SOUP AND SOUP MAKING.

PRELIMINARY REMARKS.

Soup is so convenient, economical and healthful, that as an article of diet it ranks second in importance only to bread; and soup making is justly entitled to a prominent place in the science of cookery.

A simple soup or broth of good quality, delicately seasoned with salt and pepper, or containing some of the grains, or grain products, is always acceptable, and none of the more complex soups that can be readily secured by a judicious introduction of vegetables, herbs and spices ever meet with popular disfavor.

There are enough scraps of cooked and uncooked meats, trimmings of roasts, steaks, chops, cutlets and so on in nearly every house to keep the family supplied with nutritious, palatable soup, with very little trouble and at only a slight expense for additional material. And as the best dinner can generally be preceded with advantage by a light soup of some kind, to an ordinary, cold, or “picked-up” family dinner, a plate of soup is an invaluable adjunct, and can be prepared in a few minutes in a kitchen where the value of the stock pot is recognized, and the economy of good cooking understood.

Soup scientifically prepared is easier of digestion than almost any other article of diet. The solid matter which enters into its composition and would in the original form require several hours for digestion, is so broken down in the process of preparation that it can be readily assimilated with very little expenditure of vital force; and being absorbed by the stomach as soon as eaten, goes immediately to nourish the system.

But soup to fulfill its true mission must be attractive in appearance, agreeable in flavor and unmistakable in character. It must not be a weak, sloppy, characterless compound, nor a crude, greasy, inharmonious hodge-podge. The defects of unsavory, unpalatable, indigestible soups may be concealed, but can not be removed by the excessive use of salt, pepper and

other spices and condiments. And in order that soup of any kind may legitimately aspire to high rank, either as a nutritive or hygienic agent, it must be skillfully prepared, so as to please the eye and gratify the palate.

HOW TO MAKE SOUP STOCK.

A STOCK POT.

Any ordinary pot or kettle can be used for preparing stock, but as a “digester” or stock pot is one of the most useful utensils known to the culinary art, and can be obtained at almost any hardware store, no kitchen should be without one. The cook, who is provided with a stock pot, and habitually uses it two or three times a week, can utilize all available scraps, and generally has a supply of stock on hand from which an acceptable soup, or delicious sauce can be improvised in a short time, and with very little trouble.

The stock pot should not remain on the stove or range, and fresh material be added from time to time to that which is partly or wholly cooked; but whenever a quantity of scraps accumulate they should be carefully prepared and put to cook.

SOUP STOCK.

A great many soups are made without the previous preparation of a specially distinctive stock. But stock has as legitimate an existence in soup making, as ferment has in bread making; and its recognition is quite essential to a perfect understanding of the subject. Stock is the base of soups. It is the fluid foundation with which other materials are mixed, and skillfully incorporated into soups, that in modern bills of fare are bewilderingly designated potages, purees, and consommés.

Soup stock, in the strictest sense of the term, is the fluid extract of meat or meat and bones, and is of two kinds:—simple and compound.

SIMPLE stock is the extract from a single kind of flesh, fish or fowl. **COMPOUND** stock is the extract from two or more kinds of flesh, fish or fowl mingled and cooked together, or mixed together, after being cooked separately.

HOW TO MAKE SOUP STOCK.

To make stock, meats of any kind cut in small pieces, or meat and bones well cut and broken, should be put in a pot in cold water slightly salted, and the water heated very gradually until it reaches the boiling point, after which it should be kept simmering gently for a longer or shorter time, according to the nature and quantity of the material used, and the consistency of the stock wanted. When sufficiently cooked, it should be removed from the fire, strained into a jar or bowl, and set in a cool place.

QUANTITY OF WATER.

Authorities differ somewhat in regard to the quantity of water that should be used in preparing stock and making soup.

If the simmering is to continue six or eight hours, as some recommend, a little more water is required than when it is to continue only half that length of time. But as the correct proportions are about one quart of water to each pound of meat and bones, it is absurd to use an additional quantity of water, and waste time and material in reducing the stock to the proper consistency by evaporation.

QUANTITY OF SALT.

The principal object of using salted water in the preparation of stock, is to facilitate the separation of the blood and slime from the meat. The quantity of salt used should be regulated by the condition of the meat, and in no case more than an ounce of salt to each gallon of water.

REMOVING THE SCUM.

The blood and slime when thrown to the surface in the form of scum, should be removed as rapidly as it rises. If permitted to remain after the water reaches the boiling point, it will be speedily incorporated with the stock, and injure its appearance and flavor. A little cold water poured into the pot the moment it boils, will hasten the rising of the scum.

SOAKING AND SIMMERING THE MEAT.

The albumen of all meats, like the albumen or white of eggs, is curdled and hardened by heat, but is readily soluble in cold water, and mixes quietly with it; and when meat is put to cook in cold water, and soaked until the water reaches the boiling point, and afterward permitted to only simmer, all its juices are extracted, and mingled with the liquid so perfectly as to greatly improve the flavor, and add to the nutritive properties of the stock or soup.

QUALITY OF THE MEAT.

The flavor of soup depends upon the quality of the materials of which it is made. Tough and coarse pieces of meat, when the meat is of good quality, make good soups and sauces, and can be converted into stock advantageously, as can also a great many rough, refuse bits and scraps; but it is very important that all meats of which stock is to be made, should be cooked before they get tainted, or stale; in fact, the fresher the meat, the better will be the quality of the stock made from it.

BEEF TEA.

Especial care should be observed in regard to the freshness of the meat for beef tea, which comes under the generic name of soup, being merely a plain soup stock. A cut from the round, on account of its juiciness, is preferable, for beef tea. In preparing it, all skin and fat should be removed, and the beef cut into small pieces. It should then be covered with cold water, and allowed to soak for several hours, when the water should be brought slowly to the boiling point. This tea is not so nutritious as stock simmered for two or three hours, but is believed by physicians to exercise a special tonic and exhilarating influence upon the system independent of any directly nutritive quality it may possess.

CONSISTENCY OF STOCK.

The consistency of stock depends greatly upon the material used, and the length of time it is cooked. Bones contain a large quantity of gelatinous

matter, and when equal portions of meat and bones are used, the stock, when cold, will be quite stiff and gelatinous; and the longer it is allowed to simmer, the more stiff and gelatinous it will become. If meat alone is used, or if the stock is cooked but a short time, it will remain in liquid form.

TIME REQUIRED FOR MAKING STOCK.

When meat and bones are well cut and broken up, all their valuable qualities will by proper soaking and simmering be extracted in two or three hours; and although longer cooking will render the stock thicker and more gelatinous, it is not advisable to continue it a greater length of time, as the nutrition of soup depends very little, if at all, upon the amount of gelatine it contains, and its flavor is injured by too much cooking.

STRAINING, COOLING AND KEEPING STOCK.

Stock, when sufficiently cooked, should be carefully strained, and unless wanted for immediate use should be set where it will cool as rapidly as possible. The quicker it cools the finer will be its flavor, and the greater the length of time it can be kept. In cold weather stock will keep fresh and sweet for several days; but in summer, unless kept in a cold place, it will be necessary for its preservation, to put it over the fire and bring it to a boil, or “scald it” every day.

SALTING STOCK.

After stock has been strained and while still warm, all the salt that will be needed in the soups or sauces to be prepared from it, can be added with advantage, as it becomes thoroughly incorporated with the stock and aids in its preservation.

COOKING VEGETABLES IN STOCK.

Many cook books recommend putting vegetables into the stock pot with the meat and cooking them the same length of time. But as vegetables that are cooked several hours with meat are apt to give the stock a rank taste, and also to cause it to ferment in a short time in warm weather, such a method is

objectionable in making stock. Where economy is a prominent consideration, or where the stock is to be used immediately in soup, it is perhaps as well to simmer the meat and vegetables together a sufficient length of time to extract all their flavor and nutriment.

CLASSIFICATION OF SOUPS.

After the stock has been properly made there is comparatively little trouble attending the preparation of any kind of soup desired; and it may be proceeded with at once, by the addition of spices, vegetables and other articles, or may be postponed till another day, and for another occasion.

The variety of soups is illimitable and can be increased almost indefinitely, as it requires but a new combination of materials to entitle a soup to a distinctive name, and as grotesque a one as its originator may choose to bestow upon it.

All soups, however, can be classified and arranged under five heads, viz.:

1. Plain soup.
2. Clear soup.
3. Vegetable soup.
4. White soup.
5. Mixed soup.

To one or the other of these divisions everything in the nature of soup belongs; and a little intelligent thought will enable the cook to select the materials adapted to, and appropriate for use in each division.

FLAVOR AND COLOR OF SOUP.

The flavor of the solid material, either animal or vegetable from which a soup takes its name, should always predominate when the soup is served, and only such spices should be added in its preparation as have a tendency to bring out, and perfectly develop the flavor of the dominant article.

This proposition holds good, and should be conformed to also, in regard to the color; so far, at least, as to prohibit the introduction of dark colored vegetables, spices, etc., into light colored soups.

REMOVING THE GREASE.

Before using stock for soup, the first thing to be done is to remove from it all superfluous grease. When it is to be used without being permitted to cool, a little cold water poured into it as soon as strained, will cause the grease to rise to the surface so it can be skimmed off without difficulty. If it is set aside till cold, the grease will form in a cake on the top of the stock, and can be taken off when convenient, but, as it excludes the air, it is better to let it remain till the stock is needed.

CLASS ONE.

PLAIN SOUPS.

Plain soup, in its strictest sense, is either simple or compound stock seasoned with salt, or with salt and pepper. The addition of some of the grains or grain products, generally improves the flavor and increases the nutritive value of any simple soup or broth, but does not take it out of the category of plain soup.

Prominent among, and strikingly illustrative of this class of soups, is

PLAIN CHICKEN SOUP.

The flesh of the fowl from which the stock is to be made, should, with the exception of the breast, be cut into small pieces, and the bones broken. The breast, with the skin as perfect as possible, should be placed in the pot whole, on top of the prepared material, and removed as soon as tender. To each quart of stock, when strained and skimmed, add an ounce of rice, and let simmer three-quarters of an hour, then add the breast of the chicken, cut in dice, a little minced parsley, and salt and pepper to taste. Plain chicken soup is much improved if about a pound of round steak be cut up and cooked with the fowl.

To this soup add a pint of sweet cream, thicken with flour, and flavor highly with celery, and the product will be a much admired white soup—cream of celery soup;—or if the celery and cream be omitted, the addition of half a

teaspoonful of curry powder will transform it into a choice Mulligatawny soup.

CLASS TWO.

CLEAR SOUPS.

Clear soup is made from simple or compound stock, by straining and clarifying. It can be seasoned with salt, pepper and other condiments, or with salt and pepper alone. In the preparation of clear soups, herbs, spices and vegetables are frequently cooked with the stock, and strained out, and the soup then clarified. All soups that are made with a foundation of clarified stock, or that have clear soup for a base, can be thickened with arrow root, corn starch and similar articles, or flavored with various vegetables, cereals, etc., without losing their distinctive name or character, provided care be taken to use only such articles as will not injure the clearness of the soup. As excellent illustrations of this class of soups take—

***No. 1.*—AMBER SOUP.**

Put a gill each of sliced onion, carrot, turnip and parsnip, fried to a delicate brown, together with the bits of ham or bacon with which they were fried, into a soup kettle; add to them a sprig each of parsley and thyme, half a bay leaf, two cloves, five pepper corns, and cover with five quarts of plain or compound stock. Simmer gently for an hour, strain, remove the grease, and clarify. Heat to boiling point, season with salt and pepper, add a tablespoonful of caramel and serve. If properly made, and carefully strained and clarified, this soup will be as transparent as amber.

***No. 2.*—TOMATO SOUP.**

To four quarts of clear soup, add a quart of strained stewed tomato, a teaspoonful of sugar, a tablespoonful each of corn starch and butter stirred together, and salt and pepper to taste. Boil a few minutes and serve.

No. 3.—JULIENNE SOUP.

To four quarts of clear soup, add a gill each of carrot, parsnip, turnip, celery, string beans, core of lettuce, and a small onion, cut into thin pieces about an inch in length, and simmer gently until all the vegetables are tender. Season to taste with salt and pepper, and ten or fifteen minutes before serving the soup, put into it a few water cresses or some sorrel leaves. If all the vegetables are not readily obtainable, one or more of them can be omitted without serious detriment to either the flavor or title of the soup.

CLASS THREE.

VEGETABLE SOUPS.

Vegetable soup is made by cooking vegetables in either simple or compound stock; or a special stock may be prepared by adding water or milk to the juice extracted from vegetables. A vegetable soup may contain but a single vegetable; or it may contain a variety of vegetables, and be of any color desired. The vegetables may be cooked a longer or shorter time, and left in, or strained out of the soup according to taste or fancy.

No. 1.—PLAIN VEGETABLE SOUP.

To three quarts of stock add a gill each of sliced carrot, turnip, parsnip and onion, and simmer gently till tender. Half an hour before serving, add a stalk of celery cut in small pieces, or two or three sprigs of parsley. Season with salt and pepper.

A number of plain vegetable soups quite different in character can be very readily compounded by using a greater or smaller variety of vegetables, or by adapting the combination to the season and the appetite.

No. 2.—ONION SOUP.

Fry in an ounce of butter or clarified drippings, till a light brown, two or three large onions sliced thin; then add two ounces of flour and stir till about the same color. Mix thoroughly with a pint of cold stock, place over the fire in a soup kettle, and when it comes to a boil pour in a quart of boiling milk into which three boiled potatoes, mashed to a smooth paste have been stirred. Season with salt and pepper and serve hot. Water can be used instead of stock in this soup, if more convenient, and the soup still be delicious.

No. 3.—DRIED PEA SOUP.

Soak for several hours, or over night, a pint of dried peas in two quarts of cold water. Drain and put to cook in four quarts of cold water, with a quarter of a pound of breakfast bacon or salt pork, fried to a light brown. As soon as the water boils skim carefully, cover closely and let simmer gently three or four hours, or until the peas are very tender. Strain and return the soup to the kettle, add a teaspoonful of sugar, two quarts of stock, and, when boiling, a tablespoonful each of flour and butter. Season with salt and pepper, and serve with toasted bread cut in dice.

Pea soup can be made in this manner without the bacon or pork, in which case it is advisable to use a cup of sweet cream instead of the butter, and to season delicately with celery. Sweet corn is a very desirable mixture for pea soup, and sugar may be dispensed with when it is used. The addition of a little crushed spinach juice will convert this into a nice green pea soup.

If the spinach juice be omitted, and a cup of dark rich gravy, a spoonful of caramel, and a flavoring of herbs and spices be substituted, the entire character of the soup will be so changed that it must be transferred to the list of mixed soups.

CLASS FOUR.

WHITE SOUPS.

Veal, chicken, fish, oysters and other shell fish furnish the stock for most white soups, and cream or milk enters largely into the composition of many of them. One of the leading characteristics of white soups is the prohibition of everything that has a tendency to color; hence, comparatively few vegetables, herbs and spices are legitimately permissible in their composition as seasoning and flavoring. With certain restrictions, however, a greater number can occasionally be introduced with appropriateness, and sometimes be given even a prominent place.

An illustration is furnished in

No. 1.—CREAM OF ASPARAGUS SOUP.

Cut off, about an inch in length, the points of two bunches of asparagus, and simmer them gently until tender in water sufficient to cover them, to which a teaspoonful of salt has been added. Boil the stalks of the asparagus twenty minutes in three pints of white stock or water, then strain and thicken the liquid with a tablespoonful of flour, let it boil two minutes, and add a pint of sweet cream and the asparagus points with the water in which they were cooked. Season with salt and pepper, and serve hot.

No. 2.—CORN SOUP.

A delicious white soup can be made by simmering a pint of sweet corn in a quart of white stock for fifteen minutes, then adding a quart of boiling milk and a small piece of butter, and seasoning with salt and pepper.

No. 3.—A RICH WHITE SOUP.

Simmer for an hour in three quarts of white stock a gill each of white turnip, onion and celery cut in small pieces, together with a blade of mace. Strain, thicken with two ounces of flour, boil two minutes, add half a pint of sweet cream and season with salt and pepper. When about to boil stir in the well beaten yolks of three eggs, and serve.

CLASS FIVE.

MIXED SOUPS.

Delicacy in seasoning and flavoring is pre-eminently the distinguishing mark of a fine soup of any kind; but to mix, mingle and combine many different articles of food so as to produce a soup whose flavor is distinct from any single ingredient entering into its composition, yet embodying the best qualities of each, is the true criterion of merit in a mixed soup.

Nearly all soups are in a certain sense mixed soups; but plain, clear, vegetable and white soups, have distinctive characteristics by which they can be recognized, and their genuineness established, while the individuality of a mixed soup must be evolved from the harmonious adjustment of seemingly discordant materials, and depends in a great measure upon the good judgment, discriminating taste and artistic skill of the person who prepares it.

An illustration of a mixed soup that can not be placed under any other division is

***No. 1.*—MOCK TURTLE SOUP.**

Ingredients:

A calf's head, a beef soup bone, five quarts cold water, one onion, one turnip, one carrot, one half stalk celery, one half bunch parsley, one bay leaf, one lemon, five cloves, ten allspice, ten pepper corns, one fourth nutmeg, two teaspoons of salt, a little cayenne pepper, two ounces butter, one ounce flour—a glass of wine to each quart of soup.

Put the head after removing the brains with the spices in the soup kettle, and cover with three quarts of cold water to which half a teaspoonful of salt has been added.

When it boils skim carefully and let simmer four or five hours, removing the meat as soon as tender. Strain and set aside till next day. Put the beef bone and vegetables in the soup kettle and cover with two quarts of cold

water to which half a teaspoonful of salt has been added, and simmer four hours, removing the scum as it rises. Soak the brains in cold salt water an hour, tie in a linen cloth and boil gently twenty minutes in salted water. Plunge an instant in cold water to render white and firm. Cook two ounces butter and one ounce of flour in a sauce pan till very brown. Put both soup stocks together in the kettle, after all grease and settlings have been removed, also the meat from the head cut in small dice, and the yolks of a dozen hard boiled eggs, and when it boils add the brains cut in small pieces. Put the lemon, cut in thin slices, in a heated tureen, with a gill of wine for each quart of soup; pour the boiling soup on them, and serve.

No. 2.—SAVE-ALL SOUP.

Collect the scraps left from breakfast and dinner, for instance, a half pint of soup, a gill of gravy, a half pint of mashed turnip or potato, a little macaroni cooked with cheese, a sour baked apple or broiled chop or steak, etc., etc.; put them in the stock pot or soup kettle with sufficient cold water, simmer for an hour, removing any scum that rises, then strain and set aside. Next day remove the grease, put the soup to cook, and when it boils, season with salt and pepper, and if it seems to need other seasoning add a pinch of thyme, or celery seed, or a teaspoonful of sugar. It is sometimes well to put half a bay leaf and two or three cloves in the kettle with the scraps. The flavorings and spices required in a mixed soup of this description depend greatly upon the nature of the scraps used. If they are mostly light and delicate, thyme, mace, celery, or parsley can be added; if dark and heavy, cloves, bay leaf, sweet marjoram or a little Worcestershire sauce, or walnut or other catsup can be used more appropriately. Sometimes an ounce each of butter and flour cooked together in a saucepan till browned, and then added to the soup, give it the very thing it lacks; or it may be that the flour stirred with a gill of cold sweet cream is what is needed to make it a perfect soup.

To select and harmonize the materials for a mixed soup is one of the best evidences of culinary capacity; and the cook who can do this successfully, is qualified to prepare a soup of the most complex as well as one of the simplest character, without regard to its name or class.

OYSTER SOUPS.

These all belong to the white soup class, but they occupy so anomalous a position—an oyster soup being simply an oyster stew with additional liquid, and a thickening of flour—that they deserve special mention.

TO STEW OYSTERS.—*No. 1.*

Rinse a quart of oysters in cold water, drain through a sieve. Put a piece of butter the size of an egg in a stew pan, and when melted add a pint of milk and let it come to a boil; add the oysters, and the moment the edges curl remove from the fire; season with salt and pepper. Serve with small crackers, or on thin slices of buttered toast.

TO STEW OYSTERS.—*No. 2.*

Pour a pint of cold water over a quart of oysters, stir well and drain; put the liquor in a stew pan greased with butter; when it boils, skim, add the oysters, season to taste with butter, salt and pepper, and cook and serve as in No. 1.

In changing an oyster stew to a soup, the thickening and extra liquid should be added and cooked before the oysters are put into it.

POTAGES, PUREES AND CONSOMMES.

These are French terms used to designate different kinds of soups; but they are applied so indiscriminately as to possess very little significance, even for culinary adepts; and the dividing line between a potage, a puree, a consomme, and an ordinary soup, is so imaginary as to be indistinct to plain every-day people. But as a foreign or grotesque name does not detract from the quality of a good thing, those who prefer to call a soup a potage, a puree or a consomme, can do so with impunity, and not legally infringe on the domain of any professional cook.

HOW TO SCALD SOUP.

To scald stock or soup properly, it must be brought to the boiling point and thoroughly heated. Its liability to ferment and grow sour is only increased by merely re-warming it.

WHEN TO ADD FLAVORING.

Vegetables when used merely to flavor soups should be simmered only long enough to extract their juices; and aromatic spices, orange and lemon juice, and other liquid flavorings whose subtle essences are driven off by heat, should be added barely a sufficient length of time before the soup is served, for them to blend and harmonize with the other materials—in fact it is usually better to put them in the tureen and pour the soup over them just before it goes to the table.

ORDER OF ADDING VEGETABLES.

Where several kinds of vegetables are used in the preparation of a soup, care should be taken to put those that require most cooking in the kettle first; and, if possible, to limit the simmering of each kind to the time actually necessary to cook it tender.

BROWNING VEGETABLES.

Breakfast bacon and ham give a peculiarly fine flavor to many soups, and when they are used the vegetables added to such soups should be browned in the fryings of the meat; but when neither bacon nor ham is used, the vegetables should be browned in butter, as in most cases they impart a richer flavor to the soup, if nicely browned in a little grease before being added.

VEGETABLES, ETC., ADAPTED TO SOUPS.

While nearly all kinds of vegetables, herbs, spices and cereals can be appropriately used at pleasure in clear, vegetable and mixed soups, those specially adapted to white soups are: cauliflower, potato, white turnip, onion, celery, salsify, cresses, capers, olives, parsley, thyme, rice, macaroni, vermicelli, tapioca, sago, mace, and red and white pepper.

TO CLARIFY SOUPS.

To each gallon of soup add, while cold, the whites and shells of two eggs beaten with a little cold water, simmer for fifteen minutes, removing the scum as it rises, and then strain through a flannel cloth or bag.

CARAMEL.

Preparations for coloring and flavoring soups can be obtained at almost any grocery by those who wish to use them. But caramel, which is innocent and cheap, is one of the best coloring materials, and is easily prepared:—

Stir half a pound of sugar and a spoonful of water in a saucepan over the fire till a bright brown, then add half a pint of water, boil a few minutes and strain. Caramel made in this manner will keep a considerable length of time if put in an air-tight jar or bottle.

THICKENING FOR SOUPS.

When flour, corn starch, farina or arrow root are to be used as thickening for soups they should be stirred to a smooth paste with cold milk, cream, or butter, and then added to the boiling soup. If the flour is desired brown it should be cooked with butter before it is added to the soup.

ADDITIONS TO SOUPS.

Eggs cooked in a variety of ways, croutons, noodles, dumplings, force meat balls, and a dozen other articles that are manufactured for the purpose, are used according to fancy as additions to soups. Some of them are cooked in the soup and served with it, and some are cooked separate and put in the tureen or the individual plates, and the soup poured over them.

CROUTONS.

A bit of toasted or fried bread is called in French a crouton; and croutons, which are simply bits of bread toasted or fried brown, are very nice in a

variety of soups. The bread can be toasted in the ordinary way and used dry, or it can be buttered, cut in dice and toasted brown in the oven, or fried brown in butter or drippings. The best way of serving croutons is to put a spoonful of them in each plate and pour the hot soup over them.

NOODLES.

The noodle is one of the traditional articles for serving in soups. It is a general favorite and is easily made:

To three eggs, two tablespoonfuls of water, and a pinch of salt, add flour enough to make a stiff dough. Work and knead fifteen or twenty minutes, roll to a very thin sheet, dust lightly and evenly with flour, and roll up compactly. Then with a thin sharp bladed knife cut into very thin slices and let dry for a couple of hours before putting in the soup. They will cook in five minutes. Or,

Beat an egg very light, add flour until stiff enough to roll into little crumbs the size of wheat or rice grains, drop into boiling soup and cook a few minutes.

DUMPLINGS.

A very delicate dumpling for soup can be made of biscuit dough, raised with either yeast or baking powder, in this manner: roll the dough thin, cut into dice, roll under the hand on a floured board, and steam for twenty minutes; put in the tureen and pour boiling soup over them.

But the most delicate of dumplings are made of light bread crumbs, suet or marrow, egg and seasoning. These can be varied in seasoning to suit any soup. This is a good combination for a clear, white or delicate soup of any kind. Mix well, but lightly, a tablespoonful uncooked beef marrow and half a pint bread crumbs, seasoned with salt, pepper, grated lemon peel and mace; add one well beaten egg, roll into balls in the hands, and drop into the boiling soup. They should be served as soon as they rise to the surface.

FORCE MEAT BALLS.

To four parts cooked veal, and one part suet minced together, add four parts bread crumbs and season with salt, pepper, powdered cloves and sweet herbs. Bind together with beaten egg, make into small balls and fry brown. These are much used in mock turtle and other heavy soups.

SOUP AND SOUP MAKING QUESTIONS.

- 1.—What is a stock pot?
- 2.—How should it be used and how frequently?
- 3.—What is soup stock?
- 4.—How many kinds of stock are there?
- 5.—What is simple stock?
- 6.—What is compound stock?
- 7.—How is stock made?
- 8.—Why should the water for making stock be salted?
- 9.—How much salt should be used?
- 10.—Why should the scum that rises be removed?

Obvious typographical errors have been corrected.

*** END OF THE PROJECT GUTENBERG EBOOK SOUP AND SOUP
MAKING ***

Updated editions will replace the previous one—the old editions will be renamed.

Creating the works from print editions not protected by U.S. copyright law means that no one owns a United States copyright in these works, so the Foundation (and you!) can copy and distribute it in the United States without permission and without paying copyright royalties. Special rules, set forth in the General Terms of Use part of this license, apply to copying and distributing Project Gutenberg™ electronic works to protect the PROJECT GUTENBERG™ concept and trademark. Project Gutenberg is a registered trademark, and may not be used if you charge for an eBook, except by following the terms of the trademark license, including paying royalties for use of the Project Gutenberg trademark. If you do not charge anything for copies of this eBook, complying with the trademark license is very easy. You may use this eBook for nearly any purpose such as creation of derivative works, reports, performances and research. Project Gutenberg eBooks may be modified and printed and given away—you may do practically ANYTHING in the United States with eBooks not protected by U.S. copyright law. Redistribution is subject to the trademark license, especially commercial redistribution.

START: FULL LICENSE

THE FULL PROJECT GUTENBERG™ LICENSE

PLEASE READ THIS BEFORE YOU DISTRIBUTE OR USE THIS WORK

To protect the Project Gutenberg™ mission of promoting the free distribution of electronic works, by using or distributing this work (or any other work associated in any way with the phrase “Project Gutenberg”), you agree to comply with all the terms of the Full Project Gutenberg License available with this file or online at www.gutenberg.org/license.

Section 1. General Terms of Use and Redistributing Project Gutenberg electronic works

1.A. By reading or using any part of this Project Gutenberg electronic work, you indicate that you have read, understand, agree to and accept all the terms of this license and intellectual property (trademark/copyright) agreement. If you do not agree to abide by all the terms of this agreement, you must cease using and return or destroy all copies of Project Gutenberg electronic works in your possession. If you paid a fee for obtaining a copy of or access to a Project Gutenberg electronic work and you do not agree to be bound by the terms of this agreement, you may obtain a refund from the person or entity to whom you paid the fee as set forth in paragraph 1.E.8.

1.B. “Project Gutenberg” is a registered trademark. It may only be used on or associated in any way with an electronic work by people who agree to be bound by the terms of this agreement. There are a few things that you can do with most Project Gutenberg electronic works even without complying with the full terms of this agreement. See paragraph 1.C below. There are a lot of things you can do with Project Gutenberg electronic works if you follow the terms of this agreement and help preserve free future access to Project Gutenberg electronic works. See paragraph 1.E below.

1.C. The Project Gutenberg Literary Archive Foundation (“the Foundation” or PGLAF), owns a compilation copyright in the collection of Project Gutenberg electronic works. Nearly all the individual works in the collection are in the public domain in the United States. If an individual work is unprotected by copyright law in the United States and you are

located in the United States, we do not claim a right to prevent you from copying, distributing, performing, displaying or creating derivative works based on the work as long as all references to Project Gutenberg are removed. Of course, we hope that you will support the Project Gutenberg mission of promoting free access to electronic works by freely sharing Project Gutenberg works in compliance with the terms of this agreement for keeping the Project Gutenberg name associated with the work. You can easily comply with the terms of this agreement by keeping this work in the same format with its attached full Project Gutenberg License when you share it without charge with others.

1.D. The copyright laws of the place where you are located also govern what you can do with this work. Copyright laws in most countries are in a constant state of change. If you are outside the United States, check the laws of your country in addition to the terms of this agreement before downloading, copying, displaying, performing, distributing or creating derivative works based on this work or any other Project Gutenberg work. The Foundation makes no representations concerning the copyright status of any work in any country other than the United States.

1.E. Unless you have removed all references to Project Gutenberg:

1.E.1. The following sentence, with active links to, or other immediate access to, the full Project Gutenberg License must appear prominently whenever any copy of a Project Gutenberg work (any work on which the phrase “Project Gutenberg” appears, or with which the phrase “Project Gutenberg” is associated) is accessed, displayed, performed, viewed, copied or distributed:

This eBook is for the use of anyone anywhere in the United States and most other parts of the world at no cost and with almost no restrictions whatsoever. You may copy it, give it away or re-use it under the terms of the Project Gutenberg™ License included with this eBook or online at www.gutenberg.org. If you are not located in the United States, you will have to check the laws of the country where you are located before using this eBook.

1.E.2. If an individual Project Gutenberg electronic work is derived from texts not protected by U.S. copyright law (does not contain a notice indicating that it is posted with permission of the copyright holder), the work can be copied and distributed to anyone in the United States without paying any fees or charges. If you are redistributing or providing access to a work with the phrase “Project Gutenberg” associated with or appearing on the work, you must comply either with the requirements of paragraphs 1.E.1 through 1.E.7 or obtain permission for the use of the work and the Project Gutenberg trademark as set forth in paragraphs 1.E.8 or 1.E.9.

1.E.3. If an individual Project Gutenberg electronic work is posted with the permission of the copyright holder, your use and distribution must comply with both paragraphs 1.E.1 through 1.E.7 and any additional terms imposed by the copyright holder. Additional terms will be linked to the Project Gutenberg License for all works posted with the permission of the copyright holder found at the beginning of this work.

1.E.4. Do not unlink or detach or remove the full Project Gutenberg License terms from this work, or any files containing a part of this work or any other work associated with Project Gutenberg.

1.E.5. Do not copy, display, perform, distribute or redistribute this electronic work, or any part of this electronic work, without prominently displaying the sentence set forth in paragraph 1.E.1 with active links or immediate access to the full terms of the Project Gutenberg License.

1.E.6. You may convert to and distribute this work in any binary, compressed, marked up, nonproprietary or proprietary form, including any word processing or hypertext form. However, if you provide access to or distribute copies of a Project Gutenberg work in a format other than “Plain Vanilla ASCII” or other format used in the official version posted on the official Project Gutenberg website (www.gutenberg.org), you must, at no additional cost, fee or expense to the user, provide a copy, a means of exporting a copy, or a means of obtaining a copy upon request, of the work in its original “Plain Vanilla ASCII” or other form. Any alternate format must include the full Project Gutenberg License as specified in paragraph 1.E.1.

1.E.7. Do not charge a fee for access to, viewing, displaying, performing, copying or distributing any Project Gutenberg works unless you comply with paragraph 1.E.8 or 1.E.9.

1.E.8. You may charge a reasonable fee for copies of or providing access to or distributing Project Gutenberg electronic works provided that:

- You pay a royalty fee of 20% of the gross profits you derive from the use of Project Gutenberg works calculated using the method you already use to calculate your applicable taxes. The fee is owed to the owner of the Project Gutenberg trademark, but he has agreed to donate royalties under this paragraph to the Project Gutenberg Literary Archive Foundation. Royalty payments must be paid within 60 days following each date on which you prepare (or are legally required to prepare) your periodic tax returns. Royalty payments should be clearly marked as such and sent to the Project Gutenberg Literary Archive Foundation at the address specified in Section 4, "Information about donations to the Project Gutenberg Literary Archive Foundation."
- You provide a full refund of any money paid by a user who notifies you in writing (or by e-mail) within 30 days of receipt that s/he does not agree to the terms of the full Project Gutenberg™ License. You must require such a user to return or destroy all copies of the works possessed in a physical medium and discontinue all use of and all access to other copies of Project Gutenberg™ works.
- You provide, in accordance with paragraph 1.F.3, a full refund of any money paid for a work or a replacement copy, if a defect in the electronic work is discovered and reported to you within 90 days of receipt of the work.
- You comply with all other terms of this agreement for free distribution of Project Gutenberg™ works.

1.E.9. If you wish to charge a fee or distribute a Project Gutenberg™ electronic work or group of works on different terms than are set forth in this agreement, you must obtain permission in writing from the Project Gutenberg Literary Archive Foundation, the manager of the Project

Gutenberg™ trademark. Contact the Foundation as set forth in Section 3 below.

1.F.

1.F.1. Project Gutenberg volunteers and employees expend considerable effort to identify, do copyright research on, transcribe and proofread works not protected by U.S. copyright law in creating the Project Gutenberg™ collection. Despite these efforts, Project Gutenberg™ electronic works, and the medium on which they may be stored, may contain “Defects,” such as, but not limited to, incomplete, inaccurate or corrupt data, transcription errors, a copyright or other intellectual property infringement, a defective or damaged disk or other medium, a computer virus, or computer codes that damage or cannot be read by your equipment.

1.F.2. LIMITED WARRANTY, DISCLAIMER OF DAMAGES - Except for the “Right of Replacement or Refund” described in paragraph 1.F.3, the Project Gutenberg Literary Archive Foundation, the owner of the Project Gutenberg™ trademark, and any other party distributing a Project Gutenberg™ electronic work under this agreement, disclaim all liability to you for damages, costs and expenses, including legal fees. YOU AGREE THAT YOU HAVE NO REMEDIES FOR NEGLIGENCE, STRICT LIABILITY, BREACH OF WARRANTY OR BREACH OF CONTRACT EXCEPT THOSE PROVIDED IN PARAGRAPH 1.F.3. YOU AGREE THAT THE FOUNDATION, THE TRADEMARK OWNER, AND ANY DISTRIBUTOR UNDER THIS AGREEMENT WILL NOT BE LIABLE TO YOU FOR ACTUAL, DIRECT, INDIRECT, CONSEQUENTIAL, PUNITIVE OR INCIDENTAL DAMAGES EVEN IF YOU GIVE NOTICE OF THE POSSIBILITY OF SUCH DAMAGE.

1.F.3. LIMITED RIGHT OF REPLACEMENT OR REFUND - If you discover a defect in this electronic work within 90 days of receiving it, you can receive a refund of the money (if any) you paid for it by sending a written explanation to the person you received the work from. If you received the work on a physical medium, you must return the medium with your written explanation. The person or entity that provided you with the defective work may elect to provide a replacement copy in lieu of a refund. If you received the work electronically, the person or entity providing it to

you may choose to give you a second opportunity to receive the work electronically in lieu of a refund. If the second copy is also defective, you may demand a refund in writing without further opportunities to fix the problem.

1.F.4. Except for the limited right of replacement or refund set forth in paragraph 1.F.3, this work is provided to you 'AS-IS', WITH NO OTHER WARRANTIES OF ANY KIND, EXPRESS OR IMPLIED, INCLUDING BUT NOT LIMITED TO WARRANTIES OF MERCHANTABILITY OR FITNESS FOR ANY PURPOSE.

1.F.5. Some states do not allow disclaimers of certain implied warranties or the exclusion or limitation of certain types of damages. If any disclaimer or limitation set forth in this agreement violates the law of the state applicable to this agreement, the agreement shall be interpreted to make the maximum disclaimer or limitation permitted by the applicable state law. The invalidity or unenforceability of any provision of this agreement shall not void the remaining provisions.

1.F.6. INDEMNITY - You agree to indemnify and hold the Foundation, the trademark owner, any agent or employee of the Foundation, anyone providing copies of Project Gutenberg™ electronic works in accordance with this agreement, and any volunteers associated with the production, promotion and distribution of Project Gutenberg™ electronic works, harmless from all liability, costs and expenses, including legal fees, that arise directly or indirectly from any of the following which you do or cause to occur: (a) distribution of this or any Project Gutenberg work, (b) alteration, modification, or additions or deletions to any Project Gutenberg work, and (c) any Defect you cause.

Section 2. Information about the Mission of Project Gutenberg

Project Gutenberg is synonymous with the free distribution of electronic works in formats readable by the widest variety of computers including obsolete, old, middle-aged and new computers. It exists because of the

efforts of hundreds of volunteers and donations from people in all walks of life.

Volunteers and financial support to provide volunteers with the assistance they need are critical to reaching Project Gutenberg's goals and ensuring that the Project Gutenberg collection will remain freely available for generations to come. In 2001, the Project Gutenberg Literary Archive Foundation was created to provide a secure and permanent future for Project Gutenberg and future generations. To learn more about the Project Gutenberg Literary Archive Foundation and how your efforts and donations can help, see Sections 3 and 4 and the Foundation information page at www.gutenberg.org.

Section 3. Information about the Project Gutenberg Literary Archive Foundation

The Project Gutenberg Literary Archive Foundation is a non-profit 501(c)(3) educational corporation organized under the laws of the state of Mississippi and granted tax exempt status by the Internal Revenue Service. The Foundation's EIN or federal tax identification number is 64-6221541. Contributions to the Project Gutenberg Literary Archive Foundation are tax deductible to the full extent permitted by U.S. federal laws and your state's laws.

The Foundation's business office is located at 41 Watchung Plaza #516, Montclair NJ 07042, USA, +1 (862) 621-9288. Email contact links and up to date contact information can be found at the Foundation's website and official page at www.gutenberg.org/contact

Section 4. Information about Donations to the Project Gutenberg Literary Archive Foundation

Project Gutenberg™ depends upon and cannot survive without widespread public support and donations to carry out its mission of increasing the number of public domain and licensed works that can be freely distributed in machine-readable form accessible by the widest array of equipment

including outdated equipment. Many small donations (\$1 to \$5,000) are particularly important to maintaining tax exempt status with the IRS.

The Foundation is committed to complying with the laws regulating charities and charitable donations in all 50 states of the United States. Compliance requirements are not uniform and it takes a considerable effort, much paperwork and many fees to meet and keep up with these requirements. We do not solicit donations in locations where we have not received written confirmation of compliance. To SEND DONATIONS or determine the status of compliance for any particular state visit www.gutenberg.org/donate.

While we cannot and do not solicit contributions from states where we have not met the solicitation requirements, we know of no prohibition against accepting unsolicited donations from donors in such states who approach us with offers to donate.

International donations are gratefully accepted, but we cannot make any statements concerning tax treatment of donations received from outside the United States. U.S. laws alone swamp our small staff.

Please check the Project Gutenberg web pages for current donation methods and addresses. Donations are accepted in a number of other ways including checks, online payments and credit card donations. To donate, please visit: www.gutenberg.org/donate.

Section 5. General Information About Project Gutenberg electronic works

Professor Michael S. Hart was the originator of the Project Gutenberg concept of a library of electronic works that could be freely shared with anyone. For forty years, he produced and distributed Project Gutenberg eBooks with only a loose network of volunteer support.

Project Gutenberg eBooks are often created from several printed editions, all of which are confirmed as not protected by copyright in the U.S. unless a

copyright notice is included. Thus, we do not necessarily keep eBooks in compliance with any particular paper edition.

Most people start at our website which has the main PG search facility:
www.gutenberg.org.

This website includes information about Project Gutenberg, including how to make donations to the Project Gutenberg Literary Archive Foundation, how to help produce our new eBooks, and how to subscribe to our email newsletter to hear about new eBooks.
