CHAPTER I
THE SOURCES OF OUR WORDS

What Is Philology?

Philology is the study of human speech, the science of language. Not only does it give us a chatting acquaintance with the fascinating history of the words we use or might use in speech; but it is an indispensable searchlight cast inward upon the cloudy nature, and backward upon the obscure early history, of man. The term philology once meant the study of the literature of a people (from Greek *philein*, love, and *logos*, a word, speech, discourse). Modern usage is limiting it to the science of language itself.

The best introduction to the science lies in a study of our own language, the English, rapidly becoming the American. What is true of word-building and word-journeying in English is largely true of every civilized speech; and we will find that the story of our own tongue brings it into contact with practically every language ever spoken. A recent standard English dictionary contained over 500,000 words—a good beginning for us, when the psychologists say that the vocabulary of the superior adult contains only 13,500 words.

How many words are possible? Far more than Einstein could count. By putting the 23 letters of an alphabet in every possible combination, we would have 25,852,016,738,884,976,640,000 words; with 24 letters we would get 620,448,401,733,239,439,360,000 words. Add to this that some languages, like Chinese, sing or drone their sounds, with varied accents for further varieties. Thus *dai*, in the Chinese speech of Annam, signifies 23 different things, depending upon the accent. The sentence

Ba ba ba ba

is said to mean, if properly pronounced, each syllable differently accented, “Three ladies gave a box on the ear to the favorite of the prince.” This would multiply the potentialities of speech beyond the numerical confines of this page.

Yet the hundreds of thousands, the millions, of existing words came from a far smaller number of original word-stems or roots. Max Muller lists 121

original Sanskrit roots, which lie at the base of all Indo-European languages. There was a Dr. Murray who imagined that he could derive our language from nine roots, AG, BAG, CWAG, DWAG, LAG, MAG, NAG, RAG, SWAG; an even more thorough-going Dr. Schmidt traced the whole Greek dictionary back to the root E, and the whole Latin dictionary back to the root HI. Let us do a little word-digging, and see where it lands us.

The First Recorded English Speech.

The English race may be regarded historically as a blend of Celtic or Briton, Teutonic (Anglo-Saxon), and French-Norman elements. The Celts once covered Europe from Asia Minor to Spain, Brittany in France, and Ireland; their place-names and a few other simple elements of language testify mutely today to their forgotten occupancy. The Teutonic conquerors who reached England, mainly Angles, Saxons, and Jutes, spoke a Teutonic speech. The Normans, or Northmen, were colonists from Scandinavia who founded Normandy in modern France, adopted the French tongue and French manners, and from their new home set forth and conquered England, Sicily, and several parts of Italy. The French tongue at this time was a corrupt provincial Latin. These three elements, Celtic, Teutonic, and French-Latin, are integral in our living English and American speech.

The historical fate of the early Britons dispossessed of their homes by the Anglo-Saxons is still obscure. Some undoubtedly joined their Celtic kinsmen in Ireland and Scotland; some blended in a servile condition with the new English race; a large number were annihilated with more or less rapidity. We find few words, beyond place names, definitely to be attributed to them. Among these are *bin*, *brat*, *down* (hill), *mattock*, *crock*. Later on the Welsh Celts contributed *flannel*, *maggot*, *coracle*. From the Gaels of Scotland came *clan*, *mackintosh*, *ptarmigan*, *reel* (dance), *slogan*, *whiskey*. From the Erse of Ireland were derived *brogue*, *bog*, *galore*, *shamrock*, *spalpeen*, *Tory*. This list is surprisingly small.

The Teutonic Element.

The earliest speech properly called English (from the tribe of Angles) was brought to the islands of Great Britain in the 5th century A. D. by Teutonic invaders from what is now northern Germany. This imported *Englisc*, later *English*, speech was a branch of the Western Germanic languages, which includes also High German, the literary language of modern Germany, as well as the Frisian, the Flemish language of Belgium, and the literary language of Holland. A degree more distant was the East Teutonic division which included the Gothic, and the North Teutonic, including Danish, Swedish, Icelandic, and Norwegian.

A few of the native English words have survived practically without change of form or meaning: among these are *oft*, *and*, *in*, *word*, *full*, *from*, *for*, *to*, *God*. At times there has been a slight change in sound or meaning, as in *ofer*, over; *thaet*, that; *aer*, ere; *aefter*, after. More often the change has been greater. Take the word *wanton*. This combines the old privative prefix *wan*, without, and an altered form of the past participle *togan* of the O. E. (Old English) verb *teon*, to train or rear. Thus *wanton* meant without training, and was applied first to children; its meaning today has a far wider application. These changes followed definite rules. The O. E. *k* sound, represented by the letter *c*, under certain conditions regularly became *ch*, as in choose, from *ceosan*; rich, from *rice*; much, from *mycel*. In the same way O. E. *sc* became regularly *sh*, as in should, from *sceolde*; shame, from *sceamu*; shadow, from *sceadu*. The vowels show changes as symmetrical: thus the long *a* sound in *ath*, *tacn*, *aras*, *stan*, *lar*, *swa*, *mar*, *gast*, becomes long *o* in *oath*, *token*, *arose*, *stone*, *lore*, *so*, *more*, *ghost*. Other vowels illustrate changes as regular.

The meaning in most cases showed a gradual alteration. Thus *wadan*, to advance, became *wade*, to advance in water; *stingan*, to pierce, became *sting*, when a bee pierces; *spillan*, to destroy, became *spill*, to waste liquid; *craeft*, force, became *craft*, cunning. The first two of these indicate how a word of general meaning is limited to a more specific meaning, as the language sharpens in its ability to convey ideas; *spill* shows a general

tendency for words to become lighter and less impressive in meaning, as time corrupts their force; *craft* points to the historic fact that cunning succeeded force in the dealings of men. *Mod*, courage, weakens to mood, a state of feeling; *wif*, woman, is limited to wife, married woman; *deor*, beast, to deer, a particular wild beast; *hamm*, the back of the leg, is generally restricted to the leg of a beast used for food, especially of pork, although the old meaning is still slightly alive. *Ceorl*, freeman, was degraded to churl, a boorish fellow, by the conquering Normans. At times the Christian religion caused the alteration, as when it appropriated *feond*, enemy, and made fiend, devil; *bletsian*, to consecrate by blood (compare *blood*, *bleed*), has become bless. At times the general degradation of ideas caused the change. Thus *cnafa*, boy (compare German *Knabe*) grew to knave. Queer alterations have taken place, in such pairs of words as beam and tree. *Beam*, originally meaning tree (Ger. *Baum*, tree) means now a hewn product of the tree; *tree*, once applied to wood cut for use (compare single-tree, whiffle-tree, etc.) today in *tree* applies to the source of the wood. *Bread* and *loaf* have similarly exchanged their meanings: the old meaning of loaf appears disguised in *lord* (*hlaford*, bread-warden or guardian) and *lady* (*hlaefdige*, bread-kneader).

Thus of the original Old English, a few words persist with original form and meaning; more have altered one or both; and a large number have died, and are no longer in the living vocabulary. For words die as surely as men do. Among the corpses found only in archaic poetry and old prose are *ween*, to think; *meed*, reward; *fain*, gladly; *rathe*, early; *lore*, learning; *bale*, harm; *dight*, decked; *don*, put on (literally, do-on), and also *doff*, put off.

How English Became Our Speech.

Literary English is, in reality, the East Midland dialect of the spread Wessex dialect of the Anglo-Saxon dialect of the Teutonic tongue, that split off from the Indo-European speech. It was not made the official speech by Act of Parliament or popular vote; languages do not grow that way. Skeat classifies forty-two dialects in the British Isles—nine in Scotland, three in Ireland, and thirty in England and Wales. If the political history or the geography of England had differed, we would today speak a tongue based on some other dialect. First, Old English became the basic speech in the 9th century, largely due to the literary activities of Alfred the Great, king of Wessex, in South England. The Wessex (lit., *West Saxon*) dialect at the time was only one of many; the political and literary prominence of Alfred made it selected as the speech of Anglo-Saxon England.

Then the Normans swept over the isle, and ended the reign of the English standard of speech. The English-speaking population became so reduced in social importance, that English was a forgotten speech in the ruling circles for almost 300 years; French and Latin became the accepted languages. Under Edwards I and III a national feeling grew up hostile to the continued use of French; and about 1400, at the time of Chaucer, English, as modified by French-Norman influence, became again the accepted speech, a position it has since held. This English again was only a dialect, the East Midland dialect, that of London, then merely one out of many dialects. If Alfred had come from the Scotch marches, if the island had been so skewed around geographically that the capital city had been on Tweed instead of Thames, we would speak a derivative of another set of dialects. Every language, living and dead, has grown so from some local dialect favored by circumstances geographical, political, or literary, or a combination of these.

More than this, a fact not as yet discovered by academic philology, climate plays a large shaping element in speech. The speech is determined, it might also be said, by isothermic lines. Study your map of the world for place-names, as samples of the spoken languages. The harsh Siberian and Russian Yakutsk, Kamchatka, Okhotsk, Tobolsk, Krasnoyarsk, Pustozersk,

Petrozavodsk, Scandinavian Bukke Fjord, Tromso, Sundsvall, Laurvik, correspond to the explosive Eskimo gutturals, and to Umanak, Svartenhuk, Sukkertoppen, Tchaneta, Attumwapiskat, Winisk, Waskaiowaku, names modified by southerly settlers. The guttural Teutonic speech is similar to the American Massachusetts, Connecticut, Chingashcook, Androscoggin, Umbagog, Squam, Memphramagog, Mattawamkeag, Hopatcong, Keokuk, Saskatchewan, Iskut, Kamloops. The melting softness of Italian, southern French, Spanish finds its American parallel in Miami, Pensacola, Tuscaloosa, Tuscarora, Appalachicola, Alapha, Susquehanna, and the like. Equatorial speech is similar broadly the world around; the Southern hemisphere builds back from a lazy dwelling softness to a curtness and at last a staccato brusqueness, as we approach the southern pole. Civilized conquest of the world imports inept place-names everywhere: but the original speech was determined by the close-mouthed cold and the languid drawl of tropic warmth.

Thus English took her Teutonic speech from a local dialect. At first there was no general standard; but within a century, the spread of printed books, and the King James version of the Bible, made the form of the language comparatively rigid. If it were entirely rigid, it would be dead: never forget that living speech is a constantly growing thing.

The French Element.

The English language has been said to be French badly pronounced. There is some truth in the witticism; just as French, in turn, is mangled provincial Latin. Even before the Norman conquest, certain French words had crossed the channel, becoming among others *purse, sot, castle, turn, trail, market, clerk, false*. In the 12th Century, in the little written English coming down to us, these had been joined by such words as *justice, war, peace, tower, treason, prison, court, crown, empress, chaplain, saint, grace, mercy, charity, faith*. Notice how these words point to the part played by the Normans in English history, in military, court and religious circles. The middle of the 14th Century saw thousands of words borrowed. The legal terms especially were taken from the French: among these *mortgage, forfeit, bail, jury, larceny, lease, perjury, assets, embezzle, seize, culprit, improve, attach, quit, matter of fact*. General words, with the date of their first appearance from French sources in the Oxford dictionary, are *havoc*, 1585; *plot*, 1590; *march*, 1590; *lobby*, 1553; *massacre*, 1581; *sentinel*, 1579; *attach*, 1600; *quatrain*, 1585; *gazette*, 1605; *dessert*, 1600. Later additions are *campaign*, 1656; *corps*, 1711; *memoir*, 1673; *group*, 1686; *profile*, 1656; *serenade*, 1656; *caprice*, 1667; *beau*, 1687; *brunette*, 1713; *cravat*, 1656; *pantaloon*s, 1661.

Some of these French words were from the Teutonic tribe of Franks: *blank, blue, booty, butcher, button, choice, coat, crush, dance, freight*. Some were from the French Celts: *attach, attack, baggage, bar, basin, branch, brave, car, career, carpenter, carry*. A large number were from the Latin through the French. *Cavalry* and *chivalry* come from the vulgar Latin *caballus*, a horse, rather than the classical Latin *equus* (whence *equine, equestrian*); *cat*, from Vulg. Lat. *cattus*, not classical *felis* (whence *feline*). We have words coming straight from the Latin, and from the Latin through the French, often with different meanings: this gave such pairs as *monastery, minster*; *regal, royal*; *presbyter, priest*; *security, surety*; *fidelity, faith*; *gentile, gentle, genteel, jaunty*; *annoy, ennui*; *feast, fete*; *corpse, corps*; *capital, chief, chef*. French is a lazy slurring tongue: it swallows and loses internal consonants, and adds often an initial vowel for euphony, or easier

pronunciation. Thus *capital*, from the Latin, came through the French as *chattel* and *cattle*; *study* (Lat. *studia*) became *etude*; *magistrate* became *master* and *mister*; *senior* became *sir*; *adjutant*, *aid*; *balsam*, *balm*; *collocate*, *couch*; *deacon*, *dean*; *deposit*, *depot*; *fragile*, *frail*; *juniper*, *gin*; *radius*, *ray*; *revindicate*, *revenge*; *separate*, *sever*. The cause of this French slurring of pronunciation is largely geographic; compare American colloquial speech of immigrant Italians, *police-a* for *police*, *give-a me da mon'*, etc.

The Classical Elements: Latin and Greek.

Not only did Latin come through the French; but the Renaissance, or revival of classical learning, of the Middle Ages, opened Latin and Greek to the language, and enriched our vocabulary with thousands of long-winded polysyllables—a process by no means ended yet. This borrowing, in non-classical cases as well, is true of all living European languages; but English is especially a blended tongue. Long before classical history began, the northern tribes had come into contact with Mediterranean civilization; had gained from it many products of art and industry; and had often taken at the same time the southern words to indicate these objects.

The evidence of archeology to show this southern interpenetration of the north is amply supported by what philology has discovered. Thus wine came from the South; the Lat. *vinum* survives in Eng. *wine*, Germ. *wein*, Danish, *vin*; the Lat. *caupones*, wine-dealers, gave a number of Teutonic words dealing with commerce, such as O. E. *ceapian* (from which Eng. *cheap* and *chapman*, *merchant*), and Ger. *kaufen*, to buy; *Kaufmann*, *merchant*. *Mint*, *pound* and *inch* came in at this period from Lat. *moneta*, *pondere* (to weigh), and *uncia*. *Dish*, *scuttle*, *kettle*, *mortar* were names of receptacles borrowed at this early period from the Latin; the same language also yielded *cook*, *kitchen*, *mill*, *butter* (Lat. *butyrum*), *cheese* (*caseus*), *turnip* (*turn-napus*), *pea*, *cabbage*, *plum* (*pruna*, Greek *prounon*, earlier *proumnon*, a plum tree; Eng. *prune* from same source), *peach* (*persicum*, Gr. *persicon*, from earlier *malon persicon*, the peach, literally, Persian apple. Similarly *quince* came from the phrase meaning Cydonian apple; the orange was Medic apple; the apricot Armenian apple. The Greeks in these cases named specific fruits by adding a place-name to the general word for apple, broadened to mean fruit. Compare French *pomme de terre*, apple of the earth, for potato.)

The Romans in Britain left their mark in such words as *street* (Lat. *strata*), *port* (*porta*), *Win-chester*, *Wor-cester*, *Don-caster* (*castra*, camp.) From early Roman Christianity came such words as *abbot*, *apostle*, *bishop*, *chalice*, *chapter*, *choir*, *creed*, *deacon*, *hymn*, *monk*, *pope*, *priest*, *saint*,

hymn; many of these in their turn derived by the Romans from the Greeks. *School* comes from Lat. *scola*, pointing to Roman control of education. A few typical words, showing their forms in modern and Old English, and in Latin, are:

<i>Modern English</i>	<i>Old English</i>	<i>Latin</i>
candle	candel	candela
chalk	cealc	calcem
cedar	ceder	cedrus
dragon	draca	draco
oil	ele	oleum
fever	fefer	febris
fork	forca	furca
giant	gigant	gigantem
gem	gimm	gemma
lobster	lopestra	locusta
mountain	munt	montem
poppy	popig	papaver
radish	raedic	radicem
sage	salfige	salvia

Many of these words re-entered English, long afterward, directly from the Latin; so that we have *chalk* and *calcium*; *oil* and *Oleomargarine*; *fever*, *febrile*; *giant*, *gigantic*; *lobster*, *locust*; *sage*, *salvia*, each pair with the same root. At times the Old English survived instead of the Latin: thus *gospel* comes from O. E. *godspell*, not Lat. *evangelium*; *dawn* from O. E. *daegroed*, not Lat. *aurora*. Of course, *evangelical* and *aurora* also entered the language, with slightly altered meanings.

In the century after the Norman conquest, words straight from the Latin, such as *generation*, *persecution*, *sedition*, *tradition*, made their appearance. These words, and the later additions, *fraction*, *duration*, *position*, which appear in Chaucer, may have been taken straight from the Latin, or come through Norman-French. The Renaissance brought in an immense number of words, among which (with year of first appearance in the Oxford

dictionary) are *abbreviate* (1530); *abduct* (1834); *abjure* (1501); *abnormal* (1836); *abolition* (1529); *absorb* (1490); *absurd* (1557); *abuse* (1538), etc. Many such words failed to grow in the new speech: *adminiculation*, *allect*, *annect*, *applicate*, *assentation*, all used in 16th Century English, seem now pedantic monstrosities. Old English words fell by the wayside as surely: *moond* for lunatic, *outpeopling* for captivity, *hunderer* for centurion, *frosent* for apostle, *biwordes* for parables, *crossed* for crucified, *freschman* for proselyte, all appearing in Sir John Cheke's translation of the New Testament, have died; although *byword*, *crossed*, and *freshman* took root with other meanings.

Law is full of Latin terms like *alibi*, *subpoena*, *alias*, *proviso*, and *affidavit*. Similarly came *item*, *prospectus*, *impetus*, *deficit*, *terminus*, *referendum*. The following table gives a list of the percentage of words from the Latin appearing in certain English writings:

Gibbon	30%
Samuel Johnson	28%
Tennyson	12%
Shakespeare	10%
King James Bible	6%

This refers to all the words used, not taking account of repetitions. If allowance is made for the frequent use of the simplest words, the Latin and other foreign elements swell larger. To sum the matter up another way, about one word out of every four in the complete Latin vocabulary found its way into English. Of course, one Latin word at times gave birth to scores of English words. Words are by no means monogamous; some are very Solomons.

Greek has paid its toll since the Renaissance. Many early Latin importations were derived by the Romans from the Greek speech—*abbot*, *monk*, *priest*, *clerk*, *school*, are of this type. The Greek gave directly such words as *poetry*, *drama*, *comedy*, *tragedy*, *theater*, *scene*, *melodrama*, *episode*, *ode*, *theme*, *thesis*, *topic*, *climax*, *emphasis*, *phrase*, *paragraph*, *parenthesis*, *period*, *colon*, *idiom*, *dialogue*, *apology*, *comma*, *hyphen*, etc. In the science

of botany alone Greek contributed *botany*, *protoplasm*, *stigma*, *petal*, *spore*, *parasite*, etc.; in athletics, *gymnastics*, *athlete*, *acrobat*, *trophy*, *stadium*; in physiology and medicine, words almost countless. The nomenclature of science today is taken partly from Latin and largely from Greek sources.

It must never be forgotten that historically the Mediterranean peoples were overrun many times by the northern Teutonic barbarians, not only in the breakup of their rule, but long before classical history commenced. The classical conquest of the world was largely led by men in whose veins the blood of forgotten Teutonic conquerors flowed.

Other Teutonic Elements.

The Danish Conquest, which preceded the Norman victory, added all place-names in England ending in *-by*, *-thorp*, *-throp*, *-beck*, *-dale*, *-thwaite*, etc. It is not always easy to tell whether a word is Old English or of Scandinavian borrowing: the two speeches were often alike. One test lies in the fact that O. E. *sk* changed regularly to *sh*, and *k* before *e* and *i* altered to *ch*. Thus Teutonic words with these sounds unchanged, such as *skill*, *skin*, *scare*, *sky*, *keg*, *kettle*, *kirk*, are to be assigned to Scandinavian origin. The same roots appear from Old English in such words as *shin* and *church*. Couplets from the two sources are *skirt*, *shirt*; *shriek*, *screech*. *Eggs*, *get*, *awe*, *give*, *husband*, *fellow*, *knife*, *wing*, *window*, *root*, *law*, *anger*, *gate*, *meek*, *low*, *odd*, *wrong*, *ill*, *ugly*, *rotten*, *die*, *cast*, *hit*, *take*, *call*, *want*, *scare*, *they*, *their*, *them*, are a few Scandinavian contributions indicating the everyday character of the words.

The Dutch gave us many sea-faring terms, such as *boom*, *cruise*, *sloop*, *yacht*, *ahoy*, *aloof*, *avast*, *belay*, *caboose*, *hoist*, *hold* (of a ship), *reef*, *rover*, *skipper*, *smack*, *strand*. From them we also received *deck*, *frolic*, *fumble*, *glib*, *hogshead*, *jeer*, *mop*, *rant*, *ravel*, *ruffle*, *snap*, *snuff*, *switch*, *toy*, *trick*, *uproar*, *wagon*, *furlough*, *cashier*, *forlorn*, *hope*, *plunder*, *spool*, *stripe*, *scour*. The Dutch of South Africa have given *trek*, *veldt*, *spoor*; they brought in from the Arabic *monsoon*, from the Malayan *bamboo* and *cockatoo*. In the United States the Dutch settlement gave *cold-slaw*, *boss*, *cookie*, *cruller*, *dope*, *hook*, *pit* (of a cherry), *sleigh*, *spook*, *stoop* (porch), and *waffle*.

The High German has given less; but *umlaut*, *kindergarten*, *meerscham*, *poodle*, *waltz*, *carouse*, *cobalt*, *gneiss*, *quarts*, *shale*, *zinc*, point to their influence.

Varied Sources.

Italy, with a Latin origin for its speech, has given *attitude, fiasco, influenza, isolate, motto, stanza, umbrella*, in the 16th century; and, later, *macaroni, spaghetti, wop, finale, intermezzo, oboe, opera, piano, bust, fresco, cameo, colonnade, cornice, corridor, grotto, motto, studio, point* to Italian influence in music, architecture, and elsewhere. Italian words coming to us through the French include *alarm, alert, arcade, apartment, artisan, bulletin, cadence, caress, contrast*.

The Spanish element entered first in the 16th century, in such words as *armada, comrade, desperado, dispatch, negro, renegade*. Later contributions include *brocade, anchovy* (from the early Basque speech), *booby, capsize, caste, cigar, cork, embargo, mosquito, quadroon, sherry, tornado, vanilla*. Spain's conquest of the New World made them the agents for the entrance of *cocoa, chocolate, tobacco, maize, hammock, barbacue, and potato*, from various early American sources. *Florida, alligator, dollar, sierra, Colorado, adobe, sombrero, canyon, lariat, corral, calaboose, lasso, ranch, locoed, broncho, cinch, bunco*, are Spanish words coming to us through Spanish occupation of America.

Portuguese gave less; its contributions include *cobra, palaver, madeira, port* (wine), *molasses, tank, fetish*.

Russia, especially in its great prominence in the last few years, has made us familiar with *vodka, дума, progrom, czar, mujik, bolsheviki, intelligentsia, soviet*. In earlier times we had received from the Balto-Slavic group *siskin, mammoth, mazurka, polka, howitzer, slave, ruble, samovar, crash* (linen) and *knout*. The Hungarian language, quite outside the Indo-European group, gave *vampire* and *coach*.

The Semitic Hebrew, potent in the world's religion, furnished *amen, bedlam, cherub, jubilee, Satan, Jehovah, Messiah, rabbi, sabbath, maudlin*; and also *camel, cider, ebony, elephant, cinnamon, sapphire, sodomy, leviathan*. The Semitic Arabic furnished even more. Through the Greek they gave *elixir, talisman, alchemy, carat*; more directly, *albatross, alkali, attar*,

fakir, harem, mohair, sheik, sherbet, shrub, syrup, sofa; and in various roundabout ways *naphtha, jasper, alcohol, zero, magazine, crimson, carmine, amber, cipher, cotton, garble, giraffe, gazelle, sumach, sash* (girdle), *talc, lime* (fruit), *mummy, zenith, admiral, sugar, assassin, lute, mate* (in chess), *mattress, saffron, sultan*. Many doublets came from this source: the Arabic word for drink gave *sherbet, shrub* and *syrup*; Arabic *sifr*, cipher, through Span. and Fr. gave *cipher*; through Low Lat. and Ital., *zero*. Most of the astronomical names of the constellations are Latin: *Pisces, Ursus Major, Taurus, Lyra, Libra, Virgo*, etc.; but the Arabic names of individual stars, such as *Rigel, Betelgeuse, Altair, Algol, Aldebaran*, are generally used.

From the Persian, by routes largely indirect, have come *azure, pajamas, toddy, magic, caravan, tiger, rice, scimitar, taffeta, julep, rook* (in chess), *check, checkers, chess, lemon, lilac, jasmine, spinach, tulip* and *scarlet*. *Scarlet* has had a unique journey, indicating what irresponsible vagrants words may be. It is found in Eng., Dan., Germ., Swed., Icel., Hung., Old Bulg., Serv., all from the late Gr. *skarlaton*; this Gr. term came from the Turkish *iskerat*; the Turkish word from the Arabic *saqarlat*, a variant of *saqallat*, from the Persian *saqalat*, meaning scarlet cloth. We are not through yet: the Persian word comes from Lat. *sigillatus*, figured or painted, especially as applied to cloth. This was from Lat. *signum*, a mark or sign, whose root meaning is uncertain. To show how many words may be born of one word-stem, we have from this root, among many others, *sign, signature, signal, signet, signify, assign, consign, design, countersign, ensign, resign, insignia, sigil, sigillate, seal, scarlet*—the dictionary contains 49 words from this stem beginning with *sig-* alone. Thus far has the Persian step-word *scarlet* taken us.

From the Turkish, a race dependent upon others for culture, there are few words, including *horde, turkey, turquoise, uhlan*. India, the original home of the Indo-European speech to which Anglo-Saxon and Teutonic belong, is responsible for many words. Early words representing Oriental contributions to European civilization are *pepper, camphor, indigo, china* (ware), *orange, candy, calico, chintz, sandal, jungle, loot, punch* (beverage). Later borrowings are: *juggernaut, pundit, rajah, sepoy, bandanna, thug, bungalow, shampoo, pariah, cot* (bed), *polo*.

Relatively few words have come from China and Japan. *Silk* may be of Chinese origin; *typhoon*, *tea*, *serge*, *mandarin*, certainly are. From Japan emanate *kimono*, *soy* (bean), and few others. The South Seas have furnished more, including *bamboo*, *cheroot*, *teak*, *caddy*, *gong*, *guttapercha*, *junk*, *orang-outang*, *gingham*, *bantam*, *taboo*, *tattoo*, *atoll*, *ukelele*. Uncivilized Africa's different races have given *canary*, *chimpanzee*, *voodoo*, *hoodoo*, *tango*, *guinea*, *gorilla*, *yam*, *zebra*. Australia is to be credited with *boomerang* and *kangaroo*.

The native speech of the pre-European Americans has given the words listed under the Spanish influence, and also *mahogany*, *canoe*, *guava*, *cannibal*, *hurricane*, *guano*, *tapioca*, *buccaneer*, *pampas*, *alpaca*, *condor*, *tapir*, *banana*, *jaguar*, *coyote*, also through the Spaniards. North American Indians have added to this a large number of place-names, and also *caucus*, *pow-wow*, *hickory*, *hominy*, *moccasin*, *moose*, *opossum*, *raccoon*, *skunk*, *squaw*, *toboggan*, *wigwam*, *tomahawk*. The Philippines gave the useful word *hike*. The expressive *husky* is said to be a corruption of *Eskimo*, first applied as a name for a dog.

With this we close the rapid survey of contributions to our language from every race of men. Each other language has grown by similar accretions; and the process is a continuing one. The world war added many words to the vocabulary; the uneasy peace now following is furnishing at least its daily dozen.

CHAPTER II

THE FORMATION OF WORDS

The Blending of the Elements.

The haphazard and nondescript way in which all modern civilized languages grow produces some curious philological phenomena. We have spoken of many of the doublets, especially the French-Latin ones, the Old English-Scandinavian ones, and two Persian examples. Again, from the Persian word for turban, *dulband*, have come both *turban* and *tulip*, the flower named for its shape. *Deck* and *thatch* are the same Teutonic root coming through O. E. and Dutch respectively. The Persian *shah*, ruler, has come recently in this form, and in earlier days in the verb *check*. The Greek *pandoura*, through Italian and French, gives *mandolin*; through Italian, with Negro modifications, *banjo*.

Fighting against this tendency is a simplification, by which different foreign words assume the same form in English. Thus five distinct Latin words have entered English with the one form *bay*, and mean (1) the color of a horse (Lat. *badius*); (2) a kind of laurel (Lat. *baca*, a berry); (3) an inlet of the sea (Lat. *baia*); (4) a form of window (Lat. *badere*); (5) a bark of a dog (Lat. *baubari*). *Gin*, a drink, is from Lat. *juniperus*, whence also *juniper*; in cotton *gin*, it is from Lat. *ingenium*. The differing meanings of *curry*, *yet*, *hue*, *lay*, *dam*, *main*, *swallow*, and many others, come from different word-roots.

Words from classical sources are selected for various reasons. Some are to render scientific nomenclature more specific; some, to soften tabooed subjects (compare *viscera*, *guts*; *perspire*, *sweat*; *abdomen*, *belly*). Others survive through the surge and thunder of their word-music: the lines

The multitudinous seas incarnadine,
Making the green one red

indicate the superiority in mere verbal tone of the classic over the native idiom. There is less excuse for the attempt to substitute classical *vertigo* for *dizziness*, *coryza* for *cold*, or *urticaria* for *hives*. This appears at its worst in the Bostonian reply, to "Have you eaten enough?" "Gastronomic satiety

admonishes me that I have arrived at a state of deglutition consistent with dietetic satiety.” In American, this would be, “I have eaten enough.”

The place of native words in the language is a secure one. One-fourth of the whole task of expression in English is shouldered by nine native words:

and
be
have
it
of
the
to
will
you

These nine with thirty-four other native words form half of the words actually used in English speech:

about
all
as
at
but
can
come
day
dear
for
get
go
hear
her
if
in
me
much
not

on
one
say
she
so
that
these
they
this
though
time
we
with
write
your

Furthermore, in pairs of synonyms, one native, one classical in origin, the greater directness in the native words is striking. Compare *fire*, *conflagration*; *bloody*, *sanguinary*; *stiff*, *rigid*; *fat*, *corpulent*; *sweat*, *perspire*. On one occasion Samuel Johnson, the great Latinist, lapsed into native English: "It has not wit enough to keep it sweet." After a moment's reflection, he weakened this with the classical gloss, "It has not vitality enough to preserve it from putrefaction." There are imported words, however, which enter into the very warp and woof of the language: for instance, *easy*, *large*, *sure*, *bet*, *boot*, *quiet*, *brace*, *peace*, *city*, *soldier*, *hour*, *move*, *turn*, *table*, *place*, *very*, *save*, *single*, *clear*, *plain*. In some cases the foreign word has supplanted the native in general use; compare *beautiful*, *fair*; *prosperity*, *speed*; *valley*, *dale*; *divide*, *cleave*; *forest*, *wold*; *fort*, *fastness*; *tremble*, *quake*; *joyous*, *blithe*; *mercury*, *quicksilver*; *mirror*, *looking-glass*.

A class at Columbia was recently asked to select the 50 words of most basic importance in the expression of human life. From two lists prepared 78 words were finally selected; of these, 39 were French, and 35 Anglo-Saxon. A public-speaking club selected the 21 most beautiful words in English: of these 3 were Anglo-Saxon, 1 Scandinavian, 3 Latin, and 14 French.

Many modern words are blended of two or more languages. Classic prefixes and suffixes with native roots are found in *co-worker*, *pro-German*, *re-birth*, *ante-room*, *superman*, *breakage*, *laughable*, *righteous*, *wreckage*. Native prefixes and suffixes are blended with classic roots to form *unruly*, *besiege*, *bashful*, *misplace*, *outcry*, *overcharge*, *outline*, *by-product*, *finest*, *forceful*, *napkin*, *beautiful*, *painting*, *statecraft*, *uncivil*, *overturn*, *understudy*, *relentless*. Hybrids formed of native and classic roots are found in *window-pane*, *table-cloth*, *faint-hearted*, *simple-minded*, *Saturday*, *birthplace*, *candlestick*, *staircase*, *grandstand*, *cocktail*, *fireplace*, *outrage*.

One remarkable word has recently been unearthed, a hybrid made of elements from five different languages. The word is *remacadamizing*, which may be analyzed into *re* (Latin), *mac* (Celtic), *adam* (Hebrew), *ize* (Greek) and *ing* (native English.) It is a good vigorous word too, despite its mottled ancestry.

Word Creation.

One of the forms of words known to all languages staggers under the Greek term onomatopoeic, recently rechristened echoic—a word expressing a sound in Nature. The *hiss* of steam, the *clang* of a bell, the *crash* of falling timbers,—these words are echoic. Words like *papa*, *mama*, *baby*, probably of this type, are found in practically all languages. *Bomb*, *murmur*, *cuckoo*, go back through French to Latin, and to an antiquity hard to determine. Among echoic words originating independently in English are: *buzz*, *fizz*, *purr*, *quack*, *hiss*, *boom*, *gibber*, *jabber*, *giggle*, *titter*, *whirr*, *ding-dong*, *hee-haw*, *hoot*, *chatter*. The theory that this is responsible for all words has long been abandoned; yet there is a uniform overtone in a group of words like *bosh*, *slosh*, *squash*, *plush*, *hush*, *mush*, *flush*, *blush*; a related quality in *crash*, *splash*, *smash*, *hash*, *trash*, *clash*, *dash*, *rash*. Certain verbal sounds get associated with certain emotions; and out of the casual word creations, commencing as slang, come such words as the following list of recent additions to the first volume of the Oxford dictionary, all from the *b*'s: *bamboozle*, *bang*, *bilk*, *blab*, *blabber*, *blare*, *blear*, *blight*, *blob*, *blizzard*, *blot*, *blotch*, *blubber*, *bluff*, *blunder*, *blunt*, *blur*, *blurt*, *bluster*, *bogus*, *boom*, *bore*, *bosh*, *bother*, *brash*, *brunt*, *bub*, *bump*, *bum*, *bunch*, *bungle*, *burr*, *bustle*, *buzz*. Nonsense verse contributes here; but artificial word additions, such as Gelett Burgess' *fuddy* for untidy, *bimiped* for jilted, *snosh* for vain talk, *cofle* for "to try to find out a person's name without asking," may have a harder time horn-ing into the language. The verb *to horn in*, a fine figurative phrase from the cattle country, is still ranked as slang; but it is beginning to receive academic approval.

Sometimes such word-formations are meant humorously, sometimes seriously. Thus from chimpanzee came *humanzee*, to describe one especial animal. *Travelogue*, from travel and dialogue, has more serious intention. Light recent creations are *swellegant*, *yellocution*, *versiflage*, *alcoholiday*, *flumonia*. The origin of these is obvious; but many accepted words in the language have roots as yet undiscovered, and may have come similarly. *Dog* came in before the Conquest, without known ancestry; the Teutonic name appears in *hound*, while the Latin *canis* furnishes *canine*. *Girl*, *boy*,

lad, lass, big, bad, pig, cut, entered before Chaucer; *bet, jump, dodge*, before 1600; *pun*, in the 17th century; *fun, bore, slang, fudge*, in the 18th; *rollicking, loaf* (verb) in the 19th; the modern *stunt* and *hooch* are similar.

Another source of increase to the speech is the doublets, already mentioned. Other examples are *of, off; through, thorough; porridge, pottage; shade, shed, shadow; strap, strop; courtesy, curtsey; fantasy, fancy; corpse, corps; posy, poesy*.

The most prolific source has been the combination of two or more elements into one word. Almost back to the forgotten beginnings of our speech go such words as *barn* (O. E. *bere-aern*, barley-place); *lord* (*hlaf-weard*, bread-keeper); *gossip* (*god-sibbe*, good kinsman); *hussy* (*house-wife*); *gospel* (*god-spell*, good narrative); *world* (*wer-eld*, man age); *sheriff* (*scir-gerefa*, shire reeve); *daisy* (*daeges-eage*, day's eye). The Elizabethan age was rich in compounds, such as *freshman, huntsman, bookseller, keyhole, bookworm, potluck*, and *horseplay*. Shakespeare offered *honey-heave, pity-pleading, wind-changing, carry-tale*, and others, which have not found permanent lodgings in the language. Others which have endured are *rawboned, crestfallen, untutored, high-born, red-hot, blood-stained, mouth-filling, heart-ache, hairbreadth, break neck, even-handed, moss-grown*. Among those which did not survive are *hotspur, aleknight, maltworm, hangby, crackhemp, findfault* (but compare *fault-finder*), *makepiece, tearsheet, ticklebrain, tosspot, wantwit*. A great stock of terms of contempt have survived, such as *killjoy, scarecrow, pickpocket, daredevil, spitfire, hangdog, lickspittle, makeshift, skinflint, slipshod, turncoat, telltale*. Modern equivalents are *speak-easy, bootlegger*, and juvenile *tattletale* and *copycat*. *Smut-hound, dope-fiend*, and other modern mixtures have not yet acquired lasting dignity.

The English settlers in America used this method in naming many natural objects: compare *bullfrog, canvas-back, lightning-bug, mud-hen, cat-bird, razor-back, garter-snake, groundhog, live-oak, turkey-gobbler, pokeweed, copperhead, eelgrass, reedbird, eggplant, peanut, bluegrass, Junebug*. Recent American blends include *pussyfoot, skyscraper, bell-hop, hayseed, shin-plaster, bucket-shop, lounge-lizard, rum-hound*, and many other *-lizard* and *-hound* blends.

Prefixes and suffixes are taken from all speeches. Native prefixes include *mis-*, *un-*, *after-*, *be-*, *for-*, *man-*; suffixes, *-ness*, *-less*, *-ly*, *-ish*, *-er*, *-y*, *-head*, *-hood*. With these may be used the Latin *pro-*, *post-*, *inter-*, *ante-*, *pre-*, *co-*, *sub-*, *super-*, *-ation*, *-ative*; French *dis-*, *en-*, *-age*, *-al*, *-ment*, *-able*, *-ous*, *-ose*, *-ese*, *-gy*, *-ate*, *-ard*, *-esque*, *-ade*, many of these borrowed by the French; Greek *a-* (without), *hyper-*, *nec-*, *pseudo-*, *arche-*, *-ize*, *-ist*, *-ism*, *-ite*, *-itis*; Scandinavian *-ling*, and others listed; Flemish *-kin*. Hundreds of compounds made from these have failed to survive; this is especially true of those made with native prefixes and suffixes. *Wanton* is the only word preserving the prefix *wan-*, once common in such combinations as *wanthrift*, extravagance; *wanhap*, misfortune; *wanlust*, languor; *wanwit*, folly; *wantrust*, lack of confidence; *wantruth*, falsehood; *wanchance*, ill-luck. *Blameful*, *crimeful*, *dareful*, *deathful*, *ruthful*, all from Shakespeare, are only a few of the *-ful* compounds that have died; *aidless*, *bragless*, *heirless*, *effectless*, also from Shakespeare, are four out of many more that have gone. *Gainsay* alone lives out of *gainscope*, *gainstand*, *gainstrive*, etc.; *laughing-stock* is the one relict of *gazing-stock*, *jesting-stock*, *mocking-stock*, etc. Five only of the *-worthy* adjectives (*blameworthy*, etc.) remain. Most of the *-th* nouns are gone: while keeping *warmth*, *health*, *growth*, *wealth*, and *height* (often pronounced *heighth* still) we have surrendered *lowth*, *greenth*, *coolth*, *illth*, *spilth*, etc. More of the classic prefixes and suffixes have taken root; there are five hundred words listed in the Oxford dictionary beginning with the Greek *anti-*. Only two *tele-* words were in Samuel Johnson's dictionary; there are 130 in the present Oxford one. The Century Dictionary supplement contains 168 words beginning with *auto-*. The process is a living one: thus *book-fiend*, *dope-fiend*, *chess-fiend*, *bomb-proof*, *fool-proof*, *near-beer*, *near-great*, *near-champion*, are all recent inventions.

The shortening process gave, long ago, such words as *van* (from vanguard), *van* (caravan), *patter* (pater noster), *canter* (Canterbury gallop), *wig* (periwig), *cheat* (escheat), *wag* (waghalter), *spend* (dispend), *rum* (rumbullion), *cab* (cabriolet), *still* (distillery); the dandified speech of Queen Anne's day gave *mob* (mobile vulgus), *blues* (blue devils), etc. From other sources came recently *chum* (chamber fellow), *photo* (photograph), *cycle* and *bike* (bicycle), *gas* (gasoline), *pants* (pantaloons), and countless others.

Folk-Etymology.

The World War saw folk etymology at work among us, in fascinating ways. Thus *Mouquet Farm* was promptly re-christened *Moo Cow Farm*. The conversion of the warship *Bellerophon* into *Bully Ruffian* has long afforded amusement; similar naval perversions are *Ariadne* into *Harry Annie*, *Hecate* into *He Cat*. Mistaken folk analogies are responsible for the conversion of the singular *pease* (compare *peascod*) into a *pea*, and for *edit*, *rove*, *hawk* (verb), *beg*, *asset*, *vamp*, *burgle*, *launder* (verb), *jell*, *henpeck*, and *sunburn* (both verbs).

Often it is an attempt to convert unfamiliar words into familiar, by altering the original spelling. Thus Milton's *sovrán*, by the influence of *reign*, became *sovereign*; *cold-slaw* came, not from *cold*, but from Dutch *kool*, cabbage. *Blunderbuss*, also of Dutch origin, came from *donderbuss*; *isinglass*, influenced by English *glass*, goes back to Dutch *huysenblas*, sturgeon-bladder. *Country-dance* was once *contre-dance* (from *contre*, opposite). *Pick-ax* came, not from *ax*, but from Fr. *piquois*. Barberry began as Lat. *berberis*, not kin to *berry*; *gilly-flower* from Fr. *girofle*, ultimately to Gr. *karuophullon*, nutleaf. Three words have been pulled toward the flower *rose*: *primrose* (Fr. *primerole*, Lat. *primula de ver*, first flower of spring); *tuberose* (Lat. *tuberosa*, tuberous); *rosemary*, (Lat. *ros marinus*, sea-dew). Similarly *mushroom* has nothing to do with *room*, but comes from O. Fr. *mouscheron*, from *mousse*, moss.

Animal names show the same trait. *Mongoose* is from native *mangus*, not kin to *goose*; *muskrat* is from Algonquin *muskwessu*. *Titmouse* has no more relation to *mouse*, but its second syllable derives from M. E. *mose*, O. E. *mase*, a name for several kinds of birds. *Cray-fish* and *crawfish* came into English as *crevice* from the same word in O. Fr.; the first syllable is kin to *crab*, the second has no original connection with *fish*. Often popular misreading adds an unnecessary second element to the word. The O. E. *bran* and Norse *hreinn*, reindeer, by analogy to the *rein* of a harness became reindeer, or literally deer-deer. The *grey* in *greyhound* is the name for a dog; by analogy to the color, we have the present form, which is literally dog-

dog. *Cot*, from Hindustani *knat*, bedstead, is joined often into *cot-bed*, literally bed-bed. *Cellar* in *saltcellar* meant salt-receptacle (Lat. *salarius*, salt-receptacle; the modern word is literally salt-salt-receptacle). *Turtle*, in *turtle-dove*, meant dove; our compound is literally dove-dove. O. E. *samblind*, half-blind (from Lat. *semi*-, half) gave rise to *sand-blind*, and in Shakespeare to the facetious *stoneblind* and *high-gravel-blind*. *Corporal* gets its spelling from a popular error; properly from Lat. *caporalis*, from *caput*, head, it was connected with *corps*, from Lat. *corpus*, and so grew to its present form.

At times it has been the mistaken zeal of scholars that has led the word astray. Thus *island* (M. E. *iland*, water-land) was spelled *island* in the attempt to connect it with *isle*, from Lat. *insula*, island; *rhyme* (E. *rime*) was spelled to connect it with *rhythm*. The ending *-gue*, proper in French terms like *vague*, *vogue*, *catalogue*, was applied erroneously to *tongue* and *rogue* (M. E. *tonge* and 16th Cent. *roge*); although it has not survived in *dogue* and *kingue*. The initial *wh*- in *who* and *whom* is responsible for *whole* (O. E. *hal*) and *whore* (M. E. *hore*). Thus *donkey* is modelled from the color *dun* after *monkey*, *parsnip* after *turnip*, etc.

Some Figures of Syntax.

At times modern word usage comes from the effect of some highly imaginative process, poetic in its origin. Thus the meaning of a word is often shifted subtly. The Lat. *horridus* means rough, bristly, shaggy; *hispidus* was almost a synonym. The English *horrid* and *hideous* have shifted to mean that which has the psychological effect of making a person rough and bristly, causing what is called goose-flesh, or making the hair stand on end. *Superb*, from Lat. *superbus*, proud (compare Tarquinius *Superbus*) means that worthy of pride. The adjectives in *sweet expression* and *grim determination* have shifted from the active subject to the effect on the passive object. A *deep* thinker, a *solid* reasoner, a *fluent* speaker have brought the result of the activity back as a modifier of the activity; meaning literally one who thinks deep things, one who reasons solid things, one who speaks flowing speech.

Man thought first in concrete things: when it became necessary to coin words for vaguer abstractions, he used some familiar concrete term. Thus most words expressing divisions of time have roots expressing physical facts at the bottom: *minute* (Lat. *minutus*, small); *second* (Med. Lat. *secunda minuta*, second minute, or a smaller subdivision); *week* (underlying meaning probably *change*); *month* (moon); *year* (underlying meaning probably *spring*); *season* (Lat. *satio*, sowing); *period* (Gr. *periodos*, a circle). The same thing is true of psychical terms in general. *Intellect* is from Lat. *inter-legere*, to choose between; *perceive* and *comprehend* mean literally to seize, to grasp. The process is more obvious in using *mental grasp* and the slang *to catch on*. *Ruminate* refers to the cud-chewing of cows; *brood*, to meditate, goes back to *sit* on eggs; *cogitate* means originally to mix together; *ponder*, Lat. *pondere*, to weight; *deliberate* (Lat. *libra*, scales); *reflect* (Lat. *reflectere*, to bend back); *calculate* (Lat. *calculus*, pebble, from *calx*, lime); *investigate* (Lat. *vestigium*, foot-print) illustrate this further.

Moral conceptions illustrate the same process. *Right* and *wrong* meant in their origins straight and crooked (compare *right* angle, *right* away, and the

verb *wring*, to twist). The colloquial *straight* and *crooked* hark back to the earlier idea, with new moral application. The fundamental meaning of *good* is suitable; that of *evil*, excessive. *Moral* and *ethical* both go back to words meaning custom, or manners. *True*, in its original meaning, is related to the oak tree. *Integrity* means untouched (Lat. *in*, not, and *tangere*, to touch). *Holy* comes from O. E. *halig*, from *hal*, whole. *Wicked* was M. E. *wikke*, feeble, connected with *weak*. *Virtue*, from Lat. *vir*, man, meant manly physical strength. *Character* is from the similar Greek word meaning a tool for stamping or marking.

As physical facts alter, words are put to queer uses. Thus a university course ends with a *commencement*; a steamer *sails*; an airplane *lands* on the sea; a ship is *manned* with women. We have weekly *journals* (literally, weekly dailies, from Lat. *diurnalis*, daily). *Black*-berries are red when they are green. A *manuscript* (literally, hand-written) may be typewritten. Words come to the place where they mean the same as their negatives: as *passive* and *impassive*, *ravel* and *unravel*, *valuable* and *invaluable*.

Language, Emerson said, is fossil poetry. Words, says Santayana, are the tombs of ideas. These mental pictures, traced back to their origins, may be of astonishing vividness. *Seminary* meant originally seed-plot; *stimulate* is literally to goad on—though even *goad* has now lost its physical vigor. *Sop*, used now of a drunkard, meant in O. E. bread, then used for dipping into liquids. *Cloak* meant originally bell (Late Lat. *cloca*, bell, and huntsman's cloak through similarity of shape). *Daisy* meant literally eye of day; *aster*, a star (Gr. *aster*, star; whence *astronomy*). *Tansy* comes from Gr. *athanasia*, deathlessness, immortality, a thought once applied to the plant; *pansy* derives from Fr. *pensee*, thought or remembrance. *Geranium* meant originally crane's bill, from the shape of the seed; *tulip* goes back to the Persian word seen more clearly in *turban*, shape again determining the application to the flower. Sentimental associations in English appear clearly in *lady-slipper*, *bleeding-heart*, *maiden-hair*, *heartsease*. Some of these derivations are humorous in intent; as an artist's *easel* (Ger. *Esel*, a donkey, because the easel bears burdens); *cab* from *cabriolet*, a little she-goat.

Figures of Nearness.

Many words grow from other words connected, closely or loosely, with the idea they represent. Thus, by a process of de-personization, we speak of a hunter as a *nimrod*, a teacher as a *mentor*, a wise man as a *Nestor*, a legislator as a *solon*, after definite individuals. *Tongue* acquires the wider meaning of language, as in “the English tongue.” *Language* itself is from Lat. *lingua*, tongue. *Copper* and *nickel* stand for small coins of those metals; *bloodshed* for destruction of life; *reds*, anarchists; the *bench*, the judges; the *pulpit*, the clergy; *cockcrow*, dawn. We say *the kettle boils* when we mean the water boils; we use *youth* for young people, *salt* and *deep* for ocean, and an author’s name for his works, as “I read *Shakespeare*.”

At times the shift is more disguised. Thus *front* is a long way from Lat. *frons*, the forehead. *Book* comes from O. E. *boc*, the beech-tree, the name of the material out of which books were first made. Similarly *code* is from Lat. *codex*, earlier *caudex*, tree-trunk; *Bible* from Gr. *biblion*, diminutive of *biblos*, inner bark of the papyrus; *library* from Lat. *liber*, book, originally bark of the tree. In a different way *volume* comes from Lat. *volumen*, roll, the form in which Roman records were kept. In the case of *deer*, the class name O. E. *deor*, wild beast, has come to apply to a special kind of beasts. The same is true of hound, originally the word for all dogs. In the case of *rabbit*, *bird*, and *pig* the word originally meaning the young of a species stands today for the whole species. This is being repeated today in the word *chicken*. There is no limit to the eccentricity of word creation.

CHAPTER III
THE BEHAVIOR OF WORDS

The Words for Colors.

Any subdivision of the vocabulary could with profit be set aside for particular study. Let us concentrate on the names for the colors, and learn from them what they have to teach of the development of man and his speech. The chief Sanskrit name for the abstract idea *color* is *varna*, derived from *var*, to cover. Color, therefore, was conceived originally as the result of the act of covering or smearing or painting. Our word, from the Lat. *color*, is connected with *oc-cultare*, to hide; also with Gr. *chroma*, color, from Gr. *chros*, skin. Another Sanskrit root for painting is *ang*, from which comes Lat. *unguere*, to besmear, to anoint, and Sanskrit *ak-tu*, ointment, dark tinge, night, and likewise light tinge or ray of light, from which Gr. *aktis*. Here we have the first indication that the original conception of colors did not distinguish clearly between them.

As Bucke's "Cosmic Consciousness" indicates, the primitive Aryans, perhaps 15,000 years ago, perceived or were conscious of only one color. Primitive man of this time saw no difference of tint between blue sky, green leaves, brown or gray earth, and the golden or purple clouds of sunrise and sunset. Pictet finds no color word whatever in primitive Indo-European speech; Max Muller finds no Sanskrit root with reference to any definite color. At a later period, but before the oldest literary compositions that have come down to us, the color sense developed into an appreciation of two colors, black and red. The most ancient games, such as chess and checkers, have black and red pieces. About the time that the Rig Veda was composed, yellow was perceived as a separate third color. Later came white, and then green. But throughout the Rig Veda, the Zend Avesta, and the Bible the color of the sky is not once mentioned, and was not recognized. The 10,000 lines of the Rig-Veda are largely concerned with a description of the sky; the Bible mentions the sky and heaven more than 430 times; neither mentions the color of the sky. The 48 long books of the Odyssey and Iliad make no reference to it, despite the crystal clarity of blue Mediterranean skies. 4,000, perhaps 3,000 years ago, blue was unrecognized; the subsequent names for blue were all merged in the names for black. Xenophanes knew of only three colors of the rainbow—purple, red, and

yellow; Aristotle spoke of the tri-colored rainbow; Democritus knew only four colors, black, red, white, and yellow.

Let us trace down the words for color, and find how these abstract conceptions were first phrased. Starting with the word *black*, we trace it through M. E. *bleke*, A. S. *blaec* (confused with a related word meaning shining, white, etc., whence *bleak*), O. H. G. *blah*, *black*; Icel. *blakkr*, dark, dusky; Sw. *black*, grayish; Dan. *blak*, dark; and so on back to a verb appearing in Dan. *blaken*, burn, scorch; M. L. G. *blaken*, burn with much smoke; L. G. *verblekken*, scorch, as the sun scorches grain. This in turn is akin to Lat. *flagrare*, Gr. *phlegein*, to burn; *flagrant*, *flame*, *phlegm*, *anti-phlogiston* are from this root. From the *bleak* form of the ancestry, going back to Sanskrit *bhraj*, as did the *black* meaning, akin to Gr. *phlegein*, burn, Lat. *fulgere*, shine, we get the Eng. *blank*, *blink*, *blanch*, *bleach*, *bright*. The Lat. *niger*, black, whence *negro*, etc., is remotely kin to the Sanskrit *nic*, night. Thus the original meaning of the root of *black* is primarily to burn, to scorch—a physical fact.

Red, the second color to be distinguished, goes back through Teutonic equivalents to A. S. *reodan*, make red, kill; akin to Lat. *ruber* (for *ruthr-*), Gr. *eruthros*, red; Lat. *rufus*, red; *rubidus*, dark red (whence *ruby*), *russus* and *rutilus*, reddish. The Ir. Gael, has *ruadh*, Welsh *rhudd*, red; Bulg., Bohem., Russ., and other languages use similar terms. Sanskrit has *rudhira*, red, blood. Thus blood was the original meaning. In M. Eng., it was pronounced like reed; thus the proper names Read, Reade, Reed, Reid, as well as Redd, are forms of it; although at times these names came from other stems. The synonym *scarlet* has already been traced through Turkish and Persian sources to Lat. *sigillatus*, from *signum*, a mark. *Vermilion*, *vermeil*, come from Lat. *vermiculus*, a little worm, used for the cochineal-insect which gave *crimson* and *carmine*. These two words in turn both come from *kermes*, the cochineal-insect, Sanskrit *krimija*, produced by an insect, from *krimi*, worm. Our *worm* is from the same source. *Carnation* is from the Lat. root meaning flesh, more originally a part, something divided (as food). *Gules* is akin to *gullet*; *lake* from Sanskrit *laksha*, the lac-insect. *Lobster-red* is from the Lat. *locusta*, shell-insect. *Maroon* meant a chestnut—chestnut-colored; *pink*, M. E. *pinken*, to prick, was a nasalized form of *pick*; the color use came from the flower, named for its jagged edges. *Peach* we have traced back to “Persian apple”; *rose* comes from an ancient root

meaning the flower, whence the color name. *Flush* came from *flash*, akin to Scandinavian words meaning blaze or passion; *florid* meant flowery; *blush*, another Scandinavian word meaning blaze, torch, etc. Thus *red* and its synonyms have the physical origins of (1) blood, (2) a mark, (3) a little worm, (4) flesh or a part, (5) gullet or throat, (6) an insect, (7) a shell insect, (8) the chestnut, (9) to prick, (10) Persian apple, (11) the rose, (12) blaze, (13) flowery, (14) torch. From the stem (3) alone we get vermilion, vermeil, crimson, carmine, worm, vermin, and many others. When man wanted a name for the abstract color akin to blood, the cochineal insect, etc., he used the words already applied to these things.

Yellow, the third color, from M. E. *yellow*, *yelwe*, *zelwe*, *yolwe*, *zelu*, etc., A. S. *geolu*, goes back to Lat. *helvus*, light yellow; akin to Gr. *chloa*, verdure, *chloros*, yellowish-green; Lithuanian *zalias*, green; Sanskrit *hari*, yellow. It traces back thus to the light green of verdure. *Gold* received its name from the same stem. *Ochre* meant originally pale; *aureate*, golden, came from the Sanskrit *ushas*, dawn from *ush*, burn. Other words from this Sanskrit root are *Auster*, the South wind; *helios*, the sun; *East*. It thus meant “the burning thing.” *Saffron*, a product of dried *crocus*, was named for its color. *Fallow* meant pallid; *flavous* is part of the *flame*, *flagrant* stem meaning burning, as is *fulvid*. *Lurid* comes from the same stem as yellow; *topaz* was named for its brightness, from Sanskrit *tapas*, heat. Thus the words meaning yellow split off from the light green of growing things, or from the stems meaning to burn.

White, the fourth color, M. E. *hwit*, D. *wit*, Icel. *hvittr*, traces back to Sanskrit *cveta*, white, from *cvit*, be white, or shine. From the same stem comes *wheat*, *whittle*, etc. The *bleak* stem we have already traced, in its kinship through Gr. *phlegein* to the word meaning black. *Blanch*, to make white, comes from the same stem, as does *bleach*; *argent* meant originally silvery; *blond*, originally yellow, has a lost origin.

Green, the fifth color, is comparatively simple in origin. To give its full kinships, we have M. E. *grene*, A. S. *grene*, O. North, *groene*, *groeni*, O. S. *groni*, O. Fries., *grene*, Dan. *groen*, M. L. G. *grone*, L. G. *gron*, O. H. G. *gruoni*, M. H. G. *gruene*, Ger. *grun*, Icel. *graenn*, Sw. Dan. *gron*; from the A. S. *growan*, to grow, with the formative *-ni*. To the same root belong *grow*, *grass*, *perhaps*, *gorse*.

Blue goes back through the Teutonic speeches to M. Lat. *blavus*, *blavius*, Dan. *blaa*, blue, livid; perhaps from Lat. *flavvus*, yellow—color names being inevitably variable in their early application. *Indigo* gets its name by a simple transference from the East Indian plant, and meant literally *Indian*.

Of the other colors, *brown* goes back to Gr. *phruros*, brown, from *phruros*, a toad; compare Lat. *rubeta*, a toad, *ruber*, reddish. It is Sanskrit *bhru*, reddish-brown, plus the formative *-ni*. *Gray* is a Teutonic word meaning gray; its origin is obscure, and is not connected with gray (with age) from *greis*, an old man, whence *grizzle*, nor from the Gr. *graios*, old. *Orange*, formed to resemble Lat. *aurum*. gold, had originally an initial *n-*, and came from Persian *naranj*, an orange; compare Pers. *nar*, a pomegranate. Purple is from Lat. *purpura*, the purple fish; Gr. *porphura*, same; apparently originally from Gr. *phurein*, to mix or mingle. *Violet* is named from the flower, coming as a diminutive from the Latin; *puce*, from the Fr. word meaning a flea; *plum* (as also *prune*) from the Greek word meaning a plum; *lilac*, properly the indigo plant originally, came with alternation of initial consonant, from the Sanskrit *nila*, dark blue, indigo. *Lavender* was that used in washing; compare *lave*, *lavatory*. *Amethyst*, Gr. *amethystos*, from a combination meaning a remedy for drunkenness. Our *mead*, strong drink, comes from the same Gr. stem *methu*, strong drink.

This, then, is a brief survey of the way our names for colors came into the language. Comparative philology is able to ascertain with some accuracy the order and the comparative periods at which colors were first distinguished by man; and the results of this study are paralleled, as Bucke points out, in a physical study of the nature of color waves, and by a psychological study of color, color-blindness, and the rare occurrence of color in dreams, when measured against a similar study of human ability to recognize and differentiate other sensory impressions. This has, too, a practical value. It is an interesting fact that an untinted photograph to most people resembles the original more than a tinted one. When we look at an uncolored picture, or an uncolored moving picture, we are looking through the eyes of our ancestors of some fifteen thousand years ago; the process is accordingly restful. If certain colors are added, say the red for fire scenes in the movies, this too is restful; for red was the first color split off from the uniform gray-blackness of the original. In most dreams we are entirely unaware of color, and yet find the dream-world entirely natural. The

practical lesson may be applied, among other things, to the proposition for colored movies. It is quite possible that these will never be as restful or satisfying as the uncolored ones.

Generalization and Specialization.

Language grows in an unbelievably haphazard manner. First, of course, came specific names; much later from these were chosen terms to describe collective and then abstract things. Many languages today show a queer absence of collective and abstract terms, such as we regard as indispensable. The aboriginal Tasmanians, as Jespersen points out, had no terms whatever for abstract things. They had names for each species of gum-tree, wattle-tree, etc., but no class name for tree. They had no names for general conceptions, such as hard, soft, warm, cold, long, short, etc. The Society Islanders, in like manner, can talk of a dog's tail, sheep's tail, etc., but have no general name for tail.

To the contrary, modern cultured languages pass through a period where they glory in a great number of general terms of slightly different meaning, many of which later on die a natural death. Thus the English language speaks of a *flock* of birds or sheep, a *drove* of cattle or swine, a *herd* of cattle, a *bevy* of quail, a *covey* of partridges, a *swarm* of bees, a school of fish, and (in slang) a *bunch* of men. A similar lack of proper generalization appears in cow-byre, horse-stable, dog-kennel, pig-sty, dove-cote, falcon-mews, rabbit-hutch. The wealth of terms such as *horse*, *mare*, *filly*, *stallion*, *foal*, *colt*; cow, *calf*, *heifer*, *bull*, *steer*, *ox*; *calf*, *colt*, *lamb*, *puppy*, *fawn*, *kid*, *cub*, *shoat*, *farrow*, *cygnet*, *duckling*, *parr*, *smolt*, for offspring, and cow, *mare*, *ewe*, *doe*, *bitch*, *heifer*, *sow*, *hen*, *goose*, *duck*, for females points to the time when animals, for breeding and hunting, had much greater importance in man's eyes than today. We have *rooster*, *cock*, *cockerel*, *chantecler*, *hen*, *pullet*, *chicken*, *chick*, but no class name for the family; we have no class name for the group led by Mr. Bull and Mrs. Cow. Sea-life has given rise to a large number of unrelated words descriptive of boats, such as *ship*, *boat*, *brig*, *sloop*, *schooner*, *wherry*, *shallop*, *dinghy*, *punt*.

Scene was originally a Greek theatrical term meaning tent; it grew into booth (on a stage), stage, and at last into the more universal meaning today. *Person* was originally from Lat. *persona*, an actor in a play, named from his mask with large mouth for the sound to pass through, from *per-sonare*, to

sound through. The impersonal *thing* traces back to a Teutonic stem meaning assembly or council. Many of our simplest word-elements have been generalized a long way from their original meaning. The earliest prepositions cannot be traced with certainty; but, among later ones, *around* gets its second element through Fr. from Lat. *rotundus*, derived from *rota*, wheel, whence *rotate*; while *among* goes back to O. E. *ongemang*, in the crowd; the second element being derived from the verb *gemengan*, to mingle.

The most obvious way to specialize the meaning of a word is to add a qualifying word. For example, by the addition of *Indian* to the word *corn*, which meant grain in general, the name *Indian corn* stood for the American grain whose native name was *maize*. Similarly, *engine*, mechanical device, was used to form *steam engine* for a specific device. During the last century the associated words became unnecessary; so that *corn* and *engine*, in America today, mean maize and the steam-engine. Similarly *pipe* has come to mean tobacco pipe; *poise*, mental poise; *conceit*, self conceit; *execute*, execute a capital sentence; *corpse*, dead corpse.

The auxiliary verbs in English are colorless survivals of once specific action-verbs. The conjugation of *to be* includes three distinct stems: the *am*, *is*, *are* element probably with an original meaning to breathe; the *was* and *were* originally meaning to dwell; the *be*, *being*, *been* originally meaning to grow. *Do* meant originally to put or place; compare *don*, to put on (garments), and its opposite *doff*, to take off. *Shall* goes back to the earlier meaning of owe; *will*, to wish or intend.

Euphemism and Hyperbole.

It was once a common belief that there was a definite connection between a thing and its name. A savage will not give his name to a stranger, lest he thereby place himself in the stranger's power. The name of a god must not be mentioned, or his power will pass to the hearer; thus we do not have the original name of the Hebrew deity derived from the Kenites who is now the Christian god, but only a late representation of it in the sacred tetragrammaton, or four-letter-word, *J-H-V-H*, usually misread *Jehovah*, but more closely rendered as *Jahweh*, pronounced Yahweh (compare pronunciation of last syllable of *hallelu-jah*). *Open sesame* was the Arabic phrase that opened the cave to Ali Baba. The word *charm*, Lat. *carmen*, a song, indicated the belief in the magic properties of words when sung; *enchantment* (Lat. *cantus*, song) points to the same thing.

In illustration, the dreaded bear has no name in the Balto-Slavic or Teutonic tongue. Direct naming of the evil animal was avoided by phrases like *the eater of honey*, *the noise maker*, *the brown*, or *the licker*. Similarly the Lapps, Finns, and Esthonians avoided direct reference through such substitute names as *the glory of the forest*, *the old one*, *the hairy one*, *proud honey foot*, *big foot*. The Irish even today never refer to the fairies, or *shee* (compare *banshee*); they are *the gentry*, *the good people*, *the little people*. The devil is the *Old Gentleman*, *the Old Boy*, etc. Deities today are preferably referred to as *the Almighty*, *the Creator*, *the Lord*, *the Savior*, *the Redeemer*, *Our Lady*, *Madonna*, etc. The Greeks timidly spoke of the Furies as the *Eumenides*, the gracious goddesses. Rulers are still addressed indirectly as *your Majesty*, *your excellency*, *your highness*. A servant is addressed by his first name—he is already in the power of the master; but the ancient savage taboo operates to prevent a servant's calling his master by the first name. Many European countries similarly distinguish even the pronouns used in addressing servants.

Kin to this primitive superstition is the squeamishness about naming certain parts of the body. *Leg* is slowly replacing limb, as Victorianism weakens; but *abdomen*, *viscera*, *expectorate*, *perspiration*, *illness*, still replace the

stouter English equivalents. Thus *fresh* and *soiled* have taken the place of clean and dirty in the language of the laundry. Stevenson's reference to a *pediculous malady* successfully hides lousy disease; *couch beetle* recently gentified the bedbug. The derogatory *infidel* and *atheist* are softened to freethinker. Another example of euphemism, or "speaking well" of a thing, is the prevailing taste for the grandiloquent. Thus the English *public-house* was rechristened *saloon* in America, through the word's aristocratic associations; compare a ship's *saloon*, and *salon*. The barber uses *tonsorial art* and *hair-dressing parlor*; *tonsorial emporium* is one step further on.

Hyperbole, or exaggerated speech, is responsible for many of our linguistic eccentricities. The young lady from Nevada who said in an interview that within the week she had "simply died from the heat," was "tickled to death by the movie comedians," was "driven crazy by telephone pests," and was "frozen just stiff" while auto riding, is merely typical of a general human trait. Thus we have phrases like *volcanic applause*, a *roar of laughter*, and expanded words like *daredevil*, *skinflint*, *numskull*, *lickspittle*, *bleacher*, *skyscraper*. The original exaggeration in *bleacher* is overlooked by most minds; in *astonish* and *stun*, literally thunder-stricken, it has gone entirely.

Words of dignity fade in meaning, through excessive use. *Dame* and *madame*, from Lat. *domina*, mistress of slaves; *Mister* and *Miss* and *Mrs.*, from Lat. *magister*, master; *Sir*, *sire*, from Lat. *senior*, elder, were all once associated with high honor. *Gentleman* meant a man of good family (Lat. *gens*, race.) The native English title of honor, *lady*, has degenerated into uses like *lady friend*, *ladies and gents*, *chorus lady*, *wash lady*. There was the colored woman who inquired, "Who is the colored lady working for the woman across the street?" *Yes* and *no* have lost much of their exaggerated force: *yes* from A. S. *gea swa*, yes indeed; *not* from *ne-a-wiht*, literally not ever a bit.

Running counter to exaggeration is the spirit of understatement. Thus the ocean is referred to as *the pond*, *the big drink*, *the puddle*. *Money* becomes *dough* or *jack* or *brass*. *Skirt* and *frail* and *jane* show similar dispraise of the skirted sex.

Degeneration and Elevation.

The constant usage of words cheapens their meaning, as a rule. *Vulgar*, once meaning belonging to the crowd (Lat. *vulgus*, crowd) means today low, debased. The word-fixing aristocratic classes have as a rule cheapened all words referring to the uneducated masses. *Heathen*, *pagan*, once meant merely dwellers on the heath and on the field (Gr. *pagos*, field). *Common* and *ordinary*, taken to replace vulgar, are started on the same downward trail. *Peasant*, *boor*, *rustic*, once meaning merely countryman, suggest rudeness (compare *Boer* from same stem as *boor*). *Villain*, perhaps through association with the unrelated *vile*, has left its meaning of countryman, villa-inhabitant, far behind. By a contrary understatement, a cottage or “little place in the country,” may possess 140 rooms, with two baths to each. *Wench* was originally a reputable name for a girl or child; *maid* in poetry still has nobility, in ordinary speech meaning a servant. *Knave* (O. E. *cnafa*, boy) has sunk lower. *Hick*, *hayseed*, *rube*, point further to the lack of dignity of farm labor in city eyes.

Naughty, terribly wicked in Shakespeare’s time, “a thing of naught,” means merely slightly bad. *Homely*, once almost a word of praise, means downright ugly now; *plain* is following the same course. *Mean* has dropped from its original meaning of middle (Lat. *medianus*) to its present meaning. *Soon*, *anon*, *presently*, *by and by*, successively meant immediately; *immediately*, *instantly*, and *right away* will probably take the same course—mute evidences of man’s innate inertia and procrastinateness. *Sanctimonious*, once meaning holy, has suffered the disrepute in which the pharasaical are held. *Charity*, once meaning love, suggests today a patronizing attitude. *Prude*, kin to *proud* and *prowess*, once meant high human excellence; it has ironically altered itself wholly. *Minion*, once favorite, is much less today; *scurrilous*, Lat. *scurra*, fine gentleman, grew after the Latin word had been altered to mean jester, buffoon. *Dapper*, once brave or sprightly (Germ. *tapfer*, brave) is today an adjective of contempt. The weakness of old age has depressed the meaning of *senile* and *senility*; *senator*, from the same stem, has not yet been lorimered and otherwise lowered wholly. History itself is responsible for the contrasting fates of

frank and *slave* (from the races *Frank* and *Slav*). *Sullen* is a variant of *solemn*. It was once proper to speak of the *enormity* of the Mammoth Cave; today only *enormousness* could be so used, as *enormity* means very wicked. *Very*, from Lat. *veritas*, truth, is weakening daily. *Asylum*, from Gr. *asulos*, inviolable, through association with orphan and insane, means a place of confinement rather than a refuge.

At the same time earlier words, through association with the more aristocratic things of life, have risen in connotation. *Court* goes back to Lat. *cohors*, inclosure or poultry-yard; *knight*, once O. E. *cniht*, boy, has gone the other road from *knave*. *Marshal* was once horse-servant (O. E. *mearh*, horse, *scealc*, servant). *Steward* was originally sty-ward (O. E. *stigweard*), or guardian of a sty, before *sty* had degenerated to its present meaning. *Civil*, *civilize*, (Lat. *civis*, citizen) and *urbane* (Lat. *urbs*, city) have gained dignity; although *urban* is rather colorless. *Quaker*, *Methodist*, *Yankee*, *Whig*, *Tory*, applied first in ridicule, today are accepted without offense.

CHAPTER IV.
THE ROMANCE OF WORDS

Words and Archeology.

The 18th century rediscovery of the close connection between Sanskrit roots and European speech has opened up a mine of information about the culture of our primitive ancestors. Our word *pecuniary*, for instance, from Lat. *pecunia*, money, is derived from *pecus*, cattle, pointing to the time when property consisted, not of *coins* (Lat. *cuneus*, a wedge, Gr. *konos*, a peg or cone, from which *cuneiform*, *cone*, *coign*, *hone*) but of *cattle* (from Lat. *caput*, head, whence *capital*, *chattel*, *chief*, *chef*, Eng. *head*, etc.) Carrying the word *pecus* further back, its meaning changes from *cattle* to *sheep*; then to *wool*; then to a verb stem meaning *to pull* or *pluck*. Thus the whole idea of property may be traced in the wanderings of meaning of this one word. Cognate words in the Indo-European languages for *hound*, *ox*, *cow*, *ewe*, *goat*, *sow*, *swine*, *pork*, and for *ech*, an early English word for horse (kin to Skt. *acva*, Gr. *hippos*, Lat. *equus*, Irish *ech*, etc.) indicate an acquaintance with at least six domestic animals before the separation of the European peoples.

Philologists have dug deeply in such cases. Thus the English *beech* has as cognates Ger. *Buch*, Lat. *fagus*, meaning beech; also Gr. *phegos*, oak; Curdish *buz*, *elm*; Old Bulg. *buzu*, *elder*. The English *fir* appears in Ger. *Fohre*, *fir*; Lat. *quercus*, oak, etc. In such cases, as in the involved etymology of *tree*, the term before the separation, undoubtedly starting as the name of a specific tree, may have been broadened into the class-name for tree, and been applied in each country to the chief tree at the time of the migration.

The Indo-European tongues have cognate words for *field* and *mow* and *furrow*, indicating agriculture before they separated. It is quite different with the names for metals. The word *metal* itself first appears in Herodotus, as *metallon*, a mine. *Hammer*, found in cognates in many Indo-European languages, meant originally *stone*, and points back to the Stone Age. The one metal known during the late Stone Age was copper; we find Lat. *aes*, Gothic *aiz*, Skt. *ayas*, Avestan *ayah*, all meaning copper. The name *copper*

comes from the island of Cyprus; just as *bronze* is connected with the city of Brindisi, in the Lat. *aes Brundisium*, Brindisi copper.

In the cases of the other metals, there are no such cognates. The Greek word for gold, *chrysolos*, is said to be of Hebrew origin; Lat. *aurum* originated from a Latin word meaning yellow or shining. Another form is seen in *gold*, found both in Teutonic and Slavic speeches. Its origin is unknown; it may have been geographic. *Silver* has no common Indo-European name; it gets this name from the Pontic city *Salube*. *Iron* and *lead* are in the same category; the Teutons received from the Celts both metals and names. *Steel*, appearing in many Teutonic dialects, is comparatively late. Of recent metals, *cobalt* is from the German *kobold*, a sprite; *nickel*, named by the Swedish mineralogist Cronstedt in 1754, came from Ger. *Kupfernickel*; the element *nickel* referring to another demon, *nickel*, pet form of *Niklaus* (compare *The Old Nick*; from *St. Nicholas*, whence *Santa Claus*, originally from Gr. *Nicholas*, akin to *nica*, victory.) *Tungsten*, still more recent, is named from Swed. *tung-sten*, heavy stone. *Platinum* comes from Span. *plata*, silver, from the metal's appearance. *Aluminum* or *aluminium* was discovered in 1812, and is named from *alum* (Lat. *alumen*, alum, origin unknown).

House is from Teutonic origins, probably connected with *hut*, *hoard*, *hide*; the Lat. *domus*, house, is the older root, akin to Gr. *demein*, to build, Skt. *dama*, etc.; our *dome*, *domicile*, *domestic*, come from it, as does *timber*. *Bolster*, *bed*, and other words for the contents of the house, are found in the Indo-European group of cognates; *wheel*, *wagon*, *axle*, *thill*, *yoke*, *lynch* (pin), also so found, point to their antiquity in Indo-European culture. Thus the study of words gives us a rude picture of our primitive ancestors, long before they left the Asian plateaus for their bloody scattering over the world.

The Romance of Words.

One of the most amusing phases of word study is the false etymologies around which much early history is gathered. Thus *Britain*, an old Celtic word, was traced back to the fall of Troy by the invention or connection with a *Brut*, or *Brutus*, a descendant of Aeneas, supposed to have settled in England. A similar process connects *Corineus*, a companion of Brutus, with the naming of *Cornwall*, properly *Corn-Wales*, strangers in the land. *Lisbon* was mistraced to Ulysses by spelling in *Olisipo*. The Scots go the nations one better by tracing descent to *Scota*, daughter of Pharaoh. The Early Greeks invented a mythical *Hellen*, whose sons *Aeolus* and *Dorus*, and grandsons *Achaeus* and *Ion*, were the parents respectively of the collective Hellenes or Greeks, and the tribes of Aeolians, Dorians, Achaeans, and Ionians, all in an endeavor to prove general kinship.

Consider the recent attempts to derive *Yankee*. Among the explanations offered are (1) an Indian attempt to pronounce *Anglois*, French for *English*; (2) *Eankke*, coward, in an Indian dialect; (3) Scotch *yankie*, a great falsehood; (4) *Yankoos*, a tribe of Indians conquered; (5) *Jannekin*, a Dutch taunt at New Englanders; (6) a corruption of *Yorkshire*; (7) Chinese *Yang jung*, East Indian *Yang Gee*, you are a foreigner; (8) as *Yankee Doodle*, from Persian *Yanhi Dunia*. We may confidently expect (9) from Egypt. Tut-Ankhamen, colloquially Dude-Ankhy, whence Doodle-Yankee. The greatest philological mishmash we have encountered is entitled "Prehistoric Times, or Milestones in the Evolution of Man," by four woman authors, proceeding:

It is because words related originally to sex, which is dual, that we have the double letters in a word, as in woRRy, EEI, fOOI (both kinds)! The two letters are, one for the one sex, one for the other. BRIC-a-BRAC is the CRIBbing male and the CRABbed female. WIG-WAG is the WICKEd male, always so considered, and the WAGon-like female, which carries the young.

After this, we are not surprised at the River *Picket-wire* in Texas, locally derived from its shape, though the French named it *Purgatoire*, Purgatory. Many local legends account for the English inn names *Plum and Feathers* (from the *Plume of Feathers*, the Prince of Wales' crest); the *Bull and Gate* (from the *Boulogne Gate*, to commemorate the taking of Boulogne by Henry VIII); and the *Goat and Compasses* (from the fine old Puritan signboard, "*God encompasseth us*").

Place Names.

Place names, like coins in circulation, have in many cases lost their original markings. Thus *York*, as named by the old Britons, was *Eburacon*, perhaps from a man *Eburos*. The Teutonic Angles altered this to *Evuroc*, which was further modified and took on the Anglian termination *-wic*, arriving at the form *Eoforwic*, read as *Boar Town* (*eofor*, boar, and *wic*, dwelling place). The Danes gave it a new spelling and pronunciation, *Iorvik*, which was corrupted to the present *York*. Thus the German city *Mainz* is remote from the original Lat. *Mogontiacum*; *Laon* from Lat. *Laudunum*. More recently *Chateau Vert*, Green Castle, near Oxford, appears in English as *Shotover*.

There is hardly a river in England that has not a Celtic name. The Celt. *avon*, river, is used for a dozen streams. The Celt. *dun*, fortress, appears as far apart as *Carrodunum* on the Dneister and *Singidunum*, old name for Belgrade, to *Dundalk*, *Dungannon*, etc., in Ireland. In France it is hidden in *Autun* (*Augustodunum*), *Lyons* (*Lugdunum*), *Verdun*, (*Verodunum*); in Great Britain it appears in *Dumfries*, *Dumbarton*, *Dundee*, *Dunstable*, etc. The Latin *castra*, camp, dots England in *-caster*, *-chester*, and *-cester* terminations; *strata*, road, is fixed in *Stratford*, *Stratton*, *Streatham*, *Stretford*, etc. Simpler derivations are *Oxford*, (*ox-ford*), *Swinford* (*swine-ford*), etc. Anglo-Saxon place-names are often derived from persons; as *Brighton*, from *Brihthelmestun*, farmstead of *Brihthelm*. The termination *-ing* enters into a tenth of the number of names of English villages and hamlets. Thus *Washington* is the town (*ton*) of the family (*ing*) living on the *Wash*. The Norse occupation is shown by *-by*, *-thwaite*, *beck*, and *dale*; *-thorp* is usually Scandinavian.

In America, the native Indian names range from the harshness of *Connecticut* and *Massachusetts*, and the grotesque in *Canojoharie*, *Kalamazoo*, *Ypsilanti*, *Skaneateles*, to the liquid beauty of *Miami*, *Appalachicola*, *Tuscarora*, *Tuscaloosa*. Dutch names, *Hoboken*, *Brooklyn*, *Spuyten Duyvil*, *Catskills*, *Yonkers*, point to Dutch occupation. The French gave *Vermont*, *Detroit*, *Joliet*, *Terre Haute*, *St. Louis*, *Baton Rouge*, *Mobile*, *New Orleans*. The Spanish contributed *Florida*, *San Antonio*, *El Paso*,

Albuquerque, Santa Fe, Colorado, Los Angeles, San Francisco, Montana, and many others. Occasional German and Scandinavian place-names point to their occupation.

Free use was made in America of the old names. There are more than 600 postoffices beginning with *New*. *London* appears in 11 states; *Paris*, 21; *Berlin*, 24; *Florence*, 34. There is 1 *Babylon*, 3 *Ninevehs*, 16 *Romes*, 19 *Spartas*, 22 *Athenses*, 29 *Troys*. There are 18 *Alphas*, but only 11 *Omegas*. There are 12 *Bethlehems*, 22 *Bethels*; 13 *Paradises*, and 1 *Hell Creek, Colo.* There are 11 *Freedoms*, 26 *Independences*, 38 *Unions*; 28 *Enterprises*, and 1 *Money Creek*; 16 *Harmonies*, but 25 *Lonelies*; 7 *Sunshines*, 1 *Twilight*; 3 *Faiths* and 18 *Hopes*. There are 2 *Nellies*, 11 *Coras*, and 17 *Adas*. There is a *Beef Creek*, a *Greasyridge*, a *What Cheer*, a *Yelk*, a *Yell*, a *Dead Broke*, a *Murderer's Bar*. The progress of culture is indicated in the Kansas village that changed its name from *Wild Cat* to *Keats*. There are 3 *Whynots*, 1 *Josh*; infinite *Washingtons*, *Franklins*; 22 *Brooklyns*, 75 *Buffalos* (in various compounds). There is *Seven, Tenn.*; *Fourteen, W. Va.*; *Seventeen, O.*; *Seventy-Six, Ky. and Md.*; *Ninety-Six, S. C.* So has the American spirit spoken.

Among unique English perversions, in addition to *Shotover*, are *Leighton Beau-desert* to *Leighton Buzzard*, *Burgh Walter* to *Bridgewater*, and *Beau Chef* to *Beachy* (Head). *Chemin Couvert* became, in Arkansas, *Smackover*. Even *Bunker*, in Bunker Hill, was once *Bon coeur*. There is more approval for the transformation of the amazing Indian *Quah-Tah-Wah-Am-Quah-Duavic* to French *Petamkediak*, and later English *Tom Kedgwick*. In similar fashion *Gramercy Square*, New York, was not originally French but Dutch for crooked lane, *De Kromme Zee*.

Personal Names.

Most Englishmen of the Anglo-Saxon period were content with a single name. A frequent element is *Aelf-*, elf or fairy, as in *Aelfgar*, *Aelfhelm*, *Aelfred*. *Aethel-*, meaning noble (Germ. *Edelman*, nobleman) appears in *Aethelbald*, *Aethelred*. *Ead-*, association with *eadig*, happy, appeared in *Eadgar*, *Eadgyth*, *Eadmund*, *Eadweard*, *Eadwine*. Other elements are *bald*, bold; *ecg*, edge; *god*, good; *wig*, battle; *sie*, victory; *wulf*, wolf, as prefixes: and, as suffixes, *heard*, strong; *here*, army; *mund*, hand; *roed*, counsel; *wine*, friend. Less pretentious are such names as *Brand*, sword; *Cytel*, kettle; *Wulf*, *Hild* (a), *Hengest*, *Horsa*, *Hudda*, perhaps pet forms of longer names. These survive, often greatly disguised, in such modern names as *Baldwin* (Bealdwine), *Harold* (Herewald), *Bardell* (Beorhtwulf), *Elmer* (Aelfmaer), *Herbert* (Herebearht), *Herrick* (Heric), *Hubert*, *Hubbard*, *Hobart*, *Hibbert*, *Hibbard* (Hygeeorht), *Wyman* (Wigmund), *Kemp* (Cempa, warrior), *Cob* (Cobba), *Froude* (Froda, prudent), *Tucker* (Tuccao), etc.

After the Norman Conquest, the names most widely used were *John*, *William*, *Thomas*, *Richard*, *Robert*, in the order given. *John* (Lat. *Johannes*), found in other languages Ital. *Giovanni* (from which *Zany*), Fr. *Jean*, Welsh *Evan*, Scotch *Ian*, Breton *Yves*, Russian *Ivan*, Dan. and Dutch *Hans*, is responsible also for *Shawn*, *Jane*, *Joan*, *Jones*, *Johnson*, *Jennings*, etc. *Thomas*, also Scriptural in origin, owed its popularity to pilgrimages to the shrine of St. Thomas a Becket. We have from it *Thoms*, *Thomson*, etc., and from the ending, a French clipped form, *Macey*, *Massie*, *Machin*, *Masson*, etc. The other three names are Teutonic. *William*, M. H. G. *Willehelm*, helm of resolution, had in French two forms, *Guillaume* and the one with the initial *W-*. From these comes the parallel forms *Gautier* and *Walter*, *Guy* and *Wyatt*. *Williams*, *Wills*, *Williamson*, *Wilson*, *Wilkins*, *Willett*, *Gilliam*, come from it. *Robert* was O. H. G. *Hruodbert*, fame-bright; *Richard* was *Richart*, powerful. From these came *Rick*, *Hick*, *Dick*, *Rob*, *Hob*, *Dob*, *Bob*; also *Ricketts*, *Hicks*, *Hixon*, *Dix*, *Dixon*, *Rich*, *Ritchie*, *Hitch*, *Higgs*, *Bigg*, *Robb*, *Ditch*, *Robbins*, *Robson*, *Robinson*, *Hobbs*, *Hobson*, *Dobbs*, *Dodson*, etc.

Along with this went the relative infrequency of *Arthur*, *Charles*, and *George*. Their popularity was later, from the royal houses of Stuart and Hanover, and from Arthur, Duke of Wellington. Similarly *Frederick's* vogue came from Frederick the Great.

In the period before the Conquest, individuals often earned an epithet, as Edmund *Ironsides*, Aethelred *the Unready*, Edward *the Confessor*; but these were not transmitted from father to son. The earliest form of surname proper was the patronymic, the name of parent or ancestor. Thus Alfred the Great was properly Alfred *Aethelwulfing*, or son of Aethelwulf. Thus the Beowulf characters are the *Scyldings* and *Scylfings*, sons of *Scyld* and *Scylf* respectively; similarly the Greeks Hippias and Hipparchus were *Pisistratidae*, sons of Pisistratus, etc. With later Hebrews, Abou *ben-Adhem* meant son of Adhem. In Slavic languages the patronymic ends with *-vitch*; in Norman *fitz* (Mod. Fr. *fils*, son) served the same purpose; among Scotch and Irish *Mac*, relative. In Welsh, *Map*, or later *Ap* or *Ab*, was used: it appears disguised in many names, as *Pugh* (*ap-Hugh*), *Bowen* (*ap-Owen*), *Powell* (*ap-Howell*), *Price* (*ap-Rhys*), *Pritchard* (*ap-Richard*), *Prothero* (*ap-Roderick*), *Blood*, (*ap-Lud*), as well as *Upjohn*, *Updike*, etc. The Irish *O'* serves practically the same function as *Mac*. Scandinavians use *-son*; thus *Olson* (*Olaf-son*), *Anderson* (*Andrew-son*), *Pedersen* (*Peter's son*). In the South of England the old genitive ending *-s* accomplished a similar function; thus Tom's Mary would be distinguished from Herbert's Mary. From this we get many surnames ending in *-s*. especially among the Welsh, such as *Jones*, *Williams*, *Hughes*, *Evans*, *Roberts*, *Edwards*.

A second source of surnames is from the locality where a man lived. *Scott* is an English name applied to Scotchmen; the reverse is true of *English*. *Cornish* and *Cornwallis*, for dwellers in *Cornwall*, originated in neighboring Devonshire. Similar are *Brett*, *Britton* (Brittany), *Picard*, *Power* (Picardy), *Loring* (Lorraine), *Bullen* (Boulogne), *Bloss* (Blois), *Loving* (Louvain), *Sessions* (Scissons). Place-names more purely local, with or without the terminal *-s*, are *Ford*, *Bridges*, *Field*, *Craig* (crag), *Lake*, *Rivers*, *Brooke*, *Cairnes*, *Glenn*, *Dunne* and *Dun* (hill), *Hill*, *Wood*, *Forrest*. From the O. E. *burh* (dative *byrig*), fortified place, came *Burrows*, *Burroughs*, *Borrow*, *Brough*, *Burke*, *Bury*, *Berry*. *Peak*, *Pike*, *Peck*, *Pick*, meant hill-top; *Law*, *Low*, *Lynn*, *Shaw*, *Holt*, *Hurst*, *Barrows* are similar. More definite are the place-names in *Tuttle* (*Toot-hill*), *Tyndall* (*Tyne-dale*),

Haywood (*Hay*, hedge, and wood), *Radcliffe*, *Wycliffe*, *Dodd-ridge*, *Bradshaw* (broadwood), *Crashaw* (crow-wood), *Earnshaw* (eagle-wood), *Renshaw* (raven-wood), *Schofield* (school field). From the *cliff* root came also *Clifford*, *Clifton*, *Cleaves*, *Cleveland*. The old northern form *yett* for gate appears in *Yeats* and *Yates*. *Hyatt* is *high-yett*. Dialect variants of *Hedge* appear in *Hay*, *Haig*, *Haigh*, *Haw*, *Hey*; plurals, *Hayes*, *Hawes*.

A third principal source of modern surnames is found in names of occupations. *Smith*, *Butcher*, *Carpenter*, *Miller*, *Taylor*, are fairly obvious. From crafts less in evidence come *Chaucer* (shoemaker), *Hunt* (hunter), *Day* (dairyman), *Webb*, *Weaver* (weaver), *Frick* (warrior), *Wright* (worker). *Webster*, *Brewster*, *Baxter* are feminines of weaver, brewer, baker; others are *Millard* (millward or guardian), *Plummer* (plumber), *Inman* (landlord), *Ward* (guard), *Firminger* (cheese-maker), *Barker* (tanner), *Chapman* (merchant), *Clark* (clerk or scholar). Among obsolete occupations are *Arrowsmith*, *Fletcher*, and *Flower* (all arrowmaker: compare O. E. *fla*, arrow); *Boulter* (bolt-maker), and *Bowyer*, *Bower*, *Boyer* (bow-maker). *Fuller*, *Tucker*, *Shearer*, *Sherman*, *Walker*, point to early cloth-making. *Tyler* (tile-man), *Chandler* (candlemaker), *Hawker* (itinerant salesman), *Parmenter* (parchment-maker), *Pilcher* (fur cloak maker), *Quiller* (maker of quilted ruffs), *Cutler* (knife maker), *Spooner* (spoon maker), *Collier* (coal worker, charcoal burner), *Croker*, *Crocker* (maker of crocks), *Cooper*, *Cowper* (maker of casks), *Lorimer* (bridle maker), *Sellars* (saddle maker), *Parker* (park guardian), *Hayward* (literally hedge ward, guardian of tilled fields), *Constable* (stable-man), *Stuart*, *Stewart* (steward) are a few more. *Graves* blends two forms: O. E. *gerefa*, reeve, and *Greaves* for Grove. The same is true of *Howard*, both from *Hayward* and earlier *Hereward*.

A fourth source of surnames is nicknames. Henry *Plantagenet*, Richard the *Lion-Hearted*, Edward *Longshanks*, are examples. *Wolf*, *Lovell*, *Lovett*, are all from wolf; *Drinkwater*, *Doolittle*, *Larned* (from *learned*), *Longfellow*, *Fairfax* (fair hair), *Purdy* and *Pardee* (from a French oath), *Shakespeare*, *Wagstaff*, *Hurlbutt*, *Benbow* (from *bend-bow*), *Lovejoy*, these require no comment. There were also *Stout* (meaning brave), *Little*, *Seeley* (happy), *Moody* (courageous), *Bragg* (brave). From the French came *Burnett* (diminutive of brown), *Blunt* and *Blount* (blond), *Power* (poor), *Curtis* (courteous). The Celtic gave *Gough* and *Roe*, both red; *Bain*, *Wynne*, and *Gwynne*, white; *Glass* and *Lloyd* and *Floyd*, gray; *Sayce*, Saxon; *Vaughan*,

little; *Cameron*, Scotch for crooked nose; *Campbell*, wry mouth; *Kennedy*, Irish for ugly head.

There was no uniformity in the spelling of personal names at first. In addition to the varied spellings of Shakespeare, Dr. *Crown*, 17th century, spelt his name variously *Cron*, *Croon*, *Crown*, *Crone*, *Croone*, *Croune*. *Pierce*, *Peirce*, *Pearce*, *Pearse*, *Pears*, all derive from *Piers*, Fr. for apostle Peter. *Lea*, *Lee*, *Ley*, *Leigh*, *Legh*, *Legge*, *Lay*, *Lye*, all come from O. E. for meadow. *Elsbeth*, *Elsie*, *Eliza*, *Liza*, *Lisa*, *Lizzie*, *Beth*, *Bet*, *Bettie*, *Betsy*, derive from *Elizabeth*. Suffixes like the diminutives *-kin*, *-in*, *-ie*, *-ett*, give to *Pierce*, *Perkins*, *Pierson*, etc. *Matthew* gave rise to *Matthews*, *Mayhew*, *Mayo*, *May*, *Mee*, *Mayes*, *Mekins*, *Meeson*, and at times *Mason*. The list is interminable.

Corrupt spelling, following slurred pronunciation, gave *Farrar* from *Farquhar*, *Mean* from *Meaghan*, *Calhoun* from *Colquhoun*, *Beecham* from *Beauchamp*. The Saints' names suffered a speech-change: *Bartholomew* to *Tolley*; *Edmund* to *Munn*; *St. Aubyn*, *Tobin*; *St. Osith*, *Toosey*; *St. Maur*, *Seymour*; *St. Clair*, *Sinclair*; *St. Paul*, *Semple*. The reverse tendency is found in *Alys*, *Edythe*, *Nellie*, etc.

Dutch names in the United States suffered such alterations as *Reiger* to *Riker*, *Haerlen* to *Harlan*. French changed *Caille* to *Kyle*, *Soule* to *Sewell*, *Bon Pas* to *Bumpus*, *de l' hotel* to *Doolittle*. German shifts were *Blum* to *Bloom*, *Reuss* to *Royce*, *Oehm* to *Ames*, *Furth* to *Ford*. At times they were translated: *Pfund* to *Pound*; *Konig*, *King*; *Schwartz*, *Black*; *Weber*, *Weaver*. Jewish names have also seen such changes as *Rosenberg* to *Rosen* to *Rose* to *Ross*; *Hilkovitch* to *Hilquit* to *Hill*; *Schneider* to *Taylor*; *Schlachtfeld* to *Warfield*; *Schonberg* to *Belmont*. In the New York City directory, *Smith*, *Brown*, *Miller*, *Murphy*, *Meyer*, are first five in order of popularity. *Cohen* and *Levy* come 8th and 9th; *Jones* 10th, *Taylor* 23rd.

The American Language.

There are those who think that typical American speech is found in such a sentence as, *Them guys ain't got no pep*. Here the first is ungrammatical; the second, slang; the third, bad grammar again; the fourth, colloquial; the fifth, illogical; the sixth, slang once more. And yet the meaning is plain and unambiguous, even though no word passes accepted English standards. Luckily, American speech means more than this. America has added to the language, in making it its own, such words as *blaze* (a trail), *blizzard*, *back number*, *back-bone*, *barber shop*, *barroom*, *beeline*, *belittle*, *bleachers*, *blinders*, *bloomers*, *blue laws*, *bluff*, *bob-sled*, *bogus*, *boom*, *boost*, *brainy*, *brief* (lawyers), *bully* (adj.), *campus*, *cave in*, *cocktail*, *commuter*, *contraband*, *crib*, *cow-catcher*, *crawfish*, *derail*, *diggings*, *dipper*, *doughnut*, *dovetail*, *fizzle out*, *grit* (courage), *make good*, *joyride*, *maverick*, *shyster*, *scalawag*, *snap*, *splurge*, *spree*, *spry*, *wilt*, *whole-souled*, *yegg*, among thousands of others. Her new political terms are innumerable; in every walk of life she creates her own speech. These are live words, rich in soil-tang and the glow of health. It would be an evil hour if we relied on England for our speech. But the study of our words, embalmed in English and other tongues, including the earliest, is a helpful and informative way of broadening our own understanding, and adding to the speech of our maturing soul.

*** END OF THE PROJECT GUTENBERG EBOOK AN
INTRODUCTION TO PHILOLOGY ***

Updated editions will replace the previous one—the old editions will be renamed.

Creating the works from print editions not protected by U.S. copyright law means that no one owns a United States copyright in these works, so the Foundation (and you!) can copy and distribute it in the United States without permission and without paying copyright royalties. Special rules, set forth in the General Terms of Use part of this license, apply to copying and distributing Project Gutenberg™ electronic works to protect the PROJECT GUTENBERG™ concept and trademark. Project Gutenberg is a registered trademark, and may not be used if you charge for an eBook, except by following the terms of the trademark license, including paying royalties for use of the Project Gutenberg trademark. If you do not charge anything for copies of this eBook, complying with the trademark license is very easy. You may use this eBook for nearly any purpose such as creation of derivative works, reports, performances and research. Project Gutenberg eBooks may be modified and printed and given away—you may do practically ANYTHING in the United States with eBooks not protected by U.S. copyright law. Redistribution is subject to the trademark license, especially commercial redistribution.

START: FULL LICENSE

THE FULL PROJECT GUTENBERG™ LICENSE

PLEASE READ THIS BEFORE YOU DISTRIBUTE OR USE THIS WORK

To protect the Project Gutenberg™ mission of promoting the free distribution of electronic works, by using or distributing this work (or any other work associated in any way with the phrase “Project Gutenberg”), you agree to comply with all the terms of the Full Project Gutenberg License available with this file or online at www.gutenberg.org/license.

Section 1. General Terms of Use and Redistributing Project Gutenberg electronic works

1.A. By reading or using any part of this Project Gutenberg electronic work, you indicate that you have read, understand, agree to and accept all the terms of this license and intellectual property (trademark/copyright) agreement. If you do not agree to abide by all the terms of this agreement, you must cease using and return or destroy all copies of Project Gutenberg electronic works in your possession. If you paid a fee for obtaining a copy of or access to a Project Gutenberg electronic work and you do not agree to be bound by the terms of this agreement, you may obtain a refund from the person or entity to whom you paid the fee as set forth in paragraph 1.E.8.

1.B. “Project Gutenberg” is a registered trademark. It may only be used on or associated in any way with an electronic work by people who agree to be bound by the terms of this agreement. There are a few things that you can do with most Project Gutenberg electronic works even without complying with the full terms of this agreement. See paragraph 1.C below. There are a lot of things you can do with Project Gutenberg electronic works if you follow the terms of this agreement and help preserve free future access to Project Gutenberg electronic works. See paragraph 1.E below.

1.C. The Project Gutenberg Literary Archive Foundation (“the Foundation” or PGLAF), owns a compilation copyright in the

collection of Project Gutenberg electronic works. Nearly all the individual works in the collection are in the public domain in the United States. If an individual work is unprotected by copyright law in the United States and you are located in the United States, we do not claim a right to prevent you from copying, distributing, performing, displaying or creating derivative works based on the work as long as all references to Project Gutenberg are removed. Of course, we hope that you will support the Project Gutenberg mission of promoting free access to electronic works by freely sharing Project Gutenberg works in compliance with the terms of this agreement for keeping the Project Gutenberg name associated with the work. You can easily comply with the terms of this agreement by keeping this work in the same format with its attached full Project Gutenberg License when you share it without charge with others.

1.D. The copyright laws of the place where you are located also govern what you can do with this work. Copyright laws in most countries are in a constant state of change. If you are outside the United States, check the laws of your country in addition to the terms of this agreement before downloading, copying, displaying, performing, distributing or creating derivative works based on this work or any other Project Gutenberg work. The Foundation makes no representations concerning the copyright status of any work in any country other than the United States.

1.E. Unless you have removed all references to Project Gutenberg:

1.E.1. The following sentence, with active links to, or other immediate access to, the full Project Gutenberg License must appear prominently whenever any copy of a Project Gutenberg work (any work on which the phrase “Project Gutenberg” appears, or with which the phrase “Project Gutenberg” is associated) is accessed, displayed, performed, viewed, copied or distributed:

This eBook is for the use of anyone anywhere in the United States and most other parts of the world at no cost and with almost no restrictions whatsoever. You may copy it, give it away or re-use it under the terms of the Project Gutenberg™ License included with

this eBook or online at www.gutenberg.org. If you are not located in the United States, you will have to check the laws of the country where you are located before using this eBook.

1.E.2. If an individual Project Gutenberg electronic work is derived from texts not protected by U.S. copyright law (does not contain a notice indicating that it is posted with permission of the copyright holder), the work can be copied and distributed to anyone in the United States without paying any fees or charges. If you are redistributing or providing access to a work with the phrase “Project Gutenberg” associated with or appearing on the work, you must comply either with the requirements of paragraphs 1.E.1 through 1.E.7 or obtain permission for the use of the work and the Project Gutenberg trademark as set forth in paragraphs 1.E.8 or 1.E.9.

1.E.3. If an individual Project Gutenberg electronic work is posted with the permission of the copyright holder, your use and distribution must comply with both paragraphs 1.E.1 through 1.E.7 and any additional terms imposed by the copyright holder. Additional terms will be linked to the Project Gutenberg License for all works posted with the permission of the copyright holder found at the beginning of this work.

1.E.4. Do not unlink or detach or remove the full Project Gutenberg License terms from this work, or any files containing a part of this work or any other work associated with Project Gutenberg.

1.E.5. Do not copy, display, perform, distribute or redistribute this electronic work, or any part of this electronic work, without prominently displaying the sentence set forth in paragraph 1.E.1 with active links or immediate access to the full terms of the Project Gutenberg License.

1.E.6. You may convert to and distribute this work in any binary, compressed, marked up, nonproprietary or proprietary form, including any word processing or hypertext form. However, if you provide access to or distribute copies of a Project Gutenberg work in a format other than “Plain Vanilla ASCII” or other format used in the official

version posted on the official Project Gutenberg website (www.gutenberg.org), you must, at no additional cost, fee or expense to the user, provide a copy, a means of exporting a copy, or a means of obtaining a copy upon request, of the work in its original “Plain Vanilla ASCII” or other form. Any alternate format must include the full Project Gutenberg License as specified in paragraph 1.E.1.

1.E.7. Do not charge a fee for access to, viewing, displaying, performing, copying or distributing any Project Gutenberg works unless you comply with paragraph 1.E.8 or 1.E.9.

1.E.8. You may charge a reasonable fee for copies of or providing access to or distributing Project Gutenberg electronic works provided that:

- You pay a royalty fee of 20% of the gross profits you derive from the use of Project Gutenberg works calculated using the method you already use to calculate your applicable taxes. The fee is owed to the owner of the Project Gutenberg trademark, but he has agreed to donate royalties under this paragraph to the Project Gutenberg Literary Archive Foundation. Royalty payments must be paid within 60 days following each date on which you prepare (or are legally required to prepare) your periodic tax returns. Royalty payments should be clearly marked as such and sent to the Project Gutenberg Literary Archive Foundation at the address specified in Section 4, “Information about donations to the Project Gutenberg Literary Archive Foundation.”
- You provide a full refund of any money paid by a user who notifies you in writing (or by e-mail) within 30 days of receipt that s/he does not agree to the terms of the full Project Gutenberg™ License. You must require such a user to return or destroy all copies of the works possessed in a physical medium and discontinue all use of and all access to other copies of Project Gutenberg™ works.
- You provide, in accordance with paragraph 1.F.3, a full refund of any money paid for a work or a replacement copy, if a defect in the electronic work is discovered and reported to you within 90 days of receipt of the work.

- You comply with all other terms of this agreement for free distribution of Project Gutenberg™ works.

1.E.9. If you wish to charge a fee or distribute a Project Gutenberg™ electronic work or group of works on different terms than are set forth in this agreement, you must obtain permission in writing from the Project Gutenberg Literary Archive Foundation, the manager of the Project Gutenberg™ trademark. Contact the Foundation as set forth in Section 3 below.

1.F.

1.F.1. Project Gutenberg volunteers and employees expend considerable effort to identify, do copyright research on, transcribe and proofread works not protected by U.S. copyright law in creating the Project Gutenberg™ collection. Despite these efforts, Project Gutenberg™ electronic works, and the medium on which they may be stored, may contain “Defects,” such as, but not limited to, incomplete, inaccurate or corrupt data, transcription errors, a copyright or other intellectual property infringement, a defective or damaged disk or other medium, a computer virus, or computer codes that damage or cannot be read by your equipment.

1.F.2. LIMITED WARRANTY, DISCLAIMER OF DAMAGES - Except for the “Right of Replacement or Refund” described in paragraph 1.F.3, the Project Gutenberg Literary Archive Foundation, the owner of the Project Gutenberg™ trademark, and any other party distributing a Project Gutenberg™ electronic work under this agreement, disclaim all liability to you for damages, costs and expenses, including legal fees. YOU AGREE THAT YOU HAVE NO REMEDIES FOR NEGLIGENCE, STRICT LIABILITY, BREACH OF WARRANTY OR BREACH OF CONTRACT EXCEPT THOSE PROVIDED IN PARAGRAPH 1.F.3. YOU AGREE THAT THE FOUNDATION, THE TRADEMARK OWNER, AND ANY DISTRIBUTOR UNDER THIS AGREEMENT WILL NOT BE LIABLE TO YOU FOR ACTUAL, DIRECT, INDIRECT, CONSEQUENTIAL, PUNITIVE OR INCIDENTAL DAMAGES

EVEN IF YOU GIVE NOTICE OF THE POSSIBILITY OF SUCH DAMAGE.

1.F.3. LIMITED RIGHT OF REPLACEMENT OR REFUND - If you discover a defect in this electronic work within 90 days of receiving it, you can receive a refund of the money (if any) you paid for it by sending a written explanation to the person you received the work from. If you received the work on a physical medium, you must return the medium with your written explanation. The person or entity that provided you with the defective work may elect to provide a replacement copy in lieu of a refund. If you received the work electronically, the person or entity providing it to you may choose to give you a second opportunity to receive the work electronically in lieu of a refund. If the second copy is also defective, you may demand a refund in writing without further opportunities to fix the problem.

1.F.4. Except for the limited right of replacement or refund set forth in paragraph 1.F.3, this work is provided to you 'AS-IS', WITH NO OTHER WARRANTIES OF ANY KIND, EXPRESS OR IMPLIED, INCLUDING BUT NOT LIMITED TO WARRANTIES OF MERCHANTABILITY OR FITNESS FOR ANY PURPOSE.

1.F.5. Some states do not allow disclaimers of certain implied warranties or the exclusion or limitation of certain types of damages. If any disclaimer or limitation set forth in this agreement violates the law of the state applicable to this agreement, the agreement shall be interpreted to make the maximum disclaimer or limitation permitted by the applicable state law. The invalidity or unenforceability of any provision of this agreement shall not void the remaining provisions.

1.F.6. INDEMNITY - You agree to indemnify and hold the Foundation, the trademark owner, any agent or employee of the Foundation, anyone providing copies of Project Gutenberg™ electronic works in accordance with this agreement, and any volunteers associated with the production, promotion and distribution of Project Gutenberg™ electronic works, harmless from all liability, costs and expenses, including legal fees, that arise directly or indirectly from any of the following which you do or cause to occur: (a)

distribution of this or any Project Gutenberg work, (b) alteration, modification, or additions or deletions to any Project Gutenberg work, and (c) any Defect you cause.

Section 2. Information about the Mission of Project Gutenberg

Project Gutenberg is synonymous with the free distribution of electronic works in formats readable by the widest variety of computers including obsolete, old, middle-aged and new computers. It exists because of the efforts of hundreds of volunteers and donations from people in all walks of life.

Volunteers and financial support to provide volunteers with the assistance they need are critical to reaching Project Gutenberg's goals and ensuring that the Project Gutenberg collection will remain freely available for generations to come. In 2001, the Project Gutenberg Literary Archive Foundation was created to provide a secure and permanent future for Project Gutenberg and future generations. To learn more about the Project Gutenberg Literary Archive Foundation and how your efforts and donations can help, see Sections 3 and 4 and the Foundation information page at www.gutenberg.org.

Section 3. Information about the Project Gutenberg Literary Archive Foundation

The Project Gutenberg Literary Archive Foundation is a non-profit 501(c)(3) educational corporation organized under the laws of the state of Mississippi and granted tax exempt status by the Internal Revenue Service. The Foundation's EIN or federal tax identification number is 64-6221541. Contributions to the Project Gutenberg Literary Archive Foundation are tax deductible to the full extent permitted by U.S. federal laws and your state's laws.

The Foundation's business office is located at 41 Watchung Plaza #516, Montclair NJ 07042, USA, +1 (862) 621-9288. Email contact

links and up to date contact information can be found at the Foundation's website and official page at www.gutenberg.org/contact

Section 4. Information about Donations to the Project Gutenberg Literary Archive Foundation

Project Gutenberg™ depends upon and cannot survive without widespread public support and donations to carry out its mission of increasing the number of public domain and licensed works that can be freely distributed in machine-readable form accessible by the widest array of equipment including outdated equipment. Many small donations (\$1 to \$5,000) are particularly important to maintaining tax exempt status with the IRS.

The Foundation is committed to complying with the laws regulating charities and charitable donations in all 50 states of the United States. Compliance requirements are not uniform and it takes a considerable effort, much paperwork and many fees to meet and keep up with these requirements. We do not solicit donations in locations where we have not received written confirmation of compliance. To SEND DONATIONS or determine the status of compliance for any particular state visit www.gutenberg.org/donate.

While we cannot and do not solicit contributions from states where we have not met the solicitation requirements, we know of no prohibition against accepting unsolicited donations from donors in such states who approach us with offers to donate.

International donations are gratefully accepted, but we cannot make any statements concerning tax treatment of donations received from outside the United States. U.S. laws alone swamp our small staff.

Please check the Project Gutenberg web pages for current donation methods and addresses. Donations are accepted in a number of other ways including checks, online payments and credit card donations. To donate, please visit: www.gutenberg.org/donate.

Section 5. General Information About Project Gutenberg electronic works

Professor Michael S. Hart was the originator of the Project Gutenberg concept of a library of electronic works that could be freely shared with anyone. For forty years, he produced and distributed Project Gutenberg eBooks with only a loose network of volunteer support.

Project Gutenberg eBooks are often created from several printed editions, all of which are confirmed as not protected by copyright in the U.S. unless a copyright notice is included. Thus, we do not necessarily keep eBooks in compliance with any particular paper edition.

Most people start at our website which has the main PG search facility: www.gutenberg.org.

This website includes information about Project Gutenberg, including how to make donations to the Project Gutenberg Literary Archive Foundation, how to help produce our new eBooks, and how to subscribe to our email newsletter to hear about new eBooks.
