in Finland, Sweden, and Germany, three major trading partners. The high current account deficit remains a concern.

Introduction Ethiopia

Background:

Unique among African countries, the ancient Ethiopian monarchy maintained its freedom from colonial rule, one exception being the Italian occupation of 1936-41. In 1974 a military junta, the Derg, deposed Emperor Haile SELASSIE (who had ruled since 1930) and established a socialist state. Torn by bloody coups, uprisings, wide-scale drought, and massive refugee problems, the regime was finally toppled by a coalition of rebel forces, the Ethiopian People's Revolutionary Democratic Front (EPRDF), in 1991. A

constitution was adopted in 1994 and Ethiopia's first multiparty elections were held in 1995. A two and a half year border war with Eritrea ended with a peace treaty on 12 December 2000. Final demarcation of the boundary is currently on hold due to Ethiopian objections to an international commission's finding requiring it to surrender sensitive territory.

Economy Ethiopia

Economy - overview:

Ethiopia's poverty-stricken economy is based on agriculture, which accounts for half of GDP, 85% of exports, and 80% of total employment. The agricultural sector suffers from frequent drought and poor cultivation practices. Coffee is critical to the Ethiopian economy with exports of some \$270 million in 2000/01, but historically low prices have seen many farmers switching to qat to supplement their income. The war with Eritrea in 1999-2000 and recurrent drought have buffeted the economy, in particular coffee production. In November 2001 Ethiopia qualified for debt relief from

the Highly Indebted Poor Countries (HIPC) initiative. Under Ethiopia's land tenure system, the government owns all land and provides long-term leases to the tenants; the system continues to hamper growth in the industrial sector as entrepreneurs are unable to use land as collateral for loans. Strong growth in 2002 resulted from good rainfall early in the year, the cessation of hostilities, and renewed foreign aid and debt relief. But drought struck again late in 2002, and the World Food Program (WFP) estimates 14 million Ethiopians need food immediately to survive into 2003. The government estimates that annual growth of 7% is needed to reduce poverty, yet the maintenance of 5% in 2003 will be quite difficult (one estimate is for 1.5% growth).

Transnational Issues Ethiopia

Disputes - international:
Eritrea and Ethiopia agreed to abide by 2002 independent boundary commission delimitation decision, but demarcation, scheduled to begin in 2003, has been hampered by technical delays and Ethiopian concerns that the decision ignored "human geography" and awarded Badme, the focus of the 1998-2000 war, to Eritrea, demarcation of the boundary has been postponed indefinitely; Ethiopia maintains only an administrative line and no international border with the Oromo region of southern Somalia and maintains alliances with local clans in opposition to the Transitional National Government in Mogadishu; "Somaliland" secessionists provide port facilities and trade ties to land-locked Ethiopia; efforts to demarcate the porous boundary with Sudan have been delayed by civil war there

Illicit drugs:
transit hub for heroin originating in Southwest and Southeast Asia and destined for Europe and North America as well as cocaine destined for markets in southern Africa; cultivates qat (khat) for local use and regional export, principally to Djibouti and Somalia (legal in all three countries); the lack of a well-developed

financial system limits the country's utility as a money-laundering center

@Falkland Islands (Islas Malvinas)

Introduction Falkland Islands (Islas Malvinas)

Background:

Although first sighted by an English navigator in 1592, the first landing (English) did not occur until almost a century later in 1690, and the first settlement (French) was not established until 1764. The colony was turned over to Spain two years later and the islands have since been the subject of a territorial dispute, first between Britain and Spain, then between Britain and Argentina. The UK asserted its claim to the islands by establishing a naval garrison there in 1833. Argentina invaded the islands on 2 April 1982. The British responded with an expeditionary force that landed

seven weeks later and after fierce fighting forced Argentine surrender on 14 June 1982.

Economy Falkland Islands (Islas Malvinas)

Economy - overview:
The economy was formerly based on agriculture, mainly sheep farming, but today fishing contributes the bulk of economic activity. In 1987 the government began selling fishing licenses to foreign trawlers operating within the Falklands exclusive fishing zone. These license fees total more than \$40 million per year, which goes to support the island's health, education, and welfare system. Squid accounts for 75% of the fish taken. Dairy farming supports domestic consumption; crops furnish winter fodder. Exports feature shipments of high-grade wool to the UK and the sale of postage stamps and coins. The islands are now self-financing except for defense. The British Geological Survey announced a 200-mile oil exploration zone around the islands in 1993, and early seismic surveys suggest substantial reserves capable of producing 500,000 barrels per day; to date no exploitable site has been identified. An agreement between Argentina and the UK in 1995 seeks to defuse licensing and sovereignty conflicts that would dampen foreign interest in exploiting potential oil reserves. Tourism, especially

eco-tourism, is increasing rapidly, with about 30,000 visitors in 2001. Another large source of income is interest paid on money the government has in the bank. The British military presence also provides a sizeable economic boost.

Economy Faroe Islands

Economy - overview:

The Faroese economy has had a strong performance since 1994, mostly as a result of increasing fish landings and high and stable export prices. Unemployment is falling and there are signs of labor shortages in several sectors. The positive economic development has helped the Faroese Home Rule Government produce increasing budget surpluses, which in turn help to reduce the large public debt, most of it owed to Denmark. However, the total dependence on fishing makes the Faroese economy extremely vulnerable, and the present fishing efforts appear in excess of what is a sustainable level of fishing in the long term. Oil finds close to the Faroese area give hope for deposits in the immediate Faroese area, which may eventually lay the basis for a more diversified economy and thus lessen dependence on Danish economic assistance. Aided by a substantial annual subsidy (15% of GDP) from Denmark, the Faroese have a standard of living not far below the Danes and other Scandinavians.

Introduction Fiji

Background:

Fiji became independent in 1970, after nearly a century as a British colony. Democratic rule was interrupted by two military coups in 1987, caused by concern over a government perceived as dominated by the Indian community (descendants of contract laborers brought to the islands by the British in the 19th century). A 1990 constitution favored native Melanesian control of Fiji, but led to heavy Indian emigration; the population loss resulted in economic difficulties, but ensured that Melanesians became the majority. Amendments enacted in 1997 made the constitution more equitable. Free and peaceful elections in 1999 resulted in a government led by an Indo-Fijian, but a coup in May 2000 ushered in a prolonged period

of political turmoil. Parliamentary elections held in August 2001 provided Fiji with a democratically elected government and gave a mandate to the government of Prime Minister Laisenia QARASE.

Economy Fiji

Economy - overview:
Fiji, endowed with forest, mineral, and fish resources, is one of the most developed of the Pacific island economies, though still with a large subsistence sector. Sugar exports and a growing tourist industry - with 300,000 to 400,000 tourists annually - are the major sources of foreign exchange. Sugar processing makes up one-third of industrial activity. Long-term problems include low investment, uncertain land ownership rights, and the government's ability to manage its budget.

Introduction Finland

Background:

Finland was a province and then a grand duchy under Sweden from the 12th to the 19th centuries and an autonomous grand duchy of Russia after 1809. It finally won its complete independence in 1917. During World War II, it was able to successfully defend its freedom and resist invasions by the Soviet Union - albeit with some loss of territory. In the subsequent half century, the Finns made a remarkable transformation from a farm/forest economy to a diversified modern industrial economy; per capita income is now on par with Western Europe. As a member of the European Union, Finland was the only Nordic state to join the euro system at its initiation in January 1999.

Economy Finland

Economy - overview:

Finland has a highly industrialized, largely free-market economy, with per capita output roughly that of the UK, France, Germany, and Italy. Its key economic sector is manufacturing - principally the wood, metals, engineering, telecommunications, and electronics industries. Trade is important, with exports equaling almost one-third of GDP. Except for timber and several minerals, Finland depends on imports of raw materials, energy, and some components for manufactured goods. Because of the climate, agricultural development is limited to maintaining self-sufficiency in basic products. Forestry, an important export earner, provides a secondary occupation for the rural population. Rapidly increasing integration

with Western Europe - Finland was one of the 11 countries joining the European Economic and Monetary Union (EMU) on 1 January 1999 - will dominate the economic picture over the next several years. Growth in 2003 was held back by the global slowdown but will pick up in 2004 provided the world economy suffers no further blows.

Introduction France

Background:

Although ultimately a victor in World Wars I and II, France suffered extensive losses in its empire, wealth, manpower, and rank as a dominant nation-state. Nevertheless, France today is one of the most modern countries in the world and is a leader among European nations. Since 1958, it has constructed a presidential democracy resistant to the instabilities experienced in earlier parliamentary democracies. In recent years, its reconciliation and cooperation with Germany have proved central to the economic integration of Europe, including the introduction of the euro in January 2002. At present, France is at the forefront of European states seeking to exploit the momentum of monetary union to advance the creation of a more unified and capable European defense and security apparatus.

Economy France

Economy - overview:

France is in the midst of transition, from a well-to-do modern economy that has featured extensive government ownership and intervention to one that relies more on market mechanisms. The Socialist-led government has partially or fully privatized many large companies, banks, and insurers, but still retains controlling stakes in several leading firms, including Air France, France Telecom, Renault, and Thales, and remains dominant in some sectors, particularly power, public transport, and defense industries. The telecommunications sector is gradually being opened to competition. France's leaders remain committed to a capitalism in which they maintain social equity by means of laws, tax policies, and social spending that reduce income disparity and the impact of free markets on public health and welfare. The current government has lowered income taxes and introduced measures to boost employment. At the end of 2002 the government was focusing on the problems of the high cost of labor and labor market inflexibility resulting from the 35-hour workweek and restrictions on lay-offs. The government was also pushing for pension reforms and simplification of administrative procedures. The tax burden remains one of the highest in Europe. The current economic slowdown and inflexible budget items have pushed the deficit above the EU's 3% debt limit. Business investment remains listless because of low rates of capital utilization, high debt, and the steep cost of capital.

Economy French Guiana

Economy - overview:
The economy is tied closely to the larger French economy through subsidies and imports. Besides the French space center at Kourou (which accounts for 25% of GDP), fishing and forestry are the most important economic activities. Forest and woodland cover 90% of the country. The large reserves of tropical hardwoods, not fully exploited, support an expanding sawmill industry that provides sawn logs for export. Cultivation of crops is limited to the coastal area, where the population is largely concentrated; rice and manioc are the major crops. French Guiana is heavily dependent on imports of food and energy. Unemployment is a serious problem, particularly among younger workers.

Economy French Polynesia

Economy - overview:

Since 1962, when France stationed military personnel in the region, French Polynesia has changed from a subsistence agricultural economy to one in which a high proportion of the work force is either employed by the military or supports the tourist industry. With the halt of French nuclear testing in 1996, the military contribution to the economy fell sharply. Tourism accounts for about one-fourth of GDP and is a primary source of hard currency earnings. Other sources of income are pearl farming and deep-sea commercial fishing. The small manufacturing sector primarily processes agricultural products. The territory benefits substantially from development agreements with France aimed principally at creating new businesses and strengthening social services.

@French Southern and Antarctic Lands

Introduction French Southern and Antarctic Lands

Background:

The Southern Lands consist of two archipelagos, Iles Crozet and Iles Kerguelen, and two volcanic islands, Ile Amsterdam and Ile

Saint-Paul. They contain no permanent inhabitants and are visited only by researchers studying the native fauna. The Antarctic portion consists of "Adelie Land," a thin slice of the Antarctic continent discovered and claimed by the French in 1840.

Introduction Gabon

Background:

Ruled by autocratic presidents since independence from France in 1960, Gabon introduced a multiparty system and a new constitution in the early 1990s that allowed for a more transparent electoral process and for reforms of governmental institutions. A small population, abundant natural resources, and considerable foreign support have helped make Gabon one of the more prosperous black African countries.

Economy Gabon

Economy - overview:

Gabon enjoys a per capita income four times that of most nations of sub-Saharan Africa. This has supported a sharp decline in extreme poverty; yet because of high income inequality a large proportion of the population remains poor. Gabon depended on timber and manganese until oil was discovered offshore in the early 1970s. The oil sector now accounts for 50% of GDP. Gabon continues to face fluctuating prices for its oil, timber, and manganese exports. Despite the abundance of natural wealth, poor fiscal management hobbles the economy. Devaluation of its Francophone currency by 50% on 12 January 1994 sparked a one-time inflationary surge, to 35%; the rate dropped to 6% in 1996. The IMF provided a one-year standby arrangement in 1994-95, a three-year Enhanced Financing Facility (EFF) at near commercial rates beginning in late 1995, and stand-by credit of \$119 million in October 2000. Those agreements mandate progress in privatization and fiscal discipline. France provided additional financial support in January 1997 after Gabon had met IMF targets for mid-1996. In 1997, an IMF mission to Gabon criticized the government for overspending on off-budget items, overborrowing from the central bank, and slipping on its schedule for privatization and administrative reform. The rebound of oil prices in 1999-2000 helped growth, but drops in production hampered Gabon from fully realizing potential gains. In December 2000, Gabon signed a new agreement with the Paris Club to reschedule its official debt. A follow-up bilateral repayment agreement with the US was signed in December 2001. Short-term progress depends on an upbeat world economy and fiscal and other adjustments in line with IMF policies.

Introduction Gambia, The

Background:

The Gambia gained its independence from the UK in 1965; it formed a short-lived federation of Senegambia with Senegal between 1982 and 1989. In 1991 the two nations signed a friendship and cooperation treaty. A military coup in 1994 overthrew the president and banned political activity, but a 1996 constitution and presidential elections, followed by parliamentary balloting in 1997, completed a nominal return to civilian rule. The country undertook another round of presidential and legislative elections in late 2001 and early 2002.

Economy Gambia, The

Economy - overview:

The Gambia has no important mineral or other natural resources and has a limited agricultural base. About 75% of the population depends on crops and livestock for its livelihood. Small-scale manufacturing activity features the processing of peanuts, fish, and hides.

Reexport trade normally constitutes a major segment of economic activity, but a 1999 government-imposed preshipment inspection plan, and instability of the Gambian dalasi (currency) have drawn some of the reexport trade away from The Gambia. The government's 1998 seizure of the private peanut firm Alimenta eliminated the largest purchaser of Gambian groundnuts; the following two marketing seasons have seen substantially lower prices and sales. A decline in tourism in 2000 has also held back growth. Unemployment and underemployment rates are extremely high. Shortrun economic progress remains highly dependent on sustained bilateral and multilateral aid, on responsible government economic management as forwarded by IMF technical help and advice, and on expected growth in the construction sector.

@Gaza Strip

Introduction Gaza Strip

Background:

The Israel-PLO Declaration of Principles on Interim Self-Government Arrangements (the DOP), signed in Washington on 13 September 1993, provided for a transitional period not exceeding five years of Palestinian interim self-government in the Gaza Strip and the West Bank. Under the DOP, Israel agreed to transfer certain powers and responsibilities to the Palestinian Authority, which includes the Palestinian Legislative Council elected in January 1996, as part of the interim self-governing arrangements in the West Bank and Gaza Strip. A transfer of powers and responsibilities for the Gaza Strip and Jericho took place pursuant to the Israel-PLO 4 May 1994 Cairo Agreement on the Gaza Strip and the Jericho Area and in additional areas of the West Bank pursuant to the Israel-PLO 28 September 1995 Interim Agreement, the Israel-PLO 15 January 1997 Protocol Concerning Redeployment in Hebron, the Israel-PLO 23 October 1998 Wye River Memorandum, and the 4 September 1999 Sharm el-Sheikh Agreement. The DOP provides that Israel will retain responsibility during the transitional period for external and internal security and for public order of settlements and Israeli citizens. Direct negotiations to determine the permanent status of Gaza and West Bank had begun in September 1999 after a three-year hiatus, but have been

derailed by a second intifadah that broke out in September 2000. The resulting widespread violence in the West Bank and Gaza Strip, Israel's military response, and instability within the Palestinian Authority continue to undermine progress toward a permanent agreement.

Economy Gaza Strip

Economy - overview:

Economic output in the Gaza Strip - under the responsibility of the
Palestinian Authority since the Cairo Agreement of May 1994 -
declined by about one-third between 1992 and 1996. The downturn was
largely the result of Israeli closure policies - the imposition of
generalized border closures in response to security incidents in
Israel - which disrupted previously established labor and commodity
market relationships between Israel and the WBGS (West Bank and Gaza
Strip). The most serious negative social effect of this downturn was
the emergence of high unemployment; unemployment in the WBGS
during

the 1980s was generally under 5%; by 1995 it had risen to over 20%. Israel's use of comprehensive closures decreased during the next few years and, in 1998, Israel implemented new policies to reduce the impact of closures and other security procedures on the movement of Palestinian goods and labor. These changes fueled an almost three-year-long economic recovery in the West Bank and Gaza Strip; real GDP grew by 5% in 1998 and 6% in 1999. Recovery was upended in the last quarter of 2000 with the outbreak of violence, triggering tight Israeli closures of Palestinian self-rule areas and a severe disruption of trade and labor movements. In 2001, and even more severely in 2002, Israeli military measures in Palestinian Authority areas resulted in the destruction of capital plant and administrative structure, widespread business closures, and a sharp drop in GDP. Another major loss has been the decline in income earned by Palestinian workers in Israel. International aid of \$2 billion in 2001-02 to the Gaza Strip and West Bank have prevented the complete collapse of the economy.

Introduction Georgia

Background:

Georgia was absorbed into the Russian Empire in the 19th century. Independent for three years (1918-1921) following the Russian revolution, it was forcibly incorporated into the USSR until the Soviet Union dissolved in 1991. Ethnic separation in Abkhazia and South Ossetia, poor governance, and Russian military bases deny the government effective control over the entirety of the state's internationally recognized territory. Despite myriad problems, some progress on market reforms and democratization has been made. An attempt by the government to manipulate legislative elections in

November 2003 touched off widespread protests that led to the resignation of President Eduard SHEVARDNADZE.

Economy Georgia

Economy - overview:

Georgia's main economic activities include the cultivation of agricultural products such as citrus fruits, tea, hazelnuts, and grapes; mining of manganese and copper; and output of a small industrial sector producing alcoholic and nonalcoholic beverages, metals, machinery, and chemicals. The country imports the bulk of its energy needs, including natural gas and oil products. Its only sizable internal energy resource is hydropower. Despite the severe damage the economy has suffered due to civil strife, Georgia, with the help of the IMF and World Bank, has made substantial economic gains since 1995, achieving positive GDP growth and curtailing inflation. However, the Georgian Government suffers from limited resources due to a chronic failure to collect tax revenues. Georgia also suffers from energy shortages; it privatized the T'bilisi distribution network in 1998, but collection rates are low, making the venture unprofitable. The country is pinning its hopes for long-term growth on its role as a transit state for pipelines and trade. The start of construction on the Baku-T'bilisi-Ceyhan oil pipeline and the Baku-T'bilisi-Erzurum gas pipeline will bring much-needed investment and job opportunities.

Introduction Germany

Background:

As Europe's largest economy and most populous nation, Germany remains a key member of the continent's economic, political, and defense organizations. European power struggles immersed the country in two devastating World Wars in the first half of the 20th century and left the country occupied by the victorious Allied powers of the US, UK, France, and the Soviet Union in 1945. With the advent of the Cold War, two German states were formed in 1949: the western Federal Republic of Germany (FRG) and the eastern German Democratic Republic (GDR). The democratic FRG embedded itself in key Western economic and security organizations, the EC, which became the EU, and NATO, while the Communist GDR was on the front line of the Soviet-led Warsaw Pact. The decline of the USSR and the end of the Cold War allowed for German unification in 1990. Since then, Germany has expended considerable funds to bring eastern productivity and wages up to western standards. In January 2002, Germany and 11 other EU countries introduced a common European currency, the euro.

Economy Germany

Economy - overview:

Germany's affluent and technologically powerful economy has turned

in a weak performance throughout much of the 1990s and early 2000s. The modernization and integration of the eastern German economy continues to be a costly long-term problem, with annual transfers from west to east amounting to roughly \$70 billion. Germany's ageing population, combined with high unemployment, has pushed social security outlays to a level exceeding contributions from workers. Structural rigidities in the labor market - including strict regulations on laying off workers and the setting of wages on a national basis - have made unemployment a chronic problem. Growth in 2002 and 2003 fell short of 1%. Corporate restructuring and growing capital markets are setting the foundations that could allow Germany to meet the long-term challenges of European economic integration and globalization, particularly if labor market rigidities are further addressed. In the short run, however, the fall in government revenues and the rise in expenditures have raised the deficit above the EU's 3% debt limit.

Introduction Ghana

Background:

Formed from the merger of the British colony of the Gold Coast and the Togoland trust territory, Ghana in 1957 became the first country in colonial Africa to gain its independence. A long series of coups resulted in the suspension of the constitution in 1981 and the banning of political parties. A new constitution, restoring multiparty politics, was approved in 1992. Lt. Jerry RAWLINGS, head of state since 1981, won presidential elections in 1992 and 1996, but was constitutionally prevented from running for a third term in 2000. He was succeeded by John KUFUOR, who defeated former Vice President Atta MILLS in a free and fair election.

Economy Ghana

Economy - overview:

Well endowed with natural resources, Ghana has roughly twice the per capita output of the poorer countries in West Africa. Even so, Ghana remains heavily dependent on international financial and technical assistance. Gold, timber, and cocoa production are major sources of foreign exchange. The domestic economy continues to revolve around subsistence agriculture, which accounts for 36% of GDP and employs 60% of the work force, mainly small landholders. Ghana opted for debt relief under the Heavily Indebted Poor Country (HIPC) program in 2002. Policy priorities include tighter monetary and fiscal policies, accelerated privatization, and improvement of social services.

Introduction Gibraltar

Background:

Strategically important, Gibraltar was ceded to Great Britain by Spain in the 1713 Treaty of Utrecht; the British garrison was formally declared a colony in 1830. In referendums held in 1967 and 2002, Gibraltarians ignored Spanish pressure and voted overwhelmingly to remain a British dependency.

Economy Gibraltar

Economy - overview:

Gibraltar benefits from an extensive shipping trade, offshore banking, and its position as an international conference center. The British military presence has been sharply reduced and now contributes about 7% to the local economy, compared with 60% in 1984. The financial sector, tourism (almost 5 million visitors in 1998), shipping services fees, and duties on consumer goods also generate revenue. The financial sector, the shipping sector, and tourism each contribute 25%-30% of GDP. Telecommunications accounts for another 10%. In recent years, Gibraltar has seen major structural change from a public to a private sector economy, but changes in government spending still have a major impact on the level of employment.

@Greece

Introduction Greece

Background:

Greece achieved its independence from the Ottoman Empire in 1829. During the second half of the 19th century and the first half of the 20th century, it gradually added neighboring islands and territories, most with Greek-speaking populations. Following the defeat of Communist rebels in 1949, Greece joined NATO in 1952. A military dictatorship, which in 1967 suspended many political liberties and forced the king to flee the country, lasted seven years. Democratic elections in 1974 and a referendum created a parliamentary republic and abolished the monarchy; Greece joined the European Community or EC in 1981 (which became the EU in 1992).

Economy Greece

Economy - overview:

Greece has a mixed capitalist economy with the public sector accounting for half of GDP and with per capita GDP 70% of the leading euro-zone economies. Tourism provides 15% of GDP. Immigrants make up nearly one-fifth of the work force, mainly in menial jobs. Greece is a major beneficiary of EU aid, equal to about 3.3% of GDP. The economy has improved steadily with economic growth averaging 4% since 1997, exceeding EU growth by more than 1 percentage point. Remaining challenges include the reduction of the public debt, inflation, and unemployment; and further restructuring of the economy, including privatizing several state enterprises, undertaking pension and other reforms, and minimizing bureaucratic inefficiencies. The Olympic Games will be held in Athens in mid-2004.

Economy Greenland

Economy - overview:

The economy remains critically dependent on exports of fish and substantial support from the Danish Government, which supplies about half of government revenues. The public sector, including publicly owned enterprises and the municipalities, plays the dominant role in the economy. Despite several interesting hydrocarbon and minerals exploration activities, it will take several years before production can materialize. Tourism is the only sector offering any near-term potential, and even this is limited due to a short season and high costs.

Introduction Grenada

Background:

One of the smallest independent countries in the western hemisphere, Grenada was seized by a Marxist military council on 19 October 1983. Six days later the island was invaded by US forces and those of six other Caribbean nations, which quickly captured the ringleaders and their hundreds of Cuban advisers. Free elections were reinstituted the following year.

Economy Guadeloupe

Economy - overview:

The Caribbean economy depends on agriculture, tourism, light industry, and services. It also depends on France for large subsidies and imports. Tourism is a key industry, with most tourists from the US; an increasingly large number of cruise ships visit the islands. The traditional sugarcane crop is slowly being replaced by other crops, such as bananas (which now supply about 50% of export earnings), eggplant, and flowers. Other vegetables and root crops are cultivated for local consumption, although Guadeloupe is still dependent on imported food, mainly from France. Light industry features sugar and rum production. Most manufactured goods and fuel are imported. Unemployment is especially high among the young. Hurricanes periodically devastate the economy.

Economy Guam

Economy - overview:
The economy depends on US military spending, tourism, and the export of fish and handicrafts. Total US grants, wage payments, and procurement outlays amounted to \$1 billion in 1998. Over the past 20 years, the tourist industry has grown rapidly, creating a construction boom for new hotels and the expansion of older ones. More than 1 million tourists visit Guam each year. The industry has recently suffered setbacks because of the continuing Japanese slowdown; the Japanese normally make up almost 90% of the tourists. Most food and industrial goods are imported. Guam faces the problem of building up the civilian economic sector to offset the impact of military downsizing.

Introduction Guatemala

Background:

Guatemala was freed of Spanish colonial rule in 1821. During the second half of the 20th century, it experienced a variety of military and civilian governments as well as a 36-year guerrilla war. In 1996, the government signed a peace agreement formally ending the conflict, which had led to the death of more than 100,000 people and had created some 1 million refugees.

Economy Guatemala

Economy - overview:

The agricultural sector accounts for about one-fourth of GDP, two-thirds of exports, and half of the labor force. Coffee, sugar, and bananas are the main products. Former President ARZU (1996-2000) worked to implement a program of economic liberalization and political modernization. President PORTILLO has continued the liberalization program but with more sporadic results. The 1996 signing of the peace accords, which ended 36 years of civil war, removed a major obstacle to foreign investment, but numerous corruption scandals associated with the PORTILLO administration have dampened investor confidence. The distribution of income remains highly unequal, with perhaps 75% of the population below the poverty line. Ongoing challenges include increasing the government revenues, negotiating further assistance from international donors, upgrading both government and private financial operations, and narrowing the trade deficit. A free trade agreement between the US and Central American countries promises greater access to US and neighboring markets.

OAS brokered Differendum in 2002 creating small adjustment to land
boundary, large Guatemalan maritime corridor in Caribbean, joint
ecological park for disputed Sapodilla Cays, and substantial US-UK
financial package, but agreement was not brought to popular
referendum leaving Guatemalan claim to southern half of Belize intact

Illicit drugs:
major transit country for cocaine and heroin; minor producer of
illicit opium poppy and cannabis for mostly domestic consumption;
proximity to Mexico makes Guatemala a major staging area for drugs
(cocaine and heroin shipments); money laundering is a serious
problem; corruption is a major problem

Economy Guernsey

Economy - overview:

Financial services - banking, fund management, insurance, etc. - account for about 55% of total income in this tiny Channel Island economy. Tourism, manufacturing, and horticulture, mainly tomatoes and cut flowers, have been declining. Light tax and death duties make Guernsey a popular tax haven. The evolving economic integration of the EU nations is changing the rules of the game under which Guernsey operates.

Introduction Guinea

Background:

Independent from France since 1958, Guinea did not hold democratic elections until 1993 when Gen. Lansana CONTE (head of the military government) was elected president of the civilian government. He was reelected in 1998. Unrest in Sierra Leone has spilled over into Guinea, threatening stability and creating a humanitarian emergency.

Economy Guinea

Economy - overview:

Guinea possesses major mineral, hydropower, and agricultural resources, yet remains an underdeveloped nation. The country possesses over 30% of the world's bauxite reserves and is the second-largest bauxite producer. The mining sector accounted for

about 75% of exports in 1999. Long-run improvements in government fiscal arrangements, literacy, and the legal framework are needed if the country is to move out of poverty. The government made encouraging progress in budget management in 1997-99, and reform progress was praised in the World Bank/IMF October 2000 assessment. However, fighting along the Sierra Leonean and Liberian borders has caused major economic disruptions. In addition to direct defense costs, the violence has led to a sharp decline in investor confidence. Foreign mining companies have reduced expatriate staff, while panic buying has created food shortages and inflation in local markets. Multilateral aid - including Heavily Indebted Poor Countries (HIPC) debt relief - and single digit inflation permitted moderate 3.7% growth in 2002. Growth should strengthen in 2003 because of a slowly improving security situation and increased investor confidence.

@Guinea-Bissau

Introduction Guinea-Bissau

Background:

In 1994, 20 years after independence from Portugal, the country's first multiparty legislative and presidential elections were held.

An army uprising that triggered a bloody civil war in 1998 created hundreds of thousands of displaced persons. A military junta ousted the president in May 1999. An interim government turned over power in February 2000 when opposition leader Kumba YALA took office following two rounds of transparent presidential elections.

Guinea-Bissau's transition back to democracy will be complicated by its crippled economy, devastated in the civil war.

Economy Guinea-Bissau

Economy - overview:

One of the 10 poorest countries in the world, Guinea-Bissau depends mainly on farming and fishing. Cashew crops have increased remarkably in recent years, and the country now ranks sixth in cashew production. Guinea-Bissau exports fish and seafood along with small amounts of peanuts, palm kernels, and timber. Rice is the major crop and staple food. However, intermittent fighting between Senegalese-backed government troops and a military junta destroyed much of the country's infrastructure and caused widespread damage to the economy in 1998; the civil war led to a 28% drop in GDP that year, with partial recovery in 1999-2002. Before the war, trade reform and price liberalization were the most successful part of the country's structural adjustment program under IMF sponsorship. The tightening of monetary policy and the development of the private sector had also begun to reinvigorate the economy. Because of high costs, the development of petroleum, phosphate, and other mineral resources is not a near-term prospect. However, unexploited offshore oil reserves could provide much-needed revenue in the long run. The inequality of income distribution is one of the most extreme in the world. The government and international donors continue to work out

plans to forward economic development from a lamentably low base. Government drift and indecision, however, have resulted in low growth in 2002 and dim prospects for 2003.

Introduction Guyana

Background:
Originally a Dutch colony in the 17th century, by 1815 Guyana had
become a British possession. The abolition of slavery led to black
settlement of urban areas and the importation of indentured servants
from India to work the sugar plantations. This ethnocultural divide
has persisted and has led to turbulent politics. Guyana achieved

independence from the UK in 1966, but until the early 1990s it was ruled mostly by socialist-oriented governments. In 1992, Cheddi JAGAN was elected president, in what is considered the country's first free and fair election since independence. Upon his death five years later, he was succeeded by his wife Janet, who resigned in 1999 due to poor health. Her successor, Bharrat JAGDEO, was reelected in 2001.

Economy Guyana

Economy - overview:

The Guyanese economy has exhibited moderate economic growth in 2001-02, based on expansion in the agricultural and mining sectors, a more favorable atmosphere for business initiatives, a more realistic exchange rate, fairly low inflation, and the continued support of international organizations. Chronic problems include a shortage of skilled labor and a deficient infrastructure. The government is juggling a sizable external debt against the urgent need for expanded public investment. The bauxite mining sector should benefit in the near term by restructuring and partial privatization.

@Haiti

Introduction Haiti

Background:

The native Arawak Amerindians - who inhabited the island of
Hispaniola when it was discovered by Columbus in 1492 - were
virtually annihilated by Spanish settlers within 25 years. In the
early 17th century, the French established a presence on Hispaniola,
and in 1697, Spain ceded to the French the western third of the
island - Haiti. The French colony, based on forestry and

sugar-related industries, became one of the wealthiest in the Caribbean, but only through the heavy importation of African slaves and considerable environmental degradation. In the late 18th century, Haiti's nearly half million slaves revolted under Toussaint L'OUVERTURE and after a prolonged struggle, became the first black republic to declare its independence in 1804. Haiti has been plagued by political violence for most of its history since then, and it is now one of the poorest countries in the Western Hemisphere. Over three decades of dictatorship followed by military rule ended in 1990 when Jean-Bertrand ARISTIDE was elected president. Most of his term was usurped by a military takeover, but he was able to return to office in 1994 and oversee the installation of a close associate to the presidency in 1996. ARISTIDE won a second term as president in 2000, and took office early in 2001. However, a political crisis stemming from fraudulent legislative elections in 2000 has not yet been resolved.

Economy Haiti

Economy - overview:

About 80% of the population lives in abject poverty. Nearly 70% of all Haitians depend on the agriculture sector, which consists mainly of small-scale subsistence farming and employs about two-thirds of the economically active work force. Following legislative elections in May 2000, fraught with irregularities, international donors - including the US and EU - suspended almost all aid to Haiti. The economy shrank an estimated 1.2% in 2001 and an estimated 0.9% in 2002. The contraction will likely intensify in 2003 unless a political agreement with donors is reached on economic policy.

Suspended aid and loan disbursements totaled more than \$500 million at the start of 2003.

@Holy See (Vatican City)

Introduction Holy See (Vatican City)

Background:

Popes in their secular role ruled portions of the Italian peninsula for more than a thousand years until the mid 19th century, when many of the Papal States were seized by the newly united Kingdom of Italy. In 1870, the pope's holdings were further circumscribed when Rome itself was annexed. Disputes between a series of "prisoner" popes and Italy were resolved in 1929 by three Lateran Treaties, which established the independent state of Vatican City and granted Roman Catholicism special status in Italy. In 1984, a concordat between the Holy See and Italy modified certain of the earlier treaty provisions, including the primacy of Roman Catholicism as the Italian state religion. Present concerns of the Holy See include the failing health of Pope John Paul II, interreligious dialogue and reconciliation, and the application of church doctrine in an era of rapid change and globalization. About 1 billion people worldwide profess the Catholic faith.

@Honduras

Introduction Honduras

Background:

Part of Spain's vast empire in the New World, Honduras became an independent nation in 1821. After two and one-half decades of mostly military rule, a freely elected civilian government came to power in 1982. During the 1980s, Honduras proved a haven for anti-Sandinista

contras fighting the Marxist Nicaraguan Government and an ally to Salvadoran Government forces fighting against leftist guerrillas. The country was devastated by Hurricane Mitch in 1998, which killed about 5,600 people and caused almost \$1 billion in damage.

Geography Honduras

Location:

Middle America, bordering the Caribbean Sea, between Guatemala and Nicaragua and bordering the Gulf of Fonseca (North Pacific Ocean), between El Salvador and Nicaragua

Natural hazards:

frequent, but generally mild, earthquakes; extremely susceptible to
damaging hurricanes and floods along the Caribbean coast

Environment - current issues:

urban population expanding; deforestation results from logging and

the clearing of land for agricultural purposes; further land degradation and soil erosion hastened by uncontrolled development and improper land use practices such as farming of marginal lands; mining activities polluting Lago de Yojoa (the country's largest source of fresh water), as well as several rivers and streams, with heavy metals

Environment - international agreements:

Economy Honduras

Economy - overview:

Honduras, one of the poorest countries in the Western Hemisphere with an extraordinarily unequal distribution of income, is banking on expanded trade privileges under the Enhanced Caribbean Basin Initiative and on debt relief under the Heavily Indebted Poor Countries (HIPC) initiative. While the country has met most of its macroeconomic targets, it failed to meet the IMF's goals to liberalize its energy and telecommunications sectors. Growth remains dependent on the status of the US economy, its major trading partner, on commodity prices, particularly coffee, and on reduction of the high crime rate.

Introduction Hong Kong

Background:

Occupied by the UK in 1841, Hong Kong was formally ceded by China the following year; various adjacent lands were added later in the 19th century. Pursuant to an agreement signed by China and the UK on 19 December 1984, Hong Kong became the Hong Kong Special Administrative Region (SAR) of China on 1 July 1997. In this agreement, China has promised that, under its "one country, two systems" formula, China's socialist economic system will not be imposed on Hong Kong and that Hong Kong will enjoy a high degree of autonomy in all matters except foreign and defense affairs for the next 50 years.

Economy Hong Kong

Economy - overview:

Hong Kong has a free market economy highly dependent on international trade. Natural resources are limited, and food and raw materials must be imported. Imports and exports, including reexports, each exceed GDP in dollar value. Even before Hong Kong reverted to Chinese administration on 1 July 1997 it had extensive trade and investment ties with China. Hong Kong has been further integrating its economy with China because China's growing openness to the world economy has increased competitive pressure on Hong Kong's service industries, and Hong Kong's re-export business from China is a major driver of growth. Per capita GDP compares with the level in the four big economies of Western Europe. GDP growth averaged a strong 5% in 1989-1997, but Hong Kong suffered two

recessions in the past 6 years because of the Asian financial crisis in 1998 and the global downturn of 2001-2002. The Severe Acute Respiratory Syndrome (SARS) outbreak has also battered Hong Kong's economy but the resumption of strong growth began in 2003.

@Howland Island

Introduction Howland Island

Background:

Discovered by the US early in the 19th century, the island was officially claimed by the US in 1857. Both US and British companies mined for guano until about 1890. Earhart Light is a day beacon near the middle of the west coast that was partially destroyed during World War II, but has since been rebuilt; it is named in memory of the famed aviatrix Amelia EARHART. The island is administered by the US Department of the Interior as a National Wildlife Refuge.

@Hungary

Introduction Hungary

Background:

Hungary was part of the polyglot Austro-Hungarian Empire, which collapsed during World War I. The country fell under Communist rule following World War II. In 1956, a revolt and announced withdrawal from the Warsaw Pact were met with a massive military intervention by Moscow. Under the leadership of Janos KADAR in 1968, Hungary began liberalizing its economy, introducing so-called "goulash Communism." Hungary held its first multiparty elections in 1990 and initiated a free market economy. It joined NATO in 1999 and is scheduled to accede to the EU along with nine other states on 1 May 2004. In an April 2003 referendum, 84 percent voted in favor of joining the EU.

Economy Hungary

Economy - overview:

Hungary has made the transition from a centrally planned to a market economy, with a per capita income one-half that of the Big

Four European nations. Hungary continues to demonstrate strong economic growth and to work toward accession to the European Union in May 2004. The private sector accounts for over 80% of GDP. Foreign ownership of and investment in Hungarian firms are widespread, with cumulative foreign direct investment totaling more than \$23 billion since 1989. Hungarian sovereign debt was upgraded in 2000 to the second-highest rating among all the Central European transition economies. Inflation has declined substantially, from 14% in 1998 to 4.7% in 2003; unemployment has persisted around the 6% level. Germany is by far Hungary's largest economic partner. Short-term issues include the reduction of the public sector deficit to 3% in 2004 and avoiding unjustified increases in wages.

Introduction Iceland

Background:

Settled by Norwegian and Celtic (Scottish and Irish) immigrants during the late 9th and 10th centuries A.D., Iceland boasts the world's oldest functioning legislative assembly, the Althing, established in 930. Independent for over 300 years, Iceland was subsequently ruled by Norway and Denmark. Fallout from the Askja volcano of 1875 devastated the Icelandic economy and caused widespread famine. Over the next quarter century, 20% of the island's population emigrated, mostly to Canada and the US. Limited home rule from Denmark was granted in 1874 and complete independence

attained in 1944. Literacy, longevity, income, and social cohesion are first-rate by world standards.

Economy Iceland

Economy - overview:

Iceland's Scandinavian-type economy is basically capitalistic, yet with an extensive welfare system (including generous housing

subsidies), low unemployment, and remarkably even distribution of income. In the absence of other natural resources (except for abundant hydrothermal and geothermal power), the economy depends heavily on the fishing industry, which provides 70% of export earnings and employs 12% of the work force. The economy remains sensitive to declining fish stocks as well as to fluctuations in world prices for its main exports: fish and fish products, aluminum, and ferrosilicon. Government policies include reducing the budget and current account deficits, limiting foreign borrowing, containing inflation, revising agricultural and fishing policies, diversifying the economy, and privatizing state-owned industries. The government remains opposed to EU membership, primarily because of Icelanders' concern about losing control over their fishing resources. Iceland's economy has been diversifying into manufacturing and service industries in the last decade, and new developments in software production, biotechnology, and financial services are taking place. The tourism sector is also expanding, with the recent trends in ecotourism and whale watching. Growth had been remarkably steady in 1996-2001 at 3%-5%, but could not be sustained in 2002 in an environment of global recession. Growth resumed in 2003, and inflation dropped back from 5% to 2%.

Introduction India

Background:

The Indus Valley civilization, one of the oldest in the world, goes back at least 5,000 years. Aryan tribes from the northwest invaded about 1500 B.C.; their merger with the earlier inhabitants created the classical Indian culture. Arab incursions starting in the 8th century and Turkish in 12th were followed by European traders,

beginning in the late 15th century. By the 19th century, Britain had assumed political control of virtually all Indian lands. Nonviolent resistance to British colonialism under Mohandas GANDHI and Jawaharlal NEHRU led to independence in 1947. The subcontinent was divided into the secular state of India and the smaller Muslim state of Pakistan. A third war between the two countries in 1971 resulted in East Pakistan becoming the separate nation of Bangladesh. Fundamental concerns in India include the ongoing dispute with Pakistan over Kashmir, massive overpopulation, environmental degradation, extensive poverty, and ethnic and religious strife, all this despite impressive gains in economic investment and output.

Economy India

Economy - overview:

India's economy encompasses traditional village farming, modern agriculture, handicrafts, a wide range of modern industries, and a multitude of support services. Overpopulation severely handicaps the economy and about a quarter of the population is too poor to be able to afford an adequate diet. Government controls have been reduced on imports and foreign investment, and privatization of domestic output has proceeded slowly. The economy has posted an excellent average growth rate of 6% since 1990, reducing poverty by about 10 percentage points. India has large numbers of well-educated people skilled in the English language; India is a major exporter of software services and software workers; the information technology sector leads the strong growth pattern. The World Bank and others worry about the continuing public-sector budget deficit, running at approximately 10% of GDP in 1997-2002. In 2003 the state-owned Indian Bank substantially reduced non-performing loans, attracted new customers, and turned a profit. Deep-rooted problems remain, notably conflicts among political and cultural groups.

Communications India

Telephones - main lines in use:

27.7 million (October 2000)

Telephones - mobile cellular:

2.93 million (November 2000)

Telephone system:

general assessment: mediocre service; local and long distance service provided throughout all regions of the country, with services primarily concentrated in the urban areas; major objective is to continue to expand and modernize long-distance network to keep

pace with rapidly growing number of local subscriber lines; steady improvement is taking place with the recent admission of private and private-public investors, but, with telephone density at about two for each 100 persons and a waiting list of over 2 million, demand for main line telephone service will not be satisfied for a very long time

domestic: local service is provided by microwave radio relay and coaxial cable, with open wire and obsolete electromechanical and manual switchboard systems still in use in rural areas; starting in the 1980s, a substantial amount of digital switch gear has been introduced for local and long-distance service; long-distance traffic is carried mostly by coaxial cable and low-capacity microwave radio relay; since 1985 significant trunk capacity has been added in the form of fiber-optic cable and a domestic satellite system with 254 earth stations; mobile cellular service is provided in four metropolitan cities

international: satellite earth stations - 8 Intelsat (Indian Ocean) and 1 Inmarsat (Indian Ocean region); nine gateway exchanges operating from Mumbai (Bombay), New Delhi, Kolkata (Calcutta), Chennai (Madras), Jalandhar, Kanpur, Gaidhinagar, Hyderabad, and Ernakulam; 4 submarine cables - LOCOM linking Chennai (Madras) to Penang; Indo-UAE-Gulf cable linking Mumbai (Bombay) to Al Fujayrah, UAE; India-SEA-ME-WE-3, SEA-ME-WE-2 with landing sites at Cochin and

Transnational Issues India

Disputes - international:

much of the rugged, militarized boundary with China is in dispute, but the two sides have participated in more than 13 rounds of joint

working group sessions on this issue; India objects to Pakistan ceding lands to China in 1965 boundary agreement that India believes are part of disputed Kashmir; with Pakistan, armed stand-off over the status and sovereignty of Kashmir continues; disputes with Pakistan over Indus River water sharing and the terminus of the Rann of Kutch, which prevents maritime boundary delimitation; Joint Border Committee with Nepal continues to work on resolution of disputed boundary sections; dispute with Bangladesh over New Moore/South Talpatty Island in the Bay of Bengal prevents maritime boundary delimitation

Illicit drugs:

world's largest producer of licit opium for the pharmaceutical trade, but an undetermined quantity of opium is diverted to illicit international drug markets; transit point for illicit narcotics produced in neighboring countries; illicit producer of methaqualone; vulnerable to narcotics money laundering through the hawala system

@Indian Ocean

Introduction Indian Ocean

Background:

The Indian Ocean is the third largest of the world's five oceans (after the Pacific Ocean and Atlantic Ocean, but larger than the Southern Ocean and Arctic Ocean). Four critically important access waterways are the Suez Canal (Egypt), Bab el Mandeb (Djibouti-Yemen), Strait of Hormuz (Iran-Oman), and Strait of Malacca (Indonesia-Malaysia).

Geography Indian Ocean

Location:

body of water between Africa, the Southern Ocean, Asia, and Australia

Geographic coordinates:

20 00 S, 80 00 E

Map references:

Political Map of the World

Area:

total: 68.556 million sq km

note: includes Andaman Sea, Arabian Sea, Bay of Bengal, Flores Sea, Great Australian Bight, Gulf of Aden, Gulf of Oman, Java Sea, Mozambique Channel, Persian Gulf, Red Sea, Savu Sea, Strait of Malacca, Timor Sea, and other tributary water bodies

Area - comparative:

about 5.5 times the size of the US

Coastline:

66,526 km

Climate:

northeast monsoon (December to April), southwest monsoon (June to October); tropical cyclones occur during May/June and October/November in the northern Indian Ocean and January/February in the southern Indian Ocean

Terrain:

surface dominated by counterclockwise gyre (broad, circular system of currents) in the southern Indian Ocean; unique reversal of surface currents in the northern Indian Ocean; low atmospheric pressure over southwest Asia from hot, rising, summer air results in the southwest monsoon and southwest-to-northeast winds and currents, while high pressure over northern Asia from cold, falling, winter air results in the northeast monsoon and northeast-to-southwest winds and currents; ocean floor is dominated by the Mid-Indian Ocean Ridge and subdivided by the Southeast Indian Ocean Ridge, Southwest Indian Ocean Ridge, and Ninetyeast Ridge

Elevation extremes:

lowest point: Java Trench -7,258 m

highest point: sea level 0 m

Natural resources:

oil and gas fields, fish, shrimp, sand and gravel aggregates, placer deposits, polymetallic nodules

Natural hazards:

occasional icebergs pose navigational hazard in southern reaches

Environment - current issues:

endangered marine species include the dugong, seals, turtles, and whales; oil pollution in the Arabian Sea, Persian Gulf, and Red Sea

Geography - note:

major chokepoints include Bab el Mandeb, Strait of Hormuz, Strait of Malacca, southern access to the Suez Canal, and the Lombok Strait

Economy Indian Ocean

Economy - overview:

The Indian Ocean provides major sea routes connecting the Middle East, Africa, and East Asia with Europe and the Americas. It carries a particularly heavy traffic of petroleum and petroleum products from the oilfields of the Persian Gulf and Indonesia. Its fish are of great and growing importance to the bordering countries for domestic consumption and export. Fishing fleets from Russia, Japan, South Korea, and Taiwan also exploit the Indian Ocean, mainly for shrimp and tuna. Large reserves of hydrocarbons are being tapped in the offshore areas of Saudi Arabia, Iran, India, and western Australia. An estimated 40% of the world's offshore oil production comes from the Indian Ocean. Beach sands rich in heavy minerals and offshore placer deposits are actively exploited by bordering countries, particularly India, South Africa, Indonesia, Sri Lanka, and Thailand.

Transportation Indian Ocean

Economy Indonesia

Economy - overview:
Indonesia, a vast polyglot nation, faces severe economic development problems stemming from secessionist movements and the low level of security in the regions; the lack of reliable legal recourse in contract disputes; corruption; weaknesses in the banking system; and strained relations with the IMF. Investor confidence will remain low and few new jobs will be created under these circumstances. In November 2001, Indonesia agreed with the IMF on a series of economic reforms in 2002, thus enabling further IMF disbursements. Negotiations with the IMF and bilateral donors continued in 2002. Keys to future growth remain internal reform, the build-up of the confidence of international donors and investors, and a strong comeback in the global economy.

Introduction Iran

Background:

Known as Persia until 1935, Iran became an Islamic republic in 1979 after the ruling shah was forced into exile. Conservative clerical forces established a theocratic system of government with ultimate political authority vested in a learned religious scholar. A group of Iranian students seized the US Embassy in Tehran on 4 November 1979 and held it until 20 January 1981. During 1980-88, Iran fought a bloody, indecisive war with Iraq over disputed territory. Over the past decade, popular dissatisfaction with the government, driven by demographic changes, restrictive social policies, and poor economic conditions, has created a powerful and enduring pressure for political reform.

Economy Iran

Economy - overview:

Iran's economy is a mixture of central planning, state ownership of oil and other large enterprises, village agriculture, and small-scale private trading and service ventures. President KHATAMI has continued to follow the market reform plans of former President RAFSANJANI and has indicated that he will pursue diversification of Iran's oil-reliant economy although he has made little progress toward that goal. Relatively high oil prices in recent years have enabled Iran to amass some \$15 billion in foreign exchange reserves, but have not solved Iran's structural economic problems, including high unemployment and inflation.

into five equal sectors, while other littoral states have generally agreed to equidistant seabed boundaries - Iran has threatened Azerbaijanian hydrocarbon exploration in disputed waters

Illicit drugs:

despite substantial interdiction efforts, Iran remains a key transshipment point for Southwest Asian heroin to Europe; domestic narcotics consumption remains a persistent problem and Iranian press reports estimate at least 2 million drug users in the country

Introduction Iraq

Background:

Formerly part of the Ottoman Empire, Iraq was occupied by Britain during the course of World War I; in 1920, it was declared a League of Nations mandate under UK administration. In stages over the next dozen years, Iraq attained its independence as a kingdom in 1932. A "republic" was proclaimed in 1958, but in actuality a series of military strongmen have ruled the country since then, the latest

being SADDAM Husayn. Territorial disputes with Iran led to an inconclusive and costly eight-year war (1980-88). In August 1990, Iraq seized Kuwait, but was expelled by US-led, UN coalition forces during the Gulf War of January-February 1991. Following Kuwait's liberation, the UN Security Council (UNSC) required Iraq to scrap all weapons of mass destruction and long-range missiles and to allow UN verification inspections. Continued Iraqi noncompliance with UNSC resolutions over a period of 12 years resulted in the US-led invasion of Iraq in March 2003 and the ouster of the SADDAM Husayn regime. Coalition forces remain in Iraq, helping to restore degraded infrastructure and facilitating the establishment of a freely elected government.

Economy Iraq

Economy - overview:

Iraq's economy is dominated by the oil sector, which has traditionally provided about 95% of foreign exchange earnings. In the 1980s financial problems caused by massive expenditures in the eight-year war with Iran and damage to oil export facilities by Iran led the government to implement austerity measures, borrow heavily, and later reschedule foreign debt payments; Iraq suffered economic losses from the war of at least \$100 billion. After hostilities ended in 1988, oil exports gradually increased with the construction of new pipelines and restoration of damaged facilities. Iraq's seizure of Kuwait in August 1990, subsequent international economic sanctions, and damage from military action by an international coalition beginning in January 1991 drastically reduced economic activity. Although government policies supporting large military and internal security forces and allocating resources to key supporters of the regime have hurt the economy, implementation of the UN's oil-for-food program beginning in December 1996 helped improve conditions for the average Iraqi citizen. Iraq was allowed to export limited amounts of oil in exchange for food, medicine, and some infrastructure spare parts. In December 1999 the UN Security Council authorized Iraq to export under the program as much oil as required to meet humanitarian needs. Oil exports have recently been more than three-quarters prewar level. However, 28% of Iraq's export revenues under the program have been deducted to meet UN Compensation Fund and UN administrative expenses. The drop in GDP in 2001-02 was largely the result of the global economic slowdown and lower oil prices. Per capita food imports increased significantly, while medical supplies and health care services steadily improved. Per

capita output and living standards were still well below the prewar level, but any estimates have a wide range of error. The military victory of the US-led coalition in March-April 2003 resulted in the shutdown of much of the central economic administrative structure and the loss of a comparatively small amount of capital plant.

Introduction Ireland

Background:
Celtic tribes settled on the island in the 4th century B.C.

Invasions by Norsemen that began in the late 8th century were finally ended when King Brian BORU defeated the Danes in 1014. English invasions began in the 12th century and set off more than seven centuries of Anglo-Irish struggle marked by fierce rebellions and harsh repressions. A failed 1916 Easter Monday Rebellion touched off several years of guerrilla warfare that in 1921 resulted in independence from the UK for 26 southern counties; six northern (Ulster) counties remained part of the United Kingdom. In 1948 Ireland withdrew from the British Commonwealth; it joined the European Community in 1973. Irish governments have sought the peaceful unification of Ireland and have cooperated with Britain against terrorist groups. A peace settlement for Northern Ireland, known as the Good Friday Agreement and approved in 1998, is currently being implemented.

Economy Ireland

Economy - overview:
Ireland is a small, modern, trade-dependent economy with growth
averaging a robust 8% in 1995-2002. The global slowdown, especially

in the information technology sector, pressed growth down to 2.7% in 2003. Agriculture, once the most important sector, is now dwarfed by industry and services. Industry accounts for 46% of GDP and about 80% of exports and employs 28% of the labor force. Although exports remain the primary engine for Ireland's growth, the economy has also benefited from a rise in consumer spending, construction, and business investment. Per capita GDP is 10% above that of the four big European economies. Over the past decade, the Irish Government has implemented a series of national economic programs designed to curb inflation, reduce government spending, increase labor force skills, and promote foreign investment. Ireland joined in launching the euro currency system in January 1999 along with 10 other EU nations.

Introduction Israel

Background:

Following World War II, the British withdrew from their mandate of Palestine, and the UN partitioned the area into Arab and Jewish states, an arrangement rejected by the Arabs. Subsequently, the Israelis defeated the Arabs in a series of wars without ending the deep tensions between the two sides. The territories occupied by Israel since the 1967 war are not included in the Israel country profile, unless otherwise noted. On 25 April 1982, Israel withdrew from the Sinai pursuant to the 1979 Israel-Egypt Peace Treaty. Outstanding territorial and other disputes with Jordan were resolved in the 26 October 1994 Israel-Jordan Treaty of Peace. In addition, on 25 May 2000, Israel withdrew unilaterally from southern Lebanon, which it had occupied since 1982. In keeping with the framework established at the Madrid Conference in October 1991, bilateral negotiations were conducted between Israel and Palestinian representatives (from the Israeli-occupied West Bank and Gaza Strip) and Syria to achieve a permanent settlement. But progress toward a

permanent status agreement has been undermined by the outbreak of Palestinian-Israeli violence since September 2000.

Economy Israel

Economy - overview:

Israel has a technologically advanced market economy with substantial government participation. It depends on imports of crude oil, grains, raw materials, and military equipment. Despite limited natural resources, Israel has intensively developed its agricultural and industrial sectors over the past 20 years. Israel imports significant quantities of grain but is largely self-sufficient in other agricultural products. Cut diamonds, high-technology equipment, and agricultural products (fruits and vegetables) are the leading exports. Israel usually posts sizable current account deficits, which are covered by large transfer payments from abroad and by foreign loans. Roughly half of the government's external debt is owed to the US, which is its major source of economic and military aid. The influx of Jewish immigrants from the former USSR during the period 1989-99, coupled with the opening of new markets at the end of the Cold War, energized Israel's economy, which grew rapidly in the early 1990s; growth began moderating in 1996 when the government imposed tighter fiscal and monetary policies and the immigration bonus petered out. Growth was a strong 7.2% in 2000, but the bitter Israeli-Palestinian conflict, difficulties in the high-technology, construction, and tourist sectors, and fiscal austerity in the face of growing inflation led to small declines in GDP in 2001 and 2002.

Introduction Italy

Background:

Italy became a nation-state in 1861 when the city-states of the peninsula, along with Sardinia and Sicily, were united under King Victor EMMANUEL. An era of parliamentary government came to a close in the early 1920s when Benito MUSSOLINI established a Fascist dictatorship. His disastrous alliance with Nazi Germany led to Italy's defeat in World War II. A democratic republic replaced the monarchy in 1946 and economic revival followed. Italy was a charter member of NATO and the European Economic Community (EEC). It has

been at the forefront of European economic and political unification, joining the European Monetary Union in 1999. Persistent problems include illegal immigration, organized crime, corruption, high unemployment, and the low incomes and technical standards of southern Italy compared with the prosperous north.

Economy Italy

Economy - overview:

Italy has a diversified industrial economy with roughly the same total and per capita output as France and the UK. This capitalistic economy remains divided into a developed industrial north, dominated by private companies, and a less developed, welfare-dependent agricultural south, with 20% unemployment. Most raw materials needed by industry and more than 75% of energy requirements are imported. Over the past decade, Italy has pursued a tight fiscal policy in order to meet the requirements of the Economic and Monetary Unions and has benefited from lower interest and inflation rates. The current government has enacted numerous short-term reforms aimed at improving competitiveness and long-term growth. Italy has moved slowly, however, on implementing needed structural reforms, such as lightening the high tax burden and overhauling Italy's rigid labor market and over-generous pension system, because of the current economic slowdown and opposition from labor unions.

Introduction Jamaica

Background:

Jamaica gained full independence within the British Commonwealth in 1962. Deteriorating economic conditions during the 1970s led to recurrent violence and a dropoff in tourism. Elections in 1980 saw the democratic socialists voted out of office. Subsequent governments have been open market oriented. Political violence marred elections during the 1990s.

Economy Jamaica

Economy - overview:

The economy, which depends heavily on tourism and bauxite, has been stagnant since 1995. After five years of recession, the economy inched ahead, by 0.8% in 2000, 1.7% in 2001, and 0.8% in 2002; the global economic slowdown, particularly in the United States after the 11 September 2001 terrorist attacks, has stunted the economic recovery. Serious problems include: high interest rates; increased foreign competition; a pressured, sometimes sliding, exchange rate; a widening merchandise trade deficit; and a growing internal debt, the result of government bailouts to various ailing sectors of the economy, particularly the financial sector. Depressed economic conditions have led to increased civil unrest, including serious violent crime. Jamaica's medium-term prospects will depend upon encouraging investment and tourism, maintaining a competitive exchange rate, selling off reacquired firms, and implementing proper fiscal and monetary policies.

@Jan Mayen

Introduction Jan Mayen

Background:

This desolate, mountainous island was named after a Dutch whaling captain who indisputably discovered it in 1614 (earlier claims are inconclusive). Visited only occasionally by seal hunters and trappers over the following centuries, the island came under Norwegian sovereignty in 1929. The long dormant Haakon VII Toppen/Beerenberg volcano resumed activity in 1970; it is the northernmost active volcano on earth.

@Japan

Introduction Japan

Background:

While retaining its time-honored culture, Japan rapidly absorbed Western technology during the late 19th and early 20th centuries. After its defeat in World War II, Japan recovered to become an economic power and a staunch ally of the US. While the emperor retains his throne as a symbol of national unity, actual power rests in networks of powerful politicians, bureaucrats, and business executives. The economy experienced a major slowdown starting in the 1990s following three decades of unprecedented growth.

Economy Japan

Economy - overview:
Government-industry cooperation, a strong work ethic, mastery of
high technology, and a comparatively small defense allocation (1% of
GDP) helped Japan advance with extraordinary rapidity to the rank of

second-most-technologically-powerful economy in the world after the US and third-largest economy after the US and China. One notable characteristic of the economy is the working together of manufacturers, suppliers, and distributors in closely-knit groups called keiretsu. A second basic feature has been the guarantee of lifetime employment for a substantial portion of the urban labor force. Both features are now eroding. Industry, the most important sector of the economy, is heavily dependent on imported raw materials and fuels. The much smaller agricultural sector is highly subsidized and protected, with crop yields among the highest in the world. Usually self-sufficient in rice, Japan must import about 50% of its requirements of other grain and fodder crops. Japan maintains one of the world's largest fishing fleets and accounts for nearly 15% of the global catch. For three decades overall real economic growth had been spectacular: a 10% average in the 1960s, a 5% average in the 1970s, and a 4% average in the 1980s. Growth slowed markedly in the 1990s, averaging just 1.7%, largely because of the aftereffects of overinvestment during the late 1980s and contractionary domestic policies intended to wring speculative excesses from the stock and real estate markets. Government efforts to revive economic growth have met with little success and were further hampered in 2000-2003 by the slowing of the US, European, and Asian economies. Japan's huge government debt, which is approaching 150% of GDP, and the ageing of the population are two major long-run problems. Robotics constitutes a key long-term economic strength with Japan possessing 410,000 of the world's 720,000 "working robots." Internal conflict over the proper way to reform the ailing banking system continues.

@Jarvis Island

Introduction Jarvis Island

Background:

First discovered by the British in 1821, the uninhabited island was annexed by the US in 1858, but abandoned in 1879 after tons of guano had been removed. The UK annexed the island in 1889, but never carried out plans for further exploitation. The US occupied and reclaimed the island in 1935. Abandoned after World War II, the island is currently a National Wildlife Refuge administered by the US Department of the Interior; a day beacon is situated near the middle of the west coast.

Economy Jersey

Economy - overview:

The economy is based largely on international financial services, agriculture, and tourism. Potatoes, cauliflower, tomatoes, and especially flowers are important export crops, shipped mostly to the UK. The Jersey breed of dairy cattle is known worldwide and represents an important export income earner. Milk products go to the UK and other EU countries. In 1996 the finance sector accounted for about 60% of the island's output. Tourism, another mainstay of the economy, accounts for 24% of GDP. In recent years, the government has encouraged light industry to locate in Jersey, with the result that an electronics industry has developed alongside the traditional manufacturing of knitwear. All raw material and energy requirements are imported, as well as a large share of Jersey's food needs. Light taxes and death duties make the island a popular tax haven.

@Johnston Atoll

Introduction Johnston Atoll

Background:

Both the US and the Kingdom of Hawaii annexed Johnston Atoll in 1858, but it was the US that mined the guano deposits until the late 1880s. The US Navy took over the atoll in 1934, and subsequently the US Air Force assumed control in 1948. The site was used for high-altitude nuclear tests in the 1950s and 1960s, and until late in 2000 the atoll was maintained as a storage and disposal site for chemical weapons. Munitions destruction is now complete. Cleanup and closure of the facility is progressing, with completion anticipated in 2004.

Introduction Jordan

Background:

For most of its history since independence from British administration in 1946, Jordan was ruled by King HUSSEIN (1953-99). A pragmatic ruler, he successfully navigated competing pressures from the major powers (US, USSR, and UK), various Arab states, Israel, and a large internal Palestinian population, through several wars and coup attempts. In 1989 he resumed parliamentary elections and gradually permitted political liberalization; in 1994 a formal peace treaty was signed with Israel. King ABDALLAH II - the eldest son of King HUSSEIN and Princess MUNA - assumed the throne following his father's death in February 1999. Since then, he has consolidated his power and established his domestic priorities, including an aggressive economic reform program. Jordan acceded to the World Trade Organization in January 2000, and signed free trade agreements with the United States in 2000, and with the European Free Trade Association in 2001.

Economy Jordan

Economy - overview:

Jordan is a small Arab country with inadequate supplies of water and other natural resources such as oil. Debt, poverty, and unemployment are fundamental problems, but King ABDALLAH since assuming the throne in 1999 has undertaken some broad economic reforms in a long-term effort to improve living standards. Amman in the past three years has worked closely with the IMF, practiced careful monetary policy, and made significant headway with privatization. The government also has liberalized the trade regime sufficiently to secure Jordan's membership in the WTrO (2000), a free trade accord with US (2000), and an association agreement with the EU (2001). These measures have helped improve productivity and have put Jordan on the foreign investment map. The US-led war in Iraq in 2003 dealt an economic blow to Jordan, which was dependent on Iraq for discounted oil. It remains unclear how Jordan will finance energy imports in the absence of such a deal. Other ongoing challenges include fiscal adjustment to reduce the budget deficit and broader investment incentives to promote job-creating ventures.

@Kazakhstan

Introduction Kazakhstan

Background:

Native Kazakhs, a mix of Turkic and Mongol nomadic tribes who migrated into the region in the 13th century, were rarely united as a single nation. The area was conquered by Russia in the 18th century and Kazakhstan became a Soviet Republic in 1936. During the 1950s and 1960s agricultural "Virgin Lands" program, Soviet citizens were encouraged to help cultivate Kazakhstan's northern pastures. This influx of immigrants (mostly Russians, but also some other deported nationalities) skewed the ethnic mixture and enabled non-Kazakhs to outnumber natives. Independence has caused many of these newcomers to emigrate. Current issues include: developing a cohesive national identity; expanding the development of the country's vast energy resources and exporting them to world markets; achieving a sustainable economic growth outside the oil, gas, and mining sectors; and strengthening relations with neighboring states and other foreign powers.

Geography Kazakhstan

Location:

Environment - current issues:

radioactive or toxic chemical sites associated with its former defense industries and test ranges throughout the country pose health risks for humans and animals; industrial pollution is severe in some cities; because the two main rivers which flowed into the Aral Sea have been diverted for irrigation, it is drying up and leaving behind a harmful layer of chemical pesticides and natural salts; these substances are then picked up by the wind and blown into noxious dust storms; pollution in the Caspian Sea; soil pollution from overuse of agricultural chemicals and salination from poor infrastructure and wasteful irrigation practices

Economy Kazakhstan

Economy - overview:

Kazakhstan, the largest of the former Soviet republics in
territory, excluding Russia, possesses enormous fossil fuel reserves
as well as plentiful supplies of other minerals and metals. It also
is a large agricultural - livestock and grain - producer.

Kazakhstan's industrial sector rests on the extraction and
processing of these natural resources and also on a growing
machine-building sector specializing in construction equipment,

tractors, agricultural machinery, and some defense items. The breakup of the USSR in December 1991 and the collapse in demand for Kazakhstan's traditional heavy industry products resulted in a short-term contraction of the economy, with the steepest annual decline occurring in 1994. In 1995-97, the pace of the government program of economic reform and privatization quickened, resulting in a substantial shifting of assets into the private sector. Kazakhstan enjoyed double-digit growth in 2000-01 - and a solid 9.5% in 2002 - thanks largely to its booming energy sector, but also to economic reform, good harvests, and foreign investment. The opening of the Caspian Consortium pipeline in 2001, from western Kazakhstan's Tengiz oilfield to the Black Sea, substantially raised export capacity. The country has embarked upon an industrial policy designed to diversify the economy away from overdependence on the oil sector, by developing light industry. Additionally, the policy aims to reduce the influence of foreign investment and foreign personnel; the government has engaged in several disputes with foreign oil companies over the terms of production agreements, and tensions continue.

Introduction Kenya

Background:

Founding president and liberation struggle icon Jomo KENYATTA led Kenya from independence until his death in 1978, when President Daniel Toroitich arap MOI took power in a constitutional succession. The country was a de facto one-party state from 1969 until 1982 when the ruling Kenya African National Union (KANU) made itself the sole legal party in Kenya. MOI acceded to internal and external pressure for political liberalization in late 1991. The ethnically fractured opposition failed to dislodge KANU from power in elections in 1992 and 1997, which were marred by violence and fraud, but are viewed as having generally reflected the will of the Kenyan people. President MOI stepped down in December of 2002 following fair and peaceful elections. Mwai KIBAKI, running as the candidate of the multiethnic, united opposition group, the National Rainbow Coalition, defeated

KANU candidate Uhuru KENYATTA and assumed the presidency following a campaign centered on an anticorruption platform.

Economy Kenya

Economy - overview:

Kenya, the regional hub for trade and finance in East Africa, is hampered by corruption and reliance upon several primary goods whose prices remain low. Following strong economic growth in 1995 and 1996, Kenya's economy has stagnated, with GDP growth failing to keep up with the rate of population growth. In 1997, the IMF suspended Kenya's Enhanced Structural Adjustment Program due to the government's failure to maintain reforms and curb corruption. A

severe drought from 1999 to 2000 compounded Kenya's problems, causing water and energy rationing and reducing agricultural output. As a result, GDP contracted by 0.3% in 2000. The IMF, which had resumed loans in 2000 to help Kenya through the drought, again halted lending in 2001 when the government failed to institute several anticorruption measures. Despite the return of strong rains in 2001, weak commodity prices, endemic corruption, and low investment limited Kenya's economic growth to 1%. Growth fell below 1% in 2002 because of erratic rains, low investor confidence, meager donor support, and political infighting up to the elections. In the key December 27, 2002 elections, Daniel Arap Moi's 24-year-old reign ended, and a new opposition government took on the formidable economic problems facing the nation. Substantial donor support and rooting out corruption are essential to making Kenya realize its substantial economic potential.

@Kingman Reef

Introduction Kingman Reef

Background:

The US annexed the reef in 1922. Its sheltered lagoon served as a way station for flying boats on Hawaii-to-American Samoa flights during the late 1930s. There are no terrestrial plants on the reef, which is frequently awash, but it does support abundant and diverse marine fauna and flora. In 2001, the waters surrounding the reef out to 12 NM around the reef were designated a US National Wildlife Refuge.

@Kiribati

Introduction Kiribati

Background:

The Gilbert Islands were granted self-rule by the UK in 1971 and complete independence in 1979 under the new name of Kiribati. The US relinquished all claims to the sparsely inhabited Phoenix and Line Island groups in a 1979 treaty of friendship with Kiribati.

Geography Kiribati

Location:

Oceania, group of 33 coral atolls in the Pacific Ocean, straddling the equator; the capital Tarawa is about one-half of the way from Hawaii to Australia; note - on 1 January 1995, Kiribati proclaimed that all of its territory lies in the same time zone as its Gilbert Islands group (GMT +12) even though the Phoenix Islands and the Line Islands under its jurisdiction lie on the other side of the International Date Line

Economy Kiribati

Economy - overview:

A remote country of 33 scattered coral atolls, Kiribati has few natural resources. Commercially viable phosphate deposits were exhausted at the time of independence from the UK in 1979. Copra and fish now represent the bulk of production and exports. The economy has fluctuated widely in recent years. Economic development is constrained by a shortage of skilled workers, weak infrastructure, and remoteness from international markets. Tourism provides more than one-fifth of GDP. The financial sector is at an early stage of

development as is the expansion of private sector initiatives.
Foreign financial aid from UK, Japan, Australia, New Zealand, and China is a critical supplement to GDP, equal to 25%-50% of GDP in recent years. Remittances from workers abroad account for more than \$5 million each year.

@Korea, North

Introduction Korea, North

Background:

Following World War II, Korea was split, with the northern half coming under Communist domination and the southern portion becoming Western-oriented. KIM Chong-il has ruled North Korea since his father and the country's founder, president KIM Il-song, died in 1994. After decades of mismanagement, the North relies heavily on international food aid to feed its population while continuing to expend resources to maintain an army of about 1 million. North Korea's long-range missile development and research into nuclear, chemical, and biological weapons and massive conventional armed forces are of major concern to the international community. In December 2002, North Korea repudiated a 1994 agreement that shut down its nuclear reactors and expelled UN monitors, further raising fears it would produce nuclear weapons.

Economy Korea, North

Economy - overview:

North Korea, one of the world's most centrally planned and isolated economies, faces desperate economic conditions. Industrial capital stock is nearly beyond repair as a result of years of underinvestment and spare parts shortages. Industrial and power output have declined in parallel. The nation has suffered its tenth year of food shortages because of a lack of arable land; collective farming; weather-related problems, including major drought in 2000; and chronic shortages of fertilizer and fuel. Massive international food aid deliveries have allowed the regime to escape mass starvation since 1995-96, but the population remains the victim of prolonged malnutrition and deteriorating living conditions. Large-scale military spending eats up resources needed for investment and civilian consumption. Recently, the regime has placed emphasis on earning hard currency, developing information technology, addressing power shortages, and attracting foreign aid, but in no way at the expense of relinquishing central control over key national assets or undergoing widespread market-oriented reforms. In 2003, heightened political tensions with key donor countries and general donor fatigue have held down the flow of desperately needed food aid and have threatened fuel aid as well.

Introduction Korea, South

Background:

After World War II, a republic was set up in the southern half of the Korean Peninsula while a Communist-style government was installed in the north. During the Korean War (1950-1953), US and other UN forces intervened to defend South Korea from North Korean attacks supported by the Chinese. An armistice was signed in 1953, splitting the Peninsula along a demilitarized zone at about the 38th parallel. Thereafter, South Korea achieved rapid economic growth with per capita income rising to roughly 20 times the level of North Korea. South Korea has maintained its commitment to democratize its political processes. In June 2000, a historic first North-South summit took place between the South's President KIM Dae-jung and the North's leader KIM Chong-il.

Economy Korea, South

Economy - overview:

As one of the Four Tigers of East Asia, South Korea has achieved an incredible record of growth and integration into the high-tech modern world economy. Three decades ago GDP per capita was comparable with levels in the poorer countries of Africa and Asia. Today its GDP per capita is 18 times North Korea's and equal to the lesser economies of the European Union. This success through the late 1980s was achieved by a system of close government/business ties, including directed credit, import restrictions, sponsorship of specific industries, and a strong labor effort. The government promoted the import of raw materials and technology at the expense of consumer goods and encouraged savings and investment over consumption. The Asian financial crisis of 1997-99 exposed longstanding weaknesses in South Korea's development model, including high debt/equity ratios, massive foreign borrowing, and an undisciplined financial sector. Growth plunged to a negative 6.6% in 1998, then strongly recovered to 10.8% in 1999 and 9.2% in 2000. Growth fell back to 3.3% in 2001 because of the slowing global economy, falling exports, and the perception that much-needed corporate and financial reforms had stalled. Led by consumer spending and exports, growth in 2002 was an impressive 6.2%, despite anemic global growth, followed by moderate 2.8% growth in 2003. In 2003 the six-day work week was reduced to five days.

Introduction Kuwait

Background:

Britain oversaw foreign relations and defense for the ruling Kuwaiti AL-SABAH dynasty from 1899 until independence in 1961. Kuwait was attacked and overrun by Iraq on 2 August 1990. Following several weeks of aerial bombardment, a US-led, UN coalition began a ground assault on 23 February 1991 that liberated Kuwait in four days. Kuwait spent more than \$5 billion to repair oil infrastructure damaged during 1990-91.

Economy Kuwait

Economy - overview:

Kuwait is a small, rich, relatively open economy with proved crude oil reserves of about 98 billion barrels - 10% of world reserves.

Petroleum accounts for nearly half of GDP, 95% of export revenues, and 80% of government income. Kuwait's climate limits agricultural development. Consequently, with the exception of fish, it depends almost wholly on food imports. About 75% of potable water must be distilled or imported. Kuwait continues its discussions with foreign oil companies to develop fields in the northern part of the country. Oil production declined by an estimated 8% in 2002 but is expected to return to the 2001 level in 2003.

Economy Kyrgyzstan

Economy - overview:

Kyrgyzstan is a small, poor, mountainous country with a predominantly agricultural economy. Cotton, tobacco, wool, and meat are the main agricultural products, although only tobacco and cotton are exported in any quantity. Industrial exports include gold, mercury, uranium, and natural gas and electricity. Kyrgyzstan has been fairly progressive in carrying out market reforms, such as an improved regulatory system and land reform. Kyrgyzstan was the first CIS country to be accepted into the World Trade Organization. With fits and starts, inflation has been lowered to an estimated 7% in 2001, 2.1% in 2002, and 4.0% in 2003. Much of the government's stock in enterprises has been sold. Drops in production had been severe

after the breakup of the Soviet Union in December 1991, but by mid-1995 production began to recover and exports began to increase. Growth was held down to 2.1% in 1998 largely because of the spillover from Russia's economic difficulties, but moved ahead to 3.6% in 1999, 5% in 2000, and 5% again in 2001. The drop in output at the Kumtor gold mine sparked a 0.5% decline in GDP in 2002 and again in 2003. On the positive side, the government and the international financial institutions have been engaged in a comprehensive medium-term poverty reduction and economic growth strategy. Further restructuring of domestic industry and success in attracting foreign investment are keys to future growth.

Economy Laos

Economy - overview:

The government of Laos - one of the few remaining official Communist states - began decentralizing control and encouraging private enterprise in 1986. The results, starting from an extremely low base, were striking - growth averaged 7% in 1988-2001 except during the short-lived drop caused by the Asian financial crisis beginning in 1997. Despite this high growth rate, Laos remains a country with a primitive infrastructure; it has no railroads, a rudimentary road system, and limited external and internal telecommunications. Electricity is available in only a few urban areas. Subsistence agriculture accounts for half of GDP and provides 80% of total employment. The economy will continue to benefit from aid from the IMF and other international sources and from new foreign investment in food processing and mining.

Introduction Latvia

Background:

After a brief period of independence between the two World Wars, Latvia was annexed by the USSR in 1940. It reestablished its independence in 1991 following the breakup of the Soviet Union. Although the last Russian troops left in 1994, the status of the Russian minority (some 30% of the population) remains of concern to Moscow. Latvia continues to revamp its economy for eventual integration into various Western European political and economic institutions and was invited to join NATO and the EU in 2002.

Economy Latvia

Economy - overview:

Latvia's transitional economy recovered from the 1998 Russian financial crisis, largely due to the SKELE government's budget stringency and a gradual reorientation of exports toward EU countries, lessening Latvia's trade dependency on Russia. The majority of companies, banks, and real estate have been privatized, although the state still holds sizable stakes in a few large enterprises. Latvia officially joined the World Trade Organization in February 1999. Preparing for EU membership continues as a top foreign policy goal. The current account and internal government deficits remain major concerns, but the government's efforts to increase efficiency in revenue collection may lessen the budget deficit.

Introduction Lebanon

Background:

Lebanon has made progress toward rebuilding its political institutions since 1991 and the end of the devastating 16-year civil war. Under the Ta'if Accord - the blueprint for national reconciliation - the Lebanese have established a more equitable political system, particularly by giving Muslims a greater say in the political process while institutionalizing sectarian divisions

in the government. Since the end of the war, the Lebanese have conducted several successful elections, most of the militias have been weakened or disbanded, and the Lebanese Armed Forces (LAF) have extended central government authority over about two-thirds of the country. Hizballah, the radical Shi'a party, retains its weapons. Syria maintains about 16,000 troops in Lebanon, based mainly east of Beirut and in the Bekaa Valley. Syria's troop deployment was legitimized by the Arab League during Lebanon's civil war and in the Ta'if Accord. Damascus justifies its continued military presence in Lebanon by citing Beirut's requests and the failure of the Lebanese Government to implement all of the constitutional reforms in the Ta'if Accord. Israel's withdrawal from its security zone in southern Lebanon in May 2000, however, has emboldened some Lebanese Christians and Druze to demand that Syria withdraw its forces as well.

Economy Lebanon

Economy - overview:
The 1975-91 civil war seriously damaged Lebanon's economic
infrastructure, cut national output by half, and all but ended
Lebanon's position as a Middle Eastern entrepot and banking hub.
Peace enabled the central government to restore control in Beirut,
begin collecting taxes, and regain access to key port and government

facilities. Economic recovery was helped by a financially sound banking system and resilient small- and medium-scale manufacturers. Family remittances, banking services, manufactured and farm exports, and international aid provided the main sources of foreign exchange. Lebanon's economy made impressive gains since the launch in 1993 of "Horizon 2000," the government's \$20 billion reconstruction program. Real GDP grew 8% in 1994, 7% in 1995, 4% in 1996 and in 1997, but slowed to 1.2% in 1998, -1.6% in 1999, -0.6% in 2000, 0.8% in 2001, and 1.5% in 2002. During the 1990s annual inflation fell to almost 0% from more than 100%. Lebanon has rebuilt much of its war-torn physical and financial infrastructure. The government nonetheless faces serious challenges in the economic arena. It has funded reconstruction by borrowing heavily - mostly from domestic banks. In order to reduce the ballooning national debt, the re-installed HARIRI government began an economic austerity program to rein in government expenditures, increase revenue collection, and privatize state enterprises. The HARIRI government met with international donors at the Paris II conference in November 2002 to seek bilateral assistance restructuring its domestic debt at lower rates of interest. While privatization of state-owned enterprises had not occurred by the end of 2002, the government had successfully avoided a currency devaluation and debt default in 2002.

Introduction Lesotho

Background:

Basutoland was renamed the Kingdom of Lesotho upon independence from the UK in 1966. King MOSHOESHOE was exiled in 1990. Constitutional government was restored in 1993 after 23 years of military rule. In 1998, violent protests and a military mutiny following a contentious election prompted a brief but bloody South African military intervention. Constitutional reforms have since restored political stability; peaceful parliamentary elections were held in 2002.

Economy Lesotho

Economy - overview:

Small, landlocked, and mountainous, Lesotho relies on remittances from miners employed in South Africa and customs duties from the Southern Africa Customs Union for the majority of government revenue, but the government has strengthened its tax system to reduce dependency on customs duties. Completion of a major hydropower facility in January 1998 now permits the sale of water to South Africa, also generating royalties for Lesotho. As the number of mineworkers has declined steadily over the past several years, a small manufacturing base has developed based on farm products that support the milling, canning, leather, and jute industries and a rapidly growing apparel-assembly sector. The economy is still primarily based on subsistence agriculture, especially livestock, although drought has decreased agricultural activity. The extreme inequality in the distribution of income remains a major drawback. Lesotho has signed an Interim Poverty Reduction and Growth Facility with the IMF.

@Liberia

Introduction Liberia

Background:

Eight years of civil strife were brought to a close in 1997 when free and open presidential and legislative elections were held. President TAYLOR now holds strong executive power with no real political opposition. Years of fighting, coupled with the flight of most businesses, have disrupted formal economic activity. A still

unsettled domestic security situation has slowed the process of rebuilding the social and economic structure of this war-torn country. In 2001, the UN imposed sanctions on Liberian diamonds, along with an arms embargo and a travel ban on government officials, for Liberia's support of the rebel insurgency in Sierra Leone. Renewed rebel activity has further eroded stability and economic activity. A regional peace initiative commenced in the spring of 2003 but was disrupted by the Special Court for Sierra Leone (SCSL) indictment of President TAYLOR on war crimes charges.

Economy Liberia

Economy - overview:

Civil war and misgovernment have destroyed much of Liberia's economy, especially the infrastructure in and around Monrovia. Many businessmen have fled the country, taking capital and expertise with them. Some have returned; many will not. Richly endowed with water, mineral resources, forests, and a climate favorable to agriculture, Liberia had been a producer and exporter of basic products - primarily raw timber and rubber. Local manufacturing, mainly foreign

owned, had been small in scope. The restoration of the infrastructure and the raising of incomes in this ravaged economy depend on the settlement of civil warfare, the implementation of sound macro- and micro-economic policies, including the encouragement of foreign investment, and generous support from donor countries.

@Libya

Introduction Libya

Background:

Since he took power in a 1969 military coup, Col. Muammar Abu Minyar al-QADHAFI has espoused his own political system - a combination of socialism and Islam - which he calls the Third International Theory. Viewing himself as a revolutionary leader, he used oil funds during the 1970s and 1980s to promote his ideology

outside Libya, even supporting subversives and terrorists abroad to hasten the end of Marxism and capitalism. Libyan military adventures failed, e.g., the prolonged foray of Libyan troops into the Aozou Strip in northern Chad was finally repulsed in 1987. Libyan support for terrorism decreased after UN sanctions were imposed in 1992. Those sanctions were suspended in April 1999.

Economy Libya

Economy - overview:

The socialist-oriented economy depends primarily upon revenues from the oil sector, which contribute practically all export earnings and about one-quarter of GDP. These oil revenues and a small population give Libya one of the highest per capita GDPs in Africa, but little of this income flows down to the lower orders of society. Import restrictions and inefficient resource allocations have led to periodic shortages of basic goods and foodstuffs. The nonoil manufacturing and construction sectors, which account for about 20% of GDP, have expanded from processing mostly agricultural products to include the production of petrochemicals, iron, steel, and aluminum. Climatic conditions and poor soils severely limit

agricultural output, and Libya imports about 75% of its food. Higher oil prices in the last three years led to an increase in export revenues, which has improved macroeconomic balances but has done little to stimulate broad-based economic growth. Libya is making slow progress toward economic liberalization and the upgrading of economic infrastructure, but truly market-based reforms will be slow in coming.

Introduction Liechtenstein

Background:

The Principality of Liechtenstein was established within the Holy Roman Empire in 1719; it became a sovereign state in 1806. Until the end of World War I, it was closely tied to Austria, but the economic devastation caused by that conflict forced Liechtenstein to enter into a customs and monetary union with Switzerland. Since World War II (in which Liechtenstein remained neutral), the country's low taxes have spurred outstanding economic growth. However, shortcomings in banking regulatory oversight have resulted in concerns about the use of the financial institutions for money laundering.

Economy Liechtenstein

Economy - overview:
Despite its small size and limited natural resources, Liechtenstein has developed into a prosperous, highly industrialized, free-enterprise economy with a vital financial service sector and living standards on a par with its large European neighbors. The Liechtenstein economy is widely diversified with a large number of small businesses. Low business taxes - the maximum tax rate is 20% -

and easy incorporation rules have induced many holding or so-called letter box companies to establish nominal offices in Liechtenstein, providing 30% of state revenues. The country participates in a customs union with Switzerland and uses the Swiss franc as its national currency. It imports more than 90% of its energy requirements. Liechtenstein has been a member of the European Economic Area (an organization serving as a bridge between the European Free Trade Association (EFTA) and the EU) since May 1995. The government is working to harmonize its economic policies with those of an integrated Europe.

Introduction Lithuania

Background:

Independent between the two World Wars, Lithuania was annexed by the USSR in 1940. On 11 March 1990, Lithuania became the first of the Soviet republics to declare its independence, but this proclamation was not generally recognized until September of 1991 (following the abortive coup in Moscow). The last Russian troops withdrew in 1993. Lithuania subsequently has restructured its economy for eventual integration into Western European institutions and was invited to join NATO and the EU in 2002.

Economy Lithuania

Economy - overview:

Lithuania, the Baltic state that has conducted the most trade with
Russia, has slowly rebounded from the 1998 Russian financial crisis.

Unemployment remains high, still 10.7% in 2003, but is improving. Growing domestic consumption and increased investment have furthered recovery. Trade has been increasingly oriented toward the West. Lithuania has gained membership in the World Trade Organization and has moved ahead with plans to join the EU. Privatization of the large, state-owned utilities, particularly in the energy sector, is nearing completion. Overall, more than 80% of enterprises have been privatized. Foreign government and business support have helped in the transition from the old command economy to a market economy.
